discipline and training, and believes in the cultivation of the quality and the nature of the mind; admires strong, well-developed physical life, and that charm which has been characteristic of the most womanly women from the beginning of time, and, in spite of all changes and modifications of ideals and aims, must remain the supreme charm of woman to the end of all time.

When Bradford Academy was organized at a little gathering of the leading men and women of the town in March, 1803, a very small building was sufficient to house the fifty-one pupils who constituted the first school. It stood on a beautiful site overlooking the valley of the Merrimac and fronting the heights upon which Haverhill stands. There the school remained for many years, housed in a small two-room structure; the course of study including Morse's Geography, Murray's Grammar, Pope's "Essay on Man" for parsing purposes, Blair's Rhetoric, composition, and "embroidery on satin." In 1823 the first building was enlarged by the addition of a recitation-room, and in 1828 a large boarding-house was built. In 1841, in order to meet the needs of the greatly enlarged school, New Hall was dedicated with appropriate services, and still stands on the edge of the Academy grounds, looking very like an old-fashioned New England church, but now used as a public school. In 1870 the central part of the present building was erected; it has been twice enlarged, and the Academy has again outgrown its requirements. This building shows unusual provision for space, air, light, and privacy for its students. The Academy has apparently entered upon the stage of its greatest growth under the wise and vigorous direction of the present principal, who seems to combine in a rare fashion skill in evoking the confidence and affection of her students, and executive force and foresight. Of late the Academy has gone forward by leaps and bounds; and the time is not far distant when it will need still more ample housing. Preserving the sound traditions of old-time New England education, it represents also the best modern methods of teaching, and so happily combines the ideals of the highest life with the more scientific, exact, and fruitful methods of modern training.

# The Flood Sufferers

By Edward T. Devine

General Secretary of the Charity Organization Society of New York

**F**ROM Alton, Illinois, thirty miles southward past the city of St. Louis, is a great flooded bottom, averaging ten miles in width, within which are twenty towns and villages. In the largest of these, East St. Louis, a thriving industrial city of some 40,000 people, at least 10,000 are homeless refugees, and a majority of those who live in the smaller places are either homeless or living in their attics or on their roofs. The Mississippi and the Missouri are practically one great stream at Alton, fully five miles above their usual place of union; and just where the great volume of muddy water from the Northwest swings into the shorter river which gives its name to the lower stream is the greatest width of bottom-land, fully eighteen miles from bluff to bluff. On the Illinois side the bluff closes in, taking a southwesterly direction until a few miles below East St. Louis it approaches the natural channel of the river.

At East St. Louis there is some ground on which a considerable part of the business portion of the city rests which is about as high as the level of the present high water, but it is only a part. The remainder of it, and much of what is saved in the residence blocks, owe their precarious safety solely to the heroic fight by which day after day the surging, all but irresistible floods were fought back inch by inch by the citizens of East St. Louis and the "hoboes" and negroes whom they impressed into the service. It was a fight which deserved to win. It was supported by the sturdy embankment of the Baltimore and Ohio, the Southwestern, and the Vandalia on one side of the city, but that of the Illinois Central on the other gave way and gave two-thirds of the city over to the invading waters. It was worth while for what is saved. If even yet there should be a break in the new levee which is between the relay depot and the business portion of the city, it would mean that the water which now fills the basement of the City Hall would rise to Mayor Cook's office, and that no

street would be safe. High up against the quickly built but substantial wall the swift, swirling, baffled waters almost look over at the streets six feet or more beneath their level, and occasionally thrust through a threatening finger at the bottom, against which are crowded instantly heavy bags of clayey sand.

Such, then, is the theater for the emergency relief measures for which the need so urgently calls. There is a close relation between the emergency employment and the need of the refugees, as is obvious to one who sees the thousand night laborers crowding about the City Hall, snatching a little sleep on the grass in City Hall Park, and eating with those who are being fed by charity. Three days after the flood was at its height, the Mayor announced that no more men would be employed, but that all the work needed must be performed by refugees who were being fed. The latter was a wise relief measure, but one of doubtful expediency if important work remains to be done. At several relief stations in St. Louis itself, at the City Hall, and at two emergency camps in East St. Louis, food and clothing are now—at the end of the flood work—being given out, practically to all comers. The method of distribution is a sad and depressing spectacle. The eloquent indignation of the policeman on duty at the door of one station—that for colored people—is communicable to any one who watches it. Every interview becomes an effort—usually unavailing—to find something in the great débris of hats, mismatched shoes, coats, trousers, skirts, and jackets, that will satisfy the insistent applicant, and finally an angry lecture to the ungrateful wretch who will not take anything whether it fits or not and be satisfied.

At this door over a hundred were in line on the sidewalk. A dozen stalwart men were asked whether they would take a job at a dollar a day instead of hanging about this place. Only one looked with favor on the idea. Another refused on

the ground that he could earn two dollars, and still another wanted to be sure that board was included in the offer.

In striking contrast to this not unnatural but nevertheless foolish distribution of old clothing was the service of the Salvation Army in taking into their quarters as many refugees as they could care for, supplying them with food, clothing, and lodging, enabling able-bodied men to work, and keeping careful account of all who came under their care. Other similar organizations and missions were quick to offer similar services, which were utilized, as were also local business associations that were willing to undertake the responsibility for managing a refuge. Seven hundred men, women, and children were brought over to St. Louis in one day and distributed among the seven shelters that were opened. The great number remained, however, in East St. Louis. For them was opened at first a commissary department in the Elliot Frog and Switch Works, which was abandoned later for the auditorium at the top of the City Hall. The quarters occupied at first had six feet of water at the time of my visit. Those who came here for food were given a ration consisting of three slices of bread, good coffee, hominy, baked beans, and ham. Here there were fed 600 on Sunday, June 7, 2,500 on Monday, 3,000 on Tuesday, 6,000 on Wednesday, and by Saturday about 8,000.

When tents came from Springfield, a spacious camp was organized and named Camp Washington, and later a second—called Camp Lincoln—for colored people.

The first relief problem that presented itself was the bodily rescue of those who lived in the partially submerged houses. One father and mother and grown daughter were found at a window, with the upper sash open, where they had stood on chairs all night with the water up to their armpits. It will be strange if the examination of the houses after the flood has gone does not show that others were drowned under similar conditions.

In the hurried escapes families were often separated. An employee of the Wabash Railway failed to reach the house in which his wife took refuge. With his baby he had afterwards come to some car-sheds with other refugees. The young wife thought they were both drowned,

but she kept begging others to find them. She would not eat nor sleep, and on the next day and the next she hailed every passing skiff and asked for tidings. On the third day, after she had been persuaded to go where there might be news of them, her eager search for her husband's face was rewarded. Then, and only then, says the reporter of the "Star" who relates the incident, did she break down and weep for joy. She was led to a cot, and there, worn out completely by her three days' vigil, she sobbed herself to sleep with her baby in her arms, while her husband stroked her forehead. The reunited family left later for their former home in central Missouri, passes being furnished by the road for which the man worked.

The relief organization in East St. Louis is already, and has been from the beginning of the acute situation, in the hands of responsible and sensible citizens. It is their desire to make the relief given as much as possible in the nature of complete indemnity for the actual loss. This is in most instances difficult to estimate, as the household goods have not actually been destroyed as by fire or tornado, but are simply more or less completely ruined. Since the embankment on the north did not break, the water has surrounded the houses gently, and they are not dashed to pieces or perhaps greatly injured. But certainly not fifty dollars, perhaps not one hundred dollars, will cover the average loss of each family in the actual effect of the flood on the family possessions; and, besides, all employment is at a standstill in the extensive stock-yards at the railway terminals and in the factories. For the citizens, taxes will necessarily be enormous to repair the injuries to streets and public property. East St. Louis has had great losses from the tornado of a few years ago, from strikes, and now from the flood. The case is one for generous outside gifts.

The response to this demand at her back door from St. Louis will be generous. The Merchants' Association which is her Board of Trade and Chamber of Commerce has issued an appeal and has raised at this writing \$25,000. Of this \$1,000 was sent to Topeka, and an equal sum to Kansas City, Kansas, and \$500 has gone to Charleston, Illinois, where there are many refugees from the surrounding low-

iands. Madison, Brooklyn, and other places on the Illinois side in the immediate vicinity of St. Louis will also need and are receiving succor. There will be no difficulty about supplying the food and clothing needed for the moment, but for

those larger plans of partial money indemnity so wisely conceived by the relief committee in East St. Louis at least four times as much will be required as has yet been received.

St. Louis, Missouri.

# The Creed of College Men'

## I.—The Creed of Science

**N**O man in either Great Britain or America is more famous as a scientist than Lord Kelvin, perhaps still better known to many students and readers as Sir William Thomson. Lord Kelvin's discoveries and inventions in connection with electricity, and more particularly in the work of submarine telegraphy, his writings on physical and mathematical topics, and his services to the world of science and the world of thought, have made him pre-eminent in those fields. The following brief address, to which reference has been made in the American press, but which we do not think has before been published in full in America, may be taken as the latest word which physical science has to say in answer to the question, Shall we believe in God? It followed, as will be seen, an address by Professor Henslow:

"I am in thorough sympathy with Professor Henslow in the fundamentals of his lecture; but I cannot admit that, with regard to the origin of life, science neither affirms nor denies Creative Power. Science positively affirms Creative Power. It is not in dead matter that we live and move and have our being, but in the creating and directing power which science compels us to accept as an article of belief. We cannot escape from that conclusion when we study the physics and dynamics of living and dead matter all around. Modern biologists are coming, I believe, once more to a firm acceptance of something beyond mere gravitational, chemical, and physical forces, and that unknown thing is a vital principle. We have an unknown object put before us in science. In thinking of that object we are all agnostics. We only know God in his

works, but we are absolutely forced by science to believe with perfect confidence in a Directive Power—in an influence other than physical or dynamical or electrical forces. Cicero, by some supposed to have been editor of 'Lucretius,' denied that men and plants and animals could come into existence by a fortuitous concurrence of atoms. There is nothing between absolute scientific belief in a Creative Power and the acceptance of the theory of a fortuitous concurrence of atoms. Just think of a number of atoms falling together of their own accord and making a crystal, a sprig of moss, a microbe, a living animal. Cicero's expression, 'fortuitous concurrence of atoms,' is not wholly inappropriate for the growth of a crystal. But modern scientific men are wholly in agreement with him in condemning it as utterly absurd in respect to the coming into existence, or the growth, or the continuation of the molecular combinations presented in the bodies of living things. Here scientific thought is compelled to accept the idea of Creative Power. Forty years ago I asked Liebig, walking somewhere in the country, if he believed that the grass and flowers that we saw around us grew by mere chemical forces. He answered, 'No, no more than I could believe that a book of botany describing them could grow by mere chemical forces.' Every action of free will is a miracle to physical and chemical and mathematical science. I admire the healthy, breezy atmosphere of free thought throughout Professor Henslow's lecture. Do not be afraid of being free thinkers. If you think strongly enough, you will be forced by science to the belief in God, which is the foundation of all religion. You will find science not antagonistic, but helpful to religion. In

<sup>1</sup> An editorial relating to the articles grouped under this general title will be found on another page.

conclusion, I have the pleasure to move a hearty vote of thanks to Professor Hens-

low for the interesting and instructive lecture which we have heard.

## II.—What is Christianity?

By Herbert D. Foster

Professor of History, Dartmouth College

After a personal canvass of the faculty and others, a club composed mostly of members of the faculty was organized the past winter at Dartmouth College to discuss Professor Harnack's book, "What is Christianity?" To secure informal and free discussion, the meetings were arranged for around the large table in the Trustees' room at the library on Sunday noons from November to March. An executive committee appointed leaders and sent out a circular which gave the divisions of subject-matter and the dates for thirteen sessions, and stated that "free discussion will form the chief feature of each meeting."

The interest and attendance were greater than had seemed warranted from the replies received from busy men. The largest number was thirty-six, too large for the room, at the final session, and the average probably over twenty. Certain parts of the book—the authenticity of the Gospels, the question of miracles and of Christ's nature, and the fundamental query, "What is Christianity?"—called forth so much discussion as to demand each an additional session, and prolonged the number of meetings to seventeen. There were at least three surprising things in the sessions: first, the number and the character of the attendance; second, a freedom of view on certain points on the part of the older men which surprised some of the younger; third, a somewhat unexpected strength of faith on certain important points on the part of some of the scientific men.

Two lacks were felt. The first was expert knowledge on technical points in Christology and Biblical criticism; this was supplied by calling in experts from the Board of Preachers for three conferences. The second lack was any definite answer to the chief subject of inquiry; or, to put it in another way, the lack of getting at the essentials of Christianity, because of the time and interest absorbed

in discussion of mooted points. This difficulty was met by devoting the last two sessions to organized discussion of the question of the book and of the club. On Friday morning, March 20, thirty members of the club received a circular reading as follows:

"What is Christianity?"

The club studying the above question completes Professor Harnack's book next Sunday, March 22.

It has seemed to the Committee that an expression of the conclusions of members of the class would be of unusual interest; and that such expressions might be more numerous, explicit, and unreserved if submitted in writing and unsigned.

Will you kindly send before Sunday your own brief answer, unsigned, to the question, "What is Christianity?" The question may be subdivided or varied in form to suit the preferences of any one. The answers will be read Sunday, and it is hoped that they will be numerous enough to represent varied points of view.

On this two days' notice a dozen replies were sent in by Sunday noon. They were listened to intently and were then commented on by the men who had not written. With all the expected divergence of views on many points, there was hopeful agreement on the kernel of the matter. The answer was there in a nutshell, and substantially the same, though the nutshells were different. The thoughtfulness of the replies, the interest in the question, and the substantial harmony of conclusion seemed a favorable symptom in the religious life of the community.

Whatever is done or not done subsequently by such a group of men, the individuals who compose it have come out of the discussion with a keener interest in the nature of Christianity, a broader and more sympathetic appreciation of other men's views, a clearer discrimination between essentials and non-essentials, and a firmer personal grip on the root of the whole matter. It is an experiment worth trying elsewhere.

It was under the circumstances and

with the result described that the following answers were made to the question, What is Christianity?

## I.

The following essential elements, as it seems to me, are involved in the answer to this question, the omission of any one of which could be shown to do violence to the integrity and comprehensiveness of the idea of Christianity. Christianity is: First, *intellectually*, the belief at least that Jesus Christ is the son of God in some kind of unique sense, varying from Unitarianism to Catholicism, and that in him ultimately is the redemption of mankind, social and individual. Second, *emotionally*, the sense of the kinship and unity of man with God as symbolized by the word "Father." Third, *volitionally*, the conduct of life according to the will of God, in imitation of the example of Jesus Christ, and in the spirit of love, service, and self-sacrifice toward one's neighbor. Fourth, *socially*, the establishment of the kingdom of God upon the earth. Fifth, *historically*, the growth of the institution called the Church in the world as the instrument for enacting the Christian ideas. Sixth, *philosophically*, the manifestation in time through Jesus Christ of the eternal thought and love and will of God for man.

## II.

Christianity is not a philosophical system, nor a highly civilized cult, nor a historical research, nor a pure moral code, nor a temporary expedient for elevating mankind. It is not a meritorious human invention, nor a product of evolution, nor an inheritance of virtue.

It is more than these. It is a living force making for complete righteousness, sufficient for man's life in this world with other men, and revealing and providing for his life after death. It was given by the Creator of the world to mankind in recognition of its needs, suddenly, through a being in the semblance of a man, who showed himself possessed of wisdom, morals, spiritual and physical power beyond the human, and whose personality continues to be the central source of inspiration. It requires for full appreciation not only understanding of those matters capable of physical demonstration,

but also an inner consciousness of verities no less real. Its proof lies along the threefold line of history, of its visible effects upon individuals and the race, and of personal experience.

## III.

Christianity is not philosophy, but faith. Philosophy is selfish, pondering over the deep problems of life for the comfort of the individual. Its legitimate fruit is agnosticism, and its verdict, "All is vanity and vexation of spirit." Faith seeks rather the good of the world; its fruit is a Livingstone, and its watchword hope.

Christianity is not law, but love. Law looks backward—punishment. "Moses in the law commanded us that such should be stoned." Love looks to the future—encouragement. "Neither do I condemn thee; go, and sin no more."

Christianity is not head, but heart. Not all the wisdom of a Hume or a Renan can avail anything. "Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein."

Christianity is Jesus Christ with the invitation, "Come and follow me."

## IV.

Christianity is something more essential than any particular belief or form or dogma. It is the *spirit* of Christ. It is *following* Christ. It is the sacrifice and forgetfulness of self—the service of others. It is Faith, Hope, and Love.

## V.

As I understand it, what is wanted of the various members of the class is personal testimony. Mine is as follows: Christianity for me means the service and love of God and humanity, guided and inspired by the life and example of Christ.

I trouble myself very little about the philosophical and theological controversies that crowd around the Biblical account of Christ and the dogmas of the churches. Still, to rest undisturbed amid the turmoil of doubts and criticisms one must have some general theory to fall back on—some rational basis for his faith. Was Christ the Son of God in the sense of the immaculate conception? Did he perform the miracles with which he is credited? Did he rise from the dead in body? Is

the acceptance of his atonement the only means of salvation from sin and eternal punishment? Is eternal punishment thinkable? These and many other questions cannot be utterly ignored. I believe, however, that we may dispose of them without answering them, and pass on.

They are all questions of fact, and though one should be compelled to answer all of them in the negative, the spirit and meaning of Christianity would not have been destroyed. Christianity must have a deeper basis than mere objective fact, or it never could have taken the hold it has on the world. Tradition, education, and the Biblical narrative may account for much; but taken together they fall far short of accounting for the multitudes who follow Jesus of Nazareth. Christianity satisfies the heart and the rational will of man—that is its stronghold. If founded on facts, Christianity must stand or fall with those facts, and therefore lies at the mercy of historical criticism. If religion and morality are *a priori* and founded in the very nature of the human soul, then Christianity is imperishable, for the life of Christ and the history of the Church are fraught with meaning which cannot be destroyed by controversy over fact. Opinions differ, controversies arise, facts are refuted, but Christianity lives, for the human soul goes forth in great unconscious demands for God, freedom, immortality, service, and love, and finds its will satisfied, its meaning fulfilled, in the words and life of Christ. Were criticism to strip the Biblical account of all basis in fact, it would not rob the world of the moral and religious significance of Christianity.

#### VI.

I think the essence of Christianity best expressed by our Lord himself when he summed up the commandments: "Thou shalt love the Lord thy God with all thy heart and thy soul and thy mind and thy strength. Thou shalt love thy neighbor as thyself. Upon these two commandments hang all the law and the prophets." Accepting these fundamentals, all honest differences of opinion about doctrines are of comparatively little consequence.

#### VII.

From this winter's study I am impressed more than ever with the fact that

Christianity is the life of the individual, controlled by the personality of Christ; that dogma is fast receding into the past and authority is losing its hold on humanity.

#### VIII.

*Negatively.* Christianity is not a church, or a creed, or a ritual, or a system of morals. It could exist without ecclesiastical organization or fixed forms of creed or worship, or even without any system of morals save that of the state. These systems sometimes help and sometimes hinder Christianity. But they arise because of man's inborn desire for order; not because of the demands of Christianity.

*Positively.* Christianity is a general way of living and of regarding God and man. Christ, the founder of Christianity, was this way personified; and he so spoke of himself (John xiv. 6). This way, therefore, is that taught and lived by Jesus Christ as recorded in the four Gospels. Historically, Christianity is the way of living of men who have attempted to follow Christ's way. This way regards God as a heavenly Father and all men as brothers, and therefore God and man as objects of love and trust. The essential of the way was defined by its founder in each of the four Gospels: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself" (Luke x. 27; Matt. xxii. 37, 39; Mark xii. 29–31). This is "the new commandment," and the only test of discipleship. "By this shall all men know that ye are my disciples, if ye love one another" (John xiii. 35). The Lord's Prayer is the adequate expression of the desire to follow this way of living and of regarding God and man. This prayer of the founder of Christianity sums up the ideals of the way, and points to the sources of its power. One who has love for his fellow-men has the essence of Christianity. This is the founder's test. One whose desire and attitude toward God and man are expressed by the Lord's Prayer is a Christian.

Christianity, then, was in its origin Christ's way of living and of regarding God and man; since then it has been the way of living of men who love one another,

and whose aims and attitude in life are expressed by the Lord's Prayer.

## IX.

Christianity, as to the individual, is that ordering of life and conduct, that faith in God the Creator and Father of all, which conforms to the teaching and example of Jesus Christ.

Since this religion is revealed only in the New Testament, it is inseparable from a full acceptance of that Scripture as a true report of the earthly mission of Christ, the Son of God, of the teaching of himself and his disciples, certified to be inspired by the Holy Spirit, and ever since preserved to the Church by the providence of God. The validity of the revelation of God embodied in the Scriptures of the Old Testament was recognized by Christ when he said that he came to fulfill them, and so they are an antecedent part of the Christian revelation.

Christianity essentially involves and demands recognition of the supreme authority of Christ as our Lord, once God manifest in the flesh, evermore the divine Mediator and Saviour from sin and its doom, and for each believer the master to be loved and obeyed constantly. Moreover, it essentially includes full recognition of the Holy Spirit as the manifestation of divine power now bestowed, according to the Master's promise to work in human hearts and consciences, urging all towards righteousness, but especially conforming obedient souls to the pattern of Christ.

Christianity as a power in the world is embodied in the Christian Church, composed of those who confess faith in Christ and obey his commands: which church is the visible representative of Christ in the present dispensation; whose members, if true and loyal, are witnesses for their Lord in an evil world. The power of Christ in his Church has been manifest through the Christian centuries, in triumphs over paganism, barbarism, corrupt civilizations, and all the strength of adversaries.

Christianity points with certainty to the great future, in affirmation of the resurrection of the dead and the life everlasting. Hence the true Church in every age holds fast the promise of Him who is the resurrection and the life, and main-

tains the confident expectation of his second coming to assume complete sway over all the world, and finally to be the Judge of all mankind.

## X.

In the first place, I define religion as a system of faith and worship by which men acknowledge their relation to God, and through which they seek to put themselves in harmony with God and his whole plan of creation. I define Christianity as that system of religion which regards the life of Christ as the ideal for all men in all times and conditions, and as the means of attaining to this desired harmony. True Christianity needs no forms or ceremonies for its application, except the most simple communion of the individual soul with God. Christianity is wholly of the heart; it is liberal to all men; it allows the widest possible opinions, but it never allows criticism, research, theory, to undermine the great principle of the faith, but holds fast to its ideal—perfection.

## XI.

The attempt to answer the question, "What is Christianity?" suggests the attempt of New England theologians to make a comprehensive statement of the "Plan of Salvation." Christianity is the truth embodied in Jesus Christ and expressed in his words and deeds. No man and no period can grasp it all. Each man and each period apprehends and emphasizes certain aspects of it. To us, in our day, its chief teachings are "the Fatherhood of God and the Brotherhood of Man," and its law, Christ's summary of the Ten Commandments. Harnack leaves the conviction that the essentials of Christianity are not its historic facts nor its doctrinal formulæ.

## XII.

Christianity is faith vitalized and realized in personality, organism, and institution. It depends upon the personality, message, and history of Jesus Christ, and the continued development of the first causes in the lives, organizations, systems, and institutions of his followers.

The principal sources of Christianity are the New Testament writings, but not in a sense that requires their inerrancy as history.

The personality and message of Jesus,

doubtless, would have been transmitted without the Gospels, but the fact is that they have been transmitted chiefly in this way. This renders it probable, though not necessarily certain, that the account, on the whole, including the narrative of the advent and the resurrection, is substantially authentic.

The more essential features of Christianity are :

1. Faith in the uniqueness of the advent, personality, teaching, sacrifice, and history of Jesus Christ.

2. Actual experience by believers of personal union with God, of a kind best expressed by the term sonship.

3. A sense of personal loyalty to Christ.

4. Unselfish fellowship and emulation among believers.

5. Consciousness of the forgiveness of sin, and of the possession and joyful exercise of a power to live righteously.

6. Active, loving service in individual and corporate form of Christian work, with a confident hope of a larger life, in closer union with God, after death.

The original impulse of the founder has been continually modified in passing

through the media of subsequent development, and Christianity will not be a finished product until the passing of the last individual Christian.

### XIII.

I think of Christianity, on the divine side, as God's endeavor to declare his desires and purposes toward men in terms of life. Therefore Christianity seems to me to be the ultimate religion. No other method of communicating himself than through life could be complete and satisfying. This method having been taken, nothing more can be reasonably expected. All the great elements of a personal revelation—truth, justice, mercy, sacrifice—meet in Jesus Christ.

Personal Christianity seems to me to be the appropriation by faith of the life of Jesus Christ. Faith is not the ambitious attempt to imitate Jesus; it is the simple acceptance of him in his personal relations to the individual soul. It is the grateful surrender of the life to the spirit and purpose of Jesus. Personal Christianity is the appropriation, according to one's capacity, of whatever Christ has to confer.

## III.—The Creed of a College Class

By William De Witt Hyde

President of Bowdoin College

It is the custom in the course in government at Bowdoin College to require each student to write out his individual political platform; so that in case of future Fullers, Fryes, and Reeds we can trace the development of their opinions from their college views. One's religious creed bears much the same relation to the study of philosophy that one's political platform does to the theoretical study of government. Accordingly, I asked a class of sixty students, mostly seniors, to write out their individual creeds. In these individual creeds I asked each man to state as exactly as possible both his belief and his unbelief; and to define, as far as possible, the sense in which he held the things in which he believed and the sense in which he rejected the things he did not believe. I then reduced these sixty creeds to a single composite creed.

Into this composite creed I put everything which any student had affirmed, except what some one of them had denied; aiming in this way to get a class creed to which each individual member would assent. I distributed copies of this composite creed to each member of the class, and invited criticism and amendment. We then spent two hours together in discussing the articles of the creed one by one; making such modifications and concessions at each point as were necessary to secure their unanimous acceptance by the class. At the end of the second hour the creed was adopted by a unanimous vote.

Of course a creed composed in this way is by no means an ideal or model creed. Many of the individual creeds were far more positive and comprehensive than this composite creed. As showing, however, the things on which a typical

college class can agree, this creed may be of interest. While many things are of necessity left out which we would like to see included, yet the fact that a typical college class can agree on as much as is included here is a sufficient assurance that the great institutions of Family, State, and Church will be safe in their hands; and that their fundamental attitude toward God, duty, and life, if not quite the traditional one, is yet positive, wholesome, and reverent. I inclose three creeds: one of the more conservative type, one of the more radical type, and one the composite creed agreed upon by all the class:

#### A CONSERVATIVE COLLEGE CREED

##### *I believe in*

1. God as the central power of the universe, present alike in the works of man and nature.

2. Christ as the truest expression of the character of God and the supreme example for man to pattern after.

3. In the Holy Ghost as that which urges man to better and higher things, and especially that which creates in the breast of man the love and trust in the Infinite and the satisfaction and peace at the knowledge of doing His will.

4. Prayer as the effective means of obtaining what is for our permanent good when coupled with the efforts and faith of the asker. Also as the surest way to keep before man's consciousness the example of Christ's life.

5. I believe in the eternal life as the survival after death of the mind of man.

6. In heaven as the knowledge that we have lived to the best of our ability after the teachings of Christ.

7. In hell as the realization of falling below our ideals through our own faults.

8. In salvation as the conscious choosing by man of the life of Christ as his ideal and pattern.

9. In the whole Bible as the inspired word of God to man. In that all that which is high and noble comes from God. Also that the Bible is, as a whole, the truest expression of God's will to man.

If perhaps some things appear to be beyond the understanding of man, and apparently contrary to science, I remember that science is the product of man's observation, and that there may have been extra-scientific things beyond the

comprehension of man. Again, there is so much symbolism throughout the Bible that it is hard to separate it from what was intended as fact. Therefore it is possible for me to see truth in the whole of the New Testament, either actual or symbolical.

#### A RADICAL COLLEGE CREED

##### *What I do not believe.*

I do not believe in the doctrine of original sin, nor in the various Biblical miracles, nor in the divine conception of Jesus, nor in the doctrine of atonement, nor in the Trinity, nor do I deem it necessary to believe these in order to be a Christian.

##### *What I do believe.*

I believe in the existence of God, a divine Creator and Ruler, who is only personal to the extent that He has purposes and effects results.

I believe in the fundamental, immutable principle, Truth, akin to God, if not synonymous with God; that this Truth is the only imperishable thing in the universe, and that all other things are ephemeral.

I believe that as certain human beings have to a finite extent apprehended a bit of the Truth and promulgated it, they have become known as great teachers, and won followers through the inherent yet passive force of the Truth.

I believe Jesus Christ to have been the greatest of these teachers, inasmuch as he apprehended the Truth to a greater degree than all others.

I believe his doctrines to have spread, not through the agency of any active spiritual essence known as the Holy Ghost, but because of their own inherent immortality and the transitoriness of all opposition.

I believe Jesus Christ to have been divine only as he expounded the Truth. even as Confucius and Buddha, Socrates and Mohammed, may likewise be called divine, though to a less degree.

#### THE CREED OF THE CLASS OF 1903

I believe in one God, present in nature as law, in science as truth, in art as beauty, in history as justice, in society as sympathy, in conscience as duty, and supremely in Christ as our highest ideal.

I believe in the Bible as the expression

of God's will through man; in prayer as the devotion of man's will to God; and in the church as the fellowship of those who try to do God's will in the world.

I believe in worship as the highest inspiration to work; in sacrifice as the price we must pay to make right what is wrong; in salvation as growth out of

selfishness into service; in eternal life as the survival of what loves and is lovable in each individual; and in judgment as the obvious fact that the condition of the gentle, the generous, the modest, the pure, and the true is always and everywhere preferable to that of the cruel, the sensual, the mean, the proud, and the false.

## Fiction-Readers and the Libraries

By John Cotton Dana

Librarian of the Public Library of Newark, New Jersey

SEVERAL observers of the book market have recently remarked that the day of the booming of the novel is nearly over. They think that the time when a new story can be puffed and advertised into tremendous popularity is past. This opinion has little basis in fact. Novels have been increasingly with us for a round hundred years. For several thousand years men have taken pleasure in prose fiction. Like the ruler, the priest, the trader, and the artist, the story-teller has been with us from camp-fires to cities and from huts to palaces. We cannot shake him off, and would not if we could. He has made us known to ourselves. At his best he has interpreted life for us, broadened us and mellowed us; at his poorest he has diverted us and made us forget the pettiness of our work and spirit. When his tales found the opportunity of print, and multiplied themselves a thousand times in an hour, his fascination did not increase, but his circle of listeners widened. It is widening still.

Consider the present situation and its signs of the future. There are to-day in this country probably twice as many readers of newspapers as there were ten years ago. Many of those who read before now read more. But those who read ten years ago could not, if they read all day and all night, consume the thousands of millions of papers and journals our presses now give us each year. The ranks of the readers get new recruits every day. A few come up into the reading class through high schools and colleges; but only the smallest fraction through the latter, and only a pitifully small percentage through the former. The most come up through A, B, ab, street signs, posters,

nickel stories, and the daily paper itself. Not all of us are readers yet. There is much popular error on this subject. Few adults in America are illiterates; but not all who know how to read take advantage of their knowledge. The majority of all the possible readers in this country do not, properly speaking, read at all. I mean this literally. I do not mean that they do not clearly understand what they read, but that they do not use print, save very rarely, for any purpose whatsoever. But out of this majority there are passing every year thousands and millions into the reading class. That this change has been taking place rapidly in the past ten years the growth of newspaper production and of an accompanying newspaper consumption in that period is abundant evidence. That the transformation is not complete, that many millions of literates have yet to graduate into the class of actual readers, could be shown by statistics of present newspaper consumption and of the possible readers in the country, set forth in connection with a study of the areas in which the present output of reading is consumed. Every month and every year a new army of users of print marches into the field out of the country of the non-reading. This army is recruited partly from the additions to our population, but chiefly, as I have said, from those who could read before and did not. These incoming hordes of devourers of books are nearly all of the class that gets its fundamentals only from the public schools, its practice from wayside fences and daily papers. They want the facts of life. They get them, disjointed and disconnected, from the newspapers. They want also the story; the romance; the

continuous, connected narrative, reflecting their own life, but touched with more emotion than they are quite conscious of, and painting their ideals in bright, unmistakable colors with broad, strong contrasts. In a word, they want stories. At first they read chiefly authors whose names never appear in our literary journals. They read them more than any save careful observers ever realize. Gradually, out of the many millions, a few millions come into the field which we complacently speak of as "current literature." And these few millions are they who make it sure that novels, as they appear in this field of current literature, will continue to sell in huge editions, and will continue to be as readily subject to booms by skillful advertising as the latest soap or the newest health food. The sum of it all is, the people, as always, want stories.

And stories are probably good for them. The novel to-day seems to express the present man more fully than any other form of literature. It is the most common form of art. It can touch all subjects, express all feelings, teach all doctrines. Unless all signs fail, it is sure to widen its field still further, to become still more widely read, to teach us more readily, to set forth our character, history, and aims more comprehensively still.

As a librarian the subject of novels interests me keenly. The librarian is a public servant, appointed primarily not as a censor but as a distributor of books. He is employed to supply, but within certain limits, the books the people ask for. What are the limits? The people wish novels; novels are probably helpful to them—which novels shall he give them?

Financial considerations compel a selection. No library can buy all. Help in finding an approximate answer to this important question can be got by learning which authors, by the libraries' own showing, are chiefly in demand to-day.

From thirty-four typical libraries in this country—libraries ranging in size from those of New England country towns to those of cities like St. Louis and Cleveland—I obtained lists of the names of all the authors of fiction for adults represented by the novels lent on three separate days; also figures showing the total number of books of each author lent on the three

days. These names and figures I have tabulated, and I give some of the more important results below.

In reading the names and figures several things should be taken note of, if we would avoid an entire misunderstanding of them. In the first place, this list shows the preference, not of book-buyers, but of free public library users. Of course borrowers at public libraries are also buyers of books, but this list represents their preferences as borrowers. General observation permits us to conclude that it represents fairly well also the preferences of the borrowers, and others, as book-buyers. The "best-selling" novels of a given week are usually the most often-asked-for novels at the public libraries. This list, however, fails to follow the best-selling list more closely than it does because not all libraries buy all the best-selling novels, and because the borrower at the library usually takes some novel, even if he cannot get the novel of his choice; and because this list, being a list of authors, not of books, is affected greatly by the fact that some of the authors in it are represented in most libraries by many different titles. Crawford, for example, stands first, partly by reason of the fact that he is almost always on the shelves. He is taken many times as a last resort. He is fairly popular; and then there are so many of him!

Then we should remember that this list represents in a measure the preference for books of a certain general class, rather than a preference for specific authors. Mary Johnston and Winston Churchill, for example, stand near the head; but they are there because their books are of the type now popular—historic, dramatic, simple, and superficial, rather than deep and elemental. Were they to publish no more books, their names would drop out of sight on another list of this kind made up a year from now; while Dumas and Dickens, men of more individuality, appealing to more permanent tastes, would occupy about the same positions they do here.

Again, this is a list of writers, not of books. Were it a list of books, we may be sure the names would be very differently arranged. Mr. Crunden, of the St. Louis Library, has shown, by careful study of the issue of the more popular of the

novels on his shelves, that "Les Misérables," "Vanity Fair," "The Three Guardsmen," and other books, put by common consent among the great books of the world, are those most often read by library borrowers; that they maintain their places in the front rank, in spite of the seemingly greater popularity of the novels of the hour.

I have alluded to the fact that Crawford and other authors of like fecundity, as King and Roe, owe their prominence in part to the fact that they have written so many books. They are assisted in gaining their eminence—I am not now attempting to say whether that eminence reflects credit on the work the public libraries are doing or not—by the practice which is common in libraries of buying all the works of an author as they appear once he has gained the public's ear. It is quite customary, for example, having met the public demand with a dozen copies of the first success of Jenkins, to buy a dozen of Jenkins's later efforts as they appear, regardless of the question of their merit. And while they are doing this, librarians neglect, as inquiries I have made have shown, to supply the constant demand for the older novels on which time has set the seal of approval. Of a list of one hundred of the best novels, compiled by any competent judge, most librarians would find on their shelves in the busy season hardly more than half, in good presentable condition. This manner of novel-buying of course works to the disadvantage of the standards, and helps to bring into greater use the authors we find first on my list. But here another fact should be borne in mind—that, of popular novels of the hour, no library buys enough copies to supply the demand. As it is the actual demand we are trying to measure, our figures fail us in that they show the demand as modified by an insufficient supply. If all the libraries contributing to this report were to purchase the latest popular novel up to the limit of the inquiries made for it, a list like this would change as to the authors which stand near its head almost from day to day. Probably this ever-present limit of supply gives us in these returns a better index to the character of the average reading called for than would like returns from libraries

which supplied all calls for the latest craze in fiction.

To make the significance of this list and its accompanying figures perfectly plain, I should say again that in thirty-four representative libraries in this country there were lent on three days in the current year a total of 19,144 novels. These novels were by about 1,200 authors. Of the total number of novels—in round numbers, 20,000—678 were by F. Marion Crawford, 535 by Rosa N. Carey, 486 by Alexandre Dumas. Only those authors, seventy-seven in all, are here given whose books were lent to the number of more than seventy.

Novelists pleasing to the ladies are in the lead. Carey, Douglas, Amelia Barr, and Burnham are universal favorites with the women whose literary life is not unduly strenuous, who like a story of true love dealing with a manner of life not conspicuously differing from their own. These leaders in popularity, like almost all on the list, are proper, conventional, and clean, and if the common opinion about novels and novel-reading is correct, they may be said to be, with few exceptions, wholesome.

The writers of fiction whom time has tried and experience has approved of are not near the front. Of Dickens, Scott, George Eliot, Thackeray, and Hawthorne, 772 novels were read out of the total of 20,000, or less than four per cent.; while Carey, Douglas, Barr, Burnham, and Captain King found favor in the eyes of 2,087 borrowers, or nearly eleven per cent. of all.

These figures probably represent fairly well the popular taste; that is, they represent the taste of that small portion of the community which keeps in a literary way up to the level, in general journalism, of the "Ladies' Home Journal," and in current literature of "The Bookman." These readers include most of the readers of such books as come rightly or by a kind courtesy into the field of "literature." Of all the readers in the country they form, as I intimated earlier in this paper, only a small part. But they include most of the managers and directors of affairs. They are the substantial, socially efficient people on whom we rely. And this table here is a bit of evidence as to the wholesomeness of their tastes.

Of course, if libraries were not all censors of reading in good degree, if they did not choose to keep the most frothy and the undeniably filthy from their shelves, this would be a different showing. But with shelves thus unguarded there

would come to them much more freely other elements of the community, and our list would no longer be so closely indicative of the tastes of our friends and neighbors. It would speak of tastes which we know exist, but find it possible to ignore.

*List of the names of authors of fiction for adults more than seventy of whose works were borrowed in three days at thirty-four representative free public libraries in the country, with the number of copies borrowed in each case :*

## A Midsummer Bridal Procession

By Evelyn C. Morse

**I**N your secret heart you have probably decided that June is the month of brides, and with Lowell you say, "Now God be praised for June," but we know that midsummer offers a bridal procession worthy to be "reviewed," and we have taken it upon ourselves to be present at each morning rehearsal.

The day for the final ceremony is not yet set, but the gowns, all white, must be made ready, and that takes time and much supervision.

And who are we that dare take upon ourselves this task? for it is a company of guests bearing titles, long, even polysyllabic, if they are all told, that make up the goodly number, and the fitness of each candidate for admission to the train must be without question.

We are two in number: one, just a body with two eyes that see and two ears that hear; the other, a splendid four-footed creature bearing the royal name Victoria.

Her joy is unbounded when the signal

comes that we shall start, and it is a question with me just how I shall discipline her when the final day of gravity comes; though even now, in case of need, she will "heel in" as I walk on, and "charge," as a true setter should, when one of the musicians sings his solo in a neighboring tree; for her wild antics at the thought of starting might distract the attention of small guests. Nevertheless she has her own gown ready—white, with just a touch of black on ears and paws for distinction.

The sun rides high, and our path lies down the road, across the level hill-top, for this procession bids us come to view each guest, white-robed, as he stands ready in his place. So Vick and I march on with what stateliness we may, to be worthy of our waiting company.

Close at hand look up to us the first asters; tiny white ribbons they try to flutter, but the little straps are so short that they fail; the big white daisy beside them smiles indulgently with her superior inch

or more, and the pretty Mayweed across the road calls us to look at her soft green leaves that are delicate and fern-like. Vick sniffs her approval, and we are glad of the starry little faces that look up to us with such genuine pleasure.

The next aspirant is tall and stiff, and we are not quite sure that he is an acceptable member, but we glance again, and his pretty, green, finely cut leaves quite compensate, and we accept the yarrow as a proper guest, and know that if he grows dingy before the great day, his younger brother will have a fresh, unspotted suit.

A whole family of white clover sprinkle incense and the air grows sweet, so sweet that a few blush pink from very joy.

A little break comes now, and we listen, holding ourselves entirely still; then floats out on the air, not a wedding march, no, not that yet, but the song of the robin, mellow and liquid, and prophesying happiness with every outburst, and in a moment the song-sparrow adds his sweet note from the old rail fence.

Vick is so sure now that all will be well that she begs me to accept some white, round berries that are, unfortunately, tinged with green; but they are so sturdy and strong, and put on such bright blue jackets when they are ripe, as many of them have done already, that I cannot resist, and doggie and I in our greediness lessen the number of the blue-coated ones, that we may keep their color in its purity, remembering all the while those pretty white blossoms that came first, hoping to be accepted, but in their eagerness coming too early. I suspect the early berries were soured a little through disappointment, but grow sweet with age and sunshine, as we would have them do.

Then, look! around that splendid gray-white stone runs a blackberry vine, wreathing its glossy green leaves and snowy-white petals as if the old stone itself were the bride and they the orange-blossoms; and the round white buds are just as pretty as those from warmer lands, are they not?

Over the fence clammers a wild morning-glory, its white tubes making friends with the bees; then Vick forgets her solemnity and races down the hill; the little blue-white butterflies bid me look at them as they go whirling by; and my

glance goes up and up, and there are the great snowy clouds all arrayed in their shining white puffs.

So many are the guests that I begin to wonder if the white church in the distance will hold them all; they may have to keep to the great outside till the very end, if the number grows.

Across the stone wall stands a claimant, and as I cast a critical eye a soft "everlasting" looks up at me with an innocent confidence that is irresistible, and I add her to the list.

Just beyond, a mullein-stalk holds his candle-light gleaming yellow even with the sun as a strong rival, and whispers to me that if the day grows dim he has ready a host of primroses, some tall buttercups, and the dignified St. John's-wort, all of which will be ready to give steady light, for he holds in contempt those flickering fireflies that flit and dance and never once may be depended upon.

Occasionally a "black-eyed Susan" lifts her head in pure curiosity to see the white-robed elect, and we wonder if yellow jealousy stirs her breast; but Vick thinks not, and bounds on to a singing brook, where she shows me what I had almost overlooked—the little arrow-head lily, modest but ready for the call, with her three-gored white petticoat lifted high from the mud in which she stands.

The water is so cool and inviting that we leave the rest of the sunny roadside company for another day, and follow on, till in the distance, surrounded by dark, still sentinel trees, with now and then a tall elegant "lady birch" in full white splendor, whispering secrets all the day, gleams a pond, and there, waiting for and confident of our admiration, a hundred snow-white lilies with breath such as a Parisian *parfumeur* may never hope to equal.

Here, I say, we must stop, for naught else to-day can stand the test; but Vick pleads so hard with her soft brown eyes that I compromise and take the long way home through the woods; and there, lining the grass-grown road in quiet beauty, the tall meadow-rue holds her delicate feathery flowers before us till we choose them for the bridal veil. The elder-bloom spreads her white, flat clusters for the banquet table; the wild clematis hangs her trailing garlands, and a bit farther on we listen; yes, 'tis true, a fairy tinkle—the wedding-

bells—there they nod, those golden lilies from their exquisite green whorls; and the delicate ferns and mosses spread a carpet for the royal pair; then we remember that abundance of "Queen Anne's lace" which we saw yesterday in the open field, and conclude that that is none too good for the gentle bride.

And the bride and groom worthy of such beauty, such guests for whom rain and sun, earth and air, have toiled these many

months to fitly clothe for the coming day, who are they? Can you not divine? Then go you down the self-same quiet roads, and if you do not have a hint, then go again and again; it will be well worth your while—and some day you will know, and you shall be counted worthy to be present, ay, to be yourself chosen as one who yields to the great sweet nature-world allegiance and promise of lifelong companionship.

## New Occupations for Educated Women

By Mary Caroline Crawford

OUR colleges, high schools, and seminaries will have graduated this year, as for several years past, tens of thousands of alert, healthy, mentally well-equipped girls, a large proportion of whom must enter the world's life and become self-supporting. The great and pressing problem is, "How?"

No longer in these days is it a foregone conclusion that because a girl has received a good education she will support herself as a teacher. Happily for our children, the teaching profession has now attained a dignity which places it beyond the hit-or-miss services of any college or high-school graduate. Moreover, girls themselves are branching out in this twentieth century into trades and professions which offer more opportunity for individual resource and individual enterprise than does the profession of the pedagogue. The girl of the period wishes to get into touch with the larger life of the world, to feel, through her occupations, some pulsations of our own Time Spirit. For this reason she seeks new fields of labor. But, rather paradoxically, many of the new activities in which educated women are engaging with signal success prove, when closely examined, to be reversions to the primitive occupations of their grandmothers. Only the aspect of them has changed.

A notable example of this is afforded by the highly successful bakery which is now being carried on in Cambridge, Massachusetts, by two clear-eyed, level-headed, well-born and well-bred college girls. The furniture in the salesroom of this unique establishment is after the most

approved William Morris standards; on the walls are quotations from Tolstoian books on the dignity of labor; beautiful pictures, tastefully framed, decorative palms, and a handsome rug complete the equipment of this highly interesting bake-shop. And here, in the artistic setting they have created for their excellent wares, the two college girls themselves are kept busy all the time disposing of their bread and bread-sticks for just twice the sum charged by other bakers.

"Without a vision," remarked wise old Solomon, "the people perish." The young brains behind this Laboratory Kitchen have caught the vision of better things in the industrial order, and they are inspiringly working it out. That their efforts are meeting with great success is a tribute to the public's receptivity as well as to the value of their idea. To this idea there are, of course, two distinct sides—that of the worker and that of the product. Of the former too much can scarcely be said. But on the latter it is not our purpose here to dwell. Suffice it, then, to remark on this point that bread for which people are glad to pay twice the ordinary price must possess a merit not to be had in the wares of the corner shop. That is plain on the surface.

Now for the workers themselves, and the idea for which their Laboratory Kitchen stands—an idea very well worth publishing to intelligent young women the country over. Miss Stevenson, the manager, is a South Carolinian, and when she lectures, as she sometimes does on her trade, she begins by remarking: "My grandfather was a judge, but I am a

baker." She firmly believes, as one very soon discovers from a talk with her, that there is not really, and so should never have been socially, that great gulf we have honored for years between people who work with their brains and those who work with their hands; and she feels strongly that there is a place commercially for the college-bred in the improvement of the quality of the necessities of life. Hence the text engraved on every package that leaves the shop: "There is nothing finer than common bread, unless it be bread of a finer kind."

The way in which this original young woman came into the profession of bread-making is most interesting, for naturally something akin to "conversion" has to be experienced by a Southerner of aristocratic training before the point of view that bread is worthy of a life's devotion should be attained. While a student at Converse College in her native State, Miss Stevenson became greatly interested in chemistry, specializing for three years on the subject. Later she spent several terms at Radcliffe College, Cambridge, studying English, that she might be able to express clearly and well what she had to say about chemistry. All this time her intention was to follow the beaten track, and teach chemistry. At about this stage of her student career, however, she fell under the influence of a large-brained woman whose breadth of scholarship and sane philosophy of life communicated to her such a grasp upon the underlying principles of things as was calculated to work a veritable revolution in the girl's point of view. There began to be borne in upon Miss Stevenson the truth that bread, because it is one of the necessities of life, is a thing needed in perfection. Whether there would be a demand for a bread made in perfection she did not know. But the accident of meeting then Miss Frances Elliott, the daughter of a Toronto physician, who had likewise specialized in chemistry, and was willing to make with her the hazard of a bakery such as she had thought out, decided her course. Miss Elliott had also been a pupil of the inspiring teacher, and she was a graduate of the University of Toronto. Further, she too had studied in Boston and knew its ways. Cambridge was accordingly chosen as the place in

which to make the experiment of the Laboratory Kitchen.

The girls had been told that the city on the Charles was hospitable to ideals, but at first they did not find this to be altogether true. For some time, indeed, the college folk, with whom they had previously maintained pleasant social relations, looked upon their venture askance. Then one day the much-lamented and universally beloved Mrs. Alice Freeman Palmer, hearing that two college girls had started a Laboratory Kitchen there in her neighborhood, went down to their pretty salesroom, and over the purchase of some bread for her own lunch-table made their acquaintance and asked permission to call upon them in the little home they had set up a block or two away from the bakeshop. After that there was no question in the minds of Cantabrigians.

At the beginning, while they were perfecting their recipes, these two young enthusiasts did all the baking themselves. Within three months they paid expenses. The demand proved to be much greater than they had expected. "I find people appreciate a good thing in any line when it is made with an eye on the article and not on the cash register," commented Miss Stevenson in speaking of her immediate success.

"Personally," she continued, "I am immensely interested in the economic side of this business. I myself so firmly believe that people need workers more than talkers that I am very glad indeed to have proved that a girl can earn a living in labor of this kind. We now have five helpers, all of fine quality. We are busy enough to need two shifts in the kitchen, with eight hours a day for each. When it becomes necessary to keep our ovens going all the time, we shall put on more helpers. We bake ninety-six loaves at a time, and make three kinds of bread—a health variety from a formula purchased of a New York physician, cream bread, and whole-wheat bread. The health bread is for people who cannot digest the other kind, and it has two recommendations. Mrs. William Dean Howells said it saved her life, and the Department of Chemistry at Washington has pronounced it the only bread ever analyzed which is free of yeast when done."

Miss Stevenson defends, whenever she

has opportunity, her firm conviction that the process of bread-making is very interesting to the educated woman because of the intelligence required to perfect it. And bread-making appeals, for far-reaching reasons, she holds, to the college woman. First, because of its fundamental relation to daily living—right nourishment of the body being the first step toward right behavior of the mind; second, because of its possibilities in what the modern mind realizes to be the elementary and very significant field of life, the business field, this occupation, she says, should claim a high place. Business is to-day the great field in which all classes are included. And yet it is the only field which has no controlling ideal. There is but one way, she and her partner believe, to save the nation from the present warfare between master and slave, and that is for the educated people to come down from their vantage-ground as onlookers and enter the workaday arena, matching trickery with truth, selfishness with service. Then, too, there is room for the college-bred woman here—which is much.

Something like these same ideals—though perhaps not so clearly defined—were the compelling motives which led two Wellesley girls to undertake the management at Wellesley, Massachusetts, of a tea-room, which has now grown to be a College Inn. The students of the College subscribed last year for the stock in this Inn, and thus the clever young "promoters," themselves Wellesley graduates, secured the funds necessary to the erection of a fine new building. And it is in this building, not yet a year old, that the restaurant which had already become a feature of student life at Wellesley is now carried on. Further, the house affords ample accommodation for alumnae returning to their Alma Mater for a few days' visit, the preference being given at crowded times to graduates who are also stockholders. In connection with the Inn and its excellent restaurant, these enterprising girls run a successful weekly paper, the first ever made to pay in a girls' college. Business ability, social qualities, and a devoted love for the college with which their enterprise is unofficially connected, may be held to be the qualities responsible for their decided success. Certainly they had had absolutely no

experience in hotel or restaurant work when they opened their tea-room. They only knew that college girls are eternally hungry, and that a pleasant, well-conducted little tea-shop would receive plenty of patronage. So they got in "Aunt Mary Jane," a negro cook who had been in the family, and took a shop. Then the Inn grew to fill a very real and long-felt need. And though the corporation is not yet three years old, it is already very firmly established, and pays handsome dividends to its stockholders and to Miss Mary E. Chase and Miss Caroline Rogers, its President and Secretary.

One other college woman venture of a decidedly domestic nature is the Sunshine Laundry, carried on in Brookline, Massachusetts, by two Smith graduates. A feature of this establishment is the cleanliness and airiness of the rooms in which the work is done. Higher prices than are commonly charged for laundry work are here demanded, but none of the hundreds of regular customers on the establishment's list demur at larger bills, since these insure better service than could be anywhere else obtained.

Another college-bred girl that I know has gone into the employment business. From her own experience she has observed that ladies are in constant tribulation because of inability to secure good help willing to stay in the service. And from her work in a college settlement house she had come to have a good understanding of the servant's side of the question. She saw clearly that what was needed was a higher sense of personal obligation on the part of both people making the contract. She allied herself, therefore, with a woman's association of standing, and there she now carries on an employment bureau which is going far to solve the problem, by dissolving the difficulties, of the servant situation. For, while the mistress makes concessions to the maid in this establishment, the maid similarly obligates herself to the mistress. Then, if both are honest—as they usually are—the contract entered into bids fair to be a tolerably stable one. This is a work which requires no capital whatever, and one in which any girl interested in matters sociological, and possessed of warm human interest and a fair amount of tact, might easily engage without leaving her home, provided, of course,

that home is in a sufficiently large town or city to offer opportunity for the work.

The office of the Social Secretary supplies a similar field of service, though naturally one of larger dimension. The department stores nowadays employ in many cases a tactful, well-bred, sufficiently forceful woman to stand between the firm and the employees wherever the latter feel a grievance; but an even more interesting phase of this work is in connection with the factories of enlightened mill-towns. At Ludlow, Massachusetts, near Springfield, Miss Louise Holmes is employed in this latter fashion, and has some eight hundred girls under her charge. The management of the Ludlow Mills has ever been eager to render life as interesting and healthful as possible to the many people in its employ; but until recently little that was definite had been done for the unmarried girls of the place. That these girls were in great need of healthful and uplifting occupation during the hours outside the mill was then observed, and the graduate of an industrial school was sent for. An unused office building was at once given into her charge. The only direction she received was, "Do what you can for the girls here."

The suggestion of a cooking-school was made, and no sooner made than acted upon. The very next day, indeed, mill carpenters were sent over to remodel the building. Partitions were torn down, and an attractive reception-room made. Another room was adapted into a cozy office, and of still another a sewing-room was made. The second floor was fitted up for a kitchen, and the basement was furnished for physical culture work. Then the bosses in the different departments of the mill announced that the management had established a free Girls' Institute, and that all those who wished to know how to cook would please report at the building across the way at seven o'clock. Long before seven the girls had formed in line, and that very night two hundred registered in the cooking classes. This was a couple of years ago, and the good work is still going on. To the cooking lessons have now been added basket-ball and other physical exercises. Over all of these the Social Secretary has a careful eye. She lives in the model boarding-house which the company has erected,

and, by her friendliness, her good sense, her Christian sympathy, and her womanly wit, stands incalculably for the uplift of those eight hundred ardent, enthusiastic, lovable, and loving mill-girls under her charge. Surely this is a field of usefulness which might and should interest any high-minded twentieth-century college graduate.

Prince Kropotkin was pleased to indorse the next new profession to be described, a school in the South End of Boston where a little group of apprentices are being taught to make real point lace by Mrs. Emil J. Weber, a Boston woman who has worked up the industry entirely by herself, in connection with one of the college settlement houses. The way in which Mrs. Weber acquired her present expert knowledge of lace-making is full of interest. "I cannot remember the time when I was not interested in laces," she says, "but I had no thought at first of turning my particular bent to any industrial use. I just wanted to learn how to construct the filmy web and delicate patterns I so loved. I felt that if women in other countries could make lace, I could. At least I made up my mind to try it. I used to cut up dollars' worth of lace to see how the threads were twisted; I examined them under the microscope; I hunted everywhere for some one who knew about lace-making. At last I found an Italian woman who is a maker of torchon. She it was who taught me the first principles of pillow work. Friends of mine then loaned me rare bits and choice patterns of lace, and my interest in the whole subject grew apace. Next I searched the books of the Public Library, and little by little my knowledge of lace increased. At first I was unable to get the fine thread I needed, but I have now learned where to import it from, as well as the place to buy the bobbins and the very slender pins that we use. But it was a long task to find out for myself how to make point lace. It took me three years of book study in the French and Italian works at the library to learn the secret of making the separate flowers in a piece of Venetian point." The design for point lace at the school is first sketched on parchment and stitched to a backing of stout linen. Linen threads are then drawn over the lines of the design

and the slow work of filling in the pattern with stitches of different kinds begins. When the piece is completed, the pattern and backing are cut away.

Mrs. Weber's shop has now some half-dozen apprentices to whom she is teaching the art she has so painstakingly acquired. "I haf only one regret," Prince Kropotkin said to her in his broken English when he visited this little group of lacemakers, "and that is that William Morris is not alife and I cannot go and tell him of your 'peautiful lace and the grand work you are here beginning."

William Morris is the controlling ideal of another unique little shop conducted by a clever Boston woman. This is the bookbindery of Mrs. Mary Sears, high up in a building opposite Boston Common. There are several women bookbinders in the country, but Miss Sears stands alone, I fancy, in the spirit with which she has undertaken her work. Trained in the best ateliers of London and Paris, she is an enthusiastic teacher of her craft as well as an excellent binder. But she accepts as pupils only such choice spirits as are, like herself, in love with books and bookbinding. All the work in her little establishment is done by the fingers of these enthusiastic apprentices, and every book bound reflects the intelligence of the women concerned in it. On a dainty morocco volume of Keats would be traced, perhaps, some lines which would show at once that the worker herself knew and loved the figures on the Greek Urn. Such binding as this naturally attracts to the little shop the most conspicuous bibliophiles of Boston. Consequently the good work pays, as Henry Demarest Lloyd contends work with high ideals always will.

For the girl whose lot is cast in the country, as well as for city maidens, there are, however, new and interesting lines of labor. Miss Mary Cutler, of Holliston, Massachusetts, left several years ago with some greenhouse property on her hands, resolved to make herself mistress of horticultural and floricultural lore. Accordingly, she has worked and studied until to-day her small-fruit department is stocked with many varieties hardly obtainable elsewhere. And she is able to offer ornamental trees and shrubs of rare and rich beauty. Pecuniarily as well as in other

ways, Miss Cutler has made a decided success of this work. For years Margaret Deland, the Boston author, has raised jonquils in her window garden, which she is able to sell each spring at a good price. Mrs. Deland is, therefore, an enthusiastic advocate of window-gardening for profit. I know, too, a girl in Long Island, New York, who, though she lives some seventy-five miles from the metropolis, her market, is able to make a very good income raising violets for the city florists and for private customers.

Deerfield, Massachusetts, offers, however, the most remarkable instance afforded by any country place of which I know of success in home industries. Concerning three of these only I will speak: that of magazine illustration by photographs—in which the Misses Allen, of this quaint old town, have made a great success; the blue and white embroidery now renowned the country over; and the basket-making.

It would probably be no exaggeration to say that many of the most beautiful photographic illustrations to be found in our current magazines emanate from Deerfield. To this rather remote little town the publishers send up advance sheets of forthcoming stories, and the Misses Allen supply wonderful photographic illustrations promptly, photographs which are real pictures. The models are all from life, and to the manner born. Even the age-worn secretary in the background is the real thing, not the fixed-up product of an antique furniture shop.

The world knows Deerfield village, however, by its Society of Blue and White Needlework, formed by Miss Margaret Whiting and Miss Miller, residents of the town. This Society has now been in existence some half a dozen years, and at the present time there are nearly a score of women working on the designs which Miss Miller and Miss Whiting have adapted from the old embroideries and bits of china in which Deerfield homes abound. Embroidery in the old days was a very different thing from buying a piece of cloth with a design stamped and the silk selected. When a girl preparing her trousseau decided to make a set of curtains and a spread for the best bed, she took carefully selected flax, hatched and spun it, wove it into cloth, and bleached

it on the grass. Some of the linen thread she dyed two or three shades of blue in the indigo-tub which always stood in the chimney corner. Then she drew a design on the linen, very lightly, making it up as she went along, with a bit of charcoal. This design she filled in with queer, fanciful stitches. These old-fashioned embroideries are for the most part Oriental in character, and were probably suggested by the figures on Eastern shawls which were brought home by sea-captains. But now, through the Deerfield Blue and White Society, many a home which cannot boast of sea-captain ancestors enjoys the graceful patterns of the olden times. For this Society has succeeded beyond its fondest hopes; samples of its work have been sent to almost every State in the Union, and it always has scores of orders ahead. There is no "employer" or "commission" in the work. The founders of the Society give five-tenths of the selling price to the needlewoman, two-tenths to the designer, and the remaining three tenths to pay the current expenses of the business, postage, express, and laundrying. The work is so unique and so well done that it commands a good price. The basket-weaving which Deerfield has also made a success grew

from the Society for Blue and White Needlework. The business part of this industry differs from that of the needlework, for each basket-maker buys her own leaf, and the finished basket is sent to a young woman who acts as agent and saleslady for all the weavers, receiving a commission on her sales. For the past three years an annual exhibition and sale has been held in "the village room" of Deerfield, every July, for the benefit of all these workers, and to this sale summer visitors from far and wide delight to resort. For Deerfield is a town with an interesting historical background as well as an impressive industrial outlook.

Here, then, are a dozen concrete examples of success in new enterprises undertaken by educated women. What some girls have done other girls can do in these uncrowded fields. But chiefly for their value as suggestions, as possible points of departure to still other original occupations, have these accounts been given. In woman's work, as elsewhere, pioneering, difficult as it is, offers its own peculiar zest and its own rich reward. And never have the industrial, commercial, and sociological fields been so white for the harvest as now.

## "I Know a Nature Like a Tree"

By Alice Ward Bailey

I know a nature like a tree;  
Men seek its shade instinctively.  
It is a choir for singing birds,  
A covert for the flocks and herds.  
It grows and grows, nor questions why,  
But reaches up into the sky  
And stretches down into the soil,  
Finding no trouble in its toil.  
It flaunts no star to tell of pain,  
Self-healed its wounds have closed again,  
Unaided by its pensioners;  
And yet I know that great heart stirs  
To each appeal and claim, indeed  
Leans to their lack and needs their need.

## Two New Editions

THERE are certain writers whose works suggest by their quality the most tasteful and choice forms, the most carefully studied and beautifully executed editions; it has happened, too, more than once that the form in which the work of a writer has been placed has revealed more distinction, quality, and fineness than the work itself contained. There ought to be essential harmony between a piece of literature and its permanent form. It might be possible to dress the work of Edward FitzGerald too elaborately; it would be impossible to give it too distinguished and artistic a form. The work itself, by reason of its high and original genius, its distinctive and individual quality, amply justifies the most artistic treatment. The new edition of the "Letters and Literary Remains of Edward FitzGerald," which bears the imprint of the Macmillan Company, New York, is put into seven volumes. The letters have been rearranged in chronological order and final corrections have been made in accordance with the author's wishes by one of the most intelligent and discreet of editors, W. Aldis Wright. Mr. Wright has gone over the text of all the published works, and has included them in this edition. He is the master of the entire FitzGerald literature, including not only what the translator of "Omar Khayyám" wrote with his own hand, but the large amount of writing that has been done about him. These volumes contain as near an approach to a perfect text as can be secured. The edition is enriched by a number of illustrations, which serve as frontispieces; among them are several interesting portraits, a delightful etching of "Little Grange," Woodbridge, the house from which most of the correspondence is dated, and another of FitzGerald's yacht "Scandal." The volumes are beautifully printed from large, clear type. The books are put in covers of red silk, stamped with appropriate gold designs.

The first four volumes contain the correspondence originally printed in 1889 in three volumes; the group of letters included in the "Eversley" edition five years later; the letters to Fanny Kemble,

published in 1895; and the collection entitled "More Letters," which appeared in 1901. There is no one quite like FitzGerald in literature; no one who has quite the same following. He belongs with a little group of men who are dear by reason of certain personal qualities, and fascinating by reason of a certain distinction and individuality which separate them from all other men of their time or of their race. The translator of "Omar Khayyám" was also one of the best letter-writers of our literature, to be put in the same class with Gray, Lamb, Cowper, and Walpole. Like Thackeray, he seemed to be unable to put his hand to paper without imparting the touch of literature to what he wrote. Full of prejudices, full of love for his friends, overflowing with the quaintest fancies and the most pungent criticism, devoted to flowers, to his library, and to his garden, FitzGerald was at once learned and human, whimsical and sane, the closest friend of some of the foremost men of letters of his time and yet perfectly independent in his judgment of them; one of the most companionable of modern writers.

Emerson's type of mind was so radically different from that of FitzGerald that they are not to be classed together, save for the fact that each of them stands for pure quality. Each had the same sincerity; each had the same note of distinction. It was eminently in keeping that the celebration of the centenary of the birth of Emerson should be marked by the publication of what might be regarded as a final, definitive edition of his complete works; and Messrs. Houghton, Mifflin & Co., whose imprint rests upon this edition, have done nothing more than their duty to American letters in putting Emerson into a new and worthy form, with such perfect text and such fullness of elucidation of all historical and personal matters as could be secured from a member of Mr. Emerson's family. The text used in the Centenary Edition is that which was finally decided upon by Mr. Emerson himself in the earlier volumes, and collated and revised by his biographer, Mr. J. Elliot Cabot, in the later volumes. Dr. Emerson has given in a

brief compass a new and interesting account of his father's life and work, and has contributed to each volume a group of notes setting forth the circumstances under which the addresses and lectures were delivered, or the essays written, with comments upon persons and events mentioned in the text, and tracing the thoughts or phrases as they appear both in Emerson's poetry and prose. Dr. Emerson, it will be remembered, had already written a delightfully familiar biography of his father, in perfect taste, with rare discretion and with an insight that was akin to the genius which he characterized. No one was better fitted, therefore, by association, by personal intimacy, by access to materials of every kind, to edit a defin-

itive edition of Emerson, and to supply such an edition with a complete apparatus of notes. The publication is not simply a reprint. Considerable material of interest hitherto unpublished has been brought to light; and it is proposed to give the public enough of this material to form two and possibly three additional volumes. These volumes will be issued in a style uniform with the Centenary Edition, which will be put in twelve volumes, to be published during the current year. The edition is an admirable example of that kind of book-making which we naturally associate with libraries; it is well made, attractively but very simply bound, and the printing is all that could be desired.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Book of Essays (A).** By G. S. Street. E. P. Dutton & Co., New York. 5x7½ in. 309 pages. \$1.50, net.

**Book of Snobs (The).** Prose Works of William Makepeace Thackeray. Edited by Walter Jerrold. Illustrated by C. E. Brock. The Macmillan Co., New York. 5x7½ in. 451 pages. \$1.

**Cæsar's Gallic War.** Books I.-IV. Edited by Charles E. Bennett. Allyn & Bacon, Boston. 5x7½ in. 323 pages. \$1.

**Daughters of Darkness in Sunny India.** By Beatrice M. Harband. The Fleming H. Revell Co., New York. 5x8 in. 302 pages. \$1, net.

Materials for many a romance occur abundantly in missionary work, but the workers who encounter them have scant time to use them. This volume relates the story of Sundari, a pretty and sprightly Hindu girl, during and after the terror of the plague. Facts woven together by threads of fancy compose a narrative full of interesting incidents, which reveals both the heathen need and the Christian succor that meet in India.

**Decline of the Missi Dominici in Frankish Gaul (The).** By James Westfall Thompson. (University of Chicago Decennial Publications.) The University of Chicago Press, Chicago. 8x11 in. 22 pages.

**Espurgatoire Saint Patriz of Marie de France (The): With a Text of the Latin Original.** By T. Atkinson Jenkins. (University of Chicago Decennial Publications.) The University of Chicago Press, Chicago. 8x11 in. 95 pages. \$1.25, net.

**Field of Folk (A).** By Isabella Howe Fiske. Richard G. Badger (The Gorham Press), Boston. 5x7½ in. 67 pages. \$1.

**Fundament of All Teaching.** By Julius Kuhn. Natural Truths Association, Conshohocken, Pa.

**El Haz de Lefia.** By D. Gaspar Núñez de Arce. By Rudolph Schwill. D. C. Heath & Co., Boston. 4¼x6¼ in. 153 pages.

**Home Life under the Stuarts, 1603-1649.** By Elizabeth Godfrey. Illustrated. E. P. Dutton & Co., New York. 5¼x9 in. 312 pages. \$3.50, net.

This is a book to interest every student of politics, religion, and society under the Stuarts; it is founded upon letters, diaries, and references in contemporary writings. It might well be read in connection with Reid's "Five Stuart Princesses." As the author of "Home Life" is careful to point out, the end of Elizabeth's reign saw a marked change in English manners, in dress, and, above all, in scientific conceptions of the world. The cavalier of the reigns of James I. and Charles I. was as different a man from his Elizabethan forbears as he was from his own sons and grandsons of the Restoration. Incidentally the book sheds some new light on the religious condition of an age which, beyond any other in English history, was notable because of the union between politics and religion. It is true also that, as in hardly any other age, religion and politics colored the home life of England.

**Homophonic Conversations in English, German, French, and Italian: Being a Natural Aid to the Memory in Learning those Languages.** By C. B. and C. V. Waite. C. V. Waite & Co., Chicago. 4½x6¼ in. 137 pages.

**How Paris Amuses Itself.** By F. Berkeley Smith. Illustrated. Funk & Wagnalls Co., New York. 5x8 in. 334 pages. \$1.50, net.

**Industrial Crisis (The): A Story of the "Toiling Masses" and the "Thrifty Rich."** By F. C. Lange. 5x7½ in. 262 pages.

**International Year Book (The): A Compendium of the World's Progress During the Year 1902.** Edited by Frank Moore Colby, Assisted by Harry Thurston Peck, Ph.D., L.H.D., and Edward Lathrop Engle, B.A. Dodd, Mead & Co., New York. 6¼x10 in. \$4.

The International Year Book has become an

indispensable adjunct to the library of every student of contemporary history. The volume for 1902, just published, contains one or two commendable enlargements over its predecessors in the presentation of facts. We note with satisfaction the special care taken in the department of biography—the necrology of 1902 included such picturesque and notable men as Bret Harte, Speaker Reed, Admiral Sampson, Lord Dufferin, Archbishop Temple, Rudolf Virchow, Emile Zola, and Koloman Tisza.

**In the Andamans and Nicobars.** By C. Boden Kloss. With Maps and Illustrations. E. P. Dutton & Co., New York. 6½×9¼ in. 373 pages. \$7, net.

The islands named in the title, and especially the Nicobars, are little known, and certainly are rarely visited by our countrymen. The author, an American naturalist, with one companion and a Malay crew, sailed from Singapore in a schooner and spent some months in making natural history collections. He found the people of the Nicobars wild and barbarous, and his narrative has some ethnological value, but it is more largely devoted to the hunt for rare birds and animals. The book has little literary ability and hardly any "thrill" as a story of adventure, but is evidently, from the point of view of scientific observation, thoroughly and carefully written. There are many pictures.

**Jew Baiting in Russia and Her Alleged Friendship for the United States: A Brief History of Russia's Relations with America.** By a Russian-American Diplomat. Sold at News-stands. 5×7½ in. 29 pages. 10c.

**Manual for Christian Instruction (A).** By Wilson R. Buxton. The Pilgrim Press, Boston. 4½×7 in. 98 pages. 35c.

**Memories of Yale Life and Men, 1845-1899.** By Timothy Dwight. Illustrated. Dodd Mead & Co., New York. 5½×8½ in. 500 pages. \$2.50, net.

Dr. Dwight's memory of Yale, including his undergraduate life there, covers a period of nearly sixty years. During this period, dating from a time when morning prayers were held at six o'clock in winter, Yale's old things have passed away, and all things have become new. In promoting this change, not only of the college into the university, but also of the ancient into the modern relations of students to the Faculty, no one has been more influential than Dr. Dwight. To all Yale men his commemoration both of old Yale and of its modern expansion, copiously illustrated as it is with portraits, will be desirable next to their class albums. There is a far wider circle to which it will also appeal. There are many colleges, especially in the newer parts of the country, that are doing good and indispensable work with very slender resources, and through large self-denials of the men in charge. To such these "Memories" will be an inspiration, for it was through the unsparing self-denial of the men of Yale during the middle third of the last century that, out of much weakness and poverty, modern Yale has grown to greatness. Says Dr. Dwight, in reference to the years from 1831 to 1849, the conditions of which continued much longer: "I can only wonder

at the unflinching courage and self-devotion of this brotherhood of men."

**New Conceptions in Science.** By Carl Snyder. Illustrated. Harper & Bros., New York. 5×8 in. 361 pages. \$2, net.

This book is accurately described by the publishers as a clear and concise exposition of the newest conceptions of science in various fields. In style and choice of language the essays are adapted for the intelligent inquirer rather than for the technical expert. Some or all of the papers have appeared in "Harper's Magazine." The titles of a few will best indicate the scope of the book: *The World Beyond Our Senses, How the Brain Thinks, Wireless Telegraphy, Spirit-Rappers and Telepaths, What the World is Made Of.*

**New Primary Arithmetic.** By John H. Walsh. D. C. Heath & Co., Boston. 5×7½ in. 211 pages.

**Outlines of Psychology: An Elementary Treatise, with Some Practical Applications.** By Josiah Royce, Ph.D., LL.D. The Macmillan Co., New York. 5×7½ in. 392 pages. \$1, net.

This last work by Professor Royce is the more valuable for its restriction to elementary principles and fundamental questions. Fresh light is thrown, from his point of view, on problems of general interest and their application in the conduct of life. The Spencerian, or hedonist, scheme of ethics, based upon the pleasure-pain theory of the feelings, is made clearly untenable by Professor Royce's showing that it does not account for the facts, that there is a cross-distinction in feeling between restlessness and quiescence quite independent of that between pleasure and pain. Professor Royce avails himself of this distinction in discussing the question of mental initiative—meaning by "initiative" those novelties of conduct that are not referable to former habits or present experiences, and result in novel readjustments to the environment. Signs of such initiative appear, as he observes, far down in animal life. On the facts of mental initiative has been based a theory of "self-activity." But, as Professor Royce remarks, psychology has no interest in recognizing uncaused events. He maintains that apparently spontaneous variations of habit which no external stimulus accounts for are traceable to restlessness of feeling as their principal external cause, bringing the organism by persistent trial into new relations with its environment. A constitutional restlessness of feeling thus may become the most potent director of conscious life. This is, indeed, a meager hint of an illuminating line of thought, in the practical application of which Professor Royce points out the educational importance of encouraging children in strenuous activity. His psychology of the will does not admit the familiar distinction made between attention and choice, in which the former always precedes the latter. Attention, when fixed and exclusive, is choice. "Actually, to will a given act," he says, "is to think attentively of that act to the exclusion or neglect of the representation or imagining of any and all other acts. . . . Choice bears the same relation to action that intellectual attention bears to images, ideas, or thoughts." The eth' of

this view is obvious. Professor Royce makes the striking remark that one cannot will to do what he has not already learned to do, *e.g.*, to swim. Every act that can be directly willed must first have become familiar, however extraordinary its consequences may be, *e.g.*, the trigger-pull of the suicide. What the will can do in an unfamiliar line is simply to learn how to do, so as to organize instincts into good habits. The will, though not original, can become originitive. This luminous discussion of some problems of the natural history of mind is of large value to practical educators as well as to students of psychology.

**Peril and the Preservation of the Home (The):** Being the William L. Bull Lectures for the Year 1902. By Jacob A. Riis. George W. Jacobs & Co., Philadelphia. 5x7½ in. 198 pages.

Four lectures delivered by Mr. Riis before the Philadelphia Divinity School upon the side of the home problem on which he speaks with authority. There is no discussion of the perils besetting the homes of the well-to-do, which only changes in individual character can affect. Mr. Riis confines himself to the perils besetting the homes of the poor, which an aroused social conscience may remove. The lectures contain the quintessence of Mr. Riis's experience in tenement-house reform work, and are aglow with the strong and infectious feeling which these experiences have stirred in him. They are, therefore, as full of inspiration as of information—a rare thing in tenement-house reform lectures, and, alas! in sociological lectures on any subject.

**Philippine Islands, 1493-1803 (The):** Translated from the Originals. Edited and Annotated by Emma Helen Blair and James Alexander Robertson, with Historical Introduction and Additional Notes by Edward Gaylord Bourne. Illustrated. Vol. IV.—1576-1582. The Andrew H. Clarke Co., Cleveland. 6¼x9½ in. 317 pages. Per vol., \$4, net.

**Physicians, Their Patients, Pills, Paregoric, and Poisons.** By Earle Scanland. M. E. Hale, 1448 Pacific St., Brooklyn, New York. 5x6¼ in. 99 pages.

**Prince of Sinners (A).** By E. Phillips Oppenheim. Illustrated. Little, Brown & Co., Boston. 5x8 in. 386 pages. \$1.50.

British politics, applied philanthropy in the London East End, and the characters of Lord Arranmore (certainly a most remarkable Prince of Sinners) and his unacknowledged son, Kingston Brooks, are the chief subjects of study in this rather ambitious novel. With a not undue amount of the usual "love interest," these combine to make up a readable book.

**Principal Cairns.** By John Cairns. (Famous Scots Series.) Charles Scribner's Sons, New York. 4¼x7½ in. 157 pages. 75c.

**Rabbits, Cats, and Cavies: Descriptive Sketches of all Recognized Exhibition Varieties, with Many Original Anecdotes.** By C. H. Lane, F.Z.S. Illustrated. E. P. Dutton & Co., New York. 6x8½ in. 312 pages. \$4, net.

The delightful pictures of cats, to say nothing of rabbits and cavies (the Peruvian cavy shows as little head and tail as a door-mat), and the equally delightful cat anecdotes, will make this handsome book dear to the heart of all cat-lovers. It must be added that, in main, the work is strictly scientific, and,

we have no doubt, covers the special field exhaustively and with such accuracy as to make it valuable to breeder, collector, and student of natural history.

**Relations of Structural and Functional Psychology to Philosophy.** By James Rowland Angell. (University of Chicago Decennial Publications.) The University of Chicago Press, Chicago. 8x11 in. 21 pages.

**Relation of the Medicine-Man to the Origin of the Professional Occupations (The).** By W. I. Thomas. (University of Chicago Decennial Publications.) The University of Chicago Press, Chicago. 8x11 in. 18 pages.

**Robert Browning.** By G. K. Chesterton. (English Men of Letters.) The Macmillan Co., New York. 5x7¼ in. 207 pages. 75c., net.

This latest addition to the "English Men of Letters Series" is one of the most readable in the long list of books of these brief biographies. The author is a young English journalist of great cleverness and dexterity, with skill in turning a taking phrase, and with no small endowment of natural insight. The question in regard to his work has touched, not its form nor its interest, but its solidity and its seriousness. This biography does not settle that question; it abounds in epigrams and in sentences which seem to be made for the sake of effectiveness rather than because of any vital relation to the theme; it is full of keen characterization and of pungent criticism. It has occasional lapses from sobriety and it is sometimes forced; but it is often eminently sane and fresh. The freshness is sometimes more in the phrase than in the thought. Mr. Chesterton says of "The Ring and the Book," for instance, that it is an expression of the belief that no man ever lived upon this earth without possessing a point of view; and of Mr. Santayana that he has gone out of his way to realize what it is that repels him in Browning, and that, discovering the fault which none of Browning's opponents have discovered, he has also discovered the merit which none of Browning's admirers had discovered—that the whole of Browning's poetry rests upon "primitive feeling;" to which Mr. Chesterton adds, "The only comment to be added is that so does the whole of every one else's poetry." He admirably says of Browning that he was something far more convincing, far more comforting, and far more significant than an optimist; he was a happy man. The lover of Browning will find much in this volume from which he will differ and a good deal that will irritate him; but he will have also an interesting and breezy walk over familiar territory with a somewhat audacious young critic, who forms opinions very rapidly and has a very epigrammatic way of stating them, and who at times has true divination of the matter with which he deals.

**Romance of the Civil War (The).** Selected by Albert Bushnell Hart and Elizabeth Stevens. Illustrated. (Source-Readers in American History, No. 4.) The Macmillan Co., New York. 5¼x7¼ in. 418 pages. 60c.

The signal excellence of the present volume, as contrasted with most other and larger histories of our Civil War, is that it makes clear and graphic the experiences, not of one, but of both sides of the controversy. Another

excellence, for young readers, is that we have here no attempt at making a continuous and detailed narrative; instead, as Professor Hart says, we have "merely the romance." By the recital of detached incidents the personality is brought out of the men and women who took part in the great struggle. Henceforth, if we have made proper use of this book, a series of vivid pictures should be in the young student's mind—of slave life before the war, of the attempts to free the negro, of the army enlistments, of the transportation, encampments, and actual fighting, of the conditions endured by the non-combatants, and finally of the work of such women as Mrs. Livermore, Miss Alcott, and Miss Barton in caring for the sick and wounded. We are glad to find included such inspiring contemporaneous poems as Stedman's "Cavalry Charge," Read's "Sheridan's Ride," Walt Whitman's "O Captain, My Captain," Whittier's "Barbara Frietchie," above all, Mrs. Howe's "Battle Hymn of the Republic"—poems which every young American should know by heart.

**Sarah Tuldon: A Woman Who Had Her Way.** By Orme Agnus. Illustrated. Little, Brown & Co., Boston. 5¼×8 in. 363 pages. \$1.50.

Life among agricultural laborers and small farmers in the England of two generations back is graphically depicted in these pages. The author's Sarah Tuldon is a remarkable character.

**Siege of Youth (The).** By Frances Charles. Illustrated. Little, Brown & Co., Boston. 5×8 in. 293 pages. \$1.50.

This is a character study, with art and journalism in San Francisco for its atmosphere, and love for the chief element in its not very convincing development. An accompaniment of amateurish philosophizing leads one to infer that the author is still under the siege referred to in her title. Later, we feel sure, she will write a truer book.

**Simple French.** Edited by Victor E. François, A.M., and Pierre F. Groulx. Henry Holt & Co., New York. 4½×6½ in. 241 pages. 60c.

**Sinful Peck.** By Morgan Robertson. Harper & Bros., New York. 5×7½ in. 355 pages. \$1.50.

A sea story by a writer of many popular and ingenious tales of ocean life, and one, moreover, who has thorough technical knowledge—a qualification not always possessed by those who use ships as fiction-stuff. The main idea of the story is broadly farcical. Sinful is one of a band of queerly nicknamed sailors whose early life has, we believe, before been told by this author; they have become middle-aged and rich, but Sinful loses an election bet to one of them and the penalty is that he shall go to China and back as a common sailor before the mast; he does so, but gets the whole dozen shanghaied on the same ship, and so plots that they have to come back with him also. There is a sort of rough humor about this, but the description of the bullying, fighting, maiming, stabbing, and general hatefulness all round that fill the ship is very far from humorous, and makes one feel that perhaps Mr. Robertson was not so much desirous of being an "American Jacobs," as some one

not very aptly calls him, as to enter a protest against brutality at sea.

**Sins of a Saint (The): An Historical Romance.** By J. R. Aitken. D. Appleton & Co., New York. 5×7½ in. 346 pages. \$1.50.

The Saxon Dunstan is the saint whose sins are set forth in this romance of tenth-century England. Long foot-notes distract the reader's eye and mar the pages, adding perhaps to the historical but certainly not to the literary value.

**Solar System (The): Six Lectures Delivered at the Massachusetts Institute of Technology in December, 1902.** By Percival Lowell. Houghton, Mifflin & Co., Boston. 5×7½ in. 134 pages. \$1.25, net.

In the clear sky and steady air of Arizona the Lowell Observatory at Flagstaff enjoys a large astronomical advantage. From that post Professor Lowell reports what he has observed and inferred. The general reader, who must skip the mathematical processes that enter into this report, will find enough else that he can understand and read with profit. Professor Lowell gives very reasonable grounds for his conclusion that Mars is an abode of an intelligent and socially organized population. The open questions, and the mystery into which the study of our planetary system leads, seem just as many and as deep as they were before the telescope began to enlarge the circle both of knowledge and of ignorance.

**Stay-at-Homes.** By L. B. Walford. Longmans, Green & Co., New York. 5×7½ in. 344 pages. \$1.50.

A long and, for Mrs. Walford, rather dull novel. As in her other stories, the author has a pleasant, refined manner, and depicts English social life faithfully, if somewhat too minutely. There is certainly no thrill here, but there is a good deal of quiet, sympathetic narrative.

**Stories from the Old, Old Bible.** By T. H. Robinson. Illustrated. Charles Scribner's Sons, New York. 5½×8½ in. 409 pages. \$2.50, net.

An attempt to retell the Old Testament stories as the author imagines they would have been told by the chief personages in them. Isaac, for instance, tells the story of the attempted sacrifice of himself, Naomi tells the story of Ruth, Elijah tells of the test by fire on Mount Carmel. As the title of the book leads one to suspect, there is an occasional lapse into sentimentality. On the whole, however, the stories are told with dignity.

**Text-Book of Plant Physiology (A).** By George James Pierce, Ph.D. Illustrated. Henry Holt & Co., New York. 5½×9 in. 291 pages. \$2.

**Tu-Tze's Tower (The).** By Louise Betts Edwards. Henry T. Coates & Co., Philadelphia. 5×7½ in. 418 pages.

A novel and interesting book, containing atmosphere in abundance (the scenes in far-away Asia are made to appear oddly natural and near); some clever character-drawing, and a plot refreshingly unique, in which the author reserves for the reader, until almost the last page, a genuine surprise.

**Use of Loan Credit in Modern Business (The).** By Thorstein B. Veblen. (University of Chicago Decennial Publications.) The University of Chicago Press, Chicago. 8×11 in. 22 pages.

# Correspondence

## What is Speculation?

*To the Editors of The Outlook:*

Can you state for me some principle in distinguishing between legitimate and illegitimate speculation? I have been accustomed to consider that all speculation on margins was wrong, both because the speculator furnished no service for his profit and it was therefore gambling, and because of the demoralizing results which I have seen arise from such speculation. But I confess the more I have thought the less I have been able to see the moral difference between such speculation and the buying outright of stocks, not for an investment, but for a rise; and I also fail to see why it is in principle any different from a very respectable form of speculation in land, where a man purchases land with a heavy mortgage, the amount he pays down being equivalent to the margin, and the bank loaning the money on mortgage instead of with the stock as collateral. If you can clear this matter for me, I shall be indebted, as several of my congregation have questioned me and I have been unable to answer them satisfactorily.

CLERICUS.

[The desire to get something for nothing is always and inherently a wrong desire, and any transaction, however veiled, which has for its object the gratification of this desire is an immoral transaction. Every honest bargain ought to be, in the thought of the parties to the bargain, intended for the benefit of both the bargainers. In other words, all life is for service, and no transaction is legitimate which is simply self-seeking.—THE EDITORS.]

## An Explanation

*To the Editors of The Outlook:*

In your paragraph "A Negro's View of the Race Problem" in *The Outlook* of June 13 you say that I agree with Mr. Stone that it is the mulatto who occasions the *most difficult* element in the race problem." Your statement misrepresents my meaning and sets me in a wrong attitude on the question. Mr. Stone does indeed touch upon an awful truth, but

what he states is but a partial truth, and a partial truth is more dangerous than a falsehood. There is no doubt that if there were no illegitimate mixture of blood between the races the problem would be very different from what it is. But because the full-blooded negro hears no sigh of the wrong in the sub-conscious region of his being such as the mulatto hears, it does not follow that he is free from the sigh of a wrong of some sort.

There is no doubt that there are mulattoes who yearn for social equality as such, and they can no more stop that yearning than one can stop the tide from returning to the shore. It is the yearning of the white father to return to his father's house. Many have already arrived there, and more are yet to arrive. And it has already come to pass that there is not only Caucasian blood in negro veins, but there is negro blood in Caucasian veins. Sins, like chickens, come back home to roost. On the other hand, there are many mulattoes whose yearnings and instincts lead them to seek the company of their mother's people. The writer is acquainted with families in which both these classes are found. Some of the members are passing for white, others refusing to do so. Many times have they been heard to say, "I wish I were black," while other members of the family wish they were white, and those who are able to pass for white do so. The writer who puts all the mulattoes in one class is guilty of a much too common injustice toward that large class of mulattoes who no more want to associate with whites than whites want to associate with them. They are not seeking to be white men, but *men*, which is far better. Many of them who refuse to do so could easily pass for white men if they wanted to.

The most difficult element in the race problem, so far as some are concerned, are those of the race who are determined to be men. No intelligent, fair-minded person will accuse Booker T. Washington of seeking for the much-talked-about "social equality," but even Mr. Washington, with all his "sweet reasonableness,"

is a dangerous element to the author of "The Leopard's Spots."

I do not agree with Mr. Stone that the most difficult element in the race problem is the mulatto. From Mr. Stone's point of view, "the most difficult element" in this problem is the most ambitious; from my point of view, the most difficult element is the element that Mr. Stone calls "the real negro;" that is, the shiftless and ambitionless negro. The ambitious and thrifty of the race are not all mulattoes—nor are all the shiftless and ambitionless full-blooded blacks. It is remarkable what poor thinking the superior Caucasian can do when dominated by prejudice and preconceived opinions.

Please allow me to say this to your readers, before whom you have set Mr. Stone and myself together. You have put me where I do not belong. Please let me change my seat.

THOMAS NELSON BAKER.

Pittsfield, Massachusetts.

[In view of the position which Mr. Baker takes, it is interesting to know, as we learn from a correspondent, that he is not a Northern but a Southern negro, born of pure-blooded negro parents in Virginia, educated at Hampton and afterward at Mount Hermon, at Boston University, where he was valedictorian of his class, and at Yale Divinity School, where during his last year he took charge of a negro church in the city. Though originally a Methodist, he is now pastor of a Congregational negro church at Pittsfield, Massachusetts. He has not, however, sundered his relations with the negroes of the South among whom he was born and brought up.—THE EDITORS.]

#### Help for the Flood Sufferers

##### *To the Editors of The Outlook:*

Here are twenty thousand people driven from their homes by the overflow of the Kansas River. The water was from five feet to twelve feet in their houses, driving them out, destroying their furniture, wrecking their houses, and leaving a deposit of from one to four feet of mud as the waters receded. I have just been over the whole district, and talked with many who two weeks ago were living comfortably in houses that they owned, but to-day have only the clothes they are wearing and are dependent on charity for food

and a place to sleep. Tents are furnished them, and food. Yet this cannot long be done without aid from abroad. There are forty thousand here who, living on higher ground, escaped the flood. These are giving liberally to aid their destitute fellow-citizens, but are wholly unable to meet the exigency. Mr. T. B. Gilbert, the Mayor of the city, is a man of excellent character and good business ability. He asks for aid. All funds sent to him will be wisely used for the relief of these sufferers.

I write this because word has gone out, "Kansas City chooses to take care of herself, asks no aid for her flood victims." That is true only of Kansas City, Missouri, which is the home of men of wealth, and has only 3,000 flood sufferers among her 175,000 people. It is not true of Kansas City, Kansas, which has only 60,000 people, none of them wealthy, and has 20,000 homeless and in need.

JAMES G. DOUGHERTY,

Formerly Pastor of First Congregational Church.

Kansas City, Kansas.

#### Charitable Work for Girls in New York City

The Wilson Industrial School for Girls, 125 St. Mark's Place, New York City, has made an appeal to the public for a new endowment, and this appeal calls attention to the half-year of benevolent work in that locality accomplished by this noble charity and by other institutions. The cheering thing about all of them is that they represent up-to-date endeavor. The Wilson Industrial School for Girls was the first industrial school for girls in New York City; it gathers the needy children of the neighborhood into a healthful home, where a hearty midday meal is provided and where the children are taught the simple branches of education, also sewing and household work. Once a week there is a mothers' meeting for sewing, as well as religious instruction, and the homes are visited by a competent Bible reader. Out of this work has grown a mission church, where regular services are now held. It is interesting to note that in 1876, in the Wilson School, the kitchen-garden system was organized and in the same year the matron of the school organized the largest boys' club in the city. This old-established school and

mission has a right to appeal to the public for \$100,000 or more, to place it on a permanent basis. The treasurer is Mrs. C. B. Hotchkiss, 201 West Eighty-seventh Street.

#### **The Berkshire Industrial Farm**

##### *To the Editors of The Outlook :*

The writer has been requested to prepare a brief notice of a recent parlor meeting in behalf of this excellent institution. If only in this brief space one could bring before the readers of *The Outlook* the words of the speakers and their cordial reception! Mrs. Mayo presented its work in detail, with interesting personal sketches of the boys, and with special reference to the "graduates" of this year and their satisfactory record. Dr. Charlton Lewis and the Rev. Mr. Wright, of Morristown, followed with effective analysis and commendation of her words. They emphasized the vital need of preventive work, the striking advantages of this institution, in its fine situation, healthful climate, and exceptional home atmosphere. In presenting its financial claims and needs they approved its practical methods and ideal results. May those readers of *The Outlook* who have been interested in the many lines of reform work study this one thoroughly.

It is a charming place to visit, and they will be cordially welcomed

The treasurer's address is: Mr. Robert Carter, Morristown, N. J.

For printed information apply to

W. W. MAYO, Sup't.

Canaan Four Corners, N. Y.

#### **The Jacob A. Riis Fresh Air Home**

It seems an ungracious thing to ask for support for a house that bears one's own name, but the managers say I must and there is no help for it. And, after all, what is in a name? It is the thing that tells—the work. Readers of *The Outlook* know what that is. They sent quite half of the two hundred and fifty mothers and children on their happy holiday to Twin Island, in Pelham Bay Park, last summer. Their gifts paid the butcher and the baker. Could they have looked in upon the little colony, upon the children huddling close about mamma on their little white beds, a little afraid at first of the

big rooms—ever so much bigger than the whole tenement flat at home—of the patch of ghostly moonlight on the floor, and the shadows of the waving branches outside; could they have seen them waylaying minnows and fiddler-crabs in the tide-filled hollows along shore, cheering the gay excursion steamers that went by on their way, or plucking the flowers that grow all summer on the island, they would have had their reward indeed. Over against the tenement street, with its fretful jam of childhood that makes your heart ache, there will ever stand since last summer in my memory that other picture of happy children singing under the trees, the sea wind cooling their wan cheeks and painting the sunset there. In the depth of the winter that is past, when I was traveling in the far West, I heard their little voices, and above them and the wash of lazy waves on the shore I heard another, "Inasmuch as ye did it to the least of these, ye did it unto me." That last spoke to you who helped.

"If heaven is anything like this," said one tired mother, "I don't care how soon I go there." It was a little boy in far-off Kentucky who did that. I have his letter yet. "The money is my birthday present from my mother," he wrote. "I am eight years old." There ought to be a very happy little boy out there. There certainly was one at this end belonging to the mother who was tired no longer.

The home is open once more, and we ask our friends to help keep it open till the fall storms drive our children home. Not only they and their mothers come there; papa and the boys come over Sunday for a day of real rest. The whole family together—that is something we had not dared dream of till the city government gave us the house rent free. Friends furnished it, so that we are at no expense for anything but just our boarders. It costs \$2.50 a week to provide for a mother, \$1.50 for a child, and \$3.50 for mamma and the baby. Is not that worth while? Our treasurer, Miss Clara Field, will be very glad to receive the gifts of *Outlook* readers at the settlement house, 48 Henry Street. We are all of us more grateful than we can tell for last year.

JACOB A. RIIS.

# THE CITY OF OPPORTUNITY

A Harbor View in Superior—The Gateway of the Northwest

## WHAT \$10. will do for you in SUPERIOR

The chance of a lifetime to participate in the wonderful growth and development of this Prosperous City. **SUPERIOR IS THE GATEWAY OF THE NORTHWEST.** Millions already spent by the Government and Transportation Companies, foreseeing the immense future of Superior.

**Superior, Wisconsin,** offers one of the greatest opportunities of the day for the large and small investor. The development of the Northwest is marvelous, and Superior is its gateway; the distributor of its products and supplier of its necessities.

Already one of the greatest ports in the world, and the terminus of four Great Western Railroads, Superior at the head of lake navigation, the second city in the great State of Wisconsin, is the eternal point of transfer between consumer and producer, East and West, land and water.

Superior has the largest grain elevators, ore docks, coal docks, and warehouses in the world, and is rapidly developing into a great city.

It is a perfect location for the manufacture of cereal products, coke, iron, steel, furniture, woodenware, stoves, farming implements, railroad and steamship supplies, glucose, malt, etc.

Millions have been and are being spent in permanent improvement by Railroad and Steamship Lines to handle the traffic that cannot go elsewhere.

The United States Government has spent over three millions of dollars in harbor improvements, and appropriated \$300,000 for new Government buildings.

Great cities are built at the meeting point of natural advantages, and here at the head of lake navigation in the heart of the wheat and timber belt, with the great iron and copper ore beds on one side and the magnificent grazing country on the other, stands Superior.

Great men look far ahead before investing their money, and when such men as James J. Hill, General John H. Hammond, Senator Breckenridge, Senator Beck, Thomas A. Scott, Frederick Billings, W. W. Cochran, and others started to develop Superior they realized that at this point a great industrial city was destined to be built; nor has their judgment been wrong, for from that time Superior, a mere village of a few hundred

with no railroads, has now developed into a prosperous, growing City of 35,000 inhabitants, and is on a firmer foundation than ever for a great future growth.

Capitalists alone cannot build a City. The small investor and settler form the backbone of any stable community. Realizing these facts, this Company is now offering to the public a few blocks, situated in almost the geographical center of the town.

It costs nothing to know our plan. See what we will do for you.

**OUR OFFER** is a very liberal one, especially so to the man of moderate means, who wishes to put a few dollars aside monthly as an investment. We only ask \$10.00 down

and \$5.00 a month on a \$150.00 lot, and the size of these lots is 25 feet by 120 feet; should the purchaser before he has paid for his lot in full, a deed will be delivered to his heirs without any further payments, or should the purchaser be taken sick or lose employment, we will carry his lot for a year, without any payments other than 20 cents per month as interest.

No taxes whatever will begin until the purchaser has paid for his lot in full and a deed has been delivered.

Our prices will not always be as low as they are now. Superior is developing rapidly, and, with this development, the price of real estate will increase. Large profits are made in rapidly-developing communities.

Why not take advantage of our offer and buy a lot at once?

Upon receipt of \$10.00, we will select for you one of our best \$150.00 lots.

We will send you free maps of this section and our beautiful new illustrated booklet, "The City of Opportunity," which shows in detail the wonderful growth of Superior and the Northwest.

It costs you nothing, send without delay for full information and details. ADDRESS:

Investment Department

**The Outlook** is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

**Price.**—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

**Postage is Prepaid** by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add \$1.56 for postage.

**Change of Address.**—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

**Discontinuances.**—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

**How to Remit.**—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

**Letters** should be addressed:

THE OUTLOOK COMPANY

287 Fourth Avenue, New York

Copyright, 1903, by The Outlook Company. Entered as second-class matter in the New York Post-Office.

ONE of the greatest conveniences travelers can take with them for their own exclusive use is a supply of Ivory Soap. It will save them much annoyance and discomfort. To have a pure soap always at hand is a great source of satisfaction. Ivory Soap is a quick and thorough cleanser, and speedily removes the dirt and stain of travel.

No. 10

**The Postal Scandals** The two most important events of the week in the continuance of the investigation into the charges relating to the Post-Office Department were the letter of President Roosevelt to Attorney-General Knox and the indictment of Edmund H. Driggs, formerly a Member of Congress from Brooklyn. The President's letter, as might be expected, contained a positive and vigorous injunction for absolute thoroughness in the prosecution of the investigation. Mr. Roosevelt calls for the utmost rigor of the law to be exercised in the discovery and prosecution of any breach of trust, and declares emphatically that there can be no greater offense against the Government than such a breach of trust or than dishonest management by a public official. As the amount of work thrown by this investigation upon the District Attorney's office is excessive, the President suggests that the Attorney-General appoint special assistants from his staff. In accordance with this suggestion, Mr. Knox has appointed Mr. Charles J. Bonaparte, of Baltimore, and Mr. Holmes Conrad, of Washington, formerly Solicitor-General, to assist in the inquiry. The indictment found against Mr. Driggs is based on the United States law making it a crime punishable with imprisonment for two years or a fine of \$10,000, or both, if any Member of Congress receive money from any person for procuring or aiding to procure any contract from the United States Government. It is alleged that, through Mr. George F. Miller, who has also been indicted, money to the amount of \$12,500 was paid to Mr. Driggs while he was yet a Member of Congress, by the Brandt-Dent Company, as commission for procuring the sale to the Government of the automatic cashiers made by this firm. It is stated that out of every \$150 paid by the Government for one of these

machines, the manufacturers really received only fifty dollars.

**The Panama Canal** The New York "Sun" publishes an important despatch sent by the representative of the French owners of the Panama Canal to the President of Colombia. This despatch, dated June 13, affirms as a fundamental principle that the only power which can now build the Panama Canal is the United States; that the failure by Colombia to ratify the Canal Treaty will undoubtedly result either in the construction of the Nicaragua Canal, or in the secession of Panama, under the protection of the United States, from Colombia; that one alternative would destroy the prosperity, the other the integrity, of Colombia; and that any modification of the Treaty is equivalent to its rejection. It is to be hoped that the publication of this despatch in Colombia may bring those who are opposing the ratification of the Treaty to a saner mind. The despatch is, however, in other respects important, both as an explicit recognition from a European source that the interoceanic canal can be built only by the American Nation, and as an intimation that the way for its building may be found, despite the refusal of Colombia to ratify the Treaty, through the secession of Panama from the Republic, and the support of Panama in its secession by the United States Government.

**The Declarations of Iowa Democrats** The Democrats of Iowa met last week, made their nominations for the State election, and formulated their platform. During the Convention there was a very plain and explicit statement of the issue between those who wished to "reaffirm the principles of the Democratic National platform adopted at Kansas City, July 5,

1900," and those who wished to lay the question of money standards aside. A few days before the Convention Mr. Bryan in the "Commoner" had reasserted the importance of maintaining the money question in politics. The discussion of the subject in the Convention may therefore be justly interpreted as a response by Iowa Democrats to Mr. Bryan's appeal. By a decided majority the Convention voted to omit from the platform any reference to the money question, except a general statement as to the need of a larger volume of money. The silence of the platform on this matter is, therefore, equivalent to a positive declaration that the Democrats of Iowa do not consider that free silver furnishes a living issue. It ought to be said, however, that Mr. Sullivan, the nominee for Governor, is a silver advocate. In other respects also the platform was notable. Perhaps its most important declaration was that connecting the tariff with the problem of controlling the trusts. "As the most alarming features of our present conditions," it says, "are the evils which come from the trusts, we call for the removal of the tariff from all trust-made goods, and demand that all tariff schedules be adjusted with a view to tariff for revenue only." Inasmuch as Iowa is the center of agitation in the Republican party for revision of the tariff, this declaration on the part of the Democrats is of special importance, and may have great influence in determining what the tariff policy of the Republicans will be. A proposition to advocate the Government ownership of the railroads was voted down, but it had the support of a large number of delegates. Moreover, the plank finally adopted was emphatic and specific in its demands for governmental control. It declared for the limitation by statute of dividends derived from capital invested in transportation; it also called upon the Federal Government to prevent "unreasonable" prices and profits created by commercial combinations, by declaring, when need arises, what such prices and profits should be. It denounced government by injunction, the Aldrich Financial Bill, imperialism, and corruption in the Post-Office Department. It favored, in addition to policies already mentioned, election of Senators by popular vote, and, in State

matters, State aid in building public highways, and the adoption of a frank local option law in place of the mulct law now in existence, which may be said to enact prohibition and then legalize, under regulation, its violation. Regarding the advisability of the change thus advocated, it seems as if there could be no intelligent doubt.

**The Organization  
of Fusion Forces  
in New York City**

On Tuesday of last week the political bodies which are to unite against Tammany Hall in the coming municipal campaign in New York completed their organization. Mr. R. Fulton Cutting was chosen permanent chairman of the conference. The bodies in this organization comprise the Citizens' Union, the regular Republican organization, the Greater New York Democracy, the German-American Municipal League of Brooklyn, three other German-American bodies represented by a single committee under the name of the United Germans, the Kings County Democracy, the Austro-Hungarian League, and the Italian-American League. The only important body rightfully belonging with these allies that was lacking was the German-American Reform Union. It is hardly conceivable that it will not be found among them when the campaign begins in earnest. The federation of many bodies composed of citizens of varying political beliefs concerning National policies now bids fair to become a permanent characteristic of municipal campaigns in New York City. It is a stimulating sign of the times to find among these bodies united for good government so many composed of American citizens of foreign origin. The freedom in government which native Americans are apt to accept with indifference because with familiarity, these citizens, who know by experience what government is that is not free, are peculiarly adapted to uphold with enthusiasm. It ought not to be surprising, therefore, to find them massed together in the fight against corruption, which is only another name for extortion and oppression. Mr. Cutting, in a statement made after this meeting, the last until September 1, spoke hopefully and with reasonable confidence of the outlook for the success of the

Fusion forces. He spoke of the advantage for success arising from the assurance under the present administration that the election would be conducted honestly, and that no city department would exert its power in favor of Tammany Hall as it would were that corrupt organization in office. He referred briefly to the efficiency and impartiality of the Low administration. He stated that the Fusion movement was in many ways stronger than it was two years ago; that its constituent bodies were better organized and more experienced. And he thought it incredible that the citizens of New York will not carry the movement to victory. If they care anything for the protection of the women and the children of the tenements, if they care for clean streets and wholesome surroundings, if they care for the protection of property against thieving and blackmail, if they care for the defense of the sick and the poor, if they care for the control of corporate wealth, if they care for the preservation of their own rights in public property, they will carry to victory this Fusion movement.

#### The Joint Primary Plan in Massachusetts

The plan of direct primaries, adopted in Massachusetts through the Luce Joint Caucus Bill, which has just been signed by the Governor, differs in several respects from the laws having the same general purpose in view adopted in other States and hitherto described in these columns. The law takes effect in Boston this fall, but in other cities and towns its acceptance is to be voted upon at the next State election. All caucuses of all parties are to be held at the same time and place. A would-be candidate must present a nomination paper signed by at least five voters, and in the case of higher officers by a number of voters equivalent to five for each ward. The vote at the primary will be in all, or almost all, respects exactly like that at the election. It will be in charge of the paid election officers who have charge of elections, the two leading parties being equally represented. The voter must audibly state with which party he wishes to vote. This provision has been criticized as opposed to the principles of the secret ballot, but a primary is not

an election, and it is not unfair to ask the man who wishes to take part in a party nomination to accept, for the time being at least, party membership. The law provides that voters of one party shall not within a year share in nominating the candidates of another party. This is designed to prevent the flooding of a primary as a political trick by one party with voters really belonging to another party. The voter who affiliates himself with one party at the first primary he attends must continue to act with that party in the primaries until he decides to go to the election commissioners and in writing change his party affiliation, and even then he must wait ninety days before the change takes effect. This law seems to be an honest and sensible attempt to apply the principle of direct primaries. Its actual working out will be watched with great interest by the public at large.

Philadelphia's Reform Mayor Mayor Weaver, of Philadelphia, is making a record as good as his predecessor's was bad. His latest acts have filled favored contractors with consternation. He has annulled a contract for fitting up certain rooms in the City Hall, which had been awarded on the last day of the old administration, at a price \$15,000 (or 36 per cent.) more than the lowest responsible bidder. He has imposed fines amounting to \$15,513 on a total of \$58,020 for one month's street-cleaning—an unheard-of proceeding. Mayor Weaver has declared that he intends having clean streets and contracts lived up to. Recent contracts, moreover, have actually been let to the lowest bidder—a proceeding that has been out of vogue for some years in Philadelphia. In the police department also Mayor Weaver is restoring order. Heretofore, judging from recent statements, the police have looked for instructions first to ward leaders and have obeyed them rather than the Superintendent of Police and the Director of Public Safety. A captain and two lieutenants have been suspended and ordered to stand trial for failure to obey promptly the orders given them by the department. Policy-playing has been made dangerous by police vigilance, and it looks now as if it would be effectually driven to cover. Mayor Weaver

has furthermore halted several ordinances providing for raids on the treasury, much to the chagrin of the machine, which seems to be nonplused by his vigor and independence. His course has given great satisfaction to the independents, except in the matter of appointments. Here he has outlined for himself a compromise policy. He will appoint men for political reasons, but will not, he declares, retain them for political reasons. No man can hold his office unless he discharges his duty to the satisfaction of the Mayor. This is not the ideal; but it is a long step toward the ideal, and is all that is probably practical as a first step. Thus far, it must be said, the Mayor has required faithful public service from his political appointees, and has thus made a creditable showing for his system.

**The Strikes** The strike events of last week were those at Richmond, Virginia, and in New York City. In Richmond demands have been made by the employees on the street railway company, the street railway company has refused to concede them, the men have struck, the company has given public notice that the strikers may make application for their places as individuals but not as a union, and has unofficially given out the statement that no concession will be made to the strikers, even if the battle costs the company two millions of dollars. A mob composed of strike sympathizers has undertaken to prevent by force the running of the cars, and several conflicts have taken place between the mob and the guards employed by the company. What were the original demands of the employees we do not know, but we hope that the company will refuse to yield to violence, and that the city and the State will employ all the force necessary to quell the mob. In a democratic community, if the employees of a trolley line find themselves unfairly treated, their remedy is by political action to secure municipal ownership of the trolley line, or such legal control over it as will compel the submission of controversies to some impartial tribunal. An attempt by a mob to prevent the cars from running for the accommodation of the public, unless the demands of the employees are accepted by the corporation, is no remedy for injustice to workmen, is an

injustice to the public, and presents conditions which no community ought to tolerate, whatever it may cost in money or even in life to put an end to them.—The strike conditions in New York are not so simple. As we understand the facts, the building trades in New York have been in an increasingly intolerable condition, owing to the despotic demands of the building trades unions. This despotism at last grew so intolerable that the employers were forced to unite for their own protection. Having united, they proposed a plan of arbitration for the settlement of future labor difficulties, but fell into the mistake of offering the plan as they formulated it as an absolute ultimatum. This is not the way to commend arbitration, for arbitration necessarily involves conciliation, and ordinarily involves mutual concession. The result of this combative method of endeavoring to secure peace was to stimulate the spirit of combat in the labor unions, and no stimulant of that kind was needed. The skilled unions, which had divided, have reunited: the radical members of the union have come to the front, as is usually the case in labor wars; and Samuel J. Parks, who is under indictment for corruption and blackmail, has been elected chairman of the strike committees of the reunited organizations. Under his leadership, if we may trust the daily press, the policy will be pursued of a general strike in all building trades, not only in New York City, but in all cities where members of the builders' association have contracts. The only indication of conservatism which we have seen is the report that the strike committee refused to extend the strikes to the public schools, though this policy was advocated by Mr. Parks. We agree with the New York "Evening Post" that "both parties in this unhappy controversy should make some last attempt at conference and compromise," but we are afraid there is little hope of this result if Mr. Parks is to remain as the representative of the labor unions. We also agree with "the Evening Post" that if such conference and compromise is impossible, "the employers' association cannot and should not resume work on the old intolerable terms." It would be better for the people of New York to suspend building operations for a year than to sacrifice that freedom which

has been too readily sacrificed in the past for the sake of illusive peace and temporary commercial prosperity.

#### The Irish Land Bill Amended

It is a cause of congratulation for all interested in the amicable settlement of Irish questions that Mr. Wyndham last week introduced an amendment which meets the difficulty pointed out in these columns last week. As amended, the bill will permit tenant and landlord to make voluntary bargains for the purchase of land outside of the minimum prices originally set, and the limit of advances to be made to purchasers of farms has also been extended from \$25,000 to \$35,000. These important amendments fully met the views of the Irish leader, Mr. John Redmond, who had a week before expressed fear that the Government and the Irish party had reached the parting of the ways on precisely this point. Sir Henry Campbell-Bannerman, the Liberal leader, was also completely satisfied with the action of the Government; the amendment was passed without division, and the debate is described by the reporters as a political love-feast.

#### Servia's New King

King Peter the First of Servia was officially welcomed on his arrival at Belgrade, and at the brilliant ceremony in the cathedral was received with all possible ecclesiastical pomp, addressed with congratulatory words by the Metropolitan and with obeisances by the vast congregation made up of civilians and officers—a significant fact, by the way, is found in the press report that the King favored the military men with more bows than the civilians. According to the reports, the welcome of the populace seemed genuinely enthusiastic and there were no disturbances of any kind. At the presentation of the Ministers, some of whom were deeply concerned in the bloody deed which gave him his throne, King Peter declared that his soul was filled with gratitude to God and with a consciousness of the duties that awaited him as King. He thanked the Ministers for having fulfilled their duties to the fatherland as the interests of the country demanded, and said that he was happy to

have this opportunity of renewing the expression of his deep gratitude for their services. The reprobation of the Powers for the brutal assassinations which preceded the elevation of this King to the throne was shown by the absence of the representatives of all the Powers (including, one is glad to say, the United States) except the two countries most directly interested in Servia's future—Russia and Austria; while, it will be remembered, Russia has formally expressed its disapproval of the deed and Austria refused to hold any intercourse with the provisional government. The feeling continues to grow in strength that the barbarism of the assassinations was heightened by the manner of their perpetration, and that in particular the killing of the Queen was quite unnecessary, even from the political point of view of the revolutionists, and was an act solely of hatred, revenge, and brutality.

#### Commencement at Yale

The first Commencement in the third century of Yale was distinguished by the opening of Woolsey Hall, the last of the edifices erected in the bicentennial year, and by the inauguration of its grand organ, the gift of Mrs. Newberry, which experts pronounce one of the world-famous organs. The very location of Woolsey Hall, in whose auditorium Commencement is now celebrated, marks by its close proximity to the buildings of the Sheffield Scientific School the close incorporation of this, once a side affair, into the present life of the University. Judge Baldwin, of the Yale Law School, inaugurated the Hall by an address commemorating the great President whose name it bears, with whom the modern as distinct from the ancient history of Yale began, and by whom the expansion was initiated of the old College into the present University. President Hadley's baccalaureate sermon, based upon the story of heroic chivalry recorded in 2 Samuel xxiii. 15-18, was a masterly inculcation of the principle of self-realization through self-sacrifice. "Doing makes the deed; unselfish doing makes the man;" this counts for more than any peculiarities of intellect or character, "this devotion to ideals which underlies all social order and progress."

In the Hon. Whitelaw Reid's anniversary address at the Law School on "Changing Aspects in Some Points of Public Policy and International Law," the point of central interest was the Monroe Doctrine. The Hon. Andrew D. White's address to the class of 1853 and other alumni called attention to the inadequate proportion of university men in our public life, and proposed a scheme for a more adequate university training to meet the problems of American politics. Mr. White's address, based on his own experience at home and abroad, is one of the most notable of recent utterances on university platforms, and is about to be published in the "Yale Alumni Weekly." The most significant address at the Alumni meeting was made by Mr. Charlton T. Lewis, a classmate of Mr. White, and uttered a note of warning against the modern proclivity to over-specialization. At the Alumni dinner, where over a thousand sat in the new University Hall, Dr. Lyman Abbott spoke on the unifying influence of a great university as a mold of public opinion and a teacher of true catholicity. Judge George Gray was introduced by President Hadley as representing the type of character referred to by Dr. Abbott. The unifying influence of the university upon the Nation Judge Gray believed would be secured by the democracy of Yale maintaining itself, and preventing the erection of barriers between class and class. "There are no classes in America," he exclaimed; "I hate the name." His experience in the Coal Strike Commission, Judge Gray said, assured him that there were to be no conflicts between labor and capital which could not be peacefully settled by public opinion, now growing to be the governing power in the world. The President's table at the dinner was decorated with the silver plate presented to Ambassador White in Germany, and by him presented to the University. The principal piece is inset with the gold medals won by Mr. White in his undergraduate days. Among the honorary degrees conferred, the M.A. was bestowed on Louis C. Tiffany, of New York, Mr. George S. Hutchings, the organ-builder, and Herbert W. Bowen, our Minister to Venezuela, whose name was greeted with vociferous applause. Professor William H. Brewer, of the first graduating class

in the Yale Scientific School (1852), and Judge George Gray, Chairman of the Coal Commission, received the LL.D. The degree of D.D. was bestowed on Dr. Lyman Abbott and the Rev. William R. Richards, of New York.

•

At the Harvard Commencement 1,246 degrees were given. The doctorate of laws was conferred upon twelve persons, among whom were ex-Governor Crane, of Massachusetts, and four Harvard Professors—Adams Sherman Hill, "linguist and rhetorician," Nathaniel Southgate Shaler, "naturalist and humanist," Edward Charles Pickering, "astronomical inventor and discoverer," and William James, "psychologist and master of style." Thus they were denominated by President Eliot. Professor James at the Commencement dinner made a happy characterization of the spirit of Harvard; after stating that he held no bachelor's degree, and therefore was "a little outside of the circle of the children of the house," he said that there was a spirit that was exemplified by those who, knowing that "the spirit of elation at a victory over Yale is not the whole of the law and the prophets," come to Harvard from the outside "because they have heard that she is devoted to the principles of individual vocation and free choice, . . . because you cannot make a single, one-ideaed regiment out of a Harvard class. . . . The true church is the invisible church. The true Harvard is the invisible Harvard. . . . The day when it can be said that Harvard stamps a single hard and fast type of character upon her children will be the day of her downfall." Among the Commencement addresses by representatives of the graduating classes was a notable one by a negro, Mr. L. P. Hill, on "Religion in the Education of the Negro," in which he declared that over-emphasis on the material advancement of the race meant neglect of its most distinguishing trait, its religious instinct, and that education of the negro ought to mean the development of this instinct, perverse and ill-balanced as it often is, into a power for moral progress. At the Beta Kappa exercises Carrol took with eloquence on "Ro

indicating how the succession of dreamers of a perfect state had formed present-day social ideals; and Le Baron Russell Briggs, Dean of the Faculty of Arts and Sciences, and recently chosen President of Radcliffe College, read a poem full of spiritual energy and optimism.

**Other College Notes** Among other events of special note in the college world may be mentioned: at Amherst, the laying of the corner-stone of a new college observatory, and the conferring of the degree of LL.D. upon the new Ambassador from China to the United States, Sir Chen-Tung-Liang-Cheng, who was described by President Harris as a "lover of Amherst, where he spent some years in his boyhood, scholar and diplomat, honored in his own country in positions of responsibility, representative of the most ancient to the youngest of the great national stepping-stones in the Pacific;" at Williams, the laying of the corner-stone of the Thompson Memorial Chapel and the conferring of the degree of LL.D. upon President Pritchett, of the Massachusetts Institute of Technology, and the degree of L.H.D. on Rollo Ogden, editor of the New York "Evening Post;" at Smith College, the address on "Men Who Do Things," by Mr. Bliss Perry, editor of the "Atlantic Monthly," and the graduating of the large class of 241 members; at Radcliffe, the announcement of the founding of a scholarship "the holder of which is to devote half or more of her time to the original investigation of some great problem of city life in Boston;" the fact that the Agassiz Fund for a building for the social life of the students has reached the sum of \$117,000, and the recent choice of the new President for Radcliffe, Dr. L. R. Briggs, for many years Dean of Harvard University; at Holyoke, the rendering of "Midsummer Night's Dream" by the juniors and the extensive reunions of graduates; at Dartmouth, the conferring of the degree of Master of Arts on Mr. Winston Churchill, the novelist, and that of Doctor of Laws on Admiral Mahan; at Trinity, the appointing of a committee to consider the raising of a sum of five million dollars for new buildings and an endowment; at MIT, the announcement of the gift of

a fifty-thousand-dollar library from Andrew Carnegie; at Wesleyan (Middletown, Connecticut), the address of Dr. Woodrow Wilson on "John Wesley's Place in History," that on "John Wesley, the Man," by Professor Winchester, and a poem on the same subject by Richard Watson Gilder. The week has also been the most important of the year as regards college athletic interests; at New London, Yale was victorious in three successive boat races (the University, the Freshmen, and that between four-oared crews). It is pleasant to record again the fact that this—the greatest of all the college athletic events—passed off without the slightest dispute or question. The triple victory of Yale on the water was to some extent offset by her defeat in baseball by both the Harvard and Princeton nines. At Poughkeepsie, on Friday, Cornell duplicated the remarkable performance of Yale by also winning the University, four-oar, and Freshmen races against the competition of five competing colleges.

**The Industrial Work of the Cleveland Chamber of Commerce** With a view both of possible commercial and philanthropic benefits, the Cleveland Chamber of Commerce some years ago suggested to the heads of factories and stores in that city plans tending to better the conditions of the wage-earner; to make his labor more effective; above all, to bring about a relation between employer and employee which is not that of mere wage-payer and mere wage-earner. So far as we know, Cleveland is the only city in the world in which such a work has been undertaken by a purely commercial organization; for this reason it has been watched with great interest, and from many cities inquiries have constantly been made as to the success achieved. We are gratified to note that no less than seventy Cleveland establishments have now responded to the Chamber's suggestions. The first of these was that of more adequate sanitary arrangements. Manufacturers of paint, for instance, now employ a physician who makes periodical visits to the works, examining every man; whereas employees were formerly frequently ill from the effects of chemicals, since the new plan has been in operation

a whole year has been known to pass without a case of serious illness. The sanitary arrangements recommended by the Chamber include, however, before everything, light and well-ventilated work-rooms, clean windows and floors. Secondly, a laborer going to and from his work is frequently obliged to wear clothing unfit for any use but that of the shop, because there is no opportunity at his place of work to care for clean clothes. Hence the Chamber has recommended dressing-rooms which shall contain individual lockers, well-equipped lavatories, and also baths, both shower and tub, wherever the nature of the work is such as to make baths desirable. Many shops and factories have adopted these suggestions; the testimony of a varnish company shows that the introduction of shower-baths has been of such value for both men and women that, in one of its departments at least, the use of the daily bath is made compulsory, while in the case of a large machine company the placing of shower-baths in its tempering department, together with a permission to the men to bathe each day on the company's time, was so much appreciated by the men that they also took a bath on their own time before going home.

#### Industrial Solidarity

The Cleveland Chamber also recommended, not only that rooms should be set aside so that employees could gather around tables to eat lunch in a proper manner, but also for the provision by the Company of suitable food at cost. Both of these recommendations have been largely followed. The average cost of an entire lunch is about ten cents, and the bill of fare is somewhat as follows:

Soup, two and three cents; roast meats, three to six cents; potatoes, one cent; beef stew, three cents; Hamburg steak, two cents; sandwiches, two cents; pudding, three cents; pies, three cents; tea and coffee, one cent.

Closely connected with the lunch-rooms are rest-rooms, which the Chamber has succeeded in establishing in a number of places; in two instances a piano has been provided for the employees. This leads naturally to the recommendation of reading-rooms and libraries, which has received so wide an appreciation that the library of one of the hardware companies now

has a circulation of about five hundred volumes a month. Again, the Chamber recommended that classes be organized in various subjects pertaining to the particular industry in which the employees are interested; and the evening classes in mechanical drawing, arithmetic, and English, established by a machine company, are now attended by about a hundred and fifty men. The Chamber also suggested prizes for plans concerning new methods of manufacture; in this way the employees are encouraged to make themselves of the greatest possible value to their employers. Two hardware companies now each pay out a hundred dollars every six months for such suggestions as have been of the greatest benefit. The Chamber's endeavor has also covered the work of improving factory surroundings; it is now practically demonstrated that by lawns and flower-beds a whole section of the city may be altered at an astonishingly small cost, making an unsightly neighborhood clean and attractive. Other suggestions include (1) summer outings, which have now become so common that last year very many establishments closed their places for one day, paying full wages, the day being spent in recreation; and (2) banquets to employees—during the past three years, for its annual banquet, one large concern has taken the hall of the Chamber of Commerce itself. We believe that the persistent application in every place of such admirable methods as these would result in a more intelligent, efficient, and companionable relation between employer and employee. Where there are such relations of mutual regard and respect between the employer and employed there are few strikes.

#### Impertinence Rebuked

The Rev. R. C. Fillingham is "one born out of due time." He has a sixteenth-century conscience, and either has never heard that in this country people are permitted to worship God according to the dictates of their own conscience, or does not know what that phrase means. He is a vicar of Hexton in England, has come to this country on a visit, has found ceremonies in the Episcopal Church of St. Mary the Virgin in the diocese of New York which offend his conscience, and has thereupon written a curiously dictatorial letter to

Bishop Potter, calling upon him "to take steps to put an end to these scandalous and idolatrous proceedings," and warning him that if this is not done he may feel it his duty, accompanied by "a band of friends," "by forcible action to call the attention of the public to this matter." This letter he sent to the press, so that it reached the public before it reached the Bishop. Bishop Potter has replied to it in the spirit of the Scriptural counsel, "Answer a fool according to his folly," by informing the rector of the Church of St. Mary the Virgin that such a disturbance has been threatened, and advising him to have a police force present to throw the interrupting clergyman and his band of friends into the street if they attempt to carry out the threat, and he has sent a copy of the letter to the Rev. R. C. Fillingham, with the hint that "only a lunatic could suppose that the Church in New York is governed by the laws of the Church of England." The Bishop's answer appears to have been effectual, for it is stated that this strenuous reformer will sail for England July 1, and will do nothing further in the controversy now, but "still promises to return next spring and actively combat ritualism." It is to be hoped that in the interim he will learn that, under the laws of this country, the rector of St. Mary the Virgin could put up a statue of Buddha and burn incense to it, if he wished to do so; and that only the authorities of his own Church could interpose any effectual objection. We do not admire the ceremonialism which imitates the methods of Rome without having the doctrine of Rome to make that ceremonialism significant; but even if Mr. Fillingham were right, and the proceedings in the Church of St. Mary the Virgin were as "idolatrous" as he thinks them, they would be entirely within the laws of the State of New York, which does not prohibit idolatry.

The Work of the  
Tract Society

The importance of the work done by the American Tract Society is evident from various particulars of its seventy-eighth annual report. On one hand the half-million immigrants arriving at Ellis Island, on the other hand the unchurched regions in various States, both new and old, present inviting opportunities for the

circulation of Christian literature. This is in general what the Society undertakes to do for people of all tongues spoken in this country. In Pennsylvania there are almost a million Slovaks, Croats, Poles, etc., in New England half a million French-Canadians. Seventy-seven colporters were engaged last year in circulating the issues of the Society among the motley elements of our population, foreign and native, mostly by sale, sometimes by gift. In view of the peculiar difficulties and temptations besetting the immigrant in his ignorance of the country, its opportunities and its perils, it would seem that a most useful kind of tracts for gratuitous circulation would give practical counsels as to the way to material prosperity, what things to care for, what things to beware of, rules for health, etc.

## Anarchy in Delaware

The facts respecting the tragedy of the last week at Wilmington, Delaware, apart from certain gruesome details, are substantially as follows: A negro murdered a young girl with circumstances of peculiar and revolting brutality. The coroner's jury on investigation fastened the crime upon him. The court, asked to summon, as it had legal authority to do, a special grand jury, that the criminal might have speedy trial and punishment, declined, on the ground that it would set a bad precedent. Then a mob variously composed, but including undoubtedly some reputable citizens, broke into the workhouse where the negro was confined, carried him to a point near the scene of the murder, and burned him at the stake. One of the lynchers, Cornell by name, was arrested, a second mob demanded his release, a judge was found who gave an order for his release on bail, although he was charged with murder, and murder is not aailable offense; subsequently the charge was changed to homicide. Passion breeds passion. The night of the mob, violence was offered in the streets to innocent and unoffending negroes; the night following the release of Cornell by the mob a number of negroes in the city armed themselves and marched through the streets in ugly mood, and several street fights took place between negroes

and white men, with some shooting; four men were more or less seriously wounded. If the daily press is to be believed, either the municipal authorities are paralyzed with terror and dare not act, or they share the feeling against the negroes which these events have stimulated, and are willing that the negroes should be terrorized. Their apparent supineness and inaction it is difficult to account for except on one or the other hypothesis. The events suggest some lessons which all the American people, as well as the citizens of Delaware, should take to heart.

I. The refusal of the court to summon a special grand jury, and thus give to the indignant Commonwealth a speedy execution of justice, was a blunder of the most serious nature. To say that power conferred upon the court for just such exigencies as this cannot be exercised because it has not been exercised in the past is to assume that new conditions never call for new action; to refuse such speedy trial lest it shall serve as a precedent for future cases, where no such necessity exists, is to assume that the court cannot in the future exercise a wise judgment adapted to future needs; to refuse a speedy trial because prejudice is hot against the prisoner is, as the event proves, exactly the way to inflame that prejudice into a conflagration which only blood can extinguish. That the delay of criminal proceedings for the punishment of crime is the provoking cause of many such acts of mob violence is a fact which we should think would at last be recognized by our courts of justice. That it is important that punishment should be prompt as well as sure is a truth which they seem to us to ignore. The accused has rights and they ought to be safeguarded; but the community also have rights, and too often they are not safeguarded. One of these rights it is to have such a criminal as George White brought to a speedy trial, and the punishment of the offense inflicted before the memory of the offense itself has grown dim. Either by legislative action or by a change in judicial sentiment, all criminal trials should be so expedited that acquittal or conviction may follow immediately on the crime. The American Nemesis goes on crutches and quite too slowly, not merely for American patience, but for the require-

ments of justice and the protection of the community. The Delaware court has sacrificed justice to professionalism.

II. This may and probably does account for the mob, but does not excuse it. There are cases in which the community has a right to take the law into its own hands. But such cases are rare. They exist only when, through the utter failure of the ordinary and legal methods for the administration of justice, society is in some sense resolved into its original elements. That condition of affairs did not exist in Delaware. There is no suspicion that the courts in Delaware are purchasable; and it is certain that White had no money to purchase the court even if it had been purchasable. The prejudice for the negro race is not so strong in Delaware that its citizens need fear lest popular clamor prevent the conviction of a negro. The suggestion that the jails are insecure and that the criminal might escape is hardly to be taken seriously; it is certain that his only hope for even a short lease of life lay in his remaining in jail, a fact which he knew only too well.

The action of the mob was not dictated by reason, but by passion. The mob was not bent on executing justice, but on indulging itself in revenge. The New York "Times" gives a list of eighteen lynchings perpetrated in the United States since January 1; that is three a month. Of these, fourteen have taken place in the Southern States. Two of the victims were white men, the rest were negroes; of these victims four have been burned at the stake. In addition to these are such riotings as are at this writing accompanying the city car strike in Richmond, Virginia, and those sporadic acts of violence, and occasionally of murder, which have accompanied other strikes. What does this signify? Whither does it tend?

He reads history to little purpose who does not see in this spirit of lawlessness a peril to the Republic far greater than from any form of imperialism. The greatest peril to democracy arises from its lack of self-restraint. It is an old copy-book maxim, as true as it is ancient, Anger is a brief madness. When the boys call their angry fellow "mad," they speak more truly than they know. In such a mob as that at Wilmington we see a city mad. For the hour, it is truly

insane. And any despotism, however base, is better than government by a lunatic asylum. It is because democracies realize this that they have in the past abandoned democracy for imperialism. Sulla and Marius preceded Cæsar; Robespierre, Napoleon I.; the peril of revolutionary Socialism made possible the *coup d'état* of Napoleon III. The first duty of all patriots to-day is to band together, at whatever cost of popularity, at whatever risk to person, at whatever temporary disadvantage to the community, at whatever delay or even apparent sacrifice of justice, to maintain the sovereignty of law. For the sovereignty of law is to the community what the sovereignty of reason is to the individual—sanity; and the rule of the mob is to the community what the rule of the passions is to the individual—madness.

III. It is for this reason that all such utterances as that attributed to the Rev. Mr. Ellwood, of the Olivet Presbyterian Church of Wilmington, deserve the condemnation of all right-minded and intelligent citizens. We quote from the report in the New York "Sun":

Mr. Ellwood's sermon at the Olivet Presbyterian Church on Sunday evening was on "Should the Murderer of Miss Bishop be Lynched?" He displayed in the pulpit leaves spattered with the blood of the victim. His sermon pictured the crime, and after an appeal to the judges to reverse their refusal to order a speedy trial of the negro, he said: "And, honorable Judges, if you do not hear and heed these appeals and that prisoner should be taken out and lynched, then let me say to you, with a full realization of the responsibility of my words, even as Nathan said to King David of old after his soldiers had killed Uriah, 'Thou art the man'—so I would say to you, the responsibility for lynching would be yours for delaying the execution of the law."

It is true that he added that there ought to be no lynching until September, and then only in case the criminal was acquitted by some technicality, but this was as if one should pour kerosene on a pile of wood, touch the match to it, and bid it not burn. In noble contrast to this inflammatory utterance was the open letter of the father of the murdered girl to the people. A few sentences from this letter exhibit its just and Christian spirit:

Dear Friends: . . . You have helped us bear our sorrow, made a hundredfold more intense by a most revolting crime. Our cup of bitterness is full, and we ask you to join us in our appeal to all citizens of our Common-

wealth to refrain from violence. The officers believe that they have all evidence necessary to convict the prisoner, and without doubt as soon as the court can reach his case he will receive sentence to pay the full penalty of his atrocious crime. If he can be legally tried this month, by all means let justice be swift; but if not, then let us wait calmly until the law, in its majesty, may remove the vile wretch from society. . . . Let us not try to atone for one crime, no matter how hellish, by committing another. Sincerely yours,

E. A. BISHOP.

It is in this spirit that press and pulpit should speak at such a time. The aim of all men who have the public ear should be to allay passion, and bring the righteous wrath of the community under the dominion of its conscience and its reason. We are very glad to record the fact that Mr. Ellwood stands apparently alone in bad pre-eminence. The clergy of Wilmington, without, so far as we know, a dissenting voice, have put on record by public resolution their condemnation of the mob in the following resolution:

*Resolved*, That we put on record our sense of sorrow, indignation, and shame at the lawlessness and anarchistic demonstration that have brought reproach upon our Commonwealth; that we call upon all classes and conditions to condemn and repudiate such lawlessness and inhumanity as have shocked not simply our own people, but the Nation at large; that we, in and through the pulpit, insist upon the sanctity of the law and the necessity for confiding in the wisdom and integrity of our courts of justice.

Perhaps Mr. Ellwood joined in this utterance. We hope that he did. If so, it is a pity that he did not give expression to this his conviction before the riot.

IV. Apropos of the burning of a negro in Belleville, Illinois, on the 6th of June, the colored pastor of a church in that town is reported to have given to his negro congregation the following counsel:

My Master said, "If there is no sword here, sell your coat and get one." If lynching and burning do not cease, I say to every black man, Sell your coat and get a gun.

Worse counsel could not be given to the negro. If the race war should ever become a war in reality, tragic as it would be to the whole country, it would be doubly so to the Afro-American. It would be ignorance pitted against intelligence, poverty against wealth, weakness against strength, ten millions against sixty millions. The appeal of the negro must be to the conscience of the Anglo-Saxon

to his fears. And that appeal will not be in vain; it has not been in vain. That appeal has won for him emancipation; citizenship; civil rights; a public school system freely opened to him. Bad, indefensibly bad, as the lynchings are, they are the acts of the few; they are episodes; they do not represent the Nation; they are the crimes of its madmen. The appeal must be from America drunk with passion to America sober. The action of the courts in Georgia and Alabama in regard to the peonage cases, and the protests of the clergy in Wilmington, indicate that public opinion is crystallizing to assert itself, not only in formal resolution, but also in vigorous judicial action, in condemnation alike of the mad passion of the mob and of the calculating avarice of the oppressor. To arm the negro would intensify the passion without protecting the negro from it. To the press, the pulpit, and the courts of justice, white and black are to look for the protection of the negro from the passion of the mob, and for the protection of the State from overthrow by practical anarchy.

## A French Educational Ideal

At this moment, when governmental action in regard to Roman Catholic orders, and especially teaching orders and schools, is agitating France and interesting the whole world, an educational movement of the very highest importance, which is slowly but surely influencing the official and moral outlook in France, is worth recalling. One of the first results of the crushing defeat of the French in 1871 was a critical examination by the French of their school systems; and the genius of the nation has never been more strikingly shown than in the thoroughness of this self-criticism and the rapidity with which the whole educational system was reorganized. The military army of France was practically destroyed, but it was replaced by such an army of school-teachers as France never possessed before. One of the leaders of this movement of reorganization was Ernest Lavissee, the leader and inspirer of the Federation of the Youth of France. M. Lavissee is the historian and professor of history in the

Sorbonne, and, in the judgment of many people, the foremost educator in France to-day. He might have taken as his motto Jules Simon's famous phrase, "The nation that has the best schools is the first nation in the world. If it is not so to-day, it will be so to-morrow." These words, spoken in the throes of a great defeat, were prophetic; they marked the beginning of the movement for educational reconstruction.

Without ostentation, using educational methods, the little group of men of the highest character and ability to whom Lavissee belongs have been steadily extending their influence throughout France. Of that group The Outlook has frequently had occasion to speak; Desjardins, De Vogüé, and M. Charles Wagner, whose "Youth," "Justice," and later "The Simple Life" have been so widely read in this country, are the leaders of this movement, and represent all that is best in the intellectual and moral life of the French people. That movement has been eminently social in its character, laying its methods on the solidity of interest between all classes; it has touched the highest education, and interested itself in the lowest; it has affected the universities and organized colleges and schools for workmen. These men stand for free education in the truest sense of the word, and for secular education in the noblest sense of the word. This education M. Lavissee calls *laïc*. His definition of the aims of the movement not only brings out the specific things for which it works, but also its spirit; and at this moment, when France is agitated as she has not been for a number of years past, the noble ideals of this little group of men who stand for freedom, for intelligence, for justice, and for toleration are well worth recalling:

"To be a *laïc* is *not* to limit human thought to the visible horizon, nor to interdict man from the dream of, and the perpetual search for, God. It is to stand up for the effort of duty in our present life.

"It is *not* wishing to do violence to old beliefs, it is not scorning the consciences that are still held by their charm. It is denying to religions that pass away in time the right to govern humanity that endures for aye.

"It is *not* hating such and such a church,

nor all churches taken together: it is fighting that spirit of hatred in religions that has been the cause of so much violence, bloodshed, and ruin. To be a laic is *not* to consent to the subjection of reason to immutable dogma, nor to the abdication of the human mind before the incomprehensible: it *is* to make profit out of no ignorance whatsoever.

"It *is* to believe that life is worth the trouble of being lived; it *is* to love this life and to refuse to accept such a definition of it as that the 'earth is a vale of tears,' and not to admit that tears are necessary and beneficial and suffering is providential; it *is* to make profit out of no misery whatsoever.

"It is *not* to relegate to a judge sitting outside of this life the care of feeding the hungry and giving drink to the thirsty, of redressing injustice and consoling those who weep: it *is* to give battle to evil in the name of justice.

"To be a laic is to have three virtues: Charity, that is, love of men; Hope, that is, the goodly feeling that a day will come in distant posterity when shall be realized those dreams of justice, peace, and happiness that our far-away ancestors made, looking up to the heavens; Faith, that is, the will to believe in the victorious utility of perpetual effort."

## The Victims of the Whirlpool

The period of prosperity through which the country is passing brings out both its strength and weakness; its practical force and skill, and the lack of spiritual ideas and of social training of many of those to whom wealth has come so suddenly or so rapidly that they have not been educated to use it with intelligence. To use money wisely is an art which many people never learn; to become rich without education means, for such people, a revelation of poverty of resources, of lack of poise and of good taste. Recent events in the financial world have shown more than one able man confused and carried off his feet by a prosperity which outran his education. The papers are full of stories of things said and done by so-called society people which indicate

the most rudimentary ideas of the uses of wealth, and the attempt to get out of the senses the pleasure and satisfaction which are to be gotten only from the gratification of cultivated tastes. To spend enormously on the mere machinery of living, on great establishments, yachts, automobiles, horses, elaborate dress, novel or extravagant entertainments, is to make plain the fact, which sensible people would be anxious to conceal, that the only use to which money can be put is the service of the body.

The amusements of many of the uneducated rich are pitifully puerile; their tastes painfully crude; their manners deplorably bad; their way of living conspicuously vulgar. Each vies with the other in the attempt to do things a little more elaborately, to spend larger sums, to cater a little more successfully to the news columns of the yellow journals. The hollowness of this kind of social life, its crude travesty of genuine social life, its corrupting tendency, are increasingly plain to all who know it. The note is forced, the pace killing, and the blight of womanly qualities and the decay of manly strength which come with this abnormal and unwholesome way of living inevitable.

There are hosts of people of wealth who know how to live with elegance but without ostentatious display, who spend great incomes with intelligence and with a sense of moral responsibility, who invest life with charm and dignity by calling to their aid the resources of culture in all forms. Such people are the saving element in that society in this country which commands great wealth and will grow richer as time goes on. It is the vulgar rich and the so-called "smart set" who show the worst side of human nature to the world by their display, their vulgarity of taste, their craving for sensation. If American society is not to degenerate into excessive eating, drinking, dressing, and cheap frivolity, influential people everywhere must refuse to go with the tide and hold fast to the highest standards of social refinement and moral purity.

In "The People of the Whirlpool," which bears the imprint of the Macmillan Company, the process of social deterioration, of the lowering of the standards of manners, so painfully apparent in modern society here and abroad, is sketched by a

woman who evidently writes from ample knowledge, who is keen without bitterness, satirical without malice, and pre-eminently sane and clear in her judgments. Instead of attacking the frivolity and hardness of the mere spenders of money and climbers of the social ladder, she draws a charming picture of a natural, wholesome, human family life; in touch with nature on every side; full of the resources of affection, intelligence, kindly interest in others; with a sense of humor which is at once a delight and a safeguard. With this normal home life and the simple life of the country folk of the neighborhood are contrasted the rush, noise, show, and emptiness of the life of a group of newly rich people and of people anxious to achieve social prominence, who have built up a summer colony in the neighborhood. The story is quiet, discursive, thoroughly wholesome and enjoyable, and all the more effective because it avoids the didactic method and mood. Nothing could be more strikingly unlike the atmosphere of the "smart set" than the refreshing, fragrance-laden atmosphere of the garden in which they live who refuse to be drawn into the Whirlpool.

There is something so pitifully weary and unsatisfying, so spiritually shabby, in the lives of many very rich women especially, that one longs to put such a book as "The People of the Whirlpool" into their hands as a gospel of genuine social life. There are many of these unfortunates who are wasting time and health in a ceaseless round of splendidly dreary entertainments, who are driving automobiles at breakneck speed for the sake of a new sensation, and who are often on the verge of moral disaster, not because their instincts are bad, but because they do not know how to entertain themselves, who would rejoice if some one showed them how to escape into a sweet, natural, interesting way of living. To "The People of the Whirlpool," who are trying to get out of the senses the happiness which can be gotten only out of the soul, this story will come as a message of hope and peace; to others it will be a confirmation of the determination, in an age of great temptation, to live in the affections, in the intellect, close to Nature, and with a deep joy of service in every day's work and rest.

## The Spectator

"Vindicable neutrality; that's the name for it," said Croaker, after eloquent advocacy of his latest hobby. The silence of the Spectator evidently disappointed him; he was unprepared for what was intended as a practical illustration of the workings of vindicable neutrality. Nor did the Spectator repeat aloud what he was saying to himself:

"For that which is or is not in the head,

A sounding phrase will serve you in good stead."

The Spectator could indorse in a measure what Croaker had been saying in advocacy of vindicable neutrality—that the prevailing tendency to compel an expression of agreement or disagreement with all that one may say should be checked somehow and effectually. "We reveal weakness, not strength, of character in our readiness to take sides at once, when there is no reason whatever for our so doing, no moral obligation in the matter. The fear of being accused of cowardice in opinion, of vague and uncertain conviction, leads many into a partisanship that is insincere, to say the least." History was full of examples of vindicable neutrality—what an army of martyrs; he would make a catalogue, perhaps a book, about them some day. Then the Pleasures of Vindicable Neutrality; what a field for an essayist, he thought, with a lingering glance at the niche where his essayists were treasured. President Eliot's reply, when asked recently what he thought of Mr. Roosevelt as a future President of Harvard, illustrated, in Croaker's estimation, the tact of the trained neutralist: "I am not thinking at all." How few, comparatively, really knew the pleasure of not thinking at all—that is, for the purpose of taking sides—upon many subjects distracting the public peace. Had the Spectator ever thought how constantly he was called upon to express decided partisanship in the petty ordinary affairs of his social life? Verily, the Pleasures of Neutrality were as rare as the tiny first editions of Campbell's "Pleasures of Hope" and Rogers's "Pleasures of Memory."

Then the club woman of the circle spoke up with spirit. She hoped forever

to be delivered from attendance upon those sessions of her club at which nobody knew which side anybody was on. What was it George Eliot said? She must quote from memory: "Better a wrong faith than a waning, better a false faith than no faith at all." If ever there was a dull, a deadly dull, meeting of the club, it was when the neutrals were in majority. "Vindicable neutrality!" She would add a topic to her programme. No, she had better not, erasing her entry; it would only lead them upon forbidden ground—the suffragist and the prohibition questions.

The subject led the Spectator into many pleasant byways of thought. He is a convert to vindicable neutrality. He can see that its full enjoyment demands special training in tactful vigilance against sudden and hard-pressed-for committal. "There's nothing like a good story—the more inapplicable the better," said Croaker, "in case of sudden emergency. A sequence between your story and the subject discussed might, and probably would, jeopardize your neutrality. In the groping for the connection following the story (few are ready to admit themselves unable to see the point intended) comes your chance to change the subject, if somebody doesn't cap your story at once, as in all probability somebody will. Then, if you get ahead by telling one still better, you will have experienced the peculiar delight known only to those who succeed in defending an assault upon their neutrality."

Now, on the finest residence avenue in a certain small city the Spectator knows of, a prominent and wealthy citizen has built a wall nine feet high around his extensive, park-like grounds. They are the only grounds on the avenue that are inclosed. Only through the iron gateways may a glimpse now be had of the wide sweep of velvety lawn, the gay flower-beds, all that has been open to the public so long that to be shut out is bitter grievance indeed. That costly wall has aroused popular indignation against its builder; it has already cost him a coveted political nomination and the cordial greeting of many old friends, not a few of the property-owners in its vicinity believing it to be a damage to the surrounding real estate. This sentiment expressed by a leading

paper of the city is the voice of the majority of his fellow-citizens: "... It is an attack upon the true idea of American democracy, an attempt to revive the spirit of feudalism, to introduce the features of Continental aristocracy. What would our beautiful avenue be like with a similar wall on either side its entire length?"

Naturally, "that wall" is a leading topic at social gatherings of all kinds; it draws a line not to be ignored. There is a minority with something to say in its favor—of course, those who can see how much it has added to the home life of the builder and his family—the seclusion that has been gained in place of disagreeable publicity. The summer following the completion of the wall found the family living largely out-of-doors, without having to leave home in order to do so. Through the warm weather meals are often served in shady nooks; garden parties are a feature of the hospitality of the house; the grandmother's chair and the baby's hammock have a circuit of charming havens, the roses are safe as can be, and at last they may actually taste of the fruit of their own vine and fig-tree. The children's pony crops the lawn, the hunting-dogs are loose, and peacocks strut up and down the walks. "Why should all this be sacrificed," asks the minority, "to a prevailing and mistaken idea concerning the rights of the public?"

The Spectator had bethought himself to get up right early in that contest and flee behind the rock of vindicable neutrality, and there he was resolved to stay at any cost. But one evening, when dining out almost under the shadow of the wall, his hostess called for his views upon it, and that in a way overrating any opinion he might have. He would risk it, and would follow Croaker's rule—while he remembered Mark Tapley's words, "We must hope for the worst." Had they heard the story about Dean Stanley's and Dr. Jowett's inordinate fondness for tea? No; well, they were sorry tea-toppers, and to put on the kettle when they were alone by their two selves, and indulge, "regardless," was the great joy of their busy lives. One day, talking over something of unusual interest and importance, the Dean had emptied his eighth

cup and Jowett his seventh, when Jowett, who was the host of the occasion, threw up his hands in consternation. He had forgotten to put in the tea!

It was a crucial moment for the Spectator, that following his story; he saw that his hostess was groping sorely bewildered for its application; but somebody had

capped it at once by another still better about Dr. Jowett, and so the talk flowed into Oxford channels, delightfully remote from the dangerous wall. The Spectator saw at intervals, however, in the face of his hostess what reminded him of Wonderland Alice when she said of something hard to understand: "Somehow it seems to fill my head with ideas, only I don't exactly know what they are."

## The Sherman Statue

TWO equestrian statues to Union generals have recently been erected. Of much higher rank than the usual uninspired image to be found in most American cities is that of General Hooker, by Daniel C. French and E. C. Potter, unveiled last week in Boston. But among the half-dozen great equestrian statues in the world is to be counted that which was unveiled in New York on Memorial Day of this year—the Sherman statue by Augustus Saint Gaudens.

As combining grandeur with delicacy of modeling, restraint with mobile power, and fidelity in interpretative portraiture with freedom in poetic fancy, it would be difficult to show that the Sherman statue has ever been equaled by more than two or three equestrian statues of ancient or modern times. That a statue of this lofty rank should be created by an American artist and should stand in a city of the New World affords good reason for the faith of those who believe that this land in this age is capable of making its own contribution to the progress of the world, not only in material welfare, but also in artistic achievement.

In working on this statue Mr. Saint Gaudens showed one trait of genius—the capacity for taking pains. He was commissioned to design the statue in 1892. During the eleven years since then he designed, studied, modeled, altered, re modeled, and altered yet again, until it seemed to those who were waiting for the work to be finished that the sculptor would never be content. Yet, as Mr. Kenyon Cox has said, "Saint Gaudens is one of those artists for whom it is worth while to wait." It was five years after he had submitted the design for the approval of the committee in charge of the work

that he began to model the statue in full size. It was exhibited while incomplete in Paris in 1899, and again, with the figure of Victory added, at the Paris Exposition in 1900. Discontented still, Mr. Saint Gaudens returned to this country, where he continued work upon it, changing here one detail, there another, and even remodeling certain of the more important parts. Then it was sent, in plaster, to the Exposition at Buffalo, where it received an extraordinary award. Mr. Saint Gaudens still saw opportunities for improvement. For something like a year and a half longer he worked upon it. At last, with the beauty of the first design unimpaired, rather enhanced by this tireless revision, the statue was set up in New York as a permanent honor to the city and the Nation, and a monument both to the soldier whom it memorializes and to the artist for whom it will lastingly speak.

The statue is of bronze. But the bronze is not apparent, because it is gilded. The base of the statue is of granite, like the pedestal, but is gilded like the statue itself. In color harmonious with the statue, in texture like the pedestal, the base affords both unity and contrast with each. This gilding of the statue has been criticised as putting upon the statue its one mark of insincerity and its one material that will deteriorate with time. This presents a question that can be discussed on both sides. It is to be remembered, however, that the Greeks, whose sincerity in art has been a standard it does not become the modern world to criticise, tinted their marble statues and covered even ivory images with gold. Certainly in the case of the Sherman statue the gilding has increased its delicacy of line and has added to its other traits that of splendor.

## The Fair at St. Louis

By Ernest Hamlin Abbott

With Pictures by Walter Hale

"**W**E write no more fairy tales," says Lowell, in one of his later essays, "because the facts of our every-day lives are more full of marvel than they." We have our fairy tales, just the same; but, instead of writing them, we act them out. We collect train-loads of timber, tons upon tons of staff, thousands of gallons of paint, we root up trees and set them down again, we deflect a river from its course, carry it to the top of a hill and pour it down in ordered cascades, and, presto! we have the scenery for our fairy tale—ivory palaces glowing with light, waterfalls, lagoons, shaded walks, a forest. Then we gather together the facts of our every-day lives, set them in motion in the midst of our constructed fairyland, and behold a cycle of fairy tales lasting all summer! This is our way nowadays of feeding belief in the impossible. The folk of the Middle Ages had to be satisfied with Merlin or Malagigi; even the staid gentry of the eighteenth century could do no better than merely tolerate Moll White, the Witch. But we can believe the impossible because we see it; our faith is like that described in the hymn as celestial—it is turned to sight.

Something like this was in my mind when, with my cheerful fellow-traveler as companion, I left the trolley that had brought us from St. Louis to the edge of

the Exposition grounds. Off in the distance we could see some huge white buildings rising out of the dirt and débris. All about us were little shanties, some of them evidently the sort that builders carry about in sections and set up for the storage of tools and materials, others improvised refreshment stalls and saloons. We entered the grounds through a gate in the high fence that incloses them. Here were more shanties. Beyond them, great stretches of scaffolding and framework like a forest of symmetrical giant underbrush stripped of all foliage. Seemingly endless processions of shuffling laborers wound in all directions, like lines of ants. In the roadways were mule-drawn wagons, some empty, some well loaded with dirt or timber. Underneath all was the red and yellow earth that gave to the whole a color tone like that of a brick-yard. This was our fairyland, and these were the fairies!

To think of finding our way in the midst of this confusion and of searching for beauty in this desert was to invite bewilderment, not to say consternation. We discreetly sought a rise in the ground from which we could make some survey. Other forests of scaffolding appeared. As far as we could see the ground was dotted with mule teams. Not far away was an enormous structure of ivory white, with a row of lofty columns reaching to such a

distance that the building, high as it was, seemed almost squat. An occasional sound of distant hammering, the puff of a pile-driver a quarter of a mile away, the voices of men as they passed near us, and the shouts of the mule-drivers below, seemed muffled by the silence that lay like a mist over this strange, vast, unkempt city of giant palaces and squalid huts. This near building was our only landmark. The rest seemed as undistinctive as the open sea. Toward our landmark, then, we turned. High up, over its pillars, we read the name, "Varied Industries." We spread open our chart and found the building indicated. At last we had a starting-point. So, like navigators in sight of a lighthouse, we began to steer through the charted channels. But the channels seemed to be different in fact from those on paper. Was the chart wrong, or had this whole sea been shifted? We crept along under the building until we came to the end of the great façade, and suddenly it all became plain. This enormous stretch of building was not the front, as we had supposed, but only the narrow end of a structure that seemed less the handiwork of man than some

carved glacier, fronted not with icebergs but with a colonnade of ice. The sudden view of that majestic stretch of columns was like the first blast of cool air from a thunder-cloud. Before we had taken our first deep breath of surprise and wonder we saw across the intervening avenue another such building, only less imposing, glacier fronting glacier. Then off to the left, across a wide sunken stretch of mud, another; and another yet, in the far distance, the stateliest of all. With the exhilaration of discovery we scrambled over rough baked earth, past great trenches lined with wood, like boxes sunk deep in the ground, upon rough timber bridges. How long it took to walk past even the narrow end of each building! Then up a hill, where other box-like trenches were being prepared for the making of cascades, until we stood near the summit. There we could at last see the plan in all this confusion.

Gradually the mule teams, the carpenters, the pile-drivers, began to fade away, like the genie from the brass bottle. Scaffolding disappeared. New palaces sprang into existence. Foliage burst forth. Where weather-stained timber had

ONE END OF THE BIG TRANSPORTATION BUILDING

AN ENTRANCE TO THE LIBERAL ARTS BUILDING

been, ivory seemed to be. In place of yellow and red earth, all seemed verdant with grass and trees. In the center of the avenues, between the lines of trees, were waterways on which moved gondolas and launches. Water tumbled and frolicked down the hillside. Off toward the southwestern horizon, where the sun was sinking, in the midst of rich woods the turrets and domes of more buildings were scattered. Crowning the

hill stood the substantial, sincere, severe home of the fine arts. In front, like liveried pages in the presence of the simply dressed monarch, were the ornate festival hall and pavilions. Radiating from this center toward the dark horizon of the east and north, where the smoke lay as a reminder of the world of men we had left behind, were open avenues of shaded waterways bordered by streets and walks. There on the plain below, flanking these

patrons. High up, on the top of a huge refrigerator, were seated three dilapidated negroes, one drawing out strident tones from an accordion, another torturing an enfeebled fiddle, the third splitting the air with a cornet, and then caterwauling with his own voice as he came to the refrain of his song. We agreed with the soldiers that, hideous as this was, it was better than the darkness and loneliness of their quarters back there in fairyland.

We had lost the vision, it is true; but we remembered it; and, as the trolley-car carried us through the outskirts of the city, we wondered how any man or body of men could have dreamed so big, so simple, so ingenious, so complex a dream, and how they dared to make it actual.

What does it all mean? The answer to that question all depends upon the point of view. From one point of view it stands for bigness. The longest Cathedral in England, for instance, which is Winchester, I believe, could not reach half-way the length of the Varied Industries Building, and could barely extend through its narrowest part from front to rear. And this is only one of a dozen of the largest buildings of approximately the same size. The amount of money which will be spent directly to create and maintain this World's Fair will be about four times the sum that was paid for the territory whose purchase this Fair is to celebrate. Magnitude is, of course, not the highest of qualities, and compared with some other qualities it does not signify much. But it is not necessarily to be treated with contempt. There are some things besides fortunes that depend for their value as much upon their size as upon anything else—the Alps, for instance, and the Pyramids. Magnitude tends to cultivate both pride and humility. Those who visit the World's Fair at St. Louis next year will probably be a prouder people, but a set of humbler individuals.

From another point of view this Fair will have significance as a spectacle. It will probably be mainly as a spectacle that it will draw the crowd. As a cultivator of emotion it will unquestionably be a great success. Only the *blasé* observer could, after viewing the grounds even as they are now, a year in advance of the opening, admit that he was entirely unmoved. And when the buildings shine as if they

themselves were the source of light, when the water by turns is phosphorescent, shining like molten silver and dotted with vari-colored lights, when the whole scene is thronged with people and all the activities of this especially active Exposition are aglow, it is likely that even the *blasé* will for a moment or two cease to suspend judgment. That of itself is an achievement not without moral value. The real question in this respect is whether all this sensation will tend to debilitate or to quicken, to daze simply, or to stimulate. That depends on what sort of a spectacle it will be, and leads to other points of view.

That it ought to stimulate and not debilitate any ordinary wholesome human soul is plain when the significance of the Fair is sought for as a visualized record of industry, or, more broadly, of human achievement. Distinctively, this Exposition will show not merely products but processes; not merely what, but also how, men have achieved. The men who do things will here be speaking in the only language that most of them have mastered, but a language universally understood—the language whose unit of speech is a deed.

From another point of view, yet not so very different, this Fair will be significant for what it celebrates. The purchase of the Louisiana Territory from which the greater part of twelve States and two Territories have been constructed, and which opened the way to the making of eight other States and two other Territories, was an achievement that required a courage very much like genius, only that it was shared by two or three men. Of such an achievement an Exposition of achievements is a most appropriate celebration. Of the historical significance of this World's Fair, and of the attention it will direct toward the early contributions of the Latin races to the Republic, The Outlook already has spoken. It is sufficient here to add that no one of those present at the Dedicatory Ceremonies in St. Louis last April could fail to recognize that the commemorative impulse was more than a mere excuse for some democratic pomp; it was a genuine desire to exalt a deed that as much as any other has made our country great, and to honor the men whose doing the deed was.

BUILDING THE EXPOSITION

But more than a commemoration of a past achievement, more than a grouping of present achievement, the Fair is significant as being an attempt at a distinctive achievement itself. There is, behind all the transporting and unloading and transforming of timber, staff, and paint, a purpose to create a single though colossal work of art—an expression in terms of beauty of present-day human life. Whether that purpose shall be rewarded with success none can tell until the Fair shall have ended. In the meantime it has the significance that such an effort gives it.

Distinctively, too, this Fair is designed

to be a work of education. What that signifies may be learned from the fact that in every department of the Fair the conscious object of the director is to teach the people who shall come to see it how the leaders in the branch of knowledge which that department represents have attained their measure of progress. The Department of Agriculture will endeavor to show, among other things, how sandy soil has been taught to bear vegetation; the Department of Transportation, to what extent the air has been subjugated and the winds defied in their own realm. So in Manufactures, in Electricity, in

Liberal Arts, and in each of the other departments in turn, there will be a great popular technical school teaching by example. It is not without a purpose that the first department of the classification is that of Education.

But the highest possible significance of the Fair will be lost unless it can be shown that its effect will be to turn the minds of men from things to ideals, from the visible body to the invisible mind, from matter to spirit. The chief question that concerns thoughtful men as they think of the Exposition at St. Louis is, What will it tell concerning the character of America? what will it reveal of the soul of the Nation?

The final answer to this question cannot be given for several months yet; but since the spirit of the Fair in its completion is likely to be the same as its spirit in its growth, the bearing it will have upon the higher life of the American people can in a measure be surmised from the effects which the Fair as a project yet to be realized has already had. The first place in which to find these effects is naturally St. Louis itself.

Already the Exposition has certainly stimulated civic patriotism. The very proposal to hold the Fair at St. Louis forced men to confess their belief as to what constitutes the welfare of the city. Naturally, the remonstrants were the most vociferous. The city will never get its money back. The men who put their money into such an undertaking will lose it. Every other city that has had an Exposition has been unable to withstand the shock. These were the arguments, and they were frankly commercial. How did the people of St. Louis meet these arguments? In the first place, by supplying a group of idealists, who had the imagination to plan the Fair and the transcendental will to organize it. Then the people themselves responded with contributions. Enthusiasm, some people called it, with a laugh. Enthusiasm happens to be a very effective trait to add to civic patriotism. This is the way a barber at the hotel explained it to me.

"Do you think," I asked him as he paused to snap his scissors about my ears, "that the Exposition will be a good thing for St. Louis, or not?"

"Certainly, a good thing. Of course

there'll be a slump after it's all over; but it will only look like hard times. The people that will complain are those who don't belong here. The drift that will come in with the Fair will do a booming business for a while, but they won't find their business permanent, of course; and that's all."

There was the popular faith expressed. The barber who happened to be running a pneumatic massage machine over my cheerful fellow-traveler's face told him, between the intervals of the buzzing, that he and others in the shop had bought two or three shares in the Exposition Company apiece, though with no expectation of pecuniary return. "In fact," he added, "you'll find that about every hand in this hotel has a share or two." As he expressed his faith, it was "just because it was a good thing."

This same faith, whose fruit is the spirit of co-operation, evidently actuated the motorman who controlled a car I rode on during the morning of the day of dedication, who declared ungrudgingly that he would be on duty continuously until six o'clock the next morning, and seemed to enjoy the opportunity of making such a contribution to the good of the cause. Similarly, a chambermaid whom I overheard to remark that she was there for ten days "to help out," seemed to share the same enthusiasm. It was all for the sake of the city. And in all these cases the moving spirit was the spirit of the Exposition. One had no need to look far for explanations of the contribution of five million dollars, in sums small and great, from the citizens of St. Louis to the Exposition.

The philosophy of it was expressed to me several times by people who had thought it out independently. It is not a deep philosophy, but one that apparently never occurred to the commercially-minded. I heard it expressed in the vernacular by a politician, a member of the House of Delegates. He has the wisdom that does not come from books. When I met him, he was superintending the decoration of the front of his saloon. Naturally, the first subject that came up in our conversation was the political situation in the city, and the witty, gleeful manner in which he commented on the rout of the "boodlers" showed that he

#### THE GREAT CASCADE

At night the cascade will be brightly illuminated from below by mercury-vapor lights and from above by searchlights.

was responsive to public sentiment. When the talk drifted to the Exposition, he first gave his estimate from the commercial point of view.

"No," he emphatically declared, "it won't do no good. It'll be like temporary relief to a poor man. But"—and here came his philosophy—"it'll wake people up here. They're fast asleep." That was his pronouncement, and it can be accepted as sound. It is a fact which has been shown in recent elections, and was stated and restated to me, that the Exposition, by making people think of their city, had set them also to correcting its faults. Nothing has brought this fact more clearly into relief than the opposition it has aroused among the men who trust in material things and love appearances. Some of them, men of wealth and power, have tried to quiet the investigations into the acts of corruptionists who have been robbing the city, for fear that such investigations will injure the Exposition! "Don't disgrace the city by showing its filth," has been their argument. "Don't take a bath, because people will learn that you've been dirty," is the paraphrase which Circuit Attorney Folk, the instigator and successful prosecutor of these investigations, quietly made as a retort. He knows that the great mass of the people, as well as the strong men among the merchants, are behind him; and he acknowledges that the Exposition is a distinct aid in keeping the eyes of the people directed to the city, and their wills set upon its cleansing. They want the Exposition to find prepared for it a "New St. Louis."

The Exposition has been arousing the people of the city to a recognition of the need not only of municipal cleanliness but of all kinds of municipal progress. Every city is subject to some sort of provincialism. St. Louis is no exception. But the prospect of holding a World's Fair is already making provincialism seem incompatible with the fitness of a city that invites the world to its Fair. St. Louis has grown already toward cosmopolitanism because of its cosmopolitan undertaking. The Fair will contribute a permanent art museum and a group of buildings for Washington University. St. Louis has for several years needed an adequate building for its public library. As a

direct result of the quickening of the civic pride of the city through the influence of the Exposition, the city is now practically assured of such a building. Such an influence is sure to extend in other directions, stimulating the city to a keener appreciation of art, of music, of scholarship, of all those means for the development of the mind and the spirit of man which are to be found in the Exposition itself.

The pledge that this Exposition will indeed contribute not only to the higher life of St. Louis, but also to that of the Nation, is to be found in the culmination of the Exposition itself—the Congress of Arts and Sciences. This is to be a congress of congresses. It has been described at length by its originator, Professor Münsterberg, of Harvard, in the "Atlantic Monthly" for May. Its purpose is to show the unity of knowledge and to state through papers given by experts the achievements of each branch of human knowledge in its relation to cognate branches. It is impossible here to give further details; it is sufficient to say that by means of this Congress the Fair is to be its own interpreter.

It seems to be a misfortune, if not indeed a blunder, that religion has no voice in this great Exposition except as it is represented by its kinsman science for one or two sessions. Apparently it was a serious error for the Exposition authorities to fail in recognizing the desire, expressed by the joint action of Roman Catholics, Protestants, and Jews, for a Temple of Religion to stand as a witness that the American people, who could spend millions for cattle, machinery, grains, and metals, could devote some thousands for their faith. The visitor to the Exposition will learn what the corporations and trusts are doing, but he will search in vain for any sign of what the Church is doing. It is to be hoped that the plans which have already been formulated for organizing religious effort within the city during the period of the Exposition will be successfully carried out. The Southwest, of which St. Louis is the natural capital, has so emphatically a religious life of its own that in the Exposition there there is special reason why the religious life should find at least not less than the usual attention. Nevertheless,

the last section of the official Congress of Arts and Sciences will be devoted to the subject of religious influence in civilization; so, though religion is to have no distinctive representation, it will be the culmination of the Congress that itself is the culmination of the Fair.

It should not be forgotten that this Exposition, like all other World's Fairs held in America, is primarily not a commercial undertaking. It is rather a spontaneous and half-unconscious, but all the more effective, expression of American idealism. The fact that it has been and will continue to be described largely in terms of feet and acres, of bushels and tons, of dollars that mount up into the millions, should not mislead any one into thinking that it is the apotheosis of materialism. These terms are an indication,

not of a grossness of ideas, but of a paucity of vocabulary. These form the language which most men in America can most easily use. The fact is that this Exposition is primarily a feat of the imagination, a great composite structure of ideals. Those who shall endeavor to measure its success or failure by commercial standards do not understand the American mind. Whether he be the Yankee on the side-hills of New England, the Southerner in his fields of cotton, or the Westerner making the prairie and the desert to blossom as the rose, the American is first of all a dreamer, a reacher out after the unseen, a man who is unsatisfied until he achieves the impossible. And when he builds a Fair like this, he is but saying, This is what I have dreamt, and I have made my own dream come true.

By Benjamin Rosenblatt

**T**HE cold, blank winter day breaks ghastly on the plains of northern Russia. Gloomily onward stretch the wild, snow-covered steppes of frozen Siberia; not a tree, not a bush, in sight; and the winds rise, blowing with fury and whirling heaps of snow round and round in the air. On the frozen ground two men are lying huddled together, trying to hide themselves from the blast, struggling against the deadly frost which creeps upon them, slowly paralyzing their limbs.

They escaped from the party of exiles. How they were hunted! How, like wild beasts, they were pursued! But the merciless work in the cold subterranean mines of Siberia stood before them. Thinking of it, they ran, breathlessly ran, leaving their pursuers behind. . . . And now they lie on the snow, with knees bruised and bleeding, with hands scarred and swollen, staring wildly before them on the raw, cold morning breaking in the east.

On their faces, which show intelligence and resolution, is visible the impression of the tyrannic government which persecutes them as political "criminals." Their features are pinched, the teeth set

close together, and a steady fire burns in their eyes which tells of mortal hatred to those despots who stifle every voice that is raised against their unjust rule. Their long kaftans are tied with ropes around the waist, and their faces are muffled in ragged shawls to protect them from the smarting wind. They had no time to provide themselves with proper clothing; in the dead of night they were suddenly caught and transported—but they escaped, and now they are free! All alone on the wild plains, free! How good! and how warm! . . . They feel the cold no longer. . . . Their features relax, grow softer, and their eyes become glassy, slowly filling with tears, as dim thoughts of home and native scenes pass faintly through the brain. . . . Their eyes close, they embrace each other closer and closer, feeling so warm. . . . And around them the dreary steppes stretch endlessly on and on to meet a leaden sky that hangs gloomily overhead. The bitter morning breaks on the infinite solitude, and the snow, falling, falling, falling, snugly covers the sleeping pair, making them warmer and warmer.

## Chapter XV.—On Woods Indians

**F**AR in the North dwell a people practically unknown to any but the fur-trader and the explorer. Our information as to Mokis, Sioux, Cheyennes, Nez Percés, and indirectly many others, through the pages of Cooper, Parkman, and allied writers, is varied enough, so that our ideas of Indians are pretty well established. If we are romantic, we hark back to the past and invent fairy tales with ourselves anent the Noble Red Man who has Passed Away. If we are severely practical, we take notice of filth, vice, plug hats, tin cans, and laziness. In fact, we might divide all Indian concepts into two classes, following these mental and imaginative bents. Then we should have quite simply and unsatisfactorily the Cooper Indian and the Comic Paper Indian. It must be confessed that the latter is often approximated by reality—and everybody knows it. That the former is by no means a myth—at least in many qualities—the average reader might be pardoned for doubting.

Some time ago I desired to increase my knowledge of the Woods Indians by whatever others had accomplished. Accordingly I wrote to the Ethnological Department at Washington asking what had been done in regard to the Ojibways and Wood Crees north of Lake Superior. The answer was, "Nothing."

And "nothing" is more nearly a comprehensive answer than at first you might believe. Visitors at Mackinac, Traverse, Sault Ste. Marie, and other northern resorts are besought at certain times of the year by silent, calico-dressed squaws to purchase basket and bark work. If the tourist happens to follow these women

for more wholesale examination of their wares, he will be led to a double-ended Mackinaw-built sailing-craft with red-dyed sails, half pulled out on the beach. In the stern sit two or three bucks wearing shirts, jean trousers, and broad black hats. Some of the oldest men may sport a patched pair of moccasins or so, but most are conventional enough in clumsy shoes. After a longer or shorter stay they hoist their red sails and drift away toward some mysterious destination on the north shore. If the buyer is curious enough and persistent enough, he may elicit the fact that they are Ojibways.

Now, if this same tourist happens to possess a mildly venturesome disposition, a sailing craft, and a chart of the region, he will sooner or later blunder across the dwelling-place of his silent venders. At the foot of some rarely frequented bay he will come on a diminutive village of small whitewashed log houses. It will differ from other villages in that the houses are arranged with no reference whatever to one another, but in the haphazard fashion of an encampment. Its inhabitants are his summer friends. If he is of an insinuating address, he may get a glimpse of their daily life. Then he will go away firmly convinced that he knows quite a lot about the North Woods Indian.

And so he does. But his North Woods Indian is the Reservation Indian. And in the north a Reservation Indian is as different from Woods Indian as a negro is from a Chinese.

Suppose, on the other hand, your tourist is unfortunate enough to get left at some North Woods railway station where he has descended from the transcontinental to stretch his legs, and suppose him to

<sup>1</sup> Copyright, 1903, by the Outlook Company.

have happened on a fur town like Missinâibie at the precise time when the trappers are in from the wilds. Near the borders of the village he will come upon a little encampment of conical teepees. At his approach the women and children will disappear into inner darkness. A dozen wolf-like dogs will rush out barking. Grave-faced men will respond silently to his salutation.

These men, he will be interested to observe, wear still the deer or moose skin moccasin — the lightest and easiest foot-gear for the woods; bind their long hair with a narrow fillet, and their waists with a red or striped worsted sash; keep warm under the blanket thickness of a Hudson Bay capote; and deck their clothes with a variety of barbaric ornament. He will see about camp weapons whose acquaintance he has made only in museums, peltries of whose identification he is by no means sure, and as matters of daily use snow-shoes, bark canoes, bows and arrows—what to him have been articles of ornament or curiosity. Tomorrow these people will be gone for another year, carrying with them the results of the week's barter. Neither he nor his kind will see them again, unless they too journey far into the Silent Places. But he has caught a glimpse of the stolid mask of the Woods Indian, concerning whom officially "nothing" is known.

In many respects the Woods Indian is the legitimate descendant of the Cooper Indian. His life is led entirely in the forests; his subsistence is assured by hunting, fishing, and trapping; his dwelling is the wigwam, and his habitation the wide reaches of the wilderness lying between Lake Superior and the Hudson Bay; his relation to humanity confined to intercourse with his own people and acquaintance with the men who barter for

his peltries. So his dependence is not on the world the white man has brought, but on himself and his natural environment. Civilization has merely ornamented his ancient manner. It has given him the convenience of cloth, of firearms, of steel traps, of iron kettles, of matches; it has accustomed him to the luxuries of white sugar—though he had always his own maple product—tea, flour, and white man's tobacco. That is about all. He knows nothing of whisky. The towns are never

visited by him, and the Hudson's Bay Company will sell him no liquor. His concern with you is not great, for he has little to gain from you.

This people, then, depending on natural resources for subsistence, has retained to a great extent the qualities of the early aborigines.

To begin with, it is distinctly nomadic. The great rolls of birch bark to cover the pointed teepees are easily transported in the bottoms of canoes, and the poles are quickly cut and put in place. As a consequence, the Ojibway family is always on the move. It searches out new trapping grounds, new fisheries, it pays visits, it seems even to enjoy travel for the sake of exploration. In winter a teepee of double wall is built, whose hollow is stuffed with moss to keep out the cold; but

even that approximation of permanence cannot stand against the slightest convenience. When an Indian kills, often he does not transport his game to camp, but moves his camp to the vicinity of the carcass. There are of these woods dwellers no villages, no permanent clearings. The vicinity of a Hudson's Bay post is sometimes occupied for a month or so during the summer, but that is all.

An obvious corollary of this is that tribal life does not consistently obtain. Throughout the summer months, when game and fur are at their poorest, the

A WOODS INDIAN

ON THE LONG TRAIL

bands assemble, probably at the times of barter with the traders. Then for the short period of the idling season they drift together up and down the North Country streams, or camp for big powwows and conjuring near some pleasant conflux of rivers. But when the first frosts nip the leaves, the families separate to their allotted trapping districts, there to spend the winter in pursuit of the real business of life. The tribe is thus split into many groups, ranging in numbers from the solitary trapper eager to win enough fur to buy him a wife, to a compact little group of three or four families closely related in blood. The most striking consequence is that, unlike other Indian bodies politic, there are no regularly constituted and acknowledged chiefs. Certain individuals gain a remarkable reputation and an equally remarkable respect for wisdom, or hunting skill, or power of woodcraft, or travel. These men are the so-called "old-men" often mentioned in Indian manifestoes, though age has nothing to do with the deference accorded them.

The life so briefly hinted at in the foregoing lines inevitably develops and fosters an expertness of woodcraft almost beyond belief. The Ojibway knows his environment. The forest is to him so familiar in each and every one of its numerous and subtle aspects that the slightest departure from the normal strikes his attention at once. A patch of brown shadow where green shadow should fall, a shimmering of leaves where should be merely a gentle waving, a cross light where the usual forest growth should adumbrate, a flash of wings at a time of day when feathered creatures ordinarily rest quiet—these, and hundreds of others which you and I should never even guess at, force themselves as glaringly on an Indian's notice as a brass band in a city street. A white man *looks* for game; an Indian sees it because it differs from the forest.

In journeying down the Kapúskasing River, our Indians—who had come from the woods to guide us—always saw game long before we did. They would never point it out to us. The bow of the canoe would swing silently in its direction, there to rest motionless until we indicated that we had seen something.

"Where is it, Peter?" I would whisper.

But Peter always remained contemptuously silent.

One evening we paddled directly into the eye of the setting sun across a shallow little lake filled with hardly sunken boulders. There was no current, and no breath of wind to stir the water into betraying ripples. But invariably those Indians twisted the canoe into a new course ten feet before we reached one of the obstructions, whose existence our dazzled vision could not attest until they were actually below us. They *saw* those rocks through the shimmer of the surface glare.

Another time I discovered a small black animal lying flat on a point of shale. Its head was concealed behind a boulder, and it was so far away that I was inclined to congratulate myself on having differentiated it from the shadow.

"What is it, Peter?" I asked.

Peter hardly glanced at it.

"Ninny-moósh" (dog), he replied.

Now, we were a hundred miles south of the Hudson's Bay Post and two weeks north of any other settlement. Saving a horse, a dog would be about the last thing to occur to one in guessing at the identity of any strange animals. This looked like a little black blotch, without form. Yet Peter knew it. It was a dog, lost from some Indian hunting party, and mightily glad to see us.

The sense of smell, too, is developed to an extent positively uncanny to us who have needed it so little. Your Woods Indian is always sniffing, always testing the impressions of other senses by his olfactories. Instances numerous and varied might be cited, but probably one will do as well as a dozen. It once became desirable to kill a caribou in country where the animals are not at all abundant. Tawabinisáy volunteered to take Jim within shot of one. Jim describes their hunt as the most wonderful bit of stalking he had ever seen. The Indian followed the animal's tracks as easily as you or I could have followed them over snow. He did this rapidly and certainly. Every once in a while he would get down on all fours to sniff inquiringly at the crushed herbage. Always on rising to his feet he would give the result of his investigations.

" Ah-téek (caribou) one hour."  
And later, " Ah-téek half hour."  
Or again, " Ah-téek quarter hour."  
And finally, " Ah-téek over nex' hill."  
And it was so.

In like manner, but most remarkable to us because the test of direct comparison with our own sense was permitted us, was their acuteness of hearing. Often while "jumping" a roaring rapids in two canoes my companion and I have heard our men talking to each other in quite an ordinary tone of voice. That is to say, I could hear my Indian and Jim could hear his; but personally we were forced to shout loudly to carry across the noise of the stream. The distant approach of animals they announce accurately.

" Wawashkeshí " (deer), says Peter.

And sure enough, after an interval, we too could distinguish the footfalls on the dry leaves.

Mr. Caspar Whitney describes in exasperation his experience with the Indians of the far Northwest. He complains that when they blunder on game, they drop everything and enter into almost hopeless chase, two legs against four. Occasionally the quarry becomes enough bewildered so that the wild shooting will bring it down. He quite justly argues that the merest pretense at caution in approach would result in much greater success.

The Woods Indian is no such fool. He is a mighty poor shot—and he knows it. Personally I believe he shuts both eyes before pulling trigger. He is armed with a long flint or percussion lock musket, whose gas-pipe barrel is bound to the wood that runs its entire length by means of brass bands, and whose effective range must be about ten yards. This archaic implement is known as a "trade gun," and has the single merit of never getting out of order. Furthermore, ammunition is precious. In consequence, the wilderness hunter is not going to be merely pretty sure; he intends to be absolutely certain. If he cannot approach near enough to blow a hole in his prey, he does not fire.

I have seen Peter drop into marsh grass so thin that apparently we could discern the surface of the ground through it, and disappear so completely that our most earnest attention could not distinguish even a rustling of the herbage. After an interval his gun would go off from some

distant point, exactly where some ducks had been feeding serenely oblivious to fate. Neither of us white men could have considered for a moment the possibility of getting any of them. Once I felt rather proud of myself for killing six ruffed grouse out of some trees with the pistol, until Peter drifted in carrying three he had bagged with a stick.

Another interesting phase of this almost perfect correspondence to environment is the readiness with which an Indian will meet an emergency. We are accustomed to rely first of all on the skilled labor of some one we can hire; second, if we undertake the job ourselves, on the tools made for us by skilled labor; and, third, on the shops to supply us with the materials we may need. Not once in a lifetime are we thrown entirely on our own resources. Then we improvise bunglingly a makeshift.

The Woods Indian possesses his knife and his light ax. Nails, planes, glue, chisels, vises, cord, rope, and all the rest of it he has to do without. But he never improvises makeshifts. No matter what the exigency, or how complicated the demand, his experience answers with accuracy. Utensils and tools he knows exactly where to find. His job is neat and workmanlike, whether it is a bark receptacle—watertight or not—a pair of snow-shoes, the repairing of a badly smashed canoe, the construction of a shelter, or the fashioning of a paddle. About noon one day Tawabinisáy broke his ax-helve square off. This to us would have been a serious affair. Probably we should, left to ourselves, have stuck in some sort of a rough, straight sapling handle which would have answered well enough until we could have bought another. By the time we had cooked dinner that Indian had fashioned another helve. We compared it with the store article. It was as well shaped, as smooth, as nicely balanced. In fact, as we laid the new and the old side by side we could not have selected, from any evidence of the workmanship, which had been made by machine and which by hand. Tawabinisáy then burned out the wood from the ax, retempered the steel, set the new helve and wedged it neatly with ironwood wedges.

To travel with a Woods Indian is a constant source of delight on this account.

So many little things that the white man does without because he will not bother with their transportation, the Indian makes for himself. And so quickly and easily! I have seen a thoroughly water-proof, commodious, and comfortable bark shelter made in about the time it would take one to pitch a tent. I have seen a raft built of cedar logs and cedar-bark ropes in an hour. I have seen a badly stoven canoe made as good as new in fifteen minutes. The Indian rarely needs to hunt for the materials he requires. He knows exactly where they grow, and he turns as directly to them as a clerk would turn to his shelves.

The qualities I have mentioned come primarily from the fact that the Woods Indian is a hunter. I have now to instance two whose development can be traced to the other fact—that he is a nomad. I refer to his skill with the bark canoe and his ability to carry.

I was once introduced to a man at a little way station of the Canadian Pacific Railway in the following words:

"Shake hands with Munson; he's as good a canoeman as an Indian."

A little later one of the bystanders remarked to me:

"That fellow you was just talking with is as good a canoeman as an Injin."

Still later, at an entirely different place, a member of the bar informed me in the course of discussion:

"The only man I know of who can do it is named Munson. He is as good a canoeman as an Indian."

At the time this unanimity of praise puzzled me a little. I thought I had seen some pretty good canoe work, and even cherished a mild conceit that occasionally I could keep right side up myself. I knew Munson to be a great woods traveler, with many striking qualities, and why this of canoemanship should be so insistently chosen above the others was beyond my comprehension. Subsequently a companion and I journeyed to Hudson Bay with two birch canoes and two Indians. Since that trip I have had a vast respect for Munson.

Undoubtedly among the half-breed and white guides of lower Canada, Maine, and the Adirondacks are many skillful men. But they know their waters; they follow a beaten track. The Woods Indian—well, let me tell you something of what he does.

We went down the Kapuskasing River to the Mattagami, and then down that to the Moose. These rivers are at first but a hundred feet or so wide, but rapidly swell with the influx of numberless smaller streams. Two days' journey brings you to a watercourse nearly half a mile in breadth; two weeks finds you on a surface approximately a mile and a half across. All this water descends from the Height of Land to the sea level. It does so through a rock country. The result is a series of roaring, dashing boulder rapids and waterfalls that would make your hair stand on end merely to contemplate from the banks.

The regular route to Moose Factory is by the Missinabie. Our way was new and strange. No trails; no knowledge of the country. When we came to a stretch of white water, the Indians would rise to their feet for a single instant's searching examination of the stretch of tumbled water before them. In that moment they picked the passage they were to follow as well as a white man could have done so in half an hour's study. Then without hesitation they shot their little craft at the green water.

From that time we merely tried to sit still, each in his canoe. Each Indian did it all with his single paddle. He seemed to possess absolute control over his craft. Even in the rush of water which seemed to hurry us on at almost railroad speed, he could stop for an instant, work directly sideways, shoot forward at a slant, swing either his bow or his stern. An error in judgment or in the instantaneous acting upon it meant a hit; and a hit in these savage north country rivers meant destruction. How my man kept in his mind the passage he had planned during his momentary inspection was always to me a miracle. How he got so unruly a beast as the birch canoe to follow it in that tearing volume of water was always another. Big boulders he dodged, eddies he took advantage of, slants of current he utilized. A fractional second of hesitation could not be permitted him. But always the clutching of white hands from the rip at the eddy finally conveyed to my spray-drenched faculties the fact that the rapid was safely astern. And this, mind you, in strange waters.

Occasionally we would carry our outfit

through the woods, while the Indians would shoot some especially bad water in the light canoe. As a spectacle, nothing could be finer. The flash of the yellow bark, the movement of the broken waters, the gleam of the paddle, the tense alertness of the men's figures, their carven, passive faces, with the contrast of the flashing eyes and the distended nostrils, then the leap into space over some half-cataract, the smash of spray, the exultant yells of the canoemen!

This is, of course, the spectacular. But also in the ordinary gray business of canoe travel the Woods Indian shows his superiority. He is tireless, and composed as to wrist and shoulder of a number of whalebone springs. From early dawn to dewy eve, and then a few gratuitous hours into the night, he will dig energetic holes in the water with his long, narrow blade. And every stroke counts. The water boils out in a splotch of white air-bubbles, the little suction-holes pirouette like dancing girls, the fabric of the craft itself trembles under the power of the stroke. Jim and I used, in the lake stretches, to amuse ourselves—and probably the Indians—by paddling in furious rivalry one against the other. Then Peter would make up his mind that he would like to speak to Jacob. His canoe would shoot up alongside as though the Old Man of the Lake had laid his hand across its stern. Would I could catch that trick of easy, tireless speed! I know it lies somewhat in keeping both elbows always straight and stiff, in a lurch forward of the shoulders at the end of the stroke. But that, and more! Perhaps one needs a copper skin and beady black eyes with surface lights.

Nor need you hope to pole a canoe upstream as do these people. Tawabinisáy uses two short poles, one in either hand, kneels amidships, and snakes that little old canoe of his up-stream so fast that you would swear the rapids an easy matter—until you tried them yourself. We were once trailed up a river by an old Woods Indian and his interesting family. The outfit consisted of canoe Number One—*item*, one old Injin, one boy of eight years, one dog; canoe Number Two—*item*, one old Injin squaw, one girl of eighteen or twenty, one dog; canoe Number Three—*item*, two little girls of ten and twelve, one dog. We tried desperately

for three days to get away from this party. It did not seem to work hard at all. We did. Even the two little girls appeared to dip the contemplative paddle from time to time. Water boiled back of our own blades. We started early and quit late, and about as we congratulated ourselves over our evening fire that we had distanced our followers at last, those three canoes would steal silently and calmly about the lower bend to draw ashore below us. In ten minutes the old Indian was delivering an oration to us squatted in resignation.

The Red Gods alone know what he talked about. He had no English, and our Ojibway was of the strictly utilitarian. But for an hour he would hold forth. We called him Talk-in-the-Face, the Great Indian Chief. Then he would drop a mild hint for *sáymon*, which means tobacco, and depart.

The incident had one value, however; it showed us just why these people possess the marvelous canoe skill I have attempted to sketch. The little boy in the leading canoe was not over eight or nine years of age, but he had his little paddle and his little canoe-pole, and, what is more, he already used them intelligently and well. As for the little girls—well, they did easily feats I never hope to emulate, and that without removing the cowl-like coverings from their heads and shoulders.

The same early habitude probably accounts for their ability to carry weights long distances. The Woods Indian is not a mighty man physically. Most of them are straight and well built, but of only medium height and not wonderfully muscled. Peter was most beautiful, but in the fashion of the flying Mercury, with long smooth panther muscles. He looked like Uncas, especially when his keen hawk face was fixed in distant attention. But I think I could have wrestled Peter down. Yet time and again I have seen that Indian carry two hundred pounds for some miles through a rough country absolutely without trails. And once I was witness of a feat of Tawabinisáy, when that wily savage portaged a pack of fifty pounds and a two-man canoe through a hill country for four hours and ten minutes without a rest. Tawabinisáy is even smaller than Peter.

THE PILOT AND OFFICERS ON THE BRIDGE OF A BIG OCEAN LINER

## The Pilot's Life

By Victor Slocum

With Photographs by Arthur Hewitt

"NUMBER SEVEN"

THE Sandy Hook pilots are State-constituted guardians of the interests of marine insurance for the port of New York. In case of disaster while entering or leaving the harbor, a ship unpiloted has great difficulty in collecting insurance. This places a vast amount of responsibility upon the pilots' shoulders; therefore they are, necessarily, sailors of the first class. Many of them have been masters or mates of square-rigged vessels of every description, which means a long sea experience. Some of them have sailed clipper-ships to and from Europe when these ships held predominance over steam; and I met one of these on my recent cruise on a pilot-boat. He told, with sparkling eye, of voyages the world over in quest of the dangerous cachalot, and how he had been up on the Pacific side of the Arctic, hunting bowhead whales. So, not only was he trained to be a first-class sailor, but he was thoroughly drilled in a pursuit likely to develop nerve and rapid judgment. A sailor of this sort enters

the pilot-boat service as a "boy." After a term of perhaps months to develop his fitness, the "boy" is made a boat-keeper, and entered as a regular apprentice. He must serve five years in one boat, and then pass an examination which admits him to a "sixteen-foot" license, which means that he can pilot only vessels drawing sixteen feet of water or less. In course of time, in case some one dies, he gets a "full branch." But pilots seldom die; their temperate habits and open-hearted lives, spent close to the primal elements, make them almost as imperishable as the gales of Cape Horn or Hatteras. A boat-keeper seldom becomes a pilot, for it must be observed that he has to serve five years on one boat, which makes his position a hard one to keep, as

SIGNALING A SHIP AT NIGHT

A turpentine torch is burned by the pilots at night, the ships answering with a blue light.

his very position is dependent on the whim of his masters, the licensed men. They can discharge him at any time without any plausible reason, and a man very often has his heart broken on a number of boats, for if he loses his billet on one boat, he must begin his time all over again on another.

For some strange reason, pilots make it hard for an apprentice; as a matter of principle, perhaps, because they are unwilling that any pilot shall escape the discipline to which they themselves have been subjected. So, by the time a man becomes a full-fledged pilot, he is not only a sailor, with all that the term implies, and understands how to manage a pilot-boat, but he knows the Bay. It is like an open book to him, in clear weather or in fog, in daylight or darkness; blow high or blow low, it is all the same to this master of his craft, whether bracing around the yards of a little Norwegian

"wind-jammer" or directing the movements of a great transatlantic liner.

The history of the Sandy Hook pilots reads like a romance. As far back in the legal annals as 1763 the Colonial Legislature passed an act organizing a Board of Wardens for the Port of New York, giving them power over pilotage. They could both license pilots and make it compulsory on captains of vessels to take them. When the United States Congress got its machine well oiled up and in good running order, we find it passing an act in 1789 in regard to pilots. It appears that Congress has always recognized the policy of allowing each State to arrange its own pilotage laws. About this time licenses were granted on political grounds, without much regard to seamanship or real merit, with consequent disastrous results. The calling was followed by a class of men who led it into disrepute

THE PILOT'S LANDING-PLACE

WATCHING FOR A SHIP

until 1845, when an act was passed by the New York State Legislature abolishing all pilotage regulations. The Legislature saw the pernicious effect of the system it had established. During the eight years that followed the pilots ran riot, and affairs were worse than when the law existed.

Such a reckless disregard of life and property was not to be tolerated very long, and an appeal was made to Congress. This was futile, so the merchants and underwriters got together to see what could be done. They elected a Board of Pilot Commissioners, three members of which were elected by the Chamber of Commerce and two by the Board of Underwriters. This Commission was to examine pilots as to their fitness to do the duties imposed upon them, and grant licenses to those who were fitted, stipulating that service should be a matter of compulsion to a man who wanted to keep his license. After this admirable system had been found to work in good shape and had been carefully tried, the Legislature of New York adopted it.

Under the New York State act the

Sandy Hook pilots are compelled by law to be out in all kinds of weather, to offer their services, and to board any ship signaling them. Only foreign vessels and vessels sailing under register are obliged to take them. Coastwise vessels are exempt from this law. The state of a ship's health makes no difference in the faithful performance of their sworn duty.

My cruise in the *Ambrose Snow* (officially known as Pilot Boat No. 2) really began at the Pilot Office. The genial pilots, whose very presence brings one into the atmosphere of the sea, kindly offered me the use of a locker wherein to stow my "dunnage," and gave me orders to keep within hailing distance if I wanted to go down with them, for they were momentarily expecting advice by telephone that their boat had arrived at the second landing on Staten Island; so I stood off and on until she was reported by her boat-keeper, when, in company with the six pilots who had been assigned to this cruise, I started on the Staten Island ferry to pick her up. She is a trim little craft of seventy-five tons, flush-decked and schooner-rigged, sparred less extra-

AT THE MASTHEAD LOOKING FOR SHIPS

gantly than a Gloucester "fisherman," and equipped more sensibly than a yacht, for a sailor's trained eye could detect no furbelows in her make-up. She has a character of her own, for the cut of a pilot-boat is not to be mistaken for any other, even though the sails be furled and the gigantic numeral on the mainsail be concealed, or her official blue flag, which floats above the truck when pilots are on board, be unhoisted. Each boat has a crew of four "boys," a boat-keeper, and a steward. We were to go on the southern ground to relieve No. 5, which was supposed to have discharged nearly all her

pilots. At Stapleton we found No. 7, which was under orders to relieve the steam pilot-boat from station duty.

A word of explanation in regard to the numbers of boats may be in order. Originally there were twenty-nine boats owned by the Pilot Commission, but at present there are only five, two of which are out of commission, leaving three in actual service. These retain their original numbers. Together with the two new steam pilot-boats, the New Jersey and the New York, these boats do all the pilot work of the New York port.

Our cruise in No. 2 started from Stapleton, Staten Island, with No. 7 astern. The old spirit of rivalry could not be suppressed in the pilot who had the wheel, and we kept ahead of No. 7 in good shape all the way down Swash Channel. The flood-tide was about half up as we started, and we gained time by catching a bit of counter ebb near the Long Island shore, and, by a clever bit of seamanship, held our lead on No. 7 all the way down to the bar. However, she was a close second. I heard a yarn of how she had been hulled a short time ago by a trial shot from a Sandy Hook proving battery while cruising about three

miles off shore. The shot struck her just abaft the fore-rigging, and it was only by a mere chance that a number of men were not killed—just by way of proving the value of military science. "A 'dummy' shot, they called it, but it certainly made things lively all right. If that was a 'dummy,' I wouldn't want to see the real thing coming my way," remarked the pilot who was on board No. 7 at the time the incident occurred.

Going down the Bay seems to be a new voyage to these men every time they put to sea in quest of ships to pilot up. Nothing passes them without being hailed

or signaled. Vigilance is with them a science, and a development of the power of keen observation is a part of their education. They will "raise" a sail or line of smoke on the horizon which a landsman could not detect until almost in full sight. After going over the bar we made out No. 5 down to the south'ard. We are going to relieve her, so we bear down and speak, and heave out a yawl to carry over some papers. "How many of you fellows are there?" is our interested hail, for it is proper that she discharge all her pilots before we board any vessels. "Three," is the reply. "Then half of you come aboard here." A transfer couldn't be made on this basis, however, and they go down again to their position, we returning to the Scotland lightship in order to anchor about a half-mile from her.

The wind has died out, and we haven't much room in which to drift around. We soon discover that No. 5 has discharged her three remaining men, for some steamers came up to us about midnight and snaked a couple of our men out of their bunks—after a good supper and a game of cribbage, the men had all retired excepting the watch on deck. Our pilots seemed

to know intimately each one of the one hundred and thirty-five members of the guild, and good-fellowship among them is a wholesome characteristic. They take a keen delight in recounting, in a good-natured way, humorous incidents of each other's peculiarities. They are generally laconic in their speech and are very sensibly averse to the conventional sailor's habit of spinning yarns, and very seldom talk shop. They do all of that and some growling to boot up in the office at No. 17 State Street, where they make personal accusations and settlements as to "ship stealing;" that is, getting in ahead of some other fellow and working back to the city sooner than they should. This is apt to imply negligence on the part of the disappointed boat. It is not "fair play," for their duty is only to wait outside of the bar and board vessels that require pilots. The system is regulated in the office in true military style, but the independent seafaring instinct seems bound to assert itself and is not easy to control.

The next morning found us with four pilots still aboard, and the glasses were still on the southern horizon. That is our point and province to look out for, as the eastern ground has its own patrol,

ON BOARD THE PILOT-BOAT

"AS SOON AS A SHIP IS SIGHTED THE YAWL IS LITERALLY HURLED INTO THE WATER."

#### THE PILOT'S DAY SIGNALS

A number on the mainsail and a large blue flag at the masthead.

well covered by a steam pilot-boat. The distant sea was enveloped in mist through which the gigantic eastern steamers passed in and out, their immense hulls looming up like ships under full sail. Close to us stretched Sandy Hook, which ends in the Highlands of Navesink, not distant enough to lose its tinge of green. Almost within hailing distance lay the Scotland Lightship, originally put there to mark the wreck of the steamship Scotland, but now used to mark the entrance to the South Channel. Farther out in the hazy perspective looms the station boat No. 7, her inky masts denuded of their sails. An enormous blue flag, that seems blacker than either hull or rigging beneath it, floats from one mast, and in the calm morning there is hardly breeze enough to stretch out her dark folds sufficiently to show her character to incoming or outgoing ships.

Sea-gulls "honk" and scream in a contented manner, and eight bells sounds from the lightship in a clear, sonorous tone. Our own little vessel rolls lazily on the incoming swell at anchor, with the manila cable swishing up and down musically in the water.

Soon a barkentine was sighted towing close under the coast. Was she a coaster?

All glasses were brought to bear on her to make out if there were a deck-load of hard pine to be seen, but the closest scrutiny did not seem to reveal anything of the sort. Such a load would indicate that she was from some Southern coast port, and therefore exempt. Overboard went the yawl to investigate, and away it started with four oarsmen, for we were at anchor, and all the man-power was required in the boat that was under way. They had about a half-mile to row to get into line so as to intercept the tow, and it proved "no good." She was a coaster, after all. However, the pilots had done their duty, for they must signal or hail every possibility, and patrol their ground thoroughly. Pilots are aware that American sailing vessels of the coasting type, when from a West Indian or South American port, will sometimes take on the appearance of their usual trade by loading on a false deck-load of hard pine.

In about an hour a thick fog set in, through which the resonant whistles of a number of steamers were heard. Our fog-bell rang at proper intervals, and soon a couple of steamers came near, and the cannon was loaded, and was fired in response to their long blasts. "I don't

think either of 'em is any good," observed one of the pilots, while we were all straining our ears in the cock-pit. The pilots are so familiar with sounds that they know the character of a steamer from her whistle before they can make out her form. We soon found that our pilot was right. The whistle sounded nearer at each blast heard through the thick mist.

"Give 'er another gun," cried out the pilot in charge to the boat-keeper and his crew, who had been firing rapidly.

A deafening report rang out, and the next instant the high stem of a Mallory liner overtopped our rigging. She was going dead slow, however, and passed us safely by, hardly more than a hundred feet off. She was a coasting steamer, exempt from pilotage, and soon we made out the other steamers to be coasters also.

There were so many steamers coming on that two of our pilots prepared to board. The third, having remained in his bunk during the excitement, was not aware that the others were ready to go. Now, pilots are punctilious in the matter of dress, always rigging up in good shape before boarding a ship to take command. The pilot who had expected to board the barkentine in the morning was to have the first turn, and the man who was to have the next turn was down below, playing cribbage with the third man, who had remained in his bunk during all the fuss. We had our doubts, however, about his having been asleep all the time; although he appeared to be ignorant of what had been going on, for, after the first deal, he affected to discover that his partner had on a white collar.

"What the blazes are you all fixed up for?" he growled. "Can't you wait till the man gets out of the boat before *you* go?"

"If you hadn't had your nose in a pillow, while we were firing guns and raising a hullabaloo," retorted the other, "you'd 'ave known that there were a dozen steamers blowing around here, an' I didn't want to keep 'em waitin' 'round till I got dressed up."

But they did not have to wait, and he had not donned his "boiled shirt" in vain, for the great hull of the steamer that hailed for a pilot soon appeared to us, like a ghost in a misty shroud. Her engines were shut down and she was

drifting, for it would have been dangerous to advance at even the slowest speed. Had we not been under way ourselves we would have missed her. We could hear her roaring steam-pipe, which was more of a guide to us than her whistle would have been, because it indicated her close proximity.

In a few moments our pilot had boarded, the yawl returned to our boat, and we anchored again a little out of the path of big vessels. It was now night, and the darkness added to our uncertainty, making a gloom that could almost be felt. The blinding flashes of the new Highland light shot high up into the misty sky. It is strange to see that the handiwork of man can almost conquer the elements. It matters not if the fog shuts in the coast and conceals the lighthouse, for ships may be warned from this wonderful light, which flashes far into the sky, using the mist-laden atmosphere itself for a reflector.

The next morning dawned clear and bright, and found No. 2 under way again, headed for the southern limit of her cruising-ground. A mastheads man was stationed on the fore crosstrees, but he could make nothing out from his lofty eyrie but some incoming fishing schooners and a promising streak of smoke that turned out to be a steam mackerel man; but the second cry of "Smoke O!" proved to be a tramp steamer bound up from the south'ard. She looked like a possibility, and "Pete," who had the next turn, dived down below in hasty glee to get ready, while the other called out, after a long look through the spy-glass, "They've got a jack a-flying, Pete;" and to the men on deck, "Go for'ard and put that bonnet in the jib! Lively now, and we can head 'er off." In a few moments we were bearing down to get in the steamer's track, and "Pete" emerged from the companionway, rigged all ataunto.

The steamer changed her course a little to help us out, and slowed down.

"Turn that yawl up and heave 'er out, heave 'er out!" roared "Pete," as he threw his half-used cigar over the side and started along with his "grip." Jumping into the yawl which had been hurriedly manned by two men and shoved astern, he cried out, "So long!" to his companion, who was at the wheel.

**GOING DOWN THE HARBOR**

The pilot, captain, and officers on the bridge of a big ocean liner.

**LOOKING FOR SHIPS ON THE HORIZON**

"So long, Pete! and good luck to you," is the response from our boat. The next minute "Pete" is climbing the ladder of the steamer, and is lost to our sight.

Our remaining pilot decided to transfer to No. 7, as she had been relieved from station by No. 5, and send us back to Stapleton to get ready for another cruise. We swept up under No. 7's lee and hauled down the gigantic blue pilot flag, a ceremony that indicated the completion of our official cruise.

"Here, Oscar, you take her," said our last pilot to the boat-keeper, as he relinquished the wheel to him and stepped into the yawl to leave us. "Get the topmast staysail on, and jump her up lively."

There was little need for such admonition, however, for in three hours we were anchored off Stapleton again.

This little voyage was a typical one, and was not without its excitement and dangers. However, it formed a sharp contrast to the cruises that pilot-boats formerly made before the introduction of the system now in vogue. At that time there were about thirty boats in the service, all in direct competition with one another. When I served on the "Hope" as a "boy," ("old No. 1," she was affectionately called), we were compelled to make a voyage to sea lasting nearly a month, sometimes, in order to discharge our six pilots, who would often spend fifty-four hours on their steamers before reaching Sandy Hook lightship. The pilots themselves saw that this was a piece of folly, and a plan was proposed among them whereby all competition could be abolished. They formed themselves into what

is now known as the Consolidated New York and Sandy Hook Pilot Association, built a couple of steam pilot-boats, and disposed of all their sailing craft excepting five boats. This operation gave New York a better-organized pilot service and saved the Association \$100,000 yearly in expenses. As it is now, a steamer patrols the eastern grounds and looks out for ships coming in by the Long Island shore. This class of vessels includes the transatlantic steamships, for they usually make Fire Island. Another steamer keeps on station. It is her duty to take pilots from ships bound out to sea and to facilitate their return. This leads her to make frequent trips to Gravesend Bay or thereabouts, to land pilots. For this reason she is known as the "Trolley."

The sailing pilot-boats, reminders of brave old days and heavy gales weathered off the Georges Banks or in the latitude of the turbulent Cape Hatteras, take a little sail no farther down than Long Branch, and keep a sharp lookout for what they call "southern ships." Thus, one-third of the pilots are kept outside of the bar, one-third report every morning at the office for orders, which has long since shifted from its old quarters on Burling Slip to a commodious suite of offices at No. 17 State Street, from the windows of which they can overlook the upper harbor. In the meantime, the other third are either bringing in ships or enjoying a few hours of well-earned rest in their homes; for, in proportion to their pay, which is divided equally among them every month, the character and amount of work they do is phenomenal.

ROWING THE PILOT TO AN OCEAN STEAMER

# WILLOWS

By J. Horace McFarland

ILLUSTRATED WITH PHOTOGRAPHS  
BY THE AUTHOR

"**B**Y the rivers of Babylon, there we sat down, yea, we wept, when we remembered Zion. Upon the willows in the midst thereof we hanged our harps." Thus sang the Psalmist of the sorrows of the exiles in Babylon, and his song has fastened the name of the great and wicked city upon one of the most familiar willows, while also making it "weep," for the common weeping willow is botanically named *Salix Babylonica*.

It may be that the forlorn Jews did hang their harps upon the tree we know as the weeping willow, that species being credited to Asia as a place of origin; but it is open to doubt, for the very obvious reason that the weeping willow is distinctly unadapted to use as a harp-rack, and one is at a loss to know just how the instruments in question would have been hung thereon. It is probable that the willows along the rivers of Babylon were of other species, and that the connection of the city of the captivity and the tears of the exiles with the long, drooping branches of the noble tree which has thus been sorrowfully named was a purely sentimental one. Indeed, the weeping willow is also called Napoleon's willow, because the great Corsican found much pleasure in a superb willow of the same species which stood

on the lonely prison isle of St. Helena, and from twigs of which many trees in the United States have been grown.

The willow family presents great contrasts, both physical and sentimental. It is a symbol both of grief and of grace. The former characterization is undoubtedly because of the allusion of the one hundred and thirty-seventh Psalm as quoted above, thoughtlessly extended through the centuries; and the latter, as when a beautiful and slender woman is said to be of "willowy" form, obviously because of the real grace of the long,

of so-called mournful mien, are yet bursting with vigor and life; indeed, the spread and the value of the family is by reason of this tenacity and virility, which makes a broken twig, floating on the surface of a turbid stream, take root and grow on a sandy bank where nothing else can maintain itself, wresting existence and drawing strength and beauty from the very element whose ravages of flood and current it bravely withstands.

Apparently ephemeral in wood, growing quickly and perishing as quickly, the willows nevertheless supply us with an

A WEEPING WILLOW IN A WIND-STORM

swinging wands of the same tree. I might hint that a better reason for making the willow symbolize grief is because willow charcoal is an important ingredient of gunpowder, through which a sufficiency of grief has undoubtedly entered the world!

Willow twigs seem the very essence of fragility, as they break from the parent tree at a touch; and yet one of the willows furnishes the tough, pliable, and enduring withes from which are woven the baskets of the world. The willows, usually thin in branch, sparse of somewhat pale foliage,

important preservative element in the acid extracted from their bitter juices. Salicylic acid, made from willow bark, prevents change and arrests decay, and it is an important medical agent as well.

Flexible and seemingly delicate as the little tree is when but just established, there is small promise of the rugged and sturdy trunk that in a few years may stand where the chance twig lodged. And the color of the willows—ah! there's a point for full enthusiasm, for this family of grief furnishes a cheerful note for every month in the year, and runs the whole scale

A GREAT OLD BLACK WILLOW

A NOBLE WEEPING WILLOW

of greens, grays, yellows, and browns, and even adds to the winter landscape touches of blazing orange and bright red across the snow. Before ever one has thought seriously of the coming of spring, the long branchlets of the weeping willow have quickened into a hint of lovely yellowish green, and those same branchlets will be holding their green leaves against a wintry blast when most other trees have given up their foliage under the frost's urgency. Often have the orange-yellow twigs of the golden osier illumined a somber countryside for me as I looked from the car window; and close by may be seen other willow bushes of brown, green, gray, and even purple, to add to the color compensation of the season. Then may come into the view, as one flies past, a great old weeping willow rattling its bare twigs in the wind; and if a stream is passed, there are sure to be seen on its banks the sturdy trunks of the white and the black willows at least. Think of an average landscape with the willows eliminated, and there will appear a great vacancy not readily filled by another tree.

The weeping willow has always made a strong appeal to me, but never one of simple grief or sorrow. Its expression is rather of great dignity, and I remember watching in somewhat of awe one which grew near my childhood's home, as its branches writhed and twisted in a violent rain-storm, seeming then fairly to agonize, so tossed and buffeted were they by the wind. But soon the storm ceased, the sun shone on the rounded head of the willow, turning the raindrops to quickly vanishing diamonds, and the great tree breathed only of a gentle and benignant peace. When, in later years, I came to know the moss-hung live-oak of the southland, the weeping willow assumed to me a new dignity

A BURSTING CATKIN OF THE WHITE WILLOW

and value in the northern landscape, and I have strongly resented the attitude of a noted writer on "Art Out of Doors" who says of it: "I never once have seen it where it did not hurt the effect of its surroundings, or at least, if it stood apart from other trees, where some tree of another species would not have looked far better." One of the great merits of the tree, its difference of habit, its variation from the ordinary, is thus urged against it most mistakenly.

I have spoken of the basket willow, which is scientifically *Salix viminalis*, and an introduction from Europe, as indeed are many of the family. In my father's nursery grew a great patch of basket willows, annually cut to the ground to make a profusion of "sprouts," from which were cut the "tying willows" used firmly to bind together for shipment bundles of young trees. It was an achievement to be able to take a six-foot withe, and, deftly twisting the tip of it under the heel to a mass of flexible fiber, tie this twisted portion into a substantial loop; and to have this novel wooden rope then endure the utmost pull of a vigorous man, as he braced his feet against the bundle of trees in binding the willow upon it, gave an impression of anything but weakness on the part of the willow.

Who has not admired the soft gray silky buds of the "pussy" willow, swelling with the spring's impulse, and ripening quickly into a "catkin" loaded with golden pollen? Nowadays the shoots of this willow are "forced" into bud by the florists, and sold in the cities in great quantities; but really to see it one must find the low tree or bush by a stream in the woods, or along the roadside, with a chance to note its fullness of blossom. It is finest just when the hepaticas are at their bluest on the warm hillside; and one sunny afternoon of a spring journey along the north branch of the Susquehanna River I did not know which of the two conspicuous ornaments of the deeply wooded bank made me most anxious to jump from the too swiftly moving train.

This pussy willow has pleasing leaves, and is a truly ornamental shrub or small tree which will flourish quite well in a dry back yard, as I have reason to know. One bright day in February I found a pussy willow tree, with its deep purple

buds showing not a hint of the life within. The few twigs brought home quickly expanded when placed in water, and gave us their message of cheer and promise of the spring. One twig was, out of curiosity, left in the water after the catkins had faded, merely to see what would happen. It bravely sent forth leaves, while at the base little white rootlets appeared. Its vigor appealing to us, it was planted in an arid spot in our back yard, and it is now, after a year and a half, a handsome, slender young tree that will give us a whole family of silky pussies to stroke and admire another spring.

This same little tree is called also the glaucous willow, and it is botanically *Salix discolor*. It is more distinct than some others of the family, for the willow is a great mixer. The tree expert who will unerringly distinguish between the red oak and the scarlet oak by the precise angle of the spinose margins of the leaves (how I admire an accuracy I do not possess!) will balk at which is crack willow, or white willow, or yellow or blue willow. The abundant vigor and vitality and freedom of the family, and the fact that it is of what is known as the diœcious habit—that is, the flowers are not complete, fertile and infertile flowers being borne on separate trees—make it most ready to hybridize. The pollen of the black willow may fertilize the flower of the white willow, with a result that tends certainly to grayness on the worrying head of the botanist who, in after years, is trying to locate the result of the cross!

There is much variety in the willow flowers—and I wonder how many observers really notice any other willow "blossoms" than those of the showy pussy? A superb spring day afield took me along a fascinatingly crooked stream, the Conodoguinet, whose banks furnish a congenial and as yet protected (because concealed from the flower-hunting vandal) home for wild flowers innumerable and most beautiful, as well as trees that have ripened into maturity. An earlier visit at the time the bluebells were ringing out their silent message on the hillside, in exquisite beauty, with the lavender phlox fairly carpeting the woods, gave a glimpse of some promising willows on the other side of the stream. Twilight and letters to sign—how hateful the desk and its work

A CHARACTERISTIC WHITE WILLOW CLUMP

seem in these days of springing life outside!—made a closer inspection impossible then, but a golden Saturday afternoon found three of us, of like ideals, hastening to this tree and plant paradise. A mass of soft yellow drew us from the highway across a field carpeted thickly with bluet or “quaker lady” to the edge of the stream, where a continuous hum showed that the bees were also attracted. It was

one splendid willow in full bloom, and I could not and as yet cannot safely say whether it is the crack willow or the white willow; but I can affirm of a certainty that it was a delight to the eye, the mind, and the nostrils. The extreme fragility of the smaller twigs, which broke away from the larger limbs at the lightest shake or jar, gave evidence of one of Nature's ways of distributing plant life; for it

seems that these twigs, parting company with the parent tree most readily, float away on the stream, and easily establish themselves on banks and bars, where their tough, interlacing roots soon form an almost impregnable barrier to the onslaught of the flood. Only a stone's throw away there stood a great old black willow, with a sturdy trunk of ebon hue, crowned with a mass of soft green leafage, lighter where the breeze lifted up the under side to the sunlight. Many times, doubtless, the winds had shorn and the sleet had rudely trimmed this old veteran, but there remained full life and vigor, even more attractive than that of lusty youth.

Most of the willows are shrubs rather than trees, and there are endless variations, as I have before remarked. Further, the species belonging at first in the eastern hemisphere have spread well over our own side of the globe, so that it seems odd to regard the white willow and the weeping willow as foreigners. At Niagara Falls, in the beautiful park on the American side, on the islands amid the toss of the waters, there are many willows, and those planted by man are no less beautiful than those resulting from nature's gardening. This spring I have greatly admired some splendid clumps of a form with lovely golden leaves and a small, furry catkin, found along the edge of the American rapids. I wonder, by the way, how many visitors to Niagara realize the superb collection of plants and trees there to be seen, and which it is a grateful relief to consider when the mind is wearied with the majesty and the vastness of nature's forces there uncovered? The birds are visitors to Goat Island and the other islets that divide the Niagara River, and they have brought there the plants of America in wonderful variety.

There is one willow that has been used by the nurserymen to produce a so-called weeping form, which, like most of these monstrosities, is not commendable. The goat willow is a vigorous form introduced from Europe, having large and rather broad and coarse leaves, dark green above and whitish underneath. It is taken as a "stock," upon which, at a convenient height, the skilled juggler with trees grafts a pendulous form known as the Kilmarnock willow, thus changing the habit of the tree so that it then "weeps" to the

ground. Fortunately, the original tree sometimes triumphs, the graft dies, and a lusty goat willow rears a rather shapely head to the sky.

This Kilmarnock willow is a favorite of the peripatetic tree agent, and I have enjoyed hugely one notable evidence of his persuasive eloquence to be seen in a Lebanon Valley town, inhabited by the quaint folk known as Pennsylvania Germans. All along the line of the railroad traversing this valley may be seen these distorted willows decorating the prim front yards, and they are not so offensive when used with other shrubs and trees. In this one instance, however, the tree agent evidently found a customer who was persuaded that if one Kilmarnock willow was a good thing to have, a dozen of them was twelve times better; wherefore his dooryard is grotesquely adorned with that many flourishing weepers, giving an aspect that is anything but decorous or solemn. Sometime the vigilance of the citizen will be relaxed, it may be hoped, he will neglect to cut away the recurring shoots of the parent trees, and they will escape and destroy the weeping form which provides so much hilarity for the passers-by.

The willow with its blood relation, the poplar, is often "pollarded" or trimmed for wood, and its abundant vigor enables it to recover from this process of violent abbreviation more satisfactorily than do most trees. The result is usually a disproportionately large stem or bole, for the lopping off of great branches always tends to a thickening of the main stem. The abundant leafage of both willow and poplar soon covers the scars, and there is less cause to mourn than in the case of maples or other "hard-wooded" trees.

If my readers will only add a willow section to their mental observation outfit, there will be much more to see and appreciate. Look for and enjoy in the winter the variation in twig color and bark hue; notice how smoothly lies the covering on one stem, all rugged and marked on another. In the earliest spring examine the swelling buds, of widely differing color and character, from which shortly will spring forth the catkin or aments of bloom, followed by the leaves of varied colors in the varied species, and with shapes as varied. Vivid green, soft gray, greenish yellow; dull surface and

shining surface above, pale green to almost pure white beneath; from the long and stringy leaf of the weeping willow to the comparatively broad and thick leaf of the pussy willow—there is variety and interest in the foliage well worth the attention of the tree-lover. When winter comes, there will be another set of contrasts to see in the way the various species lose their leaves and get ready for the rest time during which the buds mature and ripen, and the winter colors again shine forth.

These observations may be made anywhere in America, practically, for the willow is almost indifferent to locality, growing everywhere that its far-reaching roots can find the moisture which it loves, and which it rapidly transpires to the thirsty air. As Miss Keeler well remarks, "The genus *Salix* is admirably fitted to go forth and inhabit the earth, for it is tolerant of all soils and asks only water. It creeps nearer to the North Pole than any other woody plant except its companion the birch. It trails upon the ground or rises

one hundred feet in the air. In North America it follows the watercourses to the limit of the temperate zone, enters the tropics, crosses the equator, and appears in the mountains of Peru and Chili. . . . The books record one hundred and sixty species in the world, and these sport and hybridize to their own content and to the despair of botanists. Then, too, it comes of an ancient line; for impressions of leaves in the cretaceous rocks show that it is one of the oldest of plants."

Common it is, and therefore overlooked, which is my reason for this sketch, by which I hope some may be turned from things inward to things outward, from desiring views afar to seeing beauty close by. To watch the willow in spring and summer, with its bloom and fruit; to follow its refreshing color through winter's chill; to observe its cheer and dignity; to see the wind toss its slender wands and turn its graceful leaves—all this is worth while for the true lover of things outdoors and at hand which make for a better appreciation of this world of beauty.

## Reginald J. Campbell

**A**MONG the British visitors who in increasing numbers during recent years have appeared in American churches there has been no more "arresting personality" than that of the Rev. Reginald J. Campbell, who is to speak this summer at the Northfield Student Conference and elsewhere. Mr. Campbell recently became minister of the City Temple, which had become during the late Dr. Joseph Parker's ministry of more than thirty years a citadel of British Congregationalism.

There could hardly be a greater contrast in all outward appearance than between Dr. Parker and Mr. Campbell—the one massive, the other slender; the one rhetorical and dramatic, the other colloquial and simple, besides the difference of thirty-seven years.

Mr. Campbell is still a young man, thirty-six years of age. His first charge was at Brighton. He found a nearly empty church and quickly filled it, so that the congregation had to migrate to the larger edifice where Paxton Hood had preached, but which had been closed

when Mr. Campbell came to Brighton. The press of course gave publicity to this success; it seemed that the traditions of Robertson were realized again. But solid qualities underlay success and made it permanent.

The personal history of Mr. Campbell is peculiarly interesting. Of Scottish ancestry, the son of a Methodist preacher in London, brought up in the household of a Presbyterian elder in Ireland, confirmed in the Church of England, a student in Christ Church, Oxford, winning honors in his course there, and intending to take Anglican orders, he left the university for the Congregational pulpit at Brighton. Historical studies, searchingly reviewed in his conversations with Canon, now Bishop, Gore, convinced him that the true Church of Christ was not limited to the Anglican, the Greek, and the Roman communions. His soul revolted from what he regarded as the Anglican's unchurching of the Free Churches, with their large share of the religious life of England. And so he cast in his lot with them, and became a Nonconformist pastor.

Sincerity and earnestness, however indispensable to every preacher who would gain hold of his hearers, by no means give full account of Mr. Campbell's influence in the pulpit. People call him "magnetic," whatever that may mean. He has a lustrous eye, and a voice that is both musical and flexible. These, however, are the interpreters of a spirit that is thor-

some political as well as religious consequence in England. With Dr. John Clifford, the veteran leader of the Baptist Churches, and the Rev. Silvester Horne, his fellow-Congregationalist at the head of a great church of the people in Whitefield's old "Tabernacle," Mr. Campbell has come forward as a leader in the policy of "passive resistance" to the recently

REV. REGINALD J. CAMPBELL

oughly sympathetic with fellow-men, whom he addresses in entire simplicity as one with them in human experiences, speaking out of his own experience to their consciences and hearts. On religious themes he is enough of a rationalist to command intellectual respect and enough of a mystic to warm devotional feeling. He is at once broad and evangelical.

At present Mr. Campbell is a figure of

enacted Education Bill, under which Non-conformists are obliged to pay "rates" for the maintenance of schools controlled by the Church of England and teaching its peculiar doctrines. He announced to his congregation that he should refuse to pay rates for that purpose, and was quite ready to bear punishment for refusal by going to jail for it—an announcement received with enthusiastic applause.

THE STATELY FALL WITH QUIET POOL BENEATH

# I N T H E W O O D S O F O N T A R I O

BY

NORTON ADAMS KENT

ILLUSTRATED FROM PHOTOGRAPHS BY THE AUTHOR

"GUIDES and canoes will be ready July fifth"—such a telegram might well quicken the blood in the veins, and create in the imagination visions of Nature's wilderness, of stream and forest, of fish and game. So straightway my friend and I were off for the Canadian woods in eastern Ontario, a paradise whose door is the little town of Mattawa.

From the first fortune favored us, for the Hudson's Bay Company's agent, who had arranged for our guides, had chosen for us the best in the country. George Crawford and Frank Le Clair were half-breed Indians; Louis Souci, our cook, was French—a modernized "courrier du bois" whose forte, as he put it, was "biscuits rather than the paddle."

Three hearty shakes of three strong hands, and they were our friends at once.

From Mattawa to Temiskaming Station by rail, thence by steamboat forty-five miles up narrow Lake Temiskaming to a small farm-house at the mouth of the Montreal River—we shook the dust of civilization from our feet and entered "God's out-of-doors." So our two weeks' canoe trip began.

While George and Frank raised the tents and Louis prepared our evening meal, we, the "sports," took account of stock. Surpassing all things in importance was our photographic outfit, a five by seven camera and sixty plates inserted in separate double plate-holders packed in a water-tight box. Bitter experience had suggested this precaution, for the previous summer five dozen plates had been left in Maine, ruined by a compulsory bath. The wild waters of the Allagash even now course over them.

The next morning we were off, past the mouth of the Montreal River and up the small and winding Metabitchouan. Swift

<sup>1</sup> This article stood first among those to which honorable mention was awarded in The Outlook's "Vacation Experiences" contest.

ORDINARY LOADS

came the strokes of the paddles, and with each stroke the light bark canoe sprang forward. In the canoe the Indian guide cannot be beaten; nor is he easily surpassed on land, as we found when we reached Clay Hill Portage. This "carry" well deserves its name. The trail is of clay, its angle seemingly forty-five degrees, its length over a mile. The loads these Indians carry are immense, generally aggregating two hundred pounds. A strap passing over the forehead supports a box which forms the basis of the load—a mass of luggage which usually towers above the bearer's head. On this carry our men, without intervening rest, made a

second trip, George and Frank bearing in regulation style a canoe each, while Louis gathered up the precious utensils of his culinary establishment.

Soon we were off again through Second, Third, and Fourth Bass Lakes, small ponds separated by stretches of quick water through which we paddled and poled with much effort. Here the beauty and wildness of the country began to impress us. High cliffs crowned with pine bordered the stream at times. Young ducks swam from us in the haste of fear. Turning from the more traveled route, we "carried over" into Cooper Lake.

If you have never seen the king of the

northern woods in his glory, then you have missed a sight indeed. The hot afternoon sun beat upon lake and forest, and stillness reigned supreme. On such a day the flies bite hard both man and beast. The lake is their common refuge. We took to our canoes. We paddled into shallow bays where rushes and lily-pads grew, and had not gone far when from the stern of the canoe came to my ears a whisper, "A bull moose in the water ahead." I adjusted my camera while we cautiously approached. Soon we were a hundred yards distant; the animal raised his head from the water. We sat rigid, and the canoes drifted nearer. Undisturbed, he again buried his head, grubbing for lily-pad roots. Instantly the paddles again plied the water, and the distance lessened to fifty yards; then, finally, to but thirty feet. Then from the water emerged a superb head bearing the finest horns we had ever seen. The head turned toward us and I pressed the bulb. Then the old bull ran, and the two canoes dashed after him. Across the muddy shallows he clumsily swung his huge body; then took to the woods. A crackling of twigs in the distance and the forest was still.

The hours and days passed swiftly, the weather proving fine and Fate smiling

upon us. The country grew still more beautiful as we traveled deeper into the forest, along its fair waterways. On we went along Moccasin Stream, through a chain of beautiful lakes, small and thickly wooded, through streams lined here with grassy meadows, there bordered by abrupt cliffs. In places we pushed our way through bushes under overarching trees, and at times waded the stream, dragging and pushing the canoes. Leaving Rabbit Lake, famed for glacial markings and Indian paintings upon its rocky shores, we reached at last a small, nameless pond at the summit of the Rabbit and Temagami watersheds. We had gained the highest point of land in our trip; henceforth our course lay downward. Upon my mind that scene stands stamped indelibly—the wealth of upland foliage, the slender pine raising aloft its clean-cut fingers, the flashing white birch with leaves quivering in the breeze, the moss covering the rocks by the shore, the diminutive wooded islands breaking the expanse of glistening water.

A short climb over a rocky carry, an abrupt descent, and there came into view Temagami Lake, famed for the clearness of its waters and dotted with more than a thousand wooded islands. It is an upland

A COW MOOSE SWIMMING

"A SIGHT ONE SELDOM SEES"

sea—two of its arms stretching over fifteen miles. Upon Temagami we canoed two long and happy days. Here we met a glorious storm. We had hustled for shore and had quickly pitched camp; then, when the deluge came, driven on by a strong southeaster, we were lying in our tents in regal ease. Soon the wind changed, and, although midsummer, old Boreas touched us with his icy fingers. The sky cleared, and then appeared the setting sun, tinting huge banks of clouds with varying shades of crimson.

again supper and the cheery camp fire, conducive to the story-telling mood.

And what tongue can declare the beauties of Non-wa-kaming Lake, with its huge glistening cascade, well called "Diamond Falls;" and of Lake Lady Evelyn, too, graced with her dainty isles?

Five o'clock Friday found us turned westward near the mouth of Willow Island Creek. Memory serves me well. Here it was that, sunk deep in afternoon reverie with weary hands trailing in the cool water, I was suddenly aroused to

WILLOW ISLAND CREEK

Into a steaming lake we launched early the following morning, and about noon reached the Hudson's Bay post on Bear Island. All Canada, even to the Great Bay and beyond, is dotted with these small stations, supply centers for the hunter and trapper. That afternoon, after four hours' paddling against a northern breeze, we were making for an island when the wind suddenly quickened into a gale and both canoes shipped water. Many a frail craft has thus been swamped. With evening came a calm; then once

action by a word from my guide. A quick spurt, and we dashed between moose and shore and forced the animal, a huge cow, to attempt an escape by swimming. Four photographs of her crowned our efforts: the last was taken at a distance of ten feet. We even stroked the beast with a paddle, under the circumstances a dangerous liberty.

That evening our tents were pitched upon a rocky point at the bend of the creek. Here we established our base.

From this point we started up stream

after trout, carrying only gun, fishing-rods, camera, and a "snack" of food for lunch. That was a great day. Did Fortune favor here? No and yes. As a trout expedition the day's journey was a failure, for seven hours' paddling took us too short a distance up-stream. But the falls and the woods—what a country! To make camp ere dark we finally conquered the instinct of the explorer and the strong longing which impels every true angler to try yet one more pool. We turned back. The current, our foe of the morning, was now a friend. Again we carried by the foaming cataract where the stream, flushed with recent rains, leaped in abrupt plunges a total of nigh a hundred feet into the rock-bound caldron below. We shot many a small rapid and passed again through chains of lakes. Then came the stately fall with quiet pool beneath—an earnest of the calmer waters of Willow Island Lake.

Late in the afternoon, while pondering upon the fact that we had seen no moose that day, we came suddenly upon a bull. The old fellow was somewhat hidden by rushes. Still, he did not escape me, for he had just bade us adieu when I caught him at short range. Again a few moments passed, when, behold, down-stream, a pair of horns above dense water-rushes. My companion's canoe was leading; Frank cautiously paddled up to the reeds and peered through. Then four eloquent fingers told a startling story; there were four moose. As though alive, my canoe sprang forward and instantly was beside the other. I stood at full height, pointed at the center of the group, and pressed the bulb. I sat down, changed my plate, arose again, and found the animals almost as before—one old bull had merely lifted his head from the water in curious ease. And again the shutter closed. Then the group split up. A third plate shows but two animals. That was a sight one seldom sees; there were two full-grown bulls and two calves—a cow and a bull. This formed the climax of our experiences with big game.

On the Sabbath we rested. Monday afternoon we camped on stream-like Mattawapika Lake opposite a rocky bluff. This we climbed, and through the trees espied in the distant haze the mountain whose streams feed Willow Island Creek.

And what of the superb falls of Lake Mattawapika? It is here that Temagami, Non-wa-kaming, Lady Evelyn, and countless other smaller lakes pour forth their wealth of water in one grand discharge, which flushes to the brim the swift-flowing Montreal. Lucky for us that our course lay down-stream.

Wednesday the Montreal River was still urging us onward. We stopped for lunch, and kindled our fire on a small plateau well-nigh seventy-five feet above the river. Below us lay dark waters, hemmed in by tree-clad banks. We were at the parting of the ways. Should we follow the Haileybury trail or the Montreal River? We chose the latter, the less traveled and more dangerous route—children of destiny born under lucky stars! About the finest sport of the trip lay in shooting the rapids of that river. Hound Chute, Ragged Chute, Fountain Falls, rapid upon rapid, rough and long carries, a superb virgin flora, strong and quick bass gamy as trout—it was all like a dream, so quickly did the scene shift in that wild dash downward. The river continued steep-banked, narrow, and wild. Its furious energy had conquered the king of the woods himself, for at the base of Hound Chute we came upon the carcass of a huge moose. The animal had probably attempted to swim the stream above, too near the brink of the falls.

Several rapids we could not shoot with full loads. Here all five of us made one trip over the portage, our two Indians returning for the empty canoes. It was a fine sight to see them come down-stream, riding those mad waters. Canoe and man seemed one; for grace you will not see the like. The guide kneels amidships; force and agility mark his every move. A ragged rock seems straight ahead, when, quick as a flash, the animated canoe leaps aside and dodges like a boy at play. Then comes the rocky, chopping water at the base of the rapid. The smiling face and poise of victory show Nature again vanquished—her victor, man.

And the last day's episode! We left Frank and Louis to attend to the transportation of our outfit over the last carry, and my friend and I, with a young fire-ranger as guide, also our faithful George, started on another trout expedition. That

"IN THE DISTANT HAZE THE MOUNTAIN WHOSE STREAMS FEED WILLOW ISLAND CREEK"

day was a mixture of the sublime and the ridiculous. Where lies the much-desired pond we will not say. No law bids angler tell where lie the biggest trout. But perchance he himself may not know. Imagine the following scene: Time, 3 P.M.; locality, doubtful; scenic setting, ahead and behind, on right and left, forest; beneath, a first-rate cedar swamp with all its natural accessories; above, the vault of heaven thinly veiled with foliage. Furniture, two canoes, rifle, fishing-rods, etc., but no food. *Dramatis personæ*, three semi-weary individuals, seated; one serene Indian woodsman, standing, a latent smile lurking about the corners of his generous mouth. The young ranger mops his brow. "I reckon we are lost," he mutters. General concurrence with that reckoning— But—the trout, the fairest of all fish that swim! See the swirl of that proud tail as its owner flashes from the surface for the fly. "The landing-net, quick; I have him!" The stern hand of necessity rudely broke the spell; no trout for us that day. We must act—act quickly and wisely too. We left one canoe where we stood. George, the unconquered, led the way and set the pace—a pace indeed! Soon we found again that apology for a trail. Then came

a little lake—four men and but one small canoe. Two trips were necessary. *He* made them. Then a new way home, on territory known to him. For two miles we followed him. My friend and I carried almost nothing, but at times it took both strength and courage to keep pace with that ensouled, inverted canoe which rose and fell before us, crept deftly through the brush, vaulted the fallen log, and ever glided forward. We reached camp at 6:30. The events of that day furnish most pleasant memories. We failed; but experience is a good teacher, and some day our lines will whip that mystic pond.

Our trip was at an end; we had covered over two hundred miles of waterway and had emerged from the woods within two hundred yards from where we entered.

I have seen the gaunt Mount Kineo in Maine, and the rocky gorge of Ripogenus, which chains the Penobscot's western branch; I have camped beneath the shadow of Katahdin, wildest of the wild; I have shot the rapids of the rushing Allagash on its course to the famed St. John—but, for beauty and for charm, for unblemished loveliness, the Ontario woods stand supreme.

"HE HAD JUST BADE US ADIEU WHEN I CAUGHT HIM AT SHORT RANGE"

## Litany of a Tired Heart

By Caroline Atwater Mason

Lord, my cares are many;  
I lay them all on Thee.  
Lord, my sins are many;  
I lay them all on Thee.  
Lord, my griefs are many;  
I lay them all on Thee.  
Lord, have pity on me,  
Lord, look down on me.

# Jeanne de Lanier

By Francis Sterne Palmer

(The sprucewoods at night ; Jeanne, who has fled to join her lover :)

"Kindred of the moss and bough,  
Do you all desert me now?—  
In my own woods is there no heart  
To take poor Jeanne de Lanier's part?

"What stir was that!—a grouse's wing  
In a fir-tree fluttering.  
Be kind to-night, O good gray grouse—  
Friendless I fled my father's house!

"Red doe that listens in the wood,  
We are of one sisterhood;  
And, O my sister, I need you too—  
Doe, I belong to the woods like you!

"Black bear, to-night let ant-log be,  
Give o'er your quest for honey-tree;  
To me a brother's help is due—  
Bear, I belong to the woods like you!"

(Jeanne moves off wearily. On her track come woodsmen in the service of the Seigneur de Lanier.  
Pierre the Hunter:)

"Look, men, the runaway is near,  
Just now her foot trod mosses here;  
We'll have her back to kneel to priest,  
To lead the way to her wedding-feast,  
To take the husband chosen for her—  
To forget her Antoine the Voyageur!"

Pierre scarce had done, when reared a bear,  
Right in his path, and, swaying there,  
The hunter thought he heard it speak,  
"Back, Pierre! I guard the one you seek!"

The dark boughs of a fir-tree stirred,  
And from its depths a voice was heard:  
"Let Jeanne, our sister, freely go—  
Back, Pierre! the gray grouse wills it so!"

From darker shadows of the wood  
Leaped a doe and before him stood;  
"The deer of the spruce watch o'er her flight—  
Back, Pierre, we all are on guard to-night!"

Pierre the Hunter, with his men,  
Came to de Lanier's house again;  
"Seigneur, let Jeanne be the voyageur's bride—  
The whole sprucewood is on her side!"

THE OREGON AT SANTIAGO  
Drawn by Henry Reuterahl.

## THE BATTLE OF SANTIAGO

**B**Y the mobilization of our entire armored strength at Santiago on June 1, 1898, the Navy Department made the natural tactical move which must have been anticipated by the naval strategists of Spain before Cervera left the Cape Verde Islands. We know that such was the expectation of the Spanish Admiral and of his captains, though they considered either of the squadrons in which our fleet was divided sufficient to destroy their own. "Taking into account injuries and accidents to machinery, the necessity of renewing the coal supply, and other difficulties from which no ship is exempt," wrote Captain Concas y Palau, Cervera's chief of staff, "they formed only two squadrons instead of four, so that even if two or more of the most powerful ships were temporarily absent, the remaining forces would still be such as to exclude any doubt as to the result. This is an admirable military precaution even in case of overwhelming superiority." So convinced was Admiral Cervera that destruction would be the inevitable consequence of departure from Santiago that, in response to a request from the Captain-General of Cuba for an expression of opinion as to the plan that should be followed, he wrote:

"I, who am a man without ambitions, without mad passions, believe that whatever is most expedient should be done, and I state most emphatically that I shall *never* be the one to decree the horrible and useless hecatomb which will be the only possible result of the sortie from here by main force, for I should consider myself responsible before God and history

for the lives sacrificed on the altar of vanity, and not in the true defense of the country."

It was the conviction in Washington, also, that an attempt by the Spanish division to escape would result in its annihilation. Yet there was the chance of one or more vessels running the blockade at night or during bad weather; and we were decidedly nervous as each day brought nearer the hurricane season, with the possibility of disaster as its accompaniment. It was difficult to get out of one's head the doggerel used by the sailor in describing weather conditions in the Caribbean Sea:

June, too soon.  
In July, stand by.  
August, look out you must.  
September, remember.  
October, all over.

Sampson was as concerned about weather conditions as was the Department. Before leaving St. Nicholas Channel for Key West to obtain permission to go to Santiago, he had sent instructions to Commodore Schley to sink the collier *Sterling* across the narrow part of the entrance of the Cuban harbor. This was not done before the arrival of Sampson, though the *Sterling* had reported on May 30, and Sampson at once prepared to carry out the plan. By his direction, Naval Constructor Richmond Pearson Hobson attached electric torpedoes to the hull of the *Merrimac*, selected in place of the *Sterling* as the obstruction for the harbor; sea-valves were cut, cargo ports opened, and anchor chains holding the anchors were ranged on deck, so that the ship could be brought to a stop almost automatically. On the morning of June 3, with seven men composing his crew, Hobson gallantly took the collier into the harbor entrance, and, in spite of the

<sup>1</sup> Copyright, 1903, by the Outlook Company. All rights reserved.

This is the tenth of a series of papers to appear in the Magazine Numbers of The Outlook. Other papers will be: Valiant Deeds in the War with Spain; Samoa, the Philippines, and China.

tremendous fire to which he was subjected, coolly sunk her. Unfortunately, an injury to her steering gear and the failure of some of the torpedoes along her side to explode prevented the Merrimac from sinking until much higher in the channel than had been intended. Nevertheless, the plan which was so promising in conception was daringly executed, and Naval Constructor Hobson and his men cannot be praised too highly for the courage and patriotism which prompted them to beg for and carry out orders which seemed condemnation to death. Indeed, the rivalry, not only among officers, but among the men, for service on this forlorn hope, which meant almost certain death, was very striking. One man was taken from each ship, and in one case at least a disappointed seaman offered his accumulated wages for the chance of his successful shipmate.

The sinking of the Merrimac has been criticised; and yet, had it blocked the channel as intended, the Spanish fleet would have been ours and have been added undestroyed to our navy. Sampson quickly learned that the channel was still open, and that the enemy could leave if disposed to run the gauntlet before them. Our men-of-war remained, therefore, as they had been before the Merrimac was sunk, a wall against escape. Coaling operations were at first conducted in plain sight of the enemy; but Sampson recognized the need of a quiet harbor in which the vessels could receive fuel without disturbance from wind and sea. Before he left Key West for Santiago, the Department advised him that Captain Caspar F. Goodrich, commanding the St. Louis, who had been engaged in cable-cutting operations at Guantanamo, reported that Bay weakly defended. Sampson was advised to seize it for use as a coaling station, and he sent the Marblehead and the Yankee on June 7 to occupy it. No fortifications were found, though the ships were fired upon by a few old guns mounted at Cayo Toro and a small gunboat. Even before this reconnaissance, Sampson had telegraphed to Commodore Remey directing him to prepare to send to Santiago the battalion of marines which was in camp at Key West. The battalion had been organized at New York during the month of April, and was composed of

vigorous young men whose deeds were to show them equally gallant and courageous. It consisted of twenty-three commissioned officers of the Marine Corps, one surgeon of the navy, and six hundred and twenty-three enlisted men, all under command of Lieutenant-Colonel R. W. Huntington, U. S. M. C. The battalion was organized especially for service in Cuba, and the greatest care was taken to equip it for the arduous and trying work it would be called upon to perform. The auxiliary cruiser Panther, transformed into a marine transport, sailed with the battalion for Cuba on June 7, and reached Santiago three days later. She was immediately ordered to Guantanamo, and at two o'clock of June 10 the marines landed and established a camp at what Cuban officers pronounced to be the only position on the Bay which could be successfully occupied and defended by a small force. The marines were not to hold their ground without fighting for it. They were attacked on June 11 by a superior force of Spaniards, and were subjected to the enemy's operations constantly during the three following days. Protected by their valor, Guantanamo afforded the North Atlantic fleet a safe harbor in which to coal and make repairs. The marine battalion, which was the first American force to establish itself permanently on land in Cuba, remained until August 5. It speaks well for the equipment of the men and the vigilance and care of those to whom their health and comfort were confided that not a single life was lost and only two per cent. were afflicted with disease. Certainly this is a remarkable record, which has never been approached by any foreign force operating in Cuba. It was a splendid exhibition of brave and intelligent service.

Sampson lifted a heavy burden upon his shoulders when he assumed command at Santiago. He arranged for the sinking of the Merrimac, the occupation of Guantanamo Bay for use as a coaling base, and the organization of his command and the assignment of his vessels in the two squadrons into which he divided it. He prepared and promulgated plans of the naval battle that was sure to come, supervised the movements of the more than a hundred vessels within the range of his command, and was charged with the blockade of the

FIVE COMMANDERS AT SANTIAGO

whole Cuban coast and with co-operation with the army and the landing of its troops. His correspondence with the fleet and with the Department was large and constant. On the 2d of June he issued his general order providing for the most thorough precautions to prevent Cervera's escape and for battling and destroying his fleet in case he attempted escape. Under it our fleet line was kept in an inclosing semicircle day and night before the harbor, closely vigilant. Every night the faithful searchlight guarded against the enemy's escape or torpedo attack. Under the following clause of that order, "*If the enemy tries to escape, the ships must close and engage as soon as possible and endeavor to sink his vessels or force them to run ashore,*" the later famous battle of July 3 was actually fought and the great victory won in accordance with the plan of the commander-in-chief, to whom is due the credit that is always given to the man on whom is the responsibility of the command and of the preparation of the plans for execution by those under him.

Meantime he had not lost sight of the importance of ascertaining whether all of the Spanish fleet were at Santiago. On the morning of May 29 Commodore Schley had cabled to the Department that he had recognized the Cristobal Colon and Infanta Maria Teresa and two torpedo-boat destroyers. On May 30 the Commodore was asked to ascertain the whereabouts of the Almirante Oquendo and the Vizcaya, the remaining two armored cruisers, and on May 31 Sampson, when hastening to superintend operations, was told by the Department that it was essential to know the exact location of all of the armored cruisers, as the military expedition against Santiago must necessarily wait for the information. On June 3 Sampson cabled that a reliable Cuban, acting under his instructions, had ascertained and reported the entire Spanish fleet in Santiago.

"Beg troops move with all possible celerity," he added: "of paramount importance." Sampson believed, and this belief the Department shared, that Cervera's capture or destruction would terminate the war. Major-General Miles, commanding the army, had expressed the opinion that it would be extremely hazard-

ous and injudicious to put an army into Cuba during what is known as the "rainy" reason, and pointed out that another element of extreme danger would be the possibility of the navy being unable to keep the water between our territory and that island clear of hostile ships or fleets. Indeed, General Miles counseled that no troops should go to Cuba till our navy had destroyed the Spanish fleet. The War Department, more vigorous, determined early in May that an army under the command of Brigadier-General William R. Shafter should, with the co-operation of the navy, seize and hold Mariel, which was to be the base of operations against Havana. The appearance of Cervera's fleet caused the abandonment of this expedition. The arrival of the enemy's ships in Santiago and the convergence upon that point of our men-of-war to blockade them demonstrated the need of an army to assist the navy in forcing an entrance into the harbor, where it could destroy the Spanish fleet and compel the surrender of the city. On May 27 the Secretary of War was officially advised by the Navy Department that on receipt of absolute information of the presence of the Spanish fleet in Santiago "the movement to Santiago should be made without a moment's delay, day or night." Sampson was simultaneously instructed to organize a convoy for the thirty or more army transports, which convoy should include the New York, Indiana, and Oregon, and as many smaller vessels as could be gathered to guard against possible attack.

The presence of the Spanish division in Santiago made that harbor the center of war. Almost daily after his arrival Sampson cabled urgently requesting expedition in the movement of the army. He invited attention to the fact that if there were delay the city would be defended more strongly by guns taken from the ships, and he asserted that with ten thousand men the city and squadron could be captured or destroyed within forty-eight hours. On June 1 a memorandum was submitted to the Secretary of War stating that the battle-ship Indiana and a dozen smaller vessels were ready to protect the army *en route* to Santiago. This large force, under command of Captain Henry C. Taylor, was assembled to deter

SAMPSON, SCHLEY, AND HOBSON EXAMINING THE ENTRANCE TO SANTIAGO  
Drawn by George Varian.

by the mere fact of overwhelming superiority any enterprising Spanish commander from attempting a dash which might have caused disaster to the transport fleet. The army transport captains, who were civilians, were concerned more about the safety of their ships and the interests of their owners than about the necessities of the government. Never having engaged in such maneuvers, they were unable to maintain formation which would permit concentration of the convoy for their defense. In case of attack, therefore, a panic might ensue, the consequences of which the Department was unwilling to contemplate. It was therefore decided to organize a force the formidable character of which would forbid any plan on the part of the enemy to prevent the army from reaching Santiago. As a further precaution, Sampson was instructed to send a ship to San Juan, Porto Rico, to blockade the torpedo destroyer Terror in that harbor while the army was afloat.

Commodore Remey telegraphed on June 4 that the convoy was ready to sail. The army was slow in embarking, and it was not until June 8 that a part of it was prepared for departure. While those of the transports which had their forces on board, five that day having sailed for the rendezvous down the bay, and two others then hauling out, were moving out of Tampa, the Department received a despatch from Remey giving a circumstantial account of the sighting off the northern coast of Cuba by the auxiliary gunboat Eagle of three Spanish men-of-war, one a protected cruiser and the others torpedo-boat destroyers; and this was subsequently confirmed by the Resolute. The Department could not understand this report. Sampson had positively stated that the four Spanish armored cruisers and two torpedo-boat destroyers were locked up in the harbor of Santiago, and the only remaining torpedo-boat destroyer in the West Indies flying the Spanish flag was at San Juan. The information was, however, of the most disturbing character. A request was immediately made of the War Department to delay the departure of the expedition, and men-of-war were sent to reinforce the blockade and to scour the vicinity in which the enemy's division had been

sighted. The five transports above referred to were ordered back. Remey was asked for further particulars. He telegraphed that the captains of the Eagle and Resolute based their reports upon personal observation, and that officers and crew of the former vessel confirmed the statement of their commander. Sampson was advised of the discovery of the enemy's vessels, and directed to send two of his fastest armored vessels to search St. Nicholas Channel and to reinforce the convoy which was to start immediately. In the light of information in his possession, necessarily more ample and accurate than that of the Department, Sampson discredited the report, and cabled that the vessels seen by the Eagle were the Armeria, Scorpion, and Supply of our own fleet, which had been at the point where the supposed hostile ships were sighted. Sampson properly declined to send any armored ships to Key West, asserting that even if the report were found to be correct there was sufficient force to furnish safe convoy. In its message to Sampson the Department had asked him if he were sure that all the Spanish cruisers were in Santiago. To place this point beyond all question, he instructed Commander Daniel Delehanty, commanding the auxiliary gunboat Suwanee, to get in communication with the insurgents and obtain reliable information as to the character and number of Spanish ships in the harbor. Unwilling to trust the insurgents, Commander Delehanty detailed Lieutenant Victor Blue to penetrate to the shore of Santiago, and by personal inspection ascertain the force that lay upon its protected waters. In the uniform of his rank, Lieutenant Blue landed, and upon his return on June 13 reported that he had seen and located all the ships of Admiral Cervera's command.

Decided relief followed the receipt of this information. Even before it reached Washington, however, and, in fact, prior to the inquiry to Sampson for confirmatory knowledge of the presence of the Spanish force at Santiago, Remey had been directed to reassemble and coal the convoy; troops were all the time embarking on board, and on the morning of June 12 it was reported ready for the service expected of it. It was not until 3 P.M. of June 14, however, that the transport fleet sailed from Tampa,

#### THE RETURN OF THE FLEET FROM SANTIAGO

This photograph was taken at four o'clock on the morning of August 20, 1898, from the deck of the Government boat Nina, which had brought a despatch from Secretary Long to Admiral Sampson, notifying him that peace had been declared. In the picture Admiral Sampson stands on the bridge of the New York, which heads the fleet.

soldiers continuing to pour upon the wharf and into the transports until the morning of that day.

To organize the convoy, it had been necessary to strip the blockade and coast defense force of men-of-war. For three weeks our blockade was hardly more than technically effective. Ostensibly to provide protection for Austrians in Cuba, the Vienna Government sent the cruiser *Maria Teresa* on a visit to the ports of the island. The Department was of opinion that the purpose was to determine whether the blockade was conducted in accordance with international law. This was also believed to be one of the objects of the presence in Cuban waters of the German cruiser *Geier*, which arrived at Cienfuegos on June 11, and which reported not a single vessel blockading that port. The commander of the *Geier*, in cruising on the north shore of the island, purposely "kept close to the shore, in order to inspect the harbor of Mariel and to see how far the American blockading-line extended." The *Geier* was somewhat inclined to neglect the customary amenities. On June 22 she was sighted off Havana by the *Wilmington*, to which she explained that she was from Jagua Bay bound to Havana. Commander C. C. Todd, commanding the American gunboat, signaled that the position of the senior officer was north of Havana, and he expected the German cruiser would communicate with that officer before proceeding on her course. But the *Geier* did not alter her direction, and shortly disappeared in a squall. She was not again seen by the *Wilmington*, having entered Havana.

Here were the men-of-war of two nations, both friendly to Spain, cruising in Cuban waters, apparently for the purpose of finding flaws in our blockade; and as their conduct was based necessarily on orders from their Governments, the President could not but consider the possibility of the interference of the latter in the conflict. The advisability of guarding our armored ships by every possible means, and of not permitting them to incur unjustifiable risk of injury by a shot from a shore battery, became more apparent. The need of strengthening our blockade was also plain, as indeed was the desirability of its extension. The Department had learned that the Spaniards

were receiving supplies from Jamaica, Mexico, Europe, and North America, and it feared that the demand for necessities would cause the establishment of lines of steamers connecting neutral countries with Cuban ports which were not mentioned in the President's proclamation of blockade, but which were in communication with Havana. The main object of the blockade was the reduction of Havana by the peaceful though necessarily distressing expedient of cutting off supplies. It was destined to failure unless the cordon about Cuba were extended. The Department therefore determined to recommend the blockade of the coast of Cuba from Cape Francis, near the Yucatan Channel, to Cape Cruz, a short distance to the westward of Santiago. As the vessels carrying supplies to Havana usually entered Batabano, which was in railroad communication with the capital, that port was necessarily included within the limits of the blockade. A few miles from Batabano lies the Isle of Pines. This it was determined to seize for use as a base and harbor of refuge for small vessels operating in its vicinity, and at the time the peace protocol was signed, the Marine battalion, which had done such excellent work at Guantanamo, was on its way to effect occupation.

A further complication was added to the war situation when the State Department was advised on June 18 that the reserve fleet of Spain, consisting of one battle-ship, one armored cruiser, six converted cruisers, and four destroyers, besides auxiliary vessels, under the command of Admiral Camara, was on its way to the Philippines from the Spanish Peninsula. A week before the report of Camara's departure reached the Navy Department, the monitor *Monterey* sailed from San Diego, California, via Honolulu and Guam, and on June 23 the *Monadnock* left San Francisco for the same destination—both intended for reinforcement to Dewey. But the monitors were slow, and we could not count upon their arrival in advance of the Spanish fleet. It became necessary to employ other means to reinforce Dewey. Commodore John C. Watson was detached from the command of the blockading division on the north coast of Cuba and directed to hasten with despatch to Santiago, where he was to

assume command of a squadron consisting of the battle-ships Iowa and Oregon, and the cruisers Newark, Yosemite, Yankee, and Dixie. That the vessels might not suffer from want of fuel, a number of steam colliers, carrying forty thousand tons of the best coal of the country, were assembled at Hampton Roads, and instructions were given them to join Watson in the Azore Islands. Hitherto the Department had attempted, with poor success, to keep news of its orders and plans from the press. On this occasion, however, the plan of an attack upon Spain herself was given the widest publicity, with a view primarily to alarm Spain and cause the recall of Camara, and secondarily to awaken Europe to the fact that the republic of the western hemisphere would not hesitate to carry war, if necessary, across the Atlantic. Announcement was made on June 27 of the organization of Commodore Watson's squadron, officially designated as the "Eastern Squadron," which "will sail for the coast of Spain immediately."

Departure of Camara's reserve fleet left the coast of Spain practically without naval defense, but public opinion and the desire to assert sovereignty in the Philippines forced the Madrid authorities to make the move. For a moment, Spain had considered the withdrawal of Cervera from Santiago, unaware that his return was impossible; but the Captain-General of Cuba frowned on such action. The inadequacy of their home fortifications was known to the Castilians better than to us. But Watson's real destination was not a Spanish port. It was intended that he should follow Camara's fleet, and, though reaching the East after its arrival there, he would have experienced little difficulty in arranging a junction with Dewey. A combined movement by them against the enemy's forces would have insured their annihilation.

The Spanish reserve fleet arrived at Port Saïd on June 26, and the fact was cabled to Dewey. Sampson was also advised of the distance it had made, but he was loth to part with any of his ships because of the opinion that the force he then had "insures a capture which I believe will terminate the war." But the Department could not leave Dewey with an inferior force. Our supremacy in the

Pacific, with all that it meant, must be maintained; the troops *en route* to Manila must be protected. So, disregarding Sampson's views, it was decided not to change the plan with respect to Watson's squadron. The departure of the battle-ships was delayed, however, in order that the remaining armored vessels might fill their bunkers and maintain for as long a time as possible without recoaling their position off Santiago.

Our difficulty in making a wise distribution of the armored vessels available was great; but the Spaniards, too, were having trouble. The Egyptian Government prohibited transshipment of coal to the Spanish battle-ship Pelayo, and on June 30 Camara was directed to leave Egyptian ports at once. His failure to pass without delay through the Suez Canal cast a doubt upon his destination, or indicated that he was not properly equipped for the long voyage to the Philippines. Watson's departure was suspended. The first of the Spanish ships began passage through the Canal on July 2, and others went through on July 5 and 6. In the meantime Cervera's squadron had been destroyed, and the defense of Spain compelled the return of the ships in the Red Sea.

Meantime not the slightest attempt was made by the Spanish gunboats lurking in the harbors of Cuba to prevent the American transports with the army on board from safely reaching their destination. The knowledge of the formidable character of the fleet conveying it was sufficient to deter even the boldest from making a dash upon it. Before the departure of the expedition, the plan of campaign to be pursued jointly by the army and navy upon arrival at Santiago had been fully discussed by the War and Navy Departments. Major-General William R. Shafter, commanding the military force, was directed by General R. A. Alger, Secretary of War, to proceed with his expedition "under convoy of the navy to the vicinity of Santiago de Cuba, land your force at such place east and west of that point as your judgment may dictate, under the protection of the navy, and move it on to high ground and bluffs overlooking the harbor or into the interior, as shall best enable you to capture or destroy the garrison there; and cover the

navy as it sends its men in small boats to remove torpedoes, or, with the aid of the navy, capture or destroy the Spanish fleet now reported to be in Santiago harbor." It was the confident expectation of the service that the army would attack from the rear the Spanish shore batteries which Sampson found no difficulty in silencing, and in which direction they could not fire. It was suggested to the President by the Navy Department that the important bridge of Juragua, reported mined and guarded by a small force of Spanish soldiers, should be seized and held by the army. With it in our possession a great advantage in the movement on the forts would be achieved. As the fleet would be employed in raising the mines and attacking the Spanish vessels within the harbor, the Department expressed the opinion that no body of seamen should be landed for participation in the attempt on the bridge. This memorandum to the President was transmitted by the Secretary of War to General Shafter.

On the day of the army's arrival on the 21st of June, Captain French E. Chadwick, commanding the armored cruiser New York, and Sampson's chief of staff, was sent to confer with General Shafter. Captain Chadwick pointed out on a chart which he brought the positions occupied by the eastern and western batteries, the carrying of which was regarded by the Admiral as of primal importance, to be done before attention was paid to the city. "The possession of these points," says Admiral Sampson in his official report, "insured the destruction of the mines by us, the entrance of the heavy ships in the harbor, and the assault on Cervera's squadron. To this General Shafter gave most cordial assent, and stated that he had no intention of attacking the city proper, that here (pointing to the entrance) was the key to the situation, and that when we had this we had all."

Following the conference of Captain Chadwick with General Shafter, the latter met Rear-Admiral Sampson and Generals Garcia and Rabi, of the insurgent forces, a short distance from Aserradero, and the plan of campaign was discussed. General Shafter claims that he announced at this conference his purpose to move against the city of Santiago. In his official report, Rear-Admiral Sampson reported that at

that time General Shafter repeated what he had stated to Captain Chadwick. "I do not know why a change of plan occurred," Rear-Admiral Sampson states, "unless it was that the troops on being landed advanced themselves so far on the roads toward Santiago, before any specific plan of operations had been decided upon, that it was found inconvenient to divert them to the other points. I believe that such adherence would have resulted in a much quicker surrender of the Spanish troops and with much less loss of life, excepting possibly to the navy, which would have borne the brunt of attack instead of the army."

By changing the plan and attacking Santiago, Shafter made the city his objective, when the motive of the expedition was the destruction of Cervera's command. From the moment of his arrival until the surrender of Santiago Sampson believed, and in this opinion he was supported by his subordinates, that the capture of the fortifications defending the entrance to the harbor was the first and only proper military move, and once it was carried out, not only would Cervera's division be sunk or captured, but the city would fall. As Shafter's position before Santiago increased in seriousness, his appeals to the navy to force the harbor of Santiago increased in earnestness. "Navy should go into harbor at any cost," he cabled to the War Department. "If they do, I believe they will take the city and all the troops that are there. If they do not, our country should be prepared for heavy losses among our troops." This cablegram was sent two days after the destruction of Cervera's squadron. The international situation, however, did not permit us to throw our armored vessels away on the mines in Santiago harbor when there were no Spanish vessels to attack and destroy. We could not afford to lose one battle-ship; our efforts to purchase war-ships before the war showed that the acquisition of a single battle-ship was impossible. Moreover, as has already been stated, the attitude of Continental Europe forbade the reduction of our armored naval strength, because upon it we might have to rely for defense, not only from the Spanish force in European waters, but from an attack by the navy of another country. Sampson never enter-

tained the slightest fear of the forts defending Santiago. "They cannot even prevent our entrance," he wrote to General Shafter the day before Cervera's fleet came out. "Our trouble from the first has been that the channel to the harbor is well strewn with observation mines, which would certainly result in the sinking of one or more of our ships if we attempted to enter the harbor, and by the sinking of a ship the object of the attempt to enter the harbor would be defeated by the preventing of further progress on our part. It was my hope that an attack on your part of these shore batteries from the rear would leave us at liberty to drag the channel for torpedoes." Sampson finally determined to bring the marines from Guantanamo to capture the batteries, but before the plan could be put into execution additional troops arrived and the city surrendered.

It was gratifying to the Department to find that it had at Santiago an officer who would not be turned from the course which was so clearly buoyed. The pressure upon Sampson to follow the procedure of Farragut was not greater than that applied in Washington. Sharp criticism was leveled at the Department and at Sampson because of their refusal to risk the loss of any of our armorclads. Secretary Alger wrote on July 15, urging that orders be given the fleet to force its way into the Bay. On the following day a cable was received from Rear-Admiral Sampson fully explaining the situation, and declaring that "to throw my ships to certain destruction upon mine-fields would be suicidal folly."

The Department needed not this explanation to understand Sampson's course. Before its receipt the determination had been reached to relieve him of criticism and to accept in Washington the responsibility for his refusal to enter Santiago. He was directed to confer with the commander of the army with a view to doing all that was reasonably possible to insure the surrender of the enemy. "I leave the matter to your discretion," the Secretary of the Navy cabled, "except that the United States armored vessels must not be risked"—except, of course, in encountering the enemy's vessels.

The events described cover the period between the ~~military~~ military expe-

dition at Santiago and a few days prior to the capitulation of the Spanish forces in the eastern end of Cuba. Before the departure of Shafter's expedition from Tampa, the attention of the War Department was called to the need of supplying General Shafter's command with means for landing at its destination. The navy was prepared, of course, to furnish all the assistance in its power, in the disembarkation of troops, stores, etc. The Secretary of War advised the Secretary of the Navy that "the Major-General commanding will land his own troops. All that is required of the navy is to convoy and protect with the guns of the convoy while the military forces are landed." Yet practically no preparations were made by Shafter to land his army, and this task fell upon the navy. How well it was accomplished is shown by the cordial acknowledgment of army officers. This satisfactory maneuver followed a feint on the west side of the harbor and the bombardment of Darquiri, which was the point of landing, and of several other available sites of debarkation. There being a possibility that Cervera would take advantage of the opportunity to attempt to escape, Sampson reinforced the blockading squadron by the battle-ship *Indiana*, which had accompanied the army expedition from Tampa.

With that bravery and gallantry which have characterized the conduct of American troops in action, the army under Shafter pressed forward toward Santiago. Its advance forced Spain to come to a decision in regard to Cervera's fleet. Captain-General Blanco expressed the opinion on June 28 that the situation of the vessels in Santiago was the most dangerous of all, and that if they should be destroyed without fighting the moral effect would be terrible both in Spain and abroad. Cervera replied that, on account of lack of batteries to keep the hostile squadron at a distance, it remained constantly near the harbor entrance, illuminating it, which made a sortie, except by main force, impossible. "In my opinion," added the Admiral, "the sortie will entail the certain loss of the squadron and the majority of its crews. I shall never take this step on my own account, but if your Excellency so orders I shall carry it out." The position of the Spanish troops defending Santiago became daily more

untenable, and on July 2 General Blanco cabled to Cervera that, in view of the exhausted and serious condition of Santiago, he should go out immediately.

Sunday, July 3, 1898, is a day which will live in the annals of the American navy. A fog rested over the Bay of Santiago. It was the pall which was descending upon the power of Spain in the Indies. Outside, when the morning blushed, it disclosed the American ships gently rocking at their blockading positions, their bows in semicircle pointing each to the narrow orifice through which Cervera was preparing to dash. In bold relief, rising from the blue of the ocean, was the rugged shore, covered, save at the mouth of the harbor, with verdure. Sampson had arranged to confer with General Shafter at Siboney during the morning, and at 8:55 A.M. he started for the rendezvous, signaling as he left, "Disregard movements commander-in-chief." The familiar signal, as is well known in naval parlance, is not a relinquishment or transfer of command, but a notification to the vessels of the fleet that the commander-in-chief is moving—in this case, save of his usual place in the blockading line. The blockading squadron was further weakened by the absence of the Massachusetts, which, needing coal, had left at four o'clock for Guantanamo. Having taken a leading part in the pursuit of Cervera and in keeping him in Santiago, it seems a hard fate that she was deprived of participation in the battle, and it was a source of especial regret to me that the Bay State was not among those the namesakes of which did so nobly for the honor of the flag.

The morning wore on with the monotonous round of duties imposed upon the crews of war-ships. These were at their day stations—further out than at night. They were ranged in the form of a semicircle, with the harbor as the center, the Brooklyn holding the extreme left or western end of the line, the Texas next toward the east, the Iowa still further east and south on the curve, then the Oregon, and as the line swept into the coast, the Indiana. Closer in shore, and not far from the Brooklyn and the Indiana respectively, lay the converted gunboats Vixen and Gloucester. The vigilance the ships had observed, the

rivalry between them to be the first to sight the enemy, the danger that neglect might result in death or the destruction of some of the ships, or, worse yet, the disgrace of the enemy's escape, caused constant scrutiny of the narrow channel leading into the harbor.

The fact that the enemy was coming out was discovered almost simultaneously on several ships. From a six-pounder of the Iowa, two sharp reports, the first to break the stillness of that peaceful Sabbath morning, reverberated toward the green-covered hills. From her signal mast fluttered "Enemy's ships coming out," but the breeze had not time to straighten the flags before there broke out from the Texas the same signal.

"We had just finished making the turn at Diamond Bank, amidst deathlike silence, everybody awed by the magnificent spectacle of the ships issuing from the Morro and Socapa," Captain Concas wrote. "It was a solemn moment, capable of making the calmest heart beat faster. From outside the conning-tower, which I did not want to enter, in order, if I should fall, to set an example to my defenseless crew, I asked leave of the Admiral to open fire, and, that received, I gave the order. The bugle gave the signal for the commencement of the battle, an order which was repeated by those of the other batteries, and followed by a murmur of approbation from all those poor sailors and marines who were anxious to fight; for they did not know that those warlike echoes were the signal which hurled their country at the feet of the victor, since they were to deprive Spain of the only power still of value to her, without which a million soldiers could be of no service; of the only power which would have weight in the treaty of peace; a power the destruction of which would place Spain at the mercy of her enemy—the old Spain of Europe, not Cuba alone, as many ignorant persons believed. The sound of my bugles was the last echo of those which history tells us were sounded at the capture of Granada. It was the signal that the history of four centuries of grandeur was at an end and that Spain was becoming a nation of the fourth class."

Most of the crews of the American ships were at Sunday inspection when the enemy's vessels were discovered. In the

lead was the Infanta Maria Teresa, following her the Vizcaya, then the Colon, and finally the Oquendo. The two destroyers lagged behind, though the intention was that, under the protection of the larger ships, they should hug the shore and thus escape the fire of the American guns. To the lookouts on the American ships, the Teresa, as she slowly felt her way along the narrow, tortuous channel, looked like a small tugboat, but through their glasses they promptly identified her and the ships which followed in her wake as the enemy which they and their mess-mates had so long sought an opportunity to engage.

With an alacrity that bespoke gratification that the close of weary waiting and watching had come, officers and men sprang to their stations. As they ran, gunners and stokers stripped off their upper clothing. The moment was fraught with the risk of death, but it was filled with action, and the men who were the actors wanted nothing to impede rapid and accurate movement. Down in the bowels of the ships, the stokers, the firemen, and the engineers, deprived of the inspiration which the flash of the guns and the sight of the enemy give, feverishly threw coal into the furnaces, or sprayed the fuel and started the fans to put on forced draught, or watched the machinery and carried out the orders that the brazen bell or the speaking-tube brought from their officers. The men, grimed with coal-dust, knew that upon them depended to a large extent whether the enemy would escape. And who can describe the feelings of the men at the machinery, as they cursed at the steam for its slowness in rising, and at the fact that motives of economy and the desire to remain as long as possible before Santiago without recoaling had caused so many of their captains to refrain from keeping up steam on all the boilers? For only the Oregon was prepared for full speed—a condition due to Captain Charles E. Clark, the commander of that famous ship, and his Chief Engineer, Robert W. Milligan, who kept the furnace fires lighted—certainly a fortunate circumstance on that fortunate day.

"If the enemy tries to escape," Sampson had directed in the standing battle order of June 2, which had undergone no modification, "the ships must close

and engage as soon as possible, and endeavor to sink his vessels or force them to run ashore in the channel." This was the command of the day. Toward the mouth of the harbor the American ships started. The Vixen, not to obstruct the fire of the Brooklyn, properly turned out to sea. The Gloucester, at the eastern point of the line, gathered steam waiting the appearance of the Spanish torpedo-boat destroyers, which Commander Wainwright, her commander, marked as his especial prey. And when the Furor and Pluton appeared, he slipped the leash, and the Gloucester, herself a mere pleasure yacht without armor and with an inferior battery, sprang at them—David at Goliath—a lightly clad youth fighting armored gladiators. The example of the commander inspired the men. It was one of the most intrepid and brilliant heroisms in all naval history. Calmly and deliberately they aimed at the destroyers, the most dreaded vessels of the Spanish navy, and shell after shell struck the target. Upon the destroyers also our armorclads turned their guns. The Pluton was soon disabled; she turned and labored toward the rocks upon which she struck. The Furor, a wreck, aimlessly maneuvered in circles. Practically broken in two by a large shell which pierced her midships, her bow shot up from the water and she sank.

Before the tragedy of the destroyers began, that of the armored cruisers was in course of consummation. As the Teresa moved out of the harbor, upon her was concentrated the awful fire of four battle-ships and one armored cruiser. Captain Concas states in his book that the plan agreed upon before the ships came out contemplated the ramming of the Brooklyn by the Teresa; but if this were really the purpose, it was abandoned before attempt was made to put it into execution. Captain Taylor, of the Indiana, observed that the Teresa showed no intention to ram the Brooklyn; so did Commander Wainwright. There were a few minutes when uncertainty prevailed as to what the Spanish ships would do. Would they separate, and, each pursuing a different direction, attempt to confuse the fire of the American squadron? But Cervera, whose flag flew from the mast-head of the Teresa, quickly settled this

point, and took a westward course, closely followed by the remainder of his command.

The New York and Brooklyn were the only American vessels credited with the speed the Spanish cruisers were reputed to possess. The distance away of the former vessel, therefore, made it even more imperative that the enemy should not be allowed to pass the blockading line. As the Brooklyn was rushing in, she repeated the signal of the Iowa, "Enemy's ships escaping," then gave "Clear ship for action," and a third signal, "Close up"—all in execution of Rear-Admiral Sampson's standing order. Signal that the enemy was escaping had been hoisted on the New York, which, though out of the line, was in plain sight of the Iowa, Indiana, and Gloucester, and not much farther from the Indiana and Gloucester than the Brooklyn was from those vessels.

Thus the first move of the action was in exact accordance with the instructions of the Commander-in-Chief. Their complete observance was, however, prevented by the failure of the Brooklyn to hold the position which had been assigned to her. As this cruiser was steaming in toward the mouth of the harbor, Commodore Schley explained to Captain Cook, commanding the vessel, and a very brave and competent officer, that the signal, "Close up," meant that he was "to keep somewhere about one thousand yards from the enemy, so as to be outside of her broadside torpedo range"—although no such interpretation seems to have been placed upon it by the Commander-in-Chief. To this may possibly be ascribed Captain Cook's direction to port the helm as the ship was nearing the enemy—an order immediately confirmed by Schley—and the Brooklyn began to turn away from the battle-line until her stern was presented to the hostile cruisers. This maneuver was executed while from the masthead of the vessel was flying the signal, "Close up"! Having gone to the southward a distance not fully established, but ranging between eight hundred and two thousand yards, the Brooklyn turned and ran parallel with the Spanish ships. Schley declared this maneuver the crucial and deciding feature of the combat, and that it removed him from "dangerous proximity" to the enemy—a claim which Presi-

dent Roosevelt sharply criticised in his reply to Schley's appeal from the Court of Inquiry. But it almost precipitated a collision with the Texas, which was compelled to stop and lose distance, in order to escape the danger which was thus thrust upon her, and it left a hole in the blockading line, through which the enemy promptly steamed. Had the Spanish cruisers been able to make their estimated speed, this disobedience of Admiral Sampson's order to close and sink or force them to run ashore in the channel might have resulted in their escape. The Spaniards themselves expressed surprise that they were able to leave the mouth of the harbor at all. "When the Oquendo came out of the harbor," Captain Concas states, "it is strange that the American battle-ships which ought to have surrounded her did not capture or sink her then and there, because with the superiority they had they ought to have accomplished more than they did." To those on the Texas the moment of greatest danger in the battle was when the Brooklyn loomed out of the smoke. "Suddenly a whiff of breeze and a lull in the firing lifted the pall," wrote Captain Philip, of the Texas, "and there bearing toward us and across our bows turning on her port helm, with big waves curling over her bows and great clouds of black smoke pouring from her funnels, was the Brooklyn. She looked as big as half a dozen Great Easterns, and seemed so near that it took our breath away. 'Back both engines hard!' went down the tube to the astonished engineers, and in a twinkling the old ship was racing against herself. The collision, which seemed imminent, even if it was not, was averted, and as the big cruiser glided past all of us on the bridge gave a sigh of relief. Had the Brooklyn struck us then, it would have probably been the end of the Texas and her half thousand men."

Once turned and straightened out on a course to the westward about 2,400 yards from the parallel line of the Spanish ships, the Brooklyn did splendid and conspicuous work, lost the only man killed on our side, and did everything to redeem the error of her first maneuver.

In the meantime all the American vessels were covering the Spanish ships with a steel hail which smothered the men at the guns and prevented an accurate return.

The Teresa could not stand up under the deadly fire to which she was subjected. Two twelve-inch shells from the Iowa or the Texas smashed in her armor and entered under the berth-deck, exploding in the stern torpedo-manipulating room, cutting the beams of the berth-deck on the port side away from the frames and completely wrecking everything in that compartment. A ragged hole four feet square on the starboard side showed the point of exit. Three eight-inch shells struck the ship, two of which exploded and the third passed through the hull without bursting. Other projectiles also penetrated the vessel, killing and wounding men, driving the gunners from their stations, and setting the woodwork on fire. The Teresa was soon a burning hulk, and at 10:15 A.M. she turned to the shore and was beached six and one-half miles from the Morro. As she struck the rock, the tars of the Texas, with the elation natural to the victorious, began to cheer. But, gazing with pitying eye upon the sufferings of the men lying wounded upon the decks of the cruiser or frantically endeavoring to escape from the flames which were licking up the masts, Captain Philip, his heart bursting with the awfulness of her disaster, cried to his crew, "Don't cheer, boys: the poor devils are dying."

The murderous fire which had been poured upon the Teresa as she made her exit from the harbor was also suffered by the Vizcaya and Oquendo. By the time the Oquendo appeared, the gunners of the American fleet had recovered from their first excitement, and they aimed at her as coolly as they had done a few days before at the batteries defending the entrance to the harbor. The precision with which they shot was shown by the effect on the target-ship. Her sides, smokestacks, ventilators, hatchtrunk, practically everything above the water line, were riddled by large shells or fragments and by numerous small projectiles. One eight-inch common shell struck the hood of the forward eleven-inch gun at the edge of the port and burst, its fragments killing every one in the turret and wrecking the gun and its mount. Six other eight-inch shells entered the ship, causing frightful damage. Like the Teresa, the Oquendo was soon on fire, which could not be extinguished, and she was beached half a

mile to the westward of the point where the Teresa had sought a resting-place. The Vizcaya and the Colon were now left to carry on the battle with the uninjured American ships. The Indiana, which had used her guns with terrific effect upon the Spanish ships as they left the mouth of the harbor, was unable to keep up with the flying cruisers. She used her guns at long range upon the Vizcaya until Captain Taylor observed that vessel on fire and heading toward the shore.

By the loop of the Brooklyn the Texas had lost distance and position. Nevertheless she steamed gallantly after the chase, and, with the Oregon and the Iowa, drove shell into the enemy's vessels. The Iowa dropped behind, and Sampson, when he came up, signaled to her and to the Indiana to return to their blockading stations off the mouth of the harbor and prevent the egress of any man-of-war which might enterprisingly attempt to destroy the transports lying not far away. This was the only strategic fleet order during the action.

Far out to sea the Brooklyn, which had been doing magnificent work with her battery after the loop was made, and the Oregon pressed on, after the destruction of the Teresa, Oquendo, and Vizcaya, in chase of the Colon, which was scudding along the shore. Laboring to overtake the fleeing Spaniard also was the New York, which had now attained seventeen knots, the highest speed of any ship in the action. The Oregon, with a great white bone in her teeth, was overhauling the Colon, and, when within what was believed to be the range, a shell was fired from her forward thirteen-inch gun. The projectiles soon began to fall beyond and around the last of the Spanish cruisers. Further effort to escape would have resulted only in death to its officers and men. Following the examples of her sister ships in flames forty-five miles away, the Colon turned into the shore. The fight was ended.

We in Washington knew nothing of this dramatic struggle at the time it was occurring. The President and members of his Cabinet sat discussing the distressing despatch from Shafter saying that he contemplated withdrawal of his troops a distance of five miles, and considering the means to be employed for his immediate

at the over-apprehensive urgency of General Miles, commanding the army. The battle-ship Massachusetts was made flagship of a co-operating squadron. A division, Captain Charles H. Davis commanding, consisting of the Dixie, Annapolis, Gloucester, and Wasp, captured Ponce on July 28; three days later the Gloucester and Wasp took possession of Arroyo; the Amphitrite landed a detachment at Cape San Juan on August 6 and occupied the lighthouse, and the easy capture of the island was insured. Eleven United States men-of-war were in Porto Rican waters during the operations on the island of the army under General Miles, who—it is one

of the humorous incidents of the war—sent an amusingly transparent telegram to the Secretary of War on August 9, stating that he was “informed the naval vessels at this place [Ponce] have been ordered round to San Juan. In order that there may be no conflict of authority, I request that no aggressive action be taken against that place, that no landings be made or communication held with the Spanish officials or forces on this island by the navy.” I think that even the Secretary of War could not help smiling when he read me this unhappy despatch. Three or four days later the war was over and there were no more battles to win.

## Aftermath

By Madeline Yale Wynne

Author of “The Little Room and Other Stories,” etc.

“**S**PEAKING of love,” said John, craning his neck to peer up among the branches of an apple-tree where two squirrels were keeping up a mighty chatter, “speaking—of—love,” he was now balancing his words unconsciously in unison with his motions as he adjusted to a nicety his aim of the apple in his hand. The moment arrived, and he “fired” the apple with a swift jerk; even while it cut through the air the squirrel-talk broke off, and two incarnate bits of motion bridged the chasm between the trees, then passed out of sight down the leafy highway over our heads.

“But nobody was speaking of love,” said I, “and it is simply ridiculous the way you men throw things at things. Women never want to throw things; it is purely a masculine inclination. Why should a squirrel suggest a missile to a man?”

“As I was saying,” continued John, unmoved, “speaking of love—for we may be said to be speaking of it now, mayn’t we?” he asked, meekly.

“Why, yes,” I admitted, “of love and men and squirrels.”

“Well, what I wanted to ask is this: is love a back number, has it gone out of fashion in the era that has come in on bicycle and on golf-sticks?”

“John, before we discuss that subject,” I suggested with dignity, “I wish to

remind you that to-day happens to be the ninth anniversary of our wedding-day. Not that I would for a moment wish that insignificant fact to color your views; I only mention it as a coincident of interest.”

“Have you really been married nine years?” asked Susette, with mild wonder in her eyes; and how very long she made the “nine years” sound! I was not quite sure that this was an auspicious time for random views on life and love, for there was a something about the relations between Lewis and Susette that was as yet too intangible to be named, too tenuous to be put to the strain of even a far-off parallel of a suggestion. Some one has said that “engagements should not be pulled up by the roots to see how they are getting on,” and I thought of this as I answered lightly, “Yes, John and I have forged a chain of nine links; we are celebrating the event in this our smoke-talk under the trees.”

“For men must smoke and women must talk,” recited John, mournfully.

“How sweet the hay is!” said Susette, with her appreciative, informal little nose high in the air.

“Aftermath you should say,” corrected John.

“Rowan, isn’t it?” asked Lewis.

“What is aftermath but rowan, and what is rowan but hay?” asked Susette.

"Aftermath is second crop; it costs six dollars a day to get it in; we lose two dollars on every load. This is Jane's pet economy; she invests her losses in more fertilizer; consequent upon that comes more hay, and therefore more loss every succeeding year. That is the true inwardness of aftermath."

It is needless to say it was John who made this summary, and that I am Jane.

Susette seemed to suspect that an effort had been made to get the subject of love decently out of sight, and to bury it in the hay that our Swede was raking up into cocks for the night. Therefore she deliberately set herself to bring us back to the subject, in order to prove her unconsciousness. "We may have changed our point of view regarding what is called love," said she, "but I certainly think this generation takes a wiser and wider point of view."

Susette is a graduate from two colleges. She is straight physically and mentally, but to my thinking she is much too flagrantly innocent of the fact that Lewis has been spending the very best part of his vacation between college and his professional studies in a minute and painstaking investigation of her nature, and she not at all on his list of prescribed studies, either. She, for her part, it seemed to me, had been deliberately and successfully baffling him in this elected, post graduate course.

John was bent just now on provoking a crisis, a most dangerous thing to do; I never want to be around when submarine mines are set off. Fortunately, John is so mercurial as well as impressionable that he often defeats his own aims; and possibly he had no definite end in view this time, for he said the next minute, "Lewis, you must be sure and come up here in June some time. I want to show you some prime fishing—fishing for bats."

"For bats?"

"Yes; it is great sport. They come bumbling round here by the hundreds in June. All you have to do is to throw out some lines from the upper porch there, use a nice bamboo rod, light and springy, with a reel, and—"

"Why, John, you know you never caught a bat in all your life," interjected I, in one of my prosy moods.

"No, come to think of it, I don't believe

I ever did really catch one. They must be uncomfortable and uncanny beasts to handle; but it is not the catching that attracts, it's the fishing." I thought he winked at Lewis, but I am not sure—John is so very much of a child, even since his adoption of what he calls the silver standard as to hair and beard. He now went on to say, with the sportsman's enthusiasm, "It's great sport—early evening—half twilight—shoals of bats just getting their night-eyes on—breathless excitement! Oh, you must come up and try it, Lewis, though I warn you that Jane is quite right. I don't know as I ever thought of it before, but we never did really catch a bat."

"Love," said Lewis, slowly, oblivious of this long interlude of fishing enthusiasm, "love needs favorable conditions. Women to-day are centering themselves on the things that do not make for love. This is true of all their interests. They have proved everything that they have claimed; they are exactly what they wish to be, and they inspire exactly the sentiment they say they wish to inspire. Love to them is a superfluity; in matters psychological as in matters economic, the supply and demand are co-ordinate. Have you seen anything like the old-time love lying round of late?" asked he, in a cynical tone, of John.

"Lots of it," I answered, before John could speak.

"Give us a sample," suggested John, in the slang way he delights in—he always insists that he knows better what he thinks when he hears his thoughts spoken out in every-day words and terms.

"Well, I was thinking, when I spoke, of Hilda, our red-headed Hilda; you know her story, John."

"If it was on humble lines," suggested Lewis, "it may have had some of the old-time flavor. I was thinking more of what we call educated classes. She probably was not up to the times."

"Tell us about her!" exclaimed Susette, her enthusiasm growing as she purposely ignored every remark made by Lewis.

"Hilda was not young even when I first knew her; it was toward the end of her romance. I suppose she might have been thirty years old. She had wonderful red hair; I think it was that that recommended her to me—and afterwards I kept her because she wouldn't go away. John,

was her story a romance—old-fashioned love, as you style it?"

"I'm no judge; let us have it, and the others shall say whether it fits."

"As I say, I particularly delighted in Hilda's red hair. She was a note of Venetian splendor in our dismal, smoky city, and when we had occasion to move to another city to live I supposed, of course, she would have to be left behind; but she announced immediately that she was going with us, and, by way of making herself invaluable, she developed a wonderful ability in packing our duds; all of our gods, demigods, and skeletons were packed by her with great skill and despatch, and at the other end of the route she redistributed these impediments, placing the gods in the niches and the skeletons in closets with surprising intuition. Thenceforth she managed the household. At this time I became aware of her extraordinary power in making friends; her Swedish contingent far outnumbered my own more modest and conservative assimilation of intimates."

"Yes," said John, "and all her friends seemed to be named Jung, or Yonson, or some other name with an interchangeable J or Y. She held regular tåker fests, to coin a word, and our kitchen was too small to hold the numerous contestants. I didn't care about the below-stairs names, but I resented being called 'Yones' and having 'yems' for breakfast; as I used to say to Jane, 'her juse of the J ceased to be a yoy and a yoke.'"

"That is true; but her hair was a beautiful red, wasn't it?"

"Yes, 'twas a fine color scheme, and I did not mean to discourage any interest Susette and Lewis here had begun to feel in her romance; you admit her speech was broken, now prove to us that her heart was broken also."

"I can't prove it—I cannot even give you the delightful quality of her story—that was only to be felt by one who saw her as I did one night in the firelight, standing against the dull blue of the portière with the brass tray in her hand, her head thrown back and her hair shining like a halo. Imagine that, and you might possibly hear more than my clumsy words. 'My fad r' said she in answer to a question of mine, 'he had a bakery in Sweden; not poor like I am here, and we no

need to work for anybody; we have mens to work for us, we been rich and have blenty and we no need to work for anybody. My fader he make de dings in the bakery, and my mudder she been in de shop to sell de dings, and my sister and me we have blenty company all de time; we give blenty to eat and dey like to come all de evenings. One jung man, he named Carl, he come often and he sit ard sit, and so I t'ink he mean to ask me to marry him, but he never say one word; I t'ink it been because I so rich and he haf no money, so he not dare say nottings, but he yust sit and eat and not say anydings; he yust look all the time at me. One Christmas night we have blenty to eat and I t'ink *now* he speak, he stay so late, but he not speak; he yust eat and eat and look at me all de time. Den he get up and he say, "Good-by, Hilda," and he go away. I cry all dat night and t'ink him no good, why he not speak! But I t'ink he come back again some odder time, and I wait and wait; but he never come, and den we hear dat Carl he gone to America. So pretty soon I tell my fader and mudder I been tired of everydings and I go to America, and I come over here and I go to Baltimore, for I hear Carl he go dere. And den I get to know all the Swedes, and I ask everybody do dey know my Carl Yonson, and dey say, "Yes, he here," and I look and look but I never find him. I go and I see very many Yons-sons, but I do not find my Carl, and after a while I grow pale and t'in and I 'fraid I grow old, but I t'ink some day I see him soon, and because I not been rich any more, he speak. I been in Baltimore t'ree year and I never see my Carl. One night I go to see some gardens where dere been dancing and music and everybody go, so I t'ink now I find my Carl; and den yust as I stand on some high steps while my young man he go to get tickets so we can dance, I feel so as if somebody look at me behind, and I turn round quick and dere stand my Carl Yonson looking at me. I feel his eyes in de back of my head he look at me so hard, and nobody stand between us, and den my heart it go right up in my t'roat, and I feel so weak, for he look at me yust as he did when he come to our house and eat; den I t'row my head back so, and yust laugh at him. I laugh out loud at him,'

" 'Why, Hilda!' I exclaimed.

" 'Yes, I yust laugh. I been hunting him all dese years, and when I find him I yust laugh at him; and he grow red in the face, den he turn and go away. I call to him, 'Carl, come back, come back, I been looking for you everywhere,' but he never turn, he yust go away, and I never find him some more.'

" 'Never, Hilda?'

" 'No, I never see him some more. I ask everybody, and dey say he gone to Philadelphia. and den I gone to Philadelphia, and I get t'inner and I grow old fast, but he not dere. Den I hear he go to de West. I know many Sweeds and dey say, "Yes, you find your Carl out in de West," so I go West, and I hear everywhere, "Carl Yonson, yes, he been here, but he gone somewhere else," and I never find him now. I grow old, and I never find him.'

" 'Then that is why you wanted to come here with us?' I said.

" 'Yes, de Sweeds dey all say Carl Yonson he been in de new city, but I never find him.'

" 'Why did you laugh, Hilda? I don't see why you laughed.'

" 'I don't know; I didn't feel like myself; I just t'row my head back so, and laugh at him.'

" Now tell me, Lewis, what should you call the propelling power behind Hilda's quest for her Carl, if it was not love."

" Jane," said John, "finish the story first."

" Oh, of course; well, to be sure, Hilda married somebody else after a while. Nobody is consistent. She married frankly for a settlement; that was business, I admit. She herself said so. She didn't pretend to any love; in fact, she was bent on a good investment; and it marks exactly my point and emphasizes the difference between love and business. I confess I tried to make her see her own romance as I saw it, but she couldn't take the outsider's view. She didn't see what we may call the literary value of it. I suppose it was dead earnest to her. 'I never find my Carl, so I marry the best I can,' was the summing up of her experience. She made a miserable bargain, poor, red-haired Hilda, but she had loved."

Our man Yonson had raked the hay up quite close to us during the time I had

been telling of Hilda. He was so dull I did not believe he would understand what I said, even if he heard. He was making up the hay in cocks for the night and tying on some white nightcaps to keep the dew off. He was one of those dreadfully light, faded-out, blue-eyed Swedes, a faithful, colorless creature who had always exasperated me because his eyes were so inadequate. Of course his name was Yonson; most Swedes seem to have that name. Maybe that was why Hilda always was hearing of "Carl Yonson." From behind me the Swede spoke quietly and in an unmoved way:

" Mrs. Yones, I been Hilda's Carl."

" You, *you* Carl Yonson!"

" Yes, I been Hilda's Carl."

" Really! And did you know that she followed you over to America, and that she is married now? And did she laugh at you when she found you in Baltimore?"

" Yes," said Carl, simply. "Hilda she laugh, she laugh out loud, but I not know, till you tole me, that she been married. It will be a good ding that Hilda she marry. It will be a good ding if her man—" Here Yonson paused to find an English equivalent for a Swedish idea that was in his slow mind. "It will be a very good ding for Hilda if sometimes her man he lick her, for Hilda she get too sassy sometime. Yes, it will be a very good ting if he lick Hilda."

John lay back on the grass and frankly laughed, Lewis and Susette very considerably strolled away, after a glance at each other, and Yonson went off trundling his wheelbarrow, now emptied of the nightcaps, which gleamed in ghostly whiteness on slumbering, giant cocks. John lay at full length at my feet; night settled down solemnly between the hills, while the katydids' synchronous chant filled the air.

" Jane," said John at last, "love may be a back number. I do not know much about love; but isn't it curious I found this little old French ring with a tiny little love-knot on it in my waistcoat pocket to-day, and now it turns out that this is our wedding anniversary."

John was hunting for my hand in the darkness, and when he found it he slipped the ring on my finger—he had woven sweet-grass all through the true-lover's knot while I had been telling Hilda's story. So like John.

## Recent Fiction

**I**N a survey of recent activity in the field of American fiction a few weeks ago, *The Outlook* called attention to the fact that while no novels of high importance had been published, a number of stories had appeared of distinctly fine quality. To this list of novels, admirable in form, excellent in style, and wholesome in tone, must be added a few which have since come from the press; and among them a foremost place must be given to Mr. William Garrott Brown's "A Gentleman of the South" (The Macmillan Company), a comparatively short and a tragic story, dealing with a family feud and ending in a duel. The charm of the story is twofold. It is an admirable interpretation of the social ideals of the Old South; a sympathetic study of the standard of personal honor which, while it took conventional forms and imposed conventional duties, developed certain fine strains of character and bred men of great personal distinction. To this must be added the charm of style. It is not always easy or even possible to decide at the moment whether a piece of fiction is literature or not; but "A Gentleman of the South" has qualities of style which convey the sense of literature and which entitle the story to very careful reading. Mr. Brown, it will be remembered, is the author of that admirable interpretation of the part played in American politics by the South during the twenty-five years before the Civil War in "The Lower South in American History." He knows the field thoroughly; his knowledge of the historical background is accurate and sympathetic; and in this story he has dramatized the spirit of the Old South.

Mr. Howells, on the other hand, in his latest book, "Questionable Shapes" (Harper), deals with the most modern subjects, and ventures for the first time into that borderland which of recent years has tempted, perplexed, and bewildered a great many people to whom the problems of modern psychology are full of fascination. These stories constitute a new species of ghost stories, and in dealing with his elusive and spectral themes Mr. Howells has used all the delicacy and subtlety of his art. The tales are not blood-curdling;

they do not terrify, and in most cases they do not deceive us by the semblance to reality; but they are carefully told; and their grouping in this volume indicates that Mr. Howells is seriously interested in this recurrence in dramatic form of the problems of immortality, of thought-transference, and kindred things.

One passes into another world when he lays down Mr. Howells's stories and opens Charles G. D. Roberts's "Earth's Enigmas" (L. C. Page & Co.)—a series of comparatively brief chapters dealing with incidents and episodes in the lives of men and of animals for which there is no apparent explanation. In one of these stories, for instance, Mr. Roberts draws the picture of a solitary hut in the far woods to which a little child has wandered. The father, returning, hears the cry of the child, does not recognize it as his own, is doubtful whether he ought to pay any attention to it, but, the fatherly instinct prevailing, turns and makes his way towards the hut, discovering at the same time two half-famished wolves who are approaching from another direction. The cries of the child increase his speed, and draw the wolves still more rapidly towards their prey. At the last moment the father shoots the wolves, discovers that he has rescued his own child, and then later, in a cave in the side of the mountain, finds the bones of the young wolves whose hope of life was destroyed by the rifle-balls that killed their parents. It is such situations as these that Mr. Roberts presents with that charm of style which rarely forsakes him when he deals with animal life and with landscape.

In "A Specter of Power" (Houghton, Mifflin & Co.) Miss Murfree does not keep her readers wholly within the range of the Appalachian Mountains, but moves them towards the Atlantic coast. The story opens during the French and Indian War, and its principal figure is a young Frenchman who goes on an embassy to an Indian village in the Mississippi, and is left in the hands of the Indians, who are infuriated by the attack and flight of his fellow-commissioner. He is finally transferred to the care of a Scotch trader, under whose roof he is successfully nursed

through a severe attack of fever, only to fall in love with the Scotchman's sister. The story is not as interesting as some of its predecessors from the same hand. There are charming passages of description in it, and it is done with care; but it does not convey the same sense of familiarity with the subject that the Tennessee stories conveyed.

Those who read Mr. Arthur Sherburne Hardy's "But Yet a Woman," "The Wind of Destiny," and "Passe Rose" will not overlook "His Daughter First" (Houghton, Mifflin & Co.), which has been appearing of late months in the pages of the "Atlantic Monthly." Mr. Hardy's work has never been notable for great vigor of invention or of style, but it has had unusual qualities of refinement, delicacy of characterization, and epigrammatic speech. This latest story is as delicate and well done as any of its predecessors; and although not entirely convincing, it is less romantic and conveys a deeper sense of reality than some of its predecessors. It is a delightful piece of work, somewhat shadowy, but well thought out, skillfully constructed, and delightfully written.

Mrs. Banks's "Oldfield" was one of the most charming novels of last year; indeed, it deserved to rank with the best American novels of late years. Her latest story, "Round Anvil Rock" (Macmillan), has the same atmospheric quality. It is a story of the blue grass region; but it deals with a period much anterior to the period of "Oldfield." It is a study of pioneer conditions in Kentucky at the beginning of the last century, and brings out very clearly that combination of rough conditions with great dignity of manner and refinement of character. It is more distinctly romantic in tone than its predecessor, and has a more highly articulated plot. One of its chief figures is a man whose romantic story and mysterious fortune have long been part of the traditions of Kentucky. The heroine is a beautiful creature, full of lightness and grace, with an ethereal quality that will rank her among the rare creations of fiction. The love story which runs through the novel is extremely well told, and is idyllic in its purity and grace.

"The Captain's Toll Gate" (Appleton) is the last piece of writing that can be expected from the pen of Mr. Stockton.

The story was completely finished before his death. It is a very characteristic piece of work—droll, quaint, whimsical, full of unexpected situations, abounding in those qualities which make Mr. Stockton's best fiction easy and refreshing reading. He has more than once written a story upon a more original motive, but he never has applied his characteristic method to more amusing ends than in "The Captain's Toll Gate"—a fabrication of impossibilities from beginning to end, told with an unfaltering confidence in the fact as narrated, and with the directness of the most commonplace story. It is this combination of an entirely impossible situation with a perfectly matter-of-fact manner that is one of the most original aspects of Mr. Stockton's humor. This book is to be commended as a piece of pure refreshment.

To the series of short stories which bear the imprint of the Macmillan Company, and which were designed to fill the leisure hours of summer travel, two recent additions have been made—Mr. Crawford's "Man Overboard" and Mr. Churchill's "Mr. Keegan's Elopement." Those who recall Mr. Crawford's harrowing and blood-curdling tale of "The Upper Berth" will not be slow to lay hands on "Man Overboard," a carefully told story, very adroitly managed, less appalling than the earlier tale, but an excellent piece of ghost-story literature. Mr. Churchill's book, on the other hand, is in a very light vein—a little comedy, told with a good deal of skill, which holds the reader's attention to the end.

If "Because of Power" (G. W. Dillingham Company, New York) is the first long story which Mrs. Ella Stryker Mapes has written, it must be regarded as a book of real promise. It is well planned, the plot carefully thought out and worked out, and the details of the story well looked after. There is very little amateurishness in its structural quality, very little fumbling with materials and situations. The first impression which the reader receives from it is that the writer has the gift of storytelling. She sees incidents in dramatic perspective; she knows what to omit and what to emphasize; she is not afraid of the dramatic. The second impression is that she has command of several unusual gifts, and among them the power of de-

pecting passion. This story has passionate movement throughout. It is a profound love touched with imagination and with power of self-surrender which belong to the great emotions. This power is not common in our literature, and when it is revealed is often lacking in restraint. Mrs. Mapes not only possesses the power of using this element of the strongest and most original fiction, but she holds it in control. Her story has, therefore, throughout a moving element; it takes hold of the reader, too, by its freshness of feeling. The story is not without the faults of inexperience; but there is so much promise in it that the writer deserves to be encouraged and the emphasis laid upon what she has achieved rather than upon what she has missed. The story is not commonplace.

The anonymous "Kempton-Wace Letters" have a strong interest as dealing cleverly with the psychology of love. They pass between a brilliantly endowed young American professor of economy and an ardent English idealist. The fact that they center about the actual engagement of the American keeps them from being merely academic. Naturally, the Englishman maintains the higher, more spiritual

and imaginative view of the subject, the American the material and even sensuous view. Both are gentlemen, both are made to argue keenly and often wittily, and the personal failure of the materialist's theories in his own application of them presents a real, if not a dramatic, story-interest. The ending is well managed. The book is certainly one to provoke discussion on a subject which is of universal attractiveness (Macmillan).

Mr. Quiller-Couch always has that indefinable charm which we are wont to call the literary touch. In his new story, "The Adventures of Harry Revel," and especially in its earlier chapters, one finds that delicate treatment of character and humor, that leisurely presentation of surroundings and incidental matters, which were so evident in the masters of fiction in the last generation. The odd, kindly matron of the orphan asylum, with her repressed sentimentalism and her excruciating "poetry," might be a character from Dickens. The tale has movement and life; indeed, in the latter part it is somewhat crowded with plot and even a bit sensational. As a whole, it will gain for its author many new friends in this country. (Scribners.)

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Alton Locke, Tailor and Poet: An Autobiography.** In 2 vols. By Charles Kingsley. (Library Edition.) J. F. Taylor & Co., New York. 5x7½ in.

**Anglo-Saxon Century and the Unification of the English-Speaking People (The).** By John R. Dos Passos. G. P. Putnam's Sons, New York. 5½x9 in. 242 pages. \$1.35.

A glorification of the mission of the Anglo-Saxon race and a plea for its unification through the voluntary incorporation of Canada within the United States, and the negotiation of treaties between that country and Great Britain establishing common naturalization laws for the two countries, complete freedom of trade between them and a common coinage system, and, finally, a supreme court of arbitration for the settlement of all their international disputes. The weakness of this ostensibly practical programme for unification lies, of course, in the present extreme hostility of Canadians toward the annexation proposed, and the extreme hostility of one party in the United States toward free trade with Great Britain and of the other party toward a com-

mon coinage system with her. While collecting striking evidence of the essential unity of the English-speaking countries, Mr. Dos Passos has not sufficiently considered the currents running counter to the outward unification he proposes.

**Anne Carmel.** By Gwendolen Overton. The Macmillan Co., New York. 5¼x7¾ in.

Reserved for later notice.

**Anthology of English Poetry: Beowulf to Kipling.** By Robert N. Whiteford, Ph.D. Benjamin H. Sanborn & Co., Boston. 5½x8 in. 432 pages. \$1.

**Christian Endeavor Manual (The).** By Rev. Francis Edward Clark, D.D. United Society of Christian Endeavor, Boston. 5x7½ in. 306 pages. \$1.

A statement of the principles and the methods of the Societies of Christian Endeavor by the

founder and head of the movement. It is in the form of a text-book.

**Church and its Organic Ministries (The): A Plea for the Headship of Christ.** By Samuel J. Andrews. David Hobbs & Co., Glasgow, Scotland. 5½×8½ in. 131 pages.

The writer of the letter thus entitled is known as the author of one of the standard Lives of Christ, and also as the most prominent representative in this country of the "Catholic Apostolic Church," popularly termed "Irvingite," whose special tenet is the revival of the peculiar ministries and gifts of the Apostolic age. His contention in this letter is that no scheme of church unity that depends on episcopal organization can succeed; that episcopacy is an ineffective substitute for the primitive organization under Apostles and Prophets, which has terminated because of the decline of spiritual life. Inasmuch as these, should they reappear, would be rejected, the only solution seems to be in the miraculous return of Christ. It is impossible not to admire the religious spirit of the writer, however dissenting from his pseudo-supernaturalism and its misconceptions of evolution and sociology.

**Cornhill to Cairo. Prose Works of William Makepeace Thackeray.** Edited by Walter Jerrold. Illustrated by C. E. Brock. The Macmillan Co., New York. 5×7½ in. 443 pages. \$1.

**Earth's Enigmas.** By Charles G. D. Roberts. Illustrated. L. C. Page & Co., Boston. 5½×8 in. 285 pages. \$1.50.

Reserved for later notice.

**Egmont.** By Goethe. Edited by Robert Walder Deering, Ph.D. Henry Holt & Co., New York. 4½×6½ in. 180 pages. 60c.

**Empire and Sovereignty.** By Ernst Freund. (University of Chicago Decennial Publications.) The University of Chicago Press Chicago. 8×11 in. 32 pages.

**Erasmus.** By Ernest F. H. Capey. Illustrated. E. P. Dutton & Co., New York. 4½×7 in. 226 pages. \$1, net.

**Essays.** By Ralph Waldo Emerson. (Second Series.) Houghton, Mifflin & Co., Boston. 5×8 in. 358 pages. \$1.75.

**Essentials of German.** By B. J. Vos. Henry Holt & Co., New York. 5×7½ in. 222 pages. 80c.

**Few Remarks (A).** By Simeon Ford. Doubleday, Page & Co., New York. 5×8 in. 340 pages. \$1, net.

Mr. Ford has few rivals as an after-dinner talker. His dry, whimsical fun is irresistible largely because of his imperturbable and even solemn manner of utterance. It loses a great deal "in the cold gray dawn of the morning after," and in the severe test of type and binding.

**Finances and Administration of Providence (The).** By Howard Kemble Stokes, Ph.D. (Johns Hopkins University Studies in Historical and Political Science.) The Johns Hopkins Press, Baltimore. 6×9½ in. 464 pages.

**First Lessons in United States History.** By Edward Channing. Illustrated. The Macmillan Co., New York. 6×7½ in. 260 pages. 60c.

Professor Channing's "Student's History of the United States" will prejudice parents and teachers familiar with that work in favor of this smaller volume as a study and school book for their children and pupils. Nor should these be disappointed. The work is compre-

hensive and the style is clear, albeit with a shade of "talking down" to children. The book's merit lies in the compactness and in the practicability of the knowledge given; for instance, appended to each chapter is a summary under the caption "Do not forget;" that on Chapter XXV., for instance, is:

1. Slavery existed in all colonies before the Revolution.
2. It died out in the North.
3. Whitney's cotton-gin fastened slavery on the South.

For older students the work would have been more valuable if the dates given had been more plentiful; for instance, we are informed as to the date of the discoveries of Coronado; but there is no date given for the far more important discovery of the Mississippi River by Hernando de Soto.

**Foundations of Latin: A Book for Beginners.** By Charles E. Bennett. (Revised Edition.) Allyn & Bacon, Boston. 5×7½ in. 238 pages. 90c.

**Geography of Commerce (A): For Academies, High Schools, and Business Colleges.** By John N. Tilden, M.A., M.D., and Albert Clarke, M.A. Illustrated. Benjamin H. Sanborn & Co., Boston. 6¼×9½ in. 145 pages. \$1.25.

**Guide to Switzerland.** With Maps and Plans. The Macmillan Co., New York. 4½×7 in. 235 pages. \$1.60.

A new handbook showing novel and excellent ideas in arrangement, laying out of routes, and choice of areas for maps. An examination of the information about those places with which the reviewer is most familiar gives notable good results. The notes on history are excellent. The maps are admirably clear.

**Higher Realism (The).** By Duston Kemble. Jennings & Pye, Cincinnati. 5×7½ in. 167 pages. 75c., net.

The design of this brief treatise by a layman in philosophy is to show that human life, especially mental life, can be accounted for only by the existence of an infinite Being of similar characteristics as the Author of life.

**Historical and Critical Discussion of College Admission Requirements.** By Edwin Cornelius Broome, Ph.D. (Columbia University Contributions to Philosophy, Psychology, and Education.) The Macmillan Co., New York. 6×9½ in. 157 pages. \$1.

**History of American Literature, 1607-1865 (A).** By William P. Trent, M.A., J.L.D. D. Appleton & Co., New York. 5×7½ in. 608 pages. \$1.40, net.

Reserved for later notice.

**Juf Polonais (Le).** By Erckmann-Chatrian. Edited by Edward Manley. D. C. Heath & Co., Boston. 4½×6½ in. 108 pages.

**Kinship of God and Man.** By Rev. J. J. Lanier. In 3 vols. Vol. III. The American Church. Thomas Whittaker, New York. 5×7½ in. 184 pages. \$1, net.

The author is a minister of the Protestant Episcopal Church, attracted to it years ago from the Southern Baptist communion by its scheme for church unity. He is a "broad churchman," and in his preceding volumes has shown himself to be an independent thinker. The present volume was originally presented to a mixed audience in Milledgeville, Georgia, in a series of discourses intended to show the simplicity of religion, and how simple the organization required to manifest its essential unity. The scheme is that of the Chicago-Lambeth "Quadrilateral,"

applied within the limits of a Southern county. Waiving the feasibility of this, we hope that Mr. Lanier's book will be read wherever a stiffly sectarian spirit or a divisive theological dogmatism prevails.

**Lake Country Sketches.** By Rev. H. D. Kanner. Illustrated. The Macmillan Co., New York. 5x7½ in. 241 pages. \$1.25.

Reserved for later notice.

**Man Overboard!** By E. Marion Crawford. The Macmillan Co., New York. 4x6½ in. 96 pages. 9c.

Noticed elsewhere in this issue.

**Macedonian Folklore.** By G. F. Abbott, B.A. The Macmillan Co., New York. 5½x9 in. 372 pages. \$2.50.

Packed with the strange myths, superstitions, legends, and traditional customs of the Macedonian peasants. The book is a valuable contribution to the literature of folk-lore and symbolism. The author got most of his material at first hand through oral tradition.

**Merchant of Venice (The).** Edited by Thomas Marc Parrott, Ph.D. Henry Holt & Co., New York. 4½x7½ in. 220 pages. 50c.

**Mère de la Marquise (La).** By Edmond About. Edited by Murray Peabody Brush, Ph.D. D. C. Heath & Co., Boston. 4¼x6½ in. 168 pages.

**Mr. Keegan's Elopement.** By Winston Churchill. The Macmillan Co., New York. 4x6½ in. 73 pages. 9c.

Noticed elsewhere in this issue.

**New Grammar School Arithmetic.** Part I. and II. By John H. Walsh. D. C. Heath & Co., Boston. 5x7½ in.

**Nine Points of the Law.** By Wilfrid S. Jackson. John Lane, New York. 5x7½ in. 305 pages. This book is an account of the laughable adventures that befell one John Wayzgoose, a London counting-house clerk, who, on a holiday stroll through Windsor Forest, discovered a buried treasure. His efforts to obtain safe possession of this and to safely rid himself of it when later he learns it to be the booty of thieves and the property of his own employer, father of the girl he loves, are so sympathetically related as to keep one well amused until the last word is read.

**New International Encyclopædia (The).** Edited by Daniel Coit Gilman, L.L.D., Harry Thurston Peck, Ph.D., L.H.D., and Frank Moore Colby, M.A. Vol. X. Dodd, Mead & Co., New York. 7x10 in. 986 pages.

**Old Puritanism and the New Age (The):** Addresses before Woburn Conference of Congregational Churches at Malden, Massachusetts, April 1903. The Pilgrim Press, Boston. 5x7½ in. 106 pages.

**Personality of Emerson (The).** By F. B. Sanborn. Charles E. Goodspeed, Boston. 6x10 in. 135 pages. \$5, net.

Reserved for later notice.

**Primer of Palmistry (A).** By Emma Talbot Odell. Illustrated. Frederick J. Drake & Co., Chicago. 5x8 in. 127 pages. \$1.

**Prose Works of William Makepeace Thackeray.** The Great Hoggarty Diamond, etc. Edited by Walter Jerrold. Illustrated by Charles E. Brock. The Macmillan Co., New York. 5x7½ in. 411 pages. \$1.

**Quo Vaditis? A Call to the Old Moralities.** By Bouck White. The Civic Press, New York. 5x8 in. 203 pages. \$1.

The age needs a prophet of the old Hebraic

kind. Mr. White's indignation at existing evils is Hebraic, and his form of speech is often such, though with some consciously imitative effort and striving for effect. It is too much to expect a prophet of reproof always to keep his intellectual balance, and one must not rail at him if he sometimes screams; there is much to provoke him. One will find much here to assent to among points of dissent, and not a little that is pat and quotable. "The only true Apostolic succession is a succession of Apostles. . . . Brother, there is something rotten in an orthodoxy that believes in Christ and Quay at the same time."

**Round Anvil Rock.** By Nancy Huston Banks. Illustrated. The Macmillan Co., New York. 5x7½ in. 356 pages. \$1.50.

Reserved for later notice.

**Soldier of Conscience (A):** Edward Perkins Clark. The Eagle Press, Brooklyn. 5x7½ in. 80 pages.

A simple and worthy tribute to a writer and thinker whose work was always governed and infused with conscientious purpose. If Mr. Clark's writings had not been anonymous, as required by the custom of journalism, his name would have been as highly honored by the entire body of thinking, public-spirited men as it is now by those who know what in fact he did and stood for.

**Spectre of Power (A).** By Charles Egbert Craddock. Houghton, Mifflin & Co., Boston. 5x8 in. 415 pages. \$1.50.

Noticed elsewhere in this issue.

**Tales from Wonderland.** By Rudolph Baumbach. Translated by Helen B. Dole. Adapted for American Children by William S. M. Silber. A. Lovell & Co., New York. 5x7½ in. 122 pages. 30c.

These stories have been taken from the German and simplified for the reading of young children, who will enjoy their quaint fancies and their talking animals who can give counsel and work magic charms.

**Tarr and McMurtry Geographies.** Supplementary Volume: Texas. By E. G. Littlejohn, A.M. The Macmillan Co., New York. 5½x7½ in. 94 pages. 35c.

**Thomas Campion: Songs and Masques.** Edited by A. H. Bullen. (The Muses Library.) Charles Scribner's Sons, New York. 4x6½ in. 288 pages. \$1.75.

**Thoughts from Maeterlinck.** Chosen and Arranged by E. S. S. Dodd, Mead & Co., New York. 5x7½ in. 282 pages. \$1.20.

**Twilight of the Gods (The), and Other Tales.** By Richard Garnett. John Lane, New York. 5x7½ in. 323 pages.

Mr. Garnett has a singular faculty of treating stories of the ancient times and of classical setting in such a way as to satirize modern follies and weaknesses. These tales have distinct originality, and are clever in an unusual way.

**Ventures into Verse.** By Henry Louis Mencken. Marshall, Beek & Gordon, New York. 4½x7½ in. 46 pages.

**Victim of Conscience (A).** By Milton Goldsmith. Henry T. Coates & Co., Philadelphia. 5x7½ in. 318 pages.

**Zwischen Himmel und Erde.** By Otto Ludwig. Edited by Edward Stockton Meyer. D. C. Heath & Co., Boston. 5x7 in. 240 pages.

# Correspondence

## Temperance and Prohibition

*To the Editors of The Outlook :*

The Outlook says in an editorial April 11, "State prohibition is the act of one community imposing its will on another community. It cannot be enforced because it ought not to be enforced."

The Outlook, in another article headed "Tennessee Almost Saloon Free," calls attention to Tennessee's law, which forbids the sale of liquors within four miles of any institution of learning, in any incorporated town of less than five thousand people. The Outlook assures us that there are only eight cities left with saloons in Tennessee, and that "this State has achieved the enviable position of suppressing the saloons, wherever this is made practicable, by the honest sentiment of the people, without enacting a State prohibitory law, to be nullified by perjured officials or genuine public opinion in the larger cities."

Here is a State law, and I ask The Outlook if this is not "the act of one community imposing its will upon another," and if it does not violate The Outlook's principle of the "community's" rights, as much as though it included the other "eight" cities, and brought the whole State under prohibition.

In its editorial April 11 The Outlook says: "In some States, perhaps eventually in all, we would have the State assume the exclusive right to manufacture and sell liquor." Again we would ask The Outlook if this State law would not be "the act of one community imposing its will upon another community." In the same editorial The Outlook says, "Christ . . . did not forbid the use of wine. On the contrary, he drank it himself, made it on one occasion by a miracle, and commended it to his followers in the sacred supper." I will not use The Outlook's position regarding the Bible as my argument, for I do not agree with The Outlook on religious matters. What the wine may have been which Christ made we do not know, but certainly there is no mention of any one becoming intoxicated on this "good" wine. I certainly believe that if Christ were in America to-day he would be a total abstainer.

The Outlook says: "If we had the influence, we would persuade all men to remain out of the saloon; but if we had the power, we would not compel any man to remain out; just as we would persuade all men to attend church, but would not compel any." The Outlook could have no object whatever in either local option or State control—both of which it approves—unless it would do just what it expressly states it would not do if it had the power, compel some man to remain out.

In conclusion, let me say, I do not believe that prohibition makes people thirstier, or induces them to buy more liquor; and, to use an old argument, if it did, the liquor men would want that law. A great quantity of liquor is sold in all prohibition States; and I think in Tennessee saloons could be found outside the "eight" cities. I believe the laws are constantly being broken, and will be so long as conditions exist which call for a law. It would be idle for a State or town to take measures to prevent an evil which did not exist; but I do not believe there are more "perjured" officials in prohibition than in local option States.

I will submit The Outlook's own testimony regarding the great corruption exposed during the recent investigation in New York, which has high license by local option. Many State legislatures have been scandalized within a few weeks.

My acquaintance with the people of Vermont has been close, traveling and selling goods, and I never saw any people with better morals, or more industrious and law-abiding. The credits are the best of any State in the Union. The law was not perfectly, but well, enforced. Traveling in various States, I have found the conditions always best in prohibition States, and I believe that prohibition is the only honest way to deal with the problem.

D. O. S.

## "Jews, Turks, Infidels, and Heretics"

*To the Editors of The Outlook :*

In your issue of June 13 was printed a communication signed "Churchman" which contains two errors so glaring that it seems hardly necessary to call attention

to them. In his article, "Jews, Turks, Infidels, and Heretics," "Churchman" writes: [These are] "words inseparable to all good churchmen from the Good Friday service; as is also the claim of those using the prayer, that *they alone* are the remnant of the true Israelites." (Italics mine.) Nowhere does the Anglican Church either in England or America claim that *they alone* are "the remnant of the true Israelites." That is an assumption pure and simple on the part of "Churchman."

His second error is equally absurd. He writes: "Think of our classifying the Jews, his chosen people, with Turks, infidels, and heretics!" Here are four classes prayed for—the Jews, the Turks, the infidels, the heretics. The Jew is classed by himself, the Turk by himself, etc. The fact that they are all mentioned in one prayer does not constitute a classing together in any sense. In the Prayer for the Church Militant, prayer is offered for Rulers, Bishops and other ministers, thy People, all men, all in trouble, sorrow, need, sickness, etc. Does "Churchman" think that mentioning these various classes in one prayer classes them together? Possibly Mormons, Christian Scientists, Seventh-Day Adventists, etc., might be classed together under the term "heretics" in the mind of "Churchman;" but how he could possibly wrench the English language so as to class Jews therewith I fail to comprehend.

Unless a person believes that "Jews, Turks, infidels, and heretics" are beyond the help of prayer, there ought not to be any objection to praying for them once a year, unless, like David Harum, he thinks that is too often, and "couldn't stand the strain." (Rev.) ARTHUR W. HIGBY.

Oklahoma City, Oklahoma.

#### Fresh Air

*To the Editors of The Outlook:*

About this time of year I like to address a hundred thousand nice people, be the same more or less, who read their Outlooks on Sunday on some shady piazza by the seaside, in the Adirondacks, or in some forest or mountain glen.

The address is wholly on the outings for people who are not quite so prosperous as the reader.

At the office of "Lend a Hand" we know that before the summer is over we shall have perhaps a hundred of pathetic stories about nice old men who are cabined and confined in one "apartment" or another, sixty or seventy feet above the sidewalk in the city; and we shall know that these poor old fellows would feel much nearer to God if they were lying on haycocks, or sitting in the shade of an elm, and listening to crows or bobolinks or the plash of the waves or the babble of water.

A few years ago one man at Beverly, in this State, sent me fifty dollars for such people. I do not know his name. But I know he was a child of God, and a man of good sense. For he marked his envelope, "The value to me of one sniff of sea air."

Now I wish that a few hundred of the "readers" named above would send to us at No. 1 Beacon Street, Boston, one dollar, two, three, ten, or twenty, in that same spirit, to give us a chance to find and use country or seashore homes for our old men. Also, as you shall see, there is sometimes a young man. Of women I do not speak here.

Here are, for instance, the entries on one left-hand page of an Outing's Day-book:

S. S., 63 years. Convalescing from bronchial pneumonia. English; recommended by L. P.

G. S., 36 years. Spinal trouble, probably consumption; very sick boy; recommended by E. M.

I. J., 26 years. Blind piano-tuner. Mrs. W. pays expenses. Comes to us for return ticket.

Here are the corresponding entries on the right-hand page:

W. W., returned after fourteen days; was happy every moment he was there. \$8.

H. H. called to thank and say how happy he had been.

L. L., "good rest," most grateful, called to see me. Deformed.

I am writing these lines because, while we are quite sure of our left-hand pages, we want the *Readers* to make us sure of the right-hand pages.

EDWARD E. HALE.

Lend a Hand Office, 1 Beacon Street, Boston.

# IMPERIAL GRANUM

BEST AND MOST ECONOMICAL

## FOOD for BABIES and INVALIDS

IT ALL DEPENDS ON THE FOOD

The sweetest babies will fret and cry,  
 If you their rightful food deny.  
 The same youngsters will crow with glee,  
 If they are fed as they should be.  
 And so wise mothers quickly see  
 The needs of each young majesty.  
 They love to see them thrive and grow,  
 To see them laugh and hear them crow,  
 And be like cherubs,—don't you know  
 IMPERIAL GRANUM makes them so?

Elizabeth Robinson Scovil in The Ladies Home Journal says:

"Imperial Granum contains practically the same amount  
 of albuminoids or flesh forming substances as mother's milk.  
 It is especially adapted for the use of children after weaning."

Imperial Granum overcomes intestinal disorders.  
 It is invaluable in warm weather.

Druggists and high class grocers now supply a Trial size at  
 25 cents. Generous sample and valuable booklet on Care of

**The Outlook** is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

**Price.**—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

**Postage is Prepaid** by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add \$1.56 for postage.

**Change of Address.**—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

**Discontinuances.**—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

**How to Remit.**—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

**Letters** should be addressed:

## The Iowa Republican State Convention

Following the Democratic State Convention reported in these columns last week, the Iowa Republicans met in Des Moines on July 1, nominated a ticket with Governor Cummins at its head, and adopted a platform. The measures advocated by this platform include the regulation of trusts by the Government, the continuation of the "progress made in the preparation of the Philippine people for the fullest practical degree of self-government," the maintenance of the gold standard, and the rigorous enforcement of law (evidently in reference to lynchings). Earnest opposition is expressed to the disfranchisement of citizens upon lines of "race, color, or station in life." Governor Cummins's administration in the State is approved. So also is the National administration of President Roosevelt; in particular the course pursued by the President in his dealings with the trust problem and interstate commerce. This platform also is to be added to the list of those State platforms which have specifically advocated the renomination of Mr. Roosevelt. Interest has naturally, however, centered in the tariff question as it has been discussed in Iowa, and for that reason the tariff plank is regarded as the most important. It reaffirms belief in the principle of protection, with an unqualified pledge to maintain it. On the other hand, it apparently does not present the present protective tariff as something sacred and inviolable, for it states that tariff rates "must from time to time be changed to meet the varying conditions incident to the progress of our industries and their changing relations in our foreign and domestic commerce. Duties that are too low should be increased, and duties that are too high should be reduced." Reciprocity is indorsed as the complement of

protection, reciprocity with Cuba being specifically mentioned as a measure which ought to be promptly completed. The fact that agitation for revision of the tariff at the hands of Republicans has been carried on by a group within the party in Iowa, headed by Governor Cummins himself, who by this convention has been renominated, and that this agitation has been opposed by other leaders, has given to this tariff plank peculiar prominence. The fact that it states that the duties must be changed from time to time seems to indicate that the Republicans of the type of Governor Cummins are being heard and their demands attended to. On the other hand, the statement of the platform regarding the way in which these changes should take place is enigmatic, not to say Delphic. To say that duties which are too high should be reduced is hardly more enlightening than to say that duties which ought to be reduced ought to be reduced. The real tariff question is whether duties are too high or are too low. Those who believe in absolute free trade (and in this country they are very few) merely believe that every tariff duty, no matter what it is, is too high. For any one else, even for those who believe in tariff for revenue only, the tariff question resolves itself into the question, How may the duties that are too high and those that are too low be discriminated from those that are just right? Upon this question, that is, to the tariff question as it really is, so far as the Republican party is concerned, the Iowa platform brings no enlightenment. Perhaps an astute student of politics may be able to gain some idea as to how the tide is running in Iowa by watching the progress of one phrase in the current or the disappearance of another, but for the information of the ordinary intelligent voter this plank in the platform can hardly be called valu-

able. The framing of such a statement, which, when finally analyzed, means nothing more than "whatever is, is," may be recommended to the admiration of those who believe that political platforms are meant for phrase-making—but to no others.

#### The Case of Mr. Metcalf

A committee of the United Typothetæ of America, as the result of an investigation of the dismissal of Mr. Metcalf, waited upon the President, and subsequently interviewed the Postmaster-General, for the purpose of urging the impropriety of recognizing such a bid as that presented by Mr. Paul Herman for supplying money-order forms, on the ground that he could not and did not comply with the conditions of the specifications. These specifications provide, as we stated week before last, that no contract shall be given "to bidders whose places of business are unfavorably located, nor to those whose establishments are provided with limited facilities, nor to those who shall not satisfactorily guarantee ability to fulfill such contracts to the satisfaction of the Department." Mr. Herman had no place of business, no establishment, and therefore, in the judgment of the United Typothetæ, was not in a position to compete. This protest of the Typothetæ has been overruled, and the contract has been granted to Mr. Herman, and we judge from the official report of the Postmaster-General to the President, which lies before us, that it is not intended to reconsider the dismissal of Mr. Metcalf. In this report it is stated that Mr. Metcalf, in the investigation already had, conceded that it was not his business, but the business of the Postmaster-General, to determine whether the bidder for such a contract was responsible or not, and it is implied that in assuming this responsibility so far as to advise Mr. Herman to withdraw his bid and re-enter the employment of the Wynkoop-Hallenbeck-Crawford Company, in which his son was employed, he acted in a suspicious manner. With this implied judgment of the Postmaster-General The Outlook does not agree. The Wynkoop-Hallenbeck-Crawford Company had facilities for carrying out the contract. Mr. Herman had no facilities, but had experience which would

be of value to the Department in the execution of the contract. Mr. Metcalf may very well have believed that it would in the end cost the Government more than the forty-five thousand dollars difference between the two contracts to give the contract, apparently in violation of the terms of the specifications, to a bidder who possessed no establishment and no facilities for doing work. In endeavoring to secure the combination of the establishment on the one hand and the practical working experience on the other, he did exactly what a good business man would have been very likely to do in the conduct of his own business. It was certainly an error in judgment on his part to do this without previous conference with his superior, and his action might well have been overruled and he might well have been warned against assuming in the future a responsibility which possibly tradition might devolve upon him, but which certainly the law does not. But for such an error of judgment an officer who has proved both his competence and his integrity by years of faithful work for the Government ought not to be summarily dismissed from his position.

#### Booker Washington Defines His Position

Last week, before the Afro-American Council at Louisville, Kentucky, Dr. Booker Washington, addressing a large audience of his own race, gave a very characteristically heartening and stimulating address. It was suggested by the recent series of lynchings. "Let no man of the race become discouraged or hopeless." "Let nothing lead us into extremes of utterance or action." These were his two messages. To substantiate the first, he called attention to the men who, like Judge Jones, of Alabama, are determining that justice shall prevail. To substantiate the second, he called attention to the fact that "every race that has got upon its feet has done so through struggle and trial and persecution." He urged two lessons: one to his race, the other to the Government. The first was abhorrence of idleness and especially of the crime for which lynching has frequently been the punishment. The second was the determination that the same law should apply to both negro and white man. In

connection with this address some statements which Dr. Washington made in an interview with Mr. Raymond Patterson, of the Chicago "Tribune," are fitting. Dr. Washington has been thought by some indifferent to the political aspirations of negroes. Those who know Dr. Washington will recognize his position on this subject to be fairly stated in this interview. The matter of politics, he said, was not a question of first importance in the development of *any* race which is in the economic and educational condition of most of the negroes of the South; but, he added, "I do believe, however, as I have often stated before in the South as in the North, that the negro should have constantly held out before him a hope of reward for right living; the law that rewards righteous living should be the same for both races." Dr. Washington's position regarding the so-called higher education of the negro, often misunderstood, he explicitly defined. "It is not at all true," Dr. Washington is reported to have said, "that the educated negro fails to find work in the South and is driven northward. On the contrary, literary colleges find it difficult to supply the demand for teachers, and I am quite positive, so far as our own students go, that those who are trained in industrial pursuits can find instant employment. . . . I have never yet discovered any indication of any bar to the intellectual growth of the negro. . . . Up to about ten years ago we found great difficulty in obtaining negroes to handle our electric plant. . . . Now all this has been changed. The scientific departments can readily be equipped with negroes who have a highly technical training. . . . I cannot see that there is any great difference between the mental capacity of a pure-blooded negro and that of a man of a mixed race." Then, citing instances of men and women of distinctive negro types who have done brilliant work in education, he commented: "All these and many other men of pure negro blood have apparently demonstrated that whatever achievements are made by negroes are not to be credited to any white blood they may have, but rather to their perseverance in obtaining a good education." And as a commentary on the criticisms sometimes made of Dr. Washington, that in his endeavor to promote the negro's

bodily and material welfare he overlooks the soul and mind of the negro, it is suggestive to read this sentence of Dr. Washington's: "The negro's most prominent trait undoubtedly is his imagination."

#### The Educational Solution of the Negro Problem

Before the annual convocation of the University of New

York last week Mr. Charles A. Gardiner made an address on the constitutional and educational solution of the negro problem which was admirable for its comprehensiveness of statement, for the clearness and orderliness of its thought, and for its constructive spirit. He began by saying that the problem was a National one, although the conditions under which it must be solved must be determined by the States. He pointed out that the civil, social, and political rights of the negro are subject to the power of the separate States, though the way by which this power should be exerted is limited by the Federal Constitution. Regarding political rights he said:

These are three: To vote, hold office, and act as jurors. Nor are they rights even, but mere privileges. They are not inalienable. The Creator never endowed any one with them. . . . Never in the history of this Republic has the right to vote been possessed by more than twenty per cent. of the people.

Thus stating the limitations under which the problem must be worked out, he set forth the conditions of the problem itself. It is one that concerns chiefly an agricultural people. In all the land in which it is practically concentrated "there is only one city larger than Albany, only two larger than Utica," New York. In that region the political question has been temporarily eliminated until its settlement by the courts. In the meantime the real problem, presented by an illiterate and ignorant race in an undeveloped country, must be solved by education. How this education should be brought about is the real negro problem. That the old slave States themselves can educate the negroes within their borders he demonstrated to be impossible, by referring to the resources of the States themselves; and this was his conclusion:

Thus it is not because the States lack constitutional powers, or have failed to discharge their duties, but simply because their financial

resources are utterly inadequate to meet the enormous demands of their negro citizens. Here the South has collapsed, and it is distinctly a financial, not a constitutional, breakdown.

In contrast to this rehearsal of the impotence of the States themselves alone to solve the problem by education, he advanced the "broad proposition that the Nation has both the power and the duty to educate every negro to perform every obligation of American citizenship." The constitutional power he held to be derived from the permission given to Congress to regulate elections. If Congress has power to make an educational qualification for elections, it must, according to all canons of constitutional interpretation, have the power to provide means by which citizens may meet that qualification. The system of National education he declared to be a corollary to the fourteenth and fifteenth amendments of the Constitution, and to the Ordinance of 1787. He urged most strongly that merely negative or repressive acts on the part of the Federal Government, no matter what their nature might be, would be at best inadequate. He dismissed as out of the question all talk about repeal of the Fifteenth Amendment, as impracticable the reduction of Southern representatives and electors on account of disparity in votes, and as unconstitutional any measure of rearranging representatives according to voting rather than resident population. The problem, he concluded, is to be solved, not by any legislation of mere police character, but by appropriating the wealth of the Nation not only for the bayous of Louisiana and the harbors of Alabama and the bays of Florida and the inlets of Georgia, but also for the improvement of the minds and the souls of its people.

**Another Negro Suffrage Case**

Paul Sigg, a negro citizen and taxpayer, through his attorney, Armand Romain, has instituted mandamus proceedings in the Civil District Court of New Orleans against Jeremiah M. Gleason, supervisor of registration of voters for the Parish of Orleans, to test the constitutionality of the suffrage law. The attack is mainly directed against section 5 of article 197 of the Constitution of 1898, and all laws

and ordinances based thereon. It is the purpose of the petitioner and his counsel to endeavor to take the case to the highest court in the land—the Supreme Court of the United States—as a Federal question is raised in the application of the mandamus. This will not be the first effort to have the Louisiana suffrage law, and particularly the "grandfather clause," stricken from the statutes of the State, however, and no new questions are suggested in Sigg's petition. Sigg's petition sets forth that he is a resident of the parish of Orleans and the State of Louisiana, is also a taxpayer, and is entitled to the right of suffrage, being able to qualify under the suffrage law of Louisiana; and it charges that many of his race are unable to qualify on account of the requirements and exactions of the law; that the educational and property qualifications were intended to debar the negro citizen from the right to vote; that such are its avowed and declared purpose and intent; and that this is in violation of the fourteenth and fifteenth amendments to the Constitution of the United States. The petitioner further asserts that the poll-books will show 5,000 illiterate whites registered who have no right to be registered voters under the law, and he prays the court to make a mandatory order compelling the defendant, Jeremiah M. Gleason, to cancel these names from the books, and to expunge them of the said illegally qualified voters. And the petitioner also prays that section 5 of article 197 of the Constitution of Louisiana be declared contrary to the Constitution of the United States, and that all laws and acts of the General Assembly of the State of Louisiana based on this provision be declared null and void and of no effect. The reader will observe that this case differs radically from that brought by an Alabama negro, and passed on by the Supreme Court of the United States in a decision recently reported in these columns. In that case the petitioner asked to be registered under a law which he declared to be fraudulent, unconstitutional, and void, and the court decided that it was impossible for it to enforce a law on the assumption that it was fraudulent, unconstitutional, and void. In this case the petitioner does not ask the court to register him under the law, but to strike from the regis-

tration those who have been registered, and this on the twofold ground, first, that they have no right to be registered according to the terms of the law, and, second, that the law itself is unconstitutional and void. Without wishing to anticipate the decision of the Supreme Court, we are inclined to the opinion that in this case, as in the Alabama case, the petitioner will fail to secure the relief for which he asks. The Fifteenth Amendment to the United States Constitution, providing that "the right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude" also provides that "the Congress shall have power to enforce this article by appropriate legislation." Until Congress shall have taken some action under this clause to enforce the provisions of the Fifteenth Amendment, we very much doubt whether the Federal courts will interfere to declare the suffrage provisions of the State void, and to direct the names of voters under that provision to be stricken from the register. While all that the Supreme Court decided in the Alabama case was that it could not be asked to enforce a law alleged by the plaintiff to be void, it implied that the appeal by any voter who counted himself as wronged must be, in the first instance, to the political branch of the Government for appropriate legislation. In our judgment, if the registrars in any State refuse to register as voters citizens who are entitled to registry under the laws of the State, the remedy of the citizen is, in the first place, an appeal to the State courts; if the State law is itself unconstitutional, the remedy is, in the first place, to Congress for the necessary legislation to enforce the clause of the United States Constitution which the State law is supposed by the complainant to disregard.

#### The American Pacific Cable

There was peculiar fitness in the fact that the Fourth of July witnessed the formal opening of the cable which not only is a new route of telegraphic communication around the globe, but connects with the United States its outlying possessions—Hawaii, Guam, and the Philippines. A few enthusiastic newspapers have carelessly

announced that this is the first submarine route of telegraphic communication through the Pacific; the fact being, as most of our readers may know, that a line by way of the Pacific was completed some eight months ago in the cable from Brisbane, Australia, to Vancouver. The new cable extends through four long stretches—San Francisco to Hawaii, 2,276 miles; Hawaii to Midway, 1,254 miles; Midway to Guam, 2,593 miles; and Guam to Manila, 1,490 miles. Its average depth from the surface is nearly three miles. The construction of the cable has been carried on by the Commercial Cable Company, which was organized for the purpose less than two years ago by Mr. Clarence H. Mackay. The rapidity with which the actual work was carried on shows how the science of cable construction and laying has advanced since Cyrus Field made his first attempt to lay the Atlantic cable. The entire work has been done in less than eighteen months; and this includes the laying of over nine thousand miles of cable and the handling of nineteen million pounds of iron and steel wire, to say nothing of at least ten million pounds of other material surrounding the core of the cable. The first message was one formally declaring the cable completed, sent by President Roosevelt from Oyster Bay at eleven o'clock on the night of Independence Day to Governor Taft at Manila. The response from Governor Taft included a wish for the better mutual understanding and closer union of the United States and the Philippines, and a plea for the reduction of the tariff on Filipino products. Immediately afterwards a message was sent round the world from President Roosevelt at Oyster Bay to President Mackay, of the Cable Company, at the same place; the actual time of transmission was only twelve minutes. The course of the message was westward, and, of course, during its encircling of the world it first gained and then lost approximately twelve hours in apparent time. It may be noted that, while the United States has no ownership or supervision of this cable, it has very properly aided the Cable Company materially by allowing it to use Government charts and reports made long ago under the belief that a Government cable might at some time be constructed by the United States.

#### The American Squadron at Kiel

No unpleasant incident marred the visit of the Kearsarge, Chicago, and San Francisco to the Kiel regatta. On the contrary, the cordiality and exchange of courtesies between Germans and Americans seemed to be more than perfunctory. The German Emperor inspected the Kearsarge with that lively curiosity and professional knowledge which he shows in all naval matters, and Admiral Cotton and our Ambassador, Mr. Tower, were impressed by the sincerity and earnestness with which the Emperor declared that whenever the German and American standards met they together symbolized peace and civilization. In the races our war-ships entered several boats, both for sailing and rowing, and bore off at least a proportionate share of the honors and prizes. The German press, on the whole, has been well impressed and not inclined to renew the carping tone toward the United States which it has fallen into so often of late, although one paper could not refrain from reverting to the Coghlan and Dewey incidents to show that the "friendly spirit of the American navy for Germany is a new thing and is due to President Roosevelt's energetic steps." An interesting comment on the personal appearance of the American sailors is that of the "Kreuz Zeitung," which pictures them as "young, slender, sinewy fellows, with intelligent faces, but in appearance and bearing exhibiting a carelessness unknown among us." It adds that their lack of accuracy in giving and returning military salutes would make a Prussian corporal's hair stand on end. Perhaps the ease of manner which might shock a martinet is a sign of the presence of that individual initiative and self-reliance which, as we believe, under proper but not excessive discipline, make the American soldier and sailor what they are.

#### Governor Pennypacker's Vetoes

There has been so much criticism of Governor Pennypacker, of Pennsylvania, because of his approval of the libel bill, that much of the good work he accomplished during the session of the Legislature recently closed has been overlooked. He has an unparalleled record of vetoes—ninety-two in

number. No other Governor the State has ever had was so careful in his scrutiny of bills presented to him for approval. In this respect his policy is in marked contrast to that of his predecessor. Governor Pennypacker vetoed the Pennsylvania Railroad's bill giving railroads the right to take dwelling-houses under eminent domain proceedings, although no one protested against the bill. He vetoed the bill abolishing deputy constables, a bill conceived by the enemies of law and order societies; he vetoed the bill to give county treasurers commissions on the liquor licenses. He vetoed bills providing for extra judges who were not needed except to provide additional places for party workers. Moreover, he caused a number of bills to be recalled for further amendment, and in this way has prevented much serious trouble through faulty legislation. His influence for good was also felt most convincingly in the final defeat of three or four most iniquitous franchise measures, which he plainly and unequivocally declared he would not sign. So the leaders in the Legislature took the hint and sent them back to committee, from which they never emerged. Moreover, he has made an excellent reputation for himself in the character of some of his judicial appointments, one of which in particular, that of Judge Jacobs, at Harrisburg, has been declared "ideal" and has been complimented by the machine in nominating another man for the full term. It is unfortunate that a record so full of admirable accomplishments and one which was winning for him widespread commendation should be marred by the unfortunate message accompanying his approval of the libel bill, which, whatever its "structural strength," contained misleading and unwise phrases, and gave his critics an opening for attack and ridicule.

#### Labor Arbitration in View

It seems all but certain that definite settlement of the labor troubles in the building trades in New York City is at hand. The fact that this settlement takes the form of arbitration will be welcome to all who have encouraged the extension of reason and common sense in discussions between employers and employees. Last week one very large employing company

reached an agreement with its mechanics which included elaborate provision for arbitration. The plan provides, among other things, that if a controversy exists between employers and employees, work shall go on during the negotiations; that the matter in dispute may be submitted to a Board of Arbitration consisting of five persons, two to be chosen by each party to the dispute, and the fifth to be selected as umpire by the other four. Similar action is pending, it is believed, between the representatives of the several labor unions connected with the building trades and the Board of Governors of the Building Trades Employers' Association. The essential points involved are that arbitration shall be resorted to in all difficulties; that neither the union as a whole nor any single union shall order a strike against a member of the Building Trades Employers' Association, nor shall a union man leave his employer, nor shall the employer lock out his employees, until the matter in dispute has been brought before the general arbitration board for settlement. This board will be made up exactly like that provided in the agreement made by the Fuller Company, above outlined. Some amendments and minor propositions are still under discussion as we write; but all reports indicate a most hopeful prospect of settlement on an amicable and conciliatory basis. The loss, delay, and ill feeling caused by this group of strikes in this vicinity have been almost unprecedented; yet if a workable and fair system of arbitration results, the gain may be regarded as almost equal to the loss.

**The Crisis in  
the East**

Several circumstances combine to indicate a storm brewing in the East, in which not only Russia on the one hand, Japan, England, and possibly the United States on the other, may become involved, with China at the storm-center. America is negotiating with China for free ports in the Manchurian provinces. Great Britain and Japan are equally interested in freedom of trade in Manchuria, and have been more interested in Russia's evacuation of that territory. When we appeal to China, its Government makes no objection to the opening of free ports, but declares in vague terms that the time is

not opportune. When we appeal to Russia, Russia declares herself entirely ready to grant what by her treaties with us she is under obligation to grant, freedom of trade with the East. But when we propose that the Russian representative shall go with our representative to the Chinese Government to secure its approval of the treaty, we are met with procrastination and excuses for delay. This process has been carried on so long that the patience of the three Powers is nearly exhausted. Last week despatches stated that British and Japanese Ministers at Peking have presented a joint note to the Chinese Government calling on China to demand from Russia the immediate evacuation of Manchuria, and declaring that if that evacuation is indefinitely postponed the English and Japanese Governments will take the necessary measures for the protection of their several interests; that they will acknowledge no treaty between Russia and China which does not bind Russia to evacuate Manchuria, nor any treaty after the evacuation in regard to the civil administration of Manchuria which is not approved by England and Japan; and they demand a reply to this ultimatum within five days from its date, which we believe is July 4. The President of the United States has indicated his intention to forward to the Czar the petition being circulated in this country in behalf of the Russian Jews, notwithstanding the unofficial intimation that the Czar will not receive it, and unofficially has expressed in significant terms surprise that the Russian Government should choose to give such an intimation, when, "by methods which are certainly the reverse of friendly to the United States, it has sought to make China join in breaking the plighted faith of all the Powers as to the open door in Manchuria, and has endeavored to bar our people from access to the Manchurian trade." In addition to these diplomatic incidents is the further fact of a concentration of a considerable American navy, involving three separate squadrons, in the Gulf of Pechili, to the south of, and immediately adjoining, Manchuria. The designs of Russia on Manchuria are plain to be seen. How resolute is its determination to pursue those designs is yet to be determined. It will hardly pursue them

if the pursuit involves war with England, Japan, and the United States; doubtful whether it will pursue them if it involves war with England and Japan, with the diplomatic hostility of the United States. Students of the East have for some time prophesied that the controversy of the future would be between the Slavic and the Anglo-Saxon civilizations, as the contest of the past has been between the Latin and the Anglo-Saxon civilizations. In any such conflict it is certain that Japan would be ranged on the side of the Anglo-Saxon; certain that American sympathies would be on the same side. What America's *action* would be would depend on circumstances. Where the sympathies of China would lie, and what her action would be, it is probably impossible to foretell.

#### Socialism in Germany

The official returns of the German elections show a larger Socialist vote than was at first published, the latest figures being 2,911,317, an increase of more than 800,000 votes over 1898. The second ballots, made necessary in all constituencies in which no candidate received a majority, have been held since our last account of the elections in the issue of June 27, and the Socialists have made much the largest gains of any party in the Reichstag, increasing their representation from 54 to 81. The composition of the Reichstag is now as follows: Clericals, 102; Socialists, 81; Conservatives, 52; Free Conservatives, 19; National Liberals, 51; Richter Radicals, 21; Barth Radicals, 9; South German Radicals, 6; Poles, 16; Alsatians, 9; Anti-Semites, 9; Agrarians and Peasants' League, 7; Independents, 11; and a few members classed as Hanoverians and Danes. The steady and formidable increase of the Socialist vote is scarcely less noticeable than the disintegration of the Radicals and the decline of the Agrarians. It is partly at the expense of the Radicals, as we have already pointed out, that the Socialist gain has been secured; but the latter party has now shown such a progressive increase for more than thirty years that its preponderance, in point of numbers at least, is indicated in the not distant future. It is instructive to note the various stages of this progress. In 1871, out of a total

vote of about 4,000,000, the Socialist vote was only 124,655; in 1878, out of a total vote of 6,000,000, the Socialists had 437,158; in 1884 their vote was 549,990 in a total of 5,500,000; in 1890 they had made a great advance to 1,427,298 votes in a total of 7,000,000; in 1898 they had more than 2,000,000; and now they have nearly 3,000,000, more than a third of the total vote of the Empire. Doubtless this increase is due not only to the discontent with military burdens and the prospect of dearer food, but also to the substitution of a more moderate programme for the revolutionary collectivism of Marx. The demands of the party in the recent elections were as follows:

One vote for every man and woman; a holiday on election day; payment of Members of Parliament.

Responsibility of the government to Parliament; local self-government and the referendum.

Substitution of militia system for great standing army.

Freedom of speech and the press.

Legal equality of the sexes.

Disestablishment of the churches.

Free non-sectarian schools, with compulsory attendance.

Gratuitous legal proceedings.

Free medical attendance and burials.

Progressive income and inheritance taxes.

This, it will be seen, is in several respects frankly opportunist and practical as compared with the sweeping changes of the old programme, and without doubt broke in upon the vote of other parties whose programme it overlapped. It remains to be seen whether the Emperor's attitude will continue to be as hostile to Socialism as before. He has been challenged and rebuked in the very districts where he personally showed his hostility.

**British Ship Subsidies** The intention of the British Government to abolish existing subsidies for merchant ships which may be used as cruisers in time of war was announced in the House of Commons last week. The change will not go into effect until April 1, 1905. It is the result of a report of the Parliamentary Committee which investigated the subject. Mr. Arnold-Foster, Secretary to the Admiralty, said that it was not the intention entirely to abandon the idea of subsidizing any vessel, as there were certain qualifications for naval serv-

ice which could be obtained in that way only, and the Government reserved the right to subsidize when necessary. The abolition affects eighteen ships belonging to the Cunard, White Star, Peninsular and Oriental, Orient, Canadian Pacific, Royal Mail, and Pacific lines. Of these the White Star Line belongs to the International Mercantile Marine Company recently formed by Mr. J. Pierpont Morgan. The amount of money withheld by the change is relatively small, being less than \$40,000 a year from the White Star Line. It is the intention, except in the special cases referred to, to substitute for subsidies the chartering of ships in war time. The same day there were also made public the reports of the Bureau of Navigation at Washington, showing that for the fiscal year ending June 30 there were built 1,535 vessels of 456,076 gross tons, as compared with 1,657 vessels of 473,981 gross tons for the preceding year. A decrease, however, is not peculiar to the United States, but has been noted in the leading ship-building nations since 1901, the year of highest output in the history of this industry.

#### The Coronation Oath

Earl Grey's bill to abolish the words in the coronation oath which are offensive to Roman Catholics was defeated in the House of Lords on the second reading. The majority against it, which was 47 in a vote of 109, was not conclusive, by reason of the qualified approval of the object of the bill as expressed by the Archbishop of Canterbury. The latter said that the bishops would accept a form of words which should not be offensive, but must not be ambiguous. The offensive terms, which speak of the Pope as Antichrist, have so long been resented by the Catholic citizens of the British Empire that it was confidently expected by them that a change would be made shortly after the King's accession. Earl Grey, in introducing the bill, expressly urged the interests of imperial unity in its support, an argument which intelligent opinion from all sides abundantly justified him in using. A larger attendance in the House of Lords at the time of voting would have resulted, it is said, in the passage of the bill, and it is the declared intention of its supporters to bring it up again. The King

is known to favor it, and the knowledge that it would be passed in the House of Commons by a large majority may probably be relied upon eventually to overcome opposition among the Lords.

**A Great Canal** The construction of a canal across Scotland from the Firth of Forth to the river Clyde is credibly reported to have been decided upon by the British Government. Apart from the commercial importance of such a canal, the fact that the new British North Sea naval station is being built on the Firth of Forth is a strategic reason for it, as the largest war-ships at that station would be able to reach the Atlantic in a short time, the distance being only forty miles. It would also greatly promote trade between Edinburgh and Glasgow, making each city a port in practical command of North Sea as well as Atlantic trade. The cost is to be \$50,000,000. The new naval station and the canal are said to be the answer to the long-continued criticism which pointed out that there was no adequate naval defense on the eastern Scottish coast against any hostile power which was able to put a strong fleet in the North Sea. Recent German literature of aggressive quality had emphasized that defect, and the combination of naval and commercial advantages resulting from a canal has, it is said, compelled support of the latter project in connection with the naval station. By this means any scheme of home defense, in case of an attack by a foreign fleet, would be able to concentrate British war-ships by using the canal instead of steaming around the northern coast.

#### A Colossal Conception

Some time ago Mayor Low, of New York City, asked Mr. Lindenthal, the Bridge Commissioner, to prepare designs for the erection of a bridge terminal which should do away with the present unendurable crowding and delay at the New York entrance of the old Brooklyn Bridge. With the assistance of two consulting architects, Mr. Lindenthal has now not only submitted plans for this purpose, but also has offered as a suggestion or possibility an architectural scheme for the

treatment of the City Hall and the adjoining streets—a plan which is truly magnificent, architecturally speaking. If this elaborate and, of course, extremely expensive idea is carried out, the City Hall Square would, Mr. Lindenthal says, rival in beauty such famous squares as Trafalgar Square in London, the Place de la Concorde in Paris, and the Rathhaus Platz in Vienna, with double the area of any of these. In its full extent the plan calls for the removal of the Post-Office, the County Court-House made famous by Tweed's thefts, and the buildings now in the City Hall Park, with the exception of the City Hall itself, the architecture of which has long been admired by artists and critics of architecture. Opposite the northern end of the Park there would be a building or row of buildings, single in design, to be used for administrative purposes by the city. Where the present Bridge terminal stands would be a new terminal harmonious in design with the new Hall of Records; it would have seven floors, and from it would rise an enormous tower or campanile, represented by the plans to contain forty-two stories and to be about six hundred and fifty feet high. This also would be used chiefly for city offices. To carry out this design in full would require an expenditure of not less than thirty million dollars. It is certainly most interesting to have such a proposition before the people for discussion and as a project not improbably to be taken up in the future. Whether the unquestioned gain in municipal beauty and usefulness would justify the expenditure is a fair question for debate. It is quite possible, in any event, to make the changes now proposed in such a way as to form a basis for the more elaborate scheme if it is decided upon later. The immediate and practical part of Mr. Lindenthal's plans contemplates a structure of seven or eight floors in height which shall bridge over Chambers Street and Park Row and have its ground floor reserved for trolley-cars, the first floor above for elevated railroads, and the floor above that for Brooklyn Bridge trains. The plans include ample accommodation for switching purposes and for the continuous movement of trains and cars. The terminal itself would cost about nine million dollars, and the upper stories would

give room for the offices of the city now rented in private buildings.

#### Successful Farm Colonies

At Fort Amity, Colorado, there is a farm colony which has made a very remarkable record. The account of it which recently appeared in the New York "Sun" would be almost incredible if it were not confirmed by Commander Booth-Tucker, head of the Salvation Army in this country, under whose direction the project has been carried out. Four years ago last April about a score of men, without property except for some household furniture, were transported by the Salvation Army from various large cities—several of them from New York—to Colorado. There each was allowed a plot of land—from ten to twenty acres—a house, a cow or two, one or two horses, pigs, and poultry. The expense of transportation, land, buildings, stock, and implements was placed as a debt owed by each man to the Salvation Army. Commander Booth-Tucker has explained the idea behind this loan as follows:

Ambassador Joseph H. Choate once said that he started in life with no capital but a letter of introduction from his Uncle Rufus. Now, I think it is the duty of society to play the part of Mr. Choate's Uncle Rufus to the average man. . . . There is no one so helpless as the poor man with a little money in his pocket. Every one is trying to get it away from him. . . . If he is sick and destitute, charity will step in and take care of him. But if he is on his feet, everybody is trying to push him down. The man who begs for money is treated better than the man who asks for work.

The theory that the Salvation Army could thus play the part of Mr. Choate's Uncle Rufus has been thoroughly vindicated. The men have been eager to meet their obligations. At times the Salvation Army has had \$2,000 in excess payments on hand. In three years the first colonist paid up his whole debt and owned twenty acres, besides building his house and supporting his family in the meantime. In four years these nineteen or twenty men have reached a position which has enabled them to pay \$50,000 in freight last year. Commander Booth-Tucker indicates shrewdly that this is a suggestion to the railroads of a way by which they could build up communities of freight-payers. The Army has given no money;

it has paid wages and has accepted produce—that is, it has supplied capital and, in Commander Booth-Tucker's words, "organizing and administrative ability which we cannot expect from the ordinary individual." The amount generally considered by contractors as necessary to set a man to digging is sufficient, so the Commander estimates, to start out a family of colonists. Land sold to the colonists at Amity for \$81,000 is now worth \$200,000. Similar results have come from two other colonies established by the Salvation Army in the West.

#### American Library Association

The meeting of the American Library Association just held at Niagara Falls was one of the most important and satisfactory gatherings of librarians yet held under the auspices of this Association. The attendance ran to nearly six hundred, and included representation of the most important public and university libraries in this country and in Canada. Eight general sessions were held and twelve department sessions (including one session of the Bibliographical Society of Chicago). The papers and discussions covered every phase of library theory and practice. Perhaps the greatest interest was manifested in the development and added efficiency of small libraries, and in library work for children. The rapid growth of this last feature of public library activity has been a surprise to the librarians themselves, and as yet is by no means appreciated by the general public. The discussion over the relations of the libraries to the book trade developed the fact that there is an intense feeling in the ranks of the librarians concerning the present agreement between the Booksellers' League and the Publishers' Association, and net book rates and general conditions were discussed with considerable vigor. The reports were said to indicate that books are costing the libraries nearly twenty per cent. more than heretofore, an increase of expense which the librarians claim is unwarranted by existing conditions in the general world of trade, and is not acceptable to the publishers themselves. The outcome of the discussion was the appointment of a committee to take the whole matter under advisement,

and to counsel with the librarians as to how they may best avoid (as far as possible) this burden. The committee appointed last year to secure, if possible, reduced postal rates to libraries was continued, with instructions to make every legitimate effort to secure the passage by Congress of a book postal bill equivalent to that introduced by Senator Lodge last year. It was resolved to hold the meeting of next year at St. Louis, in October, in the form of an international library congress; and Mr. Herbert Putnam, the librarian of the Congressional Library, was wisely chosen President of the Association. It is the determination of the members to make this a notable gathering of foreigners as well as Americans.

#### The Canadian General Assembly

The General Assembly of the Presbyterian Church in Canada which has just come to a close is the twenty-ninth since the union of the four Churches in 1875. Last year the representation from Presbyteries was changed from one-fourth to one-sixth. Notwithstanding the reduction, the attendance at Vancouver this year has been proportionately larger than that of any Assembly in the past. This was the first Assembly that has been held west of Winnipeg. In many respects, a correspondent writes us, it was the best Assembly that the Presbyterian Church in Canada has ever held. A deputy from the Presbyterian Church in the United States brought greetings from the Assembly which closed in Los Angeles a few days before the Canadian Assembly opened in Vancouver. In what may be termed the greatest home mission field in the world the Presbyterian Church in Canada is in the van of progress. The influx of population to the West is unprecedented, and the Canadian Church has coped with the conditions up to the present. Wherever there is a settlement there have been provided for it a school-house and a place of worship. One conspicuous feature in the Assembly of 1903 was the attention given to the aged or infirm ministers who have served, but whose day for active service is over. Through an endowment which already is large, through accumulations that are provided for by ministerial rates and congregational contribu-

tions, every aged minister in the denomination who has given forty years of service to the Church and is connected with the Aged and Infirm Ministry Fund is entitled to a retiring allowance of four hundred dollars a year. Those who have served for a shorter period have a proportionate annuity. It is confidently expected that before long the minimum of four hundred dollars will be raised to five hundred. An increase of income to the workers in the home mission field was another feature in this Assembly. Yet another was the improvement in the Augmentation Fund, which assures every ordained minister in the denomination an annual income of seven hundred and fifty dollars and a free manse. With this minimum assured to every minister, the Church, according to the ability of individual congregations, pays salaries ranging between seven hundred and fifty with free house up to nine thousand five hundred dollars. The century fund movement, which aimed at securing an extra million at the beginning of the new century, was finally reported upon at the Vancouver Assembly. Instead of a million, the Church responded with one million six hundred thousand dollars. Including the salaries of agents, secretaries, office staff, office rent, printing, and everything that properly pertains to administration, the cost of administering the mission and benevolent work of the Church last year was a fraction less than three per cent.

Leo XIII. The death of the Pope was momentarily expected on Tuesday morning of this week, and in all human probability has taken place before these words are read. Up to the very last Leo has retained in a wonderful way the vitality and lively interest in human affairs which have always characterized him; as late as Sunday he is said to have composed a farewell in Latin verse, and on the following day he insisted upon sitting up, taking part in official work, and disposing in detail of personal matters. The tenacity of life displayed by this man ninety-three years of age has been indeed extraordinary. An affection of the heart added to pulmonary trouble were the immediate causes of his last illness. It is stated that the fact that the Pope had all his

life been almost a total abstainer from wine aided the effect of the stimulants given him. We must reserve until next week any extended account of the Pope's life or estimate of his character. Even in the briefest note, however, we must not fail to recognize the fact that, in addition to high scholarship, executive ability of an uncommon order, and remarkable industry, Leo XIII. possessed a truly statesmanlike mind in that he did not fail to see that even the Pope had to deal with modern conditions, that democracy is now as great a force as monarchy, and that industrial and social questions of the day cannot be ignored. Cardinal Gibbons rightly says that the world will admire Leo "for his loftiness of intellect, for the strong refulgent light he has spread on all social, religious, and economic questions, but, above all, for his great and abiding sympathy with humanity." The Pope's family name was Vincent Joachim Pecci, he was born in 1810, was ordained as a priest when twenty-seven years old, became a Cardinal in 1853, was elected Pope in February of 1878, and was crowned with the triple tiara in March of that year.

## The American Army

Opposite the office of The Outlook there stood formerly a very creditable-looking building, occupied in part by stores and offices, in part by the Young Men's Christian Association. Some two months ago there was hung upon this building a great placard bearing the ominous inscription: Hausling & Co., House Wreckers. Then, the tenants having moved out, the work of destruction began, and for six weeks that corner, theretofore devoted to trade, education, and religion, has been a scene of falling walls, miscellaneous piles of brick, stone, broken boards, and old timber, while the passers-by have been warned off the sidewalk by temporary fences, and the air has been full of the penetrating dust of lime. One not looking forward might well say, What a wanton destruction of property; what a peril to life; what a commentary on modern civilization, that in the heart of a great city the business of house-wreckers should be carried on without prevention

from police or protest from the Christian ministry! Which is exactly what is said concerning the army by men who do not stop to perceive that house-wrecking is often a necessary preliminary to house-building.

War is house-wrecking. It marches through Europe in the beginning of the nineteenth century, and when its work is done Bourbonism is in ruins, and the ground is cleared for the building of a new political order in united Italy, united Germany, and emancipated France. It spends seven years in destroying the government which Great Britain had organized and maintained in the American colonies. It marches through the South, and wrecks a feudal system built on slavery as its chief corner-stone. And what dust and disorder, what chaos and confusion, it leaves when its work is done! It goes into Cuba and wrecks the Spanish civilization which has existed there for three centuries—its unsanitary regulations, its robber system of taxation, its courts of injustice. It enters South Africa, and when its work is ended the Boer Republic, with its oligarchic government, its caste social order, its denial of religious liberty, is left a chaos of confused débris. And yet—how long would it have taken Rousseau to persuade Bourbon Europe that the peasantry have rights, or Jefferson to convince Great Britain that colonies were not proper fields for imperial plunder, or abolition tracts to convince the slaveocracy that slavery is economically unprofitable, or republican missionaries to work in the minds of Weyler and his ilk the conviction that governments exist for the benefit of the governed, or English Liberals to convert Kruger to the belief in equal taxation, religious freedom, and industrial liberty. In these and similar cases the new house could not be built until the old house was destroyed; the new civilization could not be erected until the old was overthrown. The house-wrecker had to precede the house-builder. In these and similar cases the moralist must not be so absorbed by a consideration of the dust and disorder of the house-wrecking that he cannot consider what sort of edifice is likely to go up in the place of the one which is being torn down.

In our time the army is not merely an

instrument for destroying the old; it is proving itself equally efficient as an instrument for building the new. It was not always so; but it is so more and more. Cromwell could destroy, but he could not rebuild; Washington rebuilt as well as destroyed. The modern army is inspired with the ambition of construction, and is displaying remarkable ability in construction. On its banner it might well bear the double legend, "House-wreckers and house-builders."

What England is doing through her army to build up a new civilization on the ruins of the old barbarism in Egypt all the world knows. What France through her army is doing to build up a new and better order in Madagascar Professor Bracq will tell our readers in an article which we shall publish before long. The American world does not know as well as it might what the American army has done and is doing in the work of reconstruction. The "Army and Navy Journal," in an article apropos of the recent Arbitration Convention at Lake Mohonk, gives an interesting account of this constructive work of the army done in times past. The army not only established the outposts of civilization, which gave security to the early settlements and cleared the way for the advancing tide of civilization, but it has staked out the paths civilization was to follow, from the Atlantic to the Pacific. Army officers have conducted the surveys for and located and constructed our highways, railways, and canals; they have established our frontiers, opened our waterways and guarded them against encroachment; they have built our lighthouses and established our harbor lines, building sea-walls and breakwaters to protect them. Nearly all the great routes of internal communication in the interests of commerce and rapid transit now in existence in this country were first explored, located, and projected by officers of our army. The "Army and Navy Journal" names a number of great railroads in whose construction, and management after construction, army officers have taken a leading part.

More dramatic, and certainly not less interesting, is the constructive work which has been done by the American army in the Philippines, Cuba, and Porto Rico. A contributor, in another part of this

issue, gives a graphic account of the progress already made in the latter island toward a free democratic civilization, based on justice and equal rights. What made this progress possible was the constructive work of the American army. If that army had not laid the foundations, the present superstructure never could have been reared.

On the disbanding of the former Guard, maintained by the Spanish and hated by the people, there followed a saturnalia of crime, burnings, robbery, assassination, rape. The difficulties encountered in stopping these outrages were great, but they were overcome. Roads were patrolled, marauders pursued, rewards for apprehension and conviction offered, public order was restored, and protection to life and property was secured. Thus the army was a Police Department.

Courts of justice proved themselves incapable of acting with the promptness and energy necessary to discover and bring guilty parties to justice. Bandits continued to commit crimes of arson and murder without a single case of conviction. Therefore military courts were organized, and the evidence secured by them revealed the existence of well-organized bands of marauders, whose victims were mostly defenseless persons of Spanish sympathies residing in the rural districts, or men of wealth subjected to blackmail. Despite the difficulty of getting evidence, because witnesses were afraid to testify, when at last it became apparent that every captured bandit would receive a speedy trial before an American court, without partiality from either fear or favor, and, if convicted, would surely go to the penitentiary, vandalism began speedily to subside, and by the spring of 1899 it had practically disappeared. Thus the army was an organized Court of Justice.

The sanitary condition of the jails had been indescribably filthy and horrible. This was radically changed. Shops for the employment of convicts were established and equipped, and brooms, hats, shoes, and other clothing were manufactured in quantity not only sufficient to supply the prison and all the jails, but also to justify competition for supplying some articles to inmates of the orphan and insane asylums. For the first time in the history of the island punishment

became reformatory. Thus the army was a Prison Reform Commission.

The tax system of Porto Rico was oppressively injurious and unjust. It was conceived in oppression and administered by fraud. Under military orders provision was made both for a better system and for a better administration of taxation, and subsequently for the translation and publication of the Spanish statutes in force in the island, that the people might know the laws to which they were subject. Thus the army was a kind of temporary Legislative Body.

Epidemics of smallpox had been frequent, and the disease was present in the island for many years previous to 1899. In the early part of that year the vaccination of the entire population was undertaken under the direction of the chief surgeon of the military department. During four months 860,000 persons were vaccinated under military orders. As a result, while the average number of deaths from smallpox for the nine years ending with 1898 was about 621, from January 1 to April 30, 1900, there was not a single death from this disease. At the same time a general order of the Military Governor directed the formation of a Board of Health at San Juan, to be composed of an army officer as president, the health officers of the fort and city, and two members of the city council. This board was authorized to formulate regulations concerning the overcrowding of buildings and the proper inspection of houses, yards, and streets. By it local boards were appointed in the various municipalities, with instructions to forward regular reports about all sanitary matters. Thus the army was a Board of Health.

The poverty in the island was great; pauperism was common; methods of prevention were hardly thought of; provisions for relief were pathetically inadequate. Under the direction of army officers a Board of Charities was organized, the orphan and insane asylums were brought under its supervision, sanitary conditions and bathing facilities were provided, a physician of professional standing was appointed superintendent, separation was made between the sexes, the children were placed in a building separate from the insane, and the accommodations for the latter were largely increased. When

by hurricane and flood three thousand people were destroyed, together with millions of dollars' worth of property, including the greater part of the food supply of the island, the army came in to furnish relief, and it distributed over thirty-two million pounds of foodstuffs, besides clothing and medicines. Thus the army was a Board of Charities.

The census of 1899, taken about a year after the American occupation, showed that only about fifteen per cent. of the population were able to read and write, and only about one-half of one per cent. claimed to have more than an elementary education. The army made the schools absolutely free to all residents of Porto Rico between the ages of six and eighteen, established a graded system of schools in towns, limited the number of pupils for each teacher to fifty, eliminated church doctrine and religion from the curriculum, provided for the teaching of Spanish, English, arithmetic, geography, elements of United States history, civil government, etc., and opened a model training-school and a summer school for teachers. Thus the army was a Board of Education.

In July, 1900, the military commander ordered a general election under military supervision. There was great interest in the election, both parties striving to secure a full registration. This was the first fair and honest election ever held in Porto Rico to fill a public office. Thus the army was a Bureau of Election.

Thus the American army found in Porto Rico a people harried by bandits, terrified by unrepressed and unpunished crime, oppressed by irrational and unjust taxation, victims of poverty and ignorance, decimated by recurrent epidemics of disease, without tribunals worthy to be called courts of justice, and without the possibility of a fair and honest election, which is the very foundation of free institutions. The American army laid in Porto Rico the foundations of a modern, well-organized society, by acting for the unorganized community, as a Police Department, a Court of Justice, a Prison Reform Commission, a Legislative Body, a Board of Health, a Board of Charities, a Board of Education, a Bureau of Elections. For the results of this work of the army the reader may turn to the article by Mr. George Marvin on another page.

Lovers of peace should set before themselves a higher ideal than to dissolve the army. Their ideal should be to direct its energies in pacific and constructive work. For the army has certain essential qualities which peculiarly fit it for such work. The army is a highly organized body. The essential principles of its organization date from the days of King David. The efficiency of those principles has been verified by centuries of experience. The army is autocratic. While many minds are needed for counsel, one head is needed for executive action. When democracy has determined what is to be done, the army is an admirable instrument for doing it. The army is animated by the spirit of obedience. Obedience is not altogether a popular nor a too common virtue in America, but it is essential in an organization which is laying the foundations of future free civilization. For obedience is the mother of liberty. The army is pervaded by the spirit of patriotism or Americanism. Nowhere, not even in the public school, is this loyalty, not only to America as a Nation, but to American ideals, more to be seen than in the American army. The army is free from the spirit of commercialism. Its inspiration is ambition, not acquisitiveness. It is, therefore, of all twentieth-century organizations, the one which is freest from corruption. Civilization can find something better to do with this splendid instrument than to belittle, to dishonor, and eventually to destroy it. We can use it in destroying the barbarisms which ought to be destroyed, but no less in building on the ground, when cleared from the ruins of the past, the foundations of a new and better civilization.

## Passive Resistance in England

A well-informed contributor gives on another page an account of the attitude taken by a considerable section of the Nonconformists in England upon the new Education Bill. Mr. Horne is one of the leaders in this Passive Resistance movement, and in his interpretation of it speaks with authority. The Outlook has heretofore informed its readers respecting the new Education Bill. It possesses some

advantages. It simplifies what was before a complicated system, and gives to it a certain degree of coherence; it probably involves some economies in administration. On the other hand, in some localities it will depreciate the teaching and narrow the curriculum, and we doubt whether it will improve either in any locality.

But these considerations appear to us, as they appear to the Nonconformists of England, insignificant in comparison with the fact that the bill violates what they believe to be a constitutional principle in England, as it certainly is in this country—that men shall not be taxed to support a religious propaganda which violates their own conscience. Practically the educational system of England is put under the control of the Church of England, while it is to be supported by men of all churches. The difference between the Nonconformists and a very considerable section of the Church of England is not less radical than the difference between Protestantism and Roman Catholicism. We do not say that it is the same; we do say that it is not less radical. Indeed, there are many Nonconformists who would object less seriously to a Roman Catholic school than to a school under the control of the High Church faction in the Church of England; they would be less afraid for their children of the influence of those whom they call "papists" than of those whom they satirically call "ape-ists." Whether this hostility is rational or not, it exists; and the constitutional provision to which appeal is made, we think with justice, is this: that no class in the community ought to be required to support a system for the education of their children in principles which are abhorrent to them.

The resistance which the Nonconformists are organizing to interpose to this bill they call Passive Resistance. They do not propose open revolt against the law; they propose simply to refuse to pay the rate and to allow their property to be sold, or themselves, if need be, imprisoned. This is wholly within the right of any body of citizens, or, for that matter, of any individual citizen. If a citizen believes a law is unjust, he may disregard it and suffer the penalty. This is what the Nonconformists in England propose to do. They will not resist the law; they will

refuse to obey it, and will suffer the penalty. If any large proportion of influential Nonconformists join in this movement, if they have enough of the spirit of Hampden and of Cromwell to see their property despoiled and to suffer, if need be, imprisonment for their convictions, they will certainly win in the end. The majority in England will not attempt the impossible task of indicting a large, influential, and entirely respectable portion of the community as criminals for refusing to cooperate in a movement which directly concerns their home, and which is against not only their judgment but their conscience.

## The Loyalty of Robert E. Lee

At the Commencement exercises of Emory College, at Oxford, Georgia, Judge Emory Speer made an eloquent plea for the honoring of Robert E. Lee, the commander of the Confederate armies, as a National hero. After a brief account of General Lee's ancestry and education, and an explanation of the motives which determined his decision to support the Confederate cause in spite of his dread and hatred of disunion, Judge Speer sketched in warm and vivid Southern phrase his career and comportment during the war, and, recounting incidents and estimates throwing light on his character, at once spiritual and human, chivalrous and practical, aggressive and unselfish, brave and mild, humble and dignified, concluded with an appeal to the Nation to accept Lee among the great patriots of America.

We call attention to this speech of Judge Speer's, not simply because of the honor it offers to a man who was worthy of admiration equally for his consummate military genius, his gentle courtliness, and his high Christian character, but more especially because of the explanation which it offers for the course of a man of these qualities in leading armed forces against his country's flag.

Robert E. Lee was never an advocate of secession. He was a devoted supporter of the Constitution and an earnest believer in the Union. When the acts of secession were passed and the Union

was menaced, he was distressed and dismayed as truly as any Northerner. In a letter to his wife in January, 1861, from which Judge Speer quotes, he says of Washington: "How his spirit would be grieved could he see the wreck of his mighty labors! I will not, however, permit myself to believe, until all grounds of hope are gone, that the fruit of his noble deeds will be destroyed and his precious advice and virtuous example will so soon be forgotten." And again, writing on the same day, he says of the dissolution of the Union that it would be the greatest of calamities, "an accumulation of all the evils we complain of," and "nothing but revolution." Judge Speer, himself a Southern man, sums up Lee's attitude with these words:

He knew that so soon as the cohesive influence of present danger was withdrawn, the States to compose the Confederacy might again separate. He clearly saw that instead of a proud and united Nation, which was winning the admiration and commanding the respect of the world, the American States, North and South, might soon present a shameful spectacle, the despair of the friends of popular government everywhere, a snarl of wrangling communities. . . . He might have seen the soil of the opposing republics in war after war drenched in fratricidal blood . . . and the genius of American freedom perish by the folly and fury of those who once worshipped at her shrine.

For a man with such devotion for the Union and such dread of anything that might destroy it to give himself to the cause which aimed at its destruction would have been absolutely impossible except for the strongest conceivable motive. Robert E. Lee found that motive in his loyalty to his convictions. No motive of self-advancement and personal glory could move him even when coupled with his belief in the prime importance of the Union. He was offered the command of the armies of the Union in which he believed passionately; but he answered the messenger from President Lincoln with the exclamation: "Mr. Blair, I look upon secession as anarchy. If I owned the four million slaves in the South, I would sacrifice them all to the Union; but how can I draw my sword upon Virginia, my native State?" To him duty meant duty to his State; honor meant going with his State to victory or defeat. We can well believe that he inflicted

upon his own sensitive soul wounds which never wholly healed when he took up the cause of disunion which he dreaded, the cause of anarchy which he denounced, for the sake of the State to which he felt himself in highest duty bound to cleave.

It is hardly possible that any man in the North could have gone through the spiritual struggle that Robert E. Lee went through during the days when war was threatened. In the North those men that wavered were choosing between a low motive and a high one. Robert E. Lee was beset by two conflicting high motives. That he chose to follow that high motive which kept him with his State The Outlook believes to have been an error of political judgment; but it was not a moral error, not even an error of political morality. He who is loyal cannot be a traitor, and Lee and the men of his stamp were as loyal to their conscientious convictions as were the men who fought against them. The test of patriotism, like the test of any other moral quality, is not success, but loyalty to conviction; and by that test Robert E. Lee stands to-day among the purest, though among the most tragically misled and misunderstood, of patriots.

One of the most pathetic, from one point of view, from another one of the most stimulating and enlightening, utterances that have come to us from the desperate days before the breaking out of the war is in a letter in which Lee mentions his own son, an officer in the regular army at the time: "The times are indeed calamitous. The brightness of God's countenance seems turned from us, and his mercy stopped in its blissful current. Tell Custis he must consult his own judgment, reason, and conscience as to the course he may take. I do not wish him to be guided by my wishes or example. If I have done wrong, let him do better. The present is a momentous question, which every man must settle for himself, and upon principle." The man who wrote these words can teach lessons of patriotism to America of to-day. The defeat of his armies, which meant triumph to the South as well as to the North, may have changed his conception of what duty to his country signified; but his loyalty to that duty as he conceived it was as steadfast before as after his defeat. It is such steadfast loyalty that is the essence of

patriotism. At some other time we may inquire into the nature of the two diverse conceptions of patriotism which contended for supremacy during the days of the Civil War. It is our purpose here to emphasize the truth that those who were loyal to the one conception were as truly patriots as those who were loyal to the other. The real issue was not between patriotism and the want of it, but between two forms of patriotism, one State, the other National. If willingness to sacrifice what is passionately prized next to honor itself is any criterion as to the degree of patriotism that begets such sacrifice, then those Southerners of whom Robert E. Lee is the type are to be counted among the patriots whose lives constitute the real riches of the Nation.

## “Saved by His Character”

*To the Editors of The Outlook :*

In the article entitled “A Text from Luther,” published in the issue of *The Outlook* for June 13, appears this statement: “No man is saved by his orthodoxy, but any man may be saved by his life; no man is saved by his churchmanship, but any man may be saved by his character.” Any Protestant will agree with the first clause in each of these sentences, but is the antithesis in each true, that “any man may be saved by his life,” and “any man may be saved by his character”? These statements seem especially inappropriate in connection with the name of Martin Luther, who was one of the sturdiest champions of the Bible doctrine of justification by faith alone, and of the Protestant teaching that we are saved “unto good works” and not by them, and that the good “life” and “character,” of which the writer speaks, are not the means unto salvation, but simply the evidences of it.

W. B.

Taken out of their connection, these sentences are fairly amenable to our correspondent's criticism. But if the article be read as a whole, we do not think that their meaning is ambiguous.

What is salvation?—character? or condition? In the ordinary language of the people, if not of the clergy and the theologian, salvation is condition. A man is regarded as saved when he is certain of heaven, and lost when he is in peril of hell. If this conception of salvation be accepted as legitimate, then the sentence which our correspondent criticises is absolutely correct. Nothing less than good character furnishes any sure hope of

heaven; nothing other than bad character puts a man in peril of hell. “Every one that loveth is born of God.” This is the one statement; the other is, “And there shall in nowise enter into it anything that defileth, neither whatsoever worketh abomination or maketh a lie.” If by salvation is meant heaven, then it is true that man is saved by his life, saved by his character.

But we agree with our correspondent's implication that it is more correct to say that character is salvation and that heaven is a consequence of being saved. The possession of life is salvation; and eternal life begins here; we do not wait to have it given to us hereafter. And the condition of receiving life or obtaining character is faith and always faith. That is, life is imparted by a superior to an inferior, by the higher to the lower, by the teacher to the pupil, by the mother to the child, by God to man. Faith accepts what grace gives—faith of the pupil in the teacher, faith of the child in the mother, faith of the soul in God. Character is developed, not by mere spontaneous growth, but primarily by reception of influence from another; by heredity; by teaching; by example; by personal contact. Faith is the spirit which perceives, admires, reveres, receives. There must be a superior to impart; but the inferior must also be willing to receive. Loyalty in the pupil to the teacher, loyalty in the child to the mother, loyalty in the soul to God—this is essential to receiving. And this loyalty is faith. Faith is not believing something about God; it is the receptive mind towards God. The pupil does not need to know what diploma the teacher has; the child does not need to know how the mother became mother; the soul does not need to understand God, still less to accept some one else's definition of God. Understanding does not precede life; it follows life. Theology does not precede religion; it follows religion. Faith is loyalty; faith is love; faith is the welcoming attitude. We are saved by faith because this welcoming attitude is the first condition of the upbuilding of character. We are saved by character, because character is the essential condition of true fellowship with God: it is “holiness, without which no man shall see the Lord.”

# Porto Rico, 1900-1903

By George Marvin

THE visible change at work at this time in the life of the people of Porto Rico and in the appearances of things there is impressive and significant. This process, the degree of transformation, is naturally less noticeable to the American who has lived here since the occupation than to one who, like the writer, revisits the island after an absence of three years. A unique process it is—the Americanization of a Latin community. Porto Rico to-day is a vastly different place from Porto Rico three years ago, and some of the signs of the times are plain enough for him who runs to read. Such judgments, formed on the appearances of things and on what people apparently think, are sufficiently confirmed in most cases, should they need support, by recorded facts and by what people frankly say.

As one goes ashore from the steamer at San Juan and walks up from the landing-stage through the shining, clean "Marina," evidences of change are at once forthcoming. Over the shouts of the stevedores and bull-boys on the docks, and the thin, shrill whistles of small craft in the harbor, sound the familiar gong and ascending whir of the American trolley. Soon around the corner from the Plaza swings a long yellow car guided by a white-coated motorman. As it straightens out and speeds away along the military road, under the ancient ruined walls of Fort Cristobal, on its way to Santurce, it works a magic transformation. The low, flat-roofed, bright-tinted Spanish buildings, with their dark arcades, the crumbling, grass-grown fortifications, the graceful palms along the harbor shores—the entire composition, from the archaic bull-carts close at hand to the distant, sleepy, shower-swept mountains, speaks one language, strikes one accord—the language of Spanish America, the minor note of arrested development, of eternal contentment *in statu quo*. That long yellow car just disappearing behind the Cuartel talks plain United States. It speaks the language of progress—its note is the note of progressive unrest.

In Ponce, across the island, another American trolley line connects the city with the Playa, or port, two miles away, supplanting slow bull-carts and a high-priced and totally inadequate coach monopoly. Each line in equipment and road-bed is fully up to the standard of the best suburban roads in the States. The San Juan line runs over the grades of the old Spanish tramway through the palm groves of Santurce and Martin Peña to Rio Piedras, seven miles from the capital. It provides fast, clean, brilliantly lighted cars in place of the old, dingy, badly ventilated Spanish coaches covered with soft-coal dust. Three years ago the steam tram, on an hourly schedule, was seldom filled. Running ten minutes apart, every trolley-car is filled to overflowing. That difference implies a great increase in the amount of necessary travel in and out of the two cities. But crowds of Porto Ricans, some with the evident enjoyment of children, ride up and down the length of the line every day for the pure pleasure of the journey.

A Ponce dry-goods merchant whose shop is in the Plaza said:

"The 'trowley' is more change Ponce to America than all de Americanos."

On fine nights this same merchant, complacently puffing his after-dinner cigarro, boards the "trowley" at his own door, and, with the subdued Señora and their two little black-eyed daughters beside him, traverses the long loop through Ponce streets and speeds down the two cool miles over the river and through the shadowy cane-fields of Señor Barros to the Playa. During the week in February when Admiral Higginson's fleet lay at anchor in the harbor of Ponce, one-third of the population of the city rang up fares on the electric road.

In addition to the trolley system, the automobile has invaded Porto Rico. A transinsular express and passenger service has been in operation from Ponce to San Juan during the past year, and the daily passage of these puffing, evil-smelling vehicles along the highway actually occasions no disturbance and attracts less

notice than would be the case on almost any American country road. The use of American horses' by civilians has greatly increased during the past three years. At San Juan, Ponce, and Mayaguez I saw several handsome teams belonging to Porto Ricans driven by native coachmen in neat white liveries, some of them close, possibly intentional, copies of the Governor's equipage. It is difficult to account for this change, unless the big horses are valued for their added importance and show. The small, wiry native horses, if properly fed and cared for, are handsome animals, fully equal to any demands made upon them, and much better adapted, either for riding or driving, to the climate and local conditions.

San Juan, as the seat of insular government, the headquarters of the military organization, and the chief port for navy and merchant marine, naturally is further advanced toward Americanization than any other city on the island. Ponce, however, with a very much smaller American colony, exhibits an even more progressive spirit, and Mayaguez, Cayey, and Aguadilla also show distinct change. One must in fairness except Caguas and Arecibo, where an anti-administration political spirit, fast dying out, is still strong enough to oppose American innovations. With the exception of Curaçao, that "Spotless Town" of the Caribbean, San Juan is the cleanest city in the West Indies; it is an object-lesson to most American cities. Every visitor notices the order and neatness of its clean, well-paved streets. In the summer of '99 it was a comparatively clean city, but Jupiter Pluvius, the then street-cleaning department, accomplished satisfactory results only on the declivities. Other cities on the island, without paving, suffer by contrast, but in Ponce and the other chief cities gangs of prisoners in uniform brown canvas systematically keep the gutters clean, the roads graded, refuse and garbage carried away. Dogs no longer batten on the principal streets, and the vital statistics are eloquent of reform,<sup>1</sup> not only in visibly clean streets, but also in the beginnings of a thorough sewerage system, and the introduction of aqueduct water in place

of the old-time disease-breeding cisterns, potent but less evident causes of improvement.

Three years ago ice was a luxury; now every town of importance on the island has its ice-plant, and many private enterprises, such as the large American sugar centrales, manage their own refrigeration with ice made on the premises. Delivery is made in San Juan by regulation American ice-wagons drawn by yokes of native bulls. At night the streets are brilliantly illuminated by electric arc lamps, and nearly all the Porto Rican houses in the three chief cities use electricity for lighting purposes. Near the new American electric light and power station, on the Playa road in Ponce, stand the remains of the old Spanish gas company's buildings. The American place is effulgent by night, a high-power lamp in front lights up spotless new white walls, clean ground and an orderly interior of machinery, stabled cars and bright offices. About the doors stand native employees neatly dressed in the company's khaki uniform.

At both San Juan and Ponce good local telephone lines are in operation, and the Spanish central responds "Hell-o." The Spanish-speaking population have been quick to appreciate this convenience, as the names in the directory books, hung beside the instruments, show. Each company is constantly extending its lines, but as yet no movement has been made towards the introduction of an insular long-distance service. Since the Bureau of Insular Telegraph received the telegraph system from the Signal Corps in February, 1901, the number of offices has been increased from ten to forty, and so prompt and efficient has the service become that it is used confidently by Porto Rican business men all over the island, who never made any customary use of the antiquated, unreliable tape-instruments of the Spaniards.

In view of the many American enterprises, successful and unsuccessful, launched on the island, and the steadily increasing tide of American travel to Porto Rico, it is remarkable that no capital has gone to the establishment of a good American hotel. The nearest approach to an American establishment of the kind is the recently finished Colonial Café in the Plaza at the capital, and the

<sup>1</sup> According to the report of Dr. H. M. Hernandez, President of the Board of Health, the total number of deaths during the year 1901 and 1902 was 13,821 less than in the preceding year.

American saloon, richly equipped with Jim Corbett's old bar furniture, near the Marina. By night this place gives a touch of Broadway to the Spanish street, flashing overhead, in red, white, and blue incandescent lights, constantly changing inducements to enter. If Porto Rico is ever to become established as an American winter resort, this need for good hotels must be met; the number of visitors during the past season was twice that in any former year; the hotel accommodations—in the mere matter of room—proved totally inadequate.

In the country the signs of transition are as plain as in the towns. At Guanica and Aguirre, sixty miles apart, in the long southern coast-strip of rich cane savannas, are situated the two great sugar centrales of the American companies. Enormous gray sheds of painted corrugated iron, covering nine roller-mills and complete plants of the newest evaporating and condensing machinery, topped by their six or eight black funnels, they make a striking contrast to the old muscovado mills of the Spanish time, nestled here and there among the cane, a solitary red brick chimney marking the situation of the antiquated structure.

The enormous material improvement of conditions in Porto Rico under the American régime is now well known, in a general way, through the recent publication at Washington of export and import statistics. From these figures we learn that our shipments to the island have multiplied eight times since 1898, while within the same period Porto Rico exports to the United States have increased from \$2,415,000 to \$12,000,000. But figures, although convincing, often need analysis, and these statistics about Porto Rico will be made more enlightening by a brief but careful examination of the conditions which underlie them.

The American occupation has revolutionized the methods of sugar and tobacco production in Porto Rico, yet it is a fact that the total output of sugar for the present year, 105,000 tons, an increase of fifty per cent. over the previous year, is more than 66,000 tons short of the largest crop produced by the Spaniards in 1879. This apparent inconsistency in favor of the banner years prior to 1898 is, however, easily accounted for

by the larger area at that time under cultivation, as well as by unusual conditions in those years. After the war the crop fell off heavily, no more land was taken up, and land already in cultivation was not properly harvested, by reason of the loss of the Spanish market, the disturbance created by the change of currency, and a general uncertainty as to just what the United States Government intended to do. Three years ago only 56,000 tons were exported, and there was a general expression of dissatisfaction by the Porto Rican growers, some of whom allowed their lands to go on mortgage foreclosure, or sold them under cane to American investors. The situation now, as far as the native growers are concerned, is completely reversed. A steady market and increased prices have brought confidence. Porto Ricans are not selling their cane lands now; they are holding on to them. A few have put centrifugals into their old mills. Others, on the south coast, near Guanica and Aguirre, have abandoned their mills and become colonos of the Americans, growing their cane and sending it to be ground at the big centrales. They keep their proprietary rights, and on a percentage basis make more money than under the former system by their own grinding. Where, three years ago, long lines of bull-carts slowly dragged small loads of cane over the stubble fields to picturesque old muscovado mills, narrow-gauge cane-railroads have been put in, and American locomotives haul trains of ten-ton cars all day and night to feed the ravenous centrales. Counting a section of the old French railroad, now controlled by an American company, sixty miles of track on the south coast are now in use for the transportation of cane.

What seems promising in all this, as well as in the other great agricultural enterprises, back of the visible material progress achieved, is the co-operation in business of Porto Ricans with Americans. In banking, shipping, and in several recently organized companies to carry on local enterprises, the same truth is noticeable. This at least seems plain; whatever they may think of us in other respects, the Porto Rican who wants to make money sees that his interests are bound up with the American. The Porto Rican acknowledges, at least by deed, that he is

behind the times. When he does that, his state of mind is enlightened; when he goes ahead, and, instead of blocking progress, helps to introduce and welcomes the new methods, he is unmistakably exhibiting American traits.

Go up in the tobacco district of Cayey. The transformation there is even more complete than in the sugar district. Valleys, hills, and mountains are planted almost continuously with tobacco. The regularly marked cultivation seems to be spreading with the rapidity of some great plague of nature into districts where it was never known before. Near Caguas the Porto Rican-American Tobacco Company has erected a large new factory, in addition to the building already occupied by it in San Juan. Before the American occupation, and within the last three years, most Porto Rican export tobacco was sent to Cuba for manufacture. The reason for this was twofold: lack of manufacturing facilities on the island, and the very small proportion of native product suitable for wrappers. Many a cigar with a Porto Rican filler has been sold in the States, wrapped in fine Cuban leaf, as a Cuban product. The establishment of new factories, which give employment to all the cigar-makers on the island, has obviated one defect. The wrappers are also coming along. A few miles out of Cayey two hundred acres of tobacco are being grown under cheese-cloth, a process which gives a leaf of the finest texture.

It is reassuring to know that the impressions gained from appearances of the tobacco district are more than confirmed by facts from the office of the Commissioner of the Interior. The crop for the present year, in the neighborhood of 10,000,000 pounds, is the most valuable ever produced in the history of Porto Rico.

While speaking of the benefit to the tobacco and sugar industries of Porto Rico, one cannot ignore the coffee situation. If you exploit tobacco and sugar to a dissatisfied person—and there are such in Porto Rico, plenty of them—he will always come back at you with coffee. Prior to the American occupation, 180,000 acres were cultivated for coffee; the present area, according to the records, is 122,000 acres. Coffee between 1879 and 1898 was the big thing in Porto Rico, exceeding the sugar crop six times,

and in 1896 being valued at more than four times the entire amount of sugar produced in that year. Much of the best class of the island population in the Spanish time was interested in coffee culture and export. All these people have suffered heavy losses, labor with capital. It is natural, perhaps, but unreasonable, to associate the cyclone of 1899, which destroyed two-thirds of the coffee-trees, with the American occupation. A juster contention is, of course, the great drop in prices directly attributable to the change in government. Brazilian coffee controls the American market, where the Porto Rican product at a higher price has not been properly appreciated, and much of the foreign market, formerly certain, has been lost. But even at the present low prices there is plenty of money in coffee. Redemption of abandoned lands and new plantings have been, and are, going forward rapidly, and, according to estimates in the Department of the Interior, the coffee crop for this year will be fully up to the normal again. Moreover, we learn from the recent statistics already alluded to, which are now common property, that the value of the coffee exported to this country has increased from \$21,000 last year to \$500,000 for the present year, 1902–03.

Such material evidences of change as trolley-cars, telegraph, telephone, and other electrical appliances, equipages on the roads, and the great transformation evident in agriculture, significant in themselves as they at first seem, might not be any true indication of popular sentiment. Porto Ricans might welcome the wealth-producing or convenient reforms of the Americanos, with hate in their hearts all the time for the foreign invaders. Effective Americanization must go deeper.

Three years is a short time in which to work visible changes in the life of a people, but that changes have taken place during that time in the dress, manners, and customs of the Porto Rican people cannot be questioned. It is a hazardous venture, from the actions of people, to reach conclusions as to their states of mind, unless those actions be so often repeated as to make it highly probable that they are natural manifestations of sincerity or habit. Single instances here and there would be inconclusive, but in the multi-

plication of instances is apt to lie, inductively, the truth.

I noticed a little ragged boy in San Juan throwing a baseball with the manner and instinctive grace of an American street Arab. I have seen hundreds of other youngsters in the capital as well as in Ponce, Cayey, Mayaguez, Yauco, amusing themselves in the same way and with the same knack. In the yard of the charity school at Santurce I saw five or six games of baseball in progress; little fellows in their khaki uniforms scampering around the bases to an accompaniment of shrill English and Spanish coaching. And they were playing the game, not playing at it, as a moment's observation proved. Four years ago Porto Ricans had never heard of baseball; it is now becoming the insular game. A league has been established at San Juan, and the regular Wednesday and Saturday games between the four teams composing it attract large crowds to the grounds near Fort Cristobal. Enthusiasm among the spectators runs high at these regular games, but a majority of the players are Americans. More important as indicating popular tendency are the games played every afternoon on the grassy slopes along the roadside, near the rifle range, where crowds of men and boys amuse themselves each afternoon. From the range come the steady reports of the Krag of the Porto Rican regiment; from the baseball grounds the good, wholesome crack of ball on bat. A member of the Executive Council told me that, in his opinion, baseball was doing more to Americanize Porto Rico than express conciliation or legislative acts passed to that end.

Altered styles of dress, chiefly among the better classes, are noticeable. I well remember, three years ago, sitting in the Plazas at Mayaguez and Ponce on the Thursday and Sunday evenings when the band played. Up and down by twos through the lane of chairs rented by the municipality at five centavos paced the girls and women of the city; all classes, poor and rich, democratically assembled together. Some were bareheaded, with flowers in their loosely done black hair; some wore mantillas; all of them had their faces powdered to a pasty whiteness. Whatever charm their personal appearance created was of a "sweet disorder in

the dress;" a candid person would have called them a dowdy lot. Now, in the same familiar places, less than three years later, American and Parisian dressmaking is writ large over the same weekly parades. One scarcely ever sees a mantilla on these occasions; some of the women wear hats precisely like contemporary head-gear in New York. The passing of the mantilla is a misfortune; the hats are much less appropriate and becoming. But with the mantilla the unsightly powdering custom has nearly disappeared; at least it is no longer powder for its own sake. The naturally good complexions of the Porto Rican women glow now with a healthier color beneath a neat and well-ordered coiffure. The women are visibly better groomed. The band plays Sousa's marches, "Mr. Dooley," or airs from "The Country Girl," instead of the mournful minor music of the Danzas. The people laugh and talk as they walk; they are out to see as well as to be seen; young men walk with the women. The artistic value of the change is doubtful; there is a certain sense of incongruity. But unmistakably there is change; there is a stir about it, an added vitality, brightness, spirit.

Less change is noticeable in the local fashion of men's clothes. These have always been simple and rational, khaki and duck chiefly, material and style dictated by the climate. But English and American tailors have found many customers, and their Porto Rican brethren are being compelled to follow their styles. Panama hats, a variety of good grades, are now manufactured on the island, chiefly for export. The stiff and heavy American-made straw hat, by an odd reciprocity, actually has a larger sale at present among the native population than the more appropriate panama.

Dress has changed; manners and customs keep pace. At a ball—or baile, as they say here—given at the Ponce Casino last February in honor of Admiral Higginson and the officers of the fleet then lying in Ponce harbor, time-honored Spanish social conventions were abandoned, as they have been since on similar occasions. Dances were divided; young señoritas, after the northern fashion, sat out dances or intermissions in the foyer or boxes of the adjoining theater with

their partners—a performance bringing social ostracism or engagements under the old standards. This is merely an instance—there are many others indicating what to us seems a more rational and wholesome association between men and women.

It is, of course, quite natural that the English language in three years should have become more commonly used, and this in spite of the fact that the number of Americans now resident on the island is no greater than it was three years ago. The floating population of adventurers and carpetbaggers who flooded in after the war has been steadily drifting away again, for Porto Rico is no place for your very small man, and the legitimate increase by birth and the coming of a better and sounder class of investors and property-holders has barely made good the exodus of the unfit. The shopkeepers and merchants in the towns, the large number of Porto Ricans employed in subordinate positions by the Government, generally know enough English to carry on their transactions in that language without trouble. The stevedores and longshoremen, barbers and cocheros, the little boot-blacks who throng the curbs, even the beggars, and that conservative body in everything but politics, the Insular Police, all have a few necessary English equivalents with which to solicit business, strike a trade, or direct a stranger. But more effective than any other cause in the establishment of English are the American schools.<sup>1</sup> One thousand one hundred and thirty American schools, each filled to overflowing, are determining the speech of the coming generation; a result which of course is being anticipated by the increasing daily use made of English by the sixty thousand pupils enrolled, and its introduction by them into their homes. Spanish has been the language of Porto Rico during four centuries; English in a general way has been used four years. That the latter language has already gained such a place is significant, first, of the eagerness and promptness with which the people of the island have sought to acquire at least the speech of the new régime, and, secondly,

of the progress made towards assimilation since the occupation.

The schools are doing more than establishing the English language in Porto Rico. More than any other agency at work they are accomplishing a rational and thorough Americanization, the effects of which will be permanent. Mr. Brumbaugh, first Commissioner of Education, and his successor, Dr. Lindsay, have set up, in place of the hopeless confusion of the Spanish schools, a compact organization and system in the department of education. American and Porto Rican teachers are working together, teaching by American methods; the results are apparent in the children. I visited a dozen schools in various parts of the island, each representative of its type; industrial, rural, kindergarten, graded and high schools. With one exception, I found the teachers eager and interested in their work; the children attentive and quiet, progress very evidently being made. The schools form the most encouraging document in the records of this American colonial experiment. Over eighty per cent. of illiteracy confronted the Commission in 1900, according to the census of that year. An appropriation equal to the entire insular budget for the current year, by Dr. Lindsay's statement, could be expended in meeting the demand for further extension of the school system, yet, in spite of the inadequacy of funds at the disposal of the department, it is constantly meeting demands in excess of its equipment. Within the last month the long-hoped-for "University of Porto Rico" has been founded, with a board of Porto Rican and American trustees, one of whom is Governor Hunt, and Dr. Lindsay as first President. This institution has just been established upon a firm financial basis by the appropriation to the insular government authorized by President Roosevelt at Oyster Bay, July 1st. By the terms of this order, provided for by Congress, 90,000 acres of unreserved government lands go to the people of Porto Rico. The money from the sale of these lands, valued at \$500,000, will be devoted to educational purposes.

Two other organizations in other ways are accomplishing the same fundamental kind of work that the schools are doing—the Porto Rican regiment and the De-

<sup>1</sup> The Porto Rican School Commission has adopted the unit of fifty as constituting a school. In many cases this enrollment corresponds with or exceeds the capacity of a school building. In other cases one building contains two or more "schools." There are six hundred and fifteen school buildings in use under the Commission.

partment of Charities. Five hundred of the little hungry waifs, ragged and dirty, half or wholly naked, who were running about three years ago, playing like chickens in the dust of the roadsides, have been rounded up into the girls' and boys' charity schools at Santurce. Now they are scrupulously clean, well fed, and neatly clad in the uniform costumes which, under the supervision of a master tailor, are made by the children themselves on the premises. The boys are under military discipline, with their own officers and a first-rate band composed entirely of charity boys. Their daily parade is an object-lesson in itself. These children are associating with the American flag which their proud color-sergeant carries, and with the English speech, their new life of health and something to do.

I have seldom seen a more soldierly, well-set-up body of infantry than the Porto Rican regiment. These young men are born soldiers as they are born musicians and horsemen. They love the martial music, the parade and glitter of military life. At guard mount and dress parade they are nearer West Point appearance than our average militia regiment. Whether they will prove good fighters in the actual business of war remains to be seen. Their American officers say they are sure of them, that men who can walk as these do, unafraid, into machete-play, won't balk at skirmishing or volley-firing with ball-cartridge. They cover hard practice marches at a swinging gait with ease. Of their marksmanship I can myself certify, after two days spent with detachments on the rifle ranges near San Geronimo. No white duck or glitter there; in blue flannel and khaki these dark-faced soldiers lay in the hot sand, under the blazing sun, during hours of steady firing. They were obviously not doing perfunctory work; each man was as keen over his elevation and wind-allowance, and watched the marking at the butts with as much eagerness, as if his pay depended upon his showing. They are stimulated to additional efforts by the presence among their officers of five out of the six best shots in the United States army. Whatever the efficiency of this regiment in time of war, it is clearly accomplishing results in times of peace to

much more than justify its maintenance. It sets a standard of physical excellence, order, and cleanliness before the people.

On the morning of Washington's birthday, February 22, 1903, I watched guard-mount at the Infantry Barracks, and afterwards crossed the street to the old Beneficencia building, where I had been invited to attend the commemorative exercises in the Public School. In the great court of the barracks, surrounded on its four sides by stories of arched galleries, a native military band in full uniform, with a perfect peacock of a drum-major at its head, paraded before the long, neat line of the guard for that day. As a special feature, I suppose, they afterwards played the National anthem. In the galleries across the court from where I stood, a crowd of soldiers, off duty, were watching the evolutions below. They were the Ponce companies who had just arrived after a hard march across the island. At the first bar of stirring music every man of them quietly stood erect, and, hat in hand, remained uncovered until the end.

With that picture of the shining barracks court and the motionless blue-clad figures in my mind, I sat a half-hour later at the Public School.

There were appropriate recitations and addresses by boys and girls, all but one in English, and several well-known songs were sung with English words by the whole school. Two girls at the piano and a black-haired boy with his violin played some familiar opera music. The exercises closed with the singing of the "Borinquena" and "America." The Porto Rican national air is haunting. In its minor cadences it seems to hold the melancholy of the tropics, the mournfulness of past greatness. It is a Spanish requiem. The children all knew it by heart; they sang it well, better than "America," but as they sang their faces were expressionless, their manner listless, in perfect sympathy with the music. When they sang our hymn, the unison and rhythm were not so marked, but every face was alert; they were trying, their eyes were bright, the hopelessness was gone from their shrill voices. Those two songs and the manner of their singing, at that particular time and place, seem to represent perfectly the difference between the old and the new—Spanish and American Porto Rico.

# Passive Resistance

By C. Silvester Horne<sup>1</sup>

THE opposition to the two great English Education Bills, the one dealing with England and Wales and the other with London, has taken an extraordinary line, and one which is being watched with curiosity and apprehension by many friends and foes of the present Government. Thousands of Nonconformists have publicly announced their determination to refuse to pay the new rate. An organization known as the Passive Resistance League has sprung into existence, with an executive composed of well-known leaders of the English Free Churches. Eminent counsel have given it as their opinion that this organized resistance to the Act brings the members of the League within the law relating to conspiracy, and exposes them to criminal prosecution. It has made no difference. Branches of the League have been formed in all parts of the country; at the present time over two hundred are in existence, and the work of enrollment is going on quietly but rapidly.

The situation is a strange one. A generation has passed since English Nonconformity had to fight for its own in this fashion. The last use made of the weapon of "passive resistance" by Free Churchmen was when they allowed their goods to be spoiled rather than pay a rate to support the established Episcopal Churches. In those days it used to be urged that the Church rate was for the purpose of maintaining the Church fabric, and that, as the parish churches belonged to all the parishioners, no injustice was done. Nevertheless, the stalwart Nonconformists retorted that it was a rate in support of a denominational institution from which they conscientiously dissented. Some of them were sent to prison; thousands had their goods distrained upon.

The battle lasted for many years, and ended in the complete victory of the Nonconformists. Church rates can no longer be levied.

As soon as the Education Bill of 1902 was introduced, the Nonconformists protested that a new Church rate was being levied under the guise of an education rate. The reason for this was that the schools of the Church of England were now to be put upon the rates, and yet were to remain under denominational management. Our contention has hitherto been that as soon as an institution becomes a State institution it must cease to be sectarian. This invaluable constitutional principle has now been ignored. The Nonconformist ratepayer will pay his money to Church of England schools, and will lose his ancient privilege of controlling the expenditure of his own money. American readers should understand that in eight thousand parishes in England and Wales there is only one public elementary school available in each parish, and that that school is under Church of England auspices, and that all children in the parish are by law compelled to attend it. The Nonconformist therefore asserts that the new education rate is worse than the old Church rate. The old Church rate went to keep up the parish church, but at least the Nonconformist was not compelled to attend the parish church. The new education rate goes to support a sectarian school, and Nonconformist children are compelled to attend this school. To understand the intensity of the Free Church opposition to this new system something must be known of the social and religious conditions which prevail to-day in many parts of England. The power of the Established Church in thousands of parishes is almost absolute. The squire of the parish, who probably owns most of the land, expects his tenant to be loyal to the Church of England; and multitudes of laborers and small shopkeepers are given to understand that their very livelihood depends on their conformity to the will of

<sup>1</sup> The Rev. C. Silvester Horne is the Chairman of the London Congregational Union, has been pastor of the Kensington Congregational Church, and has lately accepted a call to the Central Hall formerly known as Whitefield's Tabernacle. This church is in the Tottenham Court Road, and will be the center of many religious and philanthropic agencies which are to be brought to bear in a congested London district.—THE EDITORS.

the squire and the parson. The latter is very usually, nowadays, what is known as High Church. The old priestly notion of the ministry has been revived with great success. He repudiates the name Protestant. He regards the Nonconformist as a schismatic and a heretic, and the children of Nonconformists as proper subjects for his priestly influence. Even the "Pilot," which is an Anglican weekly paper of conspicuous moderation and great influence due to its statesmanlike opinions, declares that if the Church of England is to be re-Protestantized ten thousand clergymen must be turned out. These men are interested in the movement for reunion with Rome, and their teaching is hardly distinguishable from that of Rome. The schools which these men manage are the most valuable instrumentality they possess for proselytizing young England. Backed up, therefore, by the social influence of the squirearchy, they are able to make the position of the independent Nonconformist almost intolerable. He may be strong enough to take his own line so far as worshipping at a Nonconformist chapel is concerned, but when he sees his own children's minds set against him and the faith he holds most dear, he is driven to the verge of rebellion. So that when now he is required not only to expose his children to this peril, but to pay his rate that they may be seduced from their principles, he is astonishing the Government by asserting flatly that he will not pay, but will suffer loss of goods or even imprisonment.

By the side of this man who is thus cruelly tried, thousands of Free Churchmen are resolved to stand who live under more favored conditions. Possibly they live where a clergyman is more moderate and enlightened, and where the Church school is well managed. They do not object to the local administration of the act; they object to the act itself, inasmuch as it gives power to the clergy to govern even State schools, and takes away power from the ratepayer to decide how his rate is to be spent. To this they declare they will not submit. The grievance is further greatly aggravated by the fact that in these Church schools which are now to be entirely supported by public funds no Nonconformist can be a head teacher. To the power of the clergy is to be added

the sectarian influence of the principal teacher. Thus a further difficulty is placed in the way of the Nonconformist who desires to be loyal to the law of the land and at the same time to his own principles. We never expected to see, in any period of reaction, the reimposition of religious tests in any branch of the civil service. The payment of a rate that our children may be proselytized at the expense of their parents, and schools supported from the principal teacherships in which all people holding our convictions are expressly excluded, is to thousands of Nonconformists a moral impossibility. No section of the community has been more law-abiding than Free Churchmen. But it has come to this, that they can see no hope for England or for Protestantism in England save in the policy of Passive Resistance to the new Education Act. When a Nonconformist deputation waited on Mr. Balfour, the Prime Minister, to put their case before him, Dr. Fairbairn, speaking for the English Free Churches, declared that to this act they would not submit. But Mr. Balfour treats the gravest issues lightly, and it is probable that for such a statement he cared little. Bishops prophesied freely that the agitation would soon die down. They have never been celebrated for the accuracy of their predictions. The agitation is to-day spreading everywhere. It is, fortunately, very seldom that the English people is on the side of resistance to the law. But to-day, in the great citizens' meetings, the fiercest cheering is reserved for the declaration of Passive Resistance. Among the magistrates who are responsible for the administration of the law, scores have already declared that they will not pay this rate. The other day Mr. Edwyn Holt, of Manchester, resigned certain high public offices and paid a fine of two hundred dollars sooner than be a party to levying this rate; and Mr. Holt is one of the most respected of Manchester citizens. The Lord Mayor of Sheffield is prepared to lay down the Chief Magistracy of that city sooner than pay a sectarian rate. One of the leaders of the movement is Dr. John Manie, of Mansfield College, who was so recently honored at Yale with a doctor's degree. Dr. Manie is now the treasurer of the Passive Resistance

League. In Leeds at one meeting something like a thousand names were enrolled pledged to resist the law. At Coventry many of the leading citizens took the same stand. Well-known members of Parliament are public advocates of the movement. There is no considerable town where knots of men are not engaged in what is likely to prove a bitter and desperate struggle. From Oxford and from Cambridge notable manifestoes have been put forth stating the case for resistance and indicating the conscientious motives that lie behind the policy. It is safe to say that during the next six months there will be interesting and exciting developments. Rumors have already gone abroad that the Government will proclaim the Passive Resistance League, and prohibit public meetings under its auspices. It is even reported that criminal prosecu-

tion will be established and that some Nonconformist leaders will suffer. One thing, however, is certain. The conscience and reason of the country are against the Government and behind the Free Churches. A new feature in the agitation was seen in the recent enormous demonstration in Hyde Park against the bill for London. Nonconformity and the working classes made a great fighting alliance. Not far short of a quarter of a million people acclaimed the speakers and cheered enthusiastically the most uncompromising sentiments. The Government, in carrying out the clerical policy, has overreached itself. It has legislated what it cannot administer; and it seems probable that we shall witness another demonstration of the fact that no act can be operative that has not the moral convictions of the people behind it.

London, England.

## The Forest: More About Woods Indians'

By Stewart Edward White

Author of "The Blazed Trail," "Conjuror's House," etc.

**I**T must be understood, of course, that I offer you only the best of my subject. A people counts for what it does well. Also I instance men of standing in the loose Indian body politic. A traveler can easily discover the reverse of the medal. These have their shirks, their do-nothings, their men of small account, just as do other races. I have no thought of glorifying the noble red man, nor of claiming for him a freedom from human imperfection—even where his natural quality and training count the most—greater than enlightenment has been able to reach.

In my experience the honesty of the Woods Indian is of a very high order. The sense of *mine* and *thine* is strongly forced by the exigencies of the North Woods life. A man is always on the move, he is always exploring the unknown countries. Manifestly, it is impossible for him to transport the entire sum of his worldly effects. The implements of winter are a burden in summer. Also the return journey from distant shores must be provided for by food stations to be

relied on. The solution of these needs is the *cache*.

And the cache is not a literal term at all. It *conceals* nothing. Rather does it hold aloft in long-legged prominence, for the inspection of all who pass, what the owner has seen fit to leave behind. A heavy platform high enough from the ground to frustrate the investigations of animals is all that is required. Visual concealment is unnecessary, because in the North Country a cache is sacred. On it may depend the life of a man. He who leaves provisions must find them on his return, for he may reach them starving, and the length of his out-journey may depend on his certainty of relief at this point on his in-journey. So men passing touch not his hoard, for some day they may be in the same fix, and a precedent is a bad thing.

Thus in parts of the wildest countries of northern Canada I have unexpectedly come upon a birch canoe in capsized suspension between two trees; or a whole bunch of snow-shoes depending fruitlike beneath the fans of a spruce; or a tangle of steel traps thrust into the crevice of a

<sup>1</sup> Copyright, 1903, by the Outlook Company.

tree root; or a supply of pork and flour swathed like an Egyptian mummy occupying in state a high bier. These things we have passed by reverently, as symbols of a people's trust in its kind.

The same sort of honesty holds in regard to smaller things. I have never hesitated to leave in my camp firearms, fishing-rods, utensils valuable from a woods point of view, even a watch or money. Not only have I never lost anything in that manner, but once an Indian lad followed me some miles after the morning's start to restore to me a half-dozen trout flies I had accidentally left behind.

It might be readily inferred that this quality carries over into the subtleties, as indeed is the case. Mr. MacDonald, of Brunswick House, once discussed with me the system of credits carried on by the Hudson's Bay Company with the trappers. Each family is advanced goods to the value of two hundred dollars, with the understanding that the debt is to be paid from the season's catch.

"I should think you would lose a good deal," I ventured. "Nothing could be easier than for an Indian to take his two hundred dollars' worth and disappear in the woods. You'd never be able to find him."

Mr. MacDonald's reply struck me, for the man had twenty years' trading experience.

"I have never," said he, "in a long woods life, known but one Indian liar."

This my own limited woods wandering has proved to be true to a sometimes almost ridiculous extent. The most trivial statement of fact can be relied on, provided it is given outside of trade or enmity or absolute indifference. The Indian loves to fool the tenderfoot. But a sober, measured statement you can conclude is accurate. And if an Indian promises a thing, he will accomplish it. He expects you to do the same. Watch your lightest words carefully, an' you would retain the respect of your red associates.

On our way to the Hudson Bay we rashly asked Peter, towards the last, when we should reach Moose Factory. He deliberated.

"T'ursday," said he.

Things went wrong. Thursday supplied

a head wind. We had absolutely no interest in reaching Moose Factory next day. The next week would have done as well. But Peter, deaf to expostulation, entreaty, and command, kept us traveling from six in the morning until after twelve at night. We couldn't get him to stop. Finally he drew the canoes ashore.

"Moose-amik quarter hour," said he.

He had kept his word.

The Ojibway possesses a great pride, which the unthinking can ruffle quite unconsciously in many ways. Consequently the Woods Indian is variously described as a good guide or a bad one. The difference lies in whether you suggest or command.

"Peter, you've got to make Chicawgun to-night. Get a move on you!" will bring you sullen service, and probably breed kicks on the grub supply, which is the immediate precursor of mutiny.

"Peter, it's a long way to Chicawgun. Do you think we make him to-night?" on the other hand, will earn you at least a serious consideration of the question. And if Peter says you can, you will.

For the proper man the Ojibway takes a great pride in his woodcraft, the neatness of his camps, the savory quality of his cookery, the expedition of his travel, the size of his packs, the patience of his endurance. On the other hand, he can be as sullen, inefficient, stupid, and vindictive as any man of any race on earth. I suppose the faculty of getting along with men is largely inherent. Certainly it is blended of many subtleties. To be friendly, to retain respect, to praise, to preserve authority, to direct and yet to leave detail, to exact what is due and yet to deserve it—these be the qualities of a leader, and cannot be taught.

In general the Woods Indian is sober. He cannot get whisky regularly, to be sure, but I have often seen the better class of Ojibways refuse a drink, saying that they did not care for it. He starves well, and keeps going on nothing long after hope is vanished. He is patient, yea very patient, under toil, and so accomplishes great journeys, overcomes great difficulties, and does great deeds by means of this handmaiden of genius. According to his own standards is he clean. To be sure, his baths are not numerous, nor his laundry days many, but he never cooks

until he has washed his hands and arms to the very shoulders. Other details would but corroborate the impression of this instance—that his ideas differ from ours, as is his right, but that he lives up to his ideas. Also is he hospitable, expecting nothing in return. After your canoe is afloat and your paddle in the river, two or three of his youngsters will splash in after you to toss silver fish to your necessities. And so always he will wait until this last moment of departure in order that you will not feel called on to give him something in return. Which is true tact and kindness, and worthy of high praise.

Perhaps I have not strongly enough insisted that the Indian nations differ as widely from one another as do unallied races. We found this to be true even in the comparatively brief journey from Chisleau to Moose. After pushing through a trackless wilderness without having laid eyes on a human being, excepting the single instance of these French *voyageurs* going Heaven knows where, we were anticipating pleasurably our encounter with the traders at the Factory, and naturally supposed that Peter and Jacob would be equally pleased at the chance of visiting with their own kind. Not at all. When we reached Moose, our Ojibways wrapped themselves in a mantle of dignity and stalked scornful amidst obsequious clans. For the Ojibway is great among Indians, verily much greater than the Moose River Crees. Had it been a question of Rupert's River Crees, with their fierce blood laws, their conjuring lodges, and their pagan customs, the affair might have been different.

For, mark you, the Moose River Cree is little among hunters, and he conducts the chase miscellaneously over his district, without thought to the preservation of the beaver, and he works in the hay marshes during the summer, and is short, squab, and dirty, and generally *ka-win-ni-shi-shin*. The old sacred tribal laws, which are better than a religion because they are practically adapted to northern life, have among them been allowed to lapse. Travelers they are none, nor do their trappers get far from the Company's pork-barrels. So they inbreed ignobly for lack of outside favor, and are dying from the face of the land through dire diseases, just as

their reputations have already died from men's respect.

The great unwritten law of the forest is that, save as provision during legitimate travel, one may not hunt in his neighbor's district. Each trapper has assigned him, or gets by inheritance or purchase, certain territorial power. In his land he alone may trap. He knows the beaver-dams, how many animals each harbors, how large a catch each will stand without diminution of the supply. So the fur is made to last. In the southern district this division is tacitly agreed upon. It is not etiquette to poach. What would happen to a poacher no one knows, simply because the necessity for finding out has not arisen. Tawabinisáy controls from Batchawanúng to Agawa. There old Waboos takes charge. And so on. But in the far north the control is more often disputed, and there the blood law still holds. An illegal trapper baits his snares with his life. If discovered, he is summarily shot. So is the game preserved.

The Woods Indian never kills wastefully. The mere presence of game does not breed in him a lust to slaughter something. Moderation you learn of him first of all. Later, provided you are with him long enough and your mind is open to mystic influence, you will feel the strong impress of his idea—that the animals of the forest are not lower than man, but only different. Man is an animal living the life of the forest; the beasts are also a body politic speaking a different language and with different viewpoints. Amik, the beaver, has certain ideas as to the conduct of life, certain habits of body, and certain bias of thought. His scheme of things is totally at variance with that held by Me-en-gan, the wolf, but even to us whites the two are on a parity. Man has still another system. One is no better than another. They are merely different. And just as me-en-gan preys on amik, so does man kill for his own uses.

Thence are curious customs. A Rupert River Cree will not kill a bear unless he, the hunter, is in gala attire, and then not until he has made a short speech in which he assures his victim that the affair is not one of personal enmity, but of expedience, and that anyway he, the bear, will be better off in the Hereafter. And then the skull is cleaned and set on a pole near

running water, there to remain during twelve moons. Also at the tail root of a newly deceased beaver is tied a thong braided of red wool and deerskin. And many other curious habitudes which would be of slight interest here. Likewise do they conjure up by means of racket and fasting the familiar spirits of distant friends or enemies, and on these spirits fasten a blessing or a curse.

From this it may be deduced that missionary work has not been as thorough as might be hoped. That is true. The Woods Indian loves to sing, and possesses quaint melodies, or rather intonations, of his own. But especially does he delight in the long-drawn wail of some of our old-fashioned hymns. The church oftenest reaches him through them. I know nothing stranger than the sight of a little half-lit church, filled with Indians swaying unctuously to and fro in the rhythm of a cadence old Watts would have recognized with difficulty. The religious feeling of the performance is not remarkable, but perhaps it does as a starting-point.

Exactly how valuable the average missionary work is I have been puzzled to decide. Perhaps the church needs more intelligence in the men it sends out. The evangelist is usually filled with narrow, preconceived notions as to the proper physical life. He squeezes his savage into log houses, boiled shirts, and boots. When he has succeeded in getting his tuberculosis crop well started, he offers as compensation a doctrinal religion, admirably adapted to us who have within reach of century-trained perceptions a thousand of the subtler associations a savage can know nothing about. If there is enough glitter and tin steeple and high-sounding office and gilt good behavior card to it, the red man's pagan heart is tickled in its vanity, and he dies in the odor of sanctity—and of a filth his out-of-door life has never taught him how to avoid. The Indian is like a raccoon; in his proper surroundings he is clean morally and physically, because he knows how to be so; but in a cage he is filthy, because he does not know how to be otherwise.

I must not be understood as condemning missionary work; only the stupid missionary work one most often sees in the North. Surely Christianity should be

adaptable enough in its little things to fit any people with its great. It seems hard for some men to believe that it is not essential for a real Christian to wear a plug hat. One God, love, kindness, charity, honesty, right living, may thrive as well in the wigwam as in a four-square house—provided you let them wear moccasins and a capote wherewith to keep themselves warm and vital.

Tawabinisáy must have had his religious training at the hands of a good man. He had lost none of his aboriginal virtue and skill, as may be gathered from what I have before said of him, and had gained in addition certain of the gentle qualities. I have never been able to gauge exactly the extent of his religious *understanding*, for Tawabinisáy is a silent individual and possesses very little English, but I do know that his religious *feeling* was deep and reverent. He never swore in English; he did not drink; he never traveled or hunted or fished on Sunday when he could possibly help it. These virtues he wore modestly and unassumingly as an accustomed garment. Yet he was the most gloriously natural man I have ever met.

The main reliance of his formalism when he was off in the woods seemed to be a little tattered volume, which he perused diligently all Sunday, and wrapped carefully in a strip of oiled paper during the rest of the week. One day I had a chance to look at this book while its owner was away after spring water. Every alternate page was in the phonetic Indian symbols, of which more hereafter. The rest was in French, and evidently a translation. Although the volume was of Roman Catholic origin, creed was conspicuously subordinated to the needs of the class it aimed to reach. A confession of faith, quite simply, in One God, a Saviour, a Mother of Heaven; a number of Biblical extracts rich in imagery and applicability to the experience of a woods dweller; a dozen simple prayers of the kind the natural man would oftenest find occasion to express—a prayer for sickness, for bounty, for fair weather, for ease of travel, for the smiling face of Providence; and then some hymns. To me the selection seemed most judicious. It answered the needs of Tawabinisáy's habitual experiences, and so the red man was a good

and consistent convert. Irresistibly I was led to contemplate the idea of any one trying to get Tawabinisây to live in a house, to cut cordwood with an ax, to roost on a hard bench under a tin steeple, to wear stiff shoes, and to quit forest roamings.

The written language mentioned above you will see often in the Northland. Whenever an Indian band camps, it blazes a tree and leaves as record for those who may follow a message written in the phonetic character. I do not understand exactly the philosophy of it, but I gather that each sound has a symbol of its own, like shorthand, and that therefore even totally different languages such as Ojibway, the Wood Cree, or the Hudson Bay Eskimo, may all be written in the same character. It was invented nearly a hundred years ago by a priest. So simple is it, and so needed a method of intercommunication, that its use is now practically universal. Even the youngsters understand it, for they are early instructed in its mysteries during the long winter evenings. There follows a message I copied from a spruce-tree two hundred miles from anywhere on the Mattâgami River.

Besides this are numberless formal symbols in constant use. Forerunners on a trail stick a twig in the ground whose point indicates exactly the position of the sun. Those who follow are able to estimate, by noting how far beyond the spot the twig points to the sun has traveled, how long a period of time has elapsed. A stick pointed in any given direction

A short journey    A medium journey    A long journey

tells the route, of course. Another planted upright across the first shows by its position how long a journey is contemplated.

A little sack suspended at the end of the pointer conveys information as to the state of the larder, lean or fat, according as the little sack contains more or less gravel or sand. A shred of rabbit-skin means starvation. And so on in variety useless in any but an ethnological work.

The Ojibway's tongue is soft, and full of decided lisping and sustained hissing sounds. It is spoken with somewhat of a sing-song drawl. We always had a fancy that somehow it was of forest growth, and that its syllables were intended in the scheme of things to blend with the woods noises, just as the feathers of the mother partridge blend with the woods colors. In general, it is polysyllabic. That applies especially to concepts borrowed of the white men. On the other hand, the Ojibways describe in monosyllables many ideas we could express only in phrase. They have a single word for the notion, Place-where-an-animal-slept-last-night. Our "lair," "form," etc., do not mean exactly that. Its genius, moreover, inclines to a flexible verb form, by which adjectives and substantives are often absorbed into the verb itself, so that one beautiful singing word will convey a whole paragraph of information. My little

knowledge of it is so entirely empirical that it can possess small value.

In concluding these desultory remarks, I want to tell you of a very curious survival among the Ojibways and Ottâwas of the Georgian Bay. It seems that some hundreds of years ago these ordinarily peaceful folk descended on the Iroquois in what is now New York, and massacred a village or so. Then, like small boys who have thrown only too accurately at the delivery wagon, they scuttled back home again. Since that time they have lived in deadly fear of retribution. The Iroquois have long since disappeared from the face of the earth, but even to-day the Georgian Bay Indians are subject to periodical spasms of terror. Some wild-eyed and imaginative youth sees at sunset a canoe far down the horizon. Immediately the villages are abandoned in haste, and the entire community moves up to the headwaters of streams, there to lurk until convinced that all danger is past. It does no good to tell these benighted

savages that they are safe from vengeance, at least in this world. The dreaded name of Iroquois is potent even across the centuries.

[TO BE CONTINUED]

The editors are sure that the readers of "The Forest" will mourn the loss of Deuce. Many of them have, in writing to Mr. White or the editors, expressed a real personal interest in Deuce, whose portrait, by the way, appeared in the June Magazine number of The Outlook. Mr. White, who is now exploring a little-known part of California, writes us:

"We crossed the Kern alkali desert; the day turned out the worst in ten years. My two companions and myself gave him all our shares of water as well as his own; we carried him in front of our saddles; we even walked afoot carrying him in

our saddle-blanket. In this way we got him to a cottonwood-tree and a little muddy water. The others then pushed on with all the horses. I stayed with the dog and did all I could for him, but it was no use. The others pushed on to a water-tank. There R—— fell from his horse, and T—— was done up. I lay flat under a bush for three hours until R—— got back with water. You can get some idea of the heat from the fact that the brass buckle on my belt, *even in the shade*, got so hot I could barely touch it.

"Poor Deuce! he was game to the end. He was pluckier, had more intelligence, faithfulness, and affection than most men are capable of. In the dog heaven he must be in the best of it, pointing partridge and quail without number, romping in the surf, climbing the trails, as he loved. But I know he misses the pat of my hand."

## Speaking of Charity

By Marguerite Merington

THE little minister walked home with me from choir-practicing. He was full of plans for re-roofing his church and adding backs to the planks that, bridged between boulders, form the unrestful seats for worshipers at Ingonish. To raise the necessary funds, he thought, our Brooklyn lawyer might be induced to give a lecture on Shakespeare or something to the native fisherfolk, reinforced by the handful of summer colonists within hailing or sailing distance. To all of which I cheerfully assented, though, when he suggested my broaching the project to Mr. Jevons, "Ask him yourself," I replied.

It was as beautiful an evening as one may see on the Cape Breton coast. A fleecy little cloud left over from noonday hung over the squat figure of Ingonish Light, giving it the appearance of a Dutch housewife in a celestial nightcap. In the far west a steady golden glow threw into bold relief the dark chain of hills that anchor Cape Smoky to the shore. Over the meadows came pungent whiffs from the stages where innumerable cod were drying ready for their apotheosis through the medium of the prandial fish-ball into the tissue of New England conscience and

philosophy. I sat outside on the cool doorstep, while in the stuffy parlor of Castle Macallum the minister sought the lawyer and the lawyer's wife, reading their week-old papers from the States.

They heard him out in silence—an ominous sign, since, had these worthy people approved the plan, they would have picked it to pieces, as their wont was, before making it their own. Unencouraged, therefore, the little man ended his petition lamely, with a text that did not apply.

My eye was fixed on the mowing-machine that stood in the haphazard manner of the Cape, its teeth ingenuously shed beside it, patiently rusting in the evening dew, but I felt in my backbone that Mr. Jevons had removed his glasses from his commanding nose and was gesticulating with them in a way that on cross-examination has made a self-convicted liar of many a good man and true.

"Young man!" A pause. "Young man!"

By the shuffle of his boots and the uneasy creaking of his chair a blind person could have seen that the very young man addressed was trying to look superior to his first incumbency and failing dismally.

"Young man, if my understanding did

not belie me, last Sunday you preached a sermon in defense of—I might almost say, advocating—Charity!”

“Yes, indeed, Mr. Jevons. I’m so glad you were awake—I mean, glad you were present! As St. Paul says anent Charity—”

“I know what St. Paul has to say anent it, by which I suppose you mean about it. I knew what St. Paul had to say of Charity before you were born! But you took upon yourself to supplement St. Paul’s brief with some miscellaneous comments of your own on what you were pleased to term the Duty of Giving!”

“Assuredly, Mr. Jevons. As Christians, assuredly it is our manifest duty—yours and mine, sir—to Give!”

“Manifest to whom, sir? I know my own duty, I may be permitted to believe. I don’t need a lad of your youth and inexperience to point out to me my duty! And as a busy man, and a perhaps not wholly useless member of the community, I have not time to hear what you may conceive yours to be. However, what I am trying to get at is that you really believe—for I credit you with sincerity—”

“Thank you, Mr. Jevons! Indeed, I—”

“With sincerity!—you really believe that provident folk should be admonished, nay, bullyragged, into bestowing the substance accumulated by their frugality and thrift upon the wasteful, contemptible creatures that are the scum of the earth, the dregs of humanity, the Poor?”

“Admonished, Mr. Jevons; not bullyragged! As a minister of the Gospel, I—”

“Don’t take refuge in that, young man! When you pound the cushions and lay down pulpit-law to the simple souls of Ingonish, without allowing the other side of the case to be presented to them, what is that, I ask you, but intellectual, rhetorical bullyragging?”

“Excuse me, Mr. Jevons—not that I concede your point, sir! but to come back to Charity: the poor, the destitute, the outcast, however they may have become so, we have them always with us, and we oughtn’t to!—I mean, we ought to!—er, I should say, assuredly in some form they have to live and be provided for.”

“Not necessarily to live and be provided for! Certainly not at my expense.”

“My *dear* sir! You don’t mean—You wouldn’t see them— No, no, Mr. Jevons, I can’t believe that of you! You must be joking, sir. If you’ll allow me, I’ll read you a passage concerning Charity. Like the poor, I have it always with me—ha, ha, ha!” From the nervous laugh that filled in the hiatus, I knew that the little man was fishing among the brown hackles in his pocket for his Bible. “Ah, here it is! Ecclesiastes, eleven, first. About casting thy bread upon the wat—”

“Stop, sir! Pray understand that the foodstuffs left over from my table are not to be disposed of according to the ravings of some mentally disqualified old Hebrew prophet.”

“My *dear* Mr. Jevons! There is no strain of mental disqualification, nor indeed of prophecy, in Qohéleth. Ecclesiastes, you know, who may or may not have been Solomon, and who—”

“There you go. May or may not have been! These are the facts on which theologians try to establish law.”

“Moral law, Mr. Jevons, which has nothing whatever to do with legal law, nor, indeed, with fact! Besides, in addition to Qohéleth, there are other authorities for almsgiving. For example, our old friend St. Paul, ha, ha, ha! God loveth a cheerful giver, saith St. Paul, who, you will remember, was by no means an exclusivist, and—”

Mr. Jevons remembered nothing of the kind. “Young man, I am sixty years old,” he began, albeit wearing his age so debonairly as to render it the shabbiest of shifts in argument. “I am sixty years old, and all my life I have been an ass, sir—an ass! Giving right and left in charity! But I have come to my senses at last! Henceforth I put my hand in my pocket for the benefit of no man but myself! Do I make myself clear? Do you understand?”

“I understand, Mr. Jevons!” The minister’s tone was tearful; he was recalling how, on the preceding Sabbath, into the rusty tin pie-plate that serves Ingonish for alms-basin the lawyer had dropped an unprepossessing wad, which, when tenderly stroked out after service, had shown itself a bill of generous denomination.

“I understand, sir, but natheless—”

“I am glad you do, sir!”

"But natheless I cling to my tenets, and shall continue to preach them to my flock."

"Of course you will, my boy! I don't expect my having been an ass to hinder you from proving yourself one!"

"I am sure I could not have a nobler example, Mr. Jevons."

"And though pitiably, hopelessly in the wrong, you at any rate have the merit of being consistent." The rustle of an interrupted "Eagle" warned the petitioner that his case was closed.

"Er—assuredly—good-night, Mr. Jevons, and God bless you, sir."

"Going? Good-night to you, sir. Good-night!"

"Have you arranged about your lecture," I asked, as the little minister passed out.

"We didn't get to that," he answered, with professional cheeriness, hurrying down the pebbly path.

Half an hour later the squint-eyed woman called.

A jaunty sailor hat of cast-off summer tourist elegance, the jetted velvet jacket over her shabby gingham dress, betokened the occasion of a company-mannerliness that in Cape Breton we usually reserve for funerals. When we had installed her in the one arm, though far from easy, chair the Castle's hospitality affords, she produced a crumpled document, dated that morning, in the minister's hand, and affirming that the bearer, having a consumptive husband and four small children to support, was destitute and deserving of all charity.

This legend Mr. Jevons read, first to himself, then slowly and severely to the bearer, who already knew it by heart. Then, after an impressive pause, "I am sixty years old," he rehearsed, with mournful eloquence, "and all my life I have been an ass, madam—an ass! Giving right and left in charity!"

Meanwhile his wife sat by, loyally striving to banish all sympathy for misfortune from her kindly countenance. The third member of the group owns shamelessly to have waived all theoretical scruples, and, knowing the moral support of a hand-clutch on the weapon that fights the world, to have thrust the contents of her purse into the toil-hardened hand that hung limply from the royal jacket sleeve. One

wandering eye shot a grateful gleam in her direction, but its unmated fellow stared, fixed in fascinated bewilderment upon the orator. At last, "I trust," ended Mr. Jevons, "that I have made myself clear," which he certainly had not done. "I trust you gather that I do not intend to deprave you (addressing you as an average sample of an unprofitable class whose mere existence excites in the bosom of the judicious no higher feeling than contempt!)—to deprave you with a gift of money?" Realizing that something was expected of her, the average sample muttered an inarticulate assent.

"Good!" cried the lawyer. "Then, eliminating money, what is it you need? What do you want?"

"Everything!" gasped the squint-eyed woman.

The lawyer and his wife exchanged glances in which contempt for an unprofitable class was not uppermost. Speaking with one voice, they said, "Come!"

I followed, as, marshaling her like a culprit between them, they led across the meadows to Macallum's store.

"The amount of her husband's credit?" was demanded of King John, who was found in his shirt-sleeves, making up his books.

"A quarter-candle!"

By this King John, who is a master-fisherman, meant that the squint-eyed woman's husband was entitled to redeem the fourth of a quintal of cod, which is the coast medium of exchange, in commodities.

By a whispered transaction between the lawyer and King John, the credit waxed like a mustard-seed till it included a barrel of flour, peas and beans in bags, potatoes in sacks, bacon by the yard, butter by the tub, tea, coffee, sugar, treacle in proportion, not to mention sundry things in tins. When from an upper shelf he was for bringing down a bottle of Orientally named pickle, expensive in proportion to the time it had stood undemanded in stock, Mrs. Jevons tugged at her husband's sleeve and suggested that for their own sakes the poor dears must not be endued with false notions of luxury; accordingly the lawyer reluctantly compromised on several pounds of peppermint-drops for the children, and tobacco for the consumptive husband, as

essential to the maintenance of life. Also, as Maggie-the-Blacksmith's Red-headed Angus, who keeps cows, opportunely happened in for something to chew, to him was a standing order given for daily quarts of milk to be furnished to these wards of Heaven.

Ecky Macallum and a wheelbarrow accompanied the squint-eyed woman home.

We all parted for the night in some constraint, making conversationally much of very ordinary weather, and forbearing any invidious reference to Qohéleth, who may or may not have been Solomon, and

our old friend St. Paul. But when the lawyer and his wife had shot their door-bolt for the night, on the third member of the group descended the spirit of making things pleasant, that, quaintly enough, however, does not always say with making one's self popular. Her lips to their key-hole, she remarked: "I am sixty years old, and all my life I have been an ass, sir!—an ass! giving right and left in Charity—"

A heavy boot was thrown across the floor, followed by a word that may be pardoned to hot blood, but never in cold print!

## What the Post-Office Might Do

By James L. Cowles

We have the worst postal service of any civilized country in the world. There are improvements adopted in England, France, Germany, and Italy, twenty and thirty years ago, which we have not yet adopted at all or only partially or imperfectly.—R. H. Dana, "The Appointment and Tenure of Postmasters."

ON the 13th of May a gentleman presented a suit-case at the Sub-Post-Station, Seventeenth Street and Fifth Avenue, New York, to be mailed to New Haven, Connecticut. The clerk eyed him curiously. Baggage is seldom mailed in this country, save perhaps under Congressional frank, and this person made no pretense to Congressional privileges. He persisted in his demand, however, and the weight of the parcel was found to be eleven pounds three ounces.

The question then arose as to its classification and the consequent postage. Here the stranger became greatly troubled, for he quickly discovered that his tax was to be determined, not by the cost of the service to be rendered his parcel, but by the character of its contents. What difference, he asked, would it make in the cost of handling his suit-case whether it contained magazines or bound books, or seedling potatoes, or pearly barley?

Why should the tax vary from sixteen cents a pound on general merchandise to eight cents a pound on bound books, one cent a pound on magazines posted by publishers to newsdealers and publishers, four cents a pound on magazines sent by one private individual to another, and eight cents a pound on magazines posted by a printer to his publisher?

As to his being a publisher or not, "What had that to do with the cost of the service?" he demanded. Whose business was it whether he intended to eat the things in his suit-case or to plant them, and why should he pay sixteen cents a pound postage in the one case and eight cents a pound in the other?

Once more, what was the particular intent of the law of 1896 that limited the transport of general merchandise by the post-office to four-pound parcels? Finally, why should he be obliged to give up his key to the Government in order to entitle him to second, third, or fourth class postal rates? Was the object of the post-office espionage and taxation, or was its end the public service?

To all of these questions the only possible reply was, "Such is the law and you will have to abide by it. If you would mail your parcel to day, you must mail it letter post and pay letter-post rates."

But there still remained one further recourse. If it could make the round before the inauguration of the contemplated Department improvements(?) which are to reduce the weight-limit of our parcels post conventions from eleven pounds to four pounds six ounces, our parcel (brought within the eleven-pound limit) might be sent to New Haven via New Zealand or Germany. The postage via New Zealand would be \$2.64; via Germany, \$1.95.

This well illustrates the railroad adage, "The longest way round, the cheapest

way home"—the longest haul, the cheapest rate—and probably accounts for the recent arrangements extending our domestic service to Shanghai, China, the intent undoubtedly being to facilitate communications between the Post-Office Department at Washington and the American publishers.

To the ordinary American, however, promptness and despatch are usually of some importance, and it was therefore concluded to send the suit-case to New Haven by the more direct, if more expensive, domestic letter post. Six fifty-cent stamps, one eight-cent stamp, and a ten-cent special delivery stamp (costing in all \$3.68) were accordingly affixed to the right-hand corner of the package, and about 5:30 P. M. May 13 it was duly mailed. At thirteen minutes before eleven o'clock the same evening it was delivered at 91 Park Street, New Haven.

We were very fortunate in our experiment, for a few days later there came to the author of this paper a letter dated Washington, D. C., May 18, 1903, but dictated apparently in Peking, China, Year 1. The letter was signed R. J. Wynne, First Assistant Postmaster-General:

I have to inform you that the postal service is intended for the interchange of correspondence and *not to convey freight or express matter.*

A trunk weighing two hundred pounds, if presented for mailing, prepaid at the letter rate of postage, would not be accepted for mailing were the attention of the Department called to it. Section 3,879, Revised Statutes, is as follows: No package weighing more than four pounds shall be received for conveyance by mail except books published or circulated by Congress. The Department does not *at present* enforce the limit of weight against mailable matter of the first class upon which the full postage is prepaid.

The parcel weighed over four pounds and it was express matter.

Now, I think that Section 3,789 of the Revised Statutes was abrogated, in so far as it relates to both first and second class matter fully prepaid, and as to single books, by the law of 1885, which established the Cent-a-pound Publishers' Post and the Two-cent-an ounce Letter Post, and the rules and regulations of the Post-Office are in accord with this position. In any case, the above letter places the Department in this dilemma. Either it does not know the law or it does not obey the

law. If it be true that the great publishing interest of this country is doing its business, sending out periodicals and newspapers in parcels up to a 150-pound mail-sack contrary to law and at the mere will of a postal official who is knowingly disobeying the law, it would seem to be time that the public should know it.

One thing is made certain. The Department has placed itself on record in favor of restricting the service of the Post-Office to mere correspondence and to a weight-limit of not more than four pounds, even on correspondence packets. Post-Office Auditor Castle took practically this same position last fall in his speech to the New England Postmasters at Boston, when he earnestly prayed them to use all their influence against any further extension of the postal service. It is in direct accord with the thrice-repeated statement made by the ex-Chairman of the House Postal Committee, Mr. Loud, of California, in each of the reports on his bills attacking second-class matter, in which he declared that the Post-Office was not a public necessity, its business could be better done by private corporations, and, finally, that the very existence of the Post-Office is a wrong because it is run so cheaply and so well that its continuance implies its extension and advancement.

It is this powerful opposition to postal advancement and to the very existence of the Post-Office, in Congress and in the Post-Office Department itself, that leaves us subject to-day to the stigma of the Hon. R. H. Dana that we have the worst postal service of any civilized country in the world.

Since 1885 our postal movement has been practically one step forward, two steps back. Never in any corresponding period of the world's history has there been such a decrease in the cost of transportation to the carriers, and yet since 1885 there has been no decrease whatever either in the taxes levied by the carrying companies on the Government or in the postage. Our re-forwarding service has been cut down to first-class matter. The principle that the Post-Office should be confined to correspondence was re-enacted again in 1896, when the merchandise post was restricted to four-pound parcels at sixteen cents a pound.

Our system of postal insurance, con-

fined to first-class matter and to a \$25 indemnity, is little more than a farce. Our one step taken in postal advancement has been the inauguration of free rural delivery, and in that France and Switzerland preceded us by upwards of half a century.

As long ago as 1880, Dr. Stephan, the great Postmaster-General of Germany, called round him the representatives of the leading nations of Europe and established the International Parcels Post Union. To-day this service covers thirty-five of the countries of the World Letter Post Union, and more than half the civilized world, but not the United States. Under it eleven-pound parcels go to-day from Germany to Italy for a quarter, to Egypt for forty-five cents, and, by virtue of our one parcels post convention with a European power, to the United States for fifty-eight cents plus our surtax of five cents—in all sixty-three cents.

Switzerland takes eleven-pound parcels from any post-office in the Republic to the most distant chalet on the farthest Swiss Alp for eight cents, this charge also covering an indemnity of three dollars for a delay of over twenty-four hours beyond the proper delivery, and insurance against loss or damage up to three dollars a kilogram.

The Swiss post takes a forty-four-pound packet from the post-office to the address for thirty-three cents. There seems to be no limit to the weight of the Swiss parcel, and its only limit in bulk seems to be the size of a railway car door, two meters in any direction.

The German post would have taken the suit-case—eleven pounds—any distance up to forty-six English miles for six cents, and greater distances within the combined area of Germany and Austria for twelve cents. The German parcels limit is fifty kilos, one hundred and ten pounds; and parcels up to this weight are now interchanged between Germany, Austria, and Switzerland by post.

France, inaugurating her parcels post with a three-kilo weight-limit in 1880, extended the limit to five kilos (eleven pounds) in 1892, and to ten kilos (twenty-two pounds) in 1897; with this result: "The radical measure of 1897, which involved an increase of one hundred per cent. on the weight of the parcels, proved

a success. The business increased very rapidly, proving once more that cheap rates of postage never fail to gain popular favor and that a simple and comprehensive tariff largely contributes to the development of traffic."<sup>1</sup>

The English parcels post commenced operations in 1883, and though seriously hampered by the eleven-pound limit imposed by the railroad power in Parliament and heavily burdened by the railway tax of fifty-five per cent. of the postage on railroad-borne parcels, it was also a success; from the outset checking the long-prevailing extortions of the private carriers and compelling them to give better and cheaper services. The English railway rates on parcels under three hundred pounds weight, called "smalls," have been increased in recent years from four per cent. on the larger parcels up to five hundred per cent. on the smaller, but on parcels of eleven pounds and under subject to the parcels service not only was no increase possible, the postal rate has been decreased by a third on all these parcels weighing over a pound.

The great commercial nations of the earth are now handling in their domestic and international parcels services over 375,000,000 a year, having a value of thousands of millions of dollars.

There is an annual interchange of some 50,000,000 international parcels a year. The share of the United States in this international service last year, parcels received and despatched, was less than 150,000.

As long ago as 1901, thirty-five of the great countries of the world had a common international parcels service; seventeen, a common C.O.D. service; thirty-one, a common service for the interchange of letters and boxes of declared value; fifteen issued international letters of identity; nineteen had a common arrangement concerning subscriptions for newspapers and periodicals. In none of these arrangements had the United States a share. Her parcels post conventions with a few countries amount practically to nothing. And yet our Consul from Formosa writes: "I know of no convenience in respect to commercial matters that our Government could offer that would so soon show a profitable return as the institution of a parcels

<sup>1</sup> L'Union Postale, February, 1901.

post with the East. The United States is noted in the East for the superiority of its small manufactures. Countless catalogues of attractive novelties reach the East, and the magazines and trade journals convince us that our wants are many; but so complicated, unreliable, and expensive are the private express services that one finds it impracticable to send to America for anything unless the amount of the order is sufficient to justify having the shipment sent by freight. . . . A parcels post service to the East would be of inestimable value and directly enlarge the sale of our small manufactured articles, novelties, etc., to the East, while, indirectly, by rendering possible the cheap, safe, and speedy transportation of samples, it would be of benefit in increasing the volume of our general exports which are shipped to the East by freight."

As to the inability of our private express companies satisfactorily to perform this service, it would be difficult to find better

evidence than the following reply by a New York forwarding company to a Connecticut manufacturer not long ago as to the possibility of sending a package by express to Teheran, Persia: "We cannot undertake to guarantee any limit of time as to its delivery, nor can we guarantee its safe delivery, nor can we prove delivery if required by the shipper."

The truth is that neither in our domestic or our foreign business can any or all of our private express companies taken together give to our people such a parcels service as the Post-Office can easily perform. No other institution has even now so complete a machinery of collection and delivery either for domestic or foreign service, and this machinery is extending with lightning-like rapidity. The Post-Office, moreover, is the only agency that can subject our private transport companies to effectual competition. Only through the extension of the postal service can the public be protected from extortionate express charges.

## The Souls of Black Folk<sup>1</sup>

"THE Souls of Black Folk" is defective, valuable, pathetic: defective because it is so characteristically personal, racial, and controversial; valuable, because it gives with absolute frankness a view of the race problem, and still more a feeling concerning the race problem, which are doubtless entertained by thousands of our fellow-citizens; and pathetic, because the situation of a cultivated Afro-American in this country is one of indescribable pathos.

Mr. Du Bois was, we judge, born in New England. His earliest portrayed recollection is as a school-boy in a New England school-house; his first remembered experience one of bitter protest against a God who had made him an outcast and a stranger in his own land. This is the key to the volume. It is a cry, and a bitter cry, not against human wrong merely, but against what, in his feeling if not in his thought, is an irreparable injustice of life. The cry is Greek rather than American, pagan rather than Christian, a protest against fate. It is not easy to read without tears the extraordinary

self-revelation afforded by the chapter on the birth and death of his boy, the irrepressible revolt against the tragedy of the child's prospective life, and the commingled grief and consolation in his death—a consolation more pathetic than the grief. "She who in simple clearness of vision sees beyond the stars, said, when he had flown, 'He will be happy There; he ever loved beautiful things.' And I, far more ignorant, and blind by the web of mine own weaving, sit alone winding words and muttering, 'If still he be, and he be There, and there be a There, let him be happy, O Fate!'"

The old-school physiologists told of a man who had received a gunshot wound so situated that through it the observer could watch all the processes of digestion. Through his own wounds Mr. Du Bois bids the reader look and see the sorrows of a race—not its outward oppressions, but its inward tragedy. Says Shylock to Bassanio: "I will buy with you, sell with you, talk with you, walk with you, and so following; but I will not eat with you, drink with you, nor pray with you." Let the reader, if he can, imagine what it would be to live in a country whose edu-

<sup>1</sup> *The Souls of Black Folk. Essays and Sketches by W. E. Burghardt Du Bois. A. C. McClurg & Co., Chicago.*

cated, cultivated, Christian people said this to him; let him imagine himself enjoying art, literature, music, all the higher elements of a scholarly and cultivated life, but shut out from the companionship of nearly all scholarly and cultivated ladies and gentlemen, banished from their society, forbidden their friendship, and his culture and scholarship regarded by them, not as a bond of fellowship, but as a curious psychological phenomenon, a strange exception to the laws of nature, to be wondered at but never to be admired. Something such is the experience of the educated and cultivated negro as Mr. Du Bois experiences it in his own person and portrays it in his pathetic volume.

It must be said, however, that this is not a true portrayal of the "Souls of Black Folk;" it is a portrayal only of the souls of a few black folk. We believe that only thirty-five per cent. of the negroes in the South can read and write; and of these thirty-five per cent. probably only a small minority could be called in any sense educated and cultivated. The souls of some of these educated and cultivated black folk Mr. Du Bois portrays: specifically of a certain class of mulattoes. He writes in singular ignorance of the great mass of careless, idle, happy-go-lucky negroes. It may be said that their condition is even more tragic; but it is a different kind of tragedy. And yet we cannot doubt that in them there is also a potentiality of the bitterness in Mr. Du Bois's soul; that they also feel, though in a dumb, inarticulate, hardly conscious fashion, the sense of isolation, separation, social excommunication, which is so intolerable a wrong to him.

This is the pathos and the partialism of the book; but this is also its value. The Anglo-Saxon, to understand the race problem, must understand how it appears to the exceptionally educated members of the subordinate race. He must understand that the problem is one that cannot be solved by education. Education, in the ordinary sense of that term, meaning thereby the education that gives literary and scientific culture, does but complicate the problem. There are probably very few negroes in the South who are more highly educated than Professor Du Bois. And he is and avows himself to be even

to himself a problem. The most that he can say for his education is that it enables him at times to forget the problem. "I sit with Shakespeare and he winces not. Across the color line I move arm in arm with Balzac and Dumas, where smiling men welcoming women glide in gilded halls. From out the caves of evening that swing between the strong-limbed earth and the tracery of the stars, I summon Aristotle and Aurelius and what soul I will, and they come all with no scorn nor condescension. So wed with Truth, I dwell above the Veil." This is fine; but it is no solution of the problem of nine millions of negroes, for whom and for whose children there is but little possibility of even such temporary flights from the twentieth-century realities into a land of imaginings. It is no solution even for the few; for from the land of imaginings even they must return to the twentieth century. They cannot *dwell* above the Veil; they can at best only make excursions thither.

And this brings us to the grave defect in this volume: its failure to point to any solution of the problem. It describes present conditions with great dramatic vividness, too partially and pessimistically to be altogether truthful, and yet conditions of inward experience which we Anglo-Saxons ought to know, and have known too little. We wish that the volume might be read sympathetically by many white Americans and by no negro; for it ought to stir and broaden the sympathy of the one, and we fear it would only excite the bitterness of the other. But, vivid as it is in description, it offers no remedy, and can hardly be said even to suggest any. It attacks the remedy proposed by Dr. Washington, in a chapter which seems to us singularly unjust. Mr. Du Bois implies that since Dr. Washington came into leadership the negro has lost his political rights. He surely ought to know that long before Dr. Washington was recognized as a leader every Southern State had been taken out of negro control, and negro suffrage had been practically eliminated as a political factor in the Nation. Mr. Du Bois affirms that Dr. Washington's doctrine "has tended to make the whites, North and South, shift the burden of the negro problem to the negro's shoulders, and stand aside

as critical and pessimistic spectators." He surely ought to know that no one man, black or white, has done more than Dr. Washington to arouse Southern interest in the negro's education, and no one man, white or black, excepting only General Armstrong, has done so much as he has to interpret the negro's need to Northern audiences and win from Northern givers aid in supplying it. Mr. Du Bois affirms that "Mr. Washington distinctly asks that black people give up . . . higher education of negro youth." We venture to say that he cannot point out a single utterance of Dr. Washington to justify this accusation. Mr. Du Bois charges Dr. Washington with preaching a "gospel of work and money." He ought to know that Mr. Washington's gospel is character. It would hardly be too much to say that Mr. Du Bois urges the negro to self-assertion, Dr. Washington to self-respect. The whole of the latter's doctrine has been summed up by himself in the four words, "Property, economy, education, and Christian character."

It would seem almost axiomatic that for a race sixty-five per cent. of whom are illiterate, and probably seventy-five per cent. of whom are industrially dependent, first in order of importance, if not in order of time, should come primary and industrial education. But were it otherwise, were it true that Dr. Washington over-emphasizes that phase of education which many of us think pre-eminently needs emphasis just now for both black and white, it would seem that the lover of Shakespeare and Balzac and Dumas, of Aristotle and Aurelius, might emphasize the other phase of education without attacking his fellow-laborer. The development of the negro race of this country in "property, economy, education, and Christian character" needs to be pushed forward by every means and in every department; and the work is so great and the corps of laborers is so small that there is no time or energy to be spared from the common work, no surplus time or energy for one wing to expend in criticising the work of the other.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Answers to Prayer.** From George Müller's Narratives. Compiled by A. E. C. Brooks. The Fleming H. Revell Co., New York. 5x7½ in. 128 pages. 50c., net.

The founding and maintenance of George Müller's Orphan Houses at Bristol, England, in reliance solely on prayer for the necessary income, enjoy unique celebrity in the history of philanthropy. The history of Müller's work has long been in print. The present volume, authorized by Müller shortly before his death, is a compilation of experiences not heretofore recorded.

**Buddhist India.** By T. W. Rhys-Davids, LL.D., Ph.D. Illustrated. (The Story of the Nations.) G. P. Putnam's Sons, New York. 5x7½ in. 312 pages. \$2.25.

That the progress of research into the past requires the rewriting of history is by this time well understood. In this volume a most competent scholar has undertaken the task of rewriting the story of India during the period of Buddhist ascendancy—that is, for rather more than a thousand years from the sixth century B.C. It is not unlikely that the yet unworked part of the new material which warrants this undertaking has still more correction in store for current opinions than is here presented. Professor Rhys-Davids finds

no ground for the opinion that is crystallized in the phrase, "the immovable East," but, on the contrary, evidence of constant progress from the Vedic period onward. He does not believe a word of the Brahmanic story of the extirpation of Buddhism by a furious persecution in the eighth century A.D. The current conceptions of Indian history have been derived from Brahmin sources. Professor Rhys-Davids writes from a very different point of view—that of the rajput, or noble of the ancient warrior caste, in which many facts appear that have been ignored by the comparatively small Brahmin group who have been generally relied on as authorities.

**Correspondence of Lady Burghersh with the Duke of Wellington.** Edited by her Daughter, Lady Rose Weigall. Illustrated. E. P. Dutton & Co., New York. 5¼x8 in. 220 pages. \$2.50, net.

These letters of Wellington to his niece, the wife of his favorite aide-de-camp, cover a period of nearly half a century, the first being dated several years before Waterloo and the last two days before the Duke's death in 1852. Giving as they do new light on the intimate social and domestic side of the great Duke's character, they form a most important contribution to the literature concerning Wellington.

**David Hume: His Influence on Philosophy and Theology.** By James Orr, M.A., D.D. (The World's Epoch Makers.) Charles Scribner's Sons, New York. 5x7½ in. 246 pages. \$1.25.

Hume's mission in the world was chiefly negative—to sweep away antiquated modes of thought that needed to be replaced by better. His service to theology and philosophy was great, if measured by the reaction which it caused against his destructive treatment both of religion and of reason. As a master of literary style his merit is unimpeachable. Professor Orr has done full justice to his work and to his character.

**Dean of St. Patrick's (The): A Play in Four Acts.** By Mrs. Hugh Bell. Longmans, Green & Co., New York. 5x7½ in. 94 pages. \$1.

The dramatic interest of this five-act play centers in the strange romance of the great satirist's life—the love of the two women, Stella and Vanessa, for Swift, of which so much—and so little—is known. How closely Mrs. Bell has followed the lines of such authentic history of this mysterious connection as has come to us we cannot say; nor how well the play would act. But of its human interest and entire readableness we are altogether sure.

**Ethel.** By J. J. Bell. Harper & Bros., New York. 4½x7 in. 197 pages.

Distinctly bright and amusing, though rather too reminiscent of the "Dolly Dialogues," are these conversations between a young Englishman and his fiancée. Like them also, they are of a gayety a bit too sustained for entire spontaneity and naturalness.

**Farmer Kilroy on "Ivilooshin."** By Kilroy Banks. W. T. Keener & Co., Chicago. 5¼x8 in. 57 pages. 60c.

**Geography of Disease (The).** By Frank G. Clemow, M.D., D.Ph. (The Cambridge Geographical Series.) The Macmillan Co., New York. 5¼x8 in. 624 pages. \$4.

This is mainly a descriptive work, exhibiting the areas of distribution, the factors of distribution, and the comparative virulence in different regions of the various diseases of mankind, together with their etiology, so far as the causes of disease are known or suspected. Epidemic diseases, such as the "grip" and the plague, are also traced in their propagation from place to place. A large amount of interesting information has been compiled in this volume, with many valuable suggestions, and the number of unsettled questions is equally remarkable.

**German Ambitions: As They Affect Britain and the United States of America.** Reprinted, with Additions and Notes, from The Spectator. By "Vigilans Sed Aequus." G. P. Putnam's Sons, New York. 5x7½ in. 132 pages. \$1.

That these ambitions run crosswise, as well as parallel, to those of the English-speaking peoples is generally admitted. The author of these Letters, and the editor of the London "Spectator," who writes an introduction to them, regard enlightenment as better than ignorance concerning German public opinion, for the purpose of avoiding collisions, so far as practicable. The points of friction and possible collision, so far as we are concerned, are, of course, the Monroe Doctrine and the

tariffs. While the sincerity of the Kaiser is as indubitable as that of the President in their interchange of courtesies, the letter-writers, editors, publicists, and pamphleteers of Germany are by no means a negligible factor in the determination of public policies. The numerous utterances of these embodied in this volume are not put forward to foment resentment and ill will, but simply as cautionary lights, and in the interests of international prudence and peace.

**Great Revival (A): The Story of R. A. Torrey and Charles Alexander.** Edited by David Williamson. The Fleming H. Revell Co., New York. 7x9½ in. 87 pages. 50c., net.

**History of Franklin and Marshall College.** By Joseph Henry Dubbs, D.D., LL.D. Illustrated. Published by the Franklin and Marshall College Alumni Association, Lancaster, Pa. 6½x9½ in. 402 pages. \$2.50, net.

**History of Roman Literature (A).** By Harold N. Fowler, Ph.D. (Twentieth Century Text-Books.) D. Appleton & Co., New York. 5x8 in. 311 pages.

This is a fit and attractive companion book to the author's "History of Ancient Greek Literature," published early in 1902, and, like that, pursues the subject to a late period, ending with the Christian philosopher and statesman Boethius in the sixth century. Like that, also, it is not only a history of the literature of Rome, but an introduction to it. Its personal sketches and critical estimates of Roman authors are finely drawn. Yet it seems that these authors should have been more frequently introduced to speak for themselves. Cicero needed illustration by more than extracts from his orations and letters; he was a philosopher also; his thoughts on immortality, as in *De Senectute*, are apposite to our century as well as to his. As to Pliny, also, it could hardly have been anything but an oversight that failed, in the account given of his letters, to mention and to quote the earliest extant account of Christian worship from his letter to Trajan, about 112 A.D. The value and interest of the work would be considerably enhanced by an additional score or two of such well-chosen selections.

**Idyls of the Gass.** By Martha Wolfenstein. The Macmillan Co., New York. 5x7½ in. 295 pages. \$1.

These tales and sketches of Jewish life in a German village a generation ago have both humor and pathos, and moreover are imbued with true literary sincerity and feeling. They are full of quaint and, to most of us, novel bits of tradition and custom as they were in the old Judengasse. These stories may be compared not unfavorably with Mr. Zangwill's early work in this direction. The author writes with simplicity and naturalness, and her characters, though types, have also the breath of individual life.

**Influence of Christianity upon National Character Illustrated by the Lives and Legends of the English Saints (The).** Being the Hampton Lectures Preached before the University of Oxford, 1903. By William Holden Hutton, B.D. E. P. Dutton & Co., New York. 5¼x9 in. 385 pages. \$4, net.

These lectures mainly consist of biographical memoranda of the men and women of England,

from the earliest times down to the separation of the Church of England from the Church of Rome, who were canonized for their piety. Their influence on the national character is inferred from their canonization. The legends gathering about their names show to what moral qualities they attracted popular admiration; e.g., the mythical St. George, the patron saint of England, had "courage, devotion, loyalty, faith." The inference of the lecturer is not to be accepted without large qualification. Christianity undoubtedly molds national as well as individual character. But to instance the Chinese convert to present-day Christianity, and his consequent substitution of progress for stagnant immobility, as illustrative of any change wrought by mediæval saints on English character, puts a strain on belief. The religion of mediæval England was hardly more than a baptized paganism, and the virtues of its saints were by no means alien to the Teutonic blood of England before its conversion. Mr. Hutton's sacerdotal point of view appears in his uncritical admiration of Saint Thomas Becket, and in his justification of the saintship of King Charles I. as a martyr to the English Constitution, dying in defense of his trust. Some curious lore will be found in this volume; e.g., the *Blutabergglaube*, which occasioned the massacre of Jews at Kishenev, originated in England in the twelfth century, but, except in a single judicial trial in the thirteenth century, with no fatal result.

**Jewish Encyclopædia (The): A Descriptive Record of the History, Religion, Literature, and Customs of the Jewish People from the Earliest Times to the Present Day.** Prepared by more than Four Hundred Scholars and Specialists under the Direction of the following Editorial Board: Cyrus Adler, Ph.D.; Gotthard Deutsch, Ph.D.; Richard Gottheil, Ph.D.; Emil G. Hirsch, Ph.D., LL.D.; Joseph Jacobs, B.A.; Isidore Singer, Ph.D., and others. Vol. IV. Chazars—Dreyfus. Illustrated. Funk & Wagnalls Co., New York. 7¼×11 in. 688 pages.

A prominent article in this volume is devoted to the Dreyfus case—twenty-nine pages. The article on Chronology is exhaustive and valuable. The Hebrews are found working with round numbers and uncertain eras thousands of years after the Babylonians had introduced precise method. Christianity, in the long article devoted to it, is recognized as not an end, but a means to lead up to the brotherhood of man and the Fatherhood of God. In this Jews and Presbyterians are found agreeing. This volume exhibits the learning and ability that have marked its predecessors, and, like them, is copiously illustrated.

**Life and Letters of Sir George Grove, C.B.** By Charles L. Graves. The Macmillan Co., New York. 6×9 in. 484 pages. \$4.

Reserved for later notice.

**Life of Father Dolling (The).** By Charles E. Osborne. Longmans, Green & Co., New York. 6×9 in. 357 pages.

Reserved for later notice.

**Man at This Earth to the Man Possible of an Essential Being of the Universe.** By Leonidas Spratt. The H. & W. B. Drew Co., Jacksonville, Fla. 6×9 in. 412 pages.

**Master of Millions (The).** By George C. Lorimer. The Fleming H. Revell Co., New York. 5×8 in. 588 pages.

In this melodramatic novel a poor Scotch laddie is driven from home, the victim of circumstances. Half a century later, as the "master of millions," he returns incognito, dispensing lavish poetic justice to the innocent and guilty in any way concerned in his early and unmerited disgrace, or to their bewilderingly numerous surviving descendants. The incidents, characters, and conversations that crowd the pages of this over-long book are often unnatural or improbable.

**Moral System of Shakespeare (The).** By Richard G. Moulton, M.A. The Macmillan Co., New York. 5×7¼ in. 381 pages. \$1.50.

This is a work of the first rank in critical literature. Its extent and complexity are such that a brief account of it must be limited to its regulative ideas. Professor Moulton thinks that Shakespearean commentators have systematized to excess, yet, so far as a morally ordered world is discovered in the creations of the dramatist, a moral system is discovered, and as much of this may be found as is found in real life. Our study of real life, Professor Moulton justly says, requires, like the study of physical nature, experiment as well as philosophy, and for lack of this is still in a backward state. The physicist contrives peculiar combinations in his laboratory, and discovers what nature will do under given conditions. Just this is what the poet and fiction-writer do in the combinations they create with the common material of human life; their work is the experimental side of the philosophy of life; their range is as much wider than that of the daily observer of things about him as the world revealed by the telescope and the microscope is larger than that seen by the naked eye. The study of plot is the basis of Professor Moulton's treatment of his subject. What Providence is in the real world, that is plot in the dramatist's world, its providential scheme, ordered on moral principles that may be co-ordinated into system. Among the great questions of a moral system are the connection between character and fate, and the unseen forces that determine the issues of voluntary action. In the exhibition of these, in the contrived course of events, in the sympathetic response of the spectator to the spectacle, is the moral system of the poet to be traced. In working out these conceptions through a critical study of the plays, Professor Moulton exhibits, first, the root-ideas of Shakespeare's moral system; next, Shakespeare's world in its moral complexity; then, the forces of life in Shakespeare's moral world. All this is for the general reader. The technical critic has also his share, perhaps his surprise, in the Appendix, containing formal schemes of plot for all the plays. Professor Moulton regards the current schemes as in bondage to the principles of the Greek drama, antipolar as its severe simplicity is to the complexity and free play of the Shakespearean. But the new literary material of the Shakespearean drama demands a new method of dramatic analysis to bring out its

on the mainland around all the inlets or arms of the sea; that this territory was to be ten marine leagues wide unless there existed inside that limit a chain of mountains which constituted a watershed between the two countries. Now, on the summits of the Chilkoot and White Passes there is a natural watershed less than ten marine leagues from the coast, and hence, under our present *modus vivendi* with Canada, our boundary has been brought nearer to the coast line at these points. If it can be shown that such a watershed exists elsewhere, the boundary line should be changed accordingly; but the Canadian claim that the line should follow, not the actual indentations (as provided for in the Treaty), but the general trend of the coast, is shown by the diplomatic correspondence leading up to the treaty to rest on insufficient basis. Though the above letter comes from a distinguished Canadian Judge, it does not change our views regarding the justice of the American position that the Alaska boundary question is one for adjudication, not arbitration.—THE EDITORS.]

#### Unions and Earnings

##### *To the Editors of The Outlook:*

Under the heading "Do Unions Restrict Earnings?" in *The Outlook* for May 30, "C. A. B." raises a point which he considers a weakness of labor organizations and an injustice to extra-skilled laborers, namely, that the minimum-wage principle adhered to by labor unions "ignores the premium that civilization places upon individual skill."

But, first, the fear expressed by "C. A. B." that the minimum wage discourages the acquirement of skill is needless, for the personal nature of employment is never lost sight of, never lacking—I am always working for Mr. Smith, who is apt to discharge me at any time; that aptness recedes, of course, as my skill advances, but it never ceases. There is selfish incentive enough to increase skill, not to mention the most powerful urgings of pride.

But the most potent of all inducements to acquire skill and use it is the spirit of fairness to fellow union men. This spirit involves an essence of true unionism, is not selfishness and is not the pride that

may fringe upon vanity. A man who has been a member of a union long enough and intelligently enough to love it has a motive for excellence by far more laudable than the selfish scramble for a slight advance in wages which would be his spur were he ignorant of the best that is in unionism.

The motive of the skilled laborer, of the true union man, which transcends the every-man-for-himself scramble is: To do his more with an equal expenditure of energy to that with which his inferior does his less, because he owes it to his weaker brother, because he owes it to his employer, and because he owes it to his sense of fairness.

It is as if a strong man and a weaker one contracted with an employer to carry five hundred pounds of material a certain distance. The weaker man is able to shoulder two hundred pounds. The stronger man owes it to the weaker to take up the three hundred pounds remaining, if it costs him no more of energy. The stronger man owes it to his employer to work as hard as the weaker, since both are to receive equal wages. The stronger man owes it to his sense of fairness to do his seemingly larger part. A. C. G.

#### Christodora House

##### *To the Editors of The Outlook:*

In the paragraph on Christodora House in *The Outlook* of May 30 an old address of Mr. Sexton, the Treasurer, is given. His present business address is 7 Maiden Lane. Contributions may be sent at any time, however, addressed simply to Christodora House, 147 Avenue B, New York City. E. S.

#### A Short Creed

##### *To the Editors of The Outlook:*

The following may be added to the brief statements of beliefs collated by Professor Herbert D. Foster, of Dartmouth College, in *The Outlook* for June 27:

The following satisfies me as a definition of What is Christianity?

1. The life of Christ in the soul.
2. The love of Christ in the heart.
3. Loyalty to Christ in the life.
4. Giving Christ to others; our work.

(Rev.) E. J. FOOTE.

# TOLSTOI THE MAN

UNDER commission from The Outlook, Edward A. Steiner, whose work has already attracted much attention, has been spending some months in Russia, in intimate association with the family and friends of Count Leo Tolstoi. A part of the result of his work will be published in several illustrated articles in The Outlook during the autumn. His knowledge of the subject is intimate, his ability as a writer is unusual, and the illustrations which will accompany the articles are reproduced from paintings made expressly for the work by Pasternak, the eminent Russian artist and friend of Tolstoi.

**The Outlook** is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

**Price.**—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

**Postage is Prepaid** by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add \$1.56 for postage.

**Change of Address.**—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

**Discontinuances.**—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

**How to Remit.**—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

**Letters** should be addressed:

**THE OUTLOOK COMPANY**

287 Fourth Avenue, New York

matter in the New York Post-Office.

**There is a right way and a wrong way to wash flannel outing garments. Try this—the right way:**

Cut some Ivory Soap into shavings and dissolve; add this to the water and wash quickly by repeatedly immersing in the suds and drawing through the hands. The water for both washing and rinsing should be warm, never hot or cold.

Wring, stretch into shape and hang to dry in a place where there is no exposure to wind, sun, too hot or too cold air. Iron before they are entirely dry.

Shrinking is caused by the interlacing of the wool fibers, that have small, sawlike teeth which catch on each other. In washing, therefore, it is desirable to keep the material well stretched out to prevent the fiber from becoming matted. A washboard should not be used, nor should the soap be rubbed on. Pure soap and an even temperature are essential.

**The Evansville Mob** Successful crime incites to crime. Every unpunished mob breeds another mob. The tragedy at Wilmington, Delaware, has been followed by another greater tragedy at Evansville, Indiana. In the latter case a negro shot a policeman who was attempting to arrest him. A mob took possession of the city; raged unchecked for two or three days; stormed the county jail; and was not finally dispersed until eight or ten rioters were killed and at least one innocent spectator—innocent except for the criminal folly of going to the scene of disorder to look on. There are some parallels and some contrasts between the Wilmington and the Evansville mobs. In both cities a tolerated political corruption, which ought to have been intolerable, drew to the city considerable numbers of shiftless, idle, vicious negroes, ready to sell their votes to the highest bidder; in both cases the universal habit, North and South, of segregating the negroes in negro quarters, made these corrupt colonizers the neighbors of honest and industrious negroes and brought public but undeserved disgrace upon them; in both cases the mob was largely made up of the dregs of the white population, the so-called "poor whites," who are the hereditary enemies of the negro. But in Wilmington the mob was organized and was led by reputable men, as it was not in Evansville; in Wilmington a horrible crime and a judicial delay which amounted to a miscarriage of justice, constituted some excuse for the mob; there was no such excuse in Evansville; in Wilmington the authorities, both State and local, were either paralyzed by the mob or sympathized with it and offered it little resistance; in Evansville both the State and the local authorities showed a determination to preserve peace and a courage in preserving it worthy of all praise.

## Causes and Cure of Mob Law

Mob law is becoming an epidemic in America. For this there are two causes—a vicious courage and an almost equally vicious cowardice. There is in America, especially in the cities and larger towns, a lawless element, to whom a riot is a lark and a broken head no serious penalty. This element is quite as apt to be native American as foreign, and any occasion will serve which gives it an opportunity for an exhibition of its lawlessness. It is not enough to disperse by vigorous measures a mob so composed, even if the measures involve death to some of the rioters, or even to reckless spectators; when it is dispersed, the men who have instigated it should be arrested, tried, and sentenced by expeditious justice to a term of imprisonment at hard labor, which they would respect more than a broken head. Unfortunately, the application of this remedy is rendered difficult by reason of the fact that the orderly citizens and the officials who represent them take counsel of their fears instead of their courage; temporize with the mob which ought to be dispersed at every hazard; acquiesce in the crime which it commits; and are satisfied to leave its leaders unpunished when the violence has spent itself. The apathy of law-abiding citizens is scarcely less responsible for these ever-recurring outbreaks of violence than the passion of the lawless and the criminal classes. It is said, and probably truly, that the majority of the people in every mob-cursed city are "peaceable, law-abiding, kind-hearted people." But this is not enough. They must be also an aroused and a brave people, who dare to face a mob, not only in the street when they have stones in their hands, but at the polls when they have ballots in their hands.

**A Victory for  
Equal Rights**

The lynching of criminal negroes fills a large place in the daily press, and gives to Northern readers an impression that the whole South is pervaded by a passionate prejudice against the negro race. That impression is intensified by the inexcusable and lawless endeavor in some sections of the Black Belt to re-establish slavery under the name of peonage. Meanwhile few readers realize, or, if they do, reflect upon the fact that in all the Southern States the whites are taxing themselves heavily to give their negro fellow-citizens an education as nearly as possible equal to that which they give to their own children; and that they are doing this despite a poverty which puts narrow limits on all education. It is true that there are men in the South who wish to leave the negro race to provide for its own education out of its own meager resources; but their endeavor only emphasizes the fact that they are in a small minority. These facts are illustrated anew by the following telegram which we clip from the New York "Sun":

Atlanta, Ga., July 6.—Advocates of schemes to block negro education by State aid are in a bad minority in the House of Representatives of the General Assembly of Georgia. To-day, after a sharp debate, the House, by an overwhelming vote, rejected the resolution introduced by Representative Byron Dower, of Decatur county, calling for a distribution of the State public school funds according to the taxes paid by the races. This would mean the death of negro education in Georgia, as the blacks pay only one-fifteenth of the taxes, while they get nearly half the funds voted to common schools by the State. Several times attempts have been made to pass laws restricting negro suffrage in Georgia, but each time they have met the same fate as the tax division act.

Equal educational rights are far more important to the negro than equal political rights. In its insistence upon securing to the negro the best education practicable, the South is supplying the fundamental remedy, which is education, for the fundamental evil in the negro condition, which is ignorance. For the benefit of the careless reader it may be desirable to add that education means nothing less than the development of the whole man, as ignorance means nothing less than the undevelopment of the whole man.

**Thanks to Mr. Low**

The country as well as the city of New York owes thanks to Mayor Low for refusing his assent to the hurried passage of a permanent franchise for a tunnel under the North River between Jersey City and New York. It may be that this franchise ought to be granted; that the proposed contract will be mutually advantageous; that the company is prepared to pay the city an adequate price; that the conditions are such—the tunnel being inter-State—as to require a permanent franchise, with provision for readjustment from time to time of the payments to the city; and, finally, that the tunnel is important to the welfare of the city. But it is not enough that this *may* be; there should be such care in deliberation as to make it *sure* that these conditions exist. In this case there was no such deliberation. The great peril to our cities is corruption creeping in secretly in hasty and ill-considered contracts; and it is far more important that all contracts should be so carefully considered as to prevent, not only fraud, but bad bargains to the city, than that any particular contract, however important, should be signed in July rather than in October. Mayor Low, in resisting the urgency of associates whose honesty no one questions, has, under great difficulties, set an example worthy of universal recognition and following.

**The Pope's Fight for Life**

Leo XIII. appeared stronger at the beginning of this week than at any time since the first severe attack, that of Saturday, July 4. On Tuesday morning of last week the Pope's life was generally believed to be very close to its end—indeed there were persistent rumors that death had actually taken place, and dispatches from Rome stated that an official announcement of the fact was hourly expected. The surprising vitality which has excited the wonder of the world was not, however, by any means exhausted. A minor and not very painful operation (the removal by means of a hollow needle of the pleuritic accumulations) gave relief, and later in the week the operation was repeated, again with good effect. Another specialist was called into consultation, although there seemed no evidence that the two

eminent physicians in charge of the case were not doing everything possible. All over the world the most discussed topic of the day was the brave fight for life, and every one, Protestant as well as Catholic, admired the serene, calm, and undisturbed manner in which the Pope faced death, ordered his own affairs, participated in papal and ecclesiastical business so far as permitted, and in an interval of improvement drew his favorite Horace from its shelf and placidly read the "Ars Poetica." The dictum of one of the doctors seemed to express perfectly the only truth as to Leo's condition, "The Pope is ninety-four; he is very ill; all else is smoke." On Monday of this week the opinion was expressed that the Pope might very possibly live at least two weeks, and Dr. Lapponi was quoted as saying, "Yes, the Pope is better; but I beg you not to exaggerate optimism in order to avoid a disillusion later." Nevertheless, preparations continue to be made quietly for the conclave of cardinals which according to ancient custom will meet for the election of a new Pope ten days after Leo's death. Cardinal Gibbons, the only American cardinal, sailed for Havre last week and will go to the south of France, within easy call from Rome. Speculation about the cardinal upon whom the choice of the conclave may fall seems altogether futile; as usual, there are several groups of cardinals, each with a candidate, and there are many interests, political and ecclesiastical, involved. The conditions of the election are such as always to make a compromise more probable than the choice of one of the most prominent faction leaders. There can be hardly any doubt that an Italian will be the next Pope, and this probability is not at all affected by the fact that according to precedent Austria, France, and Spain claim the right each to veto the choice of a particular cardinal.

President Loubet  
in England

President Loubet's visit to King Edward, which occupied almost the first half of last week, was by far the most notable of the recent international courtesies which are believed to carry political results. The welcome to the French President was cordial in the highest degree, and his brief speeches in acknowledg-

ment were not only felicitous but diplomatically suggestive. In reply to the address of welcome at the Guildhall luncheon he said: "The presence at my side of the Minister of Foreign Affairs of the Republic is a pledge to you of the value which the whole French Government attaches to the development of those happy relations of friendship between our two countries." The development of those happy relations, however, is a matter of negotiation and compromise, and it is more than likely that the long conference between M. Delcassé and the British Secretary for Foreign Affairs, Lord Lansdowne, was held to facilitate a closer mutual approach of the two countries concerning important questions still unsettled. Of these the chief are the Newfoundland west shore difficulty, and a further delimitation of the possessions and spheres of influence of France and Great Britain in Africa. It has been reported from time to time that France would consent to relinquish her fishing rights in Newfoundland waters only on condition of receiving compensation in Africa, and the success of Great Britain in the Fashoda affair, which assured her control of the Nile valley, has made her more ready to offer France a *quid pro quo* in other portions of Africa. What England wants is that the west shore of Newfoundland should be free henceforth from the vexatious French rights whose exercise continually angers the colonists and retards enterprise and settlement; that British trading rights in the French Congo should be recognized and secured; and that with Morocco and Tunis things should remain as they are, for strategic naval reasons affecting the Mediterranean. France, on the other hand, while apparently acquiescing in the present status of Morocco and Tunis, wants a further delimitation of West African territory, which should consider French intentions and ambitions with regard to the territory around Lake Tchad, north and east of the newly organized British protectorate of Lokoto. France would doubtless insist upon increased territory in those regions, and might also require an enlargement of her sphere of influence in Siam. If, viewed in regard to world policy, there should result from the negotiations such a *rapprochement* between Great Britain,

France, and Italy as should weaken the grip of Russia, the preponderant partner of the Dual Alliance, upon French finance and upon French foreign policy in the East, it is difficult to exaggerate the important readjustments that would ensue among the world powers.

**The Congo Charges** A vote taken in the Belgian Chamber of Deputies on July 8 shows that the Government of King Leopold will do nothing to reform the administration of the Congo Free State. By a vote of 91 to 35 the Chamber refused to sustain the charges made against Congo administrators, and expressed confidence in the moral development and prosperity of the great African region under their charge. The phrase "confidence in the moral development" is, of course, a rebuke to those who, both in Belgium and outside of it, have repeatedly charged the Belgian authorities in the Congo with odious and exasperating cruelty to the natives. The debate in the Chamber showed a fairly strong minority in favor of reforming abuses, but it was urged that nothing could be done unless the Powers represented at the Berlin Convention, by which the Congo Free State was created in 1885, agreed to change the provisions of the constitution then agreed upon. Belgium having declined to intervene, there is consequently no likelihood of reform, and that reform is needed there is no doubt. It is in the highest degree improbable that the allegations as to cruelty and oppression of natives which have appeared during the last ten years in the public press, in magazines and reviews, as well as in books written specially to expose the existing abuses, should lack some reasonable foundation. American interest in the question is emphasized by the fact that the International African Association, from which the Congo Free State was developed, was first recognized by the United States. The plain inference from the Belgian vote, therefore, is that the cruelties and illegal trade restrictions practised in the Congo Free State will be continued until outside pressure impels Belgian reform, or until a new international convention shall be brought about to accomplish the needed change.

#### Reconstruction in South Africa

Three recent events in South Africa have revealed several phases of progress in the work of reconstruction. On July 2 the Intercolonial Council, presided over by Lord Milner, opened at Johannesburg. Lord Milner's inaugural speech, a brief summary of which appeared in the despatches, declared the financial situation to be reassuring, forecasted steady and certain though not rapid progress, and predicted federation as the inevitable outcome of the new state of things. The statistics by which he supported this optimistic forecast were not given in the despatches; but his recent official report upon the progress of settlement since the war explained the plan and emphasized the success of placing on farms those burghers who, in the latter part of the war, sided with the British or were opposed to the irreconcilables. It was feared on all sides that the difficulty of settling these burghers would be insurmountable, owing to the hatred and persecution of their former comrades; but Lord Milner has solved the problem by placing them together on new lands or in company with British settlers of sympathetic views, and he regards his success as practically assuring peaceable reconstruction. Another grave difficulty has been removed by the acceptance by the Cape legislature of the new preferential tariff scheme which was adopted a few months ago by representatives of the colonies. It was believed at the time that, although Natal, Rhodesia, the Transvaal, and Orange River colonies would give Great Britain a twenty-five per cent. preference on foreign imports, Cape Colony would reject it and thus block the whole scheme. The favorable attitude of the legislature is due largely to the influence of the Premier, Sir J. Gordon Sprigg, who has done much to conciliate the Africander members, though he has alienated many of the loyalists. The result is a good omen for the future, and it has also become known that some of the strongest irreconcilables have modified their attitude since Mr. Chamberlain's visit to South Africa. On the whole, this first official review of the situation since the opening of the mines gives ground for hope, and puts the authorities in a better position to grapple with the labor problem.

**Canadian Railways** Canada is just now entering upon schemes of railway construction unprecedented in its history. Two transcontinental lines, the Canadian Northern and the Trans-Canada, are now being built, and a third, the Grand Trunk Pacific, has just been decided upon by the Government under conditions which mark an interesting departure in railway construction. The Dominion Cabinet, according to the latest despatches from Ottawa, has resolved to build a Government line from Monckton, New Brunswick, to Winnipeg, after which the road will be leased to and operated by the Grand Trunk Pacific for fifty years. The latter company will build the road from Winnipeg to Port Simpson on the Pacific coast. As to the western part of the road constructed by the company, the Government will guarantee the latter's bonds up to seventy-five per cent. of actual cost of construction. On this section the rates charged will be subject to Government control, but on the eastern or Government section the rates will not be too low to prevent the company from paying the annual rental. Construction of the eastern section is to be carried on under a Government commission. The railway will thus present the interesting experiment of a simultaneous competition between public and private enterprise in construction, though in both sections the line will be operated by private enterprise. It proves a suggestive progress in public opinion in Canada toward Government ownership and control of railways, being a departure from the old system of direct land and money subsidies which often enriched and corrupted private corporations at the public expense. It is expected that the whole line will be finished within three and a half years, as the urgent demands of settlement and transportation of grain call for the utmost rapidity in building. The Canadian Northern has been built from Port Arthur nearly to the District of Alberta, via Winnipeg, a stretch of 1,200 miles, and it will be extended either to Bute Inlet or to Port Simpson on the Pacific coast. The Trans-Canada line is in some respects the most interesting of the three. It has been chartered and will be built by private enterprise in an almost direct course from Quebec to the northern end of Lake Winnipeg, thence

west until it crosses the Rocky Mountain range at Pine River Pass, reaching the Pacific coast at Port Simpson. A glance at the map will show this route to be far more northerly than the others, combining the military advantages of a line whose terminals could easily be protected by British fleets, the line being from 250 to 500 miles shorter between oceans than the other transcontinental lines, and much less accessible to an invading force by land. Thus within the next ten years it is expected that three transcontinental lines, exclusive of the Canadian Pacific, will be built in Canada.

**William Ernest Henley** If William E. Henley, who died at Woking, England, last Sunday, had not so large a following of admirers as some contemporary poets and essayists, it must be admitted that the intensity of admiration felt by those who did appreciate his work was unusual. His "Book of Verses" certainly contains evidence of deep feeling and of a rare instinct for poetic form. One poem in particular will long keep Henley's name in mind, the cry of dauntless independence called "The Captain of My Soul," beginning

Beneath the night that covers me,  
Black as the Pit from pole to pole,  
I thank whatever gods there be  
For my unconquerable soul.

Mr. Henley had a long and varied career as newspaper writer, critic, editor, essayist, and dramatist. His reputation as a reviewer was largely gained through notable contributions to the "Athenæum" and "Saturday Review." His friendship for Robert Louis Stevenson was an intimate one, and the two collaborated in four plays; two of these, "Deacon Brodie" and "Beau Austin," had some measure of success on the stage, and are even better as reading plays; the first is a powerful study of criminality in a man of outward respectability, the second a light and playful comedy of eighteenth-century polite society at a watering place. Many readers will remember the perturbation caused in literary circles two years ago by Mr. Henley's curious article on Stevenson; it was doubtless pettish in tone and exaggerated in statement, but it was misunderstood by those who did not

see that Henley's object was not to depreciate the real Stevenson but to protest against what he (rightly or wrongly) considered the mawkish and untrue adulation which obscured the real Stevenson. Mr. Henley's second volume of poems appeared in 1892 under the title "The Song of the Sword," and some years later a collected edition of the poems appeared.

**Emigration from Harput**

Among the demands made by the United States Government upon Turkey, there is one concerning men who have become naturalized in America and who are not allowed to return to their families; namely, that these men shall be allowed to send for their families to come to them. Recently Mr. Leishman, United States Minister at Constantinople, elicited a promise from the Sultan that thirty five families, the heads of which were in the United States, should be allowed to leave Turkey. The list of names was sent to Harput, Asia Minor, the families being in the district of Mr. Norton, the United States Consul there, with instructions to secure passports and to start the families on their journey. Application was made to the local Turkish authorities, but they declined to issue passports without direct and definite instructions from the central Government. On the Consul's report of this, Mr. Leishman telegraphed to Mr. Norton, that if passports were not forthcoming, he should gather the women and children and bring them to the seacoast himself. The Governor of the province was then informed that the families could wait no longer for passports, and that on a certain day they would start for the coast under the protection of the United States Consul. This fact was telegraphed to the central Government, and only then was an order wired to Harput to issue the desired passports. The families were surprised to receive them upon payment of the legal fee of \$2, whereas the general cost has been from \$20 to \$50. The statement that the demands of the United States Government upon Turkey have been conceded by the Sultan would thus seem to be somewhat premature. Negotiations are still pending, and there is some justifiable hope of ultimate success. It is to be hoped that there will be more speedy success in

this matter than there was in securing the indemnity for damages at Harput done during the Armenian massacres. It is disheartening to note that the Turkish Government is still harrying the Armenians. It does not permit them to move about from place to place except by special permission, and these permits are often issued in return for bribes; but even then the Armenian has to provide more than \$200 in additional security that he will not leave the country. It will be remembered that, for a time, passports were given to those who wanted to go to America, but only upon condition that the Armenians should renounce their nationality and promise never to return to Turkey. As this surrender of nationality did not seem to be a particularly painful thing to do, a great many availed themselves of it, upon which the central Government, withdrew it altogether. Clandestine emigration, however, still continues. Some Turks are also leaving their own country, and many Kurds. The latter do not take out passports, but only permits to go to some place near the Mediterranean coast to find work, and when they reach a seaport, a bribe passes them on to a steamer. Turkish misrule is thus evident everywhere.

**The Rhodes Scholarships**

The conditions under which American candidates for the Rhodes scholarships must qualify have been made known in a memorandum prepared by the trustees of the will of the famous South African. The first election of American scholars will be held between February and May, 1904, and those who are successful will begin residence at Oxford in October of that year. A committee has been selected for each State and Territory, and each committee is to make an appointment from the list of those successfully passing the qualifying examination. The latter is not competitive, but must satisfy the examiners that candidates are acceptable to enter on the course prescribed at Oxford. A list of the subjects is published. Applicants must be unmarried, and must be American citizens between nineteen and twenty-five years old. No candidate may compete in more than one State. In view of the numerous inquiries which will be made we publish a list of the authorities from whom information may be

obtained. In most of the Western and Southern States the president of the State university or college is chairman of the committee of selection. For the other States the following chairmen have been named :

Connecticut—President Arthur T. Hadley, LL.D., Yale University.  
 Illinois—President W. R. Harper, Ph.D., D.D., University of Chicago.  
 Kentucky—President D. B. Gray, D.D., Georgetown College.  
 Maryland—President W. A. Remsen, LL.D., Johns Hopkins University.  
 Massachusetts—President Charles W. Eliot, LL.D., Harvard University.  
 New Hampshire—President W. J. Tucker, D.D., Dartmouth College.  
 New Jersey—President Woodrow Wilson, LL.D., Princeton University.  
 New York State—President Nicholas Murray Butler, LL.D., Columbia University.  
 Rhode Island—President W. H. P. Faunce, D.D., Brown University.

In the following States appointments will be made by the chartered colleges and universities in rotation :

California—University of California, Leland Stanford University. Smaller colleges every seventh year.  
 Maine—The order of rotation yet to be fixed.  
 Vermont—University of Vermont, Middlebury College.  
 Washington—The order of rotation yet to be fixed.

#### The National Education Association at Boston

The number of people who were drawn to Boston last week by the meetings of the National Education Association was more than twice that of the normal population of the largest city in the State of Vermont, and about equal to the total population of the State of Nevada. The headquarters were in the buildings of the Massachusetts Institute of Technology, but the buildings of the Young Men's Christian Association, the New England Conservatory of Music, and the churches of the Back Bay were put to service. Meetings were held simultaneously day after day in eleven separate places. The large Mechanics Hall was thronged for the evening sessions; Symphony Hall was utilized for two performances of Berlioz's *Damnation of Faust*; and many other buildings were occupied as committee rooms, reception rooms, exhibit rooms, an emergency hospital, a temporary post-office station, and the like.

To give a complete report of the proceedings of such a convention, even in outline, would require a small volume. It was for the time being a city within a city, all of whose inhabitants were given over to the consideration of the one subject, Education. Men and women, philosophically enduring the heat, thronged the streets. Blue badges, green badges, red badges flashed from trolley cars, on the pavements, in the hotels. Here a group of women, headed by a bearded, rugged man, strolled by in the crowds, wearing gay yellow ribbons, bearing the name "Nebraska" printed conspicuously. There a group guided by an official usher, with bright red sash and epaulets, inspected the old burying-ground by King's Chapel, or examined appreciatively the Shaw monument. Excursions of teachers were manifest in all the environs of Boston, in the Harvard Yard, at Salem, at the Bunker Hill Monument, at the beaches. At the same time audiences were gathered listening to discussions, in the "new Old South Church" on Manual Training, in the "First Church" on Business Education, in the First Baptist Church on Child Study, in the Arlington Street Church on Normal Schools, and in other places on the Kindergarten, on Secondary Education, on Indian Education, and so on up to seventeen distinct topics. And for each topic there was some large or small group of teachers to whom it was of paramount importance as their specialty.

#### The Spirit of the Convention

To the most casual observer the spirit of this remarkable and, so far as the Association is concerned, unprecedented Convention was evidently that of candid, free discussion. The expression of individual opinion, no matter how conventional or unconventional, was to all appearance absolutely unhampered. No session more typically embodied this spirit than that which was concerned with the question of shortening the baccalaureate course and adjusting it to the courses in the professional schools. President Eliot of Harvard, Dean West of Princeton, President Harper of Chicago, and President Butler of Columbia courteously but firmly told one another, in the presence of an audience that crowded

the Central Church, that the baccalaureate course was too long, too short, exactly short and long enough, that it was unnecessary, essential, and partly both and partly neither, that it was fit only for mature minds, that it was adapted only for immature minds, and that it did not matter so much about the minds as about the system; that it was bound up with the future of the professional schools, that it had nothing to do with the professional schools, and that it might be taken sometimes with and sometimes without professional training. This disagreement among the doctors may have been a somewhat shocking revelation to some hearers of the chaotic condition of American education as a system, but it certainly was very strong evidence, on the other hand, that education in America is not suffering from the coma of traditionalism. In the course of the discussion that followed these addresses President G. Stanley Hall, of Clark University, indicated that this very disagreement was a sign of a wholesome condition, as uniformity was not to be desired in higher education; the same freedom which is now pretty firmly established in respect to choice of studies he regarded as quite as desirable in respect to the length of the college course. As President Eliot said in closing the discussion, the intelligent way out of the difficulty is "experiment, continued experiment." With a touch of humor, he included "that most interesting experiment of all . . . continuing the old requirement for a four-year residence." President Eliot, who is also president of the Association, also made, in his presidential address at the opening of the Convention, a fine statement in his "New Definition of the Cultivated Man." This, he said, included sympathetic acquaintance with both nature and humanity, character formed, not in seclusion, but in the world as it is, power to understand and use language, some store, though it may be only a small portion, of human knowledge, and a trained and constructive imagination. One passage is worth quoting for its stimulating ethical quality. In speaking of the mastery of some portion of the store of knowledge, he said:

What portion, or portions, of the infinite human store are most proper to the cultivated

man? The answer must be: those which enable him, with his individual personal qualities, to deal best and sympathize best with nature and with other human beings. It is here that passion for service must fuse with passion for knowledge.

These are words worthy to be bound for a sign upon the hand of academic learners and teachers, and to be written upon the doorposts of college halls and upon university gates.

#### The Legal Aid Society

The Legal Aid Society of New York City has for twenty-seven years been doing, without noise or ostentation, a work of high value and usefulness. The Society is founded upon the conviction that legal justice should be within the reach of all men and women, no matter how poor or ignorant, and grew originally out of observation of individual cases of wrong and oppression of which newly arrived immigrants, unacquainted with our language and customs, were the victims. The work has enlarged, and the Society now employs a corps of lawyers and office assistants, who give their entire time to hearing and adjusting, by advice or by legal procedure, the difficulties of the oppressed poor. The Society occupies four offices in different parts of the city: the main office, on Broadway, through which pass each month from five hundred to six hundred cases, embracing those of all nationalities; the Seamen's Branch, on State Street, which offers legal redress to sailors hailing from all ports; the Rivington Street branch, whose clients are mostly Russians and Poles; and the uptown, west side office, on Tenth Avenue, where the majority of the applicants are Americans and Irish. The large expenses of the Society are defrayed by the annual dues paid by its members, and by outside contributions; but in order that the relation between the Society and the applicant for help may be that of lawyer and client, and not that of complainer and benefactor—that there may be a business and not a charitable basis—a retainer fee of ten cents is charged in each case taken up, and ten per cent. of the money recovered, if that amount be over five dollars. A large number of the cases—from four hundred to five hundred a month, in the four offices—are those for the recovery of withheld wages. The

number of the strong who with impunity refuse to pay to the weak a part of their earnings is almost incredible. The locksmith's assistant, the bartender, the errand-boy, the housemaid, discharged on some slight pretext and denied the \$3 or \$7 due, unable to pay an ordinary lawyer for the recovery of so small a sum, is absolutely helpless unless he happens in some way to hear of this Society, which, for a fee within moderate means, will do all that the law can do, in most cases recovering the amount due. Another class is that of the intelligence office cases, where the victim pays his fee—perhaps his last dollar—on the promise of an immediate "job" in return for it, and is then turned coolly and heartlessly away, boiling with wrath and hatred, but wholly helpless. Then there are the will cases, where the heir to some small but precious sum—perhaps \$100, perhaps \$500, in many cases the result of a lifetime's savings—is enabled to receive his legacy intact, aided by the advice and backing of the Society's lawyers, instead of having it eaten up by unnecessary or unprincipled litigation. There are also the domestic trouble cases, of greatest possible range, and largely brought by women, who without this Society would be without redress. As for the sailors, the stories of the impositions practiced upon them would fill more than one book. Few, in fact, have even the slightest idea of the hundreds of ways in which the poor and ignorant in this city are constantly being made to accept unjust treatment in rebellious but impotent silence; and such of these as learn of the Legal Aid Society and are assisted by it to obtain what is lawfully theirs are made happier and more contented men, and hence better and more desirable citizens.

#### A Fitting Memorial

Not only Boston and Massachusetts, but the whole country, owe a debt of gratitude to the late Charles Eliot for his truly great contributions to the cause of outdoor art and recreation. The great metropolitan park system of Boston and its environs owes its inception, and very largely its execution, to his public spirit, foresight, and skill, and it is fitting that his friends should seek to perpetuate his memory and the history of his connection with the work by some appropriate memorial.

To be sure, as they say, the system itself "is the noblest monument to him," but there should "be some visible record that the people of his own time appreciated the man and what he accomplished in his too brief career." It is proposed, inasmuch as the erection of a monument in the park system would violate the principle which he so strongly urged, to construct the "Charles Eliot Path," encircling the summit of the beautiful Great Blue Hill, so as to disclose the most commanding views. Such a path, with the incidental bridge needed to carry it over one of the ravines, and a bronze memorial tablet, would indeed constitute a most appropriate memorial to one who gave his life to arousing "an intelligent general interest in the opportunities for making the earth beautiful instead of ugly when adapting it to the use of man." Not the least significant feature of the memorial is the fact that it is in harmony with one of Eliot's fundamental contentions that no structure or object, no matter how beautiful or commendable in itself, should be introduced into a system like that of metropolitan parks unless it tends to serve directly the uses for which alone they were created—namely, to provide permanently rural and sylvan landscape for the enjoyment and inspiration of the people. The Park Commission has undertaken to construct the path, and Mr. Eliot's friends propose to erect the bridge and tablet.

#### Education in Municipal Government

The need for intelligent and adequate instruction in governmental matters, and especially in municipal government, is one that has been increasingly felt by educators generally. Appreciating this fact, the National Municipal League has appointed a Committee on Instruction on American Educational Institutions, President Drown, of Lehigh University, as Chairman. This Committee devoted two years of consecutive activity to the preparation of courses, outlines, and syllabi for colleges, and its two reports constitute an important contribution to the subject, and have resulted in stirring up considerable interest, leading to the introduction of courses in municipal government in a number of institutions. A new committee, with City Super-

intendent William H. Maxwell, of New York, has been appointed by the League to consider the question in relation to elementary and high school. This Committee, which is made up of leading city superintendents, supervisors, principals of high and grammar schools, and publicists, has taken up its allotted task with vigor, and has just held a meeting in connection with the National Educational Association to outline an extended inquiry to ascertain to what extent instruction of any kind is given in these branches, what fundamental ideas should be developed, and what text-books are most helpful. The high character of the personnel of the Committee, and the keenness with which it has entered upon the discharge of its duties, give promise of a report of the first importance and value to the schools of the country. If it can suggest a course of study which will produce a more intelligent and enlightened generation of American citizens, especially in regard to their municipal duties, it will have achieved a result of untold value.

#### Women's Christian Work

The eleventh Summer Conference for Eastern college women under the auspices of the American Committee affiliated with the World's Christian Student Federation has just held its session at Silver Bay, Lake George. Nearly six hundred students were present from colleges, normal and private schools. Vassar sent a delegation of seventy, and the numbers of Bryn Mawr, Mount Holyoke, Smith, and Wellesley followed close after. Personal inspiration and practical training in different forms of Christian work are characteristic of the Conference. R. J. Campbell, of London, Dr. Lloyd Tompkins, Bishop Thoburn, Robert E. Speer, and John R. Mott were among the platform speakers. Mr. Mott's recent trip to Australasia and his close touch with the world of students brought a strong feeling of unity with the effort for service all over the globe, while Dr. Campbell's open-minded reverence was a benediction. There were several sectional conferences, each a normal school of its kind. The College Conference furnished hints for organized religious and philanthropic work during the academic year. The

Alumnæ Conference, conducted by Miss Eleanor Brownell, has been particularly valuable in the presentation of various forms of church work by experienced workers, along lines of missionary settlement and Sunday-school work. The Bible classes, led by the Rev. John Timothy Stone, of Baltimore, Mr. Harry Wade Hicks, Assistant Secretary of the American Board, and Miss May Blodgett, used as bases the courses of Bible study outlined by Mr. Sharman and Professor Bosworth for the devotional Bible classes of students. The Missionary Institute has emphasized service regardless of geography, but service where the need is greatest and the workers few. Intercollegiate athletics have filled the afternoon hours, and the spirit of fellowship among the colleges, the deepening of genuine loyalty on the part of alumnæ and undergraduates for the best interests of each college, has been one of the most important features of the Conference. The spiritual impression left is strong, objectively as well as subjectively. The financial session was an unusual object-lesson of spiritualized giving, and the potentialities of these days will show in many other ways in the coming year, both in academic institutions and in church and civic life.

#### Religious Pedagogy

The Hartford School of Religious Pedagogy, incorporated last spring by the Connecticut Legislature, was formerly known as the Bible Normal College of Springfield, Massachusetts, where it was organized in 1885. Its removal in 1902 to Hartford secured it an advantageous affiliation with the Hartford Theological Seminary, through which, with no organic connection of the two institutions, each of them is open to students in the other. It is now admitted by leaders of Sunday-school work, though not with uniform appreciation of the fact, that sound pedagogical method is requisite for wise religious teaching; that the teacher of religion needs training in right methods no less than the teacher of language. What the normal school and the teachers' college do for teachers in the public schools, such institutions as the Hartford School undertake to do for the teacher of the church school. Every year witnesses an increasing demand for well-

trained superintendents, secretaries, and teachers. The field of training includes four departments—the Bible, the Child, the Home, the Teacher. These are covered by a three years' course for persons intending to make religious teaching their life-work, and a course of one year for others. The three years' course is not less exacting in its requirements than that of the theological seminary, from which it is differentiated by the stress laid upon teaching. Where such a school is affiliated with the seminary, each is complementary to the other, and the best-prepared ministers are likely to be those who have had the advantages of both and are thus equipped on all sides.

## Peonage

One of the strongest arguments against a falsehood is a fair presentation of the strongest showing its advocates can make for it. For this reason we transfer here to our columns from the New York "Herald" a reported argument for peonage as an "economic necessity," attributed by the interviewer to a Georgia planter. After saying that if he were to discharge an idle or incompetent laborer, the whole family connection, from thirty to sixty people, "would skip, and half a dozen such cases of discipline would paralyze the plantation," and that therefore whipping of lazy laborers is necessary, the interview proceeds as follows:

"But you never did whip a negro, of course?"

"Yes, I have. We have to do it once in a while. A negro ran away from me and hid on the next plantation, eleven miles away. I went after him with my negro foreman. I took him out of a cabin with a revolver in my hand and drove him home. There I took it out of him with a buggy whip, while the negro foreman held him. That sounds very shocking to you, no doubt, but I am telling you the fact. If you were the only responsible white man on a plantation and were surrounded by more than five hundred negroes of the most debased and ignorant character, who cannot be reached by any moral suasion, who are influenced by neither gratitude nor resentment, you would go to the field every day with a revolver in your pocket, as every one of us planters is forced to do, and you would either maintain discipline in the only way the negro understands it, or else you would give up your plantation to your creditors or your executors, as the case might be."

A little further on in the same interview we find another statement of the same doctrine:

"Whether Judge Jones has declared this law constitutional or not, the planters in the black belt will have to maintain their right to reclaim their contract labor, or else they will have to go out of the business. Under any other system you would find it impossible to get in your cotton, because the negroes at the critical time would simply sit down and refuse to work. When they are well, we compel our laborers to go to the field by force. This is the truth, and there is no use lying about it."

It is not true that compulsory labor is necessary to the cotton industry. Experience has demonstrated that intelligence and hope are better incentives to industry than ignorance and fear. Some of the best cotton in the South is raised by free labor. The difficulty in the Black Belt is the incompetence of the planter even more than the ignorance of the laborers. If the planter does not know enough to carry on a cotton plantation with free labor, he should go out of business. That is the resolve of the Nation; and the sooner the peonage planters understand that resolve, the better for them and for the country.

But if it were true that cotton cannot be raised by free labor, it would not alter the resolve of the Nation. If we cannot have both cotton and liberty, we will have liberty and get along without cotton. The argument of the peonage planter is the argument of the sordid money-getter in all sections and at all times. "We must close our mines and factories if we cannot employ children," is the argument for child labor. "We cannot get an adequate return for our money if we are compelled to build sanitary houses," is the argument of the coffin-building landlords. "We cannot compete with the shrewd and shiftless Jews, therefore their massacre is an economic necessity," is the argument of Kishenev. And the answer is always the same: manhood is worth more than money. It is better that the factories fail and the children live; better that the landlords go to the poorhouse than that the tenants be carried to the cemetery; better to endure debt than to commit murder. It does not alarm the lovers of liberty in the least to be told that if the peonage planters are not allowed to whip their laborers they will go out of the busi-

ness. On the contrary, the Nation has resolved that they shall go out of the business as at present conducted. Philistines to the contrary notwithstanding, when money is put in one scale and manhood in the other, manhood always outweighs money. Peonage is simply slavery under another name; and its re-establishment on this continent is prohibited alike by the Constitution and laws of the United States, by the moral sentiment of the South, and by both the moral and the labor sentiment of the North. These forces are more than sufficient to overcome the "economic necessity."

The best sentiment of the South is resolved against peonage. Bitterly has the South suffered the curse of slavery. Great is the price it has paid for redemption. The peonage planters are a very small minority in the South. It is true that they are acting under color of law; true that justices of the peace and local policemen have helped them to enslave American citizens. But it is also true that it is the voice of the South which, in the person of Judge Thomas G. Jones, of Alabama, has declared this law to be as palpable a violation of the Constitution, both of the State and of the Union of States, as it is of the principles of liberty and humanity. His judicial decision is interesting reading; to the peonage planter it should be very valuable reading.

Peonage violates the Constitution of Alabama, which declares that "all men are equally free and independent, and are endowed by their Creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness." It violates the Constitution of the United States, which guarantees the right of every citizen to be free from slavery or involuntary servitude of any kind, except upon punishment for crime. It violates the fundamental principles of equity, because "it is designed solely in the interest of the employer or landlord," and "gives the renter or laborer no unusual recourse against his employer or landlord, while it in effect, though not in name, pronounces practical outlawry in favor of the landlord against the laborer or renter." Such a law, so palpably in violation of the fundamental principles of the Commonwealth, affords no protection to those who plead it as a justification for their wrong-

doing. No magistrate is liable for mistakes of judgment; but on adequate evidence that the machinery of the law has been corruptly used for the purpose of enslaving freemen—and such appears to have been the case in more than one instance—"such magistrate or other judicial officer cannot escape criminal responsibility to the United States for the conspiracy and its natural and designed effect."

That this judgment of Judge Jones expresses the best sentiment of the South we do not doubt; as little do we doubt that it represents the sentiment of both the State and the National administrations. Unless we are greatly mistaken in his character, the Governor of Alabama is as little inclined to indorse the peonage system as is Judge Jones; and certainly the President will not be more complaisant toward it. Neither Pierce, Fillmore, nor Buchanan is in the President's chair. Inhumanity to man always arouses President Roosevelt's indignation; and he has it in large measure when it is aroused.

And his indignation would represent that of the Nation. Especially among workingmen, North and South, whether they work with brains or hands or both, there will be little patience with any legal system which leaves employers free to break their contracts, and makes it a crime, punishable with slavery, for workingmen to break theirs. Already in Georgia three peonage planters have been convicted, and have had their sentence suspended by Judge Speer "during good behavior." In Alabama, under Judge Jones's instructions, ninety-nine indictments have been found by the Grand Jury, and one peonage planter has been brought to trial, convicted, and sentenced to five years' imprisonment in the penitentiary. The reader should recollect that these cases have been tried in Southern courts, and these verdicts rendered by Southern juries. We do not suppose that *The Outlook* has among its subscribers many peonage planters. But if we could reach them, it would be to counsel them, in their own interest, to abandon this system without delay. The determination of the best men in the South, reinforced by the Administration and the free-labor sentiment of the Nation, is not one to be disregarded with impunity.

## Negro Graduates

About six weeks ago a Southern correspondent wrote to us calling our attention to a letter in the Washington "Post," by Mr. Gordon McDonald, a lawyer of Montgomery, Alabama, the spirit of which is indicated by the following extract from it: "Living in Montgomery, a county adjoining Macon, wherein Tuskegee is situated, I speak whereof I know, in saying that for one genuine, hard-working husbandman or artisan sent into the world by Washington's school, it afflicts this State with twenty soft-handed negro dudes and loafers, who earn a precarious living by 'craps' or petit larceny, or live on the hard-earned wages of cooks and wash-women whose affections they have been enabled to ensnare. The girls graduated at this school are taught to scorn hard work, while their poor mothers toil over the wash-tubs and cook-stoves, that their daughters may be taught music and painting, and to rustle in fine dresses in a miserable imitation of fine ladies."

This statement was contrary to the opinions entertained at the Outlook office, and contrary to incidental information obtained from various sources, among others a personal visit to Tuskegee Institute by one of the staff; but the letter appeared in a reputable paper and was signed by its author. The Outlook, therefore, sent a representative to make inquiries as to the facts, that it might give the results to its readers. The representative called upon Mr. McDonald, who was at the moment unable to give any more definite information. He declared that he had known many graduates of Tuskegee brought into court upon criminal charges, though he could not give names; that his wife could give the names of women graduates who had been taught to scorn hard work while their poor mothers toiled over the wash-tubs and cook-stoves, and he promised to furnish names and details at a later interview. A second interview brought no results. A third one brought this information: "My wife mentioned one old woman thus afflicted, but does not wish me to reveal her name, for fear of hurting the old woman's feelings. But there are hundreds of such cases here, of which everybody in Montgomery is aware. It is a matter of common noto-

riety. I cannot give their names, but every one knows about them." But no information was furnished as to Tuskegee graduates brought before the courts under criminal charges. A fourth interview produced no better results. Then our representative decided to investigate the court records for himself. As a result, the names of three men were given to him, one indicted September, 1897, for burglary, one in April, 1897, for grand larceny, and one in April, 1903, for robbery. But on going back to Tuskegee for the purpose of identifying the persons whose names were thus given, he discovered that none of them had been students at the Institute. The result of The Outlook's investigation, then, is this:

Mr. McDonald thinks he knows of one old woman whose daughter is idle, but declines to give her name for fear of hurting her feelings. On this information he bases his statement, "I speak whereof I know in saying that for one genuine, hard-working husbandman or artisan sent into the world by Washington's school, it afflicts this State with twenty soft-handed negro dudes and loafers."

Our representative, however, did not stop his investigation here. He went carefully through the catalogues of Tuskegee Institute, and made a note of every man and woman who had received from that Institute an academic diploma or industrial certificate, whose residence was in the city of Montgomery. He also made a note of many others who have received neither certificate nor diploma, but who have pursued their education at that Institute. He found that there were residing in the city of Montgomery thirty-eight ex-students of Tuskegee, graduates and others. He personally investigated the present condition of each one of these ex-students, and he has sent to us his report concerning them. From his report we take at haphazard his account of the conditions of a dozen of these ex-students. The other accounts are equally creditable:

J. W. P., class of 1889, is farming. He controls 150 acres, owns five head of cattle, and teaches school six months in the year.

J. T. learned sewing and dressmaking at Tuskegee. She lives with her brother on South Ripley Street, working at her trade, and has all the work she can do.

Mrs. W. T. is the wife of a man employed in J. P. Adam's store. They have a good

religious experience has often been supposed to be religious education. But religious education is more than the deepening of religious experience. It may include instruction in dogma; it may include the deepening of experience; but if it is real education, it must be concerned primarily with the development of the complete life.

This is the problem that is peculiarly the religious problem of this day and land. A democracy must seek for the solution of its religious problems, like that of its political and social problems, in education. Only as religious education, as distinct from dogmatic instruction on the one hand and cultivation of the emotions on the other, is achieved will the religious questions of the age, even such pressing ones as those concerning the authority of the Bible, the overcoming of superstition, and the union of the Church, find answer.

## A Viking of To-day

Somewhere off the coast of Labrador this time of year there is a steamship called the *Strathcona* cruising about among the fishermen. In command of this vessel there is a young Englishman, an Oxford man, bronzed, athletic, who is not only a surgeon, a friend and pupil of Sir Frederick Treves, famous as surgeon to the King, but also a certificated master mariner, a founder of a system of co-operative stores, an explorer, an agent of Lloyd's, the great maritime insurance institution, an author, whose book, "*Vikings of To-day*" (bearing the imprint of Marshall Brothers, London), is full of stirring anecdote and human feeling. He combines all his functions in meeting the opportunities of the one office, Superintendent of the Royal National Mission to Deep Sea Fishermen. This surgeon-mariner, unconventional missionary, rugged, enterprising, modest, so forgetful of self that he would be likely to resent being termed unselfish, adventurous, brave, indefatigable, is Dr. Wilfred T. Grenfell. In another column he tells something of what it means to be a surgeon "*Among the Deep Sea Fishermen.*"

The inhabitants of Labrador subsist on "fish," which is the legally recognized term there for cod. During the summer

the population more than doubles, for then is the fishing season. But whether it be summer or winter, the people suffer hardships of peculiar severity. In the first place, storm and snow, merciless ice and rocks unite in bringing disaster to ships at sea and settlements on land. In the second place, the isolation of the fisher settlements on a barren soil renders the fisher folk absolutely dependent upon the traders for supplies of food, so that it has been usual for next year's catch of fish to be mortgaged in advance in payment for this year's food. In the third place, the fishing fleets have been accompanied by vessels selling grog and pandering to worse vices than drunkenness. To the need occasioned by accident and disease Dr. Grenfell brings an answer with medicines and bandages, surgical instruments, physicians, nurses, hospitals, and a hospital ship. To the pauperism and destitution brought about by the abominable "truck system" Dr. Grenfell has brought relief by establishing co-operative stores. To the challenge thrown down by the grog vessels Dr. Grenfell has replied by supplying games, wholesome amusements, and the tobacco the fishermen demand, in vessels that are veritable, though unconventional, "mission ships."

If there is any better preaching of the Gospel of Christ in the world than this we do not know it. The evidence of its character is almost literally that which Jesus gave in answer to the disciples of John the Baptist. The blind receive their sight, those crippled by wreck and exposure are restored to usefulness, those stricken with disease are healed, those who are in the power of death are raised to life, and the poor are relieved and have good news told them. And blessed is he, whosoever shall not be offended by such preaching. As Sir Frederick Treves has said in his comment on Dr. Grenfell and his work, the spirit of daring that fired the hearts of old-time adventurers is still active; for "the modern rover of the sea differs from his predecessor in little save the motive of his expedition." Indeed, even in his motive he does not differ from some of his predecessors; for it was the same motive that made adventurers of St. Paul, of St. Columba, and of Count Zinzendorf.

## Both Creditor and Debtor

The joy which comes from a sense of the breadth and depth of the love of God for his children is more widely felt to-day than in the years when men were in bondage to the fear of God's wrath; but in every age there have been those who have divined the fullness of the infinite love, even when the thought of the time limited and circumscribed it. Good Bishop Hall, whose "Meditations and Vows" are full of devout thought and peace of spirit, knew in whom he believed and was at rest. Thomas Fuller said of him that he "was commonly called our English Seneca, for the pureness, plainness, and fullness of his style. Not unhappy at Controversies, more happy at Comments, very good in his Characters, better in his Sermons, best of all in his Meditations." A little younger than Shakespeare, he was the contemporary of the great group of Englishmen who enlarged the world of action and of thought as well, and by the range and vitality of their deeds and words gave life a wider meaning. In such an active age, the tide of energy at the flood, the Bishop of Exeter and of Norwich kept the faith with the simplicity of a pure heart, and found his strength in those secret places where the holiest natures are nourished. He was still a young man when the "Meditations and Vows" were published; but he had learned much, for he tells us that he made them "not for the Eye, but for the Heart."

The spiritual insight of this seeker after God is revealed in a passage so full of truth and of strength that, brief as it is, it may stand by itself as a statement of the fullness of the love of God:

"It is a wonderful mercy of God, both to forgive us our debts to him in our sins, and to make himself a debtor to us in his promises. So that now, both ways the Soul may be sure; since he neither calleth for those debts which he hath once forgiven, nor withdraweth those favors and that Heaven which he hath promised: but, as he is a merciful creditor, to forgive; so is he a true debtor, to pay whatsoever he hath undertaken. Whence it comes to pass, that the penitent sinner owes nothing to God but Love and Obedience, and God owes still much and all to

him: for he owes as much as he hath promised; and what he owes by virtue of his blessed promise, we may challenge. O infinite Mercy! He that lent us all that we have, and in whose debt-books we run hourly forward, till the sum be endless; yet owes us more, and bids us look for payment."

## The Spectator

Wanted—a lost word and a lost recreation! Every one knows how elusive the right word is at times, and how we vainly attempt to find it by a dozen well-worn methods of suggestion, often abandoning all to let the mind settle and, in the clearing process, come to its own. The Spectator's lost word, however, is not one of the kind which thus disappears from memory; it stays by him only too faithfully. His trouble is that he cannot "place" it; nor can his friend to whom he is indebted for it.

"I've found a new word and a new amusement for you," said this friend the other day. "It's seradipity." The Spectator acknowledged that he didn't recognize the article, and craved enlightenment. "I don't know exactly what it means," was the answer, "but it's an amusement. I know that because I found it given among the *Recreations* attached to the brief biographies of 'Who's Who.' I'll show it to you." But for once the tenacious memory of the Spectator's friend failed him; he could not recall the famous man who had invented this remarkable recreation. And after glancing over a number of the 1,532 pages of "Who's Who," the Spectator also finds it not. His confidence in his friend's memory, however, is not shaken. That word, or something like it, will yet turn up.

Incidental to his search for "seradipity," the Spectator had an hour's amusement in learning what amuses other folks, as described by themselves in the pages of "Who's Who." In the first place, he notes an international difference. The English book of that name, which is the one here referred to, apparently regards a man's or woman's recreations as a matter of special significance; the Ameri-

can "Who's Who" does not report them. Probably most Americans are still somewhat reluctant to admit in print that they have any amusements; it would seem that they did not take life seriously enough. An occasional American, however, finds his way into the pages of the transatlantic "Who's Who," and is not unwilling to let his English cousins know that he too can unbend. One notices that many Americans find it difficult to "sink the shop" even in their recreations. That dean of American printers, for instance, Mr. Theodore De Vinne, has for his recreations: "Books and prints"! Another American, Edgar Saltus, gives as his only recreation, "Work." How much pleasanter it is to read of the habits of athletic Englishmen such as, for instance, C. J. Longman, of the well-known publishing firm, who is put down as the champion of England at archery, and as a devotee of football; Arthur J. Balfour, "Captain Royal and Ancient Golf Club, President Cyclists' Union, Motorist;" John Burns, the labor member of Parliament, whose recreations are "cricket, skating, rowing, boxing." But as a boxer John Burns might not be in the same class with our own Drexel Biddle, Philadelphia publisher, whose only recreation is given as "boxing—boxed exhibition bouts with many of the leading professional pugilists; encountered Robert Fitzsimmons, ex-champion heavy-weight pugilist of the world, for three rounds at the Pen and Pencil Club, Philadelphia, 1894."

⊗

Some of the more amusing or characteristic of these entries under the head of Recreations the Spectator notes at random, as follows: Israel Zangwill, "All forms of locomotion except ballooning." Lord Roberts, "Hunting, bicycling." Herbert Spencer, "Was given to salmon and sea-trout fishing until prevented by ill health." Sir Robert Giffen, "Whist and chess." Julia Ward Howe, "Reasonable society, music, club meetings." George Meredith, "A great reader, especially of French literature; has in his time been a great walker." George Bernard Shaw, "Anything except sport." (This should perhaps be accompanied by the preceding sentence as an explanation: "Diet—vegetarian.") Tommaso Salvini, "Very fond of billiards." Poultney Bigelow, on the

other hand, "No indoor sports." Sir Henry Irving, "Acting" (another illustration of a man's inability to get away from his work). Thomas Hardy, "Cycling, architecture." Father Ignatius, "Eight services a day in Llanthony Abbey Church." Miss Jeannette Gilder, "Loafing in Europe." John Burroughs, "Walking, fishing." Sir Charles Dilke, "Rapiier fencing, light-pair rowing, best-boat sculling, riding." Lady Dilke, "Riding, book-collecting." Mrs. Humphry Ward seems to have no recreations, but her husband is addicted to "shooting, formerly cricket." The Countess of Warwick has "the encouragement of gardening as a hobby; is an expert horsewoman; hunts with Warwickshire and Essex hounds; both at Warwick Castle and Easton Lodge has established a complete organization for welfare of poor and nursing of sick; is a great reader; reads every important new book." Major-General Eardley-Wilmot, "Polo, cricket, shooting, fishing, pig-sticking, tent-pegging, lime-cutting." The two last-named amusements seem to have the flavor of novelty to an American. But they are a long way off from seradipity.

⊗

One of the strangest revelations of character here given is that of General Weyler, formerly of Cuba, now of Madrid. His gentle spirit finds refreshment in "country life, and (most favourite) riding; he does not smoke nor drink spirits; he is not fond of bull-fighting, very little of music, theater, and all public recreations." A Spaniard, and not a smoker or drinker! A Weyler, and not fond of the bull fight! Perhaps it is true, however, that soldiers like to get away from suggestions of gore in their recreations; it seems to be so in the case of another soldier of better reputation, namely, General Baden-Powell, who amuses himself with "ballooning, yachting, and cycling," as well as with shooting. The Spectator will close his quotations with one about a war correspondent of some note, Mr. Charles Williams, who recreates himself with "fishing, photography, ritual, reading, naval trips." Pray what precisely may "ritual" mean in that connection? The Spectator would include this among the unsolved problems suggested by his search for the elusive amusement.

# Among the Deep-Sea Fishermen'

By Wilfred T. Grenfell

**I**N 1883, while I was studying medicine at the London Hospital in White-chapel, I was attracted by a huge crowd going into a large tent in the slums of Stepney. There was singing going on inside, and curiosity led me in.

As I left with the crowd, I came to the conclusion that my religious life was a humbug. I vowed in future that I would either give it up or make it real. It was obviously not a thing to be played with.

I was then playing on several athletic teams, and confess that the idea of a sneer and a cold shoulder had no attractions for me, and it had never occurred to me that popularity might be too dearly paid for at the price of my own independence.

Some time later I heard that one of England's famous cricketers, whose athletic distinctions I greatly admired, Mr. J. E. K. Studd, was going to speak in the neighborhood, and I went to hear him. Seated all in front of me there were two or three rows of boys from a training-ship, all dressed in the same uniform. At the end of his speech Mr. Studd invited any one who was not ashamed to confess that Christ was his Master for this life, rather than a kind of insurance ticket for the next world, to stand up. I was both ashamed and surprised to find that I was afraid to stand up. I did not know I was afraid of anything. One boy out of all this large number rose to his feet. I knew pretty well what that meant for him, so I decided to back him up and do the same.

With this theological outfit, I started on my missionary career. What to do was the next question. I went to the parson of a church where I occasionally attended, and offered myself for a class of boys in his Sunday-school. They were down-right East Londoners, and their spiritual education needed other capacities than those I had, in my mind, till then endowed the Sunday-school teacher with. I remember being surprised that one boy, whom I carried to the door by the seat

of his trousers and heaved into the street, objected by endeavoring to kick, while his "pals" in the school were for joining him in open mutiny. He got the last word, however, by climbing up outside the window and waving a hymn-book which he had stolen.

The next time I arrived the boys had got in before me (and out also), and the pictures and furniture were not as I had left them. I started to reform them in the ways that appealed most to myself, and, having a house of our own, with four other medical students, we used to clear our dining-room furniture through the window, and replace it with a horizontal bar and a couple of pairs of boxing-gloves. We were able to lead in these things our noisiest boys, and they learned to control their own tempers and respect our capacities more.

We amalgamated with the boys also for the purpose of escaping together from the slums when the summer holiday came on. After my first experience of some of my poor lads' masters, we felt like starting a physical missionary enterprise of a different kind for their behoof.

We hired a car and went to North Wales, taking with us tents, etc. The simplest possible outfit of food and clothing was provided. The boys developed in every way—one, indeed, bloomed into the strong man in a traveling circus.

My medical course being finished, I began to cast about for some way in which I could satisfy the aspirations of a young medical man and combine it with a desire for adventure and definite Christian work. Sir Frederick Treves, the famous surgeon, also a daring sailor and master mariner, who had twice helped us at our camps, and for whom I had been doing the work of an "interne" at the London Hospital, suggested my seeing if a doctor could live at sea among the deep-sea fishermen on one of the vessels of the Society of which he was a member of the council. Work in the London docks had made me familiar with the sailing vessels that one associated with "deep sea" voyages, and I innocently went to the east coast expect-

\* An explanatory statement about Dr. Grenfell's personality and work among deep-sea fishermen will be found in an editorial on another page.—THE EDITORS.

ing a two-thousand-ton vessel. Only a fear for my reputation prevented my backing out of it when I stepped aboard a fishing-smack of sixty tons burden—about the size of a canal barge.

The idea of the mission was to preach the Gospel to these men of the sea, whose inclinations did *not* lead them to prayer-meetings when, for a few days, after months at sea, they patronized the land. Before one of their smacks, on arriving in port, had heard the last of her anchor-chain running through the hawse-pipe, some one was over the rail—and that some one was not a missionary.

To complete the circle, grog vessels had found their way to sea and accompanied every aggregation of vessels. They were known by the genial name of "hells," for they pandered, whenever a man could leave his ship, to every lust of a strong nature.

The indescribable scenes on these vessels almost passed belief. A number of skippers had been drinking all one night. A quarrel arose while they were sitting half intoxicated in the cabin. One man threw the lamp at another, and the paraffin quickly soaked his clothes. My informant told me: "Bill wuz spread snorin' on the floor, 'is jersey soaked in paraffin, when one of 'em threw the match 'e wuz a-lightin' his pipe with on 'im. Bill wuz a mass of flames in 'arf a minute. Swore like —. 'E cleared up on deck and I wuz jus' in time to see 'im jump over the rail. . . . No, we never saw any more of 'im."

The outlook for success in a "mission" ship was not very encouraging. Generous prophets predicted a three months' existence when a small smack was hired by a few independent laymen and was sent to sea with a net alongside to help her to maintain herself. She had no missionary on board except the skipper, whose best qualification was that he had been turned out of his own vessel because he had refused to fish on Sundays, though he was a well-known successful fisherman. He had preferred to walk about on the quay, and see his children hungry, to surrendering his principles and doing that which he believed to be wrong. There were not *many* such men in the fleets in those days. To encourage him, the necessary qualification for success was engraved on his

wheel: "Jesus said, *Follow Me . . . and I will make you fishers of men.*" To solve the problem of fishing on Sundays he was told he must catch more fish in six days than any one else did in seven—which he did, and that this is possible twenty years' experience of many mission fishing-boats has never failed to confirm.

The skipper's first sermon was preached in this wise: The admiral of the fleet and three burly skippers had come aboard to inspect the new arrival, and had given it as their solemn opinion that what fishermen wanted was not "this 'ere cant, but more whisky." For a fisherman is always dry inside, if he is wet out. The skipper got them below, showed them the cheerful bright cabin, treated them to the most generous pot of tea that they had had for a long time, and then produced four long, well-knitted, and warm mufflers.

"Look yere, Joe," he said to the admiral, "do y' see them 'ere mufflers?"

The admiral took them and overhauled them. "What do they cost, Bill?" he said.

"If ye like 'em, I'll give 'em ter ye, on one comdishment."

"What's that?" said the admiral.

"W'y, that ye'll admit there is love in 'em, fer the ladies as knit them 'ere mufflers never seed yer, did they?"

"That's right," said the men.

"W'y, then, they must 'ave loved yer to send yer these mufflers."

"That's right," they all chimed in.

"Well, then, there ye are—take 'em."

The four men took the mufflers and thanked the skipper, whereupon he replied, "'Ow much more must Jesus Christ 'ave loved yer, when 'e gave 'imself for yer!"

If sermons are to be valued by their success, this was a great sermon, for three men not only admitted it as a theory, but before leaving the ship that night, after tears had stained those bronzed cheeks, to which they had been foreign for many a year, they decided to try and return that love, and to the day of his death Joe Quester, admiral of the "Short Blue Fleet," was an effective missionary among his admiring followers.

There seems to be a love of music in all those who do business in great waters, and this has been turned to good account in attracting men to the mission vessels.

I have heard the solitary watch, as he jumped up and down by the mast during the long hours of a wintry night, while the wind was howling through the cordage and every now and then the top of some watery mountain struck the ship and left her shivering like an aspen, singing to himself, hour after hour.

The men love getting together for singing. When the bulkheads between the cabins were removed, and the large hold thus made was crowded with men gathered round the rolling harmonium, balancing themselves on seats made of fish-boxes, their stentorian voices raised a pæan of praise, which did not jar on one's ears, though some did not know the tune, and, unwilling to be left out, were impressing the nearest tune they did know into the service.

Cheerful reading matter, especially pictures which all can read, was an attraction to the men, and so was always kept on the mission ship. Checkers, or draughts, is a great fishermen's game. They have regular "checker tournaments" and "checker clubs," so these in plenty and other simple games were provided to help to lure the men under the influence of the mission ship and to solve the question of the long hours in calm weather formerly devoted to "sprees" on the grog ship. But there was one influence fatal to complete success. Deprived of almost every form of relaxation and luxury, almost all the fishermen used tobacco. This could be bought off the floating grog-shops for thirty-five cents a pound, as it paid no duty, most of these vessels being from Holland or France. Work as the skipper would, there was ever a stream of visitors to the grog vessels for tobacco, and it must indeed be bad weather when a fisherman wouldn't throw out his boat to board the grog-shop if he wanted tobacco. I have seen them do it more than once in a double-reef breeze.

What could be done to turn the tide?

Things reached a climax at last. A young Yorkshire skipper who had left a wife, two young children, and a happy home on the land—himself pledged not to touch the liquor—had weakly visited the grog vessel to get tobacco. He was at once asked to drink, but refused. He was dared. He refused. He was dared to take "von leetle drop." In a fatal

moment he mistook what real courage meant, and tossed off a glass of aniseeded brandy. Alas, it didn't end there!

At night, as he had not returned, and the wind was rising, his mate came for him, and the crew of the grog vessel dumped the now unconscious skipper into the small boat. With great difficulty the crew dragged his insensate body on to his own vessel and laid him in the lee scupper to cool off, while they reefed the ship down to meet the threatening storm.

A little later the spray driving over the ship roused the skipper, and, staggering to his feet, he came aft to the tiller. "Give us the tiller, Ben," he said. "No, no, skipper, you are not well enough to steer. Go down and turn in; we'll look after the ship." "Give us the tiller," roared the skipper; "I'll steer the old ship to hell if I like." He had scarcely seized the helm when a sea struck the rudder, she kicked, and the tiller, catching him in the belly, flung him over the side.

He was lost in the darkness, without a sound.

Sadly, with flag half-mast, the craft picked her way homewards, and the mate had the duty of telling the wife that her children were fatherless and that her fine young husband had found a drunkard's grave at sea.

Efforts were at once made to get the British Government to allow the mission vessels to clear for the high seas with tobacco in bond. Permission was refused, so, to enable the ships to compete with the grog vessels, a consignment of tobacco was sent to Ostend. A mission ship was detailed to leave her fishing-gear at sea and run in as a trader and fetch it.

Some reliable fisherman in each fleet where there was no mission ship accepted the responsibility of a supply for his fleet, thus preaching the Gospel in one of the only ways he could. A fathom and a half of blue bunting on his foretopmast stay was the text he preached from; it was called "The Tobacco Flag." He was instructed to sell it at twenty-five cents per pound, which just paid the expenses, and also to lay as far away as possible from the grog vessel, that men coming for the cheaper tobacco would not be able to visit the grog vessels the same day.

The measure met with complete success; the tide of men was turned to the mission

ships, and the day of the grog vessel was closed. The Government, recognizing the great value of the work, now gave the required permission for a bonded store, and this was soon followed by an international convention permitting a gunboat of any nation to search and seize any vessels selling liquor on the high seas. A faddist once reasoned with the skipper about the wickedness of selling tobacco. "You ain't tried it," he replied; "it's the best 'baccer anywhere."

It was very soon found that a still further incentive to bring the fishermen aboard could be found in a small dispensary added to each ship. Concentrated mixtures plainly labeled for their purposes were supplied. The skippers were sent to London, and not only were trained to take the ambulance certificate, but were sent to hospitals and taught how to attend minor ailments. The fisherman has an inordinate love for medicine, and especially for anything that sticks—in the way of a plaster. This tendency was turned to good effect.

One day aboard a ship I moved a sailor's long boot; a bottle of medicine fell out which I had given him an hour or so previously. I asked him, "Why do you keep your medicine in your boot, skipper?" "Lest the other men should find it out; they drank the other bottle you gave me before I had a chance."

Serious cases were sent, lashed on a newly invented stretcher, by fish-carrier to London. More than once I have admitted to the London Hospital injured men who had thus traveled up for several days, and had been carried from ship to ship, over a rough sea, and eventually landed at Billingsgate with the fish.

Creditable as the results were to the mission skippers, it was a patent fact that in the larger fleets a doctor was the only efficient preacher in this line, so when it was found that doctors could live at sea, larger vessels were built, a hospital added below decks, and quarters provided for a mission surgeon.

I must not forget, however, that which, most of all, makes it easy for a fisherman, shy as he is, to begin an acquaintance with mission folk, especially a man whose notorious life would have been a bar against his coming aboard "one of them Gospel ships" at all. This was the fact

that in the mission ship all were brother fishermen. Many a man has first come aboard, as he said, "to lend a hand scrap-in' down the spars" or "to give yer an hour mendin' the net" that had been torn in the night, or to "lend a hand to clear up the fish"—using an excuse that made him feel that he had a right to come.

The factor which helps largely to take a fisherman into a saloon is the five cents in his pocket; it gives him a *right* to go. This, too, has been turned to good account by the mission on the land. For the work begun at sea had to be supplemented by Homes on the land, where the men had a right to go. Each of these Homes was influenced and inspired by some consecrated Christian lady, who voluntarily came and lived near it, and so lent the influence of a good woman (a most powerful factor in influencing sailors). But the caretaker was always a fisherman steward, who had graduated with first-class honors on a mission vessel at sea, a man who, the fishermen knew well, *really loved* to listen to their conversation about fish—fish—fish—or, say, the direction of the wind ten years before. No landsman but would be bored in time by it. Our object was to provide, not for what pleased us, but what would attract them. The Home was theirs. They had a *right* to go in and *buy* the refreshments there offered, and pay for a bed not attached to the saloon, when, as was often the case, their own home was in the country away from the sea. They could rent and be conscious owners of a locker to keep their "store clothes" when they were fishing out of some port alone, away from their own wardrobes.

When the steam fishing vessels began to replace the more picturesque yawls, the mission had either to follow suit or fall astern. It has at sea, at the present moment, besides ten other vessels, four large hospital steamers, three having cost over \$60,000 each. The best testimonial to the social revolution that has been so long taking place has been from the police magistrates and the police themselves. Encouraged by results in 1892, I was loaned the largest of the sailing vessels, a craft of ninety-seven tons burden, in which we sailed to the Labrador coast to see whether among English-speaking fishermen of the

Northwest Atlantic similar results might not be achieved there.

In three months we had nine hundred patients, to whom we could thus commend our Gospel with pills and plasters, without fear of denominational interference, besides witnessing a condition of poverty to which we had been quite strangers over on the other side. Unable to do on the ship to those men as we would have them do unto us under similar circumstances, we called on the way home at St. John's, Newfoundland, and laid the matter before the merchants, asking for help to build a hospital on the land, and promising to bring out a doctor and nurse to live there if they built it.

We have now three hospitals on that desolate coast—not palaces for pain such as one sees in these great cities, but humble wood buildings where a qualified doctor and trained nurse reside, where besides their own rooms they have a dozen beds for sick people, a convalescent room, an operating room, and an isolation ward. These places are not hospitals only but hostels, places to which any one and every one is expected to come in sickness or any other kind of trouble whatever. Needless to say, they come often very long distances in their boats in summer, or in dog-sleighs in winter. We do our part in the summer, cruising in the hospital ships, the largest of which I serve as captain, and in winter by traveling from place to place—moving practically all the time, only making the hospital, which is kept open by the nurse, the headquarters to which we return whenever we think it necessary.

Here other methods of commending our Gospel are also open to us, owing to the extraordinary poverty and isolation of the people. Lack of experience made us satisfied for the first three years to try and cope with the question of hunger and nakedness, by collecting and distributing warm clothing, and assisting the people in various ways to get food.

It was not until 1896 that, seeing the futility of giving financial help to men who had to pay from \$7 to \$8 for a barrel of flour worth \$4, and \$2.50 to \$3 for a hogshead of salt which could be bought at St. John's for \$1, we set to work to find a new sermon to preach on this subject. Many of our most piteous cases

at hospital were the direct fruit of chronic semi-starvation. Thus our people fell victims to tuberculosis of glands and bones, only owing to the marasmus induced by insufficient food. This was more especially the case among children. A universal system of truck business prevailed: the "catch" of to-morrow was mortgaged for the food of to-day. The people seldom or never saw cash. The inevitable results were poverty, thriftlessness, and eventually hopelessness. The contention of the trader was always that the men's poverty was because they did not catch enough to support themselves. The answer was that they got enough, to support at least thirty traders.

We started a sermon with a co-operative store as a text. The people round it were all heavily in debt; most winters they received so much government relief to keep them from actual starvation that the place was known as "The Sink." The people were almost all illiterate and knew nothing about business, and the little store went through varying fortunes. They had very, very little money to put in, and even that they were afraid to put in under their own names, for fear the traders should find out and punish them. One trader wrote me denying our right to interfere with *his* people, as if those whom he had tried to lead me to think were only the recipients of his "charity" existed solely for the benefit of his trade. I need not say that we had now to regret gaps in the prayer-meetings once filled so fervently by our friends the enemy.

Looking at the results of the sermon seven years afterwards, I find the people clothed, fed, independent, with a new little church building, and children far-and-away better clad and educated. The movement has spread; there are now five co-operative stores, with a schooner called the "Co-operator" which carries their products to and from the markets. The price of flour has uniformly kept under \$5 a barrel; the price of salt has been reduced nearly 50 per cent., and other things in proportion. We have had many troubles, owing to poor fisheries, our own ignorance of methods of business, and to our isolation. But our storekeepers and crew are Christian men, well aware that the best Gospel they can preach is to keep the store for Christ. As a contrast,

I sent down a young friend from Boston, who had once been a preacher on the coast, giving him \$100 for his holiday to stay at this first store and "teach them how to manage a co-operative store." He was some three days at the store himself, seeing "nothing to do." The rest he spent preaching along the coast. The consequence was the store suffered very materially, for I was home next year, and the people, afraid to handle their money, left the whole of their capital in the bank. I don't know that the memory of his sermons is a justification for his view of what was "most important" to the kingdom of God on the coast.

One of our chief troubles with our people was the long enforced idleness of the winter and the consequent necessity of living largely on the summer "catch." This necessitated their remaining scattered on the chance of catching fur-bearing animals in the winter, even if the actual "catch," as was often the case, didn't amount to a barrel of flour for the whole time. This again prevented their children being reached for educational purposes. It was long a problem to us what ought to be done to meet the difficulty. Eventually we took up a grant of timberland on which the Newfoundland Government permitted me special conditions, and we started to aggregate the people in winter by affording them remunerative work about the mill. To this we have added a small schooner-building yard, and hope shortly to add a cooperage, as we use many barrels in the fish industry. We have gathered together about this small effort this winter some two hundred and fifty people. A small school-house has been erected, and those who are managing the mill know that this effort is their text from which they are to preach their sermon.

There can be no question that the Christ would to-day support all manly and innocent pastimes. So, to meet the needs of the long wintry evenings, we have commandeered the two small jails in our district and converted them into clubs, with a library and games, which have been supplemented by the importation of footballs made of rubber for service on the snow. This has become so popular that our Eskimo women join the game with their babies in their hoods; and seal-

skin footballs stuffed with dry grass have sprung into existence all along the coast.

The toys which we usually credit Santa Claus with bringing from the north had hitherto been conspicuous by their absence, the supply perhaps being exhausted. Anyhow, the birthdays of the Labrador children, like the birthday of our Lord, have never been characterized by the joyful celebrations which formed oases in our own child life. We have turned the current of toys back to the north again. True, the dolls are often legless, the tops are dented, and the Noah's arks resemble hospitals. But these trifles have made the Christmas trees no less a message of the love of God on the birthday of the Saviour to these many birthdayless children who thus keep their own on that day.

We have become residuary legatees for all the real estate in the orphan children line. Some years ago I buried a young Scotch fisherman and his wife in a desolate sand-spit of land running out into one of the long fjords of Labrador. Amidst the poverty-stricken group that stood by as the snow fell were five little orphan children. Having assumed the care of all of them, I advertised two in a Boston newspaper and received an application from a farmer's wife in New Hampshire. Later on I visited the farm; it was small and poor and away in the backwoods. The woman had children of her own. Her simple explanation as to why she took the children is worth recording: "I cannot teach in the Sunday-school or attend prayer-meetings, Doctor. They are too far away, and I wanted to do something for the Master. I thought the farm would feed two more children." I was glad she could not speak at the prayer-meetings. Perhaps, after all, we grade our Christians by a wrong standard.

How many are losing the chances of preaching sermons that need no oratory? Is it one of the causes of the failures of the churches that so much undeveloped capacity remains in the pews?

In what relation would the Christ stand to-day to wrong-doing? On our wild and almost uncharted coast, where the visits of strangers are very rare, many wrecks occurred that, to say the least, suggested to the underwriters that no illegal efforts had been made to save them. We were

asked by Lloyds' Underwriting Agency to act as agents for them and furnish reports in case of losses occurring. At first we declined, fearing that the kind of espionage which would be necessary would be likely to interfere with our "spiritual" work. Later we began to think it was not necessary to knock all the spirit out of men to make them "spiritual," so we accepted the post of Magistrate for the coast, and also Lloyds' agency.

Steaming down a long fjord late in October, we picked up the crew of a small steamer wrecked on the north shore. After landing the men for the last boat south to take them home, we returned and raised the steamer—hailed her keel out of water at low tide, and found the only damage was a hole driven with a crowbar in her bottom. In endeavoring to tow her some six hundred miles south to St. John's, Newfoundland, we lost her in a gale of wind at sea, and with her our evidence of the crime.

It did not take us long to find out that this blow at unrighteousness had made us more enemies than many sermons. We have a saying that "it is only when you really tread on the devil's tail that he will wag it"—perhaps a modern synonym for "no cross, no crown." So long as the battle with sin is fought with kid gloves on, there will never be any need of the "fellowship of suffering." Last season, after every one had left the coast, report that a large vessel loaded with fish and fully insured had been lost on the rocks six hundred miles north reached St.

John's. Owing to the rapidly forming ice, we were doubtful if it was possible to get at the ship. But fortune favored us; we were able to get her, raise her, and, almost to our own surprise, we were able to tow her, in spite of December gales, safely to St. John's harbor. The consignee (the same man who had owned the steamer we lost, and who had "suffered other losses") was found guilty of barratry and sent down to penal servitude. It is said that the world consists of two kinds of people, "those who go out and try to do something" and those who "stay home and wonder they don't do it some other way." How would the critic look at this? Was it "missionary"?

One notices in the newspapers so much energy devoted to criticisms of what famous preachers say, some loudly declaiming against them for heterodoxy, others equally praising them. The most successful treatment for a tendency to confine religious zeal so largely to criticism would be to find more useful service in other directions. We are not told that the good Samaritan expressed any opinion of the priest or Levite. Is not the real problem of Christianity how best to commend it to the world? Can it most truly be advocated by word or deed? Can we afford to divorce the "secular" from the "religious," any more than the "religious" from the "secular"? It seems to me there is only one way to reach the soul—that is, through the body. For when the soul has cast off the body we cannot reach it at all.

## Love, Let Me Walk with You

By Hanford C. Judson

Love, let me walk with you,  
Love, let me silent be,  
While the great stars fill the heaven above  
With glimmering majesty.

God giveth the great stars names,  
Sweet names we can not know;  
But, Love, when I hear your footstep near,  
As light as the airs that blow,

They fill my heart with the joy of light  
That is from eternity.  
And my soul is glad of their mystic names,  
When, Love, you walk with me.

# Where Is the West?

By William R. Lighton

**A**MONG the people of that region which we Westerners know as "the East" there is a persistent belief that if one of their number stands facing the north, there will be on his left, more or less out of reach, a big stretch of country, with vague boundaries and still more vague characteristics, which for some reason or other ought to be called "the West." The idea can be traced through a long line of descent, and has thus gained a factitious respectability, so that the Easterner is now quite willing to admit the word "West" to his vocabulary without close scrutiny of its credentials. Along with the word he adopts a shadowy notion that Western men, manners, and morals are somehow radically distinct from those of other communities—that Western affairs must always wear a unique complexion. Just what constitutes that distinction it is not easy for him to say. Nine out of ten Eastern folk would find it inconvenient to explain their understanding of where and what "the West" really is.

In fact, the question is quite complex; and its complexity increases with the passing years, as the old barriers are broken down and the many parts of the nation are knit more closely together. Much depends upon the point of view; and there are many viewpoints. The geographer has one theory; the captain of industry another; and there are the politician, the moralist, and (most confusing of all) the literary man, each eager to tell all about it, each sure he is right, and each at variance with every other. The whole argument has become a labyrinth, whose passages lead nowhere. The more we try to pin the matter down by hard and fast definitions, the more it eludes us.

It will not do to fix upon a mid-continent meridian and say that all the territory on one side shall be East and all on the other side West. Other and subtler distinctions would dissolve such a line at once. In point of physical boundaries "the West" has always been something of a vagabond, possessing a name without a local habitation. Originally "the West" meant the primeval wilderness. To the

first white dwellers on the Massachusetts coast, everything outside their own little domain was West; they only were Easterners. Then the Dutch settled on the Hudson; and forthwith that region was added to the East. So it went on, as the tide of migration swept farther and farther inland, until Ohio was East, then Indiana and Kentucky. The progressive conquest of the wilderness crowded the West westward to the Missouri, then to the Rocky Mountains, then to the shores of the Pacific. In our day Illinois does not like to be called a Western State; Iowa is almost as sensitive about it; Kansas and Nebraska are not sure that the term does not carry opprobrium. These States prefer the name "Interior"—or, if you insist, they will compromise on "Middle West." It is only when you get into Colorado, Wyoming, and Montana that you hear the people say, with a defiant frankness, "Yes, maybe we are Western. What are you going to do about it?" But if you go on to the Pacific, new confusion awaits you—the Californian speaks of Denver as "the East;" and to the Denverite, Kansas City is hopelessly Eastern, while Boston and New York are fairly Oriental. No, the West is not a definite place; the name is merely relative.

Other arguments have sought to designate the West by means of social idiosyncrasies. The pioneering of a new land separates men from the conventional institutions of organized society, from constitutions, codes, and creeds, and throws them back upon the native resources of human nature. Naturally, they set up some rude standards of behavior, standards in which fixedness counts for much less than adaptability. While a new society is finding itself, its institutions must be more or less fluid. The value of precedent and rule is reduced to the minimum; the value of primal insight into the underlying principles of manly honor and integrity is at its greatest. This does not mean that the people of the frontier are endowed with unusual moral steadfastness; it means that simplicity of motive is the dominant note in their life;

that they live according to their own perceptions, more than by precept and maxim. That has always been true of the American Border. Twenty years ago western Nebraska was almost as primitive in its social life as was England in the time of the Norman Conquest. The whole continent, from the Atlantic to the Pacific, has been in the same condition at one time or another. It was lawless, in a narrow sense, in that it was independent of statutes; yet it was governed by those basic old Anglo-Saxon ideals of conduct which are not easily reduced to print, but which make the substratum of our civilization. Formal statutes were wanting, but the spirit out of which wise statutes grow was in full force.

Naturally, too, such freedom reacted upon the people and resulted in the production of those quaint and picturesque "types" upon which the maker of literature has seized with such avidity. The familiar "bad man" of Western lore was the product, not of wickedness, but of untrammelled freedom; he was merely the normal good man of older States escaped from the law-fenced highways of "back East," going across a wide expanse of open country at his own gait. For a time those little differences in manners were regarded as the distinguishing traits of the West, until time showed them to be ephemeral. They were never so much in the ascendant, even when the West was at its wildest, as appears from the pages of the border romance. From Bret Harte on down to the latest disciple of that school, writers of Western stuff have, without exception, exaggerated outward signs, while failing miserably to appreciate underlying motives; they have worked the idea of frontier lawlessness until it has become an article of the popular faith. We ought to know by this time that rank, red-shirted, loud-mouthed outlawry cannot dominate any Anglo-Saxon society, even in the much-abused "West." We are made of better stuff than that. These so-called Western "types" do not speak very well for the honesty of our literature. As a matter of fact, flagrant unrighteousness of motive or conduct was never more pronounced on the Western frontier than it is on the streets of New York to-day. There has been plenty of flamboyant picturesqueness, I grant, but no excess of

lawlessness. If there exists a separate West, its separateness must rest upon some other basis than that. Even the old-time picturesqueness has disappeared in great measure, as population has thickened and first rough makeshifts have been supplanted by politer forms. Courts of laws have succeeded the vigilance committees. They may not effect a greater degree of absolute justice, but they are more in keeping with racial traditions, and give us a sense of greater stability. Other expedients of frontier life have yielded in the same way, and with their passing has disappeared every outward symbol of disorder. If you will look at the matter without prejudice, you will discover that the balance of the law-abiding spirit is decidedly in favor of the West. In proportion to population, there is to-day twice as much crime in Massachusetts as in Nebraska.

Neither does the distinction lie in matters of educational achievement, except as these also show a balance in favor of the West. In proportion to population, Nebraska's expenditure for educational purposes is annually twice as great as that of Massachusetts; and in the same proportion illiteracy is reduced by one-half. Prairies and mountains are speckled with college towns. In point of efficiency in preparing men and women for the serious business of life, Western educational institutions are second to none. Some of the greatest industrial feats of this generation have been wrought in the Far West by men born, bred, and educated on the sunset side of the Missouri.

The question in my title must be answered by attending to the most recent developments in our life. There is, indeed, a West; but it does not exist by reason of certain geographical boundaries; neither does it depend upon ethical variance or literary tradition. Its outlines are not arbitrary, but rational.

This is an industrial nation. More than any other nation of earth, it measures the motives of its every-day life by the industrial scale. If any part is able to show independence of other parts, it will be an industrial independence. In this particular alone can the West be said to have a separate existence in the present day.

Ten years ago the working West was hopelessly dependent upon the older

East. Everything it had to sell in the world's markets had to go through Eastern channels; everything it bought came by way of the East. The vast corn and wheat fields of the prairies—an empire in themselves—sent almost every bushel of their surplus product to Duluth or Chicago, and thence to the Atlantic seaboard. The West, which grew the grain, had nothing to say about the price it would get for it; the Boards of Trade in Chicago, New York, and London fixed prices and dictated all the conditions of traffic; the producer could do nothing but accept such terms as were offered him. His millions of pounds of wool went the same way, along with his millions of untanned hides—it was all shipped to the East as raw material. Then, if he wanted a suit of clothes or a pair of boots, he must buy them in the East, made of wool and leather of his own production. In neither case had he anything to say about price.

A change has been wrought within the last decade. It began with the establishment of the vast packing-houses at various points on the Missouri River. These, by moving the market for live stock several hundred miles westward, gave a new impetus to stock-raising on the big prairies. But cattle, swine, and sheep that have been brought to maturity on grazing land are not yet ready for the packing-houses; they must first be corn-fattened. The multiplication of the herds was thus of threefold benefit: it turned to profitable account immense tracts of land unsuited to other uses; it made an increased demand for prairie corn; and it brought the corn market to the grower's very gate. With every year these Western-grown, corn-fattened cattle and swine come nearer and nearer to consuming the one-time troublesome surplus. The corn-grower is relieved of a great worry, while the prairie packing-houses are enabled to put their meats upon the world's markets at prices that defy competition. Here is at once the solution of a mighty economic problem and a definite answer to the question, "Where is the West?"

Within a very few years it will be seen of all men that "the West" is no longer a wild and woolly sort of No-Man's-Land, where spurred and pistoled bravos do nothing all day long but fling defiance in

the face of Heaven and its laws; it will be seen that "the West" has, by hard, patient, persistent labor, won an unequivocal station and dignity as the chief source of the world's food supply. Very few persons appreciate the volume of traffic in Western foodstuffs. Secretary Shaw, in a recent address in Chicago, declared that a single Western city (Minneapolis) now manufactures and sends abroad a carload of flour for every ten minutes of day and night, the year round. He said also that the Detroit River (one of the links in the Great Lakes traffic) carries four times as much tonnage as does the Suez Canal. The significance of these figures is tremendous; but it must be remembered that they represent only a small fraction of the whole commerce. Since 1890 the trans-Mississippi country has discovered that the logical outlet for its export trade is by way of the Gulf ports, rather than by New York and Baltimore; a very large proportion of Western meat and grain and flour is now sent to the South, and thence to Europe, with a large decrease in cost of transportation. The West is thus evolving a commercial independence of the Eastern States, saving to itself the percentage once paid to Eastern middlemen.

Heretofore the bulk of exported foodstuffs has gone to Europe; but within three or four years Asiatic markets have begun to yawn for American corn and wheat. In 1901, for the first time in her history, Nebraska sent trainloads of grain across the mountains to the Pacific ports, for shipment to India and China. This is but the beginning.

The Eastern States can have no considerable part in this. It seems not unlikely that agriculture will soon be a lost art in the East. Minneapolis can sell flour to the New York farmer for less money than it costs him to produce it on his own land; Omaha and Kansas City can sell dressed pork and beef to the farmer of Massachusetts and Connecticut for less money than it costs him to feed his own pig or cow.

From the first round billow of the corn-prairies of Indiana to the last field of wheat in the sunlit vales of California—there is the real West; the independent, powerful, proud, modern West—the world's inexhaustible food-garden.

# International Police

By Lucia Ames Mead

**I** BELIEVE in arbitration, of course, and in a stated International Congress—I have worked to promote that,” said a Senator in the Massachusetts Legislature to me; “but when you peace people talk about ending war, I can’t follow you. I think you will have to wait until the millennium; for so long as there is sin in the world there must needs be force.” Doubtless there are some “peace men” who, like Tolstoi, decry all use of force; but the ordinary sensible man who is working to abolish national armaments, when the shrieks from Kishenev and the Congo ring in his ears, calls for a strong hand, and no milk-and-water policy. As he remembers the two thousand gangs of American anarchists who have torn open jail doors and hanged and burned untried men, and themselves gone unpunished, he believes there is still use in this world for the soldier.

But if he is a peace man who wants to make himself effective, he will not waste time in discussing the horrors of war and the beauties of peace. He will try to let in a light on a subject about which much sophistry has befogged the public’s mind. His first proposition will be that the organized, authoritative force of this world is of two essentially different kinds. The one that we know most about is of comparatively recent origin; it is the police force. Time was, and not more than two or three centuries ago, when every man carried his own weapon and avenged his own wrong. To-day, in thoroughly civilized communities, he who avenges his own wrong becomes a criminal. The State has established a disinterested method of settling disputes according to evidence and justice. Force is employed, but not to settle the dispute. The policeman brings the contestants to a court. That is his function—to bring to court—and he uses only that modicum of force which is necessary to bring contestants to court. Often they come of their own accord, or, when brought, they usually venture little or no resistance. Then twelve men hear evidence for and against. No man may

be a juror who is interested personally in the dispute. Witnesses are brought, lawyers employed, law books studied. When the verdict is given, an impartial judge decrees sentence according to statutes made by another disinterested set of men called legislators. The whole transaction means that the result depends upon law and justice, not accident or the bulk of the contestants. The child has as good a chance of justice as the man. The function of the police is to bring to court and to take to prison according as the court orders. The policeman himself inflicts no punishment, and uses only such force as may be necessary to bring a stubborn man to trial. Let this be emphasized, for this use of force is almost universally confounded with that totally different use of force employed by armies and navies. National armies and navies have no analogy with the police, though nine college graduates out of ten argue as if they were analogous. The function of the police is to bring to court. The function of national armies and navies and the powers behind them is to execute without trial. Were the nations not living in anarchic relations with each other, armies and navies would be simply gigantic, organized lynchings. They listen to no arguments, weigh no testimony, are not disinterested, and do not force their antagonist to come to any court. Their settlement is made, not according to justice, but by brute force. Almost every attribute of the police force is lacking in army and navy. And yet we are incessantly told by some of the best and ablest of men that the navy polices our coast, that the army is our national police. The most fundamental and palpable divergence of functions is ignored, and the solution of the world’s greatest problem is relegated to the millennium because of this curious kink in the reasoning faculties of many leaders of thought.

At the recent Mohonk Arbitration Conference I listened anxiously for one word on this confusing subject. Only one speaker, Mr. Edwin Ginn, the publisher, casually used the word that, if said with

emphasis and heeded, would have thrown a flood of light on what to most men seems hopelessly obscured. He said "the International Police." What would an international police do? It would bring stubborn nations to the World's Court with the same efficiency as the city police separate two men glaring at each other with murderous knives unsheathed, and drag them to the Police Court. Of what would the International Police be composed? Of a small body of armed men and battle-ships paid and organized by practically all the nations of the world and controlling them through a World Legislature which would make laws to be carried out by the Hague Court. We have the Hague Court. Next winter Congress will be asked to propose to the nations to establish an International Congress to meet at regular intervals to discuss international problems. This will not be a World Legislature, as its delegates will have, as at the Hague Conference, no power to do more than to refer questions to their nations for ratification. It must be a little time before the Congress can be formed. It may be decades before it develops into a genuine Legislature with power. But a World Legislature is as definitely bound to come as the Isthmian canal or the Cape to Cairo railroad. Not until it is established, and perhaps several decades after that, can we talk practically about forming an International Police; we must first, of course, all pledge ourselves to carry international differences to court. But though the period of complete national disarmament may be relegated to another century, it is of immense importance for the world to know that it is approximately near, that we need not wait until sin and quarrels have been banished from the earth before we find a rational way of treating them.

The police force will remain to bring men to court. The militia will remain to compel riotous mobs and lynchers to leave their quarrels and their vengeance to the courts. The international police will supplant the national, paid bodies of executioners who, under our present anarchic system of international relations, execute in absence of law, according to national whim or passion or prejudice. The reign of law has come in families, in cities, in the States, in the nations. It is coming

between the nations. There is no new principle to be invented, simply the extension of an old and tried principle.

We shall not arbitrate with savages, but the civilized nations will arbitrate about the lands and rights of savages. No one nation will be permitted by the other nations to steal their land and exploit them. The mutual self-interest of great nations, if nothing more, will demand justice for the weaker ones. Human nature will, no doubt, still have the tiger latent in it; but the tiger will be left dormant as there is less and less occasion to arouse it. Sin and cruelty and avarice will persist, but we shall treat them calmly, disinterestedly, not with the senseless passion of war. Civil war may remain an abstract possibility. The International Police is not an academic question, but a live, practical question. There is nothing that need prevent its being realized within a hundred years, if the leaders of thought in Europe and America see clearly and do what they are perfectly capable of doing. The action of the allied armies in China in the suppression of the "Boxers" gives a hint of what International Police may do.

For years Dr. Hale and others in America went up and down the land crying, "We must have an International Court;" when it came we welcomed it as a familiar thought. While we are busy making this court more and more efficient by enlarging the scope of cases brought to it, we must familiarize men with the next step to goals ahead of us—the World Legislature and the World Police. We must arouse the hopeless and give new courage to pessimists who assume that Christendom must continue to sink three billion<sup>1</sup> dollars annually simply to keep the peace. We must show a way out of the quagmires in which their hopes are sunk. City, State, and nation have been organized and put under the reign of law. The world will likewise be organized and put under the reign of law, and when that is done we shall not have abolished force, or wickedness, or punishment for wickedness, or civil war, but we shall have abolished wars between nations and national armies and navies.

<sup>1</sup> This includes interest on debt for past wars and part of the wages lost by millions of unproductive soldiers.

# THE FOREST'

BY STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

## Chapter XVII.—On the Catching of a Certain Fish

WE settled down peacefully on the River, and the weather, after so much enmity, was kind to us. Likewise did the flies disappear from the woods utterly.

Each morning we arose as the Red Gods willed; generally early, when the sun was just gilding the peaks to the westward; but not too early, before the white veil had left the River. Billy, with woodsman's contempt for economy, hewed great logs and burned them nobly in the cooking of trout, oatmeal, pancakes, and the like. We had constructed ourselves tables and benches between green trees, and there we ate. And great was the eating, beyond the official capacity of the human stomach. There offered little things to do, delicious little things just on the hither side of idleness. A rod wrapping needed more waxed silk, a favorite fly required attention to prevent dissolution; the pistol was to be cleaned; a flag-pole seemed desirable; a trifle more of balsam could do no harm; clothes might stand drying, blankets airing. We accomplished these things leisurely, pausing for the telling of stories, for the puffing of pipes, for the sheer joy of contemplations. Deerskin slipper moccasins and flapping trousers attested our *dishabille*. And then somehow it was noon, and Billy again at the Dutch oven and the broiler.

Trout we ate, and always more trout. Big fellows broiled with strips of bacon craftily sewn in and out of the pink flesh; medium fellows cut into steaks; little fellows fried crisp in corn-meal; big, medium, and little fellows mingled in component of the famous North Country *bouillon*, whose other ingredients are partridges and tomatoes and potatoes and onions and salt pork and flour, in combination delicious beyond belief. Nor ever did we tire of them, three times a day, printed statement to the contrary

notwithstanding. And besides were many crafty dishes over whose construction the major portion of morning idleness was spent.

Now, at two o'clock, we groaned temporary little groans, and crawled, shrinking, into our river clothes, which we dared not to hang too near the fire for fear of the disintegrating scorch, and drew on soggy, hobnailed shoes, with holes cut in the bottom, and plunged with howls of disgust into the upper riffles. Then the cautious leg-straddled passage of the swift current, during which we forgot forever—which eternity alone circles the bliss of an afternoon on the River—the chill of the water, and so came to the trail.

Now, at the Idiot's Delight, Dick and I parted company. By three o'clock I came again to the River, far up, half-way to the Big Falls. Deuce watched me gravely. With the first click of the reel he retired to the brush away from the back-cast, there to remain until the pool was fished, and we could continue our journey.

In the swift leaping water, at the smooth back of the eddy, in the white foam, under the dark cliff shadow, here, there, everywhere, the bright flies drop softly like strange snowflakes. The game is as interesting as pistol-shooting. To hit the mark, that is enough. And then a swirl of water and a broad, lazy tail wakes you to the fact that other matters are yours. Verily the fish of the North Country are mighty beyond all others.

Over the river rests the sheen of light, over the hills rests the sheen of romance. The land is enchanted. Birds dip and sway, advance and retreat, leaves toss their hands in greeting, or bend and whisper one to the other; splashes of sun fall heavy as metal through the yielding screens of branches; little breezes wander hesitatingly here and there, to sink about kites on the nearest bar of sun-angles; the stream shouts and

gurgles, murmurs, hushes, lies still and secret as though to warn you to discretion, breaks away with a shriek of hilarity when your discretion has been assured. There is in you a great leisure, as though the day would never end. There is in you a great keenness. One part of you is vibrantly alive. Your wrist muscles contract almost automatically at the swirl of a rise, and the hum of life along the gossamer of your line gains its communication with every nerve in your body. The question of gear and method you attack clear-minded. What fly? Montreal, Parmachenee Bells, Royal Coachman, Silver Doctor, Professor, Brown Hackle, Cowdung—these grand lures for the North Country trout receive each its due test and attention. And on the tail snell what fisherman has not the Gamble—the unusual, obscure, multi-named fly which may, in the occultism of his taste, attract the Big Fellows? Besides, there remains always the handling. Does your trout to-day fancy the skittering of his food, or the withdrawal in three jerks, or the inch-deep sinking of the fly? Does he want it across current or up current? will he rise with a snap, or is he going to come slowly, or is he going to play? These be problems interesting, insistent to be solved, with the ready test within the reach of your skill.

But that alertness is only the one side of your mood. No matter how difficult the selection, how strenuous the fight, there is in you a large feeling that might almost be described as Buddhistic. Time has nothing to do with your problems. The world has quietly run down, and has been embalmed with all its sweetness of light and color and sound in a warm lethe bath of sun. This afternoon is going to last forever. You note and enjoy and savor the little pleasures, unhurried by the thought that anything else, whether of pleasure or duty, is to follow.

And so for long, delicious æons. The River flows on, ever on; the hills watch, watch always; the birds sing; the sun shines grateful across your shoulders; the big trout and the little rise in predestined order and make their predestined fight and go their predestined way either to liberty or the creel; the pools and the rapids and the riffles slip by up-stream as though they had been withdrawn rather than as though you had advanced.

Then suddenly the day has dropped its wings. The earth moves forward with a jar. Things are to be accomplished; things are being accomplished. The River is hurrying down to the Lake; the birds have business of their own to attend to, an' it please you; the hills are waiting for something that has not yet happened, but they are ready. Startled, you look up. The afternoon has finished. Your last step has taken you over the edge of the shadow cast by the setting sun across the range of hills.

For the first time you look about you to see where you are. It has not mattered before. Now you know that shortly it will be dark. Still remain below you four pools. A great haste seizes you.

"If I take my rod apart, and strike through the woods," you argue, "I can make the Narrows, and I am sure there is a big trout there."

Why the Narrows should be any more likely to contain a big trout than any of the three other pools, you would not be able to explain. In half an hour it will be dark. You hurry. In the forest it is already twilight, but by now you know the forest well. Preoccupied, feverish with your great idea, you hasten on. The birds, silent all in the brooding of night, rise ghostly to right and left. Shadows steal away like hostile spies among the tree-trunks. The silver of last daylight gleams ahead of you through the brush. You know it for the Narrows, whither the instinct of your eagerness has led you as accurately as a compass through the forest.

Fervently, as though this were of world's affairs the most important, you congratulate yourself on being in time. Your rod seems to joint itself. In a moment the cast drops like a breath on the molten silver. Nothing. Another try a trifle lower down. Nothing. A little wandering breeze spoils your fourth attempt, carrying the leader far to the left. Curses, deep and fervent. The daylight is fading, draining away. A fifth cast falls forty feet out. Slowly you drag the flies across the current, reluctant to recover until the latest possible moment. And so, when your rod is foolishly upright, your line slack, and your flies motionless, there rolls slowly up and over the trout of trouts. You see a broad side, the whirl

of a fan tail that looks to you to be at least six inches across—and the current slides on, silverlike, smooth, indifferent to the wild leap of your heart.

Like a crazy man, you shorten your line. Six seconds later your flies fall skillfully just up-stream from where last you saw that wonderful tail.

But six seconds may be a long, long period of time. You have feared and hoped and speculated and realized—feared that the leviathan has pricked himself, and so will not rise again; hoped that his appearance merely indicated curiosity which he will desire further to satisfy; speculated on whether your skill can drop the fly exactly on that spot, as it must be dropped; and realized that, whatever be the truth as to all those fears and hopes and speculations, this is irrevocably your last chance.

For an instant you allow the flies to drift down-stream, to be floated here and there by idle little eddies, to be sucked down and spat out of tiny suction-holes. Then cautiously you draw them across the surface of the waters. *Thump—thump—thump*—your heart slows up with disappointment. Then, mysteriously, like the stirring of the waters by some invisible hand, the molten silver is broken in its smoothness. The Royal Coachman quietly disappears. With all the brakes shrieking on your desire to shut your eyes and heave a mighty heave, you depress your butt and strike.

Then in the twilight the battle. No leisure is here, only quivering, intense, agonized anxiety. The affair transcends the moment. Purposes and necessities of untold ages have concentrated, so that somehow back of your consciousness rest hosts of disembodied hopes, tendencies, evolutionary progressions, all breathless lest you prove unequal to the struggle for which they have been so long preparing. Responsibility, vast, vague, formless, is yours. Only the fact that you are wholly occupied with the exigence of the moment prevents your understanding of what it is, but it hovers dark and depressing behind your possible failure. You must win. This is no fish; it is opportunity itself, and once gone it will never return. The mysticism of lower dusk in the forest, of upper afterglow on the hills, of the chill of evening waters and winds, of the glint

of strange phantoms under the darkness of cliffs, of the whisperings and shoutings of Things you are too busy to identify out in the gray of North Country awe—all these menace you with indeterminate dread. Knee-deep, waist-deep, swift water, slack water, down-stream, up-stream, with red eyes straining into the dimness, with every muscle taut and every nerve quivering, you follow the ripping of your line. You have consecrated yourself to the uttermost. The minutes stalk by you gigantic. You are a stable pinpoint in whirling phantasms. And you are very little, very small, very inadequate among these titans of circumstance.

Thrice he breaks water, a white and ghostly apparition from the deep. Your heart stops with your reel, and only resumes its office when again the line sings safely. The darkness falls, and with it, like the mysterious strength of Sir Gareth's opponent, falls the power of your adversary. His rushes shorten. The blown world of your uncertainty shrinks to the normal. From the haze of your consciousness, as through a fog, loom the old familiar forest, and the hills, and the River. Slowly you creep from that strange and enchanted land. The sullen trout yields. In all gentleness you float him within reach of your net. Quietly, breathlessly, you walk ashore, and over the beach, and an unnecessary hundred feet from the water, lest he retain still a flop. Then you lay him upon the stones and lift up your heart in rejoicing.

How you get to camp you never clearly know. Exultation lifts your feet. Wings, wings, O ye Red Gods, wings to carry the body whither the spirit hath already soared, and stooped, and circled back in impatience to see why still the body lingers! Ordinarily you can cross the riffles above the Half-Way Pool only with caution and prayer and a stout staff craftily employed. This night you can—and do—splash across hand-free as recklessly as you would wade a little brook. There is no stumble in you, for you have done a great deed, and the Red Gods are smiling.

Through the trees glows a light, and in the center of that light are leaping flames, and in the circle of that light stand, rough hewn the tent and the table and

compan-

ions. You stop short, and swallow hard, and saunter into camp as one indifferent.

Carelessly you toss aside your creel—into the darkest corner, as though it were unimportant—nonchalantly you lean your rod against the slant of your tent, wearily you seat yourself and begin to draw off your drenched garments. Billy bends toward the fire. Dick gets you your dry clothes. Nobody says anything, for everybody is hungry. No one asks you any questions, for on the River you get in almost any time of night.

Finally, as you are hanging your wet things near the fire, you inquire casually over your shoulder:

"Dick, have any luck?"

Dick tells you. You listen with apparent interest. He has caught a three-pounder. He describes the spot and the method and the struggle. He is very much pleased. You pity him.

The three of you eat supper, lots of supper. Billy arises first, filling his pipe. He hangs water over the fire for the dish-washing. You and Dick sit hunched on a log, blissfully happy in the moments of digestion, ruminative, watching the blaze. The tobacco-smoke eddies and sucks upward to join the wood-smoke. Billy moves here and there in the fulfillment of his simple tasks, casting his shadow wavering and gigantic against the firelit trees. By and by he has finished. He gathers up the straps of Dick's creel, and

turns to the shadow for your own. He is going to clean the fish. It is the moment you have watched for. You shroud yourself in profound indifference.

"Sacré!" shrieks Billy.

You do not even turn your head.

"Jumping giraffes! why, it's a whale!" cries Dick.

You roll a blasé eye in their direction, as though such puerile enthusiasm wearies you.

"Yes, it's quite a little fish," you concede.

They swarm down upon you demanding particulars. These you accord laconically, a word at a time, in answer to direct questions, between puffs of smoke.

"At the Narrows. Royal Coachman. Just before I came in. Pretty fair fight. Just at the edge of the eddy," and so on. But your soul glories.

The tape-line is brought out. Twenty-nine inches it records. Holy smoke, what a fish! Your air implies that you will probably catch three more just like him on the morrow. Dick and Billy make tracings of him on the birch bark. You retain your lofty calm; but inside you are little quivers of rapture. And when you awake, late in the night, you are conscious first of all that you are happy, happy, happy, all through; and only when the drowse drains away do you remember why.

[TO BE CONTINUED]

## The Pan-American Railway

By Charles M. Pepper

Special Commissioner

**E**VERY great enterprise must wait its turn. Especially is this so if it be of an international character. The Pan-American, or Intercontinental, Railway project has had a long wait. Its turn seems now to be coming.

The origin and conception of the plan are old. First the dreamer, musing on waking the sleeping richness of continents. Then the statesman with imagination, who grasps the idea in its bolder outlines. After him the captains of industry, the practical men of affairs who also have imagination.

The broad events which are converging

and are focusing the intercontinental railway project as a measure of the not remote future are easily seen, though their bearing may not yet be understood fully by busy persons whose minds are occupied in other fields. Among them are the changes of a political character which have come since the results of the Spanish-American War established the international relation of the North American Republic to its neighbors on the south. This relation properly may be studied in its influence on industrial and commercial development.

Then there is the coincident fact of

New York striving successfully for supremacy as the money center of the world. Though it is only dimly seen even by those who are the strategists and generals in this campaign, the increased prestige of New York inevitably will bring the financing of future Central and South American operations there. The \$500,000,000 American gold which has gone into Mexico has overflowed naturally in that country into railway-building, and it is a simple process for it to flow on south with the geographical current.

A final, determinate, and positive factor, and one which gives promise of the earliest results, is the construction of the isthmian canal. With this Government enterprise under way, there is the certainty of private projects for exploitation and development, and of these railways on either side of the canal reaching out into Central America and into Colombia are sure to be the outcome. They will form links in the Pan-American route.

With this understanding of the controlling conditions and circumstances, it is well to look to the actual groundwork for the intercontinental trunk line which may make it possible to go by rail from New York or San Francisco to Buenos Ayres. The period of public receptiveness for the gigantic plan has come. Thirty years ago and more a United States consul in South America, Hinton Rowan Helper, began the agitation for a three Americas' railway. Others also took up the idea. When James G. Blaine's dream began to take form and the First International Conference of American States was held in Washington in 1889-90, the Pan-American railway project was strongly urged by him. To his mind it was a leading element in the policy of which he was the exponent. Among the delegates of the United States to that Conference were former Senator Henry G. Davis, of West Virginia, a practical railway-builder, and Andrew Carnegie. The idea appealed to them as it did to Mr. Blaine, and probably in its industrial and commercial aspects even more than to the great Secretary of State.

This Conference adopted a series of strong resolutions favoring the building of the intercontinental railway, and as a first step recommended an international survey. President Harrison, in full sym-

pathy with Mr. Blaine, approved the project as vast but practicable, and recommended to Congress the appropriation necessary for this purpose, which was made. This fund was supplemented by the various governments.

With this authority, three corps of engineers were placed in the field under the direction of a commission of which Mr. A. J. Cassatt, of the Pennsylvania Railroad, was chairman. The surveys were made under the immediate supervision of Mr. William F. Shunk, eminent in his profession. The results were embodied in a series of reports which covered the territory from the northern border of Guatemala and along the Andes to the northern frontier of the Argentine Republic. Estimates also were made for projected surveys and connections with the railway systems of Brazil and Paraguay, as well as for a branch across from Colombia to Venezuelan seaports. Furthermore, the route was mapped out for a branch to the Colombian port of Cartagena on the Caribbean Sea.

The principals in this international survey modestly spoke of their work as a railway reconnaissance. It was more. Its technical value was unquestioned. The exposition of the engineering difficulties was explicit enough to furnish those who might want to doubt with grounds for their doubts, but among experienced railway-builders there were few to question the conclusions reached by the survey corps. These conclusions were that no engineering obstacles existed which could not be overcome, and that the cost of construction would be reasonable enough to justify the enterprise from the commercial standpoint. Nothing led to the belief that the engineering problems of the Andes which are yet to be solved were greater than those which had been solved by Henry Meiggs in Peru. The justification of this international survey is shown in the extent to which it has been followed in actual railway construction, and also as the basis for supplemental and independent reconnaissances by private enterprise. The published volumes, in both the technical and the general information which they give, are convincing literature of the feasibility and utility of a Pan-American intercontinental trunk line.

When the Second International Ameri-

can Conference met in Mexico in the winter of 1901-02, the intercontinental railway was a leading theme. Reports were made by the delegates of the different countries of their existing systems and of actual and projected railway construction. These reports were a tonic. They showed that the international survey in several instances was being used as the basis for railways under construction, and in other instances it was being tested for variations and branch feeders which might prove useful in the development of natural resources. It was shown that the Mexican system was almost complete, and that the time was not far off when New York, Chicago, or San Francisco would be in direct communication by rail with the heart of Central America. Other information told how the gaps were being closed in South America.

Since these reports were made, the line from Cordoba, near Vera Cruz, has been completed to a junction with the Tehuantepec isthmian railway, and the Mexican Government is pushing the construction of the Pan-American line from San Geronimo south towards the Guatemalan border. When this work is a little further advanced, the Guatemalan Government will take steps to close up the gap of thirty miles necessary to bring its railway system to the frontier of Mexico. American interests identified with the two trunk lines which enter the United States through the gateways of El Paso and Laredo already are reaching out for the traffic which may be had when this Central American connection is established.

The Government of the Argentine Republic has pushed the building of its railway lines from Jujuy, formerly the northern terminus, till they are now close to the boundary of Bolivia, and Bolivia also is encouraging the extension of its system south along the route of the intercontinental survey so as to connect with the Argentine system. Chili, which has a most extensive railway network, is encouraging the trans-Andean project that will bring Santiago into through rail connection with Buenos Ayres. Peru is also having an era of railway-building, some actual, more in prospect. By the end of the present year it is likely that the gaps between New York and Buenos Ayres on the intercontinental route will not aggre-

gate more than 4,700 miles, as against 5,200 miles when the last reports were made.

The second American Conference took practical steps, not only to conserve what had been done, but to encourage progress along definite and clearly marked lines. It adopted a series of recommendations, among others one that a permanent committee be appointed and that the United States be invited to initiate measures for sending representatives to the various countries to further the common aspiration for building the intercontinental railway. The permanent Pan-American Railway Committee thus designated is composed of Henry G. Davis, of West Virginia; Andrew Carnegie, of New York; Manuel de Aspiroz, Ambassador from Mexico; Manuel Alvarez Calderon, Minister from Peru; and Antonio Lazo Arriaga, Minister from Guatemala. Mr. Davis was a delegate to the Conference held in Mexico. The headquarters of the Committee are in Washington.

The Congress of the United States, at its last session, authorized the appointment of a Special Commissioner to carry out the recommendations of the Mexican Conference with regard to the Pan-American Railway. The President, at the suggestion of the Secretary of State, made the appointment, and instructions have been issued to the diplomatic and consular representatives of the United States to co-operate with the Special Commissioner. The Ministers of the various Governments of the Latin-American countries accredited in Washington also have taken measures to insure the success of the mission. The Commissioner will visit the capitals of all the countries to the south of the United States.

This is the status of the subject as it exists to-day. No illusions cloud it. The broad fact is that the Government of the United States and the Governments of the other Republics are disposed to work in unison, and with this co-operation and encouragement the links in the Intercontinental American Railway gradually may be welded together. On the part of the Central and South American countries there is the basic notion of affirming their own unity by the closer connection which railway communication establishes. There is, moreover, the substantial advantage

which comes from the exploitation of their natural resources and the development of their commerce. Railroads are built from many motives. They live by the traffic which they develop and create.

In a general way, it may be assumed that accurate information with respect to the existing systems of Central and South American railroads, the lines projected, the resources which are awaiting development by further building, the code of laws under which the railways are operated, the special inducements for foreign capital in the form of concessions, subsidies, land grants, guarantees of interest and principal of bonds, if presented under the sanction of official statements, will have a direct interest for the overflowing American capital which within a few years will begin to turn southward in search of greater returns than it gets at home.

Without reflecting on their ignorance, it may be said that the American people know little of the existing South American railways and less of the projects and possibilities. They do not know how the Brazilian lines are largely the work of Brazilian engineers; how near the little inland river-bordered Republic of Paraguay is to joining its line with the Argentine network; how complete are the systems of the Argentine Republic and of Chili, and how near realization is the trans-Andean project.

Kindred to this main subject of the Pan-American Railway is the question of river communication. It, too, is a vast subject, yet is thoroughly practicable. Those who would understand the full scope of connecting the intercontinental trunk line by means of branches with the inland waterways of South America should read the report made to the Mexican Conference by the distinguished Colombian, General Rafael Reyes. He, with his brothers, Henry and Nestor, both of whom perished in the work, explored the greater part of the Amazon and its affluents.

"The extension of the territory that these rivers irrigate," says General Reyes, "is more than 4,000,000 square miles, which are to-day virgin soil and which are offered to commerce and to human industry." In his intensely interesting graphic account he gives

hensive idea of the course which an American traveler might follow after going from New York to Buenos Ayres by rail. This would take the traveler on the Rio de la Plata and the Parana to the Amazon, and through its affluents into Bolivia, Peru, and Ecuador; then to Colombia and to Venezuela through the branches of the Orinoco, and back to the Amazon.

Compared with the great transcontinental routes the Pan-American Railway project is not wonderful. Now that passengers may take their little journey to Moscow, and then proceed across Siberia to Port Arthur or Vladivostok, reaching the Pacific in less than eighteen days, the trip from New York to Buenos Ayres should be included in future itineraries. It is true that instead of an autocratic government, with cogent military and political reasons for building a vast railway line, the Pan-American Railway requires the co-operation of many governments. It requires also the confidence which these must inspire on the part of private capital. But, instead of costing \$400,000,000, with perhaps an additional \$200,000,000 to be expended within a period of five or six years, the Pan-American links, according to the estimates of the engineers, can be brought together for less than one total expenditure of \$200,000,000. It may be said that each of the Central and South American countries has the same political reason for completing within its own links a railway system that the Czar of Russia had for constructing the trans-Siberian line. Beyond this is the common interest which will be promoted by a trunk line and feeders joining three continents. Railway development means commerce, and commerce is civilization. The mightiest factor in South American civilization will be railroad communication.

The Pan-American Railway idea has the support of enthusiasts, but of enthusiasts who have behind them the record of achievement. It is these achievements that give encouragement to the younger generation, who also may catch some of their enthusiasm. When Mr. Carnegie and Mr. Davis, and men of similar persistent purpose, leave the doubters to discuss obstacles, and give the indorsement of their practical experience to the

general plan, others safely may follow them.

There are further measures which preserve the continuity of the idea. The second International American Conference, besides appointing a permanent Pan-American Railway Committee, provided that at a future date an assembly be called of authorized representatives of all the Republics of this hemisphere interested, for the purpose of perfecting a convention to arrange for the construction of the proposed intercontinental

railway. It also provided for the holding of a third International Conference within a few years, when the work that has been done towards carrying out its recommendations may be reviewed, and fresh impetus be given the general policy of drawing the nations of America into closer relation. It is almost needless to mention the sympathetic interest which President Roosevelt and Secretary Hay have shown in this subject, of which the Pan-American Railway is one of the most important elements.

## The Heart of the Dream

By Katharine Holland Brown

"THIS is the way." Tom clutched her arm with a lean, eager hand. Harriet looked up at him, keenly anxious. From New York to southern Illinois had been a long ride for a man just up from pneumonia. She put up her hand and stroked his gray young head.

"Hurry slower, Tom. It has waited for you twenty years. Let it keep on waiting a minute longer."

"Just like a girl!" Tom's big-boy laugh rang challenging music through the sleepy orchard. Harriet's cheek burned to rose. When one has married at thirty, petting comes not amiss, even after eight wedded years. "So you're jealous! Jealous of the poor little brier-patch my youth lies buried in! I always did suspect it."

"I'm jealous of every rock and acorn and fence-rail on the place!" snapped Harriet, chin aloft. "You've been telling me of that wonderful woods, and the pasture, and the big brook where you learned to swim, ever since we were married, and you've sighed and languished for them till I've wanted to come out and cuff the Dryad's ears. The hussy! To keep you tied to her apron-strings all these years!"

"It was a good long string, and I had no end of sea-room." Tom pinched her cheek, then laughed again at her face of reproach. "There's not even a chipmunk to see us, child. This isn't Broadway. Come, let's run for it."

A chill of foreboding swept her heart. "Tom!" She caught his wrist and held him back, all too easily. "Have you thought—maybe—it won't be the same?"

"Oh, but Jim Burroughs was here last year, on his way through from California; and he said it hadn't changed, not a leaf nor a twig. Don't croak, Harry. Yes, I know; the town is awful." He swept East Clarkesville with a fling of scorn. "Poor Sis, you thought you were coming to classic vales and rural shades, and all that, didn't you? And you found brick walks and automobiles, and all the girls wearing Colonial shoes by mail order, with gilt buckles, and blue ribbon roses in their hair, just like the society leaders up in Chicago. It's too bad. But the real place will make up for it. Ah, it is a real place, Harry. You'll see!"

He scrambled over the low worm fence, then helped her dutifully from rail to rail, with serious regard for her crisp ruffles. Their way led past the orchard down a cool shaded road, all snow-flecked with clover, then up the railroad embankment, steep and glaring in the high spring sun. Harriet trod the hot sand with wary steps; these were her best shoes, and she quailed before the thought of scuffing them. Yet her eyes followed her husband; her breath caught sharply when he stumbled once and wavered a moment before he won his balance again. It was so hard not to help!

"It's right across there." Tom waited for her and pulled her free hand into his own, then dragged her on down the embankment. He laughed out, nervously. Transparent color brimmed the hollow of his cheek. "You're a good girl, and I'm a greedy, to haul you out here on our

first vacation, just because—but maybe you'll like it?" His eyes implored her.

"I wanted to come even worse than you did," she vowed, briskly. "Don't let's be sentimental, Tom."

"Well, then—" he snatched her hand and they ran like children down the sandy hill, then pushed their way through a hedge of wild crab-apple, tossing rosy and sweet. Here they stopped. Tom straightened his shoulders with a hard breath; Harriet looked down quietly into the wonderland of her husband's boyhood dreams.

It was just as he had described it, time and again. There was the wooded slope on which they stood, bedded thick in moldering leaves. A thread of a brook trickled brown past their feet; the hollowed intervale below was carpeted gray with pungent mint, and scrolled in pink with clover. Beyond, the brook widened to silver; a sea of young timothy, rippled with racing shadow, tossed misty waves against the keener green of hillside wheat.

"It's exactly as it used to be." Tom's voice was oddly subdued. "Look, Harry! Friar Tuck used to paddle up that slope, heaving like an old porpoise, his cowl hung back so he could puff; sometimes Don Quixote would come along on Rosinante and give him a lift up the hill; sometimes he climbed on behind the Black Knight and rode to the tilt-yard with him. See that big maple yonder? Rebecca used to kneel by it, all in her white dress, with her black hair streaming to her knees, waiting for her champion—it was only a sapling then, but it made a first-rate stake if you piled dead leaves around it for fagots. I couldn't begin to count the number of times I've spurred down the hill, into the lists, to rescue her," he chuckled softly. "And down there, where the brook slips under the fence, they used to come by shoals, the biggest crowd! Catherine de' Medici washing her bloody hands, and Edith searching for Harold, with her yellow hair all tied with pearls and her veil bound back with jewels, so that she could see; the only jewels I'd ever laid eyes on then were mother's cameo earrings, but they were splendor enough for me. And Saint Elizabeth with her market-basket, and Godfrey of Bouillon, and Henry the Lion, in his sackcloth, with ashes in his hair, and the

purpling cuts showing on his back and his arms! Not to mention Brunhild, and Alaric, and St. Francis with birds fluttering on his shoulders and popping out of his sleeves and his pockets, like a sleight-of-hand man! Oh! they were a great crowd, I tell you what!"

"And it's just the same?"

"Only through the wrong end of the opera-glass," he answered, with a rueful grin. "I know I learned to swim in that brook, all right, but it wouldn't hold a muskrat now. The whole intervale wouldn't be big enough for Rebecca's mule to turn round in, I don't believe. But it was big enough to dream in."

He strolled away, kicking the dry leaves as he went, and stooping to pull the clovers with dexterous pinches, which brought them up full-stalked, clear of the soil. "I'll be back in a jiff," he called, turning to meet her eye. "I just want to make sure of it that it's all here!"

Harriet sat down beside a clump of sweet-fern. So this was his Enchanted Forest! And even years and wider, fairer sights could never rob it of its joy for him.

A clump of straggling trees; a splash of running water; a dappled field. From these rude playthings what had he not built up? The love for wild, free, innocent things which had fed the springs of joy within him through grim disappointment and heart-sickening care; the delight of giving, even as they gave, his trees, his wild flowers, freely, happily; the spirit, the content, the faith, which framed his House of Life. And what had they won in return?

Ah! could his youth lie buried here, deep in leaf and anemone? The youth of the man whose manhood years alone were hers? Jealous, he had said? Perhaps. Never of the love that was hers to-day, secure as her own breath. But for her love of twenty years ago, the silent boy, shy, moody, whimsical, living his mystic days with the trees and the visions of his lone, wistful dream. Surely the wood and the brook had been first in his heart. Foolish she was, perhaps grasping, covetous, she told herself in sharp reproof. Yet the awful mother-hunger of the mother denied rose upon her, a whelming wave.

"The boy's mine!" She spoke through

**Hints to Golfers.** By Niblick. Illustrated. The Baker & Taylor Co., New York. (Sixth Edition.) 5x8½ in. 147 pages. \$1.25, net.

This unique volume will be helpful alike to the beginner at golf and to the seasoned player. Its value lies largely in its simplicity. The author points out briefly the faults to be avoided, and, with the aid of excellent illustrations and diagrams, gives sound advice as to the perfecting of one's game. Special emphasis is laid upon the fact that golf is the game of all games into which enters the mental as well as the physical make-up of the player. The book as a whole is to be heartily commended.

**Cumulative Index to a Selected List of Periodicals.** Authors, Subjects, Titles, Reviews, Portraits, Illustrations, Maps. Fourth Annual Volume, 1899. Edited and Published by the Cumulative Index Co., Cleveland, Ohio. 8x11 in. 81 pages.

**Dowager Countess and the American Girl (The).** By Lilian Bell. Harper & Bros., New York. 4½x7 in. \$1.25.

A lively story of a social combat between an American girl and her English mother-in-law. There are passages which are distinctly offensive to all readers of taste.

**Dramatic Criticism: Three Lectures Delivered at the Royal Institution, February, 1903.** By A. B. Walkley. E. P. Dutton & Co., New York. 5½x8 in. 125 pages. \$1.50, net.

**Early Mackinac: An Historical and Descriptive Sketch.** By Meade C. Williams. (Fourth Edition.) The Presbyterian Book Store, 1516 Locust St., St. Louis, Mo. 5x7½ in. 176 pages. 85c.

**Florence: Her History and Art to the Fall of the Republic.** By Francis A. Hyett, B.A. E. P. Dutton & Co., New York. 5½x9 in. 600 pages. \$2.50, net.

It is rather singular that, with all the books which have been written about Florence, there has not seemed heretofore to be available a single volume of moderate compass which covers the political and art history of the place satisfactorily and in a really orderly arrangement. The little book of Mr. Gardner's, recently published, is capital, but is quite limited in scope. Mrs. Oliphant's "Makers of Florence," in many ways an admirable and useful book, is planned in such a manner as to make the historical narrative disjointed. Professor Villari's great book is too elaborate for ordinary readers, and the same may be said of Napier's "Florentine History." The present author has succeeded admirably in so disentangling the political intrigues and partisan faction fights in Florentine history as to make it easy for the average reader to follow the story intelligently. He has also given due proportion of attention to the literary and art history of Florence, taking each period by itself and in close conjunction with the political history. While the style of the book cannot be called brilliant or dramatic, it is clear, and holds the attention fairly well. The book may be cordially commended to the historical student.

**Fullness of the Blessing of the Gospel of Christ (The).** By Bishop Willard F. Mallalieu. Jennings & Pye, New York. 4½x7 in. 168 pages. 50c.

**History of France (The).** By Arthur Hassall, M.A. (The Temple Primers.) The Macmillan Co., New York. 4x6 in. 246 pages. 40c.

To his other valuable volumes Mr. Arthur Hassall has now added a small "History of France," which should appeal to students, since, so far as we know, it is the first work of the kind to cover French history to the present date. Its value, however, is as a book of reference rather than a connected history. The necessity of condensation into the narrow limits of the little volumes of this series has played havoc with the description. Mr. Hassall has not been able to give more than the barest outline of the great movements which have made French history notable; for example, he has but *six pages* to discover the events from Napoleon's fall to M. Loubet's election! However, for the kind of book which this must perforce be, it is doubtful whether it could have been done better by M. Lavissee, M. Rambaud, or any other author of the admirable short histories of France now in use in the public schools of that country.

**In Quest of the Quaint.** By Eliza B. Chase. Illustrated. Ferris & Leach, Philadelphia. 5½x8 in. 253 pages. \$1.50.

A half-dozen or so sketches of travel through the picturesque region of the lower St. Lawrence, introducing pleasantly many quaint legends and chansons of the French-Canadian habitant and voyageur. The illustrations are from water-color and pencil drawings by the author, and a convenient index is placed at the back of the book.

**Japanese Garland (A).** By Florence Peltier. Illustrated. The Lothrop Publishing Co., Boston. 5x7 in. 201 pages. 75c., net.

A Japanese lad who is being educated in this country is supposed to tell to his schoolmates during their hours of recreation these folk-lore tales of his own land. It is a slight criticism that occasionally the language put into Yone's mouth sounds somewhat mature for a boy of twelve.

**Laos of North Siam (The).** By Lillian Johnson Curtis. Illustrated. The Westminster Press, Philadelphia. 5½x8 in. 338 pages. \$1.25, net.

This account of a little-known people by one who has spent many years as a missionary among them is religious in tone, and obviously written with a serious purpose. But for all that it is an entertaining book; the chapter on folk-lore and the curious burial customs of the country are especially interesting.

**Letters to M. G. and H. G.** By John Ruskin. D. Appleton & Co., New York. 3x8 in. 149 pages. \$1.25, net.

These letters show Ruskin in his most sentimental condition. To Mary Gladstone he writes, for instance: "My dear M—, You were a perfect little mother to me last night. I didn't feel safe a moment except when I was close to you." He is in somewhat the same frame of mind when he speaks of art or social conditions. Even his pessimism is sentimental. Gladstone and Ruskin are shown in effective contrast. It is interesting to note a passage concerning Ruskin, quoted from an old journal, in which it is said of "all vile, dark, hateful

things" that "they are not—cannot be. They are lies, negations, blanks, non-entities. 'God is—and there *is none else* beside Him.'" This has come to have a familiar sound in these days of science and health with key to the Scriptures.

**Life and Letters of Charles Butler.** By Francis Hovey Stoddard. With Portraits. Charles Scribner's Sons, New York.  $5\frac{1}{2} \times 8\frac{1}{2}$  in. 357 pages. \$3, net.

Reserved for later notice.

**Lions of the Lord (The).** By Harry Leon Wilson. Illustrated. The Lothrop Publishing Co., Boston.  $5 \times 7\frac{1}{2}$  in. 520 pages. \$1.50.

A novel with Brigham Young in it may safely be pronounced unusual. But Mr. Wilson's book is by much more than this fact removed from the commonplace. It holds in unique combination an absorbing story, a keen psychological study, and an animated historical chronicle of the establishment of the Mormon Church.

**Love-Letters of Margaret Fuller, 1845-1846.** Introduction by Julia Ward Howe. D. Appleton & Co., New York.  $5 \times 7\frac{1}{2}$  in. 228 pages. \$1.35, net.

That one who guarded as scrupulously as did Margaret Fuller the many confidences reposed in her should have these personal, intimate letters of hers given to the public seems singularly inappropriate. That they were written, not to him who became her husband, but to a friend she met while living in the home of Horace Greeley, before her visit to Europe, only increases the infringement on her private life. And yet, with both correspondents long years dead, the letters themselves might well tempt to publication, so full are they of personal revelation, so charged with sympathy and tenderness, so overflowing with delicacy of fancy and feeling and with spiritual intuition. While written only for the eye of one beloved friend, they contain nothing that men and angels might not read. No word is given, of course, of any of the replies received from her correspondent, and his nature can be but conjectured from the trust and affection with which Margaret Fuller addresses him. "You are noble; I have elected to abide by you. . . . You have been to me as sunshine and green woods," she writes, and asks a blessing on "the true heart that consoles me for the littleness I must see in my race elsewhere." Why he did not win the hand of the woman whose heart was tuned to his is not revealed, though ground for many a surmise is given by hint and reference within the letters. Beneath all the exquisite beauty that clothes the thoughts suggested to her lover, the letters plainly show how warm and responsive a heart beat in the woman who, in an age when her sisters were cribbed and confined, stood a strong intellectual power that pierced and saw and was not afraid to speak. "I never had these feelings at all toward any other," she writes, this woman of whom Emerson said that "all the art, the thought, and the nobleness of New England seemed at the moment related to her, and she to it." Rich in friendship as she was, until she met the Marquis of Ossoli no other nature save this had awakened in her that life that reveals both

self and all other worlds, and as interpreters of such an awakening these letters have the charm of romance and the satisfyingness of reality.

**Mara. By "Pansy" (Mrs. G. R. Alden).** Illustrated. The Lothrop Publishing Co., Boston.  $5 \times 7\frac{1}{2}$  in. 341 pages. \$1.50.

More than one generation of girl readers have welcomed the "Pansy" books, so Mrs. Alden is sure of her audience. This time her lesson in the guise of fiction (wherein she introduces four young women separating at the end of their school days, and follows them thereafter through three hundred odd pages), is on the sacrament of matrimony. It is also an arraignment of Mormonism and the National Government for responsibility in its continuance in this country.

**Mrs. Pendleton's Four in Hand.** By Gertrude Atherton. The Macmillan Co., New York.  $4 \times 6\frac{1}{4}$  in. 89 pages. 50c.

A very "light-weight" short story of the kind thought by some people desirable for summer reading.

**Norwegian By-Ways.** By Charles W. Wood. Illustrated. The Macmillan Co., New York.  $5\frac{1}{2} \times 8$  in. 384 pages. \$2.

Mr. Wood's "Norwegian By-Ways" is of the same charming and gossipy order as his books on Spain and Southern France. As in those, this volume is full of vivacious dialogue, which accords well with the author's lively and entertaining descriptions of scenery. His light touch reproduces for us scenes which we may have witnessed ourselves, and others which, through his words, we long to see. Norway is a solemn land, but Mr. Wood has brightened the picture with high lights here and there. Nor are they out of place on his canvas.

**Our Feathered Game: A Handbook of the North American Game Birds.** By Dwight W. Huntington. Illustrated. Charles Scribner's Sons, New York.  $5\frac{1}{2} \times 8$  in. 428 pages.

One's attention is first attracted in this book by the half-dozen or more really charming color pictures of shooting scenes. When the book is read, it becomes evident that Mr. Huntington is entitled to the credit of being able to narrate the story of his own hunting expeditions after wild turkey, grouse, partridges, ducks, and other of our game birds in such a way as to interest even the non-sporting reader. This is really high praise, and it is not often that it can be given to a book of this sort. Sportsmen will find in it, not only these interesting narratives, but also very sensible and practical suggestions in regard to the sport, while an appendix contains well-arranged scientific information for the naturalist.

**Out of Kishineff: The Duty of the American People to the Russian Jew.** By W. C. Stiles. B. D. G. W. Dillingham Co., New York.  $5 \times 7\frac{1}{2}$  in. 38 pages. \$1.20, net.

In a spirit of enterprise and to take advantage of the immediate timeliness, this book has been prepared apparently with some haste. Nevertheless, it contains a great deal of information on the conditions of the Jewish people in Russia, and the duty of the American people as it

appears to the author. A little more reserve in the writing would really have made the book more forcible and effective. An account of the recent massacre is included, and, in addition to chapters on the character and life of the Jews in Russia, the author discusses their position in New York, the general subject of Jewish immigration to America, and the international principles involved or violated.

**Out of the Past: Some Biographical Essays.**

By the Right Hon. Sir Mountstuart E. Grant Duff, G.C.S.I., F.R.S. E. P. Dutton & Co., New York. In 2 vols. 5x7½ in. \$5, net, a set.

These two volumes of essays are largely (but not entirely, as might be judged from the subtitle) biographical in character. The papers were obviously written for publication in English reviews, and have little in the way of a thread of common interest to bind them together. Among the biographical sketches, those most notable relate to Walter Bagehot, Dean, Stanley, Matthew Arnold, and Cobden. The author is always cautious and conservative in expressing his opinion, but he is very happy in reproducing the atmosphere and personal surroundings which belong to his subject. Among the non-biographical topics treated are some so far removed in character as accounts of visits to Niagara and Palestine on the one hand, and treatises on religious liberty, Parliamentary reforms, and money on the other.

**Representative Art of Our Time, with Original Etchings and Lithographs and Reproductions of Oil and Water-Color Paintings, Pastels, etc.** Edited by Charles Holme. Parts VI. and VII. Published by the International Studio, 67 Fifth Avenue, New York. Complete in 8 parts. Each \$1, net.

One of the most instructive essays that have appeared in this series is A. L. Baldry's "The Development and Practice of Pastel Painting," which forms the text-matter of Part VI., and the most pleasing illustration of the number is a delicately colored drawing by Bernard Partridge entitled "Spring." Other reproductions are an etching by A. Lepère, oil paintings by Arnesley Brown and George Clausen, an auto-lithograph by Steinlen, and a water-color on silk by Charles Couder. To Part VII. Mr. Baldry also contributes an article on "Monotyping in Color," and the pictures are oil paintings by G. F. Watts, J. F. Raffaelli, and Bertram Priestman, an etching by A. Legros, a pencil drawing by P. Dupont, and a water-color by Gaston La Touche. This collection will be completed with the eighth installment, and a handsome portfolio is furnished in which the parts may be kept.

**Revival Addresses.** By R. A. Torrey. The Fleming H. Revell Co., New York. 5¼x8 in. 271 pages. \$1, net.

**Selections from Homer's Iliad.** Edited by Allen Rogers Benner. (Twentieth Century Text-Books.) Illustrated. D. Appleton & Co., New York. 5x8 in. 522 pages. \$1.60.

**Short History of Christianity (A).** By John Horsch. Published by the Author, 107 University St., Cleveland, Ohio. 5x7½ in. 304 pages. \$1, net. This is a concise and plain narrative, interested rather in real Christianity than in churchly organization or doctrine, and in special sympathy with independent as distinguished from

established or State churches. In this it goes so far as to prefer Carlstadt to Luther. The long-misrepresented Anabaptists of the Reformation period are treated with at least full appreciation.

**Thompson's Progress.** By C. J. Cutcliffe Hyne. The Macmillan Co., New York. 5¼x7¼ in.

If lively invention, rapid movement, and brisk dialogue can make a story popular, Mr. Hyne's novel must score a success. It is a distinct advance on his "Captain Kettle" tales, although, like them, it cares little for probabilities so long as the reader's curiosity is aroused, his attention held, and temporary entertainment is supplied to him. The Thompson whose Progress brings him somewhat too swiftly from being a nameless poacher lad, Tom's Son, to the position of a millionaire, financier, and political power, with a peerage impending, is a wonderful chap, and it is to Mr. Hyne's credit that one does, at least while reading, partly believe in him. There are some really delightful chapters about Tom's poaching experiences—he loves the fine art of poaching so well that he continues his nefarious acts after he is a rich man, and even secretly poaches his own estates, offering his keepers a reward for his own capture. The kind of interest this book excites—and we fancy very few people will leave it half-read—is something like that aroused by Mr. Hornung's "Raffles" or Sir Conan Doyle's "Sherlock Holmes;" one must not take it too seriously, but it is decidedly amusing and clever.

**"Twixt God and Mammon.** By William Edwards Tirebuck. D. Appleton & Co., New York. 5x7½ in. 313 pages. \$1.50.

The Reverend Gomer Deen is a Ritualist curate and afterward a vicar of the Church of England, who succumbs to doubt and temptation and makes a worldly marriage, finally ending his life with a poisoned draught at the communion-table of his own church. Despite this lurid situation and three other sudden deaths, the book is not altogether sensational. It is chiefly a skillful portrayal of spiritual conflict. The Welsh scenes and characters are also admirably done, with the single exception of Joy Probart, who seems to us as exaggerated a type of virtue as is Miss Abercromby Moore of worldliness. The book is prefaced by a memoir and appreciation of the author by Hall Caine, who was his lifelong friend.

**Unfrequented Paths: Songs of Nature, Labor, and Men.** By George E. McNeill. Illustrated. The James H. West Co., Boston. 6x8¼ in. 115 pages. \$1.50.

**Unwelcome Mrs. Hatch (The).** By Mrs. Burton Harrison. D. Appleton & Co., New York. 4½x7½ in. 191 pages. \$1.25.

This is a sad little story of defrauded mother-love, and it seems very real. Mrs. Hatch is the name assumed by a divorced wife, the penalty of whose wrong-doing has been disproportionately great. But her story ends more happily than is often the case with the Mrs. Hatches of real life.

**Vedanta Philosophy: Divine Heritage of Man.** By Swami Abhedananda. The Vedanta Society, New York. 5x7½ in. 215 pages. \$1.

"THE NAME IS EVERYTHING."

# THE STORY OF A LABOR AGITATOR

**J**OSEPH R. BUCHANAN, who has been recently described as having "led more strikes than any other man in the country, yet never struck himself," has written for *The Outlook* the story of his experiences as a labor agitator in a series of articles which will shortly be published. He was for nearly twenty years in the thick of the labor conflict in the West, and is intimately acquainted with all the well-known labor leaders.

**The Death of Leo XIII.** On Monday of this week the Pope passed quietly away after a fight against illness lasting more than two weeks, the final exhibition of a surprising vital force. Among his last wandering utterances are said to have been these words: "The Church is triumphing," "My dear people," "Oh, the weight of these robes! Can I hold out to the end?" Elsewhere in this issue of *The Outlook* will be found an estimate of the character, purposes, and statesmanship of this remarkable man, who is admitted by all students of the ecclesiastical and civil history of our times to have been one of the ablest of modern Popes. Leo XIII., who was reckoned by some authorities of the Church as the two hundred and fifty-third, by others as the two hundred and fifty-seventh pontiff to fill Peter's chair, was in his ninety-fourth year. He was the son of Count Ludovico Pecci, and was baptized under the name Vincent Joachim (or Giacomo) Pecci. He was educated at a Jesuit college in Viterbo, in the ecclesiastical colleges of Rome, and at the Roman University. It is recorded that his youthful attainments were unusual not only in the classics and in philosophy, but also in mathematics and physics, and he was made a Doctor of Laws some sixty-five years ago. Taking holy orders, he received preferment of various kinds from Pope Gregory XVI., and in his administration of the church's affairs at Perugia and Benevento showed vigorous executive ability; in Benevento, for instance, he is largely to be credited with putting an end to a long-established system of brigandage. Pius IX. created Pecci a cardinal in 1853, after he had held the offices of Bishop of Perugia and Archbishop of Damietta. Just twenty-five years later he was chosen by the conclave to succeed Pius IX. As is more common

than otherwise the choice was a compromise between factions whose candidates were too strong to yield one to the other, but not strong enough to secure a majority. Pecci was regarded as a moderate compared with the candidates of the extreme conservative and radical parties.

**Leo's Reign and Policy** In matters relating to international politics Leo XIII. soon showed a tendency to placate enemies rather than to provoke contests; particularly was this so with regard to Germany, whose Government soon recognized the Pope's force and ability, and reached with him a peaceable understanding upon questions growing out of the kulturkampf controversy, which at one time seemed impossible of a reasonable solution. The same desire for conciliation was shown in Leo's dealings with Russia in regard to the treatment of Roman Catholics in that country. In American affairs he has always taken a warm interest; during his last illness he once exclaimed, "The Americans love me more than any other people." The position of Leo XIII. in the McGlynn case, in the Knights of Labor controversy, in the Hecker incident, and in the discussion about "Americanism" in the Church will readily be recalled. Leo XIII. has steadfastly maintained his claim to the temporal sovereignty of Rome, and, like Pius IX., has acted on the theory that he was a prisoner within the extensive buildings and grounds of the Vatican; in pursuance of this theory he has always refused to touch the income voted him by the Italian Parliament and has otherwise ignored the official acts of the Italian Government, although in many practical points there has been a good understanding between the two powers. Leo's en-

cyclicals relating to education, to socialism, to labor problems, and to church government have been regarded the world over as papers of marked ability. The Jubilees held successively to commemorate fifty years of his priesthood and twenty-five years of his papacy were occasions of great rejoicings at Rome and throughout the Roman Catholic world.

**Ceremonies and the  
Succession**

A curious ceremony attendant on the death of a Pope is the manner in which it is officially ascertained that he is no longer of the living. One of the highest dignitaries of the Vatican goes to the bedside and with a small gold mallet kept solely for this purpose taps three times upon the forehead of the Pope, with each blow calling upon him by his baptismal name: "Giacomo Pecci! Giacomo Pecci! Giacomo Pecci! Art thou alive?" Then and not till then the Pope is officially dead. Despatches from Rome state that the funeral of Leo XIII. is expected to be a magnificent spectacle, and Cardinal Oreglia, who is now in supreme command at the Vatican, says that he will revive the lying in state in the Sistine Chapel, yet the obsequies of a Pope are traditionally of the simplest nature, the assumption being that he is beyond all need of the pomps and ceremonies which are lavished upon the newly elected pontiff. During the conclave of the cardinals for the election of the new Pope, they are as completely isolated from outside influences as the members of a jury in a murder trial. The part of the Vatican where the conclave is held is securely walled off and kept under the strictest surveillance. The food and whatever else is admitted is rigidly examined. We shall publish next week an article by a well-informed contributor describing the cardinals generally regarded as candidates for the papacy and the parties within the church which they represent.

**A Famous Painter**

James Abbott McNeill Whistler, who died in London on Friday of last week, was a man of singular and sometimes contradictory personal traits, while critical opinions still vary as to his artistic achievements. There has been, however, a remarkable

change in the opinion as to Whistler's genius since the day when Mr. Ruskin declared that his exhibited paintings "nearly approached the aspect of wilful imposture," and that he had never expected to hear of "a coxcomb's asking two hundred guineas for flinging a pot of paint in the public's face." Mr. Whistler believed firmly in his "harmony of color" idea, scoffed at all realism and what is called story-telling in painting, and undoubtedly took sincere delight in his caustic and witty retorts to scoffing critics. Whatever may be said of his more ambitious paintings, no one would now deny exquisite beauty of a unique order to many of his water-colors, while his etchings are eagerly sought by collectors and rank with Seymour Haden's as the best work of recent years. His famous portrait of Carlyle and that of his own mother now in the Luxembourg show his power in portraiture. Mr. Whistler was an American by birth, was educated at West Point, studied in Paris with Gleyre, and was one of that jovial and brilliant band of young artists made familiar to novel readers by Du Maurier. When he first came to London, he lived for a time with Swinburne and Rossetti. The appreciation of his ability came slowly, and existed in Paris and America before it gained much ground in England. The attack by Ruskin in 1878, part of which is quoted above, led to a libel suit; the trial was a source of immense entertainment to the art-loving public, and to no one more so, probably, than to Whistler himself; the verdict was in Whistler's favor, and the damages were assessed at one farthing! Whistler was wont to describe himself as a past master in the gentle art of making enemies; but his fierce combats always had something of the mock-heroic about them; he was humorist enough to laugh at himself as well as others; and it is doubtful whether he really left an enemy behind him.

**Russia:  
Kishenev—the  
Open Door**

It is officially announced that the Russian Government has been courteously asked by our Government if it will consent to receive a petition from a large number of American citizens in relation to the Kishenev tragedy, and that it has

declined to do so. This probably closes the official connection of our country with this affair, though that the petition will get before the Russian as well as the American public by unofficial methods, to a greater or less extent, is highly probable. Whether it will ever get to the Czar is not so certain. One of the advantages which a bureaucracy derives from a censorship of the press and the mails, is its ability to keep the Czar in ignorance of matters which it does not wish him to know. Simultaneously with this announcement comes another that China and Russia have both agreed to the "open door" in Manchuria. Coupled with this agreement is another that all custom's receipts shall be collected at the ports, and all internal taxation on imports shall be abolished. The reader can better understand what this means, if he will imagine that prior to this date all goods imported into this country were liable to pay a tax on passing the border of each State, and each State might vary the tax at will, and that henceforth all duties were to be collected, as in fact they are now, at the port of entry. In the first case no merchant could know what his duties would be; in the other case he knows them exactly before the goods arrive. It is true that as yet what are to be the free ports in Manchuria is not announced, and it is stated that the freedom of the ports will not become an accomplished fact until Russia withdraws from Manchuria; but it is also true that the date of such withdrawal is fixed as about the first of September. If the treaty contained a promise only to China, or even to Japan, we might well be skeptical as to its fulfillment; but we are slow to believe that Russia is playing fast and loose with the United States. It cannot afford to do so. War between Russia and Japan is quite possible at any time; if Great Britain were to join with Japan such a war would be a serious matter; and if in such a war Russia had incurred the hostility of the United States by a broken treaty, it would be still more serious. There is at this writing every indication that Secretary Hay has won a new triumph for the "new diplomacy" as well as for America, by securing for China and for Christendom an extension of the freedom of commerce which cannot but be advantageous commercially to both, and

vitality and morally greatly advantageous to China.

**Addickism** The corruption of Addickism in Delaware seems to be on the increase if the present indications can be relied upon. With a firm hold on Kent and Sussex, the two lower counties of the State, Addicks and his forces are making inroads on the third county, Newcastle. It is true they were defeated in the recent mayoralty contest in Wilmington, but on the other hand they defeated the regular or Dupont Republicans. This has been their policy, so their defeat at this time is not to be taken as conclusive. It is an encouraging sign that some of the churches are beginning to feel the enormity of the present situation. The brave words of Bishop Leighton Coleman at the recent Diocesan Convention is worthy of reproduction and emulation. He spoke strongly, saying in part that political corruption "in one form or another has been associated with our civic life for many years; but I think that one is warranted in saying that it has been more extensive and more flagrant within the past few years, especially, but not exclusively, in our own State of Delaware. A transaction that is criminal and debasing in its character loses none of its criminality and baseness when it concerns the body politic, and just as the Church would denounce it between man and man, so she must denounce it when it concerns the commonwealth. A man must be made to feel that what he would be afraid and ashamed to do in his own business or social relations, he is to be equally ashamed to do in politics. He is not to be allowed to use his church membership as a cloak under whose protecting folds he may be guilty of all manner of deceit and fraud. A corruptionist is not really a Democrat or a Republican, but simply a hypocritical criminal, who, in his greed and dishonesty, is grossly violating the principles which he professes to espouse. It is the business of the Church by her emphatic condemnation of such cormorantic members to aid the actually honest and determined men of either party to eliminate these dangerous and disgraceful elements, and to make it impossible for them to regain the mastery. Let us, therefore, see to it that far from degrading

the standard of the Church to the baser spirit of the age, we raise the same spirit to the higher level of truth and righteousness."

#### Gains for Arbitration in New York

In New York City the Building Trades Employers' Association by conceding a minor point of form has won substantial victories. Its plan of arbitration, it will be recalled, was rejected by all of the building trades unions when presented as an "ultimatum," but it has now been accepted almost unchanged by the most important of these unions, when presented as a basis for conference. The incident illustrates the truth that questions of dignity have often as much to do with labor disputes as questions of wages or hours. Among the unions accepting it are the bricklayers', the plasterers', and one of the two carpenters' organizations. Were it not for the continued opposition of the housesmiths' union, which is able to arrest all work on structural iron, the New York building trades strike would be practically at an end. Even as it is, the Employers' Association claims that over thirty-five thousand unionists are back at work this week. Some of the unions which have accepted the arbitration plan have been expelled from the central association of the building trades unions on the ground that the accepted plan will prevent the unions from making common cause with one another, but now that the unions signing the agreement constitute a majority of all the men in the building trades, expulsion from the central body has lost its terrors as a measure of discipline. The first case for arbitration under the new plan has resulted in a verdict satisfactory to the unions, and there is hope that nine months of peace under arbitration may follow the three months of war now drawing to a close.

#### Labor Riots in Chicago

In Chicago the labor situation has been much more disturbing, though the strike at the center of the Chicago conflict has relatively little importance. It grew out of the employment of sixteen non-union hands by the Kellogg Switchboard Company, and most of these sixteen have since

joined the strikers. The Kellogg Company, however, succeeded in obtaining several hundred other non-union employees to take the strikers' places, and the cause of the strikers, for some reason not explained by our Chicago exchanges, took an unusual hold upon the sympathies of organized labor throughout the city. The teamsters' organization ordered a sympathetic strike, directing its members not to handle the goods of the Kellogg Company, and at one time last week it was feared that the freight handlers would take similar action. A score of freight handlers employed by the Chicago Terminal and Transfer Company did quit work when ordered to handle the goods of the boycotted firm, but the head of their union was soon brought to realize his mistake in sanctioning such a strike, which would have been—like the disastrous Pullman strike of 1894—an attempt to keep the railroads from discharging their duties as common carriers. With a Federal Court injunction impending, the freight handlers' strike was speedily called off. The sympathetic strike of the teamsters, however, involved no such legal complications, and was enforced with vigor. When, by the middle of last week, the Kellogg Company succeeded in engaging non-union teamsters to deliver their goods to the Terminal Company, union teamsters manipulated their own wagons so as to block the streets through which the non-unionists were attempting to drive. Other strike sympathizers joined in this work, mobs gathering in the streets and workmen on buildings throwing bricks at the boycotted teamsters. The police of Chicago showed great energy in dispersing the mobs, terrorizing the brick throwers, and arresting the union drivers creating the blockades, and succeeded in clearing the streets for the Kellogg Company's wagons. The courts also seem to have acted wisely in the crisis. They have freely and fully recognized the rights of the unionists to establish a peaceful picket line, but have secured the summary imprisonment of pickets who attempted in any way to terrorize those with whom they spoke. Thus the union workmen were secured their freedom of speech, but the non-union workmen were also secured their freedom of listening or not listening to what was said.

Chief Arthur's  
Career

Peter M. Arthur, for thirty years the head of the Brotherhood of Locomotive Engineers, died suddenly at Winnipeg, Manitoba, last week, while speaking at the banquet closing the annual union convention of his order. Some sense of his approaching end seemed to be upon him as he rose to speak. "I want to say a few things," he said, "as it may be my parting words to many of you." Then followed the words: "We are here to-night, no one can tell where—" At this point death came. Most of the labor leaders in this country are conspicuously young men—Mr. Mitchell is now hardly more than thirty. Mr. Arthur was forty-two when he became the head of his brotherhood in 1873, and has always been the "old leader" to the great majority of men to-day serving as locomotive engineers. He was born in Scotland, was brought to this country when six years of age, and a few years later entered the railway service. In nearly every trade it is the most skilled men who first and most effectively organize. The engineers' union dates back to 1863, and Mr. Arthur was in it from the start. He became the head of the order at the beginning of the hard times which for six years cut down wages more and more in nearly all trades, but by successful negotiations he was able to keep the pay of engineers steady or advancing. He was not a labor agitator, but a labor negotiator. He had no visions respecting the "solidarity of labor." As the head of the locomotive engineers he made the best contracts he could for his constituents, and succeeded in obtaining substantial concessions for them by engaging that his order would not support any other railway union by a sympathetic strike. In this policy Mr. Arthur was year after year sustained by a majority of his own union, but it cost him the enmity of nearly all other trades unionists. His success as a negotiator, however, did not rest exclusively upon his much debated policy of dissociating his union from the rest of organized labor. He had rare skill in formulating reasonable demands, and by consistently putting moderate demands strongly instead of immoderate demands weakly, he kept the good will of railroad managers, while steadily obtaining better terms for his men. One other

feature of his policy won for him universal regard. He steadily insisted upon the necessity of making membership in the brotherhood signify a high standard of skill and a high standard of personal responsibility. He was one of the leaders in the movement through which the railway unions have come to take so decided a stand against intemperance on the part of their members. In the view of *The Outlook* his life affords a fine illustration of both the best spirit and the best methods in labor leadership.

A Speculators'  
Panic

Again last week there was a spectacular fall in stocks—standard "investment securities" like New York Central and Pennsylvania selling for 114 and 120 respectively, or more than fifty points below the highest level reached last year. The same kind of reactions extended throughout the list, and imposing fortunes that seemed to have been created out of nothing when the markets were advancing vanished into nothingness. But the most striking as well as the most gratifying feature of the recent fall in securities, is the small number of bankruptcies resulting from them. According to "Dun's Review" the number of commercial failures has been actually less than a year ago, when the wave of prosperity at nearly all points was at the high-water mark. The present panic is thus far at least a speculators' affair, and had not the fever of speculation spread so alarmingly in all ranks of society relatively few would be suffering from its consequences. The effect of the reaction, however, is not entirely limited to the world of speculators. Stocks have tumbled because of the overstrained credit of those supporting them, and as they have tumbled credits have been still further weakened, and the demand for money has been greatly intensified. Interest rates have therefore risen for business men of all classes, and even so prosperous a corporation as the Union Pacific Railroad Company was last week compelled to pay six per cent. interest when borrowing ten million dollars for a year and a half. It is to be feared that this rise in interest rates may later result in an increase of commercial failures. Fortunately, however, its immediate effect has been to

stop the outflow of gold to Europe, which reached seven million dollars week before last. In the manufacturing world production is still on the largest scale that has yet been reached, and in the railroad world the traffic returns for last month largely exceeded those of a year ago. These evidences of prosperity, however, might easily be given an undeserved importance in forecasting the future, for activity in manufacturing and transportation is peculiarly the result of past contracts and often continues for a considerable period after business depression has set in. More important for the future are the crop returns, and these are now more favorable than at the beginning of the month, when the Government reports promised somewhat less than the average harvest for nearly all the important crops except winter wheat.

**American Trade  
with South Africa and  
New Zealand**

Mr. Chamberlain's preferential tariff scheme may affect our exports to South Africa, New Zealand, and Australia long before the electorate of Great Britain shall have decided finally upon the proposed changes. It is easier for those colonies to give the mother country a preference and discriminate against the United States, because they have much less to lose and far more to gain in the near future than Great Britain. American interest in their discrimination is real because their preference for the mother country would be effective against us. Canada's preference has not been thus effective, because our exports to the Dominion continue to increase rapidly, the nearness and immense variety of our market proving too strong for the mother country even with the latter's 33⅓ per cent. advantage; but with the far-off colonies the case is different. For example, the United States exported to South Africa during the fiscal year 1902 over \$26,000,000 worth of goods, which was an increase of 36.8 per cent. over our exports for 1901. More than two-thirds of this amount is made up of goods in which we directly compete with Great Britain, and a 25 per cent. preference, which will probably go into effect soon, would seriously cripple that branch of our foreign

trade. With regard to New Zealand, to which country we exported \$7,000,000 worth in 1902, a diminution of trade would follow, and Australian trade would also be lessened seriously. In South Africa our interest is more pronounced because for some years to come there will be a very large and increasing demand for purposes of building, for mining machinery, and for agricultural development. All these colonies were formally pledged to a preference, so far as their prime ministers could speak for them, last year at the Colonial Conference in London; and everything thus far goes to show that the preference will be given. The whole question of our keeping this trade by some concession is therefore suggested in a very forcible way.

**Civic Improvement**      **The American League  
for Civic Improvement**

had its annual meeting in a novel fashion last week. In connection with the Chautauqua Institution, a "Civic Institute" was arranged for the entire week, the business sessions being subordinated. Thus the modern gospel of civics was attractively presented to a great throng of the rather acutely intelligent people who choose to take recreation with instruction along the shores of the beautiful lake in northwestern New York. The programme included lectures, addresses, and conferences. Mr. John Quincy Adams presented a series of inspiring studies on art in its connection with every-day life; Professor Charles Zueblin, of the University of Chicago, discussed in an unusually interesting way the relations of the individual in a series of lectures upon Wealth, Man and Woman, Politics, and Justice. Mr. J. Horace McFarland, re-elected President of the League, told a great throng of the graphic campaign for civic betterment in Harrisburg, and Mr. Albert Kelsey, who is engaged in the beautifying of the Chautauqua grounds, illustrated "The Model City." A significant address by Mr. Clinton Rogers Woodruff, president of the American Park and Outdoor Art Association and secretary of the National Municipal League, told of the notable municipal progress of the year. There were other strong addresses, including one by Dr.

Charles B. Gilbert and one by Governor R. M. La Follette, of Wisconsin. Although these lectures and addresses were forceful and very largely attended, the most significant feature of the civic institute week was undoubtedly the series of conferences arranged to cover not only rural, town, and National improvement, but also to include a great number of women's clubs represented at Chautauqua. At these conferences earnest people from the ranks of civic workers spoke freely upon all phases of the subject, and a depth of interest and feeling was manifested that goes to prove the sincerity of the great civic awakening to which *The Outlook* has often referred.

**Outdoor Art** The movement for "a more beautiful America" proceeds apace and at a rate that should fill the hearts of the most zealous with reasonable encouragement. The annual meeting of the American Park and Outdoor Art Association has just been held this month at Buffalo. The sessions were largely taken up with reports of work actually accomplished or in hand, and these were highly encouraging. The most striking report was that of Superintendent Geo. A. Parker, of the Keney Park, Hartford, as Chairman of the Park Census Committee, in which he pleaded for extended park schemes to atone for the atrophy resulting from an industrial system. His suggestions as to the ways and means of increasing the use of existing parks by laboring men were eminently practical, and excited a discussion which gave evidence of a determination on the part of the members to put them into practical operation. President Woodruff's address on "Awakening America" and Professor L. H. Bailey's on "The Forward Movement in Outdoor Art" outlined in detail the remarkable advances along these lines within the past few years, and discussed their true significance and bearing. A marked spiritual tone pervaded the meetings, which told plainly alike of the earnestness and high ideals of those interested in this movement. The address of Superintendent Welch, of the Niagara Reservation, in which he spoke of the "Landscape Features and Problems at Niagara," was particularly characterized by these feat-

ures. He has accomplished a great work, and has gone far toward realizing his aspiration to provide a great national and natural reservation where the people "can behold nature and worship nature's God free from the suggestions of commercialism."

#### Religious Conventions of Young People

Since the eighth of July there have been held three conventions of religious bodies composed of young people. The first was the sixth biennial convention of the Brotherhood of Andrew and Philip, an organization of undenominational character somewhat similar to the more widely known Brotherhood of St. Andrew, composed of young men of the Episcopal Church. This undenominational brotherhood met at a summer assembly in Pennsylvania. The objects of the assembly—to increase the religious earnestness of those who attended, to enlarge the usefulness of the brotherhood, and to provide wholesome recreation—were apparently accomplished. The second convention was an immense gathering at Denver, beginning on July ninth—the National Convention of Young People's Societies of Christian Endeavor. This was the first to be held since the conventions were made biennial. During the present year two thousand new societies have been added. This fact, taken with the large attendance and the hope expressed by Dr. F. E. Clark, the president of the United Society, that the membership would be doubled in the next ten years, indicates that the Christian Endeavor movement is at least not waning. An exciting incident of the convention was the collapse of the huge tent "Endeavor" while occupied by eight thousand people. By alert action all serious injury was avoided. Under the leadership of Dr. Clark overtures were made to the Epworth League, the Methodist young people's society, and to the Baptist Young People's Union for amalgamation. Such overtures ought to be received with cordial acceptance. That they are not impracticable may be seen in the fact that such amalgamation already exists among the local societies of Christian Endeavor, each of which is just as denominational as the Church with which it is connected. The union of these local denominational

societies into the one common undenominational body—a union that has existed for two decades—is a signal illustration of the practical method by which the churches are approaching union if not unity. The third convention, that of the Epworth League, at Detroit, beginning one week later than that of the Christian Endeavor societies, has been marked by a very large attendance, hundreds of delegates being compelled to sleep on pew cushions in a Methodist church. The Epworth League, although it is a denominational organization, is doing service for church union in some measure, by bringing together in common convention representatives of the Methodist Episcopal Church and Methodist Episcopal Church South.

#### Sex in Industry

The Massachusetts Bureau of Statistics has recently issued an interesting special report on "Sex in Industry," according to which more than eighty-eight per cent. of the women workers of that State are unmarried. More than 100,000 are in factories, 79,000 are servants, and 20,000 practice professions. It is significant that inroads are being made upon occupations hitherto exclusively reserved by custom for men. For example, there are 727 women employed as messengers and errand girls, 44 as hack drivers, 245 as photographers, 5 as steamfitters, 7 as marble cutters, 10 as brick masons, and 5 as butchers! The investigations seem to have disclosed a confident feeling as to the economic position and prospects of the women workers in that State. Very many are said to prefer freedom, work, and income of their own to the marriage tie. The State bureau has done a distinct service by the publication of the report, as the economic conditions in Massachusetts, especially the employment of women in factories, offer a richer field for investigating this subject than any other American community. The facts cited suggest a relatively greater proportion of working women in that State than in any other, owing to the greater development of the factory system there; but they also forecast a similar state of things as specialized manufacturing develops more highly in other States.

#### The Emerson Centenary at Concord and in London

The centennial of Emerson's birth has been already

celebrated by the issue of a number of books about Emerson, by sermons in churches, by articles in newspapers and magazines. Two other modes of celebration of rather exceptional character are now to be added to these. On Monday, July 13, the Emerson Memorial School began its sessions; the morning sessions were held in Concord, in the town hall, where Emerson often spoke, the evening sessions in Huntington Hall, Boston. The school consists of lectures delivered by admirers of Emerson, among them men who were personal friends of his, before what the Boston "Transcript" calls "a highly cultured audience," most of whom, not unnaturally, were women. Emerson's relation to the transcendental movement, to Harvard, to social reform, to slavery, to science, and his contributions to philosophy, to education, to religion, and to literature, besides subjects touching more directly Emerson's personality, furnish topics which will be under consideration until July 31, when the sessions of the school are to end. The spirit of the lectures has been that of eulogy rather than that of critical estimate. On July 15 a bust of Emerson was unveiled in Tavistock Square, London. Mr. Choate, the American Ambassador, delivered an address on Emerson as a poet, philosopher, and reformer. Of this address, however, the cable gives us no adequate report.

## Pope Leo XIII.

### A Protestant Estimate

In estimating the character and influence of Pope Leo XIII., the Protestant reader must remember—and it is as a Protestant and to Protestants we write—that the Pope of Rome is controlled in his actions by two considerations, both of which Protestants are apt to ignore. The first of these is his profound religious faith in a principle which the Protestant never believes and often fails even to understand—faith in the divine supremacy and infallibility of the Church. We do not believe it, though we think that we understand it. The second is the fact that he

works through an organization governed, as all organizations are, by its traditions, that is, its habits. Man is said to be master of himself, yet he is controlled, not merely by the infirmities and the habits, but also by the necessary laws, of his body, through which alone he can act on the world. So the Pope is controlled, not only by the imperfections of the Church the head of which he is, but also by its temper, its habits, its necessary laws. Working always in a spirit of entire and consecrated loyalty to the essential principle of the Roman Catholic Church, and always with a tactful and diplomatic skill in harmony with its past traditions and its present personnel, Pope Leo XIII. has done all that piety and statecraft combined could do, consistently with this spirit of loyalty and this harmonious co-operation with the hierarchy, to bring the Church and the democratic movement of our age into harmony, by inspiring the Church with the humanistic spirit and by endeavoring to inspire democracy with the spirit of respect for law and order founded on and inspired by the spirit of reverence for God and the institutions of religion.

His unswerving loyalty to the Roman Catholic faith, coupled with his unmistakable and avowed sympathies with the movement of humanity toward a broader and freer development than any which it has known in the past, have given to his acts, in the eyes of the unthinking, an appearance of inconsistency, which we are persuaded disappears when these two elements in his character are considered—elements not often, perhaps, united in one person, yet by no means necessarily inconsistent.

It is the claim of the Roman Church to be the only Church of God, the sole heir to the authority of Christ, his true vicegerent, "a church established by Christ for the instruction of all; spread for that end through all nations; visibly continued in the succession of pastors and people through all ages." A considerable and not uninfluential section of the Anglican Church have, during the past century, been trying to identify themselves organically with this Church, without disavowing their own ancestry and inheritance. There was something to be said for their claim that they were not truly separated from the Church of

Rome, since they could unquestionably trace their ecclesiastical lineage back to the Roman hierarchy. A politic ecclesiastic less loyal to his own convictions might have found, or tried to find, a door by which this section of Anglican Churchmen could become loyal adherents of the Mother Church without the mild martyrdom which secession from their own Church would involve. To this suggestion the Pope would give no countenance. When at last the question was fairly brought before him, he declared the Anglican orders not only to be irregular—irregularity might be cured by a general act of recognition—but absolutely void, so that these Anglican Catholics could come into fellowship with Rome only by openly, frankly, and publicly abandoning their fellowship with the Church of England, a step which very few of them were willing to take.

The same uncompromising adherence to fundamental principles was again illustrated by the Pope's letter to Cardinal Gibbons on Americanism; though in this case it was coupled with a definition of the degree of accommodation to local needs and local sentiments which can be regarded as consistent with such loyalty. "The doctrine of faith," said the Pope in that letter, "has not been proposed like a philosophical invention, to be perfected by human ingenuity, but has been delivered as a divine deposit to be faithfully kept and infallibly declared." This is his definition of that article of faith which, as we have said above, cannot be believed and can hardly even be understood by a Protestant mind. Insisting on this, the Pope goes on to add that, adhering to the divine doctrine and the divine principle of morals without deviation, yet the Church "has never neglected to accommodate herself to the character and genius of the nations which she embraces." Hence "if by this name [Americanism] are to be understood certain endowments of mind which belong to the American people, just as other characteristics belong to various other nations, and if, moreover, by it is designated your political condition and the laws and customs by which you are governed, there is no objection to the name."

This principle of ready accommodation of infallible authority and inflexible and unchanging law to changing circumstances,

which is the key to the character and career of Pope Leo XIII., finds a striking and, to the American people, a valuable illustration in the policy which has been pursued by the Church, under the direction of the Pope, regarding our common-school system. At one time it looked as though the power of the Church would be concentrated on an endeavor to disrupt our public-school system, on the ground that if the schools are left to be carried on by the State they must be either Protestant or godless. It was not uncommon for priests to compel parents to send their children to the parochial school under penalty of excommunication; and the result was unquestionably not only the creation of hostile feeling between Protestants and Roman Catholics, but also some loosening of the tie which bound the Roman Catholic laity to their Church. All this controversy has passed, let us hope forever, from the American community, by the application of the principle enunciated by Pope Leo XIII., that loyalty to the Church is not necessarily inconsistent with recognition by the Church of the laws and customs by which the particular community is governed. In 1893 it was definitely declared, evidently with the approval of the Pope, since it was by his special representative, that the Church of Rome does not disapprove the public schools; that it forbids priests or bishops to excommunicate parents because they send their children to the public schools; and that it approves such schools, provided other and adequate provision can be made for the teaching of the children in religion. How, under Monsignor Satolli, Father McGlynn was restored to the priesthood, from which he had been deposed, nominally because of his adherence to the Single Tax, really, as there is good reason to believe, because of his adherence to the public-school system of the United States, our readers will remember. That single act of restoration interpreted and emphasized the liberty of speech and of opinion sacredly secured by the Pope to the priesthood, so long as the priest remains loyal to the supreme authority of the Church and its essential tenets.

A less important though a not less striking and interesting illustration of the Pope's desire to work in harmony with

the American Republic is afforded by the cordial support he has given to Judge Taft's proposal for the solution of the perplexing Friar land question in the Philippines. In this case the reactionary spirit, which is not without influence in the Vatican, would, if it could, have blocked the way toward the purchase of the Friars' lands by the Philippine Government acting under the advice of the Government of the United States; for the reactionary spirit is hostile to that separation of Church and State and that religious freedom in the State which is of the essence of American institutions. The Pope by giving his cordial approbation to the purchase has given impulse to this plan for solving what threatened to be a most difficult problem, and largely determined its success. It is to be hoped that his death will be followed by the election of a successor who is in sympathy with his spirit, and will do what he can to carry to a successful issue his conciliatory policy.

Turning from the more ecclesiastical aspects of the career of Pope Leo XIII., these two characteristics—uncompromising adherence to principle and recognition of and accommodation to human conditions as they vary in different communities and epochs—is nowhere more strikingly illustrated than in his famous encyclical on "The Condition of Labor," issued in June, 1901. In this encyclical the Pope explicitly recognizes the fact "that some remedy must be found, and quickly found, for the misery and wretchedness which press so heavily at this moment on the large majority of the very poor;" but he equally explicitly condemns as spurious remedies the anarchy which would abolish all law and the socialism which would abolish all private property; and he emphasizes as the only remedy that spirit of brotherhood which honors all labor and condemns all idleness, is alike inconsistent with envy and pride, and unites different classes, and we might here add different races, in the bonds of friendship and of brotherly love. We do not recall any single document issued during the last quarter of a century which deserves so much to be regarded as a true statement both of our social disorder and of the direction in which we are to look for a remedy as this Encyclical of Pope Leo XIII. And the reader should remember

that when this Encyclical was issued the tendency of the prosperous was to affirm that there was no disorder to be remedied, and even more than to-day it was the tendency of those who spoke for the unprosperous to affirm that the only remedy was a social revolution. It is hardly too much to say that the choice generally offered was between Mr. Carnegie's "Triumphant Democracy" and Count Tolstoi's "My Religion."

Pope Leo XIII. was elected to the Papacy in February, 1878. During the twenty-five years of his office he has proved himself a great statesman. He has recognized that humanistic and popular movement which during the nineteenth century has revolutionized Europe, and which may be designated by the general term democracy, and he has so directed the life of the Roman Catholic Church as to furnish to this movement, full of peril as well as of promise to humanity, the restraining and regulative influence, not only of the spirit of religion, but also of the traditions and institutions of the most powerful of the Christian churches. His name as a leader of democracy, though rather as a restraining than an inspiring leader, deserves to take place with those of Cavour in Italy, Gambetta in France, and Gladstone in England.

## Opium in the Philippines

We have been at pains to secure accurate information as to the pending discussion in the Philippines concerning the best method of dealing with the opium trade in that archipelago. There is no "Administration bill," no "Root bill," no "Taft bill," no "Commission bill." Since the American occupation there has been no restriction in the Philippines on the use of opium. The Spanish law departed with the Spanish Government, and no new law has come in to take its place. In order to consider the whole subject more thoroughly, the Commission has had drafted and presented to it for consideration two plans. One of these follows, with some modifications, the method pursued in the English colonies; the other the Japanese method. Under the former method all but medical use of opium would be prohibited, except to

adult Chinamen; selling to any one else would be made a criminal offense; the exclusive right to import and sell would be farmed out to the highest bidder; he and his agents alone could sell; he would be put under heavy bonds to observe the law; the price paid by him for the monopoly would be such as to assure a high price for the opium he sold; and on these provisions of the law the Government would rely to limit the sale and use of opium. Under the other method, all wholesale of opium would be conducted by the Government; it would be sold only for medical purposes; and retailed only by apothecaries, who would be forbidden to sell except on prescription of a physician. The first law, it will be seen, is a form of high license; the second is a form of prohibition. Neither has received as yet the approval, directly or indirectly, of the Administration, the Secretary of War, the Philippine Commission, or any of its members. Both plans have been formulated for the purpose of a more thorough consideration. At the present time, the consideration of the whole topic is awaiting an investigation into the practical effects of prohibition in Japan, Upper Burmah, and Formosa, where it has been tried.

He who is a prohibitionist on principle will think that any such investigation is unnecessary. He will think that if the use of opium is wrong it ought to be prohibited. We are not of that opinion. In our judgment, the object of the legislation should be to reduce the use of opium to a minimum. If high license will reduce it more effectually than prohibition, high license is better; if prohibition will reduce it more effectually than high license, prohibition is better. The law is to be measured solely by its effect on the traffic. In dealing with vice that is the best law which is practically more efficacious in making vice difficult and virtue easy. The fact that high license will give the Government a considerable revenue, which can be expended on education, is a matter not to be considered. The question and the only question to be considered is how best to protect the community from the evils arising from the opium habit.

This question is not a simple one. Monopolies are to be discouraged, preeminently monopoly in dealing with an

article which is so largely an instrument of vice. The higher price the monopolist pays for his exclusive privilege, the stronger will be his temptation to push the sale of the pernicious drug. The larger the revenue which the Government receives, the stronger will be the temptation of both Government and people to acquiesce in the continuance, and even the extension, of the opium habit. The instinct of America cannot be disregarded, and that has always been strongly opposed to England's course in dealing with the opium traffic in China, and will be strongly against any regulation which seems to give National sanction to the opium traffic in the Philippines. There are serious objections to the plan of farming out the exclusive right of selling to the highest bidder.

On the other hand, opium smoking is so established a habit among Chinamen that prohibition would inevitably induce evasion and violation of the law. Smuggling would become common, and in an archipelago possessing so extensive a coast line, could not be prevented. The same peril from corruption and blackmail which has attended prohibitory measures in dealing with alcohol in the United States would attend prohibitory measures in dealing with opium in the Philippines. The drug-stores are generally carried on by Filipinos, and are gathering places for the people. Banishing opium to the drug-stores might promote the opium habit among the Filipinos while apparently prohibiting it among them. The fact that the Chinese traders are generally opposed to the high license measure and are promoting the agitation against it, gives color to the belief that they think it would be easier for them to conduct an illicit trade under prohibition than under high license.

We recognize the serious difficulties in the situation. It is doubtful how far it is practicable for Americans to impose their own ethical ideals on a people of a totally foreign race; it is doubtful how far it is right to do so. But there is a method which is neither prohibition nor high license, which approximates more nearly to the Gothenburg system of dealing with the liquor question. It appears to us that this plan is perhaps worth consideration. This would be for the Government itself to assume the exclusive sale of opium; to

sell it through salaried agents and only in the larger towns; and to sell it only to Chinamen or upon the prescription of a physician. The Government might fix such a price for the opium as would have the restraining effect of a high license on the sale. Its agents would be under no temptation to promote the sale, for they would make no profits upon the sales. Thus some of the objections to prohibition on the one hand and high license on the other would be obviated. The Government would, it is true, make a profit out of the sale. But there is no reason why it should not make a profit out of the sale of opium as a medicine; and the objection to its making a profit out of the sale to Chinamen would be counterbalanced by the fact that it could regulate that sale, as it could not if it was conducted by a private monopoly.

There is clearly no occasion for going into hysterics on the subject. It is one which calls for the most careful consideration. It may be assumed that it is receiving such consideration from both the home Government and the Philippine Government. It may be assumed that both will welcome any light which can be thrown upon it by the press of this country. But it is light, not heat, that is needed.

## Peonage : A Significant Mistrial

We have reserved comment on the latest peonage case in Alabama until the full and authoritative reports of the case were before us. They show that not only a single citizen was on trial for the crime of maltreating a helpless black man, but also a jury of twelve men were on trial upon the question whether they would give greater weight to their prejudices against the negro than to their oath of office. Seven of the jury, to their credit be it said, put their honor above their prejudices; five of them put their prejudices above their honor. We are sorry that we are not able to give the names of these five jurymen, that they might receive the only punishment possible in their case, that of universal obloquy.

In this case a negro by the name of Glenn Helms was arrested, apparently

without any cause, on a charge of vagrancy, fined, and then sold to a Mr. Turner to work off the fine. There was a claim that Glenn Helms consented to go with Turner in preference to paying the fine and submitting to the four and a half months of hard labor included in the sentence. Turner was indicted for holding Helms in slavery. Judge Thomas G. Jones, before whom the case was tried, in his charge to the jury made both the facts and the law in the case very clear. There was no justification in the law for the original arrest and conviction of Glenn Helms. There was no foundation in law for the supposed contract by which he was bound over to Mr. Turner. There was no legal justification for the beatings to which he was subjected, or for holding him in duress and forcing him to labor, or for pursuing him when he ran away and bringing him back. "So far as Glenn Helms's rights are concerned, he stood, when he and his companions were being bid off at Dadeville, just as though some ruffian had come on the streets of Goodwater, and picked him, and forcibly carried him off to hire him out. In the eyes of the law he stood just as one of your boys would stand if he were thus robbed of liberty." The pretended contract into which Glenn Helms was forced by this illegal arrest was in the eyes of the law no contract. "There cannot be," said the Judge, "any voluntary contract in the eye of the law made in this country by which a man surrenders his liberty and his person to the dominion of another to secure an obligation, if in consequence of that obligation and claim the man is forced to do labor against his will to pay that debt or obligation. The law steps in, and says to people who attempt it, You shall not do it."

It is evident from the Judge's charge that there was no real question either as to the law or as to the facts. This was made still more evident by the supplementary charge of the Judge when the jury returned to the court to ask further instructions. "There is not," said the Judge to the jury, "a man on the jury who can give a scintilla of reason for disbelieving that this boy Helms was carried to Turner's place, kept there by Turner, by force and against his will, in order to work out a debt or obligation which

Turner claimed against him, until Helms's father paid what Turner claimed to be due, on account of the obligation incurred by the advance to pay the fine and costs, and that under the law given you this constituted the holding of Helms to a condition of peonage, wilfully and knowingly, against the statutes of the United States. Return to your deliberations and see if you cannot perform your duty."

The jury did return to their deliberations, and could not perform their duty. They could not agree upon a verdict and were finally discharged. The only reason why they could not was that five of the jurymen were indifferent to the solemn appeal of the Judge in his opening charge: "In a little while the Judge and the criminal, the prince and the pauper, the great and the humble, will all pass away. It matters not then who they were, how high or how low. The question when we go to the great beyond is not who we were, but how did we discharge our duty in our sphere while we were here below."

The trial of Turner and the charge of the Judge will possibly do as much to break up peonage in Alabama as the verdict of the jury would have done if the five recreant jurymen had not been recreant. Condemnation by the State, and, so far as they know the facts, condemnation by the Nation, will rest upon these five jurymen, and their verdict will emphasize and focus the national condemnation of a race prejudice which refuses to do justice to the poor and the helpless because he is black. In saying this we do but echo the rebuke visited upon these five recreant jurymen by the Judge, "as an Alabamian, as a Southern man, and as an ex-Confederate soldier." "Those of you," he said, "who have refused to follow the instructions of the court have, in effect, said to everybody in and out of Alabama, in a plain case, where there is no dispute as to the law or the facts and no room for reasonable doubt, that a jury in one of the most intelligent districts in this State has divided and declined to enforce the law for no other reason than the base one that the defendant was a white man and the victim of the law he violated is a negro boy."

It is now for the press of Alabama to repeat throughout the State these words of the Judge, and create a public senti-

ment in the State which will secure justice and the protection of the law for the innocent negro against the oppressions of the oppressive white man. We believe that this can be done. In spite of the dishonor which these five men have inflicted on their State, we shall still believe that the Southern States may be trusted to deal justly with the negro, that the noble example set by Judge Jones will be more weighty than the ignoble example set by the five jurymen. If the future should show this trust to be unfounded, it will then be for Congress to provide, as it can under the Constitution, for an appeal to a more honorable or a more courageous tribunal than that furnished by this Alabama jury. This power is given to Congress explicitly by Article XIII. of the Constitution, which not only provides that "neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist in the United States or any place subject to their jurisdiction," but also provides that "Congress shall have power to enforce this article by appropriate legislation." If this Constitutional provision is set at naught by Southern juries, it will be quite within the power of Congress to transfer those accused of crime under this Constitution to a locality where an unprejudiced jury can pass upon the offense.

Judge Jones expresses the thanks for the court to those of the jury who tried to follow the law as the court gave it, for trying to do their duty. The Outlook, repeating these thanks, extends them on behalf of the Nation to the Judge who did his duty so faithfully and so well under circumstances of so great difficulty.

## "Ready-to-Wear" Degrees

Some Englishmen amused themselves last month over a libel suit brought by a Congregationalist clergyman of London against the "Christian World" for declaring that the degrees which he had obtained from Harriman University, in Tennessee, were those of a "fake" university, and were "contemptible and worthless." This clergyman denied that either the university or the degrees he had

received from it could be termed fraudulent, inasmuch as the institution was chartered by the State, and the degrees had been granted only after examination; he therefore demanded of the journal retraction and apology and claimed one thousand pounds damages. Thereupon he began his suit in the High Courts of Justice.

In describing the "university" in question, the clergyman's counsel declared that it was established in a prohibition town by "the Temperance party of America." "We like to have our universities," said this lawyer, "under the shade of cathedral and ancient and historic buildings. In America they are of a more practical turn of mind, and they like to have their universities not so much near a cathedral as far away from a public house." He asserted that it was a flourishing institution of three hundred students and twenty-seven instructors; that the clergyman had studied, taken examinations, and had received first his bachelor's degree and then his doctorate; and that as a Nonconformist finds it almost impossible to obtain academic dignity from English universities, he was forced to turn to America.

On being cross-questioned the clergyman admitted that although Harriman was his "Alma Mater" he had never been near it. He had been at Ocean Grove for his examinations.

*Question.* You are proud to have a Harriman degree? *Answer.* Yes. (Laughter.)

*Q.* And yet you never went there? *A.* No, and for good reasons.

*Q.* Possibly! Is Ocean Grove, where you were examined, about a thousand miles from Harriman, or how far is it from Harriman? *A.* I suppose some eight hundred or a thousand miles.

*Q.* Is that the nearest you have got to Harriman? *A.* No.

*Q.* How near did you get to it? *A.* I went further south to Baltimore to preach, and to Washington, and I rather think that that would be the nearest point.

*Q.* I am afraid I do not know the distance; it is a large country; but did you ever get within one hundred miles of it, or within five hundred of it. *A.* I could not say, unless you showed me a map. (Laughter.)

When further cross-examined, the clergyman proved to be somewhat confused as to the Latin form of the doctor's degree for which he applied. This, perhaps, is not surprising, in the light of the

Latin used by the chancellor in the following letter submitted in evidence :

The American Temperance University,  
Harriman, April 16, 1900.

*My Dear Dr.:* Your letter of March 27 duly received.

I will fix your degree as per your wish, *Divinitatis Doctoris*. . . . I have so arranged your name as to cause my books to show that your degree has been earned, and it will come *pro merito*, and not *pro honoris*. This is conferring the favor of recognizing your scholarship and literary work through the years. I am quite sure this will be gratifying, and, besides, it makes sure the degree at our commencement.—With great respect: always your friend,  
J. F. SPENCE.

Arranging a name so as to cause books to show that a degree was earned and not given "*pro honoris*," may well have drawn from these Englishmen some hilarity on account of its moral as well as its linguistic ingenuousness.

A Yale professor, sent by the "Christian World" to Harriman, found there dilapidated buildings, a class in elementary arithmetic, some young women learning book-keeping and type-writing, the director of the school of Domestic Science keeping house for an oil agent and his wife, and the professor of astronomy a practising dentist. The degrees, it transpired, bestowed by this institution upon the plaintiff were granted after an examination conducted by a man who was not only not a member of the faculty, but not even a member of the "university." The jury without hearing all of the defense brought in a verdict against the complainant clergyman. The "Christian World" comments: "Convinced free-traders as we are, we must certainly plead for protection against the importation from America or elsewhere of this class of degrees."

Another institution in Tennessee, boasting the resounding title of "The American National Nashville College of Law," has been dealing in degrees given, as its sister institution would say, "*pro honoris*." Its "President and Dean, *ex officio*," has been sending out letters (only two have reached this office) stating that "the college will confer a title upon some worthy educator or jurist of your State," and that the name of the person addressed has been suggested. Questions are inclosed to be answered, of which these are samples: "Married or single?" "Profession or avocation?" "If not a graduate,

state time studied in years." "Do you believe in the co-education of the sexes in a college of law?" "Do you chew or smoke tobacco or drink intoxicants of any kind?" "Do you take exercise daily?" "Was Pope right in saying: 'Drink deep or taste not of the Pierian Spring?'" "Are you a subscriber to 'American Legal Lore?'" A fee of ten dollars is required in advance to cover the "cost of the issuance of the diploma, and engrossing name in the same." In an accompanying circular the college song is printed with the statement that the "Alumni . . . appeals (*sic*) to all lovers of the law . . . to have this song sung all over the United States, and to have it published in all newspapers and magazines, and inclose a copy in all your letters." As we cannot sing it all over the land we comply with the request as far as we are able by printing the remarkable production here:

Down in the beautiful Southland,  
In a spot so dear to one and all,  
Stands our noble Alma Mater,  
The Nashville College of Law.

*Chorus:*

Sound its praises, sing them ever,  
Help it onward, loud the story tell  
Welcome to thee, our Alma Mater,  
Welcome, all welcome, farewell.

Down in our sunny Tennessee,  
'Midst hills, music, echo, and sound,  
Where all in nature smiling seems,  
Stands the pride of an Athens town.

On the letter heading appears this legend:

CORRESPONDENCE DEPARTMENT OF LAW.

All courses in Law are now taught by the Correspondence Method the same as in Residence, having over 1,000 students in this department last year.

This helps to explain the question about the Pierian Spring.

"Our motto," according to the Dean, "is that we shall pass through this world but once, and therefore any good thing that we can do, or any kindness that we can bestow upon a truly worthy one, let us do it now; let us not defer it, nor neglect it, for we shall not pass this way again." This subtle and tactful hint to respond quickly to his offer of "The Honorary Degree of Doctor of Laws, LL.D.," as he is not likely to pass our way again, has, we confess, had whatever effect it otherwise might have had since we learned of the experi . . . the

London Congregational clergyman underwent after receiving a Tennessee degree.

Englishmen take their academic degrees very seriously; Oxford undergraduates have profited by that fact for many annual occasions in the Sheldonian Theatre; in America academic titles seem to be going fast the way of the Kentucky "Colonel" or the more prevalent "Honorable" or "Past Grand Master." Incidents which call into prominence institutions that manufacture degrees "while you wait" may be hailed as delightful and diverting displays of human vanity; but as causes for serious concern they may be briefly dismissed. So, in the words of the Nashville college song, we bid this subject,

"Welcome, all welcome, farewell."

## 'The Spectator

The Spectator has an aunt who visits the poor after the fashion of her youth. He has a niece who is in a college settlement, and a cousin who is connected with the Charity Organization Society. The more he hears them all talk upon the subject of charity visiting, the more thankful he feels that his is not a case of destitution. He feels guiltily conscious of certain defects of character which, being passably prosperous, he is enabled to conceal from the eyes of the world, but which he knows that a trained Friendly Visitor would find out and tabulate with unerring clearness. He realizes that as a charity case he could not be marked "deserving" on account of them, and he is reminded of the frank remark of another aunt upon one occasion, when the lack of personal cleanliness of a certain needy household was being condemned: "Well, Eliza, all I have to say is, that if I were destitute, I know I should be dirty, and I think I should steal!"

Worthy or worthless, however, the poor will always be visited, since they are always with us, and the human impulse to help them remains happily unquenchable, whether it takes the old-fashioned, haphazard channels of personal gifts of soup, cast-off clothing, and baskets of food, or follows the new courses of scientific relief organization. The difference in method does not affect the singleness of the purpose. How much it helps the

poor to visit them is thought by some to be open to discussion, and many social theorists are impatient of any mode of charity, as buttressing social injustice. But knowledge is power; and here is where, to the Spectator's mind, the evolution of charitable processes has begun to tell. From the methods of his aunt to the methods of his niece and cousin, charity has taken a long step forward, as regards the community. The average case of destitution may have gained more in money, food, clothes, etc., from the old-fashioned visitor (often more, indeed, than was good for the recipients); but the community gains far more from the modern worker among the poor, as regards possible prevention of the worst evils of destitution, and possible removal of the slum from the city map. The systematic study of the causes of poverty cannot buttress social injustice, but must inevitably make for better social conditions. The charting of the reefs on which the "submerged tenth" makes shipwreck means a safer navigation in the future.

The Spectator remembers, as a boy, carrying beneficent baskets for this same aunt of his, when, as a young woman, she went about her charitable work. Her principle was never to go empty-handed, because, as she said, "one can't give advice with any freedom unless something else is given besides." The advice was sensible and the relief substantial; yet it has become the fixed assertion of this habitual benefactress that "the more you know of the poor, the less you believe in them." Her generosity, however, continues in spite of this. As to theories about the poor, she has none. Each case is treated individually, and she has no records save those of memory—which in her case are so vivid, accurate, and humorous, or pathetic as the case may be, that the Spectator can never forget some of her descriptions. There was the family of eight, for instance, without fire or food, who, when a round sum was raised for their relief, took the opportunity to have all their photographs taken. They "had wanted to all their lives, but never could get round to it before," was their ingenuous explanation. And then there was the man for whom she laboriously collected subscriptions to buy him a new wooden

leg, only to find afterward that he and his wife were paying for a piano, on the installment plan, all the time.

Just here the Spectator's niece from the College Settlement is ready to argue in behalf of modern methods. Charity was of no use, she pointed out, to those families until their conceptions of life were readjusted. They were the product of wrong conditions and ideas. They needed training and suggestion more than fire or food or wooden legs. The Charity Organization cousin, too, considers that the best visitors for such families would give no personal relief. Such a case presents a problem—and here the Spectator can see the actual joy with which the present-day visitor girds herself for the conflict with it. In old-fashioned visiting, if the household turned out "unworthy," the visitor sighed, gave more advice, and then turned resignedly away. But now the "unworthy" case must be analyzed, the heart of its mystery plucked out, and all kinds of remedies tried. The more obscure the disease, the more glorious the cure. Old-fashioned charity poured in oil and wine; modern charity uses the scalpel and the microscope. The Good Samaritan must be something of a Sherlock Holmes to satisfy twentieth-century requirements. The outline of a complete registration of a given family in the charity office records combines the features of a census report, a medical diagnosis, a biographical dictionary, and a business directory. Rent, debts, savings, pawn-tickets, education, habits, previous residences and employers, friends, health, earning capacity—there is no end to the list. A man's own mother can hardly know as much about him as a well-trained visitor searches out and reports. The fierce light that beats upon a throne is nothing to the X-ray that penetrates the inmost secrets of the applicant for relief; and the short and simple annals of the poor, while enough for the poet of past centuries, are superseded by (a) their Social History; (b) their Physical History; (c) their Work History, and (d) their Financial History, with copious data under each head.

The best visitor, the Spectator's cousin has explained to him, cannot take the risk of giving relief, either in money or pro-

visions, at all. In a worthy and self-respecting case, the gift of anything by a visitor makes the relation constrained ever after. In unworthy cases, each visit suggests a new demand. This is true, no doubt; and yet the Spectator himself would feel like a pickpocket if he visited a family in distress and did not give them something. He would feel constrained ever after, whether they did or not. Discipline of the natural impulses is evidently the first step in a visitor's training. But—paradoxically enough—this modern method ends in belief, not lack of belief, in the poor. "Not alms, but a friend," is the motto to-day, and friendship and esteem, as usual, go together. The visitor suggests, rather than advises; studies the case from other points than that of personal giving, inspires self-help, brings neighborhood, church, and institutional relief to bear without directly administering them, and especially endeavors to help the poor, not as individuals, but as part of society, looking to the effect of every act upon other cases as well. Such intelligent care stimulates the visited to rise to their best, and, if there is anything good in them, develops it. The College Settlement worker, doing work for a neighborhood rather than individuals, in the same spirit, comes also to blame conditions, but to believe in those who are at the bottom of the social scale. In this respect, whatever modern methods have or have not done for the poor, they have done much for the workers among them by substituting optimism for pessimism.

The Spectator's niece, indeed, goes so far as to assert that if any fashionable residence block uptown were visited by trained charity workers, and the results tabulated, the showing, as regards the essentials of individual character, would not be markedly different from that of the tenements. "There are some rich people of my acquaintance," she says, severely, "who appear to me much more hopeless than any charity case, because they are worthless after having had every opportunity to be otherwise." It is at this point that the Spectator, as aforesaid, feels thankful that he is not so destitute as to be investigated—and yet, what a blessing the wise and gentle guidance of a Friendly Visitor might be to any of us!

# The Mission Indians

By Charles F. Lummis

THE story of the Warner's Ranch Indians, evicted from their immemorial home by the decision of the United States Supreme Court, has aroused as widespread interest as any case in the recent history of our Indian policy. As in every case which appeals to public sympathy, there has been too much, of more than sympathy—too much also of something worse than folly. A compact and official statement of the facts may be of interest to *The Outlook*. If from one standpoint the affair gives us nothing to be proud of, and is too much in keeping with our "Century of Dishonor," from another it seems to me to open the door of the most hopeful condition we have yet seen in our Indian affairs.

I have called the Cupeño tenancy "immemorial." Their own traditions assert that "When God made yonder Eagle-Nest and Rabbit-Hole mountains, he gave us this land." The first official invasion of Southern California by Americans found these Indians *in situ*. They were an appanage of the Mission of San Luis Rey. There is no historic evidence that civilized man ever found the Agua Caliente (or Warner's Hot Springs) vacant of these Indians. That they were located here when the Mexican land-grant was made under which they are now undone is absolutely established. The first grant was made June 8, 1840, to José Antonio Pico by Governor Alvarado, which provides that the grantee "shall not molest the Indians that thereon may be established." The grant to Warner was dated November 28, 1844, and was made by Micheltorena, a notorious Mexican carpet-bag Governor of this much-milked province. It did not contain the formal clause, but that is insignificant. In the California of then, the wildest dream could not have conceived of any title under which the Indians *could* be molested.

Colonel John J. Warner, a Connecticut Yankee whom I knew well, was in my time a very amiable and respected old man; but he was not precisely the most fortunate successor to the paternal rule

of Spain over the Indians. The abstract of Lieutenant-Colonel Emory's report, further on, is pertinent; so also is the fact that in 1850 Warner had to flee the ranch. This can best be understood by those who knew the nature of these Indians, among the most docile known to history. Governor J. G. Downey, who took the grant from Warner, was better qualified in this respect. In a personal letter of October 10, 1874, he writes of these "poor, unfortunate, deserving, and neglected Indians," and urges efforts in their behalf. His heirs, however, have for several years actively fought for a "clear title"—that is, for the ejectment of the Indians. The American idea has arrived in the land to which it is most foreign. To make the legal story short, the suit of the American claimants reached the California Supreme Court, and was decided in their favor by a divided bench, four to three—Chief Justice Beatty and Justices MacFarlane and Temple dissenting. The Supreme Court of the United States, in May, 1901, affirmed this decision.

A vital contention of the American claimants was that the Warner's Ranch people "are not Mission Indians." With entire respect for the character and legal attainments of their attorneys, I believe they erred in straying into ethnology. The Cupeños (Spanish locative, derived from "Cupa," their own name for their home) are of the Luiseño linguistic stock, the same as the Indians of Pala, their new home. The tribe was under the mission of San Luis Rey de Francia, of which magnificent establishment both Pala and the Hot Springs were *asistencias*. The old adobe chapel at Warner's Hot Springs was built long before the grant to Warner, or that to Pico, by the Franciscan missionaries of San Luis Rey. This is admitted by claimants' attorneys (v. briefs before the United States Supreme Court), who admit that Warner bought the chapel.

Under date of December 2 and 3, 1846, Lieutenant-Colonel W. H. Emory, of the advance guard of the Army of the West (Thirtieth Congress, first session ex. Doc.

No. 41), reports as to the status of Warner's Hot Springs:

Above us was Mr. Warner's backwoods, American-looking house, built of adobe and covered with thatched roofs. Around were the thatched huts of the half-naked Indians, who were held in a sort of serfdom by the master of the *rancheria*. I visited one or two of these huts, and found the inmates living in great poverty. The thermometer was at thirty degrees; they had no covers but sheepskins. They told me that when they were under the charge of the missions they were all comfortable and happy; but since the good priests had been removed, and they were in the hands of the people of the country, they had been ill-treated. This change took place in 1836. . . . Near the house is the source of the Agua [sic] Caliente—a magnificent hot spring. . . . The Indians have made pools for bathing. They huddle around the basin of the spring to catch the genial warmth of its vapors, and on cold nights immerse themselves in the spring to keep warm. A day will come when the invalids of the white race will assemble here to drink and bathe in these waters.

On the same date Captain A. R. Johnston, First Dragoons, who was killed three days later in the first fight with the native Californians, wrote in his diary (same document):

We found Warner's a place which would be considered a poor location in the United States . . . with a hot spring and a cold one on his place. . . . The labor is performed by California Indians, who are stimulated to work by three dollars a month and repeated floggings.

Certainly no student of California and Spanish America can pretend that the United States Supreme Court was tolerably informed as to the Spanish land laws, upon which, in the last analysis, every land title in California rests. It is not an extreme statement to say that there is no possible construction, nor evasion, by which, under Spanish jurisdiction, Indians could be ejected from their birthplace, or their homes sold over their heads. From the beginning of that marvelous policy—dimly conceived on the first return of Columbus from the New World, and formulated swiftly, almost unerringly, and with a statesmanship we well might copy—the tenure of the Indians in Spanish America was absolutely secure. It may be added that the Indians in the United States now most thoroughly safe in their lands, are those in whose case our Government has confirmed the titles given by Spain. And entirely aside from Pueblo grants, every

individual "encomienda," "repartimiento," land grant (Merced), or whatsoever title to land, was invariably subject to the rights of the Indians thereon. Whatever criticism lies in the Warner's Ranch case must apply to the Supreme Court's unfamiliarity with the basic land laws of Spanish America—if the statute limitations release that astounding act of Congress, the act of March 3, 1851, and its resultant Commission, which virtually held every man in California guilty of having stolen his home until he proved that he had *not* stolen it. Under this, the most incomparable example of "Tenderfoot" legislation, thousands of Californians lost their titles. Naturally, many failed to understand that they were accused, and failed to appear before the Commission. And not only ignorant and remote Indians, and Mexicans, who never saw a legal notice and could not read it if seen: even the bishop of Los Angeles and Monterey lost valuable properties by failure to prove that they were his.

As a student of Spanish America I venture the assertion that no case comparable either to this legislation or to the eviction of the Warner's Ranch Indians by the Supreme Court can be found in the whole judicial record of Spain in America in more than three centuries. Still, this is not so bad as broken treaties and violated faith; it is a mere case of ignorance of the subject, in which, probably, not twelve living Americans are expert.

The claim that these are not Mission Indians is scientifically absurd. Aside from their old Franciscan chapel, aside from the fact that every one of them speaks Spanish (though the nearest Mexican settlement was over fifty miles away), it is notorious that every one of them wears a Spanish baptismal name. The oldest man of the whole tribe, Leonardo—who as an adult man (of about forty years, he tells me) acted as a guide for General P. St. George Cooke, in 1846—carries in his very name sufficient title to the status of his people as Mission Indians.

But if, from the legal side, the case continues the long line of melancholy precedence, the episode as a whole marks what it is not unfair to count a new era in our Indian policy. For the first time, so far I know, Indians have here been given a far better home than that from

a far better home. These 2,500 Indians, of the same stock, are worse off than ever before, while the Warner's Ranch Indians are (in everything but the fine sentiment for their home) incomparably better off than ever before in their history. More than half of these others are actually destitute and suffering; about a third of them can be relieved, if the recommendations of the Commission be carried out in good faith. The League is a permanent organization; its corner-stones are common sense and long patience; it knows what it wants, and how to get it. It believes it can wear out any person, or aggregation of persons, or labyrinth of red tape. Its first energy is bent to remedying the condition of all the Mission Indians; later to improve the general conditions in the Indian service as fast and as far as sober and practical people can see their way. The machinery the League already has; all it needs is funds to prosecute its work—and no such work can be prosecuted without funds. The League's latest campaign, now active, has brought about an official investigation of the outrageous application of the universally desired "Hair-cut Order," in the case of the Hopi Indians—the well-styled "People of Peace." Their agent has gone to the extent of tying their hands

behind them with baling wire, and forcibly shearing their ancient ceremonial queue, as precise and as well-kept as the queue that the Father of his Country wore. Not invidiously, but because I believe it to be not only true but important, the Sequoya League is "different," because directed exclusively by people that *know* Indians, as well as "have sympathy" with them.

As to the Warner's Ranch Indians, their latter state is far better, materially and morally, than their first. All now depends on the working out and administration by the Department of their case. Foolish methods can bring to naught the advancement that has been gained; but as the Department allows sympathy, and as the League is here, and will stay here, the final outcome will probably be a decisive gain. Meantime, the transposed Indians are "finding their feet" faster than was expected. Only four or five are "irreconcilable." The more intelligent and progressive are glad of the better opportunity; the average are reconciled. With the exclusion of two or three disreputable American mischief breeders from the reservation, the Cupeños will adjust themselves quickly and fully to the new home.

Los Angeles, California.

## Love

By Madison Cawein

For him who loves, each mounting morn  
Breathes melody more sweet than birds';  
And every wind-stirred flower and thorn  
Whispers melodious words:—  
Would you believe that everything  
Through *her* soft voice is made to sing?

For her, the faultless skies of day  
Grow nearer in eternal blue,  
Where God is felt as wind and ray,  
And seen as fire and dew:—  
Would you believe that all the skies  
Are Heaven only through *his* eyes?

For them, the dreams that haunt the night  
With mystic beauty and romance,  
Are presences of starry light  
And moony radiance:—  
Would you believe this love that's theirs  
Could make for them a universe?

# A Few Memories of Johannes Brahms

By Sir Charles Villiers Stanford

Sir Charles Villiers Stanford, the author of the following article, is the foremost living composer of Great Britain. He is Professor of Composition and Orchestral Playing at the Royal College of Music, and Professor of Music in the University of Cambridge. His compositions in the field of operatic, choral, and chamber music, for the orchestra and for the solo voice, have given him an enviable reputation both at home and abroad. He is best known in this country by his Irish Symphony, his delightful operetta "Shamus O'Brien," and his Irish songs. He has done for the folk songs of Ireland what Brahms and Dvořák have done for those of Germany and Bohemia, and in this phase alone of his musical career has made a contribution to his art which entitles him to a very high place in the esteem of lovers of music. Two volumes of Irish vocal melodies arranged, edited, and harmonized by him are published by Boosey & Co. of this city, and give—in a form easily accessible to the American amateur—an intimation of the scope of his skill and genius.—THE EDITORS.

**I**T is a curious fact that the lives of the majority of the greatest composers have proved to be very unfruitful ground for their biographers. Inasmuch as they consisted mainly of writing music, eating, sleeping, and exercise (of sorts usually the reverse of sporting), the record is meager except in the case of those who had to do with the dramatic side of their art; of Bach, Beethoven, Schumann, there is little to tell; and so it is with the last of their great line, Johannes Brahms. An article by Mr. Daniel Gregory Mason upon this last of the giants, which contained many interesting personal touches, besides some vastly acute criticism, has encouraged me to put down a few memories, dating mainly from his middle and later period, which may some day be useful when a future Spitta or Thayer arises to write his Life from the point of view of a future generation. But there is nothing striking about them; they are at best feeble side-lights upon a nature which was more than commonly *intime*, and which, moreover, was veiled by a considerable amount of purposeful paradox.

The first time I ever heard the name of Brahms was about 1867; as I lived until 1870 in Ireland, out of the reach of practical orchestral and chamber music by seven hours' rail and four hours' sea, the lateness of the date is not remarkable. But I shall never forget the amazing effect which was produced upon me by hearing the variations on a theme of Handel, or how much of my small pocket-money I spent in buying as many of his works as I could get. I knew nothing of the Schumann article, nor anything about

him save his music, and the grip it took of me at fifteen has never relaxed since. Nothing that was not inherently sincere could possibly remain so lifelong a possession of any musician. My first sight of the composer himself was at the remarkable Schumann Festival given at Bonn under the direction of Joachim in 1873, where he sat, tawny-haired and clean-shaven, beside his "second mother," Clara Schumann. My first speech with him was at a dinner-party given on the day following the close of that Festival by Ferdinand Hiller at Cologne; but it was short and uninteresting; he was somewhat bored and unapproachable, and not (to tell the truth) in the best of tempers. I had, however, the opportunity of studying his face, which I never again saw without the now familiar beard. The clean-cut, refined beauty of his boyish features had vanished, the jowl was thick and powerful, and the mouth rather large and coarse. But his eyes, which were of an astonishingly deep and luminous violet, were fascinating, and the brow and head most noble in proportion. Without the least personal resemblance, his face had a quality in common with Wagner and Liszt in that the upper half was very ideal and the lower very human.<sup>1</sup>

Like many great men, he had a suit of armor which he put on to meet the stranger. Tennyson's armor was brusque-

<sup>1</sup> It is quite erroneous to imagine that Brahms was of Jewish descent. A glance at his purely Teutonic features and at his springing walk was enough to show that he had no Semitic blood. His friend Dietrich, of Oldenburg, told me that Brahms was an old Silesian word signifying "Reed." Max Bruch once roused the lion in him at a supper by saying, "Prosit, Abrahams!" and got in reply the crushingly unexpected retort, "Prosit, Baruch!"

ness, Leighton's was excessive polish, Brahms's could be downright rudeness. But all three, as soon as their armor was put by, were alike in one respect—they were simple to the point of boyishness. Brahms most of all hated the lionizer, and was forever on the lookout for him. Returning one day from a walk at Heidelberg, he was met by a man who stopped him and asked if he were not Brahms; on receiving an affirmative reply, the stranger expanded into eulogies of his compositions. Brahms put on a puzzled look, then suddenly said, "Oh, you must mean my brother; he was taking a walk with me on the hill just now," indicating where the mythical relation had gone, and the unwelcome celebrity-hunter rushed on up the hill.

In 1877 Cambridge University offered him (together with Joachim) an honorary degree. Mr. Mason, in his book "From Grieg to Brahms," p. 178, has a remark about this which is erroneous, and is really a confusion between two wholly distinct events. He says that "when the University of Cambridge offered him a degree, suggesting that he write a new work for the occasion, he replied that if any of his old works seemed good enough to them he should be happy to receive the honor, but that he was too busy to write one." The actual facts are these: Brahms hesitated long about visiting Cambridge, and, being much pressed to do so both by Joachim and Frau Schumann, was almost on the point of accepting, when, unfortunately, the authorities of the Crystal Palace got wind of the possible visit, and announced in the "Times" that he would be invited to conduct at one of their Saturday concerts. This piece of overzeal wrecked the visit. The University did not ask him to write a new work for the occasion, but although he would not come and could not be given a degree *in absentia*, he entrusted the manuscript score and parts of his first Symphony in C Minor (which had then only once been played in Carlsruhe) to Joachim, and it was performed together with the Schicksalslied at the concert of the University Musical Society, at which his presence was so desired. The incident to which Mr. Mason refers was probably an invitation in 1887 to write a work for the Leeds Festival—an institution

which had hitherto wholly neglected his compositions, and which was conducted by Sullivan, who made no secret of his lack of sympathy for them. To this he replied: "I cannot well decide to promise you a new work for your Festival. Should you consider one or other of my existing works worthy the honor of a performance, it would give me great pleasure. But if this, as it appears, is not the case, how could I hope to succeed this time? If, however, the charm of novelty is a *sine qua non*, forgive me if I admit that I neither rightly understand nor greatly sympathize with such a distinction." A very pretty *riposte*, and a thoroughly dignified specimen of epistolary satire.

The Cambridge performance of the C Minor Symphony attracted almost every musician of importance in England, and much interest was excited among Cambridge men by the curious coincidence that the Horn theme in the introduction to the last movement was nearly, note for note, a quotation of the famous hour-chimes of St. Mary's (the University Church) bells. Brahms's music had long been more deeply appreciated and universally accepted in England than in Germany, probably in a measure from the fact that we had no serious battle-ground of Wagnerian and anti-Wagnerian parties; the performance of this symphony laid an imperishable keystone to his fame among Britons. I had myself the curious good fortune to compare the attitude of an English and German audience towards one of his orchestral works. In 1875 I heard within a few weeks two performances of his Serenade in A (without violins), first at the Philharmonic Society of London, and afterwards at the Gewandhaus in Leipzig. In London the enthusiasm was so great that two movements (the scherzo and the minuet) had to be repeated. In Leipzig the entire work went literally without one hand being raised to applaud.

A short time after the Cambridge performance I had made my first collection of Irish Folk-songs, and, knowing the interest which Brahms took in such work, I asked and obtained his leave to dedicate it to him. The next time I visited Vienna I went with Hans Richter to see him. He opened the door of his little flat himself, clad in a jersey and trousers, and led us through a bare outer room, and his bed-

room, scarcely less bare save for a drawing of "Anselmo's Grab" over his very short and stumpy bed, into his study, a double room crammed with books, music, and literature of all sorts. He greeted Richter warmly, and when I was introduced gave me a most distant and suspicious bow. I bethought me of the stranger at Heidelberg, and looked out for squalls. I was quite sure he was aware of who I was, but was going to measure my capacity for lion-hunting. His chance came; he offered Richter a cigar and was then handing the box to me, when he snatched it back with a curt "You are English, you don't smoke!" To which I replied, with an impertinence which it required some courage to assume, "I beg pardon, the English not only smoke, but they even compose music sometimes," making a simultaneous dash after the retreating cigar-box. For one moment he looked at me like a dangerous mastiff, and then burst out laughing. The ice was broken, and never froze again. I caught sight of some fine engravings, and he spent the best part of the morning showing me his complete collection of Piranesi, and other treasures which he had picked up in Italy during the previous summer. He only mentioned music once, describing most humorously an opera which he had heard at Brescia, which consisted, he said, entirely of "Schluss-Cadenzen," but was so beautifully sung that he rejoiced in listening to them over and over again.

When I next visited Vienna I went to see him without an appointment, thinking that I should surely find him at home at eleven o'clock. But his housekeeper told me that he had just gone to dinner. I was so astonished that I said to her, "In Heaven's name, what time does Brahms eat his breakfast?" "At five," said the dame; "he does all his work before eleven, and is out the rest of the day." However, I fell in with him later, and sat with him through a rehearsal of Gluck's "Alceste" at the Opera-House, over which he waxed enthusiastic. His two favorite haunts in Vienna were Strauss's Band and the Opera. While there I heard of a tremendous verbal castigation which he had given at a restaurant to a young man who thought he would gain his favor by sneering at Wagner.

I made two attempts to induce him to visit England after this. First in 1889, when his "Requiem" was given at the Leeds Festival, I wrote and told him that if he would come to Cambridge via Harwich, I would go to Leeds and back with him, and conceal his identity from every one; but he was not to be stirred. Last in 1893, when the Cambridge University Musical Society was about to celebrate its fiftieth birthday. We wrote once more, and offered him, with Verdi, an honorary degree. He was this time sorely tempted and much touched by the request, but he turned it off by saying how old he would seem beside the everlasting youth of Verdi, and how much nicer it would be if I would go and take walks with him at Cadenabbia instead. Our next and last meeting was in Berlin, the Christmas of the famous Jameson Raid. He came to conduct his two Piano Concertos and the Academic Festival Overture at a concert given by D'Albert, and was much fêted and in high good humor. At an interesting dinner party given by Joachim, at which were present also his friends Professor Dorn, of Naples, and Von Herzogenberg the composer, an amusingly characteristic scene occurred. Joachim, in a few well-chosen words, was asking us not to lose the opportunity of drinking the health of the greatest composer, when, before he could say the name, Brahms bounded to his feet, glass in hand, and called out, "Quite right! Here's Mozart's health!" and walked round, clinking glasses with us all. His old hatred of personal eulogy was never more prettily expressed. Within a year and a half he was dead, and in this same house Joachim was showing me the first letter which Schumann had written to him after their first meeting at Düsseldorf, with the famous sentence, "Das ist der der kommen musste," and the autograph score of the first Piano Concerto, which contains that most impressive key to the meaning of the Adagio—the words of the "Benedictus qui venit" written over the notes of the theme.

A most remarkable and extraordinary personality was Brahms. Humorous, fearless, far-seeing; sometimes over-rough to his contemporaries, but a worshiper of and worshiped by young children; with a very noble, generous, and ideal side to

his character, and a curiously warped and sensual side as well. He could look like Jupiter Olympus at one moment and like Falstaff the next, but the Jupiter never seemed to suffer in the end; and assuredly, if a man's work be any key to his real soul, the last chorale which he wrote, the touching "O Welt, ich muss dich lassen," is a standing proof of the type of qualities which were dominant in him. For kings and princes he had no concern except as fellow-men. In that respect he resembled Beethoven. He could afford to be intimate with them because he was independent of them. For the Meiningen Festival he stayed at the castle and was in the habit of taking his constitutional at six o'clock in the morning. The Grand Duke knocked at his door at eight, and asked him if he had had a pleasant walk. "Yes, sir," said Brahms; "I have taken a stroll round the three neighboring kingdoms." While he was on the same visit he electrified a state dinner by an outburst upon the attitude of Europe towards Japan. The war between China and Japan had just been declared, and every one was discussing the certain downfall of the smaller power. Brahms prophesied the reverse, and went on to say that after Japan had

beaten China, Europe would step in, in its selfish way, and prevent her reaping the fruits of her victory. The Grand Duke reminded him that Europe had interests to safeguard, to which Brahms rapped out a sharp retort. All ended peacefully, but the little incident served to prove how much more far-sighted a politician he was than many of his professionally diplomatic contemporaries.

Of his later friendships perhaps the most curiously assorted was with Hans von Bülow. He had sufficient insight to appreciate (what few did) the very great nobility of the character of that most versatile and peppery of men. To any who spoke complainingly of him, Brahms always answered with a request to remember his greater and unique qualities; and certainly Von Bülow repaid him with a devotion which never varied. And if he was sometimes brusque to his contemporaries, he could show in an eminent degree a modest deference to his seniors. The last vision I had of him was sitting beside the diminutive form of the aged Menzel, drinking in like a keen school-boy every word the great old artist said, with an attitude as full of unaffected reverence as of unconscious dignity.

## Studies in Colonial Administration

By Alleyne Ireland, F.R.G.S.

Colonial Commissioner of the University of Chicago. Author of "Tropical Colonization," etc.

### IV.—Sarawak

I HAD occasion some years ago to write for the "Atlantic Monthly"<sup>1</sup> an article on "European Experience with Tropical Colonies." At its conclusion are to be found the following lines from Froude, quoted in support of the argument in favor of personal rule in the tropics: "Find a Raja Brooke [of Sarawak] if you can. . . . Send him out with no more instructions than the Knight of La Mancha gave Sancho—to fear God and do his duty. . . . The leading of the wise few, the willing obedience of the many, is the beginning and end of all right action. Secure this and you secure everything. Fail to secure it, and, be your liberties as wide as you can make them, no success is

possible." For the past two months I have been in Sarawak, traveling up and down the coast and into the interior, and working in Kuching, the capital. At the end of it I find myself unable to express the high opinion I have formed of the administration of the country without a fear that I shall lay myself open to the charge of exaggeration. With such knowledge of administrative systems in the tropics as may be gained by actual observation in almost every part of the British Empire except the African Colonies, I can say that in no country which I have ever visited are there to be observed so many signs of a wise and generous rule, such abundant indications of good government, as are to be seen on every hand in Sarawak.

<sup>1</sup> "Atlantic Monthly," December, 1898.

The present Raja, or King, of Sarawak, is an Englishman, Sir Charles Johnson Brooke, G.C.M.G., head of an old county family, and a descendant, through the female line, of the Stuarts. The story of how he has come to occupy the position of absolute monarch over a territory as large as England, situated in the out-of-the-way island of Borneo and peopled by Dyaks, Malays, and Chinese, reads like the wildest fiction rather than sober historical fact. In the years following the restoration of Java to the Dutch (a piece of folly scarcely paralleled in the annals of British expansion—a mere act of grace for which England has never received the smallest gratitude), the Malay Archipelago fell into a most disturbed condition. Dutch authority was severely shaken; England was unwilling to assume any further responsibilities in the Far East; and the historical Dutch policy of fomenting the internal dissensions of the native governments, in order to weaken the general opposition to white rule, bore abundant fruit. Into this part of the world came, in the thirties, James Brooke, a young military officer of the East India Company, who had retired from the service after distinguishing himself in the Burmese War of 1824, and who had been rendered independent by inheriting a large fortune from his father in 1835. Inspired by a strong spirit of adventure, Brooke determined, after carefully studying the general condition of the Malay Archipelago, to devote his energies to the amelioration of the life of the native Borneans. His original intention was to secure his footing by means of trade, and then to work on the minds of the native rulers. The ambition of wealth he never had for a moment; and, indeed, he subsequently spent the whole of his large private fortune on his reform schemes in Sarawak.

Writing of the objects he had at heart Brooke said: "It is a grand experiment, which, if it succeeds, will bestow a blessing on these poor people; and their children's children shall bless me. If it please God to permit me to give a stamp to this country which shall last after I am no more, I shall have lived a life which emperors might envy. If by dedicating myself to the task I am able to introduce better customs and settled laws, and to raise the feeling of the people so that their

rights can never in future be wantonly infringed, I shall indeed be content and happy." But on his arrival in Borneo he found a condition of affairs which, while rendering his original plan of action impossible, led to the solution of the difficulties along another line, and to the fulfilment of his hopes.

At the time of Brooke's arrival in Borneo the territory of Sarawak was under the rule of Omar Ali, the Malay Sultan of Brunei, but its affairs were actually administered by the Sultan's uncle, Raja Muda Hassim<sup>1</sup>. On reaching Sarawak it was learned that a formidable rebellion had been in progress for more than three years, and that there was little prospect of peace. So evil was the condition of the country that Hassim entreated Brooke to remain in the country and take over the government, offering him as a reward all the trade of the place. This proposal was declined, but Brooke offered to give what aid he could to bring the civil war to an end; and, putting himself at the head of a small force of Europeans, he actually succeeded, after a few months' fighting, in restoring peace. His first task, on the conclusion of hostilities, was to prevent a wholesale massacre of the surrendered rebels, and in this he was successful.

The reward conferred on Brooke for his part in suppressing the rebellion was a mere permission to trade with the people. Although this was a very small matter, it was accepted without complaint; and there matters might have rested had it not been for an incident which brought about a crisis in the affairs of Sarawak. The Governor of Sarawak under the Raja Muda Hassim was a Malay chief named Makota; and the recent rebellion had been largely brought about by his misgovernment. After the conclusion of peace Brooke took every legitimate means of increasing his influence with the Raja Muda, in pursuance of his original intention of securing improvement in the government. But when it became evident to Makota that Brooke was supplanting him in the counsels of the State he commenced a series of underhand attacks on Brooke's influence, and these failing, he finally attempted to poison the whole English

<sup>1</sup> Raja Muda is the Malay equivalent for Heir Apparent.

community. Through the indiscretion of a subordinate the plot was discovered; and Brooke immediately brought matters to a head by laying the facts before the Raja Muda and demanding that justice should be done. The affair ended in the degradation of Makota and the appointment of Brooke as Governor of Sarawak in his place. This was the beginning of the Brooke rule in Sarawak. The grant of the Governorship was approved by the Sultan, and, after some years, arrangements were made under which the Sultan conferred the Government of Sarawak in perpetuity on Sir James Brooke (he was created a K.C.B. by the late Queen in 1848), and in 1863 the independence of the country was formally recognized by the British Government.

Five years later the first Raja Brooke died. His biographer, Sir Spencer St. John, tells us that towards the end of his life the Raja wrote: "In spite of trials and anxieties, calumny and misrepresentation, I have been a happy man, and can pillow my head in the consciousness of a well-spent life of sacrifice and devotion to a good cause." The Raja was succeeded by his nephew, Sir Charles Johnson Brooke, G.C.M.G., who is still at the head of the State.

It became clear as soon as the new King took over the reins of government that he intended to adopt as his model the liberal and enlightened policy of the late Raja. As early as 1870 the present Raja published in the Sarawak "Gazette" his views as to the method of government best suited to the needs of his people. This early pronouncement of policy was drawn forth by a rumor which had reached the Raja's ear that certain persons regarded with disfavor his intention of presiding as Chief Justice at the sittings of the Supreme Court. It is true that in the condition of civilization with which we are familiar the idea of a king or president fulfilling judicial functions is repugnant to the public sense of the true attributes of a judiciary. But the conditions in Borneo are absolutely different; and the oriental mind is quite familiar with the idea of the highest judicial and executive functions being combined in one person, is familiar in fact with no other system. The Raja expressed himself as follows on the point—and it may well be

noted that the liberal view he advances as to the relation between the superior and the inferior races is one which we have persuaded ourselves, through a perverted application of history, to be the monopoly of those peoples who live under republican institutions. "Our chief success," he says, "has been owing to the good feeling existing between ruler and people, brought about by there being no impediments between them; and the non-success of European Government generally in dealing with Asiatics is caused by the want of sympathy and knowledge between the ruler and the ruled, the reason being the distance and unapproachableness of the leader. If I am to exclude myself from court I must necessarily withdraw myself from hearing the complaints, either serious or petty, of my people, who would then be justified in drawing an unsatisfactory and unhappy comparison between myself and my uncle, who was *de facto* the slave of his people, and left the country under my charge expecting me to carry out his policy."

The organization of the government of Sarawak is simple in the extreme. At the head of everything is the Raja, a monarch more completely autocratic than any other in the world, since for him the two great restraining forces of absolute monarchy—the existence of turbulent anti-dynastic factions and the very strong influence which is always exerted by a powerful hereditary nobility—do not exist. The government, then, is purely despotic in form. But it is a despotism which has shown itself, up to the present time, to be of the most benevolent kind, inspired by motives of the most sincere unselfishness, and guided ever by an earnest desire to advance the true interests of the people, even when the pursuance of such aims has involved, as has very frequently been the case, great sacrifices on the part of the ruler.

The form of administration has grown up with the country, and is such as the experience of half a century has shown to be best suited to the local conditions. There are two State Councils—the General Council and the Supreme Council. The former consists of the Raja, and of the following government servants, native and European, who are all members *ex officio* :—the Divisional Residents, the Res-

idents of the Second Class, the Commandant of the Forces, the Treasurer, the Principal Medical Officer, the Datus<sup>1</sup>, and all native chiefs holding office under the Government. This body meets once in three years, unless specially summoned for specific reasons. Its functions are of a purely advisory or consultative nature, and the Council was, in fact, instituted for the purpose of keeping the Raja informed of the general condition of public opinion in the country districts and out-stations, and of advising him in regard to any important changes which it might be proposed to make in the general policy of administration. On the occasions of these triennial meetings the Raja makes what is practically a Speech from the Throne, in which the condition of the country is reviewed; and the leading members of the Council also speak.

The General Council serves its purpose admirably, since it keeps all the members of the administration in touch with the Raja and with one another; and it contributes greatly to that state of good feeling between natives and Europeans which is the fundamental characteristic of the Sarawak State. It is, however, the Supreme Council which really administers the affairs of the country. This Council consists of the Raja, the Resident of the First Division, and the four Datus. It is provided that the European members must never outnumber the native members. The General Council meets once a month, and all proposed laws are laid before it, as well as such administrative matters as are not of a purely routine nature. In order to endow this brief description of a unique Legislature with some degree of reality I print here the official report of a meeting of the Sarawak Supreme Council which was held just before my arrival in the country:

#### SUPREME COUNCIL.

The Resident's Office, Kuching, 9th August, 1902.

Present,

His Highness the Raja, G.C.M.G.

The Resident of the First Division (the Honorable C. A. Bampfylde).

The Datu Bandar (Haji Bua Hassan).

The Datu Muda (Abang Mohamad Kassim).

The Datu Hakim (Haji Mohamad Ali).

The Datu Emaum (Haji Amin).

A meeting of the Council was convened this day. His Highness the Raja informed the Members he had what he considered an important matter to lay before them in reference to the future supply of timber for building purposes. At present large quantities of different kinds of woods were being felled immediately in the vicinity of the principal town for export; and a trade had sprung up which threatened to despoil the forests of all the best and most useful woods necessary to the inhabitants of a growing town. At this end of the State, where so much wood is now being worked for export, the country is comparatively narrow, being only a few miles in depth to the boundary with Netherlands territory; and in this narrow strip of land large quantities of valuable timber have also been destroyed by generations of Dyak farming. What there is left should be preserved as far as possible for local use, for were these woods, even the commonest of them, once worked out, the inhabitants of this town and the neighborhood would be put to the greatest inconvenience.

His Highness now proposed that all woods in the forests lying between Tanjong Datu and the right bank of the Sadong River shall be preserved for the use of the inhabitants, and that after six months from the present date the exportation of timber from any port within the above mentioned limits shall be prohibited.

This was carried unanimously.

No other matters were brought forward.

F. H. DALLAS,

Acting Clerk of Supreme Council.

The above is probably the first report of a meeting of a Borneo Legislature which has ever been printed in the United States; but, in view of the growing importance of southeastern Asia, it is very unlikely that it will also be the last.

For administrative purposes Sarawak is split up into divisions under the charge of Residents. These officers are assisted by one or more Englishmen and by a small staff of natives. The duties of the Resident are manifold. He must see to the collection of the revenue, to the administration of justice, to public works, and so on; and, above all, he must be at all times accessible to the people. The Dyaks have the strongest objection to doing the smallest thing without first indulging in long and tedious palavers. The discussion about the business itself may occupy, perhaps, ten minutes; but it must be preceded by an almost interminable interchange of polite nothings. These interviews, however, are a most important element in the administrative system, for it is no exaggeration to say

<sup>1</sup> There are four Datus—the Datu Bandar, or Senior Chief; the Datu Muda, or Junior Chief; the Datu Hakim, or Chief Mohammedan Magistrate, and the Datu Emaum, who is the head for the time being of the Mohammedan religion in Sarawak.

that the average Dyak had rather submit, after due palaver had and obtained, to some important measure of which he himself disapproved, than acquiesce in the most trivial matter of obvious utility without being afforded a chance of talking with the Government officer for hours about the monsoon, or the best shape for a boat's prow, or the proper color to be worn if a certain relative (presently in robust health) should chance to die.

The chief characteristic of the administrative methods of Sarawak is the emphasis laid by the Raja on the necessity of maintaining the closest personal relations between the rulers and the ruled, and the subordination to this end of mere clerical work.

Thus it happens that although the student finds in Sarawak a very small amount of official literature, yet he observes that each official is intimately conversant with all the affairs of his district, can tell you the history of almost every family, knows everybody by sight and nearly everybody by name, and is prepared at a moment's notice to talk to one about the approaching marriage of a daughter, to another about the prospect of a successful gutta expedition into the interior.

All officials in Sarawak are chosen personally by the Raja on the occasions of his visits to England; and it is curious to note that, with two exceptions (a Scotchman and a Frenchman) every man in the service is an Englishman. There is this further fact worthy of record that, whether it be to the advantage of the country or not, the population of Sarawak does not include a Jew or a lawyer.

That Sarawak has prospered greatly under its present ruler is shown by the following figures:

Sarawak.	1870.	1901.
Value of foreign imports.	\$1,328,963	\$4,404,000
Value of foreign exports.	1,494,241	5,900,000

A certain proportion of the increase disclosed in the above figures is apparent rather than real, and is due to the fall in the value of the silver dollar; but even allowing for that, the foreign trade of Sarawak has more than doubled during the past thirty years.

The principal articles of export in 1901 were: Gold, \$1,246,114; pepper, \$1,477,499; gutta and india-rubber, \$1,222,382; and sago-flour, \$559,723; which together

represented three-quarters of the total value of exports.

In the import trade rice is by far the most important item, being represented in 1901 by a value of \$750,000, or one-sixth of the total value of imports. Other items were cloth of various kinds, \$537,895; tobacco, \$184,000; opium, \$172,000; kerosene oil, \$122,866; and sugar, \$105,067.

The future prosperity of Sarawak appears to be well assured. Valuable gold deposits exist, and these are being worked by the Borneo Company, Limited, which, if it has wasted twenty years in finding out the value of its properties in Sarawak, is now making up for lost time by introducing the most modern mining machinery and by employing a competent staff of scientific men to carry out its plans. As far as agriculture is concerned the pepper and sago of Sarawak command the highest price in the open market; and the demand for these commodities is constantly increasing. It is important to realize, in this connection, that nearly all the labor of the country is performed by Chinese immigrants, the native Dyak and Malay population being quite useless for industrial purposes, from strong disinclination to steady work of any kind.

The impression of the country which I carry away with me is that of a land full of contentment and prosperity, a land in which neither the native nor the white man has pushed his views of life to their logical conclusion, but where each has been willing to yield to the other something of his extreme conviction. There has been here a tacit understanding on both sides that those qualities which can alone insure the *permanence* of good government in the State are to be found in the white man and not in the native; and the final control remains, therefore, in European hands, although every opportunity is taken of consulting the natives and of benefiting by their intimate knowledge of the country and of the people.

Nothing could better serve to exhibit at once the strength and the weakness of a despotic form of government than the present condition of Sarawak, for if it be true that the wisdom, tolerance, and sympathy of the present Raja have molded the country to the extraordinary state of tranquil prosperity which it now enjoys, the power of an unwise or wicked ruler

to throw the country back into a condition of barbarism must be admitted as a necessary corollary. The advent of such a ruler is, however, in the highest degree improbable. The succession is guaranteed by the British Government; and the Raja Muda, Charles Vyner Brooke, has been educated with the fact of his eventual inheritance of the throne constantly in view. The future rulers of Sarawak

will no doubt be as carefully trained; and if the wise custom which has hitherto prevailed, of assigning to the Heir Apparent responsible administrative duties in the country districts, is continued there is no reason to doubt that the Brooke rule in Sarawak will confer in the future as it has done in the past the greatest benefits upon the country and its inhabitants.

Kuching, Sarawak, Borneo.

## The Forest<sup>1</sup>

By Stewart Edward White

Author of "The Blazed Trail," "Conjuror's House," etc.

### Chapter XVIII.—The Man who Walks by Moonlight

WE had been joined on the River by friends—"Doug," who never fished more than forty rods from camp, and was always inventing water-gauges, patent indicators, and other things, and who wore in his soft slouch hat so many brilliant trout-flies that he irresistibly reminded you of flower-decked Ophelia; "Dinnis," who was large and good-natured and bubbling and popular; Johnny, whose wide eyes looked for the first time on the woods life, and whose awestruck soul concealed itself behind assumptions; "Jim," six feet tall and three feet broad, with whom, the season before, I had penetrated to Hudson Bay; and, finally, "Doc," tall, granite, experienced, the best fisherman that ever hit the River. With these were Indians. Buckshot, a little Indian with a good knowledge of English; Johnnie Challán, a half-breed Indian, ugly, furtive, an efficient man about camp; and Tawabinisáy himself. This was an honor due to the presence of Doc. Tawabinisáy approved of Doc. That was all there was to say about it.

After a few days, inevitably, the question of Kawágama came up. Billy, Johnnie Challán, and Buckshot squatted in a semicircle, and drew diagrams in the soft dirt with a stick. Tawabinisáy sat on a log and overlooked the proceedings. Finally he spoke.

"Tawabinisáy" (they always gave him his full title; we called him Tawáb) "tell me lake you find he no Kawágama," trans-

lated Buckshot. "He called Black Beaver Lake."

"Ask him if he'll take us to Kawágama," I requested.

Tawabinisáy looked very doubtful.

"Come on, Tawáb," urged Doc, nodding at him vigorously. "Don't be a clam. We won't take anybody else up there."

The Indian probably did not comprehend the words, but he liked Doc.

"A' right," he pronounced, laboriously.

Buckshot explained to us his plans.

"Tawabinisáy tell me," said he, "he don' been to Kawágama seven year. Tomorrow he go blaze trail. Nex' day we go."

"How would it be if one or two of us went with him to-morrow to see how he does it?" asked Jim.

Buckshot looked at us strangely.

"I don't want to follow him," he replied, with a significant simplicity. "He run like a deer."

"Buckshot," said I, pursuing the inevitable linguistics, "what does Kawágama mean?"

Buckshot thought for quite two minutes. Then he drew a semicircle.

"W'at you call dat?" he asked.

"Crescent, like moon? half circle? horse-shoe? bow?" we proposed.

Buckshot shook his head at each suggestion. He made a wriggling mark, then a wide sweep, then a loop.

"All d'ose," said he, "w'at you call him?"

"Curve!" we cried.

"Ah hah," assented Buckshot, satisfied.

<sup>1</sup> Copyright, 1903, by the Outlook Company.

"Buckshot," we went on, "what does 'Tawabinisáy' mean?"

"Man-who-travels-by-moonlight," he replied, promptly.

The following morning Tawabinisáy departed, carrying a lunch and a hand ax. At four o'clock he was back, sitting on a log and smoking a pipe. In the meantime we had made up our party.

Tawabinisáy himself had decided that the two half-breeds must stay at home. He wished to share his secret only with his own tribesman. The fiat grieved Billy, for behold he had already put in much time on this very search, and naturally desired to be in at the finish. Dick, too, wanted to go, but him we decided too young and light for a fast march. Dinnis had to leave the River in a day or so; Johnnie was a little doubtful as to the tramp, although he concealed his doubt—at least to his own satisfaction—under a variety of excuses. Jim and Doc would go, of course. There remained Doug.

We found that individual erecting a rack of many projecting arms—like a Greek warrior's trophy—at the precise spot where the first rays of the morning sun would strike it. On the projecting arms he purposed hanging his wet clothes.

"Doug," said we, "do you want to go to Kawágama to-morrow?"

Doug turned on us a sardonic eye. He made no direct answer, but told the following story:

"Once upon a time, Judge Carter was riding through a rural district in Virginia. He stopped at a negro's cabin to get his direction. 'Uncle,' said he, 'can you direct me to Colonel Thompson's?'"

"'Yes, sah,' replied the negro; 'yo' goes down this yah road 'bout two mile till yo' comes to an ol' ailm tree, and then yo' tu'ns sha'p to th' right down a lane fo' 'bout a qua'ter of a mile. Thah you sees a big white house. Yo' wants to go through th' ya'd, to a paf that takes you a spell to a gate. Yo' follows that road to th' lef' till yo' comes to three roads goin' up a hill; and, jedge, *it don' mattah which one of them thah roads yo' take, yo' sure gets lost anyway.*'"

Then Doug turned placidly back to the construction of his trophy.

We interpreted this as an answer, and made up an outfit for five.

The following morning at six o'clock we were under way. Johnnie Challán ferried us across the river in two installments. We waved our hands and plunged through the brush screen.

Thenceforth it was walk half an hour, rest five minutes, with almost the regularity of clockwork. We timed the Indians secretly, and found they varied by hardly a minute from absolute fidelity to this schedule. We had at first, of course, to gain the higher level of the hills, but Tawabinisáy had the day before picked out a route that mounted as easily as the country would allow, and through a hardwood forest free of underbrush. Briefly indicated, our way led first through the big trees and up the hills, then behind a great cliff knob into a creek valley, through a quarter-mile of bottom-land thicket, then by an open strip to the first little lake. This we ferried by means of the bark canoe carried on the shoulders of Tawabinisáy.

In the course of the morning we thus passed four lakes. Throughout the entire distance to Kawágama were the fresh ax-blazes the Indian had made the day before. These were neither so frequent nor as plainly cut as a white man's trail, but each represented a pause long enough for the clip of an ax. In addition, the trail had been made possible for a canoe. That meant the cutting out of overhanging branches wherever they might catch the bow of the craft. In the thicket a little road had been cleared, and the brush had been piled on either side. To an unaccustomed eye it seemed the work of two days at least. Yet Tawabinisáy had picked out his route, cleared and marked it thus, skirted the shores of the lakes we were able to traverse in the canoe, and had returned to the River in less time than we consumed in merely reaching the Lake itself! Truly, as Buckshot said, he must have "run like a deer."

Tawabinisáy has a delightful grin which he displays when pleased or good-humored or puzzled or interested or comprehending, just as a dog sneezes and wrinkles up his nose in like case. He is essentially kind-hearted. If he likes you and approves of you, he tries to teach you, to help you, to show you things. But he never offers to do any part of your work, and on the march he never looks back to

see if you are keeping up. You can shout at him until you are black in the face, but never will he pause until rest time. Then he squats on his heels, lights his pipe—and grins.

Buckshot adored him. This opportunity of traveling with him was an epoch. He drank in eagerly the brief remarks of his "old man," and detailed them to us with solemnity, prefaced always by his "Tawabinisáy tell me." Buckshot is of the better class of Indian himself, but occasionally he is puzzled by the woods noises. Tawabinisáy never. As we cooked lunch, we heard the sound of steady footsteps in the forest—*pat*; then a pause—then *pat*; just like a deer browsing. To make sure, I inquired of Buckshot:

"What is it?"

Buckshot listened a moment.

"Deer," said he, decisively; then, not because he doubted his own judgment, but from habitual deference, he turned to where Tawabinisáy was frying things.

"Qwaw?" he inquired.

Tawabinisáy never even looked up.

"Adjí-domo" (squirrel), said he.

We looked at each other incredulously. It sounded like a deer. It did not sound in the least like a squirrel. An experienced Indian had pronounced it a deer. Nevertheless, it was a squirrel.

We approached Kawágama by way of a gradual slope clothed with a beautiful beech and maple forest whose trees were the tallest of those species I have ever seen. Ten minutes brought us to the shore. There was no abrupt bursting in on Kawágama through screens of leaves; we entered leisurely to her presence by way of an antechamber whose spaciousness permitted no vulgar surprises. After a time we launched the canoe from a natural dock afforded by a cedar root, and so stood ready to cross to our permanent camp. But first we drew our knives and erased from a giant birch the half-grown-over name of the banker Clement.

There seems to me little use in telling you that Kawágama is about four miles long by a mile wide, is shaped like a crescent and lies in a valley surrounded by high hills; nor that its water is so transparent that the bottom is visible until it fades into the sheer blackness of depth; nor that it is alive with trout; nor that its silence is the silence of a vast

solitude, so that always, even at daybreak or at high midday, it seems to be late afternoon. That would convey little to you. I will inform you quite simply that Kawágama is a very beautiful specimen of the wilderness lake, that it is as the Lord made it, and that we had a good time.

Did you ever fish with the fly from a birch-bark canoe on absolutely still water? You do not seem to move. But far below you, gliding, silent, ghost-like, the bottom slips beneath. Like a weather-vane in an imperceptible current of air, your bow turns to right or left in apparent obedience to the mere will of your companion. And the flies drop softly like down. Then the silence becomes sacred. You whisper—although there is no reason for your whispering; you move cautiously lest your reel scrape the gunwale. An inadvertent click of the paddle is a profanation. The only creatures in all God's world possessing the right to utter aloud a single syllable are the loon far away, and the winter wren near at hand. Even the trout fight grimly, without noise, their white bodies flashing far down in the dimness.

Hour after hour we stole here and there like conspirators. Where showed the circles of a fish's rise, thither crept we to drop a fly on their center as in the bull's eye of a target. The trout seemed to linger near their latest capture, so often we would catch one exactly where we had seen him break water some little time before. In this was the charm of the still hunt. Shoal water, deep water, it seemed all the same to our fortunes. The lake was full of fish, and beautiful fish they were, with deep glowing bronze bellies, and all of from a pound to a pound and a half in weight. The lake had not been fished. Probably somewhere in those black depths over one of the bubbling springholes that must feed so cold and clear a body of water, are big fellows lying, and probably the crafty minnow or spoon might lure them out. But we were satisfied with our game.

At other times we paddled here and there in exploration of coves, inlets, and a tiny little brook that flowed westward from a reed marsh to join another River running parallel to our own.

The Indians had erected a huge lean-to of birch bark, from the ribs of which hung

clothes and the little bags of food. The cooking fire was made in front of it between two giant birch-trees. At evening the light and heat reflected strongly beneath the shelter, leaving the forest in impenetrable darkness. To the very edge of mystery crowded the strange woods noises, the eerie influences of the night, like wolves afraid of the blaze. We felt them hovering, vague, huge, dreadful, just outside the circle of safety our fire had traced about us. The cheerful flames

were dancing familiars who cherished for us the home feeling in the middle of a wilderness.

Two days we lingered, then took the back track. A little after noon we arrived at the camp, empty save for Johnny Challán. Towards dark the fishermen straggled in. Time had been paid them in familiar coinage. They had demanded only accustomed toll of the days, but we had returned laden with strange and glittering memories.<sup>1</sup>

THE END

## Diagnosing Insanity at Sight<sup>2</sup>

By Stephen Smith, M.D., LL.D.

"**W**HAT! Do you affirm that you can diagnose insanity at sight?"

"I do," was the calm, dignified, but emphatic response.

This question was put by John Van Buren, Esq., at that time Attorney-General of the State of New York, and was answered by Dr. Amariah Brigham, Superintendent of the Utica Asylum for the Insane. The occasion was remarkable for the intense popular interest in the results of the trial, the scientific questions involved, and the eminence of the now historical personages engaged in its management. This occasion was the trial of William Freeman, a negro, for the murder of the Van Ness family in the vicinity of Auburn, Cayuga County, New York, on the night of the 12th of March, 1846. The frightful tragedy was thus described in a local paper:

William Freeman, a negro, a native of Auburn, who has recently been discharged after five years' confinement in the States Prison, having provided himself with weapons proceeded to the house of John G. Van Ness, in the suburbs of Auburn, and there, without notice and without any apparent motive, slew Mr. Van Ness, a wealthy and worthy citizen, Mrs. Van Ness, her sleeping infant, and her aged mother, and wounded mortally, it is believed, the laboring man who dwelt with them, leaving only the maid servant of the family, and she had only been spared because he had been disabled in the affray.

The murderer was arrested and confessed the perpetration of the crime, but

showed no signs of regret; on the contrary, he freely described all the incidents of the murder, and laughed continually during the recital. The incensed and excited public saw in his strange acts and unaccountable conduct, together with the entire absence of motive for the crime, grounds for the belief that he might escape punishment on the plea of some wily lawyer that the prisoner was insane. Crowds of excited people gathered about the jail determined to seize the prisoner and lynch him, but the sheriff adopted such precautions that no serious effort was made at a rescue. But popular feel-

<sup>1</sup>In reply to inquiries as to necessary outfit for camping and woods traveling, the author furnishes the following lists:

### *I.—Provisions for man, one week.*

7 lbs. flour, 5 lbs. pork, .20 lb. tea, 2 lbs. beans, 1½ lbs. sugar, 1½ lbs. rice, 1½ lbs. prunes and raisins, .10 lb. lard, 1 lb. oatmeal, baking powder, matches, soap, pepper, salt, ½ lb. tobacco. (A little over 20 lbs.) This will last much longer if you get game and fish.

### *II.—Pack one, or absolute necessities for hard trip.*

*Wear*—Hat, 1 suit woolen underwear, shirt, trousers, socks, silk handkerchief, cotton handkerchief.

*Carry*—Sweater (3 lbs.); extra drawers, 2 extra pair socks (1½ lbs.); gloves (buckskin), towel, surgeon's plaster, laxative, 2 extra pairs moccasins, pistol and cartridges, fishing tackle, blanket (7½ lbs.), rubber blanket (1 lb.), tent (8 lbs.), small ax (2½ lbs.), knife, mosquito dope, compass, tooth-brush, comb, small whetstone—total, about 25 lbs.; 2 tin or aluminum pails, 1 aluminum frying-pan, 1 cup, 1 knife, fork, and spoon (4 lbs.—aluminum).

Whole pack under 50 lbs. In case of two or more people, each pack would be lighter, as tent, tinware, etc. would do for both.

### *III.—Pack two—for luxuries and easy trips—extra to pack one.*

More fishing tackle, camera, 1 more pair socks, 1 more suit underclothes, 1 more sweater, wading shoes of canvas, large ax, mosquito net, mending materials, kettle, candles, more tinware, another shirt, whisky.

<sup>2</sup>Read at the annual meeting of the American Psychological Association, Washington, District of Columbia, May 14, 1903.

ing now took another form. It was determined to resist to the last any effort that might be made to secure the escape of the criminal under cover of alleged insanity. The greatest vigilance was maintained over every movement in the legal proceedings in order to prevent that issue. What made the apprehension that this question would be raised more decisive was the circumstance that only a month previously a murderer had escaped the lawful punishment of his crime through the plea of insanity interposed by his counsel, William H. Seward, Esq. There was, indeed, a wide-spread belief that the criminal in the Van Ness tragedy was emboldened to perpetrate murder owing to the results of the recent trial. The excitement of the public was in some measure allayed by the remark of a prominent Judge that the prisoner would not escape conviction by any plea or defense of Seward.

But the Judge and the public were destined to be disappointed. Freeman was indicted and in due time brought into court for arraignment. The court house was densely packed by an eager and excited crowd of citizens. The District Attorney arraigned the prisoner on the several indictments for murder. Freeman's appearance was said to be that of a man "deaf, stupid, unable to talk connectedly or to any sensible purpose; had an idiotic laugh upon his face, and, apparently, was ignorant of, or indifferent to, his own situation." To the question "Have you any counsel?" the prisoner replied, "I don't know." To the further question "Who are your counsel?" he replied, "I don't know." These questions led up to the tragic feature of these proceedings. The Judge asked the usual question, "Will any one defend this man?" A death-like hush fell upon the audience. The report states that "The spectators looked at each other in breathless silence, broken only when Mr. Seward, pale with emotion, but with inflexible determination in every feature, rose and said, 'May it please the Court, I shall remain counsel for the prisoner until his death.'" It is added, "A murmur of indignation ran around the court-room at this continued defiance, as it was regarded, both of public opinion and of public justice."

At that period the anti-slavery agita-

tion had reached a degree of development which converted the prejudices of the great mass of the people against the negro into an uncontrollable frenzy when he committed crimes. Scarcely less bitter was the public feeling against the few anti-slavery sympathizers in the community who, though equally shocked by the murder, desired to have a fair trial given the criminal. But nothing could have occurred which tended to arouse greater popular indignation than the announcement that the negro was to have as his legal adviser and protector one who, under the specious plea of insanity, had recently secured a disagreement of the jury in a trial for murder. And it is certain that no man of less reputation than Mr. Seward would or could have had the courage to assume, voluntarily, the position of counsel of this self-convicted negro murderer. One prominent local attorney who was impressed with the conviction that the prisoner was insane or an imbecile, and that he might not receive fair treatment owing to the popular excitement, and had volunteered to defend him, publicly withdrew from the case rather than face the storm of indignation which awaited the counsel of the murderer. It was the abandonment of the case that led Mr. Seward, in volunteering to defend Freeman, to add, "I shall remain counsel for the prisoner until his death."

Mr. Seward occupied at that time a unique position in the political history of the State of New York. He had already been Governor of the State for two terms, and took rank among those advanced leaders of the Whig party who entertained and occasionally gave utterance to strong anti-slavery sentiments. No man of less note and courage would have dared to appear as counsel of the prisoner, and even he was denounced by the press and pulpit in unmeasured terms, and the most dishonorable motives were attributed to him in explanation of his conduct. Even the clergyman who conducted the funeral services of the murdered family had inflamed the public mind by appealing to instincts of self-preservation against any indulgence of moderation or forbearance toward "adroit counsel" in the efforts to lower the standard of accountability for crime by the plea of insanity.

It appears from the record that Mr.

Seward did not undertake the defense of Freeman from mere sentiment, but that he thoroughly studied the case and became convinced that the prisoner was hopelessly demented. He personally visited him in his cell and endeavored to converse with him, but found him hardly more than idiotic. He invited friends to visit the prisoner and study the case, and their reports confirmed his experience. He also engaged the services of expert physicians, all of whom agreed that Freeman was suffering from dementia due to a severe injury to the head received several years before, and his delusion was that he had been wrongfully confined in prison and that he would seek revenge of some one.

The District Attorney of Cayuga County, impressed with the gravity of the situation and the favorable character which Mr. Seward might give to the defense, summoned to his aid the Attorney-General of the State, John Van Buren, Esq., son of ex-President Martin Van Buren, then at the height of his professional and political fame. He was regarded as an excellent antagonist of Mr. Seward. The appearance of these famous men in court gave additional interest to the trial. The court-room was constantly crowded and the town was filled with strangers interested in the case.

The theory of the defense was insanity, and among the eminent alienists summoned as expert witnesses was Dr. Amariah Brigham. He was Superintendent of the Asylum for the Insane at Utica, and was regarded as the highest authority in his specialty in this country. He had previously seen the prisoner and fully sustained the theory of insanity. At the time of the trial he had desired to see the prisoner again and make a more thorough study of the case. In order to weaken, as far as possible, Dr. Brigham's testimony, the prosecution refused to allow him to examine the prisoner during the trial. He was compelled, therefore, to form his opinion of the mental condition of Freeman by daily observations of his appearance and actions in court.

The testimony of Dr. Brigham was regarded as the pivot on which the case should ultimately turn, and public excitement was at its height when he was called to the witness stand. I happened to be

in Auburn the day that Dr. Brigham was examined and witnessed the remarkable scene which transpired, and which has never been described.

Dr. Brigham was a man whose personality would attract attention in any audience. He was very tall and spare, and his smoothly shaven face was as impassive and expressionless as marble. His eyes were piercing when fixed on an object, but expressive of humor when he was subjected to examination. The general impression which he made upon the spectators was that of a man of great intellectual superiority, but who had the most perfect self-control. On his direct examination he described in great detail the signs and symptoms of dementia, and gave his reasons for believing that this was the special form of insanity with which the prisoner was afflicted. He admitted that his opinion was based on his study and observation of the prisoner while in court. In reply to questions as to his ability to diagnose insanity at sight, he expressed the most positive opinion that he could do so ordinarily, and had often proved his power to detect the absence of insanity when insanity was feigned by observation and without asking a question.

On the cross-examination Mr. Van Buren resorted to every possible stratagem and quibble to destroy the effect of these firmly expressed opinions. He ranged through the fields of literature, science, history, and philosophy to find some point of attack where Dr. Brigham might be vulnerable, but in vain, for he was met not only with prompt answers, but frequently the learned counsel, with all the wit and sarcasm for which he was renowned, was placed in limbo by the incisive repartee of the witness.

The character of much of this part of the testimony will appear from quotations from the record.

"Is suicide contagious?" asked the counsel.

"I think it was in the French Army until Napoleon put a stop to it," the witness replied. It is stated that a titter ran through the audience and the Attorney-General renewed the charge.

"Is hysterics contagious?" he asked.

"It seems to be catching!" the Doctor placidly said.

"Suppose, Doctor," said the counsel

with a sneer, "that I should go out and steal a hundred dollars and then come in again and sit down here, would you swear I was insane?"

"I think I should," calmly replied the Doctor.

At length the examination took a more practical form when the counsel inquired as to the method pursued by the witness in diagnosing insanity at sight. The witness replied that he relied on the features of the patient, which he always attentively studied.

"Which feature do you rely on in your diagnosis?" queried the counsel.

"I rely on no one feature, but study them as a group," was the answer.

"Do you rely on the chin?" he was asked. "No," he said. "Do you rely on the nose?" was the next question. "No," he said. "Do you rely on the ear?" the counsel persisted. "No," said the witness. "Do you rely on the cheek?" was the next tantalizing question. "No," was the answer. "Do you rely on the mouth?" the counsel continued. "Very much," said the Doctor. "Do you rely upon the eyes?" was the next question. "Still more than on the mouth," the witness answered. "If, then, this prisoner were concealed all but his mouth or his eyes, you affirm that you could decide accurately whether or not he is insane?" queried Mr. Van Buren. "No, I do not state that; I must see all of the features at once," the witness urged. For a considerable time the astute Attorney-General dwelt on the features of different persons, endeavoring by his wit and sarcasm to throw the utmost ridicule upon the witness's method of detecting insanity at sight. With passive countenance and in the most quiet, self-possessed manner the witness answered all the questions, exhibiting not the slightest irritation at the gibes and jeers of the wily and witty counsel as he held up to ridicule before the jury Dr. Brigham's new method of diagnosing insanity.

The interest of the court, jury, counsel, and the immense audience had gradually increased as the examination progressed, until the nervous tension of the entire mass of people had become painful and the suppressed excitement was intense. The climax was reached when the Attorney-General exclaimed, with startling

vehemence and emphasis on every word, "What! Do you affirm that you can diagnose insanity at sight?" "I do," was the calm, dignified, but emphatic, response. Thrusting his thumbs into the arm-holes of his vest and turning towards the jury and the spectators, the Attorney-General demanded in the most contemptuous manner and tone, "Point out to the court and jury an insane person." This challenge was the critical test of the competency of the witness on the credibility of whose testimony the defense placed its chief reliance. Dr. Brigham accepted the challenge without a moment's hesitation, and with an air of reserved confidence which impressed every one with the belief, or perhaps fear, that he would prove equal to the emergency.

It is impossible to describe the scene which followed. A breathless silence fell upon the court-room. The venerable Judge raised his glasses to his forehead and surveyed the excited mass of people about to undergo the ordeal of an examination as to their sanity. The large number of legal gentlemen within the bar arose to their feet and gazed at the crowded hall and passageways with intense curiosity. The spectators were simply awe-stricken when they realized that the crucial test was to be applied to them, and, being one of the number, I still feel the thrill of horror I experienced.

Dr. Brigham rose from his chair very deliberately and stood for a moment surveying the people, as if to determine where to begin his scrutiny. He was as white and emotionless as a marble statue. Turning slowly to the left or first tier of seats he began a deliberate survey of the spectators, scanning the features of each one with the apparent confidence that he could detect the faintest traces of insanity. As his keen, searching eyes glanced from tier to tier of seats the suspense was simply unendurable. He had reached the middle aisle and yet no one had been pointed out as insane. Five hundred faces had been scrutinized and no group of individual features had responded to the test. That portion of the audience at least breathed more freely. An incredulous smile began to play about the mouth and light up the mobile features of the Attorney-General, while a greater earnestness of manner and intensity of scrutiny were

apparent in the witness. Deep furrows appeared on his pallid face, and his eyes assumed a piercing brilliancy which made every one shrink on whom his gaze was momentarily fixed. I felt myself transfixed when I realized that my face was focalized on his vision, and I experienced a sense of the greatest relief when I saw that I had safely passed the trying ordeal. A sigh of relief followed along the rows of seats as the glance of the great expert swept over them. The area of faces still to be examined was now rapidly diminishing, and but one-fourth of the audience remained to be scanned. It was apparent that thus far either there was no insane person in the crowd, or if there was, the witness had failed to detect such person, and hence had failed to answer the practical test to which he had been challenged by the prosecution and which he had accepted without protest.

Suddenly the wandering eyes of the expert became fixed, his features relaxed and assumed their customary impassiveness, and it was evident that he had discovered the object of his search. Stretching out his long arm and pointing with his finger toward a person on one of the rear tiers of seats, he quietly said, "There is an insane man." At the instant a man, as if struck with a bullet, sprang from his seat and, wildly gesticulating and shouting a volley of oaths against any one who would call him insane, rushed down the aisle towards the bar. The Judge rose

hastily from his chair as if about to escape; the lawyers were panic-stricken and mingled with the crowd; but Dr. Brigham stood perfectly self-possessed, while the officers struggled with the lunatic in their efforts to remove him from the court-room.

The whole scene was intensely dramatic and the termination was a surprising ovation for the triumphant actor, Dr. Brigham. The prosecution was completely nonplused, and the witness was allowed to retire without further tests of his ability as an authority in the diagnosis of insanity at sight. The man who was pointed out as insane proved to be a harmless lunatic who had strayed into court from a neighboring livery stable. To break the force of Dr. Brigham's successful test, however, the prosecution circulated the report that Mr. Seward, in anticipation of this test being made, had caused the insane man to be placed in that seat, and that Dr. Brigham had previously seen him. This absurd story only heightened the effect of the favorable impression which Dr. Brigham's successful answer of the challenge of the Attorney-General made upon the court, jury, and the people.

The final issue of the case was the conviction of the criminal for murder in the first degree. Public feeling would admit of no other verdict. He was not executed, but died in prison, demented to idiocy. An autopsy confirmed the correctness of the defense—insanity.

## Insurance and Crime<sup>1</sup>

**M**R. Campbell's "Insurance and Crime" is not a book made out of other books, but a book out of which other books—or at least many magazine articles—may be made. The author has explored a new field with the intellectual thoroughness of a scholar and the moral insight of a reformer. In laying bare the abuses that have grown up about the now omnipresent system of insurance, he is as far from attacking the insurance principle as religious reformers have been from attacking the principle of religion when they have laid bare the abuses that have grown up about the

Church. He believes in insurance, but demonstrates that this great sphere of human activity is no more exempt from moral evils than any other, and that these moral evils are not to be cured merely by the enlightened self-interest of insurance men. The conscience of the whole public must be aroused to protect the public welfare.

The author's first illustration of the inadequacy of the motive of self-interest on the part of the insurance companies to protect the public is the history of marine insurance. Instance after instance is given of vessels overinsured, which were sent out to sea in unseaworthy condition, certain to go down in the first storm,

<sup>1</sup> *Insurance and Crime*. By Alexander Colin Campbell. G. P. Putnam's Sons, New York.

bearing with them all on board. In some cases captains were hired to scuttle their ships if the storms failed to do the desired work. Yet this system of robbery and murder continued to develop itself without serious check from the insurance companies until the whole nation was aroused by appalling calamities and the Plimsoll Mark to prevent overloading was established after a heroic struggle in Parliament. To the Plimsoll legislation Mr. Campbell attaches less importance than we should have anticipated, but none the less his narrative sustains his contention that the insurance companies found it easier to raise the rates of insurance upon all vessels, sound or unsound, than to discriminate between the owners of one and the owners of the other. Only public action, prompted by the desire to preserve the lives of uninsured crews, caused the system of inspection which practically put an end to the ghastly industry of insuring death-traps.

Turning from marine insurance to fire insurance, Mr. Campbell shows that the same principle is still true in a very remarkable degree. In the latter part of the seventeenth century—at the time of the great fire in London—the whole system of fire insurance came very near becoming a public function. It was only after a long controversy that the advocates of fire insurance and fire protection through the agency of a private company carried the day against the advocates of a city system. Curiously enough, in London the companies furnished fire protection as well as fire insurance down to 1866, when the city took over the former work. The companies had made a failure of it, and were naturally glad to be relieved of the expense it involved, and to confine themselves to the revenue-yielding field of insurance. To some extent the fire insurance companies, particularly some of the mutual companies, have insisted upon regulations tending to prevent fires in the property insured. But in general, Mr. Campbell maintains, even when the insurance companies come together for joint agreements, they have striven to increase rates so that they could afford to run the risk of subsidized arson rather than to establish rules to eliminate the moral hazards. No insurance companies, he says, make really effective discriminations

between insurers morally certain to guard their property against loss, and those palpably uncertain not to set fire to it. The difficulty here comes largely through the fact that the insurance companies deal with their patrons through agents, and the companies everywhere persist in paying their agent according to the amount of the policies he writes. "The company," says Mr. Campbell, "deals through agents whom it pays, not in proportion as they maintain the company's interest, but in proportion as they maintain the interest of the other side." Mr. Campbell admits that he cannot fully explain why the companies have failed to get rid of this anomaly, but insists that there is no question as to the fact. It is impossible, he says, simultaneously to move from somewhere to nowhere, and while the insurance companies recognize that their present position is bad, no one has yet suggested a new position which they could all take in common, or any one of them take alone, without running the risk of loss of trade. Often, he says, agents do reject risks to protect their companies, but the temptation is always present for them to write policies for anybody for the largest amounts possible. The record of crime promoted by the over-insurance of property is simply interminable. Mr. Campbell's citations make extremely vivid the magnitude of the abuse, but, unfortunately, he has no adequate remedy to offer. Apparently he has as little faith that legislatures can remedy the evils as that insurance companies will remedy them. His only hope is that public indignation against the injustice of assessing the best class of insurers as heavily as the worst, and public alarm over the subsidizing of arson, may in some unknown way compel a reformation.

In the field of life insurance Mr. Campbell presents even more thrilling historical incidents bringing out the terrible crimes which unregulated insurance may incite, and here his narrative has philosophical completeness in that he is able to present the legal remedy for the wrongs exposed. This remedy consists in the prohibition of insurance for the benefit of any one who has not a clear financial interest in the continued life of the person insured. The partial adoption of this principle has in large measure done away with subsidized

crime in this branch of insurance, and its complete adoption would still further reduce it. In dealing with child life insurance Mr. Campbell does not array himself with the sensational reformers who would make us believe that among the poor the insurance of a child's life is generally equivalent to the insurance of his death. He is, indeed, extremely mild in recommendations of legislative control. But the public records of child murder which he cites will prompt many of his readers to demand that legislators apply rigidly in this field the principle that parents may only insure against the financial loss which their children's sickness and death would bring. To insure against loss—to make small sacrifices in times of prosperity to provide against disaster—is a reasonable and rightful thing; but to insure in the hope of gain through others' losses is a species of policy-playing or gambling that is bad in spirit and demoralizing in its consequences.

Mr. Campbell's three chapters on Company Frauds deal with quite a distinct form of crime connected with unregulated insurance. Many of the incidents illustrating how irresponsible companies have

defrauded policy-holders are grotesque in the extreme, but in most of these cases the victims of the crimes awaken little pity, as their own senseless greed has prompted them to take foolhardy risks in the hope of getting something for nothing or getting immense returns from small investments. In large measure the radical cure for this form of wrong was the public experience, with its quick and inevitable consequences, but the narrative also brings out the necessity for a State supervision of insurance companies as thorough as that provided for banks. These chapters, however, stand a little apart from the main purport of the book, which is to bring out the public losses consequent upon the permission of insurance contracts by which the insured may gain by the very disaster against which he insures. Public sentiment, he urges, should unite with public law in making such gains next to impossible. This discussion of remedies, as we have before suggested, is not as adequate as the discussion of evils, but the author has done such good work as an explorer that he may with good conscience leave to some one else the supplementary work of the legislator.

## Saxon Ecclesiastical Architecture<sup>1</sup>

**A**S befits the text, this work is presented in large print and on good paper. A wealth of illustration adds greatly to the value. The Professor of Fine Art in the University of Edinburgh has thus put the world in possession of information not to be obtained elsewhere with the peculiar and helpful illumination here found. He has not been content with writing a history of the arts of early England, or merely a history of Saxon architecture; his volumes comprise also a valuable account of the social and religious life which underlies the history of art in every country. Better than before we understand that the Saxons did not roam about in the fashion of Mr. Hewlett's "Forest Lovers;" that Alfred the Great and Charlemagne were the most modern men of the mediæval period; above all, that Bishop Lightfoot's glowing words

concerning that distant epoch of Christianity in England were true, for it was "the most attractive and in a spiritual aspect the most splendid in the annals of the Church."

So far as architecture is concerned, while France and Britain may have passed through the same phases of ecclesiastical development, they passed through them at different times. It is true that Church history started in both countries at about the same epoch; but whereas in Gaul that history was continuous, in Britain it was soon interrupted by the invasion of the Danes. The invasions shook the life of the Church as they shook the life of the State. If in Saxon civilization there was neither continuous progress nor evolution, the same is true of Saxon architecture; indeed, in many respects, Professor Baldwin Brown shows that the early periods are really more attractive than the later, first owing to the Danish desolation, and next to a tendency in the Saxon temperament to sink into that inertia which Bede depre-

<sup>1</sup> *The Arts in Early England*. By G. Baldwin Brown, M.A. Illustrated. E. P. Dutton & Co., New York. 3 Vols.

cates in his countrymen. The author considers (1) the Romano-British churches prior to the Saxon invasion, (2) the structures built and used by Celtic Christians in the non-Romanized parts of the British Isles, and (3) the Saxon churches erected subsequent to the conversion to Christianity of the invader. From the conversion of Ethelbert to the Norman Conquest, the author divides Church history into three strikingly convenient periods, the first ending with the first inroad of the Danes, the second covering the Danish wars, and the third beginning with Edgar's reign—or, roughly, 600–800, 800–950, 950–1066.

The work is a popular one in the sense that the criteria which are given to aid the observer in distinguishing a Saxon church from one belonging to other mediæval periods, may be diagnosed even from the bicycle saddle—for instance: "The first sight of a country church is generally of its tower and spire. A western tower that is of great height in proportion to its width and of conspicuous plainness will repay interrogation. If it be buttressed at its angles, it is no use inquiring further, unless, indeed, the buttresses can be plainly seen to be later additions. If it rise gaunt and smooth, the outline only broken perhaps by a single horizontal string course, above

which it may be slightly narrow, it has Saxon character" etc. The author then proceeds to put his reader in possession of the main facts concerning the plan, the general form, and the details of the most characteristic examples of Saxon ecclesiastical architecture.

The weight of Professor Baldwin Brown's authority may serve to dissipate at least one popular prejudice; he declares that no evidence exists to show that any existing Saxon church was once part of a pagan Roman building. He confirms another popular prejudice, however, in declaring that, while the Saxon village church was fairly up to the general mediæval standard for structures of the kind, in cathedral and abbey churches, even if the Saxon builder did rise to the height of his task, the standard of size and splendor was so quickly advanced after the Norman conquest that the original Saxon structures had perforce to yield to larger and more ornate edifices. From the tenth century to the middle of the fourteenth, the economic condition of the rural villages and country towns did not greatly alter, but the resources of the larger abbeys and bishops' sees were enormously increased.

These superb volumes have an inexact title: "Saxon Ecclesiastical Architecture" would have been preferable.

## Trusts and the Tariff<sup>1</sup>

IT is, we think, unfortunate that Mr. Bolen has put two quite distinct books into one volume. Part One contains "The Plain Facts as to the Trusts," Part Two "The Plain Facts as to the Tariff." Whatever economic connection these two topics may have, his treatment demonstrates that they can be separately treated, for he has treated them separately. There is practically no unity in the volume, except that produced by the binder's art. Each Part is complete in itself, and each might have been published as a separate volume. And however interdependent Mr. Bolen may think the two themes, it is certain that they will be approached by readers in a very different mood of mind. Say what we

will as to the duty of considering the tariff question in a purely non-partisan and scientific spirit, it is difficult to find any American who does so consider it. The tariff has been for nearly or quite a century a political question, and the national habit of so regarding it is fixed—not so as to trusts. A few persons, pecuniarily interested in trusts, object to any interference with them; a few others, personally injured by a trust, object to any allowance of them. But most of us have no fixed and final opinions on the subject. The public mind is as yet unformed. Americans need just such a book as Part One of this volume would be if it were published separately. We hope that it is not yet too late to issue it as a separate volume.

For as a reference-book Part One is of

<sup>1</sup> *Plain Facts as to Trusts and the Tariff*. By George L. Bolen. The Macmillan Company, New York.

great value. The author has made a careful study of the best literature on the subject. His impartiality is not imperiled by any illusive ambition for originality. He has no panacea to offer. He is rather a scholar than a prophet, and on economic subjects it is the work of the scholar which Americans most need. He writes without heat, and is neither the assailant nor the apologist of trusts. He does not wish to smash the trusts, nor, on the other hand, does he deny their existence. He is neither a disciple of Mr. Bryan nor of the late Thomas B. Reed; he follows neither the "Commoner" nor the New York "Sun." The title of one of his chapters indicates the spirit of the book: "Possibilities for Good and Evil." He believes that a principal cause of trusts is to be found in railroad discriminations; but he would not substitute public for private ownership of railroads; he would repeal the anti-pooling law and would simultaneously give the Inter-State Commerce Commis-

sion a *power* which it does not possess to regulate rates. He sees more reason for the Government ownership of the telegraph, and for the municipal ownership, though not the municipal operation, of street railways. More important, however, than his own conclusions is his condensed and fair-minded report of the conclusions of others on these and kindred subjects. As a reporter he compacts a great deal into a little space. His book is not wanting in opinions, but it is especially rich in facts. In style and in character it is cyclopedic. It ought to be in the library of every journalist who undertakes to deal with this subject. It would make an excellent text-book for academic instruction. The fair-minded legislator will find it valuable. It is, in a word, the sort of material which leaders of public opinion, who wish to base their own opinions on the experience of the past, always find serviceable and often find essential in their work.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**April Twilights.** By Willa Sibert Cather. Richard G. Badger, Boston. 5x7½ in. 52 pages. \$1.

**All on the Irish Shore: Irish Sketches.** By E. C. Somerville and Martin Ross. Illustrated. (Second Impression.) Longmans, Green & Co., New York. 5x7½ in. 274 pages. \$1.50.

There are eleven of these light and amusing sketches which deal largely with horses and hunting in Ireland, and the one criticism possible is of the very clever authors—that they did not see fit to make it an even dozen. So diverting a book we have not encountered in many a day.

**Call of the Wild (The).** By Jack London. Illustrated. The Macmillan Co., New York. 5x8 in. 231 pages. \$1.50.

This is a fine dog-story, but it is a great deal more than that. Through the history of the kidnapped St. Bernard, Buck, his subjugation by the law of the club, his adventures in the Klondike, where he becomes famous as a superb sledge dog, his fights for the mastership, his duel to the death with a rival, the abuse and suffering he endures with unconquerable soul, his one great love for a human being and the deeds that love prompts, and, finally, his reversion to type, his yielding to the "call of the wild" until he becomes a magnificent savage, the leader of a pack of wolves—through all these incidents of Buck's remarkable career Mr. London shows us, with

a cold, clear vigorousness that suits the subject, the life of the Far North. One feels that around Buck is passing a wild, hard, thrilling strife for existence, for food, and for gold. The human figures are strongly drawn; and although there is no love tale in the book, its romance is fascinating. In point of execution this story seems to us the best that Mr. London has put forth. It takes hold of the attention irresistibly, and keeps that hold to the end. A word of special praise should be accorded the original and effective color illustration.

**Cambridge Modern History (The).** Planned by the late Lord Acton, LL.D. Edited by A. W. Ward, Litt.D., G. W. Prothero, Litt.D., Stanley Leathes, M.A. Vol. VII. The United States. The Macmillan Co., New York. 6½x10 in. 857 pages. \$4.

Reserved for later notice.

**Country Jake (The).** By Oliver Woodruff Gogin. The Broadway Publishing Co., New York. 5½x8 in. 129 pages.

**Count Zarka.** By Sir William Magnay. L. C. Page & Co., Boston. 5x7½ in. 318 pages.

Not a very good specimen of the romance of cut-and-thrust, court intrigue, and improbable adventure.

**Crystals and Gold.** By R. T. Cross. Published by the Author, York, Neb. 5x7½ in. 191 pages. \$1.

**Evolution of the Japanese: Social and Psychic.** By Sidney L. Gulick, M.A. The Fleming H. Revell Co., New York. 6x9 in. 457 pages. \$2. net.

Reserved for later notice.

**Faith of Robert Louis Stevenson (The).** By John Kelman, Jr., M.A. The Fleming H. Revell Co., New York. 6x9 in. \$1.50. net.

Mr. Kelman is a preacher of Edinburgh, formerly an assistant of Dr. George Adam Smith. It is said that no one else has so approached the power and influence over the young men of Scotland which Professor Drummond had. Evidently an earnest admirer of Stevenson, he has made an astonishingly minute and thorough examination of the whole Stevensonian literature, and has directly or by deduction found much that bears on the different phases and changes in Stevenson's religious thought. Naturally, such a book is largely subjective, and in parts the reasoning strikes one as a little over-subtle, but the writer avoids the pitfalls of dogmatism and rhapsody with great skill, while the innumerable quotations from his author save the elaborate volume from any charge of dullness.

**Following the Deer.** By William J. Long. Illustrated. Ginn & Co., Boston. 5½x8 in. 193 pages.

Mr. Copeland's drawings and the decoration of the pages and cover all help make this a pretty volume externally. Mr. Long's talk about the deer here included originally formed part of his book "Secrets of the Woods," but is well suited to the present separate publication.

**Fundamental Problems: The Method of Philosophy as a Systematic Arrangement of Knowledge.** By Dr. Paul Carus. (Third Edition.) The Open Court Publishing Co., Chicago. 5x8 in. 373 pages.

**George H. Hepworth: Preacher, Journalist, Friend of the People.** By Susan Hayes Ward. E. P. Dutton & Co., New York. 5x8½ in. 294 pages. \$2. net.

From the day he was born, when laid aside as dead he was made to draw his first breath by the zealous efforts of a neighbor, to the end of his life the subject of this appreciative biography seems to have had more than his share of human vicissitudes. The soundness of his heart is amply shown by the development which these experiences wrought in his character. As a boy he was studious, and, as one school incident shows, spirited. Those who knew him in his boyhood, however, could hardly have foreseen his growth into a man of stanchness and enterprising moral courage. The event in his life in which these qualities were most amply proved was his change from the Unitarian to the evangelical Congregational ministry. As the biographer points out, this was not due wholly to doctrinal beliefs, although in so far as Dr. Hepworth's "personal attachment to Christ" led him to theological views about Christ it was due to doctrinal beliefs in some considerable measure. It was caused as well by his sympathy with the masses of the people, with whom he felt the Unitarian body had little in common. The bitter feelings engendered by his change of denominational affiliation tried both his courage and his charity. That he not only

persisted in spite of them, but even overcame them, was evidence of the strength of his character. For the last twenty years and more of his life he was engaged largely in journalistic work, writing religious editorials and other contributions for the New York "Herald," and representing that journal as an investigator of conditions in Ireland during the famine of 1880 and the Armenian massacres in 1897. During the last year of his life he showed his spirit by continuing his literary work in spite of illness that kept him much of the time on his back. He was an optimist from first to last, but not because his life was one of ease. The story of his life is well told. It is thoroughly readable. It is frankly admiring, but marked by restraint and good taste. It pictures Dr. Hepworth's personality skilfully and convincingly.

**Gilded Lady (The): Being the True Story of a Crime Against the United States Government as Recorded by Henry V. Chardon, late of the Secret Service.** By Will M. Clemens. Illustrated. G. W. Dillingham Co., New York. 5x7½ in. 268 pages. \$1.25.

**Girl and the Devil (A).** By Jeannette Llewellyn Edwards. Illustrated. The Broadway Publishing Co., New York. 5½x8 in. 270 pages.

**Gospel in Miniature (The): An Exposition of the Prayer that Jesus Taught Men to Pray.** By Alba C. Piersel. Eaton & Mains, Cincinnati. 4¼x6 in. 117 pages. 25c., net. (Postage, 4c.)

**Haz de Leña (El).** By D. Gaspar Nunez de Arce. By Rudolph Schwill. D. C. Heath & Co., Boston. 4¼x6½ in. 153 pages.

In this edition of perhaps the most dignified historical Spanish play of our century Professor Schwill has done more than merely to introduce English readers to "El Haz de Leña" by means of admirable introductory essays and notes. At last the reader whose Don Carlos of history is Schiller's may find out in a popular way through this drama just who the real Don Carlos was, and incidentally may define the gloomy Philip II. more closely. From Prescott to Martin Hume, Philip has stood as the incarnation of bigotry and hateful autocracy, yet the Spanish view of the sovereign has ever been more lenient, and it is in accord with this view that the king stands forth in "El Haz de Leña." Yet, after all is said, Philip remains hard-hearted, intolerant, fanatical. His idea of accomplishing God's will was by preserving absolutism; he sincerely believed that he was dispensing divine justice in killing or burning traitors and heretics. Even his own flesh and blood found no mercy at his hands, as we see in the case of Don Carlos. Students both of history and of the drama will welcome the publication in this form of a play which deserves to stand alongside Schiller's inspiring work as a great dramatic achievement, and deserves to rank even ahead of the German play as an accurate presentation of character.

**How We are Fed: A Geographical Reader.** By James Franklin Chamberlain. (Home and World Series.) Illustrated. The Macmillan Co., New York.

**Individual Prayer as a Working Force.** By David Gregg, D.D. The Fleming H. Revell Co., New York. 5x7½ in. 147 pages. 60c.

**Influence of Emerson (The).** By Edwin D. Mead. The American Unitarian Association, Boston. 5x7½ in. 304 pages. \$1.20, net.

Three essays on Emerson, by one who is so ardent a disciple as to say in regard to Emerson's writings, "It could almost be wished that there might be professorships of this book, 'Nature,' and the correlated essays, in our colleges—" and to explain why this is not an extravagant wish. The first essay deals with Emerson's philosophy, the second with his relation to Theodore Parker, the third with his relation to Carlyle. There is much that is suggestive in this volume. Those, however, who feel that Emerson's individualism is too often egotism and self-assertiveness, if not arrogance, finely phrased, will find it hard to read with patience an estimate that concludes: "Thus always is Emerson his own best balancer and corrector. . . . This, we say, was the wise man, the perfect and upright; we find in him no fault at all."

**Introduction to the History of Modern Philosophy.** By Arthur Stone Dewing. The J. B. Lippincott Co., Philadelphia. 5x8½ in. 346 pages. \$2, net.

Reserved for later notice.

**Is There a God?** By John Hunkey. In 2 vols. Vol I. Published by the Author, Atchison, Kan. 5¼x8½ in. 320 pages.

**Joliffe: Incidents of Peculiar Beliefs in Meridional France.** By Maxwell Sommerville. Illustrated. Drexell Biddle, Philadelphia. 4½x7 in. 213 pages.

**Karma: A Story of Buddhist Ethics.** By Paul Carus. Illustrated. The Open Court Publishing Co., Chicago. 5x7½ in. 46 pages.

**Lord's Prayer (The): A Paraphrase.** By Charlotte H. Homosum Co., New York. 5½x7 in. 22 pages. 50c.

**Mettle of the Pasture (The).** By James Lane Allen. The Macmillan Co., New York. 5x7½ in. 448 pages. \$1.50.

Reserved for later notice.

**Modern Patrician (A).** By N. Ainsworth Montgomery. James H. Earle & Co., Boston. 5x7½ in. 444 pages. \$1.50.

**Mors et Victoria.** Longmans, Green & Co., New York. 5¼x8¼ in. 117 pages. \$1.20, net.

An anonymous dramatic poem in three acts, dealing with the persecution of the Huguenots. The heroine is a maid of honor to "Queen Margot." The end is deeply tragical.

**Mothers (The).** By Edward F. Hayward. Richard G. Badger, Boston. 5x7½ in. 27 pages. 75c.

**Nerves in Disorder: A Plea for Rational Treatment.** By Alfred T. Schofield, M.D. Funk & Wagnalls Co., New York. 4½x7½ in. \$1.50.

**Papers of Pastor Felix (The).** By Arthur John Lockhart. Jennings & Pye, Cincinnati. 5x8 in. 386 pages. \$1.25.

Reserved for later notice.

**Plays of Maevonius (The). Ex Anti-Quitatis Angiporibus Parateles.** The Marion Press, Jamaica, Queensborough, New York. 7¼x11 in. 56 pages.

**Rejected of Men.** By Howard Pyle. Harper & Bros., New York. 4½x7½ in. 268 pages. \$1.50. An attempt to retell the story of Jesus's life in a modern environment. Caiaphas is Dr. Caiaphas, rector of the Church of the Advent

and then bishop; the "rich young ruler" is Mr. Gilderman, owner of the Gilderman Building and son-in-law of Dr. Caiaphas; Pilate is Governor Pilate; while John the Baptist, Lazarus, and Christ retain their Scriptural names unaltered. Tom Kettle, the man born blind who was cured by Christ, is a "charity case," who receives severe treatment from the church committee on the charge of fraudulent misrepresentations. Mr. Gilderman is a spectator of the resurrection of Lazarus at the cemetery, and then drives at a rattling pace to catch the "three-twenty-two train." He discovers that he is neglecting his club-mates and his wife because of his interest in "the Man," and recovers his composure. He plays poker at the club, wins his money, takes an electric cab home, and then suddenly at the front door sees the mob with two or three policemen taking Christ to the crucifixion. The purpose of the book is frankly didactic; it aims to let the reader "see why it was that we crucified the Truth." Whether it is convincing or not depends altogether on the reader.

**Religious Education Association (The).** Proceedings of the First Annual Convention, Chicago, February 10-12, 1903. Published by the Executive Office of the Association, Chicago. 6x9 in. 422 pages.

Dr. Hervey, in his address included in this volume, tells an anecdote of a boy in an industrial class held on Saturday: "'How is it,' said the teacher, 'that you cut up so in Sunday-school and behave so well here?' 'Well,' said the boy, 'here I have something to occupy my mind; in Sunday-school I don't.'" There is stated concretely the inadequacy of religious education, not only in the Sunday-school—which is only one agency—but in the home, in the day school, through books, periodicals, and associations of one sort and another. The Religious Education Association, organized last February, is a means by which men of ability and influence are attempting to give to religious education the dignity that it ought to have. This volume is a record of the first convention of that Association. It contains many valuable addresses. It is to be recommended to all who are concerned about education in religion for two reasons: first, because of the discussions it records on topics of high importance; second, because of the account it gives of the principles and the spirit of the Association itself.

**Rise and Fall of the Anabaptists.** By E. Belfort Bax. The Macmillan Co., New York. 5½x8½ in. 407 pages. \$2.

The term Anabaptist is here used to include a number of sects which arose and thrived during a large part of the sixteenth century in Europe. Their only common bond outwardly consisted in their agreement in asserting that one who was a true believer, according to their doctrines, must be re-baptized, although he has already once been baptized. Socially their unity consisted in the fact that there were various forms of the one protest on the part of the artisan classes against the religious and social traditionalism behind which their feudal superiors had entrenched themselves. Religiously their unity consisted in the fact that

they relied on the "inner light" as a guidance in the understanding of the Bible. Within such unity their diversity was extraordinary. Some, regarding all law, both civil and moral, superseded by the "inner light," declared that the believer could not sin; and therefore gave themselves up to unbridled indulgence in every form of vice; others, regarding their own "inner light" supremely authoritative, made laws and rules, both civil and moral, which they put into execution by sword and flame. One sect encouraged women to abandon chastity, on the ground that Christians achieve salvation by suffering shame. Of another sect, some burnt their Bibles and refused to work or pray, saying that God would write his law in their hearts and had no need of anything they might do. If there is such a thing as epidemic insanity it certainly was rife among these Anabaptists. In these various Anabaptist sects may be found prototypes of modern religious sects all the way from orthodox Baptists and Friends, through Unitarians and Universalists, to Christian Scientists and even polygamous Mormons. The author's social sympathy, being on the side of those who are oppressed and are struggling against odds, enables him to get the point of view of these artisans and handicraftsmen who, often by methods intolerable in any age, asserted their religious and social liberty. This social sympathy, however, sometimes leads the author to apologize or extenuate the cruelty and the lawlessness which at times seemed to be unrestrained among these sectaries. Indeed, the book is full of violence and bloodshed and torture, in which feudal lords and journeymen were by turn executioners and victims. Occasionally an inaccuracy of statement is to be found, as, for instance, when the "origin of baptism by immersion" is specifically identified with a certain event, and when the Moravians are classified without qualification under the head of Anabaptists. These errors, however, are probably due to carelessness of phrase. The book is informing, readable, and full of human feeling. The partisanship of the author imparts to his narrative style, vitality, and vividness in narration, while the frankness with which he recounts the worst as well as the best side of those with whose social struggles he is in sympathy deprives his partisanship of any pernicious quality.

**Siege of Youth (The).** By Frances Charles. Little, Brown & Co., Boston. 5x8 in. \$1.50.

Those who like the obvious and the dramatic in fiction will find this story over-sophisticated and devoid of action. Others will see that there are remarkable impressionistic effects in the character-study, and that the author has intellectual force of an unusual order.

**Spirit in Man (The): Sermons and Selections.** By Horace Bushnell. (Centenary Edition.) Charles Scribner's Sons, New York. 5x8 in. 444 pages. \$1.25, net.

The sermons of Dr. Bushnell are an exception to the rule that sermons are better heard than read. What power he may have put into them by his personality we do not know, but their style is such as to give the impression to

the reader that they would require for appreciation by an audience very close listening. They are not always easy reading, but to thoughtful minds they are always stimulating. This volume contains, in addition to some complete sermons, a number of extracts from sermons left by the author in a rough and unrevised state, a few letters, and forty pages of aphorisms. These last are very characteristic of Bushnell's genius, and illustrate what we have said, that he is often better worth reading than hearing. Some of these aphorisms, carefully pondered, should suffice to correct radical errors in modern democracy. For example, "Liberty is justice secured." This is the liberty America is trying to give to the Filipinos. "Have faith in truth, never in numbers." Majorities, then, are not infallible.

**Style Manual for Stenographers, Reporters, and Correspondents.** By Hugh Graham Paterson. Published by the Author, 153 La Salle St., Chicago, Ill. 6x9 $\frac{1}{2}$  in. 116 pages. \$2, net.

**Surd of Metaphysics: An Inquiry Into the Question Are There Things-In-Themselves?** By Dr. Paul Carus. The Open Court Publishing Co., Chicago. 5x7 $\frac{1}{2}$  in. 233 pages.

**Tempest (The).** By William Shakespeare. Edited by Edward Everett Hale, Jr., Ph.D. (The Riverside Literature Series.) Houghton, Mifflin & Co., Boston. 4 $\frac{1}{2}$ x7 in. 116 pages. 15c.

**Temple Bible (The): First and Second Books of Exodus.** Edited by Archibald Duff, D.D., LL.D. J. B. Lippincott Co., Philadelphia. 4x5 $\frac{1}{4}$  in. 146 pages. 60c, net.

**Training of Wild Animals (The).** By Frank C. Bostock. Edited by Ellen Velvin, F.Z.S. Illustrated. The Century Co., New York. 5x7 $\frac{1}{2}$  in. 256 pages. \$1, net.

An extremely interesting account of the methods of animal-trainers by one of the most successful and daring members of the profession. There are many pictures.

**Wesley and His Preachers: Their Conquest of Britain.** By G. Holden Pike. J. B. Lippincott Co., Philadelphia. 5 $\frac{1}{4}$ x8 $\frac{1}{2}$  in. 310 pages. \$1.75, net.

This is one of the number of books called forth by the bi-centenary of Wesley's birth. It is a string of incidents, anecdotes, and quotations from Wesley and others, arranged under such chapter headings as "Some Characteristics of the Man," "The Early Assistant Preachers," "Some Phases of Town and Village Life," "The Common People," "Belief in the Supernatural," "Quakers in London and Elsewhere." The volume is not characterized by either originality of thought or orderliness of construction. It serves well as a scrap-book on the subject put into good typographical form.

**Where There is Nothing: Being Volume I. of Plays for an Irish Theatre.** By W. B. Yeats. The Macmillan Co., New York. 5x7 in. 212 pages. \$1.25, net.

Reserved for later notice.

**With the Birds.** By Caroline Eliza Hyde. The Broadway Publishing Co., New York. 5x8 in. 31 pages.

**Young Ivy on Old Walls.** By H. Arthur Powell. Richard G. Badger, Boston. 5 $\frac{1}{4}$ x8 in. 57 pages.

**Young Man's Questions (A).** By Robert E. Speer. The Fleming H. Revell Co., New York. 5x7 $\frac{1}{2}$  in. 223 pages. 80c., net.

# Correspondence

## Passive Resistance

*To the Editors of The Outlook :*

As you truly say in your editorial on "Passive Resistance in England," in your issue of July 11, *The Outlook* has heretofore informed its readers respecting the new Education Bill. But you will perhaps pardon my suggesting that such information has had a strong bias in favor of the Nonconformist side of the question. And as Mr. Horne's paper in the same issue is avowedly written from the same standpoint, I am going to ask you to publish this letter, telling something of the other side of the question, although, unless you afford opportunity for myself or others to tell the whole story, the rights of the Church of England in the premises can hardly be made clear. Because the subject is so vast in its reach and complications that it would be asking too much of your courtesy to expect you to devote several columns of your valued publication to the presentation of a matter wholly misrepresented by the vast majority of those who have written upon it in American papers.

The whole difficulty has arisen from the lack of accommodation for English scholars. When the new system of increased educational opportunities was proposed, the question at once arose as to where the children should be gathered. To provide new buildings would necessitate the outlay of at least one hundred millions of dollars. To obviate this the Government agreed to avail themselves of buildings already in existence, the property of the Church of England, Roman Catholics, Wesleyans, and Jews. In these buildings the majority of English children have been educated for a generation at least (3,041,673 to the 2,721,173 taught in the Board Schools). They were erected and supported by the denominations named, and naturally were under the direction of representatives of said denominations. The choice lay between, first, erecting new schools, to which the taxpayers objected; second, to virtually renting them from their owners; third, confiscating them and robbing both the living and the dead of property for which they had conscientiously made great sacrifice.

Mr. Horne makes a grave misstatement when he says that "in eight thousand parishes in England and Wales there is only one public elementary school available in each parish, and that that school is under Church of England auspices." The facts in the case are that while there are nearly eight thousand school districts in which there is only one school, nearly two thousand of these are Board and Nonconformist schools, and in any of them the religious body which chooses to do so may erect its own building and secure governmental support if conditions justify it.

Further, the "Conscience clause" perfectly provides for the protection of the religious opinions of parents. In return for the use of the building the vested owners of the school property are allowed to teach the tenets of their church during "the religious hour." This applies to all denominations alike. And a request that children be excused from attendance at such religious instruction must be honored by those in authority.

The Church of England's position (whether justified by facts or not, at least conscientiously held) is to the effect that she is custodian of funds left for a specific purpose, *i. e.*, the training of her children in the doctrines of the Church. For this she has given lavishly for generations, in the year 1900 the gifts of her members being \$5,000,000 for educational purposes. Besides this they paid all school rates for secular schools. She believes that religious training is absolutely essential to the well being of the race, and so insists upon retaining it. And the criminal statistics which she quotes of countries where systematic religious training does not prevail amply justified her in her position.

The crux of the matter lies wholly in the fact that the large majority of Nonconformists have not, in the past, made provision for the education of their children. Had they done so they might now claim of the State all that has been granted to the Wesleyan Methodists and other religious bodies who possess buildings which the Government needs. It is worthy of note that Messrs. Balfour and Chamberlain are not members of the

Church of England, and may therefore be considered impartial in the matter. While, if, as was stated in your columns some three years back, the majority of the English nation are members of one or other of the nonconforming bodies, the next election will afford them the opportunity of filling the House of Commons with those who consider themselves wronged by the new Education Bill.

Mr. Horne makes another misstatement. The Nonconformist rate-payer does not "lose his ancient privilege of controlling the expenditure of his own money." A Board of Trustees will be elected annually by the voters, and the majority will rule exactly as is the case in the United States. While the representative of the owners of the school property, whether Nonconformist or Church of England, must be a member of this Board, he may be the only Wesleyan, Roman Catholic, Jew, or member of the Church of England thereon. The power remains with the taxpayers. \* \*

[Our correspondent's letter appears to us to be conclusive against the measure which he advocates. According to this letter, two-fifths of the children of England have been taught in the Board Schools. These children are now to be transferred largely to schools under the control of an ecclesiastical organization whose ecclesiastical and political principles are repugnant to the conscience of the parents of most of these children. It is nothing to the purpose to say that on the request of the parent the child may be excused from studying the tenets to which the parent objects. What the parent objects to is having his child in a school controlled by a church to many of whose methods and principles he strenuously objects. Nor is our correspondent correct in saying that the majority will rule "exactly as is the case in the United States." In the United States the people of the district directly elect the Board of Education, and without regard to their ecclesiastical connection. Under the English scheme, the administration of the education in each locality is put in the hands of a local Educational Committee, on which ecclesiastics have a right to representation as ecclesiastics; in no case is more than a majority required to be appointed by the County Council. The

practical effect of this provision will be to put the great majority of the schools of England under ecclesiastical control. In our judgment, there is no alternative between either relegating education to the churches and leaving it to be supported by the churches, or supporting it by the State and putting it exclusively under control of the State. No scheme by which the funds are furnished by the taxpayers and the control is furnished in whole or in part by the Church, will prove successful in a free community.—THE EDITORS.]

#### Cruelty a Growth

##### *To the Editors of The Outlook :*

The horror of the burning of the negro murderer at New Castle, Delaware, seems to have obscured one of the most important lessons to be drawn from the incident. Many times a year the citizens of New Castle, children, women, and men, are permitted—which means they are practically invited—to attend the public whipping of misdemeanants and felons. So far as I have seen no attempt has been made to discern any relation between the verbal and printed accounts of this brutal exhibition and the outrage upon law and humanity committed by the New Castle mob.

I wish to suggest that burning at the stake at Delaware, lynching in Illinois, race riots in Indiana, and peonage in Alabama are the legitimate fruition of the vindictiveness which still characterizes our penal procedure, of sentences which are fitted to the enormity of the crime committed rather than to the need of the criminal or the protection of society. So long as colored chain gangs, guarded by dogs and guns, parade Southern highways, white men will sell and buy negro workmen, whether through the peonage system of Alabama or the evocation of law by Georgia County. So long as New Castle flaunts its whipping posts, and so long as Illinois and Indiana papers cry out for vengeance upon felons and murderers, we shall have an inflammable public mind ready to express itself in lynchings and burnings. The prevention of such atrocities lies not with courts or city authorities or State militia, but must depend upon a reformation of the citizen's attitude toward the law. It is safe to

# The Best Things to Eat

Are made with Royal Baking Powder—bread, biscuit, cake, rolls, muffins, crusts, and all the various pastries requiring a leavening or raising agent.

Risen with Royal Baking Powder, all these foods are superlatively light, sweet, tender, delicious and wholesome.

Royal Baking Powder is the greatest of time and labor savers to the pastry cook. Besides, it economizes flour, butter and eggs, and, best of all, makes the food more digestible and healthful.

There are many imitation baking powders, sold cheap, which contain alum. Housekeepers must avoid these. Alum is a poison, and its use in food is condemned by all physicians.

**The Outlook** is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

**Price.**—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

**Postage is Prepaid** by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add \$1.56 for postage.

**Change of Address.**—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

**Discontinuances.**—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

**How to Remit.**—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

**Letters** should be addressed:

THE OUTLOOK COMPANY

287 Fourth Avenue, New York

Copyright, 1903, by The Outlook Company. Entered as second-class matter in the New York Post-Office.

### DREAMLAND.

Wonderful scenes of pleasure bright,  
 Visions of fairy joys,  
 Wonderful dreams of rare delight  
 Come to small girls and boys.  
 Wonderful animals nod and blink  
 All of the dreamland through  
 And care for the children. What do you think—  
 Do little folks' dreams come true?

**T**HERE are many white soaps, each represented to be just as good as the Ivory; they are not, but like all imitations, they lack the peculiar and remarkable qualities of the genuine. Ask for Ivory Soap and insist upon getting it.

IT FLOATS.

## The Labor Issue at Washington

The facts in the labor issue raised at Washington are, briefly put, as follows: The employees of the Government printing office in Washington are members of a trades union. Mr. William A. Miller, assistant foreman, was expelled from the union. Notice of his expulsion was given to the Public Printer, and he was thereupon removed from his position. He complained to the Civil Service Commission, alleging that his removal had been made in violation of the civil service rules. The Civil Service Commission sustained his complaint, and requested that he be reassigned to duty. His complaint was at the same time investigated by Mr. Cortelyou, Secretary of Commerce and Labor, and the result of both investigations was laid before the President. The President thereupon directed Mr. Miller's reinstatement, accompanying this order with two letters, dated respectively July 13 and July 14. The first of these letters stated the principle on which this reinstatement was ordered in the following terms:

On the face of the papers presented Miller would appear to have been removed in violation of law. There is no objection to the employees of the Government Printing Office constituting themselves into a union if they so desire; but no rules or resolutions of that union can be permitted to override the laws of the United States, which it is my sworn duty to enforce.

The second letter was a brief argument in support of this principle, as follows:

In connection with my letter of yesterday I call attention to the judgment and award by the Anthracite Coal Strike Commission in their report to me of March 18 last: "It is adjudged and awarded that no person shall be refused employment or in any way discriminated against on account of membership or non-membership in any labor organization, and that there shall be no discrimination against or interference with any employee who is not a member of any labor organization

by members of such organization." I heartily approve of this award and judgment by the commission appointed by me, which itself included a member of a labor union. This commission was dealing with labor organizations working for private employers. It is, of course, mere elementary decency to require that all the Government departments shall be handled in accordance with the principles thus clearly and fearlessly enunciated.

At the present writing Mr. Miller has been informed of his reinstatement, has returned to Washington from his Western home, and it is reported is about to resume his work. The Bookbinders' Union has presented to the Civil Service Commission the charges on which Mr. Miller was originally expelled from the union. We do not learn that these charges have yet been presented to Mr. Miller, or that he has had any trial or been heard in his own defense before the Civil Service Commission, although his defense has been given to the public in a reported interview. The union has finally and sensibly abandoned any intention of "walking out," believing that on account of new charges Mr. Miller will ultimately be dropped from the service.

**The Rights of Labor  
and the  
Rights of the People** We do not think it necessary here to repeat the newspaper reports either of the charges or of the defense. Whether Mr. Miller is a good assistant foreman or not is a question which does not greatly concern the public; but the issues involved do greatly concern the public. They appear to us to be two: First, have the people of the United States a right to employ in their work any man who gives them satisfaction, or are they to be permitted to employ only men who are approved and indorsed by the appropriate labor organization? Second, if a question arises as to the competence of an employee of the people of the United States,

are those charges to be submitted to and tried by a tribunal of the United States, or are they to be submitted to and tried by a labor union? We are not sorry to have this question raised, and we trust and believe that the President will meet it squarely and carry it through to a final decision. In our judgment the people of the United States have a right to employ any one who renders to them satisfactory service without asking permission of a trades union to do so, and every one in the employ of the United States has a right to have charges of incompetence or mal-administration presented to and tried by the United States, not by a labor union. If the International Brotherhood of Bookbinders, which is the name of the labor union involved, attempts a strike against the people of the United States, we think it will find that it has undertaken a war which can have but one result. If its leaders are wise they will remind the members of that union what resulted from the strike of railroad employees against the people in Australia, and what resulted from the strike of railroad employees against the people in Holland. The people of the United States are not ready to resign their sovereignty into the hands of any private organization, whether of capitalists or of laborers. We hope that no means may be found to avoid or compromise the issue presented in this case. The right of a man to work, whether he belongs to a labor union or not, is one of the primary rights of labor, and something will be accomplished for that right in all private industries by the establishment of that right in industries carried on by the Federal Government.

**Southern Sentiment  
Concerning Peonage**

On Saturday of last week the jury in the peonage case against R. N. Franklin in the United States Court at Montgomery, Alabama, brought in a verdict of guilty. Judge Jones improved the occasion to add another to the vigorous expressions of opinion upon the criminal practices which have cast such a blot upon Alabama. A correspondent in that State writes us as follows:

There can be no question that the public sentiment of Alabama is with Judge Jones. The pulpit and the press will earnestly support

the Court in its timely and fearless efforts to suppress these criminal practices, which happily are not very widespread. In fact, nearly all the people of the better classes are united in this instance.

This judgment is confirmed by the press of Alabama, which vigorously sustains Judge Jones. We note among these supporters "The Birmingham Age Herald," "The Birmingham News," "The Birmingham Ledger," "The Mobile Register," "The Huntsville Tribune," and "The Montgomery Advertiser." One quotation from the latter paper may serve as a type of all:

The good name of our race, our people, and our section was involved, and he (Judge Jones) would have been recreant to his duty if he had spoken with bated breath or soft words. The people of the State, with here and there an exception, approve and defend the act.

Other Southern papers appear to take the same ground. Thus for example the Nashville "News":

Judge T. G. Jones, in his scathing remarks to the jury which failed to agree in the peonage case, upheld the honor of his State, which such juries would drag in the dust. All Alabamians should feel grateful to him for his emphatic expression from the bench of the best sentiment of their State regarding these brutal and cowardly offenses.

Doubtless there are exceptions; thus the New Orleans "Times-Democrat" makes Judge Jones's conduct of this case an occasion for an attack on President Roosevelt and on Judge Jones as his appointee, but the political animus is so evident that the attack can hardly deceive any who do not wish to be deceived. The right and duty of a Judge to rebuke a jury for refusing to accept the law as given to them by the bench is too well settled to be questioned at this late day. Juries cannot be impeached, and when, as in this case, some jurymen have announced beforehand that they will not render a verdict against one of the parties to the suit, no matter what the evidence, and thus proceed to carry out that resolve in spite of both fact and law, it is the duty of the Judge to call them to account as Judge Jones did.

**The Case of Turner  
Ended**

In the Turner case not only is the action of the Judge sustained by the press and people of Alabama, and generally of the South, but by the action of the defendant himself, J. Fletcher Turner. It

may be assumed that his counsel understand the public sentiment of the State and the evidence in the case, and under their advice, despite the half victory of a mistrial, Mr. Turner has come into court and pleaded guilty. In this plea his lawyer insisted for him that he did not realize that he was violating the law, and that he was not personally guilty of practising cruelty upon the negroes whom he temporarily purchased and held to service. The Judge in accepting the plea restated the facts in the case as evidence that "this was moral as well as legal peonage," and added that he had already informed Mr. Turner's counsel that he would try to have the second trial proceed before another Judge who had not heard the evidence in the case, nor expressed any opinion respecting it. With this explanation the Court imposed a fine of one thousand dollars, leaving the counsel and the District Attorney to arrange for time and method of payment. The result confirms the judgment which The Outlook has already expressed, that the Southern people may be trusted to enforce the laws for the protection of the negroes. We may take this occasion to add that simultaneously with these reports we receive the full report of the Grand Jury by which Turner was indicted. It finds ninety-nine indictments for peonage, but only eighteen persons are involved, and their investigations indicate that the practice has been confined to two counties. The Grand Jury recommend that authority be taken from Justices of the Peace to impose hard labor. This recommendation if carried into effect would probably abolish peonage altogether, since it would take from such minor officials the power which has been used to coerce negroes into submission to practical slavery.

#### The New Flood Tide of Immigration

The surest sign—but, unfortunately, not the surest promise—of prosperity among wage earners, is the volume of immigration, and this now exceeds the dimensions reached in 1882—when the last great wave of prosperity was at its flood. The quickness with which working people in this country inform their foreign relatives whether work here is plentiful or scarce, is clearly por-

trayed in the immigration records of the fat and lean years of the past quarter of a century. It runs as follows:

Fiscal year.	Immigrants.
1878.....	138,000
1882.....	788,000
1886.....	334,000
1892.....	623,000
1895.....	279,000
1903.....	857,000

Nothing like the present flood of immigrants has ever been known except in 1882, and even that year's flood was radically different from the present. The six countries which have contributed most largely to our population sent the following number of immigrants in the two specified years:

	1882	1903
Greater Britain .....	276,000	69,000
Scandinavia.....	105,000	78,000
Germany.....	251,000	40,000
Italy.....	32,000	230,000
Austria.....	29,000	206,000
Russia.....	21,000	136,000

The aggregate immigration from Great Britain, Scandinavia, and Germany has fallen from 632,000 to 187,000, while the aggregate immigration from Italy, Austria, and Russia has risen from 82,000 to 572,000. Mr. Beecher's happy optimism regarding the rapid assimilation of "immigrant hay" by the American ox is no longer so easily justified. Twenty years ago our immigrants were chiefly of the same races that had peopled England, and quickly formed a homogeneous element in our national growth. The bulk of the immigration to-day is from races historically remote, and to-day widely separated from us by the different social, industrial, and political environments. The process of assimilation necessary to national unity is thereby rendered far more difficult, and the difficulty is still further increased by the illiteracy of the majority of the immigrants, and their tendency clannishly to settle in communities of their own in our great cities. The extent to which the present immigrants are adding themselves *en masse* to our urban wage-earning population, instead of becoming their own employers on Western farms, seems to Immigration Commissioner Sargent to promise serious complications when a period of industrial depression again sets in. The Commissioner urges the enactment of the measure held up in the Senate

last winter, restricting immigration by the educational test. The Outlook earnestly seconds this recommendation. The time has fully come for making good citizenship, not cheap goods, the aim of our legislation, and sacrificing the apparent economic prosperity to the real moral welfare of the country whenever the two conflict.

**"Emergency" Currency  
Not for Speculation**

At the end of June Mr. Cannon, Speaker of the next House of Representatives, bluntly declared his opposition to any legislation from the next Congress to provide a "rubber" currency based on bank assets. There was no demand for such a currency, he is reported to have said, except from Eastern money centers, and "if the Eastern bankers would reduce their call loans and bring the speculative interests of Wall Street down to a conservative basis, there would be no occasion for the creation of more money by legislation." "The Western banks," he added, "have large reserves in the East, and these reserves are being used to manipulate the markets." This interview created a profound sensation in Wall Street. The Speaker of the House, by controlling the Committee on Rules, which decides what measures shall be considered, can virtually block any proposition for new legislation to which he is strongly opposed, and Mr. Cannon's remark about Western bank reserves being used in Wall Street to manipulate the markets read like an indorsement of former Comptroller Dawes's suggestion in his report for 1900 that the national banking laws should be amended so that the money of the country should be less concentrated in the speculative centers. The national banking law, it will be recalled, authorizes the banks in all small cities to deposit from one-half to three-fifths of their reserves in New York, Chicago, and St. Louis, where three-quarters of it may again be loaned out, and under this provision, as Mr. O. H. Schreiner, of Brooklyn, has pointed out in a recent pamphlet, the "country" bank reserves deposited in speculative centers exceed two hundred millions, and nearly equal the total sum loaned on demand by New York national banks on Stock Exchange collateral. Mr. Cannon's interview therefore almost

destroyed Wall Street's hope of currency expansion from the next Congress. Within a fortnight, however, this hope was, in a measure, revived by a statement of Senator Lodge that President Roosevelt would recommend to the extra session of Congress in November currency legislation "along the lines" suggested by his previous "messages and speeches." This statement was treated in some quarters as if it expressed President Roosevelt's indorsement of the asset currency scheme of currency inflation whenever times are good. References to President Roosevelt's messages and speeches, however, do not warrant the conclusion that he indorses this plan. In his speech at Quincy last April he expressly declared that "permanent increases" in our currency "would be dangerous, permanent contraction ruinous." The reform which he favored was one which would permit the currency to expand when money was tight—and not when bank assets had a high valuation—and permit it to contract when money is easy—and not when bank assets are depreciated or destroyed. He did not commit himself to any definite plan, but he seemed to indorse the German system of permitting emergency issues of currency subject to a high tax to compel retirement when the emergency is past, rather than to indorse any plan by which in times of prosperity the banks might add indefinitely a credit currency—which itself would need support if a panic came.

**The Decline in  
Trust Stocks**

Last week's decline in the stock market affected pre-eminently the trust securities. The decline in this field is now much more serious than that in railroad stocks, for the latter, as a rule, have merely lost half the gain they had made while the market was advancing, but the trust stocks are now as a rule lower than at the date of their issue. At the time of the opening of the new Stock Exchange building "Dun's Review" published a table showing the fluctuations in sixty important railway stocks for nearly a generation. In 1897 the highest average price reached for these stocks was \$60 a share. Last year at one time the average rose to \$116 a share, showing a doubling of prices during the five-year period. The declines

of the past year, according to last week's issue of the same review, have brought the average price of these shares down to \$86—a loss of thirty dollars from the highest point reached, but a gain about as great from ordinary prices as late as 1898. In the trust stocks, however, as has been stated, the present prices are not only far lower than when the trust fever was at its height, but are considerably lower than when the trusts were organized. We have compared the prices recorded last week for eighteen of the most important of the industrial stocks with those at which they were first put upon the market—as given in Professor Meade's volume on "Trust Finance." The average price at which the stocks of these eighteen trusts were first sold was \$60 a share. Last week the average price of these same stocks was \$47 a share, showing a loss of just one-quarter in average value. At the price at which the first investors or speculators bought them, the stocks of these eighteen trusts were worth eleven hundred million dollars. At the price at which these stocks were sold last week they were worth a little less than eight hundred millions—a net loss of over three hundred millions. When the fall in these stocks first began Mr. Morgan attributed it to the mass of "undigested securities." A fortnight ago Mr. James J. Hill substituted the phrase "indigestible securities." This week some investors are disposed to classify them as "indigestible insecurities."

Wall Street Gambling The events of the week enforce the folly of gambling no less than its crime. There is always a liability to fluctuations in value which are natural and due to natural causes. There will always be men to deal with actual values buying and selling, and using their knowledge to buy, if they have the money, when goods are cheap, and to sell if they have the opportunity when goods are high. These men are engaged in legitimate business. But there are also shrewd operators in Wall Street, and others who are not in the street, but who work through its machinery, whose chief employment is to create imaginary values and sell the fictitious thing to the unwary, and others whose chief employ-

ment it is to create a public impression that articles of real value are valueless and to buy them when there is a panic. There are gamblers—and worse—whose morals are little better than those of the dealers in gold bricks or counterfeit money. These are the criminals. The fools are the men and women who dabble in stocks; who imagine that they can engage in speculation with unprincipled sharpers and not lose; whose conscience is so ill developed that they are willing to join in a game in which nothing is made by one man except by another man's loss, and whose self-conceit is so developed that they imagine that without knowledge they can play the game successfully with professional gamblers who devote their lives to it.

#### Opposition to Erie Canal Enlargement

The Chamber of Commerce of Rochester, New York, called a convention in that city on July 21 to organize the opposition to the enlargement of the Erie Canal by the State. It will be remembered that in the last session of the New York Legislature a bill was passed providing that at the next election the voters of the State should decide whether the sum of \$101,000,000 should be borrowed and devoted to making out of the present Erie Canal a waterway large enough to be used by thousand-ton barges. The bill was vigorously opposed while it was before the Legislature; and now that the proposition is to be submitted to the voters a strong and increasingly energetic campaign is being waged against it. The opposition has been in part determined by locality. The city of Rochester would not be so directly benefited by the change as Buffalo, for instance, and therefore it was natural that the organization of opposition to the enlargement should take place there. The opposition, however, has been formed on other grounds beside those of local interest. This was clearly stated by the chairman of the convention, Mr. John I. Platt, editor of the Poughkeepsie "Eagle." As he correctly stated it: "This question, whether the return will be greater than the expenditure, is the kernel of the whole question." He then gave some interesting figures. The sum which it is proposed should be borrowed is eight and a half

millions of dollars more than the value of all the public school buildings in the State. That sum with the interest for eighteen years added would exceed the value of all public school buildings, the buildings and grounds of all the colleges and universities, and the scientific apparatus in them, and yet leave enough probably to pay for all the private schools. If the debt should be allowed to run for fifty years, as some suggest, it would not only be equivalent in value to the entire educational plant of the State, but would in addition equal the total endowment of the colleges and universities in the State and then leave a balance of over fifty millions of dollars. It is well to have the facts stated thus, for it gives the voters a chance to understand the really enormous character of the proposed undertaking. We repeat these figures without vouching for their accuracy. In themselves they constitute of course no argument against the undertaking; but they form an impressive argument for most careful consideration and the freest possible discussion by the voters of the State. The other arguments presented before the Convention did not strengthen the case against the canal. The pro-canal convention to be held this week in Utica will present to the country the reply of the canal advocates.

✽

**Frederick W. Holls** George Frederick William Holls, who died last Thursday in Yonkers at the age of forty-six, was most widely known for his services on behalf of international peace at the Hague Peace Conference, where he was secretary of the American delegation, and later became the American representative on the Sub-Committee on Arbitration. It is generally understood that he was the author of the American mediation proposals. His book on "The Peace Conference at The Hague," is a clear and valuable account of the proceedings. His ability received high recognition when he was offered by President Roosevelt the post of umpire in the claims against Venezuela last May, a post he was obliged to decline. Mr. Holls, previous to his services for international arbitration, had been eminent in his State, New York, as a member of the Constitutional Convention, in which he was chairman of the

Committee on Education. To him was due some important amendments. As a member of the New York State Commission on Educational Unification he had great influence in the discussion of one of the most momentous educational questions with which any American State has had to deal. Mr. Holls was especially proficient in giving to others, through public lectures, the impressions he had received in his public career, especially in his experiences at the Hague Conference. He was a graduate of Columbia College and Law School, and had received the degree of D.C.L. from the University of Leipsic. He was a man of great seriousness, of marked ability, and of high civic ideals.

**China and the United States** Our readers must take with large allowance the reports in the daily press concerning the negotiations of the United States with Russia and China over the question of the open door in Manchuria. A Washington correspondent who must send off his story in an hour works under conditions not familiar to Prince Ching. Thus last week, owing perhaps to inevitable delays in the conduct of diplomatic intercourse, especially with Oriental countries, the proposed commercial treaty between China and the United States was again the subject of much newspaper discussion, occasioned by the unauthenticated rumor that Prince Ching, President of the Chinese Foreign Office, had now refused to open towns in Manchuria to international trade. The rumor is uncertain. What is certain is that China has made pledges to the United States to open two or more Manchurian ports to the world's trade, and that Russia has promised to withdraw from Manchuria under certain conditions, has also promised to respect the open door, and has assured the United States that new ports would be opened. Hence, the American Government expects to obtain in Manchuria, whether from China or from Russia, an "open door" treatment. This feeling of assurance may not be altogether justified by the facts, but no matter what fresh obstacle Orientalism may devise—and in this Russia is as Oriental as is China—the American Government, under the lead

of President Roosevelt and Secretary Hay, will continue firm in the conviction that the principle of the open door in China should be enjoyed by every nation, will continue by every means in its power to exert strenuous influence in this direction, and will insist on the definite settling of the matter *now*. Past success gives promise of future success; for it is not too much to say that since the Boxer atrocities, whatever prosperity attends commercial, diplomatic, educational, and religious conditions in China to-day is due more to the policy of the present American administration than to the combined influence of the other Powers.

#### The Venezuelan Insurrection

Last week in Venezuela the important town of Ciudad Bolivar, on the Orinoco River, was captured by the Government troops from the revolutionists. From the accounts of the capture, the fight would seem to have been a fierce one. Nearly a hundred dead rebels were found inside the Zamora or citadel of the town, and more than two hundred revolutionists were killed in the vicinity of the jail, where the opposing forces had concentrated afterwards. The possession of every block was disputed by inches, as all the houses had been barricaded and the revolutionists were shooting from the azoteas or flat roofs. Hence, in order to gain possession of the houses, the method of the Government troops was to bore holes through the walls as soon as a house was captured, and thus not to expose the troops to the street fire. The total loss of lives is reported at 1,500. With the capture of Ciudad Bolivar, we hope, for the sake of sorely-needed peace, that the present insurrection has come to an end, even though the Castro government may not be the most ideal one for Venezuela.

#### Leo XIII.'s Funeral

Last week the imposing funeral ceremonies honoring Leo XIII. began at the Vatican by the lying-in-state there of the body of the dead Pontiff, and the filing before it of the cardinals and other dignitaries of the church. This was followed by a three days' lying-in-state at St. Peter's, where the Pope's body was viewed by

thousands upon thousands of the faithful. And not by these only. Many anti-clerical Radicals, Socialists, and Free Thinkers were present; though abhorring what they call "Vaticanism," they wished to show respect to the memory of the great man who had been a social no less than a religious force. The procession from the Vatican to the cathedral was impressively picturesque. It was held at night and was composed of grooms with their lighted torches, the Noble Guard, the cardinals in their violet robes of mourning, the other prelates and priests, the diplomatic body accredited to the Vatican, and the civil and military officers of the Pope. The body was borne by the same *sedari*, who in the Pontiff's lifetime carried him in his *sedes gestatoria*, or chair of state, and was robed in vestments used by Leo XIII. on the occasion of his last public function (when he confirmed the appointments of Archbishop Farley, of New York, and Quigley, of Chicago), namely, the papal tunic, the white cope and red chasuble, the gilded stole, the pontifical pallium, and the golden mitre. The procession entered the cathedral chanting the "Libera me, Domine" and the body was placed on a bier high above the heads of the people and behind an iron grating. It was a great disappointment to the devout not to be allowed to kiss the feet of the dead Pope, as had hitherto been the custom. There was also another departure from ancient rule. On the day following the demise, when the cardinals met to declare their ruler officially dead, Cardinal Oreglia, Dean of the Sacred College, pronounced the traditional words "Papa vere mortuus est" without the historic tapping three times with a mallet on the dead Pontiff's head. The official announcement was followed by the traditional ceremony of the removal of the Fisherman's Ring (though rumor says another was found in its place). After the death of a Pope the Fisherman's Ring is broken in the presence of the cardinals, and, when a new Pope is elected, is reset and presented to him. Tradition says that the stone in the ring belonged to St. Peter himself. While the Pope's body was being carried into the cathedral, the ceremony of depositing the urn containing his heart was taking place in the Church of Sts. Vincent and Anastasius, a depositary

for the hearts of all the Popes. But neither at this church nor at St. Peter's was the most significant mourning observed. That was to be seen along the poorer streets of Rome, where many a small shop was closed with this inscription on the shutters: "Chiuso per il lutto mondiale" (Closed on account of the world's mourning).

⊗

#### The Coming Conclave

There are sixty-four cardinals. One of these will be chosen Pope, succeeding the late Leo XIII.: the successful candidate must receive a two-thirds vote. The Conclave is to be held in the Vatican, where each cardinal will occupy a cell, for which he draws lots. No communication with the outside world may be had. The Conclave will be under the presidency of the Piedmontese Cardinal Oreglia, Dean of the Sacred College (or Consistory of all the Cardinals), who will count the ballots cast and announce the result. His was the chief figure at Leo XIII.'s funeral; during the days elapsing between the Pope's death and the Conclave, it is this Camerlengo or Chamberlain who is the temporary head of the Church. As such his authority is undeniably great, and some observers now think that his use of it during these days has predisposed the cardinals towards him as a candidate, particularly as his great age (he is the sole survivor of the last Conclave) is in his favor with ambitious younger men who wish to see the way cleared for their own pretensions by a presumably short reign. This reasoning had much to do with electing the venerable Pecci, twenty-five years ago, yet he outlived all but one of his fellow cardinals! There has been, however, no more irreconcilable opponent of Leo XIII.'s liberal policy than Cardinal Oreglia; his election might thus signalize a reactionary Vatican attitude. Of all candidates the figure of the Sicilian Cardinal Rampolla, long Secretary of State to Leo XIII., again looms largest in the public eye. Though his strength lies first of all in his forceful personality, it also lies in the obligation to him which many cardinals must feel, as, without his approval, they might never have reached their present station. The campaign for him is now being conducted by the French, Spanish, and Portuguese representatives and is opposed by those

from Germany, Austria, and Italy. The candidate of the monastic orders is the Genoese Cardinal Gotti, a magnificent specimen of the "self-made man," for he has risen from peasant ranks. Nevertheless, long the head of the Carmelites, he must necessarily be first, last, and always a monk. Hence his candidacy inspires a certain distrust, for the election to the Papacy of a monk might unnecessarily complicate the relations of the Papacy with France, Spain, and the United States, in view of the present difficulties with the monastic orders in the first two countries and in the Philippines. During the past week evidences have accumulated to show that the choice of the Triple Alliance is Cardinal Serafino Vannutelli. His creditable record, both as man and as diplomat, indicates to the three Powers how much they might gain by the ascendancy of one who understands them so well. Finally, three candidates stand out more than ever as eminently and nationally Italian in their divorce from "the prisoner of the Vatican" attitude—Cardinals Sarto, Capocelatro, and Agliardi, men of democratic sympathies, liberal tendencies, and marked capacity for administrative work. All Protestants hope that such qualities will distinguish the next Pope—whether he be one of these prominent *papabili* or some obscure compromise candidate.

**The Irish Land Bill** Last week was a notable one in Irish history. The Land Bill passed its third reading in the House of Commons by the impressive vote of 317 to 20. Mr. Redmond, leader of the Irish Nationalists, paid a merited tribute to the ability and patience with which the bill had been conducted by Mr. Wyndham, Chief Secretary for Ireland, but for whose sympathetic and conciliatory spirit the bill could not have been brought to a successful issue. The speaker added that evicted tenants had now obtained all they wanted, and it was satisfactory to remember that this had been accomplished with the consent of the principal representatives of the landlords; under the bill practically every evicted tenant in Ireland might be restored—a fact of enormous importance to the future of the island. Mr. Redmond concluded with a declaration that this

settlement of the land question "should remove the last barrier to the concession of those wider national rights without which Irishmen would never be contented." Referring to this warning, Premier Balfour said that he rejoiced in the good will shown on all sides during the discussion no less than in the bill's final passage; that he had long advocated a purchase-scheme, realizing (as every one must have realized) that the Irish land system was probably the worst in the world, "contriving to combine the defects of almost every other conceivable system." Mr. Balfour declared that the bill in its practical workings should be entirely successful, for he was convinced that Irish tenants could be trusted to fulfill the obligations which they had undertaken to the British Treasury; he added:

I trust that henceforth Irishmen will no longer be tempted to mix up two quite different controversies, the controversy whether you should or should not give home rule to Ireland, and the controversy whether you should or should not maintain a land system which was costly, unjust, complicated, financially burdensome, and equally injurious to tenants and landlords.

The second important Irish event last week was the visit to Dublin of the King and Queen. In his speeches Edward VII. declared that there was no part of his dominions in which he took greater interest than in Ireland. His Majesty added that he rejoiced to hear of the awakened spirit of hope and enterprise among the Irish people which was full of promise for the future. It would be a source of profound happiness to him if his reign were coincident with a new era of social peace and industrial progress for Ireland. This sentiment will find an echo on both sides of the Atlantic.

**Persia, Great Britain,  
and Russia.**

A treaty has been concluded between Great Britain and Persia by which the former power has been placed on an equal footing with Russia in regard to Persian importation of foreign goods. When Lord Lansdowne announced some weeks ago a British "Monroe Doctrine" to be applied henceforth to the Persian gulf, he intimated that British trade privileges in Persia were about to be enlarged, and it is now officially announced that a new treaty has been ratified at Teheran.

By its terms British merchandise is given the same reduction as imports from Russia, a concession which removes any uncertainty as to the operation of the most favored nation clause, which is also renewed to each country by the treaty. Lord Lansdowne stated, however, that notwithstanding such a clause means had been found to discriminate against British goods. That the discrimination was made at the instance of Russian agents may be presumed from the special provision for equality with Russian goods. The new treaty also secures reform in the Persian customs administration, which had hitherto allowed the farming out of customs duties, a practice now replaced by a government system of offices and warehouses. The Persian export duty of five per cent. upon all except a few articles is also abolished. It remains to be seen whether the advantages secured by the new Anglo-Persian treaty will be nullified by Russian influence. Ever since the Czar's Government obtained a strong financial foothold in Persia by reason of a loan, a persistent attempt has been made to secure a predominant position for Russian commerce in that country. The attempt was for a short time successful, as was evident from the recent tariff agreement between the Russian and Persian Governments. The new British treaty would seem somewhat to checkmate Russian success at least for the moment.

**Canadian Prosperity** The exhibit of Canadian prosperity for the fiscal year ending June 30, 1903, is altogether unprecedented in the history of the Dominion. The aggregate foreign trade is over \$450,000,000, an increase of more than \$35,000,000 over 1902, and nearly double the total foreign trade of 1896. Still more significant is the American share in this great trade expansion. Of Canadian imports, \$125,000,000 worth were American manufactured goods and natural products, an increase of about \$13,000,000 over the imports of the previous year. The remarkable feature is that this has taken place in spite of Canada's preferential tariff in favor of the mother country. Fuller returns will doubtless show that the Dominion's imports of British goods for 1903 will be more than those of the previous year, but no such volume of

trade as that with the United States is expected. The exports to this country have also increased to about \$55,000,000, as against nearly \$49,000,000 for 1902. The large balance of \$70,000,000 in our favor suggests more pointedly than ever before the possibilities of trade with Canada if a measure of reciprocity should be granted to her, and it also illustrates the only effective way to meet Mr. Chamberlain's preferential tariff scheme, if this country should feel interested enough to counteract it and were determined to do so. For the Colonial head and front of that scheme is the Canadian preference, even though it is only partially effective, and if an American concession of liberal reciprocity were given and accepted the whole trade outlook between Great Britain and her colonies would be changed. Another noteworthy evidence of progress is the immigration returns, which for the fiscal year amounted to 125,000, an increase of 45,000 over the previous year. Of these over 40,000 came from the United States, 40,000 from Great Britain, and the remainder from Continental Europe, chiefly Norway and Sweden, Germany, Rumania, and the Austrian province of Galicia. The increase of American immigration is best illustrated by the fact that in 1896 only thirty-six came into the Canadian Northwest. In 1900 the influx had increased to nearly 5,800, in 1901 to about 18,000, and in 1903 to more than 40,000.

#### The British Colonial Universities Conference

⊗ An Allied Colonial Universities Conference has just been

held in London for the promotion of technical study and research work in the universities of Great Britain and the colonies. Over thirty universities and colleges were represented. The special purpose of the conference was to suggest means whereby British and colonial students could obtain within the empire the special advantages in post-graduate study for which they have been compelled hitherto to go to Germany, the United States, and France. A committee, composed of Lord Kelvin, Mr. Bryce, and Lord Strathcona, was appointed to arrange details of organization. The conference concluded with a great gathering, at which Premier Balfour delivered

an address. Among the means recommended for co-ordinating university work were interchange of professors, the movement of students from one university to another, the careful comparison of educational results, higher pay for the best attainable professors, and the establishment of some form of original research as a condition for receiving the highest academical degrees, while the immediate impulse of the movement was supplied by the recent gift of \$1,500,000 from Wernher Beit & Company, the South African mining firm, for the establishment of a technical university in London. The scheme has been emphasized as part of the larger movement of imperial consolidation now so engrossing in British affairs. During the discussions a conflict of opinion was apparent concerning a proposed centralization of post-graduate studies in Great Britain. Against this some of the colonial delegates strongly protested, their contention being that the attraction of students and of influence should go to those institutions, whether in Great Britain or the colonies, which developed the best teaching and the most original research work. McGill University, for example, had recently attracted students from English and Scotch universities. It was recognized without dissent that the leading English and many of the colonial universities were considerably behind the American and German universities in specialized instruction in practical science and engineering, and that little was to be hoped for from the scheme debated unless this particular deficiency was speedily supplied and a sufficiently high standard henceforth maintained.

⊗

## Educational Progress of the Year

The most striking educational event of the past year was undoubtedly the meeting at Boston, last month, of the National Educational Association. This Association has come to have, in all normal years, conventions of tremendous magnitude and of great educational significance. But the Boston meeting so far surpassed all its predecessors as to stand in a class by itself. President Eliot was its presiding officer. The attendance was well over thirty thousand. The social and

artistic features of the gathering were of exceptional interest. The programme of regular exercises, too, was unusually strong and varied. The convention was not so much epoch-making in special acts, as representative of a full tide of educational activity.

Something analogous to this may be said of the year which this convention has rounded out. It has seen a rapid extension of the system of consolidation of country schools; continued effort to get the kindergartens out of their esoteric isolation, and to integrate them with the system of public education; the growth of instruction in home occupations, work-of-hand, the fine arts, and history in the elementary schools; continued effort to economize time in the grammar schools and to make their courses of instruction lead to something; continued prosperity of the high schools, with differentiation of their courses of study and the erection of great buildings for their use; the further extension of (modified) election of studies in both high schools and colleges, and the further merging of the later baccalaureate degrees in the old degree of bachelor of arts.

The fight against personal and partisan politics in school affairs has gone on, with varying fortunes. Some of the worst revelations yet made concerning the subordination of city teachers to the political machine have come out within the past few months in Philadelphia. The attempt at a better adjustment of relations between secondary and higher institutions goes hopefully forward. The College Entrance Examination Board is working out improvement in one direction. The "certificate system" of admission to college is unmistakably gaining in the East, while holding its own in the West. The center of gravity in these relations is shifting. It was long on the side of the colleges; now the public high school is more and more dominating the situation. The normal schools are slowly working up toward college grade, by advancing their admission requirements, and the question of the relation of these schools to the universities is entering on a new stage of discussion. The Carnegie Institution has fairly begun its activity as special promoter of research in many fields. The University of California—a State

institution—has established a research-professorship in physiology. Plans for the administration of the Cecil Rhodes scholarships have taken fairly definite form, and the pilgrimage of the scholars from America to Oxford will soon begin. The new movement for the promotion of education in the South is making a good beginning, under the General Educational Board and the Southern Educational Board. The discussion of co-education has not been so hysterical as was some of that of the preceding year. An important step has been taken by the University of Chicago in providing for a partial segregation of its women students in the instruction of the first two college years.

There have been during the year two notable manifestations of interest in the religious aspect of education, one English and the other American. In England, where the new education act calls for the support of schools of the Church of England by a public rate, a Passive Resistance League has been formed by non-conformists who refuse to pay this rate. A recent writer declares that over two hundred branches of this League are already in existence, scattered all over the country. It is apparent from newspaper reports that the principle of passive resistance has already been carried into effect in many places. In America, the significant occurrence was the formation of the Religious Educational Association, for the improvement of religious and moral education through the Sunday-school and other agencies. The initial impulse was given to this organization by a convention held at Chicago in February. It represents the rising desire in this country to make the religious training of American children at least respectable from an educational point of view. It is not likely that any promoter of the new movement would think for a moment of introducing into our public education such an unfortunate situation as that which England faces under its new education act. It should be added that, aside from its unhappy handling of the "religious difficulty," the English act has in it much that is progressive and valuable.

There have been some indications of increasing interest in vocational education. While building up a system of liberal culture for all, our people have learned

to look with suspicion on training for special occupations. This state of things is now changing. The interest in trade schools, schools of commerce, of architecture, and of other technical pursuits has been clearly rising. During the past year, the discussion of professional education and its relation to the general training of the college course has been at its height. This discussion culminated at the Boston meeting of the National Association in the first session of the Department of Higher Education. Presidents Eliot, Butler, Harper, Wheeler, and others participated in this conference, which brought forth a clear enunciation of the four chief plans now proposed for the adjustment of the baccalaureate course to the needs of the professional schools. In his pointed summing up of the argument, President Eliot reminded his hearers that the four-year college course, as commonly understood, is gone already. He would have experimentation by different institutions along different lines to determine what may best take its place.

What may be called the personal history of our education during the past year presents much that is of national interest. Our losses by death have been heavy. Two, at least, of those who have been taken, Mrs. Alice Freeman Palmer and Dr. J. L. M. Curry, were of the highest order of ability and usefulness in their different spheres. Others who should receive special mention are President William M. Beardshear, Dean Edward R. Shaw, and Dr. Emerson E. White. Among the new college presidents of the year are Woodrow Wilson at Princeton, Edmund Janes James at Northwestern, Frank Strong at the University of Kansas, and Henry Churchill King at Oberlin. John Huston Finley has been elected president of the City College of New York. L. H. Jones, formerly superintendent of schools at Cleveland, has become president of the State normal school system of Michigan. In the Philippine Islands, James F. Smith has succeeded Bernard Moses as Commissioner of Education, and the first superintendent of schools, Fred W. Atkinson, has been succeeded by E. B. Bryan.

In the informal discussions at the Boston meeting of the National Association, one question much mooted was that relating to the personnel of the teaching pro-

fession: Is it, on the whole, rising or deteriorating? The Boston meeting was encouraging in its indications of professional advancement. Two very different movements are now under way, both of which seek to render the teaching profession attractive to men and women of good abilities. The National Federation of Teachers, with its headquarters at Chicago, is seeking primarily to improve the economic condition of teachers. The higher training schools, such as the Teachers' College of Columbia University and the School of Education of Chicago University, are seeking to attract students of high attainments by offering them instruction of full university grade. Harvard University has during the past year called for two and one-half million dollars with which to expand its Department of Education into a professional school of the highest type. The success of this undertaking would be a distinct gain to our national education.

## Promotions in the Army

The promotion of General Wood to be Major-General has provoked some natural criticism. We believe that this last promotion has been in the regular order. But the fact remains that he who was five years ago an assistant-surgeon is now a Major-General. Into the question of the propriety of this particular promotion The Outlook does not enter. We do not think that public opinion, represented by the press, has for its function the determination of the fitness of particular individuals for particular posts in the army. But since this appointment has been sharply criticised, as due to personal favoritism, it is proper to recall to our readers George Kennan's article in The Outlook for April 15, 1899, on "The Sanitary Regeneration of Santiago." This article, by a disinterested and critical student of affairs, affords abundant reason for thinking that in General Wood's past career there has been both distinguished merit and clear evidence of the possession of remarkable administrative abilities, and these are the abilities that are just now pre-eminently needed in our army for the work which it has to do; his ability to command large

bodies of men in action has never been tested. We repeat, however, that we are not here engaged to defend the rapid promotion of General Wood. We neither commend nor criticise it; we pass no judgment on it. But the general question on what principles promotions in the army should be made is a quite legitimate subject for public discussion. And the rapid promotion of General Wood affords, naturally, a text for the consideration of that question.

There are four principles on which such promotions can be based: favoritism—personal or political; seniority in service; record for past merit; opportunity for future service.

It is natural and to some extent legitimate that the appointing officer in a great organization, the Commander-in-Chief of the Army, the Pope in the Church, the president of a corporation, should appoint to office a man whom he knows and likes. Personal acquaintance and personal confidence must enter into appointments and promotions to some extent. But on the whole the less it enters in the better. For open this door and personal favoritism is sure to enter in, and political favoritism is sure to follow. Pure as the appointing officer may know his motives to be, sure as he may be of himself, confident as he may be of his own judgment, in general it may be safely said he would better refuse to consider his own recommendations and determine all questions of appointment and promotion regardless of his own personal predilections.

Seniority in service is a very simple method of determining promotions. It has the advantage of being mechanical and self-executing. Wherever death or resignation creates a vacancy the man next below in rank, or next in age of the same rank, occupies the vacant place, and so creates another vacancy to be filled in turn. But the disadvantage of this method is that it is too mechanical and too self-executing. Seniority in service indicates nothing except that the senior has had good health or has taken good care of it, or, in the case of the army, that he has had safe posts. It would be an excellent method to select safe subjects for life insurance; it is no method to select efficient and capable officers for service in the higher ranks, whether for military, civil,

or ecclesiastical service. It is not adopted in business nor in the Church; it should not be adopted in the army. Favoritism gives us unworthy men; seniority gives us incompetent men. Favoritism gave us in the Civil War General Butler; seniority in service gave us Scott and Hallock. Neither method would ever have found for us a Sheridan, a Sherman, or a Grant. Seniority in service may justly be depended on in the gradual elevation of men in the lower offices, where courage, order, and fidelity in routine are the chief requisites. But it can never be depended on to select men to conduct a Santiago campaign, to bring order out of confusion in the Philippines or Porto Rico, to protect our border from Indian warfare, to maintain the best discipline and order in large bodies of men, or even the best conditions in our sea-coast fortifications.

For these purposes promotion should be made as a reward for past service, or because the appointing power finds in the past record of the appointee reason to believe that he will be specially fitted to render the future service demanded. Promotion as a reward for merit incites every man to do his best in his present post; promotion as an opportunity to do needed service in a new position puts the appointing officer on his mettle to make the best possible selection for that purpose. It was the application of these two principles that marked the career of Napoleon the Great, and gave him a body of military supporters which no army before had ever seen. It was the application of the same principle that in less than three years' time promoted Grant from a colonel to the practical commander-in-chief of the forces in the field.

To state these principles illustratively: In a camp where there are four regiments it becomes necessary to select a colonel from the captains. Favoritism will give it to the man whom the President happens to know, or who is most eagerly and successfully pressed upon his notice by some influential friend who does know him. Seniority in service will give it to the oldest captain. Reward of merit and adaptation to future work will give it to the captain whose record shows the best drilled and most orderly company, the one with the best *esprit de corps*, and the one with the greatest enthusiasm for its cap-

tain and for the service. Applied in a counting house, favoritism will give the position of superintendency of a department to the son or nephew of some member of the firm, seniority in service to the oldest clerk, reward of merit and fitness for service to the man whose record shows the greatest adaptability to the new work which will be demanded of him.

To apply these principles to a great organization like the army is not a simple matter. But if we are correctly informed as to the method adopted by the present Administration to carry them out, it is admirably adapted to its purpose. A careful record is kept of the work of all officers—their opportunities, their successes, their failures. A system of cross references is arranged by which the Secretary of War can at any time turn not only to

the record of any officer, but can also make a comparison of the service in the same department rendered by different officers; can, for example, have put before him the records of all notable engineering efforts, administrative records, scouting adventures, and so can judge, in so far as such records afford a basis for such judgment, who in the army is best fitted for any new piece of kindred work which needs to be done. If all promotions and appointments in our army are made in accordance with this system, if favoritism, whether personal or political, is banished, and seniority in office is regarded only as a secondary consideration, we ought in time to have an army in its officers second to none in the world, as it is now second to none in its rank and file.

## Who Will Be the Next Pope?

By Maud Howe

As many of our readers know, the author of this article is the youngest daughter of Mrs. Julia Ward Howe. During many years' residence in Rome she has had unusual opportunities to learn about Roman affairs, both ecclesiastical and civil. Her knowledge of the dignitaries of the Roman Catholic Church and of the political aspects of life at the Vatican is founded upon many conversations with diplomats, authors of note, and ecclesiastics, Italian, English, and American. We may add that the following account of the candidates for the Papacy and the division of the cardinals in what may be called church politics, has been approved as correct by excellent authority in this country.—THE EDITORS.

**L**EO XIII. took a grim interest in all the gossip and the prophecies concerning his successor. The people about him were ever on the alert for some hint indicating his own private opinion on the subject. A story is told of the Abbé Perosi, whose oratorios "Lazarus" and the "Resurrection of Christ" have made such an impression on the musical world of Europe. Perosi was offered the post of director of the choir of the Sistine Chapel. At that time he felt that he could serve his art better by remaining in Venice, where he directed the choir of St. Mark's, and frankly told the Pope this. Instead of being annoyed by so young a man's refusal of the highest musical post in the gift of the Church, Leo XIII. said good-humoredly, "Go back to Venice and St. Mark's, but you will return to Rome with your cardinal one day." This is construed as indicating the Pope's belief in Cardinal Sarto's succeeding him.

When Leo XIII. was elected, it was believed by the conclave that he would not live more than three, or, at the outside, five years. He was known to be a liberal, and was elected in the belief that his policy would be a conciliatory one, but like his predecessor, Pius IX., he yielded to the pressure of the Intransigent party. That party is still the strongest in Rome, if not in the Catholic Church, which it must be remembered are no longer one and the same thing. There is a ferment of new ideas among the laity and among the clerics of the Church. Just how strong this progressive element is, the conclave which will choose Leo's successor will show. There are three stormy currents of feeling among earnest Catholics, three distinct parties in the Church, which may be denominated the Party of Action, the Party of Inaction, and the Italian Party.

The men of action represent one extreme, the men of inaction the other, while the Italian party stands midway

between the two. What is commonly referred to as "the power behind the throne," or the "Black Pope," unites all the conservative forces of the Church—the Jesuits, the Dominicans, the Carmelites, in a word the party of the Monks, men who hold that tradition must be respected above all else, that the power of the Church rests on the permanence of its institutions. Such men are fond of quoting Macauley's prophecy concerning the Catholic Church—"And she may still exist in undiminished vigor when some traveler from New Zealand shall, in the midst of a vast solitude, take his stand on a broken arch of London Bridge to sketch the ruins of St. Paul's."

To these Intransigents, all change, all progress, all science means disintegration, ruin, chaos. They stand solidly together, shoulder to shoulder, a compact phalanx. To concede, even to discuss reform, is an acknowledgment of weakness. If such a man is assailed by doubts, let him fight them out in his own mind, let him hide them and isolate them from all other men, as one who is plague-stricken should hold himself apart from his fellows. Faith, first and last, faith is what he must strive for; doubt is of the devil, the cunningest of the wiles with which he has tempted all saints and believers from the beginning. St. Ignatius, St. Dominic, St. Thomas Aquinas may be termed the patron saints of the Intransigents. The candidate who will represent this party, which we have called the Party of Inaction, will doubtless be Cardinal Gotti, a Genoese Carmelite monk. At all the functions at the Vatican, whether social or religious, Cardinal Gotti is a striking figure. When his brother cardinals are gorgeous in scarlet silk and splendid laces, he is always dressed in the brown cloth habit of his order, over which he wears a cloak of white cloth. He has the face of an ascetic; pale, spiritual, serene.

Girolamo Maria Gotti was born in Genoa on the 28th of March, 1834. At the age of sixteen he joined the order of the bare-footed Carmelites, and eventually became the head of the order. In 1892 Gotti, then Archbishop of Petra, was sent on a mission to Rio Janeiro. On his return he was made a cardinal, it is said sorely against his will. At the request of Leo XIII. he laid aside his

scruples and accepted the honor. In his life and habits he is still the simple Carmelite, living in a modest apartment in the street of the Forum of Trajan, and sleeping upon the hard and narrow bed of a monk. He is said not to desire the Papacy, though he has ardent supporters, who claim that Leo XIII. has more than once jestingly addressed him as "My successor." His friends point to the flames in his coat of arms as looking to the fulfillment of the prophecy of St. Malachi, Archbishop of Armagh (in Ireland), which characterizes the next pope as "Ignis Ardens." The same ancient and extremely Delphic oracle foretold the reign of Pius IX. with the words "Crux de Crusis," and Leo XIII. as "Lumen in Coelo." Believers in the oracle explain that if ever pope had many crosses to bear it was surely Pius, and that the arms of Leo included a star. The prophecy foretells the characters of thirty-three more popes; by a strange coincidence there still remain thirty-three vacant medallions in the frieze containing the portraits of all the former popes at the church of St. Paul's outside the walls of Rome. The representative of the Party of Inaction, whether he be Cardinal Gotti, Cardinal Rampolla, or another, will be solidly supported by Spain, as well as by the men of his own stripe of whatever nationality. Next to Italy, Spain is the strongest power in the politics of the Church. He will also have the support of France, this chiefly for political reasons. It has been and remains the policy of France to keep open the wound which drains the life blood of Italy, to fan the quarrel between the Government and the Vatican—the division of interests which is roughly expressed in the terms Black and White. The poorer Italy remains, the safer the southern frontier of France. It would not at all suit the needs of France to have the unification of Italy become a fact instead of an ideal, to have a first-class power at her gates. Behind the superficial commercial friction and jealousy between the two countries lies the Triple Alliance, France's real grievance against Italy.

The Party of Action includes the men who, from Savonarola to Archbishop Ireland, have maintained that the Church must advance with the rest of the world; that

the discoveries of science and the modern methods of history are not to be ignored, but should be incorporated with the Church. To them the danger lies in ignoring new truths rather than in proclaiming them. They maintain that the rôle of the Church as the great civilizer of the world did not stop at the thirteenth century, and it should be in the present and in the future not only the conserver but the discoverer of knowledge, the protector of science, the friend of the arts. They look with terror at the new world of civilized men—thinkers, teachers, historians, artists, scientists—who, while still preserving the spirit, have thrown away the forms of Christianity, and frankly or tacitly declare that it has done its work in the world and is as dead to them as the mythologies of Greece or Scandinavia. "How long," they ask, "will the essence of Christianity remain what it is to-day—the lifting force of the world? For how many generations will Christ's spirit animate when his name is denied?" The Party of Action maintains that while creed and dogma must be held intact, forms and customs must be modified to meet the exigencies of the moment. The Party of Action stands, ax in hand, ready to cut away the dead wood from the tree of life.

The candidate of the Party of Action will probably be Cardinal Serafino Vannutelli, who was born at Genazzano, in the province of Rome, November 26, 1834. At an early age he came to Rome, where he entered the Capranica College. He was graduated with many honors, being a laureate in theology and canon law. He next studied at the Pontifical Seminary, from which he emerged to enter the diplomatic service of the Vatican. His first post was that of auditor to Monsignor Meglia at Mexico, and later at Munich. He was sent as apostolic delegate to Ecuador and to Peru. Returning from these distant missions he was next appointed Nuncio to Brussels, and later to Vienna, where he remained until 1887, when he was created cardinal. He then established himself at Rome, where he has filled various important offices, finally being appointed Secretary of Briefs. His presence at the capital was soon felt, for not only was he active in Church affairs, but took a leading part in the social life

of the Black circle, where he is a great favorite. He was, and still is, to be met with at the diplomatic receptions, and at the weddings and the baptisms of his friends' children. He is much beloved as a kindly, agreeable man. Social by nature, his experience in foreign courts has increased his native talent for society. His popularity brought its penalty, and strong efforts were made to get him out of Rome. He was offered the important seat of Archbishop of Bologna, gained time by temporizing, and finally, by the death of the Archbishop of Frascati, was able to frustrate his enemies and obtain the vacant bishopric of Frascati, in the near neighborhood of Rome. He was much regarded by Leo XIII., who often consulted with him. He is a charming, popular man, and has many ardent friends, first among whom is his brother, Cardinal Vincenzo Vannutelli, whose greatest ambition in life is said to be that Serafino shall succeed to the Papacy.

If Rome were in point of fact merely the capital of the Church the coming conclave might fight out the battle on the broad lines of radicalism and conservatism. But Italy will come in, as she always has, as a powerful factor in all Church politics. The Italian party consists mainly of men of a patriotic mold, whose first desire is to establish a *modus vivendi* between the Church and the Government, to heal the wound which the Intransigents, with France and Spain at their back, are always tearing open. The Italian party maintains that Italy is the best ally for the Church in Europe. France is too indifferent religiously, Spain too intolerant, too isolated, Austria too feeble. Of all the Catholic powers, Italy should be, as she always has been, the Church's nearest friend. The astronomer priest, Father Denza, and Monsignor Carini, librarian of the Vatican, two powerful friends of conciliation, have both died during the last nine years; in them Italy and the Church lost devoted and earnest sons. The so-called Black or clerical families have suffered terribly since they were forbidden by the Pope to vote or to hold office under the government. Some of the oldest and noblest families in the country look with dismay on their crumbling fortunes and their disfranchised sons. The head of one of the most loyal

of these Black houses told the writer that for twenty-five years he had abstained from voting, but that when his son asked his consent to vote he could not conscientiously forbid him to do so. The Italian Government, which he had been told would be overthrown in a few years, seemed to be growing stronger and stronger, in spite of foreign enemies and more bitter foes at home. He was too old to change his colors, but the new generation, the men born and bred under the new order, must be free to choose between Pope and King. "Why should we choose?" say these men. "What logical argument can be advanced that should prevent our being at once good Catholics and good patriots?" The logical argument has yet to be advanced. That the breach is healing, as all wounds will heal in healthy flesh when nature is given a chance, is evident to the lover of Italy.

The candidate of the Italian party will doubtless be Cardinal Sarto, Patriarch of Venice. Sarto was born in Treviso on the 2d of June, 1835. He studied at the College of Castelfranco and at the Seminary of Padua. His first curé was in the parish of Tombolo, from which in 1867 he was transferred to Salzano. The Bishop of Treviso noticing his talent appointed him canon of the cathedral of Treviso. He next became Bishop of Mantua. In 1893 he was elected to the office he now holds. He is one of the most popular of the cardinals, and is much beloved by the Venetians. He is a prudent, correct, well-balanced man. While never directly opposing the policy of Leo XIII., he is noted for his abstinence from all aggressive action, and his influence is always exerted to keep the peace between the opposing factions. When King Umberto went to Venice to meet the Emperor of Germany Cardinal Sarto announced his intention of making a state visit to the King. A hint was sent him from the Vatican that his course might not be a wise one, and that he had best be absent from Venice at the time of the King's visit. The decision was left, however, with Sarto, who carried out his original plan, made his state visit to the King, and, it is said, mentioned the fact that the Vatican had advised against it. Personally, he is perhaps the most sympathetic of the *papabile* cardinals. He is

a handsome man, carrying his sixty-eight years lightly. Strong, modest, disliking the intrigues and the ceremonies of the papal court, he rarely comes to Rome, and is content to remain in his beloved Venice, the friend of the people and of the clerics alike. For Italy his election would be fortunate; he has many well wishers in the Roman world, where, his friends hold, he is too little seen.

Cardinal Rampolla is spoken of by many outsiders as having the best chance for election, but to those who know most he is held to have less chance than the three candidates already referred to. The Pope's Secretary of State is known to be a Republican; he is too young to be acceptable to most churchmen, who look with distrust upon a man who is as likely to have as long a reign as Leo XIII. or Pius IX. Underlying the popular idea that the cardinals always choose the oldest of their number, in order that his reign may be short and they themselves may have another chance of election, there is a deep prejudice against a long papal reign, in the present conditions of Europe. A change of policy is difficult during the lifetime of a pope, as the papal policy is supposed to always follow the line in which it starts. It is thought more likely that some older man, possibly Oreglia, if backed by Rampolla and his followers, may win, in which case the present Secretary of State might continue to hold his place, and have, at the following conclave, a greater chance of election.

If history repeats itself, a "dark horse," Cardinal Oreglia or another—if he is only old enough—has more chances than any other to win the election. Cardinal Oreglia is the oldest of the cardinals who are considered *papabile*, a term which may be translated eligible for the Papacy. Santo Stefano di Oreglia was born at Beneva-gienna, in Piedmont, in 1828. He was educated at the Academy of the Noble Ecclesiastics, where he won reputation for his sound theology and his talent for languages. He was sent on a diplomatic mission to Holland, and later, on his return from The Hague, went as Nuncio to Portugal. He was made cardinal in 1873 by Pius IX., of whom he was a most devoted adherent. At one time it was believed that he was out of sympathy with the present policy of the Church, and it is

not to be denied that for a long time he never put foot in the Vatican unless he was obliged to do so. Since he has become *doyen* of the College of Cardinals and chamberlain of the Vatican, however, he has been assiduous in discharging his duties. He, like Cardinal Gotti, is extremely simple in his habits. He lives in a modest apartment in the Via Nazionale. His enemies accuse him of extreme avariciousness; his friends declare that he is only parsimonious in his own personal expenditure and is conspicuously lavish in matters of charity.

There remains to be mentioned but one more candidate for the great Papacy race, with many people the favorite. Domenico Svampa, born at Ferno in the year 1851, is the youngest of the cardinals. His advance in his career has been like Rampolla's, astonishingly rapid. He was made Bishop of Forlì in 1887, cardinal, and Archbishop of Bologna in 1894. It is said that the seat being vacant, the Pope, finding no one among his cardinals whom he considered fitted to fill it, gave the hat to Domenico Svampa. He is a tall, heavily-built man, with a fine presence and a dark, powerful face. If personal vigor and a forceful character were the qualities most needed in the future pope, the battle would be between Rampolla and Svampa, but in this contest the victory is not always to the strong. When King Umberto visited Bologna for the military maneuvers held there a few years ago, Cardinal Svampa thought fit to absent himself from Bologna. This can only be construed as an act of hostility towards the Government. It is said that his action was suggested by the

Vatican; unlike the Patriarch of Venice, Svampa found the hint quite in accordance with his desires. Quietly and steadily the Cardinal of Bologna works at eradicating from his clergy the liberal ideas he found among them. Whether or no he stands the best chance for the election, Italy and the world has yet much to hear from Domenico Svampa.

The main question which the conclave will be forced to consider, is the position of the future pope. Shall the present conditions be indefinitely prolonged or not? It is intolerable to a large proportion of Catholics of all shades of political opinion that the pope should remain the prisoner of the Vatican, even if it is the Black pope who holds the key of his prison. It cannot be denied that in spite of the existing conditions Leo XIII. has done much to strengthen the position of the Papacy in Europe. During his reign, and noticeably during the last ten years, religious functions of all sorts have been carried on at Rome with perfect liberty and security; great pilgrimages have been organized from every part of the world; many beatifications have been made; his encyclicals have been circulated far and wide; all this without interference from, nay, it is not too much to say, under the protection of the Italian Government. It is said that the patrimony of Peter has been increased by many millions; in spite of all this, it is not to be endured that any man in his position, whether wilfully or not, should remain indefinitely a prisoner.

"Who will cut the Gordian knot?"

That is the question which every one asks himself, which the conclave must consider, which the future pope must decide.

## The Inglorious Days

By Mary Lord

When the long days drag on, so dull, so drear,  
Hour following hour in sad monotonous length,  
When my heart cries, "Is this my life so dear?  
Must I give up to this my youth, my strength?"

Then to my spirit breathes thy gentle voice  
And says, "Thy patience, too, I count as mine,  
Mine thy endurance,"—Lord, I ask no choice,  
For, lo! the inglorious days are also thine.

# School-Houses and Beauty

By Ira Remsen

President Johns Hopkins University

**I** DO not think the term "hideous" too strong to apply to some of the structures in which we instruct our children. In a casual observation of school-houses in city and country, I have been impressed with the lack of beauty in design. In fact, some of the buildings are so conspicuous in their ugliness of outline and proportion that I have wondered if they have been planned to make them specially repulsive. We have been making progress in the beautifying of our towns and cities, and have erected public buildings and monuments in which the artistic is very noticeable, while many of the public parks have been made attractive to the eye. But it really seems to me that in the architecture of our public schools we have not kept pace with the development on other lines, and that there is ample opportunity for improvement.

The impression apparently prevails among many who constitute American school boards that ornamentation is a luxury, that the æsthetic is not necessary in the education of youth. Possibly this is one reason for the backwardness in designing buildings which would teach the children to appreciate the beautiful. The question of money is also used as an argument by the school authorities. I am not prepared to say that a structure planned on artistic lines is much more expensive than the ungainly buildings which are to-day being erected in some of the principal cities of the country. The value of art as an educational factor can, in my opinion, be strikingly demonstrated by the embellishment of the school-house, and the children to whom it becomes almost as familiar as the home can be unconsciously instructed to appreciate the artistic merely by their observation of its design in their daily visits to it. In its exterior and interior it can be made an object-lesson in art of the highest importance.

Great cities in Europe are notable to tourists, not only for their wealth of historical associations, but for the harmonious outlines of design which in every direction appeal to the finer senses. The institu-

tions for instruction harmonize with other structures in this respect; but in the United States the contrast is often very great. Why should not the American school stand out among other edifices as an example of art, so that the place where we educate our children will be characterized by its æsthetic features, and possibly its appropriate location? I remember noticing several school-houses in Berkshire County, Massachusetts, all of which had been built upon sites where the natural surroundings were very attractive, and upon inquiry found that the school authorities had selected the localities purposely with the view of the effect upon the children. Here is an example which might well be emulated in other parts of the country, numerous as are the opportunities for such selection. I recognize the fact, however, that the average school board is not always composed of men who realize the influence of the beautiful, and a great work can be accomplished in enlightening them in this respect. Unfortunately, too many of the buildings in our cities, for example, are planned by architects who thoughtlessly ignore what is really an essential. If the plans were prepared, and, after preparation, submitted to a committee which included at least one architect capable of making suggestions which would add to their artistic merit, possibly this would be an improvement upon the system which is too commonly carried out, of copying old designs to save expense, or giving the preparation of the plans to one man, who, as I have intimated, may not be competent properly to complete them individually.

I do not believe the development of the æsthetic in children can be too greatly cultivated. In fact, this feature is too frequently neglected by the teacher whose attention is devoted to the ordinary curriculum. In the planning of the school-house, however, is afforded an opportunity to supply these deficiencies. If in design it represents a combination of the beautiful and artistic, it will attract the eye as does the charm of nature, and become a most important force for instruction.

THE LIBRARY OF NEW YORK UNIVERSITY

# RECENT AMERICAN COLLEGE ARCHITECTURE

BY A. D. F. HAMLIN

ADJUNCT PROFESSOR OF ARCHITECTURE IN COLUMBIA UNIVERSITY

WITH PICTURES BY CHARLES W. FURLONG  
AND DECORATIONS BY EDWARD EDWARDS

**A** NATION that has many new buildings to erect and plenty of money to spend upon them is sure to develop a characteristic architecture. It may be good or bad or simply commonplace, but nothing can prevent its being clearly expressive of the taste, culture, ideals, and capacities of the Nation. The style of the new buildings will be an index of its artistic taste; the purposes for which they are erected will reveal the dominant interests and illustrate the character of its civilization.

It has been customary to speak of the pervading commercialism of American life. The towering and impressive masses of the business buildings of lower New York seem to give evidence of a triumphant materialism; the more so when we learn that fifty or sixty millions of dollars sometimes go into such structures in a

single twelvemonth. But the evidence is fallacious, for when we survey the country at large it is not sky-scrapers that fill our vision, but rather the homes, churches, and schools of the people. We have heard a good deal about our domestic and religious architecture, both from native and foreign critics; but our collegiate architecture has not received the attention it deserves, though not less suggestive than our houses and churches of the National progress and National ideals.

Recent foreign observers have expressed amazement at the magnitude, number, equipment, and endowments of our universities. No one, indeed, who studies the record of recent gifts to education in this country, or the statistics of attendance upon our higher institutions of learning, can fail to be impressed with the increasing popular regard for intellectual

culture. We believe that the architectural character of the buildings erected for these institutions within the past ten years indicates an equally rapid advance in the artistic culture of the Nation. It is not without significance that the two most magnificent buildings ever erected in America, with the possible exception of the Capitol at Washington, are public libraries, one built by the Nation at Washington, the other by the municipality at Boston; and that Congress has authorized new buildings to cost fourteen millions of dollars for the two great National schools at Annapolis and West Point. In the very focus of American commercialism, the noblest of recent buildings is the library erected at Columbia University in 1897 by the present Mayor of the city, to be soon, however, surpassed in size and splendor by the city's own new Public Library; and there is in process of gradual erection in Brooklyn a superb museum building for the Brooklyn Institute, an important educational organization—a veritable palace of the arts and sciences, to cost several millions, and to be paid for out of the public funds. Let it also be noted that the people of this same city of New York, with all their reputed devotion to mammon, maintain two great universities, Columbia University and the New York University, both recently equipped with splendid new buildings; and that the city has itself begun upon Washington Heights the erection of a noble and costly group of buildings for its own City College.

The collegiate architecture of the United States represents, therefore, no small or unimportant phase of the National activity. During the past ten years it has fully shared in the general progress and prosperity. In many cases the whole aspect of an institution has been metamorphosed either by a complete reconstruction on a new site, or by notable additions to the buildings on the old site. In the latter case the comparison of the new with the old buildings furnishes an object-lesson in the progress and tendencies of our collegiate architecture. The contrast is sometimes extraordinary. The new edifices are not only more artistic in design, more monumental in effect than the old; they are also better planned, more convenient, more solid and thorough in con-

struction, and vastly better furnished and equipped.

The architecture of American colleges has grown up on an essentially different system from the European. The typical American college or university consists of a collection of distinct buildings, grouped more or less regularly about a grassy and shady area called the campus. The original nucleus of the group was usually the chapel, flanked by two dormitories of red brick. A half-dozen lecture-rooms occupied the basement of the chapel. Other dormitories and recitation halls, laboratories, and a library were added as the resources of the institution permitted, and placed as the convenience of the occasion seemed to dictate—in parallel rows, or around a vast square, or in more fortuitous groupings determined by the topography. The successive additions were often wholly unrelated architecturally to their older neighbors, or even in some cases to one another, representing as many diverse styles as there were architects employed. Harvard, Yale, Princeton, Brown, and Wesleyan Universities, Bowdoin and Dartmouth, Amherst and Williams Colleges, and half a hundred others, grew up in this way. The European conception of collegiate architecture was derived from olden monastic traditions; it was that of the cloister or quadrangle, or a series of "quads," each entirely surrounded by a continuous building and entered through an imposing gateway. Such a scheme was not only foreign to our ideas, but wholly impracticable for rural colleges struggling for existence on the slenderest of means; and out of such struggling rural colleges have grown nearly all our great universities.

The newer American college architecture, even in following the traditional American system of isolated buildings, seeks to secure general unity of effect. It is, of course, impossible to correct the chaos of an existing group of heterogeneous buildings, but it is at least possible to establish a definite plan and scheme to which all future additions shall conform. At Harvard the dominant note of the older colonial buildings has been followed in nearly all the more recent erections in and about the "Square." Several colleges and universities have had the good fortune to be able to undertake an entire

NEW DORMITORIES AT THE UNIVERSITY OF PENNSYLVANIA

THE NEW MEMORIAL GATEWAY AT HOWDOIN

rebuilding on a new site. Trinity College, at Hartford, Connecticut, was the first of these, having as far back as 1875 begun the erection of an imposing block of buildings in four quadrangles, from plans by the late William Burges, of London. Only a small part of this great scheme has been completed, forming a long and imposing stretch of buildings in English Gothic style. About 1890 the Leland Stanford Junior University began in like manner the erection at Palo Alto (California) of new buildings on a comprehensive plan prepared by Shepley, Rutan, and Coolidge, of Boston. This was only in part realized; and the unity of the scheme has been injured by several structures designed by other hands. A few years later the University of New York moved certain of its departments to a new site at Fordham Heights, near the metropolis, and built there, from designs by McKim, Mead, and White, a group of buildings centered around a fine domical library and memorial gallery, which last has become known all over the country as the "Hall of Fame." The new buildings of Columbia University, by the same architects, followed soon after, the noble Low Library forming the center of the group (1895-1897); and in 1898 Mrs.

Phœbe Hearst instituted an international competition for new buildings on a scale of unexampled magnificence for the University of California at Berkeley, in which the prize was won by the French architect Bénard. The first buildings of this vast design—the School of Mines and an open-air "theater"—are now under construction. Washington University at St. Louis has begun the execution of a fine design by Cope and Stewardson, of Philadelphia, on an almost equally ambitious scale. All of these great enterprises betoken abundant confidence in the future of the institutions that have entered upon them, a sublime reliance upon the generous support of the American people, and the determination to plan, not merely for the immediate necessity, but for expected growth, so that order and beauty may reign in increasing perfection as the years roll on. Meanwhile, many other colleges and universities, retaining the old site and buildings, have added new structures of great size, cost, and beauty. There is probably not one among our older institutions of the higher learning that has not received notable architectural additions within the past ten years, and in some cases, as at Harvard, Yale, Princeton, and the University of Penn-

sylvania, the cost of these additions has run up into the millions. Our medical colleges, theological seminaries, and technological schools have shared in this extension and enrichment.

The causes of this architectural activity are not hard to discover. It is not to be explained merely by any theory of a newly developed passion for expenditure, luxury, or splendor. The trustees of our great educational institutions are almost without exception men of conservative, rather than radical ideas; men with a deep sense of their responsibility to the public and to the institution, and they could not command millions for display if they wished it. New buildings have become necessary simply because the new education demands resources and an equipment for which the old provision was utterly inadequate. A chapel and four recitation-rooms were all that was necessary for the

college of 1803. The library was amply accommodated in one or two of the rooms in an adjacent dormitory. For the college of 1903 there must be a modern fireproof library, with stack-room, reading-room, reference-room, seminar-rooms, and staff-rooms; scientific buildings, with laboratories, more varied and complex than our fathers ever dreamed of, with testing rooms and lecture-rooms and instructors' rooms and storerooms; a gymnasium, large and spacious, with running-track, swimming-tank, baths, handball courts, and what not. There must be a suitable administration building for the president, treasurer, and dean, for faculty meetings and trustee meetings, and a hall or auditorium for commencement gatherings and mass-meetings. In some colleges a college "commons," refectory, or dining-hall is required, and the social life of the students must be provided for by a college

THE HARVARD UNION

THE YALE BICENTENNIAL BUILDING

club-house, or, in connection with their religious life, by a special building for the religious associations and the college Young Men's Christian Association. As the college grows, moreover, the dormitories must be extended or multiplied and new recitation-halls added. Thus architectural expansion and renovation become an absolute necessity wherever there are life and growth in a college, as in any other public institution that partakes of the real life of the community.

Thus made necessary by the main force of circumstances, these new buildings show also the influence of the changes in public taste and in the standards of architectural and structural excellence which have taken place in the past twenty years. Not only have the architects made great progress in their mastery of the resources of design; their clients, the governing bodies of the colleges, have made an equal advance in their conceptions of what sort of buildings the colleges require. Alike in artistic design, in solidity of construction, and in elegance of finish and equipments, the buildings erected during the past ten years far surpass anything that this country had ever seen before in the way of collegiate architecture.

The cosmopolitan and eclectic quality of our taste is fitly expressed in the variety of architectural style which these modern college buildings display. From 1880 to 1890 the powerful influence of Mr. Richardson showed itself in the general adoption of the Romanesque style, freely treated; but more recently other styles have found favor. The majority of the newer buildings are either "Colonial" (or "Georgian," as some prefer to call it) in style, as at Harvard; or in the late Gothic style of many university buildings in England, to which the name of the English Collegiate style is often given. This style lends itself readily to the treatment of long ranges of buildings of moderate height, and permits of a more picturesque variety of mass and sky-line than the Georgian, and the more stately Classic and Renaissance styles. It has been handled with great skill by Cope and Stewardson in the handsome buildings of the dormitory "Quad" at Pennsylvania University, in Blair Hall at Princeton, and in the new edifices of Washington University at St. Louis. The Vanderbilt

Hall at Yale, by C. C. Haight, and the very picturesque and impressive group of buildings on Washington Heights for the College of the City of New York, by Mr. G. B. Post, are also excellent examples of the style. Mr. Potter's new Library at Princeton approaches closer to the Perpendicular Gothic in style, but is unmistakably scholastic in character.

The Georgian style is less picturesque, more restrained, more domestic perhaps, and better suited for detached buildings than for continuous ranges and quadrangles. It has very naturally been adopted at Harvard for all the newer buildings, which thus harmonize with and emphasize the quaint flavor and historic associations of the older ones. The Harvard Union, the new gymnasium for Radcliffe College, the Randall dining hall, and the new gates are examples of this style; while the Law School at the University of Pennsylvania, the new Library of the University of Virginia, and Barnard College at New York, represent other applications of it. McKim, Mead, and White's Library and other buildings at Fordham Heights for the New York University are also in a version of the Georgian style, modified by a touch of Italian classical stateliness; and in the more important group at Columbia University these same architects have apparently tried the experiment of establishing a strong contrast between the Low Library—a magnificent Greco-Roman building of creamy Indiana limestone—and the half-Georgian departmental buildings of red brick with stone finishings.

A third style requires notice—the Italian or classic style, not because it is in frequent use, but because of the importance of the few cases in which it has been adopted. The most conspicuous instance is the University of California, where two of the buildings of the vast plan prepared by the architect Bénard are now being erected under the supervision of Mr. J. G. Harvard, of New York—the School of Mines and the open-air auditorium. The new buildings for the Naval Academy at Annapolis, by Ernest Flagg, are in this stately and monumental style, which permits of greater majesty of scale and splendor of effect than the other two.

But, whatever the style of the newer college buildings of the United States, they are all in one sense thoroughly

THE NEW COLLEGE OF THE CITY OF NEW YORK

MEMORIAL ARCH AT OBERLIN COLLEGE

Dedicated May 14, 1903, in memory of thirteen American missionaries martyred in China.

American; for their designs have been studied with a special view to meeting American requirements, and the success and merit of the result have depended, not on the style label it wears, but on the ability, skill, and taste with which the architect has solved the specific problem presented to him in each case. In general, this ability, skill, and taste have been of a high order. It is to be regretted that in this respect the Roman Catholic colleges have, as a whole, remained so far in arrears. There is hardly one among these institutions to whose credit can be set down any really notable and highly meritorious work of architecture in recent years.

The complete list of important buildings erected within the past ten years for American colleges, universities, theological seminaries, and other institutions of the higher learning would make an im-

pressive showing. These buildings represent an enormous financial investment; and it must be remembered that this physical growth means also a great increase in expenditure for maintenance and administration. All this is significant of the disposition of the American people to increase their financial investment in the higher education—an investment not only in buildings, which, taken alone, might mean mere luxury, but in all that for which the buildings stand, and to promote which they were built—science, literature, religion, and intellectual culture of every kind. The American scholar may well point to these edifices with pride, assured that a hundred years from now many of them will still be looked upon with admiration, as monuments of the intellectual and artistic enthusiasm of an age too often accounted as wholly given up to a selfish materialism.

# The Coasters

By L. Frank Tooker

Up and down the coast from Calais to the keys,  
We have groped with lead and log  
Through the easter and the fog,  
Felt the sting of hail or whistled for a breeze,  
Till we know the charted coast  
Like the face we love the most,  
With the old "blue pigeon" tracking down the seas.

When the stars are in the sky, we closely pass,  
Sailing by within a league,  
Barnegat and Chincoteague,  
But we give a wider birth to Hatteras;  
For she sits among the dunes  
Like a siren playing tunes,  
All too quick to change a jig to dirge or mass.

All the white sea-horses scamper unto her;  
All the currents slip away  
Where her sullen rollers play,  
Rain and driving rack about her in a blur.  
Oh, she beckons, and she brings  
To her feet the pallid things  
Round whose sightless forms her breakers fawn and purr!

When the fog is like a wall upon our lee,  
And the capes have closed the door,  
Through the murk we safely bore,  
While the off-shore sailors blunder back to sea.  
Through a ram's horn or a gourd  
With the lead we'd lay our board,  
Little matter what the fog or night might be.

Loafing slowly down the coast with dragging sheets,  
Carrying on to make a berth  
When the thunder rocks the earth  
And the leveled rains against our faces beat,  
We have waited, we have won,  
In the storm and in the sun,  
Not to vaunt in conquest, grovel in defeat.

We will hazard all with any gale that blows,  
Slipping out of port at night  
When the storm-flags flap with fright  
And the sea is gray with long wind-driven rows.  
When the decks are running free  
Braver road there could not be;  
What if Death should bar us from its happy close?

Gales will rage about us, toppling seas downpour;  
Hurling scud and driving sleet  
Shift the deck beneath our feet,  
Snatch the canvas from us, deafened by its roar.  
Blind to all but duty, we  
Hold the course we cannot see,  
Flash a last thought homeward, pass the open door.

**F**IFTY years ago this summer, Commodore Matthew Perry, himself "an educator of our navy," spent eight days in the waters of Japan. Unwelcome guest then, but glorified now, he proved to the Japanese that Americans were willing to teach them. At Yokohama the next year he set up a little industrial exposition of American products and machinery on the strand. By this he opened to the Japanese the modern world of industry and invention, inducing in the Oriental islanders an insatiable hunger for the wonders of the West. Perry was modern Japan's first great schoolmaster, and Townsend Harris, ex-President of the Board of Education of the city of New York, followed him. After eighteen months of diplomacy, without ship or soldier, Harris won his way into the city of Yedo, with the American flag wrapped round his presents of lamps, locks, machines, and dictionaries. Then he sat down to do pedagogic work day and night steadily during four months. He taught the hermit statesmen how to keep national house in modern style among greedy nations with plenty of cannon.

Thus began what Mr. William H. Seward called "the tutorship of the United States in Japan." This, he declared, "must be based on deeper and broader

principles of philanthropy than have hitherto been practiced in the intercourse of nations . . . which shall send teachers to instruct and establish schools on the American system."

While the political earthquake rumbled and crashed, and the volcano of civil war sent out its lava and scoria, there was no time for constructing a national system of education, even had one then been desired, for there was no true nationality. Yet even in that era of chaos, from 1859 to 1870, Americans on the soil were doing work in the caissons. They were preparing plans and materials for the new Japan which they saw by faith. Dr. Hepburn trained up physicians, taught science, and by his dictionary made possible to speakers of English the study of the Japanese language. Dr. S. R. Brown raised up future schoolmasters and college presidents. Dr. Verbeck was making statesmen and planning to get Japanese abroad and to bring American teachers to Nippon. The chief text-books were the New Testament and the Constitution of the United States. Pumpelly made reconnaissance of Japan's mineral wealth and introduced blasting and powder in the mines. Nakamura to the scholars and Fukuzawa to the people were hiding the

Western leaven in the vernacular, by means of cheap books and publications. When peace dawned after war, an army of educators entered, and from 1872 until the present time Americans have been the chief educators of the Japanese—Murray, Lyman, Capron, Scott, Berry, Mason, Clark, Morse, Mendenhall, with scores of other secular teachers and hundreds of other teachers and missionaries, men and women, full of zeal and usually of tact and ability. Did ever a country within two decades have such a swarm of educators and of education, mostly free? Nine-tenths of the modern educated men and women of Japan before 1890, and a majority of those in influence and office to-day, received their first instruction from American missionaries.

There is also an underground history of modern education, even as there is of Christianity, in the crypts of Japan. The first English teacher of the Japanese was Ronald McDonald, a true explorer. In 1845, when he was twenty-four years old, this American sailor shipped at Sag Harbor in a whale-ship, the Plymouth (significant name). He arranged with the captain to be left on the coast of Japan in a small boat, in order to cast himself ashore and obtain some knowledge of the land and people of unknown Japan. Kindly treated, he lived in Nagasaki until taken away by Glyn in 1849. He taught the English language and trained the interpreters who came on board our ten-gun brig Preble, surprising Commander Glyn by talking pretty good English instead of Japanese

or Dutch. It was McDonald who began American educational activity in Japan—the story of which will some day be fully written.

It is thoroughly appropriate that the Fifth National Exposition should be held in Japan's greatest commercial and manufacturing city. Osaka, from its geographical situation, had always a unique position in the national development. Japan is all northeast and southwest, and what Tokio is to the former, Osaka is to the latter. It is the gateway to the Inland Sea and the northern head of the richest and most populous half of the empire. In old days Yedo was the city of the soldier, and there were the nation's purse and sword. Kioto was the city of the Emperor and the nobles and of priests, dwelling amid temples, gardens, and art treasures. But Osaka was the mart of trade. Here the three hundred or more feudal barons had their storehouses. Hence the city charter or constitution differed notably from either of the others; it was more like that of the free cities of Europe. There was a spirit of independence and intelligence among

the citizens, who were money-loving and politically conservative, while in all things that make for national wealth they were alert and intelligent. Osaka, or Naniwa, stands on the delta of the river Yodo, which drains the waters of Biwa, Japan's largest lake; and much of the long, narrow island, whereon are the finest buildings, is river-made. Like most ancient cities, it has a common and prosaic and also a poetic

STATUE IN THE AQUARIUM

name. Osaka means "the hillside by the great estuary." The original township was situated on the seaward side of a low hill, which still forms the eastern and upper quarters of the city. Its poetical name, which is very ancient, means Swift Waves, or possibly Wave Blossoms. As tradition loves to think, it was given by the first Emperor, at a date which modern chronology, officially made in Tokio a few years ago, sets at 660 B.C. The higher criticism and a scholar's common sense laugh at this date, but it is still dangerous for a professor in Japan to impeach official orthodoxy, and herein, as is notorious, academic freedom of

inquiry is still under ban. Despite all their boasted culture, the Japanese are not allowed to inquire into politico-religious origins. Both Japanese and Chinese orthodoxy are still rigid and persecuting.

The city covers little over eight square miles, and between the guide-book claim of 922,000 and the Government census of 845,000 souls one may choose to suit himself. The city is protected from the open sea by the island of Awaji, the mythological navel of heaven-born Japan, but for ages the harbor has been threatened with uselessness by a great bar, on which thousands of Japanese vessels have been wrecked and

THE MIDWAY, LOOKING BACK TO THE MAIN ENTRANCE

their crews lost. Here, on April 12, 1867, our own Rear-Admiral Henry H. Bell, one of Farragut's ablest captains, with several of our brave sailors, was drowned. Now the Japanese engineers are making what will be the largest harbor east of Suez. The work was begun in 1899 and is now half completed.

Osaka to this day retains traces of its origin. When I made my delightful visit there, I could easily discover this and find good reason for calling it "the Venice of Japan." The river divides itself into two equal streams which embrace a long, narrow island, on which are not only the single park which the city possesses, but also the Post and Telegraph buildings, etc., the splendid stone edifice of the Bank of Japan, and the public library, also a stone structure, the gift of Mr. Sumitomo. The river arms clasp again and then open once more, holding within their grip the

most recently formed delta containing the Prefectural Government House, the City Hall, the old foreign concession, the Chinese quarter, etc.; but seven-tenths of the city is on the south side of the river, in the center of which is the wealthiest and most aristocratic section, the name of which is Semba, or literally "boat neighborhood," thus revealing its origin and reminding one of the derivation of "Boston." Through its very heart runs the Korean Bridge Street, showing where the first Korean artisan-immigrants, bringing with them the arts and civilization of the continent, first settled. In this section is also the richest and liveliest street of Osaka. The Yodo River reminds one of the Grand Canal of Venice, while the interminable branch streams and canals, bridges and narrow thoroughfares, complete the parallel. The busiest streets are the narrowest. The shops are small, but

stuffed to overflowing with fine goods — the tradesmen who sit within being, according to the jest of the Tokio man, a part of the stock.

Under these circumstances the Osakaites, having no hill or groves near by, take their fun on the water. Pleasure-boats during the afternoon and evening hours make the river a lively place, while during the morning the junks, rafts, ships, and steamers have the right of way. Fronting the river is the Imperial Mint, one of the best-equipped institutions of its kind in the world. From the water is also visible the Castle, once the greatest structure reared by man in all the empire, but twice given to the flames—in 1613, when Iyeyasu made himself overlord, and in 1868, when the fortunes of Tycoonism disappeared in fire and smoke.

I spent my three

THE ELEVATOR TOWER

MAIN ENTRANCE OF THE OSAKA EXPOSITION

happy days in Osaka when feudalism was still in its glory. Then there was not one chimney in the whole municipality, and only low smoke-holes let out the products of combustion in kitchen, factory, and crematory. Now, as I look at the large bird's-eye view, reduced from a photograph, I can count scores of lofty brick or steel-framed smoke-stacks wafting their white lines of puffing steam or their clouds of black smoke against the blue sky and the distant mountains. In the city are nearly six hundred manufactories, including many large cotton-mills equipped with the latest improved machinery, and employing about 50,000 operatives. Sixty banks handle the finances of a city which has under charter about 65,000 tons of shipping, for Osaka believes in sea-power. Since the introduction of water by means of steam-pumps and modern hydraulics, Osaka is one of the healthiest cities in the empire.

Space fails me to tell of the various buildings, all of which are wholly in Occidental style, or with the Oriental features tastefully blended. Evidently the Japanese believe in education through architecture. Looking up the Midway toward the Art Gallery, with its arches, columns, and pilasters, mansard roofs, and electric lights, both along the highway, with cable and column, or blossoming out in mid-air from the apex of towers, one realizes what a transformation Japan has passed through, though the dress of the women and children and most of the men is native or hybrid. The Art Gallery is wholly foreign as to its exterior, but within one sees that the Japanese have the gift of rejection as well as of assimilation of things which the foreigner can bring him. Indeed, this is one of the marked traits of the islanders—a source of strength as well as of weakness. There seem to be some ideas, such as the personality of God and the full individuality

of man, which the native intellect appears unable to grasp.

There is one large building devoted wholly to foreign goods and samples. Of course there is plenty of amusement, and a colossal tun, as large as a house, and serving for an advertisement of a new beer, shows that the twentieth-century Japanese quenches his thirst no longer with saké (rice brew or spirit) exclusively. "Shooting the chute" with boats is a novelty much enjoyed, but many of the old-fashioned forms of fun are still patronized. In the field of oil painting one can hardly say that the Japanese have as yet achieved success, but in bronze-casting of statues and equestrian figures and in combining with the old sweetness and loveliness in their figures of Kwannon—the Goddess of Mercy—the nude in childhood (for the Japanese are not yet ready to adopt nudity in depicting the adult figure), especially with water effects, success has been won. In the building devoted to education (number six) are shown the products of the schools from the kindergarten upward to the university.

The fifth National Exposition at Osaka is an educational landmark in the history of Japan. We find a nation at school, and the Japanese themselves becoming the schoolmasters to Asia. Already there are a thousand Japanese teachers in China, Korea, and Siam. On Japanese soil are pupils from China, Korea, Annam, and Siam, numbering over a thousand. Though this great Exposition is set forth in Occidental form, its spirit and architecture are throughout educational. It is a possibility and a success because of Japan's thirty thousand public schools, graded from kindergarten to university, in which every day gather five million pupils. Here we see, also, that the key-note furnished by Perry, in his Yokohama Exhibition of 1854, in what was predominantly industrial, technical, and useful, has been followed out in full strain. In over seven hundred special schools Japan is training her children in handiwork as well as redecraft.

Japan's education is no mere exotic. It is well rooted in the past. Its flowering is no sudden phenomenon, nor have things brought across the sea made a new nation. Its blossoms are not the

result of legerdemain, fastened on with wire and toothpick timber. The finest fruits have ripened on stems, and have deep roots. That political movement which in 1868 initiated the new Japan was the logical issue of the research and publications of the Mito scholars of nearly two centuries ago. The revolution which culminated at Kioto in 1868 was a students' movement from beginning to end. It is still the educated mind that directs the modern empire, and the Government is still far in advance of the mass of the people.

To make plain what we have said, and to show the elements of permanence in Japan's civilization, let us look to day at an educational map of Japan, such as that found in the twenty-eighth Annual Report of the Minister of State for Education (1901). There we find that in some districts of the Empire the percentage of children of the right age in school actually reaches to between ninety and ninety-five per cent. In the three islands constituting the old part of the empire the only area left blank, as showing less than fifty-five per cent., is Lake Biwa—which is all water. The extreme northern districts, and those parts highly mountainous, or inhabited chiefly by fishermen, hunters, and poor farmers, run between sixty and eighty per cent., but there are ten districts out of the forty-three which have between eighty-five and ninety per cent., while the half-dozen banner districts have between ninety and ninety-five per cent. This is no accident, for in these six districts are the old and famous centers of learning, where books and scholars have from early time abounded, some for a thousand years or more. In Japan's oldest scripture, the Kojiki (written 712 A.D.), we detect three distinct cycles of tradition, and it is just where these are located that to-day we find our ninety-five per cent. of possible school attendance.

In the eyes of educators, whose standard is other than that of official Japan, two false theories have been adopted, two radically wrong courses pursued—both of them thoroughly Chinese and Asiatic. On the mistaken notion of supporting the throne by myth and legend, official Japan encourages and is building up an agnostic, if not atheistic, ethical philosophy, even while she dishonors and degrades the

ethical and inquiring scholar. Her boasted system of education will never command the unqualified respect of the world until, in respect to the aggressive teaching of agnostic morals and the repression of critical investigation, she

ceases to make Russia and China her models and follows that of more enlightened countries.

Nevertheless, with much that is crude and imperfect, Japan shows herself worthy of a noble future.

## The Need of Sanitary Schools

By Ellen Richards

Chairman of Committee of Public Schools of the Woman's Educational Association, and Director of Sanitary Chemistry of the Massachusetts Institute of Technology

**S**CHOOL sanitation follows, naturally, school architecture, for it is largely dependent upon soil and site, construction, plan, and arrangement for its very existence. About thirty years ago we defined sanitation as clean soil, clean air, and pure water. To-day we may add three more requirements: good food, cheerful surroundings, and freedom from noise. Clean soil has become of constantly increasing importance as more persons are crowded upon it and the necessary contamination increases. Pure water is recognized as a necessity; while clean air means unused air, air in its normal condition, washed by the rains, freshened by the winds. Confined within four walls it loses its freshness, and when passed again and again through animal or human lungs it becomes seriously vitiated. When filled with the fine dust of the daily wear and tear of things, it may become a source of disease.

A sanitary school building, once the site is right, demands at least three things: Plumbing in a separate stack, or, if in the cellar, then a separate ventilating shaft which is always working. Quick removal of used air as well as of used water. This cannot be done unless the construction permits. When windows are depended

upon, they must reach the ceiling and not stop three feet below, leaving an inverted lake of hot, bad air to fluctuate back and forth, but not to be removed until it cools, which often does not take place during the day. With windows on two sides, even if at right angles instead of opposite, easily lowered at the top, this air will flow out as readily as water from the bottom of a basin with the plug removed. If any one of the mechanical systems of ventilation is installed, it must be in charge of some one who understands its working, who will not reverse shutters, valves, etc., and draw the outgoing air from the closet down into the class-rooms. The inlets must be so placed as not to cause a draught upon the teacher's head or the scholars' bodies, for swiftly moving air has the chilling effect of cold air.

With the tight walls and confined spaces of the modern building, with the increased vitiation of the air due to better nutrition, more intense life, more dust, more soiled clothes, an increased quantity of fresh air is needed. I believe the ideal plan would be to have the warmed air come up through the floor through many inlets and rise steadily to the ceiling, pouring out into a flue with a sufficiently strong upward draught to keep the current moving at

such a rate as to give fresh air for each inhalation of the child when sitting, and diluted air when standing and for the teacher. As school construction now stands, there are several serious objections to this ideal method. First in hygienic importance is the inevitable collection of dust in these floor inlets; second, the increase in fire risk in all but incombustible buildings; third, the difficulty of arranging the flues from the center or the sides of the ceiling in a three or four story building; the fourth and the most serious, perhaps, in this kind of a building is the conduction of sounds from the room below to those above.

If it is desirable to cross a range of mountains or to go through them, does the American railway engineer hesitate and say, "This has never been done; the people won't pay for it if it is"? Then why should the school-house architect hesitate, on account of the cost, to design an American school-house to suit American needs, and include these essentials of health? The business man has his office building designed to facilitate the transaction of his business, and when it is no longer suitable it is torn down and a more efficient one built, or it is abandoned to less critical tenants. Our school-houses are built to be an ornament to the city, perhaps; but they are frequently copies (to save architects' fees) of some other city's blunder, or the contractor bungles the fairly good plans. In almost every case it is the children who are sacrificed, who are dragged by the truant officer from the sunlight and free air of the streets into stagnant, dusty, ill-smelling air which no respectable Board of Charity would allow in an almshouse; and yet the strong arm of the law confines our children by the thousands in buildings without fire-escapes, in buildings where the walls and floors are covered with dust containing scarlet fever and diphtheria germs.

Let us have a twentieth-century school-house in which it will be possible to educate a twentieth-century child—in which a well-trained, refined man or woman will be willing to teach. Why should the newness or the difficulty of the problem daunt us? What a terrible waste, not only of municipal money, but of human energy, to keep on building impossible houses and then try to remodel them! Let us cut loose from tradition and have a school-house in which the whole child may thrive—not only his mind, but his body. Not only give him clean air and washing facilities, but cheerful, uplifting surroundings and good food; for not the least of modern discoveries is that of the great influence of food on the bodily resistance to disease and on mental development. Therefore, lunch-rooms with all the facilities for food, both hot and cold, must be included in the twentieth-century school-house. I believe the day is not far off when the town schools with two sessions will provide a noon lunch instead of sending the small children through wet, muddy streets to a home from which the mother may be absent, to pick up as they may such food as they find. Even if the food is right, may it not be possible to utilize the noon hour to better advantage in teaching gardening, housekeeping, or in games?

But, to return to the original subject, I admit that time must elapse before we can bring about this ideal state of affairs. Meanwhile we must spend money and ingenuity upon our present ill-adapted houses in order to tide over the gap between the good and the bad. Therefore the immediate duty of all interested in education is plain—to create public opinion for adequate structures, so that the future presidents, mayors, and members of school boards will become wise enough to realize the broad benefits which will result from a liberal provision for this purpose.

THE MORAVIAN CHURCH AT BETHLEHEM, BUILT ONE HUNDRED YEARS AGO  
The Bach Festival served as a centennial celebration.

## The Moravians and Their Festival

By Ernest Hamlin Abbott

**A** HUNDRED and fifty years or more ago, a band of Indians, so runs the legend, were creeping stealthily in the night toward a little mission settlement on the bank of the Lehigh River. Suddenly they paused. Their murderous purpose was quenched in amazement. "It is the voice of the Great Spirit," they said to one another; "He defends these people;" and, turning, they filed silently back into the wilderness. The sound that filled these Indians with wonder and reverence was the music of

the trombone choir in the belfry of the chapel, announcing to the settlement, by recognized chorales, the death of some one in the community.

To-day this custom still continues. No dismal clanging bell greets death among the Moravians, but the simple, strong harmonies to which they sing their hymns. None of their customs is more interpretative of their faith than this. It is a faith that is unfaltering even at the grave, and there, as elsewhere, finds its most spontaneous expression in music.

In much the same way, the Bach Festivals which have been held in the Moravian Church in Bethlehem, first in 1900, again in 1901, and for the third time in May of this year, have been an embodiment of the Moravian spirit. Like the Gothic cathedrals of France in architecture, like the old morality play "Everyman" in drama, like the Sargent mural decorations of the Boston Public Library in painting, so the choral works of Bach represent in music the religious feeling finding voice in art. It is because religion is so often dogmatic and didactic that it is commonly counted uncongenial to art. But when religion is primarily a feeling, then even its dogmas may furnish symbols for art to use as material in giving to feeling a form. For the Moravians' religion is not so much doctrinal or didactic as it is devotional. It has therefore been natural for the Moravians to give to their religion forms of beauty. The art to which racially they were most disposed was that of music. Consequently the religious spirit and the musical spirit of the Moravians of Bethlehem are and have always been intermingled; neither can be really understood without some knowledge of the other; and both are possessions by inheritance.

Originally the Moravian Church was not a church at all. It was, as its official name *Unitas Fratrum* indicates, a movement to increase the "unity of the brethren," to develop the spiritual life of Christian people. To trace its progress from its beginnings in pre-Reformation times, when it began to assume form under Hus, and at last became organized, then renewed in a convocation held among the mountains in the open air, almost extinguished by persecution, preserved by Comenius and a few faithful souls, revived with almost dramatic effect under the guidance of Count Zinzendorf, expanding into a missionary movement, and finally finding its way to America, where its beneficence has been out of all proportion to its size—to trace all this is impossible within the limits of a brief article; but to ignore this history altogether is to fall into the error into which most people fall who hear of the Moravians—the error of fancying that the Moravian Church is to be classed with the many doctrinal sects that exist in America. The fact is, the

Moravian Church is historically not so much a denomination as a religious movement to intensify spiritual life in the Church throughout the world. Consequently to-day the Moravians, though they form now a distinct ecclesiastical body, have more than any other people the point of view of those who belong, not to a sect, nor to a congregation, but to the Holy Church Universal. They therefore have no distinctive doctrines; they simply hold, with distinctive intensity, the doctrines that are among Christians universally agreed upon as essential. And their customs are distinctive only in so far as they are not merely traditional forms which have become valued for their own sake, but are genuine and efficient expressions of a vital rather than mechanical faith. So they hail death with the music of the trombones as befitting the passage of the soldier of Jesus Christ from one army to another; so they hold their Easter service at dawn in the burying-ground, for that place typifies to them not death but the resurrection; so at Christmas their home festivities are not around lighted trees, but in front of a "Putz" or miniature scene, where are represented the stable, the star, the shepherds, and the wise men, for Christmas even to the Moravian children is not a holiday in honor of Santa Claus, but a reminder of the coming of the Christ child.

The musical spirit, like the religious spirit, of the Bethlehem Moravians has had a normal and spontaneous development. When the first Moravian missionaries settled in Bethlehem, they brought with them a characteristic of the German race to which they belonged—the love of music. The stately German chorales—the music of the German Reformation—supplied the tunes to which they sang their hymns. These old chorales have continued to constitute almost exclusively the music of the Moravian congregation to this day. The Moravians have been touched not at all by the trivially rhythmic melodies that constitute so much of the popular religious music of America, and very little by English hymn tunes and other church music. Even in the liturgy of the Church, where a chant or versicles might be expected, a chorale is sung. Other vocal music they had, to be sure, but even that showed largely the influence of the almost

**THE TROMBONISTS IN THE BELFRY**

They announce the death of members of the congregation by playing chorales, and summon the people to Love Feasts and special church festivals.

rhythmless chorales. Instrumental music, too, they had from the beginning of the settlement at Bethlehem, and among their number were good instrumental players. The story is told of a Philadelphia clarinet-player who went to visit Bethlehem in the latter part of the eighteenth century. He sat at the open window of the inn and played his clarinet. Much to his disappointment, he saw that the people passing by his window gave

him no attention. Putting down his instrument in disgust, he went out into the street to find out what manner of people these were. He soon discovered the reason for their neglect of him. Passing a cobbler's shop, he heard the sounds of a clarinet.

THE CORPSE HOUSE

Where the body is kept during a funeral service in the church.

He looked in, and there saw the cobbler making use of a leisure moment by playing the clarinet as he himself could never hope to play it. He had the grace to acknowledge his discomfort by leaving the town. Some visiting musicians since his day might well have followed his example.

Of course Michel, the cobbler, was an exceptional player; but there were enough proficient instrumentalists in Bethlehem in 1784 to form an orchestra. The members of this orchestra played Haydn symphonies and quartettes, and were in indirect communication with "Papa" Haydn himself. At this time, when the population was only about four hundred and fifty, the Collegium

THE BELL HOUSE AND THE SISTERS' HOUSE

Two of a group of buildings, now connected, survivals of the old "Economy."

AN EXTENSION OF THE SISTERS' HOUSE

Typical of the quaint, ivy-covered brick buildings that give to Bethlehem its historic atmosphere.

Musicum Bethlehem, consisting of this orchestra and a chorus, rendered for the most part music of composers, meritorious but now generally forgotten, such as Rolle and Loewe. This music was of the sort developed by Haydn, called homophonic, that is, consisting of a single melody sustained by harmony, though Graun's "Tod Jesu," which was rendered, was polyphonic, like Bach's music—made up of an intricate weaving of melodies. Other works given were Haydn's "Creation" in 1813 (for the first time in America), Mozart Masses set to German words, Handel's "Messiah," and, in 1866 or '67, a half of Schumann's "Paradise and Peri." The latter was prepared under the direction of an old fiddler who had played under Mendelssohn. During all this time the organists of the church were not professional musicians, but artisans and other

citizens of the town who spelled each other off at the organ. One or two of them were blacksmiths. Nevertheless they were no mean musicians. Their duties required them to be able to play any chorale in any key, to have a moderate sense of absolute pitch, to play from a figured bass, and to improvise. Such facts as these show that the spirit of music in Bethlehem is not an imported thing, but is indigenous; that its development has been normal and spontaneous; and that it made this small Pennsylvania town old in musical experience before New York or even Boston had had any musical experience whatever. With the exception of one rather brief and not very creditable period, the musical life of Bethlehem has centered about the Moravian Church.

It was for a church with religious and musical ideals very similar to those of

the Moravian Church at Bethlehem that Bach's choral works were written. Nevertheless, probably because Bach was forgotten in Germany when the Moravians emigrated, it was not until Mr. J. Fred. Wolle, the present organist of the Moravian Church and the director of the Bach Festivals, returned to his native place after his musical studies, and began in 1884 his work there, that interest in Bach was awakened. For nine years he was content with making the people of the community familiar with Bach, accustoming their ears to the beauties of polyphonic music. Then he reorganized an old choral society, and by its means brought out in 1893 Bach's "Passion according to St. John." With that began the enthusiasm for the music of Bach which now marks the community, and which has steadily increased. Other performances of Bach followed. At last, in 1900, occurred the first Bach Festival of two sessions in one day, consisting of the B minor Mass. This was the first time that that great work was given in America. The next year the second Bach Festival occurred, lasting for three days, and this year the third, lasting from the 11th to and including the 16th of May. In spite of the fatiguing labor involved in the continual, almost continuous, rehearsing of these enormously difficult works, the enthusiasm of the Bach Choir, as the choral society is now called, has never flagged. That this is due to the personal magnetism of Mr. Wolle no one can rightfully deny; but even Mr. Wolle could not create such a spirit in any other community. It is also because the choral works of Bach, as no other music ever written, give expression to both the religious spirit and the musical spirit inherent in this community that the Bach Festivals have become possible. One who does not understand this, no matter how technical his knowledge of Bach may be, can receive from the Bach Festival at Bethlehem only the most superficial impression. And yet so pervasive and enthralling is this religious and musical spirit that it seems as if only the dullard or the pedant after attending the Bach Festival this year could miss its meaning.

Enough has been said to show that the Moravians of Bethlehem have created in America a peculiar community. And yet,

in spite of a notion unfortunately prevalent among many who have vaguely heard of the Moravians, the community is the opposite of eccentric. Probably this notion is due to the fact that for twenty years during the eighteenth century the people of Bethlehem maintained a sort of communism of labor. The "Economy," as it was called, was adopted merely to meet the exigencies of a mission station in the wilderness, and it met them admirably. With the development of the community, however, the "Economy" disappeared, and now no remnant of it remains except the names of some buildings owned by the Moravian Church. The "Brethren's House" is now a seminary for girls; the "Sisters' House" is now let out to tenants. The old names are retained, but the buildings are put to uses that supply present needs. If there is one trait predominant in the Moravians, it is poise. Their love of music has saved them from Puritanical excesses; their devotional spirit has saved them from doctrinal excesses; and the dignity of their music and their devotional liturgy has saved them from the one kind of excesses to which music and religious devotion make men liable—excesses of emotionalism. This poise of character has enabled them to be at once progressive and conservative—progressive in life, conservative of form. In this respect their buildings are typical, their uses being easily adapted to new conditions, their names remaining unchanged.

It is therefore a most natural consequence that Bethlehem, famous for the steel works just across the river, where the most modern artillery and plate armor are designed and constructed, should be one of the few places in America of historic appearance. Though by no means old, even for an American settlement, it has an Old World quaintness almost as marked as the old French quarter of New Orleans. Its streets densely shaded with maples and horse-chestnuts, its plastered ivy-covered buildings, its inn, once a Moravian hostelry, its Moravian Church, with the belfry rising from the center, its picturesque alleys and lanes, give to it a personality, as it were, which offers to the visitor a friendship unlikely to alter.

For a few weeks this year the old town was agitated from the river to the crest of

the hill. As one resident said, "The place has been turned upside down. I've wanted a carpet put down, and have got for an answer, 'All right, only we can't do it until after Bach.' I've wanted a fence mended—'When Bach is over.'"

One tradesman, whose business has brought him to Bethlehem for only a part

All this was the doing, practically, of one man. For nineteen years Mr. Wolle had been making known to this community the music of Bach. But he had been making it known, not for its interesting technical ingenuity, nor for its intellectually educative value, but for its monumental beauty. To some minds, whose

MR. J. FRED. WOLLE

Organist of the Moravian Church, originator and conductor of the Bach Festivals, and member of a family for years well known in Moravian circles.

of the year, was heard to exclaim, "What is this Botch anyway! Everybody wants to have things done before Botch." Those who were to sing in the chorus and those who had obtained seats for the festival could think of little else but Bach. In spite of all the material preparation, the atmosphere seemed that of spiritual elevation. It was like that which comes with the approach of some great religious festivity.

acquaintance with Bach has been made through text-book and dictionary, this notion seems revolutionary. These minds, actively engaged in writing for certain newspapers readable criticisms of metropolitan concerts and opera performances, can recount rules by which one is supposed to know where, in any given piece, the time should be retarded, just as the execution of a measure an appoggiatura

THE OLD MORAVIAN BURYING-GROUND, "GOD'S ACRE"

The flat stones mark graves arranged, not in family plots as in the more recent Moravian burying-places, but in simple rows according to the chronological order of the deaths of those they commemorate. Here is held each year a service in the open air at dawn on Easter Day.

should occupy, and under what circumstances a note should not be sung as it is written. To them, because to most people, Bach is a musical mechanism to be put into operation for the edification of the musical mechanic. From the trammels of this kind of interpretation Mr. Wolle had long been free. He had studied Bach enough to see that within the technical body was a great free spirit, and that the body was made for the spirit, not the spirit for the body. It was that spirit which he revealed to the people of Bethlehem.

So the first day of Festival arrived. The afternoon had gone. It was twilight. People were clustered about the church doors. Near by, in "God's Acre," the old Moravian burying-ground, with its rows of restful flat stones, there was a little group, silent, expectant. The quaint brick buildings were framed by thick foliage. From the horizon across the valley the great full moon rose, and shone through the trees. Then, while all was still, gently there floated down from the sky the soft-ened, solemn harmonies of the trombones.

It was like a choir of ascended human spirits singing above the world their summons to a life like theirs. The chorale ended, there was silence for a space. Then the trombones sounded again; then for a third time. The lights in the belfry disappeared. The people, subdued, quietly filed into the church. The interior of the church was as severe as a New England meeting-house. The large gallery at the rear was filled with people. In the center was an orchestra; in each wing a chorus. The women of the choruses and a few in the orchestra (for many of the orchestra were amateurs from the region round about) were dressed in white. In the congregation every third or fourth person had a score in his hand. For a moment a hush; then came the woven sound of instruments and voices. "Sleepers, awake!" So they summoned the faithful to meet the Bridegroom. The congregation responded with a chorale of praise. Then in gorgeous, jubilant tones sounded the Magnificat. Thus the coming of Christ was announced; and the people dispersed.

The next afternoon and evening the Christmas Oratorio was sung, celebrating Christ's birth. On Wednesday evening, when the congregation reassembled, they found the chorus dressed in solemn black, for the time of Christ's suffering was approaching. The music that greeted this time showed sorrow in its beauty. The next day the tragic Passion music left the people before the cross and the tomb, with wails of sad polyphony. With a new day the chorus, once more in white, resounded the news of the resurrection. Finally, on Saturday, the great B minor Mass ended the Festival—and the ending was resplendent. The music of the Mass was like great streams of color, or like a flood, now overwhelming one, now buoying one up. For six days religious devotion instinct with human feeling had found voice in most exalted music. It seemed strange now to have silence.

Of such six days as those, musical criticism has little that is profitable to say. It would be easy to record a very considerable list of imperfections in the achieve-

ment, the most serious being those contributed by some of the visiting professional musicians who took part. But these concern the externals of the Festival. Of the spirit of the Festival it is enough to say that it was the spirit of Bach himself. The Moravians have found in Bach the expression of their own spiritual life, and have therefore become sympathetic interpreters of Bach to others. As one auditor said, as the Festival was drawing to its close, "Bach is the Bible of music." As the theologian turning to the Bible finds only texts to supply material for dogmas and doctrinal systems, while the unsophisticated reader finds messages for the commonest and deepest human experiences, so the academic musician or critic turning to Bach finds there only counterpoint with which to exercise his ingenuity, but these Moravians have found and revealed a virile beauty in sound and form full of passionate tenderness, dramatic dignity, human sorrow, jubilant content, and affectionate, almost familiar, reverence.

THE OLD MORAVIAN HOSTELRY, BUILT IN 1758  
Originally the property of the mission community and still used as a hotel.

A TYPICAL AMERICAN COLLEGE GIRL

# The Practical Religion of the College Girl

By Alice Katharine Fallows

With Pictures by John Russell

THE mother who wrote to a certain president asking him to see that her daughter said her prayers every night before she went to bed, mistook the function of a college equally with the one who begged him to be sure that her child put on her rubbers whenever it rained. A college is not a nursery. One of its chief values intellectually, and religiously as well, is supposed to be that a girl must face her own issues and make her own decisions. It is not the province of the college, as a college, to measure her religious development with a yardstick, nor to register the degree of her altruism with a thermometer.

Still, character-building quite as much as mind-building is the aim of the college. In this the religious element is a powerful factor. Opportunities are presented to a girl, not forced upon her; but the fitness of college as a training-school for religious and philanthropic work is being demonstrated by alumnae the world over. Missionary graduates in China, Turkey, India, and Japan, indicated on their college missionary maps by flags or white ribbons radiating from the home center, are trying to cure sick souls and sick bodies, with college-born enthusiasm. Settlement workers preach the gospel of clean homes and clean lives to the tenements. College girls bend their minds to the wide-reaching problems that city charity departments must meet every day. They work in Young Women's Christian Associations, they hold kindergarten for the little brothers and sisters of the sick babies on floating hospitals, and in countless incidental ways give their help to large organizations. Others, not as conspicuously, but just as sincerely, are adding an important mite to the comfort of the world, through the humdrum duties of uneventful days. By no means all alumnae are philanthropic nor even unselfish. The patent remedy for making over human nature has not yet been found. But when college can start an impulse that expresses itself in so many different ways, the method of inspiration must be effective.

The official religion of the colleges usually ends with certain provisions for general worship. Each college gives its students an invitation to go to chapel every day and church on Sundays, more or less strenuous according to its characteristic attitude.

Bryn Mawr, as a college, though Christian in its origin, on principle exerts the least influence of all on its students. The result is a sharper division than anywhere else of girls who are religious and those who are not. A student may go to the Quaker chapel service held daily, and on Sunday to one of the town churches or not, as she pleases; though a wholesome fear that too many absentees would bring compulsory chapel and church acts as a stimulus on the laggards.

Wellesley has departed far from its early days of religious exactions. A story is told of one of the pioneer teachers with a sense of humor, set to spy on two girls who were suspected of misusing the "Quiet Hour" set aside each day at that time for meditation. She stole up to the door and peered through the keyhole. At that moment the door was flung open from the inside, and, confronted by the indignant roommates, the teacher, with a twinkle in her eye, said solemnly, "I happened to be just in front of your door when the bell for Quiet Hour rang, so I knelt down where I was." The incident is interesting as a measure of the contrast between the old and the new. Quiet hour, espionage, and the rigid evangelism of those days are so entirely foreign to the liberal Wellesley of to-day that they are only traditions to the students. Chapel and church, even, are voluntary, as they are at Bryn Mawr. The influence of the college is definitely religious, and the force of orthodox traditions as well as the charm of the morning service, with its vested choir and the opportunity of hearing distinguished ministers in the college church on Sunday, make the attendance at both these services very general.

Smith, whose religious life from the beginning has tended to be earnest but

THE COLLEGE GIRL AT WORK

broad at the same time, requires chapel and church. Each student hands in a report at the end of the semester; but since admonition seems to be the only penalty for absences, the full rows at chapel and the large number of students in the pews of the town churches may be taken as a fair indication of the voluntary student interest in these services. Vassar, also wide in view and earnest in practice, makes church and chapel obligatory, and insures the presence of the girls at the restful chapel service after dinner by the monitor system.

Holyoke requests urgently daily attendance at chapel, with its beautiful choir of a hundred and fifty voices, and Sunday attendance at some town church which the girls by means of a special student-letter may join temporarily. Holyoke's earliest history gave it a reputation for almost stressful piety. But the religious interests of the new Holyoke are comprehensive, wholesome, and broad-minded. A shade more of the evangelical emphasis, and a more direct religious influence exerted on the students than in most of the other colleges, seem the only effects traceable to those earlier times when Mary Lyon, braving the prejudice of centuries, saw the rigorous side of prayer and supplication.

Most of the colleges hold a Sunday vesper service for those who care to attend, some of them a weekly prayer-meeting in addition; each of them except Bryn Mawr provides still further for the spiritual welfare of its students by required courses on Biblical history or literature or interpretation.

The official creed of a college is not like a church creed. It is inclusive rather than exclusive, a composite of all creeds. The effect of it upon a girl differs with her temperament and training. A student whose previous teaching has led her to believe that salvation can be found only between the narrow limits of one denomination may be shocked and startled at first by the breadth of the college view. The girl upon whom no breath of higher criticism has blown may suffer and rebel in the class-room at the theories, be they never so gently presented, which assail some of her axiomatic beliefs. Science and philosophy may start the period of doubt which is almost sure to come to

girls of a certain type of mind at some stage of their experience, in college or out. They are by no means in the majority, and with the safeguards which the college tries to provide they are likely much sooner than in another place to regain their poise quickly with a faith as firm as before, if wider.

To any of these girls, from the most evangelical to the most liberal, college religion on the student side offers an opportunity for systematic work.

"Since Mary W—— came home from college," a church member remarked one day, "she has suggested more good schemes for raising the church debt than all the rest of us put together, and carried them out too. She hadn't a practical idea in her head when she went away. I wonder what she did. There's Dorothy S——, too; she used to be a sleepy young person who never exerted herself, and she has made such a success of the big class of high-school girls that no one else could manage, that they would rather miss a dance than Sunday-school."

Mary W—— happened to have been the head of a committee that raised over a thousand dollars among the students for the salary of a medical missionary and for other work in foreign fields. Before the various contributions were won from hard-worked purses she learned the best methods of systematic collection by experience if not by intuition. Dorothy S——, after managing successfully a Bible class of forty college girls, keen in their judgment and unsparing in their questions, could scarcely help being qualified to claim and hold the attention of her high-school girls. Efficiency, natural or acquired, is the secret of success in any of the various other branches of student work. These are usually under the direction of the Christian Association, which by one name or another exists in every college.

One of the first things impressed upon a freshman is that the Christian Association believes in service, and that service covers a variety of activities. The summer before she enters, she receives a welcoming letter from an upper-class girl and a handbook giving her essential bits of college information. Afterwards she finds that the Christian Association is responsible for the handbook and letters.

The first strange homesick Sunday after she acquires the dignity of a freshman she is asked to attend prayer-meeting by some genial girl who makes her forget her blues and explains many things, among them that the prayer-meeting is under the charge of the Christian Association. The next day she overhears a girl relating the funny things that happened to her as a waitress in a summer hotel. The narrator, one of the girls working her way through college, the freshman learns later, obtained her summer place through the Labor Exchange Department of the Christian Association. Then she needs a second-hand French dictionary, and some one refers her to the Book Exchange managed by the Christian Association. By the time this freshman, with the rest of her class, has been introduced to the college at a reception given by the Christian Association, she is ready to bear testimony to the diversity of its activities. With the invitation to join its ranks and to take a specified part in its work, her responsibility begins.

Like the college, the Christian Association is usually organized on the broadest religious lines, with a pledge of membership which includes every denomination. The comprehensiveness of its work makes its appeal almost universal. Missionary meetings, formal weekly prayer-meetings, ten-minute prayer-meetings of little groups each morning or evening, the special prayer-meetings as the Day of Prayer approaches, the services on the day itself, are all naturally in charge of the Association. Mission study classes and Bible classes, which mean work and preparation, appeal to the girl desiring the intellectual side of religion, while altruistic work of a dozen different kinds, without any religious flavor, gives the merely ethical girl no excuse for staying idle.

In organization the Association is admirably calculated to unify the many branches and get the best results. To assist its officers, Smith and Holyoke have recently called a General Secretary. The title is not explanatory. When a freshman has to look up its meaning in her college handbook, the Salvation Army worker may be pardoned who touched the arm of her neighbor in a railroad train and asked earnestly, "Lassie, is your soul saved?" When the girl answered with a smile, "Well, I'm a

General Secretary," the worker said with pleading intensity, "But, lassie, you wouldna let a little thing like that interfere with the saving of your soul?"

With the multitude of good deeds which a General Secretary has to her credit, the incident was particularly humorous. She helps to map out the work of the Association and to execute it. She relieves the student president of some of her duties, which are very heavy when an Association has seventeen branches of work and seven or eight hundred workers; she assists the committees, takes an active part in the prayer-meetings and Bible classes, and to the college girls in general acts as adviser and friend. At Smith an important part of her work has been to bring the large number of students who live in the town into closer relation with college affairs, socially as well as religiously.

Haphazard methods of doing good are not in favor at college, and the businesslike system of the Association is excellent training. Nor has the system driven out the old, unobtrusive method of doing with the right hand what the left hand knoweth not. Girls rich in this world's goods are content on occasion to pay the way of a poor neighbor and let their generosity go unmarked. A popular student will quietly drum up customers for the bootblacking industry of a girl with her way to earn, or even collect stockings week after week for a poor neighbor to mend, who is too sensitive to go to the Students' Exchange for work or let her identity be known.

The comprehensiveness of the Association gives as good training spiritually as its system does mechanically. To find the common ground on which believers in different creeds and doctrines can agree makes the religious problem for the students always interesting and sometimes perplexing. The concessions which individuals must make for the sake of the whole discourage egotism. The grandfathers of a certain eminent bishop, according to family tradition—one an Episcopalian, one a Unitarian—had a bitter discussion about their different religious views. They agreed to read the Bible from cover to cover for arguments. When they met, after the task was completed, the Episcopalian had turned Unitarian and the Unitarian Episcopalian. This is

not exactly the effect of responsible positions in the Association on girls of opposite views. But when Roman Catholic, Episcopalian, Presbyterian, Baptist, Unitarian, Universalist, and Jew must be considered in a scheme of religious work, the most ardent sectarian is apt to realize that she cannot expect them all to accept her own religious belief, and to learn her first lesson in tolerance, while the ultra-liberal girl, acting for the whole body, learns a conservatism which saves her from the intolerance of tolerance.

How fair-minded, religiously, a whole college could be, Smith showed dramatically a few years ago. The affiliation of the long-established Smith College Association for Christian Work with the Young Women's Christian Association was urged upon the students with great eloquence by one of the members of the Young Women's Christian Association. The change meant excluding from the Association, as active members, all but evangelical Christians. The discussion of the question, following a period of unusual religious enthusiasm, shook the college from center to circumference. But when it was put to vote, although the great majority of girls as individuals might have preferred the new basis, three only out of the whole student body voted for change. The rest, acting for the whole body, could not conscientiously accept a standard that excluded from its college association members who desired to live rightly and work faithfully whatever their church beliefs.

How inevitable religious expression of some kind is among college girls, Bryn Mawr gives an interesting proof. That college, in the first place, true to its belief in individualism, decided to leave exercise and religion to the discretion of the students. Exercise was so flagrantly neglected that the faculty, for the best health of the college, made it compulsory. Although the authorities never yet have given to the students the religious support and encouragement which other colleges offer as a matter of course, the students, from their own sense of necessity, introduced all the various branches of religious and philanthropic activity, and have developed them so consistently that their work compares favorably with that of any other student community.

The various Christian Associations all work along very much the same lines. The similarity is due to the annual Summer Conference of girl students recently transferred from Northfield to Silver Bay, Lake George, so that college girls and college men can now meet simultaneously as soon as the colleges close. This Conference is held under the auspices of the World's Federation of Students. Holyoke, so far, is the only woman's college which has found it best to accept the strictly evangelical basis which makes affiliation with this body possible. But all the other Eastern colleges are invited to Silver Bay as a matter of course.

The Conference has come to be a most important factor in college religion. Prominent girls from all the colleges meet there on a common basis of interests. The president and officers of the Christian Associations come together to compare notes, and to outline, as a result of the comparison, the best methods of work for the following year. The student volunteers who have promised to go to foreign fields if possible, and the others interested in missionary work, meet for an hour each day to hear talks on all phases of missionary work. The girls planning to go into active church work in small towns or in large cities have special meetings full of practical suggestions, conducted by experienced college alumnae. Whatever their college, whatever their creed, the members of the Conference worship together at inspiring meetings led by noted men and women, consult together, and play together in the afternoons given up to athletic games and recreation. The strong impulse given to religious work by the Conference is not all it accomplishes. As a cure for provincialism it is also most effective. To recognize other standards which may be as good, though not so congenial, as one's own, to meet other college girls working to the same end through different means, is to substitute breadth for narrowness. If a girl brought away from Silver Bay nothing more than a recognition of other colleges' excellencies, it would be worth her while to go, for her own sake and for the final confusion of the critics who charge her with narrowness.

Although the Christian Associations, as a result of the Silver Bay Conference,

work in similar ways, each college has its special problems and opportunities. The altruistic Vassar girl, fired by the sociology courses and her own desire to be about the rescue of the masses, finds her horizon definitely limited. Poughkeepsie comprehends only a very small portion of the "other half." They will welcome her neighborly visits and be grateful for her aid, but they will not miss her vitally if she does not come. This girl may dress some of the army of dolls for New York East Side children which are always put on exhibition just before Christmas, with an entrance fee of two cents which pays the expressage. If the Vassar altruist is content to begin at home, she will find good material for her application of the Golden Rule among the maids of the college. The number employed in the different buildings make quite a community in themselves. For several years part of the student work has been to form classes for them in reading and writing, arithmetic, dancing, or anything else they might desire, also to provide, every week or two, social evenings, with a dance, a play given by the hostesses, or some other entertainment as the particular attraction. This year the special interest of the students has been to raise money for the Maids' Club-House.

Bryn Mawr students also look after the spiritual and intellectual welfare of the college maids. A Sunday-school with an abundant allowance of singing is dear to the daughters of the colored persuasion employed there. But the "study" classes are made interesting, too, and it seems worth while to belong to them, especially when the closing exercises include an exciting spelling-match, as they did this spring, and the prize pupil almost outspells her teacher. Philadelphia and its settlements are within reach of the Bryn Mawr girls, and they have assisted in the work of several of them financially and personally both.

Radcliffe girls, through their Emanuel Club, brighten the lives of some of their poorer neighbors, and, besides, take part, if they wish, in one of Boston's many philanthropic or charitable projects. Wellesley is near enough Boston to invite companies of settlement children out for a day's romp in the country, to give a play to the settlement boys (who blister

their hands and threaten the floor, in the excess of their appreciation), and to lend a hand in various other ways to furthering settlement work.

Mount Holyoke students have formed several prosperous clubs among the working-girls of Holyoke, and this year have conducted a Junior Endeavor Society for mission children; besides, they have held services at the Poor Farm, which has no others. A Christmas tree and a gift for each of the inmates was their contribution to the Christmas cheer of a rather cheerless place. A Sunday-school in a little school-house a mile and a half away has been the charge of faithful girls who have braved any weather to be present. A Christmas party and a "sugaring-off" were events in the lives of the small pupils which they will not forget.

Smith, with its large population, has a great variety of charitable interests, and important among them is its neighborhood work. The numerous classes in the Home Culture Club of Northampton, taught almost entirely by Smith girls, have given the teachers experience in meeting human nature and their pupils information in many subjects. The girls have managed several clubs for boys and girls on Hospital Hill. Sunday after Sunday they have gone to teach in the Sunday-school there at Bay State and Leeds; they have carried on three Christian Endeavor Societies, and in many other ways have done as well as they could what their hands found to do.

The organized efforts of a college at helpfulness make a brave showing in the pages of a report. In the symmetrical development of the students, too, they have a vital influence. The religious and altruistic and philanthropic phases of college life, like its strictly intellectual phases, are a preparation for what is to come. The more normal they are, the better they will succeed as a basis for a wholesome, useful, unselfish life afterward. Emotionalism and sentimentalism are as much to be avoided as apathy. For either extreme nothing is better than practical student work. If a girl, as a result of college influences and her own choices, has gained a broader view of God, a better knowledge of service, and a wiser tolerance of her fellow-creatures, college religion has given her a working hypothesis for a useful future wherever it may be.

## A Chinese Kindergarten

**I**N all attempts to achieve moral uplifting it is being more and more recognized that the effort which has the surest and most lasting reward is that which is directed toward children. Adults already have their habits of life formed, and therefore do not easily adopt other habits even though they may be convinced that other habits are better. Children, on the other hand, are in the stage of life when habits are forming. With them there is no need of spending energy to destroy the bad, but only to construct the good. This truth is being discovered and demonstrated by missionaries in foreign lands. In accordance with this principle a number of kindergartens have been started in foreign mission stations. At Foochow, China, in connection with the Girls' Day School conducted by the American Board, is what is known as the Davis Memorial Kindergarten. This is held in a bright, sunny room in Davis Memorial Hall. From twenty to thirty little children attend daily. A trained kindergartner from this country, Miss Jean Brown, is in charge, and work-

ing with her are three or four native pupil-teachers. Under the direction of Miss Brown and her assistants these Chinese children, in their games, in their songs—which, by the way, are transforming their harsh and unmusical voices—at their work with cubes and oblongs, in their celebrating with gifts and decorations the coming of the Christ Child, are unconsciously and naturally absorbing ideals that are new to their land and motives that otherwise would never govern their lives. The work of such a kindergarten is true missionary work, though it could hardly be called “converting the heathen.” It is work for children, who are in nature essentially the same the world over; yet it is distinctively work for China, for it is doing for the next generation of Chinese what the same effort a generation hence could do only in a small degree if at all. To use the words of Miss Woodhull, of the Foochow Mission, “One needs to know something of Chinese life, its selfishness, petty jealousies, and unwillingness to work for the good of the whole, to realize what the kindergarten is doing for these children.”

## What's a Heart?

By Carol S. Turvey

What's a heart?  
Just a basket for the ills of life,  
And all its meat—  
Just a tender net to compass Love,  
And find it sweet.

What's a heart?  
Just a keyhole for the Master's key,  
That winds us well;  
To show the time of day in Heaven,  
Or night in Hell.

## A New College President

THE College of the City of New York, although it is not, we believe, the only college supported and controlled by a municipality, is certainly the most notable institution carried on by a city for its own young citizens. Quite recently there has been a new impulse in the management of the College, and plans of large extent and liberal design, both materially and in the educational sense, are now developing. Not the least important of these is the recent selection, as President, of Dr. John Huston Finley, whose portrait we present to our readers herewith. Dr. Finley, although still a young man for a college president, has had experience not only as an educator and college professor, but as a writer, a student of economics, and an author of works of social and political value. He is a graduate of Knox University, and also bears degrees received for merit from the Johns Hopkins University; has held the presidency of Knox College; he has been for the last three years professor of politics in the University of Princeton; he is co-author with Professor Ely of "Taxation in American States and Cities," and he has been a contributor both in prose and poetry to many of our best magazines and reviews. It is confidently expected that under his management the staid old college, now some five years over its first half-century of life, will display new vigor and raise new standards.

The architectural plans for the new buildings of the College of the City of New York, to be erected at once on a well-chosen site on Amsterdam Avenue and One Hundred and Thirty-eighth Street, some six miles north of the old building, are really superb in design and unity. A view of the main building will be found elsewhere in this issue of The Outlook, in the article on "Recent American College Architecture." The style of architecture is distinctly Gothic, and the effect of the main tower is both solid and picturesque. The architect is Mr. George B. Post, of New York. The total cost of the new buildings is to be two and one-half million dollars or more, although no dormitories are included. At present something like two thousand students attend the classes of the College yearly, and as any resident of New York City over fourteen years of age may now become a student upon passing the required examinations, it is not improbable that before long the number above given will be more than doubled. The institution was originally called the New York Free Academy, and it was not until 1866 that the name was changed to that now in use; as this change of name indicates, the first twenty years of the institution's life witnessed a development from school to college; the development is still going on, and the College is in fact as much deserving of the name of university as very many of the institutions to which that name is attached.

LEO XIII.

From the painting by Cécile Wentworth.

DRAWN BY HAROLD BROWN

A DISTANT VIEW OF ST. PETER'S  
The point of view is the Janiculum Hill.

## A Portrait of Leo XIII.

**S**PECIAL interest attaches to the portrait of Pope Leo which is presented herewith, because the Pope himself, in a private audience granted to the painter of the portrait from which this picture is reproduced, Mrs. Cécile Wentworth, of New York, assured her that, in his judgment, it was the best portrait so far painted of himself, and that the painting would be preserved in the Vatican as a valued treasure. This painting attracted great attention at the Paris Salon of 1899, and later at the World's Exposition there, when a medal was conferred on it. It was painted a little over ten years ago, when the Pope was, comparatively speaking, in full command of his physical powers—his mental faculties, as we all know, have remained acute and vigorous in the latter years of his extraordinary life. The painting of the picture required many sittings and the work of many months. The artist enjoys the distinction of being one of the only three women whose pictures have been accorded a place in the Luxembourg Palace, the other two being Rosa Bonheur and Marie Bashkirtseff.

The Outlook has already given its readers some account of the life of

Leo XIII., together with an estimate of his character and influence; but it may be worth while to repeat here what Mr. Marion Crawford, the novelist and lifelong student of Italian history and manners, has said of Leo XIII. in the columns of this journal: "Leo the Thirteenth is to be classed among the hard and the strong, among those who leave their mark upon others and upon their times, but who are not themselves easily affected by men or by circumstances, whose principles are bred in them, not acquired, whose opinions proceed from within outwards, not from without inwards, whose actions are the resultant of principles, opinions, and thoughts, rather than the expression of instinct—persons, in short, whose minds belong most distinctly to the rigid and masculine mind rather than to the feminine, pliant, and artistic. It is impossible not to be impressed by such a man; it must be very hard, on the other hand, to impress one's self upon him. Leo the Thirteenth has been Pope more than twenty years, and his reign is counted among the long pontificates; he is a man of prodigious talent, of unchanging principle, and untiring energy."

RESTING AT THE WYTHBURN INN, THIRLMERE

# Coaching in England

By Margaret Waldo Higginson

ONE of the most delightful ways of seeing England and Wales is by coaching. North Wales is crossed and recrossed by coach lines in all directions, and the Lake district and North Devon almost as much so. The jangling four-in-hands, racing by in a cloud of dust, with the merry crowd atop, and bugles blowing, blend well with the peaceful rusticity of the English country, and the constant overflow of changing life back and forth is refreshing.

Every one knows Bettws-y-coed, that typical little Welsh village, only with the bleakness that sometimes strays over to Wales from Scotland all left out. It is very green and very sunny and very peaceful, with round wooded hills, and smooth meadows with sheep grazing quietly; a little river flows noiselessly down on one side of the small white road, and there are big, densely green trees all about. The quiet is broken only by the coaching parties that are passing at all times, with gay horns announcing their arrival from afar. The first coaching trip we took from Bettws was through a wonderful pass, the pass of Gwyant, where happy, quiet little lakes were dumped down amidst the hills where you least expected them, with always a fresh breeze, and the lazy sheep grazing. It was a good free-sensation up on the front seat of the coach, with the long whip crackling bravely over the four racing horses, and the bugle blowing defiantly behind whenever we passed a cottage or tiny hamlet, and might hope to make the smallest impression on the humble dwellers therein. The end of the route was at Beddgelert, a sunny little place, with a quiet old Welsh woman in a steeple-crowned hat sitting under a tree selling counterparts of herself in the way of dolls, all patiently sitting up out of a basket, with their smaller edition of steeple-crowned hats peering out at the top. I finally, after the purchase of a most superior doll, drew the old woman into conversation, and she told me how she had the dolls made with a different kind of complexion for Americans, so they

would not melt away when they got to "the States." "Ah, well," she said, "I've been dressin' dolls for thirty-seven years, yes, thirty-seven years, and I'm thinkin' I'm a bit tired of it noo," and as I turned to go she announced with a brightly smiling face that "the present Queen" and the Duchess of York had shaken hands with her the last time they were there. We had a funny lunch at the "Royal Goat," which imperial animal was prancing, in white stone, just above the door, and then started on our homeward way. Our driver was a jovial, red-faced young Irishman, whose only drawback, he said, was that his hair was red. He was strong and big and good-looking, with a well-formed mouth and teeth, a cheery laugh, and a painstaking misplacing of his h's. He laughed long and loud, and with the most healthy and well-meaning enjoyment, at a melancholy boy whom we passed, with two small and slender tufts of black hair springing up, like oases, on a poll otherwise quite destitute of covering, and shining with an unsuccessful zeal for fertility. The boy himself seemed placid, if possibly a bit surprised at the world. The drivers of the coaches are a hearty, honest race, with a healthy enjoyment of their occupation. I found only two exceptions to this rule, in the Lake region—two old men who had grown old driving back and forth between Windermere and Keswick. They were soured and cantankerous, and difficult about fees; but the race as a whole is attractive and wholesome, with a love of a good chat.

The coach that used to run between Bettws-y-coed and Bangor has been stopped, for some unknown reason, and so, unless people go to the trouble and expense of getting a private carriage, they miss one of the most wonderful drives in Wales, desolate, barren, but very beautiful. I thought the Ffranon Pass was bleaker and more tragic than anything I had ever seen—a shallow, gray sheet of a lake, colorless moors stretching away, and bold, lonely, hopeless crags above, with huge stones fallen, in sheer misery, from their

tops. It made one feel that living there would make one as gray and hopeless as the crags and the flat earth; Childe Roland knew that country well, I am sure. It is a bit like Scotland, though with all the bleakness and none of the grandeur.

The town of Bangor is large and commonplace, but beyond, down by the river, where there are few houses and fewer people, it has a fascination all its own. It is gray and misty there, and the only sound is the hauling up and down of sails, or the foot-falls of old sailors going along the beach. Down below a fisherman in his scow is lazily backing water, with a calm pipe vigorously in operation, waiting for a possible customer. On the other side of the river first there are mud-banks, with boats lying on their sides, and then tiny, dingy little shanties, and then, above, prim, narrow, gray little houses, all alike, their small twin chimneys joining their smoke to the mist. And above there is still smoke, and more smoke, a great cloud of it hanging there. This smooth, treacherous-looking water is the Menai Strait, and the smoke-dimmed island on the other side is the island of Anglesey. Just up the river, toward the old castle of Carnarvon, are the bridges, wonderful things, leading to Holyhead, twenty-two miles across the little island, and from there the mail steamers go in only four hours to Dublin.

There was no coaching through the island of Anglesey; it was too small. There were only diminutive carriage drives, and the afternoon which brought me (in a very dirty carriage, with a stumbling horse, and a driver who could understand nor speak anything but Welsh) to Beaumaris Castle was certainly a red-lettered day in my calendar. Such a wonderful old castle as it was—wall upon wall, rounded turret upon turret, of ivy-covered, patient strength, with the soft green grass beneath, and chattering birds flying about among the leaves. The dark, crumbling, lonely stairways were still struggling to reach the tops of the towers, as they used to do hundreds of years ago; they were cold, damp, pathetic places, full of memories, and the dust of what had been. In the midst of the dignified old courtyard the mocking forgetfulness of to-day came in, in two well-marked tennis-courts with defiant nets. No one was using them,

and it was only an effort to destroy the prerogative of old age; the ivy told for more.

I climbed to the top of the shaky walls, and I think I could have sat and watched that view forever. Here in the foreground, on the other side of the swiftly moving water, were the green, rolling mountains of Wales; beyond, the mouth of the Strait, guarded on one side by the big black cliff of Great Orm's Head jutting into the sea, with Little Orm's Head backing it up from behind, and on the other by the smaller but still bold cliffs of the sheer end of Anglesey, the spot to the north-west where all is sea again, and England jumps off into it; in the far distance was the wide blue ocean, with the smoke of steamers for home floating along the horizon line. I kept thinking of

"Nobly, nobly Cape St. Vincent to the north-west died away,"

and

"Here and here did England help me: how can I help England?"

and I remembered how I had once heard an English writer say that the man who had written that single line had done more for England than all the volumes of a man like Kipling put together.

The atmosphere of Wales is entirely different from that of any other portion of the British Isles, partly from the element of age that is ever before one in the old Welsh language, still spoken universally among the older inhabitants, and partially at least among the younger generations. We were told one story by an Irish doctor in Bettws-y-coed, illustrative of this, which was most amusing. The doctor had been sent for to see an old woman with a sore throat, and on arrival there he had puzzled his brains as to how in the world he was going to make her understand him. Finally he managed to muster up enough Welsh to tell her to put out her tongue, which she obediently did. But, once out, he could not possibly imagine how to tell her to put it in again, so the poor old dame held it patiently forth until at last, by frantic signs, the doctor succeeded in conveying to her mind that she might withdraw it. The women of Wales are not the hardy creatures one would suppose, but are often anæmic to a degree, and this is attributed by the physicians to the uni-

versal Welsh diet of bacon and excessive tea-drinking. The men, however, are usually hale and hearty.

Coaching in the Lake region is naturally more hilly than in Wales, and the driver often calls out a hearty request to get out and walk up the steep hills, or even down, when they are more than usually precipitate. The straight road from Windermere to Keswick is not disproportionately steep any of the way, but the cross-routes to Patterdale and Ullswater Lake, with the long pull up the Kirkstone Pass, to Coniston, where Rus-

ness of one part of the road is almost incredible, and the black, overhanging mountains seem about to fall and annihilate one. There is a charming dark little lake at Buttermere, with sheer crags jutting straight from the water, and down these snowy cascades go tumbling, the largest of them boasting the name of "Sour-Milk Gyll."

The whole Lake region is overflowing with literary memories, is marvelously redolent of great and good men that were—Wordsworth, Shelley, Coleridge, Southey, "Christopher North," De Quin-

CROSSING THE FERRY AT WINDERMERE

kin lived and died, and even more especially to Buttermere (Cockermouth), there is much climbing to be done both ways, with such perpendicular cliffs at times that the coaches have to crawl at a snail's pace along them, and I have seen some frail ladies almost reduced to hysterics by the alarming prospect. But the drivers have strong nerves and the horses strong feet, and there has seldom been an accident.

I think if I had time for only one coach-drive in the Keswick region, I should choose the one to Buttermere, for wildness of scene and superb views. The steep-

cey, Dr. Arnold, and Harriet Martineau; and many little vine-covered cottages up among the trees are pointed out as once having been the home of one or other of these thinkers of the past. Wordsworth especially, of course, is woven and interwoven with every stick and stone, every smallest lake or greenest hillside; wherever one goes one sees the old white-haired man before one, with his stick in his hand, and his ever-faithful Dorothy, she of the wild eyes, by his side; but it is in Grasmere that one thinks of him most. Here is the wee rose-covered house, "Dove Cottage," where he lived

KIRKSTONE PASS

for the first years of his life, and the cheery bit of an old woman who now does the honors of the little place remembers the poet well. He was thought "naught o', naught o' at a'," when she was young, she says, and she laments that she "could ha' made her fortun' had she but ha' known, for when his furnitur' was sold after he died she could ha' bought it a' oop and made her fortun'; but she only bought two rugs and a chair, and she sat on 'em, and walked about ower them, and there was nothing left but shreds!" She also told us about De Quincey, who lived in the house after Wordsworth had left, and said that he used to keep his books scattered all over the floor of every room in the house—"a very ontidy mon was De Quincey," she said.

The larger house, Rydal Mount, where Wordsworth lived longest, and where he died, is another flower-embowered place, with sweeping grounds, fine trees and bright flowers, and rambling, terraced walks, on which the old inhabitants say Wordsworth used to pace up and down, shouting out his poetry to the silent air. No wonder he loved the place, for the mountains above are big and rough and peaceful, little Rydal Water sparkles through the trees on the right, and to the left just a bit of the lake of Windermere

is shining out from the base of the encircling hills. In the small green churchyard is the poet's grave, very simple and very dignified, with all his family grouped about him, and poor little Hartley Coleridge right behind, with those pathetic words, "By Thy cross and passion," cut into the stone.

Once I was in Grasmere on the Feast of St. Oswald (after whom the village church is named), and I felt as if I had been transplanted back a hundred years, for the old-time ceremony of rush-bearing came off. All the children from far and near assembled in the town with great masses of rushes and flowers most gayly mingled, and after sitting on the church wall for a while, with their treasures piled about them and their small feet dangling, waiting for the village band to arrive, they marched about the little roads bearing their flowers on high and looking very dear and excited. Close to the church a small gingerbread shop had been instituted for the day, and the same old woman who was the custodian of Dove Cottage dispensed hot little gingerbread men or animals of different varieties to the children gathered around the door. It was delightful to see them coming away beaming, with either hand grasping a delectable pig or cow sadly mutilated by this time.

THE HOME OF HARTLEY COLERIDGE

ASCENDING NEWLANDS PASS

The old woman told us that she had made this gingerbread for the children on this day for thirty years! At five o'clock there was a small service in the church, where rushes were strewn on the floor, as in days of old; and to finish the day, at half-past six there was wrestling in the field hard by, and sundry country bumpkins came sheepishly forward to try a "fall" with a neighbor, their fellows meantime urging them on with much shouting and good nature.

Keswick lies at the end of all the coach routes, and the lake of Derwentwater is the most beautiful of them all. The philanthropic people of that region have been raising money to preserve some land on the shores, and a touching story is told of a letter coming from an old man, saying, "I am dying, and I am blind, but I saw Derwentwater one day five years ago, and I send you a pound." The view from Friar's Crag, where a simple slab of slate is put up to the memory of Ruskin, can be surpassed by few on the continent. The big wild mountains rise tier upon tier around the lake and off into the hazy distance, and they reminded me of those other hills which

"like giants at a hunting, lay  
Chin upon hand, to see the game at bay."

I saw one of the most wonderful sunsets I had ever seen at Keswick. All day it had been raining, but at about a quarter to eight the clouds began to roll away, and the sun came out underneath them, a great glow of ruddy light, making radiant the distant hills, while the foreground was still black. There was a break in the hills down to the far horizon, with bright clouds lingering; and in the strange red glow old Skiddaw stood out on one side, and Helvellyn on the other, with the white cattle and the sheep so unconscious of it all.

But, after all, the most ideal coaching country is in Devonshire—North Devon, where the moors sweep, exquisite, heather-grown, miles and miles, to the far blue sea. Here the air is like wine, frosty and fresh and cold sometimes, even in summer, and the deer are startled from their coverts by the horns of the passing coaches, and start out, poised, graceful, alert, warm spots of red against the darkness of bleak Exmoor.

The sight of a hunt with the Devonshire staghounds is not to be missed, and I felt that I had stepped into an old English novel all at once. Here it all was—the great pack of dogs coming down the road, with the keepers in scarlet behind

them; the constant stream of horsemen pouring in; and the crowd of spectators—on foot, on horseback, or in big coaches—getting larger every minute. Then came the start; the excited baying, the blowing of horns, and the poor dogs still left inside the shed were nearly crying their souls out. Here we lost them for a time, except now and then a glint of red among the heather; and then—there was the stag! right above us, big and graceful and listening, its glorious antlers high in air; and suddenly—with a bound it was gone. But the huntsmen never got that one, for the poor creature took to the sea, in the way they so often do to save their lives, and when we drove away all the horsemen were down by the water, their riders searching anxiously for their vanished prey.

There is so much coaching to be done through those wonderful moors that it is hard to tell where to begin or where to

end. Clovelly is an old, though a very fascinating, story to most people, but the Lorna Doone region is perhaps a little less familiar, and two or more coaches run through there from Lynton every day. One of the coaches is called "Lorna Doone," the little cottage where one gets lunch at the end of the route is named "Lorna Doone," and from the very start one feels wholly in the proper atmosphere. The valley is beautiful, but, alas! not now, at any rate, like the book. It is almost unrecognizable—nothing is there that is wild or bold or un-get-at-able—but it is charming, and one must use great imagination, that is all, to persuade one's self of the reality of those awful, hairbreadth dangers that John Ridd used to go through. At the far end of the six-mile walk through the valley, the scattered remnants of some little old huts are pointed out as all that is left of the old habitations of the Doones.

## Sister Agatha

By Mary Lord

Within these cloistered walls my footsteps walk content.  
My quiet heart is still on Mary's labors bent;  
I watch the growing flowers within our garden fair,  
And thank kind God he gives me this pleasantness to share.  
(Ah, longing heart, be still!)

At early mass, high up within the choir I stand,  
Lifting my voice to God with all the convent band,  
Singing to Him my Gloria; and I am well content,  
Here, far within these sheltering walls, on Mary's work intent.  
(Ah, longing heart, be still!)

Here, safe from all earth's turmoil, from anger and from strife,  
Sheltered from all the pain and toil of every woman's life,  
My days all given to service, my nights to sweet repose,  
It is my joy to sing God's hymns and watch my crimson rose.  
(Ah, longing heart, be still!)

Spared all the pangs of childbirth, the mother's breaking heart,  
The anguish of renouncement, and ruined hope's keen smart;  
For me no faithless lover, no agony of pain;  
Content within these cloistered walls God gives me to remain.  
(Hush, hush, my heart, be still!)

# The Educated Woman of To-Morrow

By Heloise E. Hersey

THE progress of civilization in the century just past has given to women novel and extraordinary opportunities for education. It is common to treat that fact as if it were for women the most important one of the time. It is not. The most important fact in respect of the evolution of society in the nineteenth century is one in which men and women are alike concerned. It is this: The human race has been called on for adaptation to a new environment, with a rapidity unknown in the history of the world. We speak of the sixteenth century as the age of discovery, and picture the excitements of that time, with its startling experience and its enlargement of the imagination. We read with emotion Keats's stirring lines describing

"stout Cortez when with eagle eyes  
He stared at the Pacific—and all his men  
Looked at each other with a wild surmise,—  
Silent, upon a peak in Darien."

The silent agitation of that handful of explorers pales before the sight one may now see almost any day of the year, when a great floating town discharges its population of thousands of men, women, and children seeking a land of startling novelty and of infinite promise—conditions of life untried and unimagined—occupations varied, strenuous, rewarding—or poverty and death in exile. The scene at the immigrant station of New York is a commonplace of our time. That it should have become a commonplace is of itself a miracle.

This is but one of the rapid changes in the conditions of living. The concentration of life in huge cities, travel that girdles the continents, the fierce competition that after a hand-to-hand struggle makes peace by some vast combination, the increase of wealth and of poverty, the enormous factory, the ten-thousand-acre farm, the telephone exchange, the reformatory, the beneficent hospital, and the impending triumph by which man is apparently to enslave the circumambient air and force it to waft his word over the oceans—these and a thousand other marvels have made of life in our time a

matter nearly as different from life in the seventeenth century as was that of apes in the primeval forest different from that of Egypt under the Ptolemies. The demand for adaptation came with lightning-like rapidity. It came to all at once. No wonder that in the turmoil it has been imperfectly answered.

Great as has been the demand for adaptation made upon the whole race, that made upon women alone has been still greater. Here are some typical facts. In 1800 less than one hundred women were employed in factories in the United States. Employment in other lines outside those strictly domestic was rare. Even women teachers were few. To-day five millions of women are engaged in the United States in four hundred different wage-earning occupations.

In 1840 there was not a college in the world open to women. In 1890 in this country 303 colleges were open to both men and women, 127 to men alone, and 170 to women alone—an actual advantage of 43 in favor of women.

In 1900 there were in colleges in this country 58,467 men and 34,407 women—that is, nearly sixty per cent. as many women as men.

In 1900, in the United States, degrees were conferred on 10,794 men and on 4,293 women—more than one-third as many women as men.

The field that the college alone has thrown open to women is of bewildering extent and charm. Friendship, athletics, scientific research, several of the professions, have brought us their novel offerings. Surprises have been so numerous that women have almost lost the power of being surprised. The announcement that Harvard College had conferred upon a woman the degree of Ph.D. would be greeted with not much more excitement than that aroused in our grandmothers by the news that the stage-coach between Boston and New York had reduced its time for the trip by an hour and a half. The impossible of yesterday has become the commonplace of to-day.

There have been grave reasons—rea-

sons far deeper than the mere question of sex—for confusion during the last fifty years in regard to the feminine ideal. That there has been such confusion it is useless to deny. In our grandmother's time folk were pretty well agreed as to what a woman ought to be. The type was settled, and variations from it were regarded with suspicion. A very perfect article was certainly developed. But with change came doubt, and with doubt came inevitably semi-failure of accomplishment. If I know but dimly what I want, I am likely to get—nothing at all or an inferior article. Now one ideal prevailed and now another, none being triumphant enough to commend itself long to an eager and aspiring sex.

First came the ideal of the *achieving* woman. Her achievement was to be measured by the accepted standards of men's works. Her conscience and her ambition both spurred her to success. "Aren't you ashamed to be an idler?" cried her conscience. "Don't you long for the toothsome fruit of public praise?" whispered ambition. Between the two motives, woman rushed into the arena of ordinary life. She went into business and succeeded. She invaded at least two professions and succeeded. She did not hesitate to grasp at the prizes of high scholarship. She quietly took most of the great system of organized charity from the hands of men, and she has made of it the most perfect expression of human compassion that the world has ever seen.

Another prevalent opinion was that women should be freed from the restraints of conventionality. The eccentric woman is not now so much in evidence as twenty years ago, but she still exists. She no longer affects the masculine linen or the cane, but she may hold the theory that gentle manners are a survival of the harem, that grace and beauty are inconsistent with intellectuality, and that freedom is to be preferred to that fetich called *charm*.

Here, again, is the ideal of the woman as first and foremost an athlete. She must treat her body with the seriousness that we associate with the training-table and the boat-race. She frequents the gymnasium more than the church, and the golf-links more than the library. Her trophies are

neither sonnets nor diplomas, but loving-cups and broken records.

There has been an ideal that woman should be as political as possible. Give her the ballot, and education will take care of itself. Let her hold office, and she will achieve health and sanity.

Finally, there has been an ideal, half acknowledged, that women should be as separate as possible from men in aim and work. Witness the "women's buildings" at great expositions. What a marvelous variety of things have been gathered there, from crazy-quilts to statues, and from doughnuts to theses on quaternions!

From all these partial, spasmodic, imperfect theories it is time to turn. Out of the dust and scramble may we not emerge upon some tableland where we can see woman's life clearly and see it whole?

It is of vital importance that we should grasp at the outset and practically the truth that education is only one factor in a rounded life. It is not an end in itself, for men or women. It is a means to an end. It has so many delightful and absorbing accompaniments that we are easily beguiled into thinking it is all of life. Education, physical vigor, social influence, accomplishments, these are our weapons for the battle of life—they are not victory, nor do they insure it. The very phrase "the educated woman" is a misleading one, but it must serve in default of a better. The woman of the future will hold her education at its due worth, and unless she does so hold it, she will be unworthy of it.

This future woman will have the most gracious and alluring manners the world has ever known. They will have the sincerity of the Quaker and the elegance of the Frenchwoman of the Salon. Mr. Beecher used to say that he couldn't see why the devil should have all the good music. Why should the fools have all the good manners? Is there any reason, because I have studied the plays of Shakespeare, that I should enter a room like a frightened rustic? Ought not "the company of the high and most glorious poets" to set me free among my peers? Are a strident voice, a hurried gait, an elbowing push, the necessary result of the thorough study of the natural laws of this well-ordered and noiseless universe? Hasten the day when it shall be tautological to say, "She

is an educated woman with beautiful manners." Is it so now?

The woman of the future must settle the problem that now oppresses us as to the part which physical training and athletics must play in her daily life. The girl who takes prizes in athletics during her four years in college, and then goes home to town or village where there is neither gymnasium nor basket-ball team nor golf-links, may easily find herself irritable under her deprivation. There is one suggestion for the partial solution of the problem, but it not a popular one. The sound mind in the sound body may thrive not only on systematic athletic training, but also on manual labor of the most practical kind. The stigma so long resting on domestic labor must sometime be removed, as that which long rested on "trade" has been. It is partly reactionary. Some clever writer has said, "An age which worked Berlin wool parrots with beaded eyes naturally gives place to one which pays outsiders to darn its stockings." If the educated woman can contrive some sort of return to certain phases of manual work, she will not only provide a relief for her own nervous activity and help to adjust the domestic problem, but she will also broaden the bands of her own sympathy with ordinary life, and prevent that remoteness from the fundamental struggle of existence which is so greatly to be deplored.

The educated woman of the future is not to be primarily a hard-working woman. It has seemed at times during the last twenty years as if we were in danger of reverting to the squaw type. A woman at the head of a great philanthropy confesses: "It is a little queer for me to have to leave the house an hour before my husband in the morning and return to it an hour after he does at night." The ideal woman will look upon wage-earning for women as an evil, to be avoided if may be, to be accepted with a high philosophy if must be. Why any woman should want to earn money when there are so many better things to earn, it is hard to see. Did we need Mr. Kipling to tell us that in Paradise

"No one shall work for money  
And no one shall work for fame,  
But each for the joy of the working"?

Certain it is, however, that whether

the future woman earns wages or whether she labors for the higher rewards, her toil shall be without haste, as well as without rest. The world does not wait alone for the helping shoulder at the wheel. If I have hitched my wagon to a star, it is not necessary for the star to drop down to earth to pull me out of a mud-hole. What I ask of the star is that she shall keep on shining and moving in her orbit. It is a wide and noble one.

The educated woman will have a new standard of personal honor. The past heroines of fiction have been permitted to lie, to betray secrets, to hesitate between love and duty, and yet to die sweetly in the full blaze of the calcium light of sanctity. Schopenhauer declared a half-century ago that women so commonly lie that it was wrong to call on them to take an oath, so helpless were they to resist the temptation to perjure themselves! We have sailed far by that bitter word, but we wait yet for the day when an educated woman will keep a promise or a secret, will pay a debt, or will face a penalty as bravely as she bears physical pain.

The educated woman of the future will have a larger measure of that potent combination of common sense, a trained judgment of human nature, and a passionately warm heart, which makes for the perfect marriage. In respect of marriage, this country presents a unique situation. We are the only civilized people in the history of the world who for two hundred and fifty years have given free play to the law of natural selection. This law has controlled the jungle and the savage tribe, but civilization has always been adjusting and restricting its operation on society. Class distinctions, marriages of convenience, a careful guard upon the associations and the explorations of youth—these have been the rule among the cultivated classes in every nation in Europe. Whenever, in a single instance, a break was made with established custom, it has been regarded as exceptional, and the offenders have usually taken care that their children did not repeat the indiscretion. In this country the exact contrary has been true. There is an occasional marriage of convenience. Wealth sometimes marries wealth. There has been a tendency to intermarry among certain families. But these facts are exceptional. The Ameri-

can woman has found herself mistress of her own fate. She has not been entirely successful in the use of her freedom; but now, as balance and guard for that freedom, comes, not a *duenna*, not an ambitious, title-loving mother, not an avaricious father trading on his daughter's charms, but the trained judgment of the girl herself, first to direct and then to justify and reinforce the verdict of her heart. Nothing would be more absurd than that this judgment should repress or extinguish the voice of love. The loveless marriage should grow less and less frequent. So also should the marriage in which there is love and nothing else—no congenial tastes, no corresponding aspirations.

The educated woman of the future will be profoundly religious. She will instinctively find her place in the universe and will establish, use, and rejoice in her relation to God as truly as to her fellows. She will not become the victim of the "fads" and caprices that masquerade under the name of religion. The noisy revival, the silent séance, the crowded office of the paid "Christian healer," the ecclesiasticism that devotes itself to a sort of cult of millinery, will know this woman no more. Quakeries have too long found their willing victims among women. But to love God and to worship him, to study and to follow the Lord Jesus Christ, and to find the heart's home in the blessed Church which he founded on earth, will surely be the noblest effluence of the character of the modern woman.

It would be easy to go on enumerating attractive qualities that should be possessed by "earth's noblest thing—a woman perfected." Ought we not rather to look for some bond which should serve at once to unite and to define all these qualities? Civilization has advanced largely by means of the extension of that method known as the division of labor. Is it possible that in this great phase of human activity the contrary law is to obtain? Is it to come to pass that women shall simply learn to do better and better the work hitherto done by man? Is the progress of the sex to be judged by the new-old occupations they are pursuing, the professional skill they are acquiring, the research they are conducting, the pedagogical methods they are inventing and applying, the noble art they are

creating? Is it along these paths where leads the most imperative and the most *scientific* call for the woman of the future? Truly, no. It were far easier for her to excel in these efforts than in those to which she is summoned, but the voice of the age is insistent and she must not ignore it.

The world calls to-day for two great classes of workers. In every department of life they may be found. They are the conceiving and the nourishing; the planting and the tending; the creative and the sympathetic. One of these fields belongs to the man of the future as it has belonged to the man of the past. The other opens before the woman and claims her devotion. Is this rank mediævalism? In the Middle Ages the man went to the wars or in search of adventure, while the woman was fain to bide at home, to weave his linen, order aright his castle, and polish his shield. Let us grant that our theory has the mark of the mediæval upon it. Have not linen, shield, and castle assumed a new and symbolic significance in this new century? There have come into existence a great set of activities that may be called the activities of *amelioration*. This complex life of ours has brought many an evil in its train. The factory, the tenement-house, the slum, the sins of poverty, the sins of wealth, the strained or broken nerve, the perplexed, distracted spirit, these furnish the problems that women are called to solve. Some answer there is for each. Women are bound to find it. Life must be rendered happy and serene in spite of modern conditions. Women must defend beauty against the encroachments of the ugly, virtue against the attacks of vice, and faith and hope against the paralysis of materialism.

Women have already assumed the burden of many of our great philanthropies. Nothing could be better proof of their talent for saving that which seems lost than the rise, under their fostering care, of day nurseries, free kindergartens, vacation schools, social settlements, emergency stations, and all the great mechanism of modern philanthropy.

But let us not strive to be too specific. We do not know what the new century is to bring of scientific advance. Neither do we know what new gifts it will bring to woman or what new demands it will

make upon her. We can but try to guess in what quarter of the heavens the star will appear which is to lead her on.

The woman of the twentieth century will have a trained mind well equipped; gracious manners; a strong and active body, capable of all homely tasks as well as of athletic feats; she will have the repose which comes from the possession of some precious leisure; she will know the full meaning of the phrase, "in honor bound;" she will know how to love and where to love; she will have a clear vision of the spiritual world; all these powers will be at the service of those who wait in weakness and weariness for help. As women are the mothers of the race, so will they become in still deeper measure the mothers of society. So at last will the sublime prophecy wrapped up in the poet's phrase, *Das ewigweibliche*, be seen

to be a modern truth, supported by the achievements of modern science both in physiology and in sociology. So the poet, the student, and society come finally to the same goal. To the womanhood of those who are now in the full bloom of girlhood will belong the fulfillment of the poet's dream.

"They to the disappointed earth shall give the  
lives we meant to live,  
Beautiful, free, and strong,  
The light we almost had  
Shall make them glad.  
The words we waited long  
Shall run in music from their voice and song.  
Unto our world hope's daily oracles  
From their lips shall be brought,  
And in our lives love's hourly miracles  
By them be wrought.  
Their merry task shall be  
To make the house all fine and sweet  
Its new inhabitant to greet,  
The wondrous, star-eyed, twentieth century."

## To the Unknown God

### Athenian Hymn

By Robert Haven Schauffler

Night-folded Unreality  
(If such a phantom-god there be),  
We raise our timid song to Thee.

They say Thy home is in the deep;  
Below Poseidon Thou dost keep  
Thy throne where sunbeams never sleep.

They say Thy home is in the sky;  
Thou flashest an all-seeing eye  
Down on the peak where Zeus doth lie.

But if Thou art so far from here  
That Thou to man dost not appear,  
Why do we sometimes feel Thee near,

Or seem to feel, when droops the heart?  
Do we then know Thy healing art—  
Or is it of our dreams a part?

Sometimes we seem to feel Thee nigh  
In moments when the soul mounts high—  
Seem to behold Thee eye to eye;

And then Thy majesty we deem  
More radiant than Apollo's beam  
Or the Cloud-Gatherer's lightning-gleam.

Then Earth returns Thy mien to mar,  
Leaving Thee phantom-like and far  
Like luster from a hidden star.

## SOME OF THE GALLANT DEEDS OF THE WAR WITH SPAIN<sup>1</sup>

**B**RAVERY is the rule rather than the exception. It has had signal illustrations in all the crises of our history. Who forgets Nathan Hale, who regretted, when dying the patriot's death, that he had but one life to give for his country?

When the war with Spain was impending, no question arose as to the bravery of American men-o'-war's men; nor, indeed, did we have any doubt of the courage of the foe. Spain's history is also replete with deeds of heroism. What the Spaniard lacked more than the American was the initiative dash which, supported by gallantry and efficiency, was sure to win the victory. Full of patriotism and from infancy inspired at hearth and school by the recital of the glorious deeds of the past, American seamen could be depended upon to do their best and to flinch from no service for the honor of the flag.

Associated in the popular heart with the names of our heroes in the recent war are the names of the vessels the decks of which they trod. It is Dewey and the Olympia, Clark and the Oregon, Hobson and the Merrimac.

At the time of the destruction of the Maine, the entire armored fleet of the Spanish Government was in home ports or cruising in the Atlantic Ocean; and one vessel, the Vizcaya, was enjoying in New York Harbor the hospitality of the United States. Because our force was not, at least nominally, superior to that of Spain, it was important that we should concentrate our armored ships within striking distance of Cuba. Dewey just at that time hardly seemed to need

such vessels; his squadron was strong enough to destroy the Spanish force defending the Philippines. The geographical situation rendered our Pacific slope also safe from Spanish men-of-war operating from the Peninsula. Nevertheless, to guard against the contingency of attack by an isolated Spanish cruiser or privateer, a scheme of naval defense was adopted for the western coast which included the stationing of the monitor Monadnock at Port Angeles, Washington, for the defense of northern ports, and of the monitor Monterey at San Francisco and San Diego for the protection of southern cities, and the distribution of less effective vessels, manned by naval militiamen, at the same and other points. With these there, the Oregon could be spared from the Pacific coast and was needed in Cuban waters. She was in good trim to do the work the Department cut out for her. At the naval station at Bremerton, Washington, she had been docked and cleaned and painted; to make her steadier in a seaway, new bilge-keels had been fitted; doubling plates were put on; injured floor-plates were removed and replaced, and her outside plating was overhauled. She was in condition to render the best service, and her subsequent achievements in prolonged voyage and strenuous battle, and the comparative small cost of her subsequent repairs, are a splendid tribute to her builders, the Union Iron Works of San Francisco.

Three weeks after the Maine sank in Havana Harbor the Secretary of the Navy ordered the Oregon to proceed from Bremerton to San Francisco, there to receive ammunition and await orders. "In view

THE SINKING OF THE MERRIMACK

of the present critical condition of affairs," her commanding officer was advised under date of March 12, "the Oregon should leave San Francisco at the earliest possible date, and arrive at Callao [Peru] as soon as practicable. The crew is to be constantly drilled, the passage of the ship not to be delayed thereby." Broken health forced the Department to order Captain Alexander H. McCormick, who then commanded her, before a board of medical survey, and its report of physical condemnation alone caused his detachment. There was no time, even had the Department been so inclined, to send a captain from the East to join the Oregon, nor could one have been found better fitted for the perilous and gallant task before her than Captain Charles E. Clark, who then commanded the Monterey, at San Diego, and who was transferred to the battle-ship. He entered upon his new duty on March 17, and two days later the Oregon began the trip which has no parallel in history.

The passage of the Oregon through the Golden Gate marked the beginning of a season of anxiety for the officers and men on board as well as for the Department. Captain Clark was now to carry out the orders of the Secretary of the Navy, to proceed into a zone in which danger from the elements and the foe was to be feared. Primarily responsible for the voyage, the Department was bound to facilitate it, and, by the transmission of information respecting the enemy, safeguard the ship. The Marietta, Commander Frederick M. Synonds commanding, which was at San José, Guatemala, protecting American interests, was directed to sail at once for Panama, and under date of March 24 she left that Colombian port for Callao, to make arrangements for coaling the Oregon when the latter should arrive. The Marietta reached Callao on March 30, and contracted for coal. On the following day she sailed for Valparaiso, Chili. Her orders to put into this port were based upon the Department's expectation that the Chilian battle-ship, the Captain Prat, would, by purchase, be added to our navy. The negotiations to this end fell through, as failed most of our efforts to buy men-of-war from foreign governments. The call of the Marietta was productive, however, of one important

result. It afforded the Chilian authorities an opportunity to show to the United States the courtesies of their good will. On the day the Marietta reached Valparaiso the Oregon left Callao. While at the Peruvian port, minor repairs had been made to the machinery of the battle-ship, and she sailed with one boiler still in the hands of workmen. Captain Clark had cabled that he could make Montevideo, Uruguay, and perhaps Rio de Janeiro, Brazil, and the Department gave him orders to this effect. He was advised that the Spanish torpedo-boat *Temerario* was at Montevideo, and that the Marietta had been directed to proceed to Sandy Point, Patagonia, to arrange for coal and to accompany him to Key West. Those who recall the apprehension excited by the Spanish torpedo-boats just prior to the war will understand the Department's anxiety for the Oregon. There was the possibility that the commander of the *Temerario* might be sufficiently enterprising to take station in one of the numerous inlets of the Straits of Magellan, and discharge a torpedo at the American man-of-war as she passed. Captain Clark was not advised that war had been declared until his arrival, April 30, at Rio de Janeiro, but he took precautions against torpedo attacks, screening, when in company with the Marietta, all the lights, which were shown by only the leading vessel, and having gun-crews asleep beside the loaded 8-inch, 6-inch, and smaller rapid-fire guns. Nearing the Straits of Magellan, the Oregon and the Marietta, still separated, plunged through a tempestuous sea. Tons of water swept the deck of the battle-ship, and the little Marietta was tossed and pitched and finally compelled to run into Tuesday Bay. In the Straits, and before arrival at Sandy Point, the Oregon encountered a violent gale. So dense became the rain and the fog that it was impossible to distinguish the frowning shores. The situation of the Oregon was very dangerous. Captain Clark let go his anchors on a rocky shelf, and, with the wind howling and the waves thundering upon the islets and reefs, the gallant ship rode out the storm. At daylight, April 17, the battle-ship got under way, and, steaming at fifteen and one-half knots, hastened to Sandy Point. Captain Clark desired to reach his destination

THE CONVERTED CRUISER

before nightfall, so as to deprive the *Temerario* or any other hostile vessel from the additional advantage of darkness in making a torpedo attack. Tortuous and narrow, the Straits of Magellan afford numerous opportunities for the operations of a torpedo-boat.

The *Marietta*, which joined the *Oregon* at Sandy Point, had arranged for coal in advance of her arrival. The fuel was soon pouring in almost a continuous stream into the bunkers of the two ships. To enable earlier departure, men of the *Oregon* left their hammocks in the netting while they shoveled and carried coal. Equally zealous was the crew of the *Marietta*. The spirit on board the gunboat was also shown at Para, Brazil, where two officers, not on duty, seized wheelbarrows and voluntarily aided in coaling, thus encouraging the men, who, though nearly worn out by labor already performed, were full of enthusiasm.

It was impossible for the Department

COMMANDER RICHARD WAINWRIGHT

GLOUCESTER IN WAR PAINT

to communicate telegraphically with the *Oregon* and *Marietta* at Sandy Point. After the voyage was completed we learned that the two ships safely passed out of the Straits on the evening of April 21. The low rate of speed of the *Marietta* and the head winds and seas experienced north of Rio de la Plata retarded the *Oregon* during the voyage to Rio de Janeiro. The officers of the ship, the engineers

among whom voluntarily doubled their watches when high speed was required, and the men, who, suffering from heat-exhaustion, yet crawled back to the engine-rooms, chafed under this enforced delay. But the *Marietta* was needed to aid in repelling any possible torpedo attack, and man could not control the wind and the sea. The Department's concern for the *Oregon* was intensified by the departure of Cervera's squadron from Cape Verde Islands, and of the *Temerario* from Montevideo for Rio de

Drawn by Henry Reuterdahl.

Janeiro. There were indications that the Spanish ships were converging for the purpose of sinking our battle-ship. Many plans were considered by the Naval War Board and the Department to assure the safety of the Oregon. Ignorant of the actual condition of the Spanish division, it was feared that if she fell in with it she would be overpowered. But confidence also prevailed that before destruction she would inflict serious damage upon her opponents. Captain Clark, in a letter to Captain Alfred T. Mahan, stated that in the event of battle he had determined to pursue the tactics of the last of the Horatii. He proposed to turn tail after sighting the enemy's fleet and to make a running fight. It would be to the advantage of the Oregon to delay as long as possible the employment of the broadside batteries of the hostile ships. Though three of the latter were sister ships, Captain Clark believed they had different rates of speed, and in a battle such as he projected they would be drawn out into a line, and one might be placed *hors du combat* before the others came to her assistance. By this move he hoped to prevent concentration of the Spanish fire, which, in all likelihood, would kill or drive the men from the rapid-firing guns, and leave the battle-ship dependent for defense upon her turret guns—a disadvantage which to an enterprising foe would be an opportunity for torpedo-boat attack. Against the heavy stern fire of the Oregon, consisting of two 13 and four 8 inch besides smaller guns, each Spanish cruiser could not oppose a bow fire of more than one 11 or 9.8 inch gun and guns of lesser caliber. Had the Oregon met Cervera's fleet, the latter, in view of its condition, would very likely have suffered defeat and perhaps annihilation. Certainly her officers and men were determined to do and dare any peril. *Possunt quia posse videntur*. The tactics determined upon by Captain Clark were observed at Santiago de Cuba, with this difference—that the Oregon, co-operating with the other American men-of-war, was the pursuer, and the Spanish squadron was the chase.

The friendliness toward the United States of Brazil, which sold to this country two men-of-war under construction for her navy in England, was further shown

by the courtesies she extended to the Oregon and the Marietta during their stay at Rio de Janeiro. The Department had been in negotiation for the Nictheroy, an auxiliary cruiser which, during the revolution in Brazil of 1894, had been purchased by that Government from a private firm in the United States. The Nictheroy, as was the case with some other purchases made by us in our sharp stress for ships, was rather a bad bargain, but was at once overhauled and is now, under the name of the Buffalo, a useful and effective man-of-war. The purchase served, however, the good purpose of increasing the friendliness of Brazil, which had herself not made an over good bargain in buying this vessel five years before. Captain Clark was told that the Department left it to his discretion as to avoiding the Spanish fleet and making his run to the United States, and that the Marietta and Nictheroy were subject to his orders. Frequent breakdowns of the machinery of the Nictheroy delayed the division, and Captain Clark, feeling that the Oregon was needed to reinforce Rear-Admiral Sampson, and that in any event he would have to abandon his consorts if he met the enemy, directed Commander Symonds to proceed with his own ship and the auxiliary cruiser to the United States. When the Oregon put into Bahia, the Department instructed her commander to make no further stops at Brazilian ports, but to proceed to the West Indies, and reiterated its caution to avoid if possible the Spanish squadron, the whereabouts of which was still unknown.

On May 12, the day the Department learned of the appearance of Cervera near Martinique, and two days after the departure of the Oregon from Bahia, the question of the safety of this battle-ship was submitted to and considered by the Naval War Board. The time for despatching assistance had, however, passed. To send it, it would have been necessary for the Department to advise Captain Clark at Bahia to pursue a certain route, and to designate a point on it at which he could be met by reinforcements. This action was not taken because, despite every effort to maintain secrecy, it was probable that information of the movement would leak out, and, besides, the Department was confident that the Oregon would take care

THE WHITEHEAD TORPEDO

of herself. To the Secretary the War Board reported:

The Board discussed fully the question of the advisability of despatching assistance to the Oregon, in view of the possibility of that vessel being waylaid by the Cape de Verde squadron. After fully considering the matter, it was concluded that, under conditions as they now exist, it was inexpedient to detail either the Flying Squadron or vessels from Admiral Sampson's fleet to assist her, as the danger of her meeting the Spanish squadron was now thought to be less than formerly, and it was undesirable to disturb Admiral Sampson's operations around Porto Rico or to leave the northern coast without its chief defense.

Sixty hours after the Spanish squadron left Curaçao, its destination unknown, the Oregon arrived at the Barbadoes, six hundred miles away. Captain Clark learned here of the sighting of the Spanish fleet on May 12 off Martinique, one hundred miles distant. He coaled as rapidly as possible, British neutrality permitting him to receive sufficient fuel to reach an American port, and on the evening of May 18 circled the island and made to the northward on his way to Key West. On May 24 the country and the Department learned with relief that the battleship was off Jupiter Inlet, Florida, and a

few hours later she dropped anchor at Key West. The Oregon had completed in sixty-eight days a voyage of fourteen thousand miles, and at its close needed only coal to join the fighting fleet. The Marietta, which had been authorized to leave the Nictheroy, and ordered to proceed alone to Hampton Roads, reached Key West on June 4. Like the Oregon, whose fame she shares, she was fit for immediate service—a remarkable record in view of the type of ship, the distance steamed—twelve thousand miles—and the character of the weather encountered. The congratulations sent by the Department to the commanding officers of both vessels were heartfelt. The addition of the Oregon to Rear-Admiral Sampson's command gave it great superiority over Cervera and assured his destruction. The Spanish captains contend that the United States need not have felt a moment's concern about Captain Clark's ship. "It was about this time, namely, May 18," wrote Captain Concas y Palau, Cervera's chief of staff, "that the Oregon cast anchor at Barbadoes. The United States Government was under the impression that it might be the object of the maneuvers of our squadron to go in search of that ship, which we, however, supposed to be in the Pacific. This illustrates how the commander-in-chief of our squadron was supplied with information."

It does not detract from the credit due and which has been universally given to the officers and the men of the Oregon to say that the voyages of the monitors from San Francisco to Manila were even

more arduous and certainly as worthy of commendation. A vessel even of the Oregon class had never made a sea cruise such as she was called upon to make, and some were skeptical, before the battle-ship started, as to her ability to plow in safety through the seas raised by the storms of the southern zones. The Department had, however, entertained no apprehension on this score, and performance settled all doubt. Then, too, the subsequent voyage of the Oregon from New York to Manila demonstrated beyond all question that she and her sister ships, under careful officers, can navigate the ocean without more than ordinary danger. The monitors, however, were nothing but coast defense ships, and had not been constructed for oversea operations. The experience of Rear-Admiral Sampson with the monitors attached to the North Atlantic Fleet had proved that vessels of this class are not good sea boats. Small coal supply restricted their range of operations. They were slow, rolled heavily in a seaway, and were almost suffocating between decks, where officers and men had to seek refuge even in a moderate blow.

There was probability that Spain, taking advantage of the comparatively insignificant strength of Admiral Dewey's squadron, might order some of her armored ships, the completion of which was hastened, to the East to reassert her sovereignty over the Philippine Archipelago. The official notes of Spain show that we were not wrong in this assumption. "Very serious situation in the Philippines," the Spanish Minister of War cabled to the Governor-General of Cuba on June 3, "compels us to send there ships and

PHOTOGRAPH BY ENRIQUE MULLER

THE TORPEDO BOAT WINSLOW

reinforcement of troops as early as possible. To be able to cope with hostile squadron at Manila it will be indispensable to send an equally strong fleet there."

Before this message was sent, the Department, through its agents in Spain, had heard and transmitted to Admiral Dewey rumors of a possible Spanish expedition to operate about the Philippine Islands, and on May 20 it advised him of reports that the battle-ship *Pelayo*, armored cruiser *Carlos V.*, protected cruiser *Alfonso XII.*, and some transports carrying troops, were *en route* to the Orient. Other reports gave the east coast of the United States as their destination. Dewey was warned not to place too much credence in these rumors, as at the time our sources of intelligence in Spain were liable to error. If one, however, considers that the expedition under Admiral Camara, which started for the Philippines but was stopped at Suez, comprised both ships and troops, the rumors first mentioned will be found to have been very nearly correct.

The success of Dewey at Manila entailed upon the Department the further responsibility of providing him with an adequate force to retain his position in the Far East. The reports of the despatch of a Spanish relief force were regarded as having some foundation. For Spain to leave the United States in undisputed possession of the Philippines would be prejudicial to the Spanish case in future peace negotiations. The cruiser *Charleston*, which had been hastily completed and commissioned, on May 5 was ordered to Manila in company with the *City of Peking*, conveying troops to that point. *En route*, Captain Henry Glass, commanding, captured the island of Guam without resistance, the Governor not having been informed of the declaration of war and at first believing that the guns fired by the *Charleston* were a salute to the flag of Spain.

Dewey had enough protected and unprotected cruisers and gunboats, but these in a battle with efficient armored ships would run great risk. With Cervera's squadron intact, and containing the possibilities of incalculable mischief, and with the probability that Spain would, after all, attach to it the armorclads then in Peninsular waters, any reduction of Sampson's

strength would have been unwise, and was not seriously considered. But reinforcements for Dewey were essential, and the Department decided to send to him the monitors *Monterey* and *Monadnock*.

There was historical precedent for the despatch of the monitors on a long cruise. To silence critics who condemned the type because of alleged unseaworthiness, the Department, after the Civil War, sent the *Monadnock*, of Civil War construction, from the Atlantic coast to San Francisco to be of aid in case of any necessity for the defense of the west coast, and the *Miantonomoh* to Europe to impress the governments of that continent with the formidable character of the new type of vessels developed in our country. Yet, in spite of the performance of these ships, the Department could not but regard the voyage of the *Monterey* and the *Monadnock* to the Philippines, made under the very different circumstances of the stress of war, as an experiment. Again there entered the element of great risk, but the emergency justified it.

The *Monterey* was the first to leave San Francisco. Commanded by Commander E. H. C. Leutze, with officers and men enthusiastic at the prospect of active service, she started on June 7, in company with the collier *Brutus*. A moderate sea washed the coal from her deck, and she put into San Diego, whence she sailed on June 11. Two weeks later the *Monadnock*, Captain W. H. Whiting, with troops on both sides of the Golden Gate wigwagging good-by and good-luck messages, steamed for Honolulu. Accompanying her under instructions to supply coal or to tow was the collier *Nero*.

Thirteen days were occupied by the *Monterey* in making Honolulu. The *Monadnock* covered the distance in better time, arriving on July 3, ten days after leaving San Francisco. Both vessels made repairs and received supplies at the Hawaiian capital. On July 1 the *Monterey* started for Manila, and the *Monadnock* followed on July 13. The experience of one ship was the experience of both. Partly in tow, partly under their own steam, machinery requiring constant attention, the towing bridle chafing, and repairs necessary, they labored toward Manila.

"The trip through the tropics," Captain Whiting states in his official report,

REAR-ADMIRAL CHARLES EDGAR CLARK

Commander of the *Oregon* during its famous voyage from the Pacific.

"was very trying on officers and men. The temperature of the sea water has been 85 to 87 degrees, the temperature of the air 75 to 95 degrees, and with the engines and boilers in use there was no chance for the heat to radiate. Hence the temperatures in the ship have been very high—fire-room from 110 degrees to 130 degrees, engine-room 118 to 140 degrees, dynamo-room 105 to 130 degrees, crew space 86 to 99 degrees, lower wardroom 89 to 100 degrees, cabin stateroom 95 to 99 degrees. Men have been overcome in the coal bunkers, fire-room, and evaporating-room with heat exhaustion, and the health of the ship's company has been affected by living in such high temperatures."

These hardships were common to both vessels, although little notice of them has been taken, and were much more prolonged and therefore severe than those on board of ships which had more glory. On the *Monterey*, and the same must have been substantially true of the *Monadnock*, the hatches were off only once in fifty days, and on that occasion the deck was so hot that it was necessary to play the hose on it to keep the pitch from boiling out. The monitor ran at times submerged

under water. In spite, however, of all difficulties, no effort was left unmade to hasten the progress of the voyage. The *Monterey* chose to make Manila by San Bernardino Straits, and when she passed through, in the early hours of August 2, the Spanish colors were hoisted in salute from a near-by lighthouse. The Spaniards apparently believed a relief force for themselves had come. At the time the *Monadnock* left San Francisco it was thought Camara might get his squadron to the East before her arrival. She was therefore directed to follow a prescribed course, along which she would join Dewey's squadron if it were compelled to withdraw temporarily from Manila. This course the *Monadnock* followed, but, of course, failed to sight any of Dewey's ships until she cast anchor in the harbor of Manila on August 16, four days after the signature of the peace protocol in Washington and three days after the fall of Manila. The *Monterey* had reached Manila on August 4. With the arrival of these two ships closed the most hazardous voyages of the war.

Thus, while all the ships fought well, a few were called upon to render conspicu-

ous service, and they responded nobly. So it was with the men. There were everywhere in the service the desire and anxiety to be in the forefront, where danger was and where the flag needed support. It was pretty much an even level of courage, although above it rose some special instances of gallantry—special rather in the opportunities than in the men. There were, for instance, the deeds of Hobson, of Blue, of Wainwright, of Bernadou, of Ward and Buck, of the navy, and of Newcomb of the revenue cutter service. Among the enlisted men were those who dared death with Hobson, who fought under Wainwright, who served with Bernadou, who bravely repulsed the Spaniards at Guantanamo, and who participated in the cable-cutting expeditions.

When Cervera's squadron was definitely located at Santiago, the Department and Rear-Admiral Sampson considered the means that should be adopted to prevent its departure. The channel ranged from 350 to 450 feet in width at the entrance of the harbor, and it was decided to bottle up Cervera by sinking a vessel at the narrowest point. Sampson instructed Schley to use the collier *Sterling* to effect this purpose. Before Schley could execute the instructions, Sampson arrived and took command. While on his way to Santiago, this commander-in-chief directed Naval Constructor Richmond Pearson Hobson to devise a method for sinking a ship so as to prevent the egress of the Spanish men-of-war. Hobson considered many plans, including the feigning of a chase of a collier by the fleet, with a view to deceiving the Spaniards until the obstruction had arrived at the point selected and had sunk. Sampson determined that it would be wiser to send in a ship just before dawn and when the tide was flood. This tide was desired so that if the anchor gear were destroyed the ship would drift and sink before moved by the ebb tide to a wider part of the channel. Thursday, June 2, and half-past three in the morning, were the day and hour selected for the maneuver. Immediately upon arrival at Santiago steps were taken to carry the plan into execution. Ten electric torpedoes, each containing a charge of eighty-eight pounds of gunpowder, were attached to the port side of the

collier *Merrimac*, which was designated for the sacrifice. To facilitate the sinking of the vessel, it was arranged to drop anchors forward and aft, cargo ports and all interior doors and hatchways were opened, and sea connections prepared so as to be readily opened. Twenty-three hundred tons of coal lay in the hold of the *Merrimac*, but, even if time had permitted its removal, it was believed that it would aid in holding the vessel in the channel.

Rear-Admiral Sampson determined that as Hobson had prepared the plan, he was the person best fitted to execute it. Commodore J. M. Miller was therefore relieved of the command of the *Merrimac*—a hardship for that brave officer, but one which the chances of war imposed. A call for volunteers was made. Only six or seven men were needed—one to steer, one to assist in exploding the torpedoes, one at each anchor to cut the rope holding it, one in the boiler-room, and one to operate the engines. Rear-Admiral Sampson assured Hobson that there would be no difficulty in obtaining men. Indeed, when the signal was hoisted, the majority of the crew of every ship asked permission to go. Personal appeals were made to Hobson and to Sampson. Patriotism blunted the fear of shell and bullets, and glory-winning service of the country was the factor actuating the men who applied for the privilege of going to what appeared to be certain death. Sampson refused to permit a greater number on board the *Merrimac* than necessary for the conduct of the maneuver, and as finally designated they were:

George Charette, gunner's mate, first class; Daniel Montague, chief master-at-arms; J. E. Murphy, coxswain; George F. Phillips, machinist, first class; Francis Kelly, water-tender; Randolph Clausen, coxswain, and Osborn Deignan, coxswain. Deignan, Phillips, and Kelly were among the crew of the collier when under Commander Miller. The commanding officer recommended Deignan to Hobson. Assistant Engineer Robert K. Crank, who aided in the preparations and was on the vessel on the first attempt to make the harbor entrance, urged the selection of Phillips and Kelly. Captain Robley D. Evans named Murphy as the representative of the *Iowa*. Charette had served

with Hobson when the latter was a midshipman, and, remembering his conduct, the Constructor allowed him to go. Montague was chief master-at-arms of the New York and was indorsed by the officers of the flagship. Clausen's selection at the last moment gave rise to the report that to make sure of going he had secreted himself on board the Merrimac, which was not the case. He was at her wheel when Hobson, in need of a seventh man, informed him to his delight that he should remain on the vessel.

Having completed arrangements early on the morning of June 2, the Merrimac, her crew stripped to underclothes, wearing life-jackets and carrying revolvers in belts around their waists, started for the scene of her destruction. Before out of reach she was directed by Rear-Admiral Sampson to return, as dawn was breaking. The reaction from the strain was fearful, and one man, Boatswain Mullen, of the Merrimac, was, in spite of his earnest protest, relieved, and in his stead Murphy designated as above stated.

There was a slight chance of escape by Hobson and his companions, and Rear-Admiral Sampson directed the steam-launch of the New York, under Naval Cadet Joseph Wright Powell, to follow the collier and wait near the harbor entrance, prepared to dash in to the rescue should the men succeed in getting away alive. This duty was most hazardous, but, as in the case of the Merrimac, every member of the crew of the launch volunteered for it.

On the morning of June 3 the plan was put into execution. With the full moon streaming down upon the Merrimac, she moved toward the site of her grave. Deignan was at the wheel, Phillips and Kelly were in the engine and boiler rooms, and Charette, Clausen, Montague, and Murphy were at their stations. Coolly directing the course of the ship was Hobson, stripped, like his men, of all clothing save shirt and drawers, and wearing a life-preserver and revolver-belt. Five hundred yards from the mouth of the harbor the Spanish batteries opened fire, and shell hurtled through the air, shrieking and exploding in and about the ship. Hobson gave the signal to stop just before reaching the point where the Merrimac was to be sunk, and the men below obeyed

the order. Sea-valves were opened, anchors let go, and orders given to explode the torpedoes. But the enemy's fire had broken the torpedo connections and shattered the electric generating cells, and but two torpedoes were discharged. In the meantime the steering-gear was shot away, and the wreck drifted helplessly away from the position where it had been intended it should sink.

The Merrimac was subjected to the fire of all the guns of the fortifications, and a submarine mine exploded beneath her hull. The Spaniards believed that our fleet was attempting to force the harbor. Lying at full length upon the deck, Hobson and his men waited for a projectile to explode among them and send all into eternity. The ship was drifting toward the wider section of the channel, and here she lurched heavily and sank. The men were washed miraculously alive into the water, and hurled about in the mass of débris. Toward a catamaran they swam, and to it they clung, keeping only their heads above the water. A Spanish launch appearing, Hobson called, and, covered by the rifles of her guard, he and his men were taken on her. Admiral Cervera was on board; to him the Merrimac's crew surrendered, and his humanity and kindness were as great as their heroism, which appealed at once to his admiration.

Hobson gallantly executed the mission intrusted to him. Although it failed, failure in no wise detracted from the magnificent courage displayed by the men engaged in the maneuver. In his report of it to the Department, Sampson said, "A more brave and daring thing has not been done since Cushing blew up the Albemarle." Learning with gratitude that the crew of the Merrimac survived, negotiations were begun to effect an exchange, and they resulted successfully a few days before the capitulation of Santiago.

While Sampson was satisfied on June 3 that he was blockading the entire Spanish squadron in Santiago, the report from the Eagle and Resolute that they had sighted four powerful hostile vessels, although not much weight was attached to it, made necessary positive knowledge as to whether all of Cervera's armored ships were actually within the Cuban harbor.

Rear-Admiral Sampson was notified of the Department's anxiety in this connection, and he directed Lieutenant-Commander Daniel Delehanty, commanding the U. S. S. Suwanee, to ascertain through the insurgents how many Spanish ships lay in the bay. Believing that an officer could obtain more satisfactory information than a Cuban, Lieutenant-Commander Delehanty, with Sampson's approval, directed Lieutenant Victor Blue to make a reconnaissance of the harbor. Clad in the uniform of his rank, Blue landed, and, in company with a Cuban officer, made for the hills in the rear of Santiago. The two officers passed on one occasion within six hundred yards of a Spanish camp without detection. Blue was taken to the headquarters of an insurgent Cuban battalion, and there a conference was held as to the route to be followed. Small parties of Spaniards were patrolling the country in all directions within a zone of fifteen miles from the city, and it was necessary to exercise the utmost caution. A decision was finally reached, and, with three soldiers leading the way, Blue and the Cuban officer resumed the journey. The party traveled along the main road leading to Santiago for a distance of one and a half miles, when they entered the woods. Leading their mules through a swampy jungle and sinking knee deep in mud, they doggedly tramped. Fearing that in the dark, night having fallen, a Spanish detachment might be met, it was decided to halt, and until daylight they remained sheltered in the home of a Cuban sympathizer. When morning came, they moved along the road recommended by the host of the night. Other sympathizers gave good advice as to the route to be pursued in order to avoid Spaniards. The party finally reached the top of a hill and dismounted. Beneath it was encamped a force of Spanish soldiers, and beyond, upon the bay, lay two armored cruisers and two destroyers. The scouts gently stole toward the city, and half a mile from the first position ascended another hill. Here was sighted the third armored cruiser. But the fourth remained to be located. Another point of vantage was sought, and from it Lieutenant Blue beheld the sought-for vessel.

Having obtained the information, the party started on its return journey, and

arrived without molestation at Acerraderos. The Suwanee's mail-boat carried Blue to his ship, and Rear-Admiral Sampson notified the Department of the result of the reconnaissance.

Accurate information is, of course, essential to the successful conduct of war. Prior to and in the early stages of the struggle with Spain, the Department received from various sources a mass of reports regarding the disposition and condition of the Spanish ships. There was danger that hired spies would sell themselves to the Spanish Government and supply us with misleading information. The President and Secretary of the Navy determined to send two officers to Europe to report upon the movements of Cervera and those of Camara. To the first duty was assigned Ensign Henry Herbert Ward and to the latter Ensign William Henry Buck. Each, in civilian garb, was on board a foreign yacht hired for the purpose, the officers and men of which had no knowledge of the business or character of their voyaging sightseer, except that they were to take him wherever his pleasure inclined him to go. As these officers took their lives in their hands, necessarily the greatest secrecy in regard to their mission was imposed. Ward first went to Cadiz, Spain, where he stayed forty-eight hours, but failed to find any trace of Cervera or of the vessels of his division, though he identified the ships of Camara's squadron, and, safely reaching Gibraltar, cabled the information to Washington. This information was confirmatorily valuable, for only the day before its receipt the Department had notified Dewey that the Spanish fleet was *en route* to the Philippines. From Gibraltar Ward went to St. Thomas. At the Madeiras he learned that the Canary Islands were defended by only three torpedo-boats, and this information was immediately sent to the Department. Spanish agents at St. Thomas became suspicious of the young "Englishman," Ward and Buck being regarded as of this nationality, and upon Ward's departure for San Juan they cabled the fact of his coming to the Spanish authorities. Four officials of the port boarded the steamer when she reached San Juan and cross-questioned the suspected passenger. Displaying remarkable

*sang-froid*, Ward was guarded in his replies, and finally declared that he would not respond further unless in the presence of the British Consul. The examination was resumed when the British official boarded the steamer. So convincing was the American officer that he was finally advised that he would not be molested, but was not to be permitted ashore. Not content with his narrow escape, and desiring information in addition to that which he could get in the harbor, Ward protested to the British Consul at being confined to the ship, and through the intercession of that officer, who little knew whose cause he was advocating, the prohibition to land was removed. In company with the Consul and a Spanish naval officer he landed and called upon the naval commandant, of whom he requested relief from the espionage of the Spaniards. This request was granted, and Ward strolled along the water front and through a portion of the Spanish barracks. After his visit to San Juan he visited neutral ports investigating rumors that the Spaniards were gathering supplies in preparation for further operations. These were found to be groundless.

In the meantime Buck was devoting his attention to Camara. Learning positively that the Spanish Admiral had sailed from Cadiz on a westerly course, Buck proceeded to Port Saïd, where he ascertained that the Spanish ships had passed through the Canal. Informed that Camara would probably return, Buck remained at Port Saïd, and when the hostile ships re-entered the Mediterranean he promptly cabled the news to the Department. The departure of Camara from Port Saïd and his course were also communicated to Washington, and Buck then took passage in a steamer for Algiers, keeping in sight of the Spanish ships until the vessel he had boarded turned into its port of destination. From Algiers Buck returned to the United States, there being no further need of his presence in the Mediterranean.

Whoever tells the story of the battle of Santiago must refer to the gallantry of the officers and men of the Gloucester. This pleasure yacht, comparatively frail as a lady's fan, purchased from J. Pierpont Morgan and put to the perils of a man-of-war, braved for a time, almost alone, the guns of the whole Spanish squadron and

the shore batteries, and by her accurate and deadly fire disabled and, with the assistance of our armorclads, sank two Spanish torpedo-boat destroyers, each of which was her superior in construction and fighting strength. A shot from a one-pounder gun would have rendered the Gloucester helpless, but, while aware of this possibility, yet giving no heed to it, Lieutenant-Commander Richard Wainwright carried the vessel to the point where she could inflict the greatest damage upon her foes. At the hour when Cervera's ships appeared, the men of the Gloucester, as with those of other vessels of the squadron, were drawn up for Sunday inspection. While on the berth-deck, Wainwright heard the welcome news that the Spaniards were coming out. Hastening to the bridge, he ordered the helm put over, and to Chief Engineer George W. McElroy the signal was given by Lieutenant Harry McL. Huse, executive of the vessel, "Full steam ahead."

The praise that is due Milligan, of the Oregon, for keeping his engines in efficient condition is due also to McElroy for his work in connection with the machinery of the Gloucester. Wainwright ordered forced draught, and the blowers were soon whirring, and steam began to rise in the boilers of the gunboat. Her guns vomiting projectiles, the Infanta Maria Teresa turned to the west, and after her came the remaining Spanish armored cruisers. Almost irresistible was the temptation to participate in the combat with the armored cruisers, but Wainwright conceived it to be his duty to wait for the destroyers, and, with a patience difficult to exercise while part of the quarry was at hand and shells were splashing and raining about his little boat, he remained near the Indiana. Suddenly from the mouth of the harbor shot the Pluton and Furor, the dreaded vipers of the Spanish squadron. "Gunboats close in," signaled Captain Taylor, of the Indiana. Simultaneously with the hoisting of this signal, the Gloucester, under full head of steam, dashed toward the enemy. Bombardment of the coasts had developed splendid gunners among her officers and men. While waiting for the destroyers, Lieutenant Thomas C. Wood, commanding the after division, made up of three 3-pounders, had delib-

boat and towed her out of the harbor. Ensign Worth Bagley, of the Winslow, was killed, and two men were mortally wounded by a shell. These were the first casualties in Cuban waters. Bagley was a fine young North Carolinian, and for him and the brave men who died with him the whole country was at once full of pride and of mourning.

At Manzanillo, also, American officers and men displayed noteworthy conduct. Four Spanish gunboats were reported within the harbor, and on June 29 Rear-Admiral Sampson directed Lieutenant Lucien Young, commanding the *Hist*, to proceed off that port to attack the enemy's ships. Like the *Gloucester*, the *Hist* was a small yacht without protection of any kind, and having a battery of only a few three-pounders. Meeting the *Hornet*, also a converted yacht, Lieutenant James M. Helm commanding, and the tug *Wompatuck*, Lieutenant Carl W. Jungen, Young proceeded with them into the harbor, his own vessel in the lead, the *Wompatuck* and the *Hornet* following. Insufficient water prevented the *Wompatuck* from keeping her position in the column, and the *Hist* and *Hornet* went on, firing at a gunboat which had been sighted. No decisive results followed, though the gunboat was struck repeatedly.

The *Hist* and *Hornet*, with the *Wompatuck*, now turned into another channel and proceeded toward Manzanillo. When not far from the city, Lieutenant Young sighted nine armed vessels arranged so as to form a crescent and supported by batteries and troops. Undeterred by this vastly superior force, Young continued his course toward the enemy. As Dewey had done at Manila, he steamed along the Spanish front, delivering and receiving a heavy fire. The *Hist* was struck eleven times. One projectile cut the main steam-pipe of the *Hornet*, which disabled her, so that the *Wompatuck* was sent to tow her out of action. The *Wompatuck* had also been struck, one projectile passing through her just above the water-line. Informed that the *Wompatuck* was able to take care of the *Hornet*, the *Hist* turned her guns upon a large Spanish pontoon, which was equipped with 6-inch smooth-bore guns. This was soon set on fire and destroyed. A gunboat was sunk and

a sloop loaded with soldiers which had poured a musketry fire upon the *Hist* was also destroyed. A torpedo-boat and several gunboats which held the right of the Spanish line were damaged. The American force slowly withdrew, and the Spaniards made no attempt to follow. The casualties on the American side were three men of the *Hornet* scalded.

The action last described occurred on June 30. The *Scorpion*, Lieutenant-Commander Adolph Marix, reached Manzanillo the next day. Accompanied by the tug *Osceola*, Lieutenant J. L. Purcell, the *Scorpion* dashed into the harbor and opened fire, but it was found impossible to destroy the gunboats, and the vessels retired. Reinforced by the *Wilmington*, Commander Todd, and the *Helena*, Commander W. T. Swinburne, the American ships determined to make a fresh attack. Three channels lead into the harbor. Through the southern steamed the *Hist*, *Hornet*, and *Wompatuck*; the *Scorpion* and *Osceola* used the middle channel, and the gunboats *Wilmington* and *Helena* the northern channel. Keeping as much as possible out of range of shore batteries, the American ships concentrated their fire upon the gunboats, which soon were totally destroyed. When night fell on the 17th of July, there was not a Spanish ship in Manzanillo which could aid in the defense of the port. Weakened by these losses, feeble resistance to our occupation of the city was anticipated, and Rear-Admiral Sampson directed the *Newark*, Captain C. F. Goodrich, and the *Resolute*, Commander Joseph B. Eaton, which had on board a battalion of five hundred marines commanded by Lieutenant-Colonel Robert W. Huntington, to effect the reduction of the place. The *Newark* and *Resolute* were supported by the *Hist*, *Suwanee*, *Osceola*, and *Alvarado*, the last commanded by Lieutenant Victor Blue. A demand was made for the surrender of the city on August 12, which was rejected, and a bombardment of the shore batteries was begun. Earlier in the day, Captain Goodrich, through Lieutenant Young, had advised the Cubans of his purpose to attack the city, and in accordance with his suggestion the insurgents assaulted the rear of the Spanish position. Flags of truce were flying over the hostile bat-

teries and blockhouses the following morning, and the captain of the port communicated to Captain Goodrich a despatch from the Secretary of the Navy announcing the signature of the protocol of peace.

In order to isolate telegraphically Cuba and Porto Rico from Spain, the Department arranged, before war was declared, to cut the cables landing in those islands. Insurrection in Cuba and frequent destruction of telegraphic lines as one of its accompaniments had forced the Spaniards, in order to maintain communication, to lay a number of cables on the south side of the island. Four cables connected Santiago de Cuba and Jamaica, one led from Guantanamo to Santo Domingo, and one connected Havana and Key West. Immediately after the commencement of hostilities consideration was given to a proposal to declare telegraph cables neutral, but it was finally decided to destroy all save that connecting Havana and Key West. The immunity of this last line was due, not to unselfishness, but to the expectation that by means of it we would be able to learn much of value. Our action was justified by events. Over this cable signal officers of our army at Key West learned of the arrival of Cervera at Santiago de Cuba. The Marblehead, Captain Bowman H. McCalla, who was later to distinguish himself at Guantanamo, and the Nashville, Commander W. Maynard, cut two cables on May 11 at Cienfuegos; the St. Louis, Captain Caspar F. Goodrich, and Wompatuck, Lieutenant Carl W. Jungen, cut a cable at Santiago on May 18, a few hours before the Spanish division entered that harbor; the St. Louis and Wompatuck unsuccessfully attempted to destroy the Guantanamo cable on May 19, but later this task was accomplished by the St. Louis, Captain Goodrich, and Marblehead; while the Wilmington, Helena, Manning, and Hist cut a cable running between Manzanillo and Cienfuegos. All these operations were conducted skillfully and gallantly, and in some cases under a murderous fire.

The honor of engaging in the first naval battle of the war with Spain belongs to the converted yacht *Eagle*, Lieutenant W. H. H. Southerland commanding. The

*Eagle* enjoyed no protection, and her battery comprised only four 6-pounder rapid-firing guns and two machine guns. She was assigned to duty with the division under Commander B. H. McCalla, which was stationed off Cienfuegos immediately after the outbreak of war. On April 29 the *Eagle* lay about 1,500 yards from the mouth of the harbor. Anticipating an easy prey, the Spanish torpedo gunboat *Galicia*, mounting two 4.72-inch breech-loading rifles, four 6-pounder rapid-fire guns, and two torpedo-tubes, with another small gunboat, left the harbor and started for the saucy American ship. A third gunboat, which remained in the harbor, joined her sister ships in a heavy fire. In spite of the odds against him, Lieutenant Southerland made no effort to escape, but boldly returned the fire with his 6-pounders, the range at first being 4,000 yards. When the range had decreased to 2,200 yards, the *Galicia* and her consort turned and retreated into the harbor. Southerland received the commendation of his commanding officer, Captain McCalla, for conspicuous valor.

No description of the gallant work of officers and men during the war would be complete without a reference to the conduct of the marines landed at Guantanamo. Under the command of Lieutenant-Colonel Robert W. Huntington, the battalion, 647 strong, established itself in the position best suited for defense and the protection of ships coaling in the bay. On the day after the landing, Spanish soldiers, concealed in the thick underbrush, opened fire, and continued their attack until June 14, when Huntington determined upon offensive operations. From Cubans it had been learned that the Spaniards had their headquarters about six miles away at Cuzco, which was the site of the only fresh-water well in the neighborhood. Concerting with Lieutenant-Colonel Tomas, commanding the Cuban contingent, Company C, First Lieutenant Lewis C. Lucas, and Company D, Captain William F. Spicer, both under Captain George F. Elliott, attacked the enemy. In spite of the intense heat, the mountainous and tropical character of the country through which the march was made, and the fire of the Spaniards hid in the dense growth, the marines and Cubans forced their

way and captured Cuzco. The assailants numbered 275, while the enemy was 500 strong. In this engagement the marines sustained but one casualty—an enlisted man wounded. The Cubans lost two killed and four wounded. The Spaniards suffered heavily, having 60 killed, 150 wounded, and 18 taken prisoners. And these casualties were not the most serious part of their defeat, for they lost their camp and supplies and the well was destroyed. As the direct consequence, no further hostilities were directed against the marine camp or the ships in the bay, whereas prior to the capture of Cuzco the marines had suffered severely from Spanish attack, losing five men (one of them Assistant Surgeon John Blair Gibbs) killed and twenty-two wounded.

Thus the Navy, Marine Corps, and Revenue Marine service were represented in gallant deeds. President McKinley, on the recommendation of the Secretary of the Navy made in keeping with the Secretary's pledge at the outbreak of the war, promoted officers who had rendered conspicuous service. All these promotions were at last confirmed by the Senate, with the exception of the cases, referred to in a former chapter, of Sampson and Schley. The commanding officers, executive officers, and chief engineers of the ships engaged at the battles of Manila and Santiago were all in this way advanced on the list at the same time. Then, that the Department might provide for all cases worthy of promotion, a board of retired rear-admirals—Sicard, Matthews, and Norton—was appointed after the close of the war, which carefully examined every record submitted. It recommended advancement, which was made and confirmed. Not all officers were satisfied, but the Board was disinterested and painstaking. The law makes "extraordinary heroism" and "eminent and conspicuous conduct in battle" the grounds of promotion, and, while there were numberless instances of heroism and of gallant conduct in battle, it was not in many cases possible for the Board to lift them out of the common range of faithful and ordinary discharge of duty into the extraordinary range contemplated by the law. If in any case a point was strained, it was in favor of the officer. Indeed, not without some force was the rejoinder of some of the disap-

pointed officers that promotion had been recommended to participants in the battles of the war who did not come more than themselves within the strict letter of the statute; and there may have been some errors of over-liberality, but, if so, they were on the generous side.

Hobson was advanced ten numbers and given the rank of captain. His men were not only given higher ratings, but also medals of honor and gratuities of one hundred dollars each. The other officers hereinbefore named, both in the Navy and in the Marine Corps, received advances in number on the report of the Board above referred to, as did many others who, though not in the battle of Manila or Santiago, yet displayed "extraordinary heroism" or "eminent and conspicuous conduct in battle" elsewhere. Lieutenant F. H. Newcomb, of the Revenue Marine service, commanding the revenue cutter Hudson, was given a gold medal by act of Congress.

These advancements in numbers worked unmerited hardship upon many officers who had no chance to achieve distinction and yet were equally patriotic and competent with those who achieved it. For such it was especially galling that after the war they found themselves in actually lower relative place on the navy list than before the war, reduced in rank and delayed in receipt of the increased pay that comes with regular rise in grade. In other words, the promotions made were at the expense, not of the Government, but of the unfortunate officers overridden. After repeated appeals by the Secretary of the Navy to Congress, an act was at last passed practically providing that, when an officer had been or should be promoted for gallant conduct, those previously above him should not lose their respective numbers, but if, for instance, No. 10 is promoted to No. 5, he becomes an additional number and the original No. 5 goes up the list together with him. Thus every loss in rank suffered by any officer as above stated was made good.

I have entitled this chapter "Some of the Gallant Deeds of the War," because it is simply impossible to enumerate them all. To do so it would be almost necessary to name every officer and man. It is the fortune of great events that only those who are in the most conspicu-

ures have their praises sung ; and yet not only the courage and spirit, but the merit of duty done and peril faced, may be just as great in those who are below the pinnacles. Who shall say that the fireman sweating at the furnace in the bowels of

the ship, or the commander taking his almost submerged and heat-stifed monitor day after day and week after week across the Pacific, is not as deserving as the chief who is in command when a booming victory is won?

## The Postmistress of Knockagaí

By Seumas MacManus

Author of "Through the Turf Smoke," "In Chimney Corners," etc.

**O**F course, in formal compliance with the regulations, Nancy—our postmistress was Nancy, Nancy Kelly—had a slot in the window, ostensibly for the purpose of posting the letters. But scarcely a soul at the Bocht had the hardihood—"the bare-faced impudence," Nancy styled it—to make use of this convenience. Under cover of night, or taking mean advantage of Nancy's temporary absence (perhaps she had run over to Jamie Mor's to ask the time on their clock, or down to Toal-a-Gallagher's to learn if the designs of Frank Mulrinny had transpired—the outline of a quart-bottle in his coat-pocket having been seen by all the world as he went off in the direction of Dhrimore, where he courted, on the evening before), unprincipled people *had* dropped letters in the slot in the window. But these people invariably lived to regret the insult offered to an unoffending woman. Nancy held over such a letter, till, by linking bits and scraps of circumstantial evidence and by calling in experts upon handwriting, she ran the rascal to earth, and got from him a voluntary confession and abject apology—when, however, both were too late to bespeak any mitigation of her contemptuous and scathing denunciation.

"There's a doore to me house, built big enough to let in both the letther an' the letther-carrier; an' if I'm good enough to send off their letthers to the other en' of the wurrl' an' further, I'm surely fit to have the letther handed into me hand." Thus Nancy expounded the ethics of letter-posting. "There's no plague in my house. An' I'm sartint there's none can cast up to me that I ever queskened them what was inside of their letther." This last statement was strictly true. Nancy never did ask any one concerning the

contents of his letter; yet, strange to say, there were few brave enough to hand Nancy Kelly a letter and meet her eye unflinchingly, and then turn and walk out without volunteering information which Nancy would "sooner put her fut in the fire than ax."

When one who knew his business went to Nancy's post-office with a letter, he first swapped salutations with Nancy, and then accepted the proffered chair and gave and got the news of their respective parts of the parish before remarking that he was thinking of posting a letter. If Nancy then nodded approbation—as almost always she graciously did—Denis (say) then produced the letter, and, turning it round and over, informed her that it was to be sent to Iowa in the States, to Tibuik, to young Jimmy. Nancy, by repeated nods of her head, signified that she noted all this and would remember it. Denis then handed it to her, inquiring how much the damage would be to bring it to Iowa. And he went on to tell about Jimmy's affairs, in particular how he stood pecuniarily.

"It was Molly Magroarty, Nelly's daughter, that wrote the letther. (She's a purty han' at the pen, in throth, for her age.) I axed her to let Jimmy know that Long John Meehan's park, at our own me'rin, is to be soul'—for poor John, God help him! isn't prosperin' lately—an' to tell him that if he had twinty poun' or so to spare, he could do worse nor put it into Long John's park. That's all." Denis made sure to thank Nancy and express his sense of gratitude for the obligation she put him under, before he took his leave. There was not any use trying to equivocate concerning the contents of a letter, for Nancy could read any man "like a ha'penny book," as she said her-

self, though he were as deep as a tailor's thimble. If a reckless one dared, once in a while, to risk an untruth, Nancy just lifted her gray eye and fixed it on him, and made him wince as if she had been sticking a pin in his heart.

Jimmy the Post brought out the mails, often a whole dozen, and sometimes as many as sixteen and even eighteen letters, to Nancy's office from Donegal once a week. No one had the impertinence to go seeking for a letter on arrival day—and, indeed, if they did, their journey would be deservedly fruitless. The right of one day's grace wherein Nancy might scrutinize the superscription and postmarks and speculate upon the probable contents of letters was a prerogative which not even the most punctilious would dream of denying the postmistress. Charlie the Nadger once, seeking his letter, walked in as Jimmy the Post walked out; Nancy withered him up with one look and dismissed him with the contemptuous query: "A letther? Musha, who do ye think would send the lakes i' you a letther?" And by way of admonition to Charlie and all the precipitate in her district, she (very properly, as I think) delivered his letter to him fourteen days after its arrival. It contained his passage money. And Charlie thanked God that he was soon to be beyond Nancy's jurisdiction.

When Nancy did graciously bestow a letter on an inquirer, common politeness, of course, not to mention Nancy's eye, required that the letter should then and there be opened and its contents discussed. Pathrick Martin, of Augherly, though, was an unprincipled man, and when he got the letter from Annie from Cincinnati which, as he anticipated, contained confidences about Annie's trials with her Dutch husband who drank, he slipped the missive into his pocket with an assumption of unconsciousness that, in an honorable cause, had done him credit; and then he made a bold attempt to retire under cover of an irregular fire of remarks upon indifferent subjects. And as, despite Nancy's dry, monosyllabic replies, he still continued to edge towards the door, she brought her cold gray eye to bear upon him with such deadly precision that Pathrick, in another moment, awoke to the full extent of his

meanness, dropped into a providential chair, and remembered the letter with suspicious suddenness; he drew it out and implored Nancy to do him the particular favor of reading it for him.

Dan Mac a-Nirn made a sweetheart for himself when he was hired up the Pettigo way. She was both wise and well-to-do; and so, when Dan returned home, he thought to correspond with her with matrimonial intentions. Under protest, Nancy Kelly despatched two of poor Dan's love-missives and delivered to him two replies. But she put down her foot when Dan came along with a third—an epistle upon which he had had John the Tailor working for three nights, and had fed him with whisky all the time to give John the necessary inspiration, and which had been called by the proud author "a triumph iv jaynius." She got Dan seated in the corner and stood over him with arms akimbo. "I'll tell ye what it is, Dan Mac a-Nirn," she said, "ye're only makin' a *plaisham* iv me an' me post-office. I'll neither take nor give any more blatherskiten' letthers. If every other fool in the country begun takin' afther you every time they're in a coortin' way, my six poun' a year would be hard-earned money. Go away about yer business now; an' go home, an' put that letther in yer fist behind the fire; an' if ye want a wife (though, in troth, when ye have yer mother an' yer sisther to look afther, ye're marrid enough)—but if ye *must* have a wife, look about in yer neighborhood an' ye'll get wan be waggin' yer finger; there's Hughie Shan's daughter Mar'get—why don't ye take her? or Shusan Doherty iv the Roadside? Away with ye, now; an' take good advice when it's given ye for nothing." Dan, poor fellow! sighed and went home; and married Hughie Shan's daughter Mar'get sooner than want; and a girl at Pettigo, probably for long and long, walked away heartless from her post-office—and doesn't know to this day that 'twas the tyranny of Nancy Kelly, and not the fickleness of Dan, that has left her pining.

To open and read all newspapers without the necessity of the addressee's presence was a prerogative assumed by Nancy naturally. When the paper (always an American one) contained minute and graphic details of the latest spicy tragedy, Nancy detained the copy till she had

treated all her cronies to the feast. And if the account was of the last great prize-fight, Nancy kindly extended the courtesy of the paper to Toal-a-Gallagher the shoemaker, who was particularly interested in those things. Micky Meehan sent home "The Rocky Mountain Lightning Streak" to his father with a regularity that was particularly gratifying to Nancy. Nancy did not usually detain the "Lightning Streak" more than two or three days after its arrival. On one week it contained an unconcluded article upon George Washington which so whetted Teddy Meehan's appetite for the remainder that he brushed his coat and put it and a clean collar on, and, taking his stick in his fist, traveled twice on the following week all the way in from Tullyfinn to inquire if the subsequent issue of the paper had arrived. On the second occasion, though Teddy observed with the corner of his eye that Nancy's whole soul was engrossed in an article in no other than the "Lightning Streak," she replied to him hurriedly that it had not come, and buried herself in the paper again. Teddy sat him down for a while, torn by an inward conflict. His anxiety for the paper, however, got the better of his discretion, and, forcing sudden resolution, he said, "But Nancy, *a chara*, isn't that it ye're readin'?" Nancy lowered the paper and, turning, looked at him for a minute with an outraged look. "Teddy Meehan," she said; then, severely, "let me tell ye—what ye don't seem to know—that it's the heighth of ill-breedin' of ye to take an' look over any wan's shoulder when they're readin'." As Teddy, all abashed, gathered himself away, she added, by way of parting consolation, "Small wonder ye're ashamed iv yerself." She watched after him sternly till he had slunk away around the bend, and then, with a pained and injured look on her countenance, resumed perusal of "The Lightning Streak."

But the thorn in Nancy Kelly's side was Barney Meehan, the priest's boy. Partly as the result of his office, but chiefly, I suppose, because it was born with him, Barney was a domineering fellow who could tolerate no tyranny except his own. Barney was the only man in the parish who dared, in broad daylight and with the full knowledge that an

incensed postmistress's eye was upon him, walk forward with exasperating nonchalance to Nancy Kelly's and drop his letters, one by one, into the slot! And when he felt in a wantonly aggravating mood, he heaped insult on insult by calling in the slot after the letters, "There's two iv them letthers for Belfast an' wan for Letther-kenny. See that ye send them off quickly, Nancy Kelly, if ye please"—the last sentence, being interpreted, signifying, "I dar' an' defy ye to delay them, Nancy." Ere matters had got very embittered between the postmistress and the priest's boy, she had occasionally ventured to question him regarding Father Dan's correspondence. "Barney," in her smoothest tones, "that letther I give ye for his reverence the other day was from furrin parts, an' still it wasn't an Ameriky stamp was on it?" "That letther," Barney said gravely, "was from the Imp'ror iv the Yalla Say, wantin' to know how ducks sould here be the pair, bekase that he was goin' to send his youngest son to Timbuctoo for to dail in that commodity." This uncalled-for insult on Barney's part put Nancy on her dignity for months, till at length the arrival of a letter with the Rome postmark aroused her curiosity so that she deigned to stoop to Barney for intelligence. "That," Barney coolly informed her, "was a letter from no less nor cur Holy Father himself, the Pope (may God bliss him an' prosper his pratiegarden), informin' Father Dan that the En' of the Wurr!' starts Chewsday (Tuesday) come eight days in the County Wacklow, an' that we may expect it to work around here within three weeks at the farthest." Nancy Kelly never after that demeaned herself by questioning Barney on such subjects; and it is to be hoped, for Barney's sake, that he realized his punishment as palpably as he should.

Barney Meehan, too, had often the cool impudence to walk in' on the heels of Jimmy the Post, and stand by till he got his portion of the mails; and if, by awkward mismanagement, Nancy allowed him to get a glimpse of the directions on other letters, he made it his business to send word to the fortunate parties "there was a letther lyin' at Nancy's for them," and so had them in upon the postmistress before she had had time to examine those letters with the leisure which she wished. He

lost no opportunity of aggravating Nancy; once she handed him no less than four letters, yet Barney, repressing all traces of excitement, merely remarked that he thought "this day might houl' up, an' be a gran' hay day, if the win' didn't work back at twelve," slipping the letters into his long blue coat with as much seeming carelessness as if he was inured to the receipt of extraordinary mails.

The fact was, Barney, who was used to dominate, could not bring his neck to bend beneath any woman's nod; but, on the contrary, considered that Nancy Kelly, far from exacting, should bring him homage. It was Greek and Greek. Nancy had the advantage in good staying powers; Barney in tact. Where Nancy gave verbal expression to her feelings of bitter animosity, Barney merely acted his under the armor of a Lord Chesterfield politeness; and this aggravated Nancy more than if he had slapped her in the face. He was a very Machiavel, was Barney, for long enough.

Only, at length, Nancy got him to betray the man that lurked behind the skilled politician. There was a son of Johnnie Brodbin's who went to the States; and, having a taste for dabbling in water-colors, used to decorate the envelopes of his letters to Father Dan with a many-colored eagle bearing in its beak a scroll (also elaborately variegated with colors), on which the address was elegantly penned. Altogether this decorative envelope was a work of art, to us. But Barney was often and often puzzled to know why the envelope was disfigured with dirt before it reached his hand. The problem was unexpectedly solved one day that he walked in and found Nancy's youngest sitting squat upon the floor, and amusing itself with a recently arrived one, to keep the baby quiet and out of mischief whilst Nancy went to the well. Barney forgot his Lord Chesterfield that day. Nancy retailed to the neighbors how Barney Meehan ferociously snatched the letter out of the innocent child's hand as if he would like to stick it to the heart; and how, towards herself, he behaved like "an unnatural, uncultivated bear." And after that the strained relations that had hitherto existed attained a tension that was too acute to last. And, daily, thenceforward, Nancy Kelly was getting more

and more provoking. She met Barney's complaints with unkind jests or cruel sneers. He threatened her with all the terrors of the Church, of which, as Priest's Boy, he was a humble representative, and vowed to bring down upon her head the vengeance of Father Dan. But, to Barney's utter consternation, she, with reckless temerity, snapped her fingers—snapped her fingers!—and said, "That for both ye an' Father Dan!" The grass did not grow under Barney's heels whilst he went home to Father Dan with this bit of intelligence. Father Dan helped himself generously from his snuff-box when Barney had unburthened, and he said, "Barney, Nancy Kelly's past prayin' for, I see." "But," said Barney, in alarm, "aren't ye goin' to punish her as she desarves?" "Indeed, and I am that, Barney. Take a snuff. I mean to leave her to the torments of her own conscience." Barney quitted Father Dan in a towering wrath; for he knew right well Nancy Kelly had not got a conscience. "If ivery varago in the parish takes to snappin' their fingers at both iv us, it 'ill be yer desarts," he angrily impressed on the priest.

Barney next threatened to invoked upon Nancy the powers of "The Postmaster General." But Nancy brazenly laughed this threat to scorn; Barney did not know that gentleman's address; and, besides, even if he did, if Barney Meehan had the impudence to dhrop a letter containing barefaced insinuations about herself, she would light the fire with said letter, and then she would "just like to see him" dare to darken her door with his forbid-din' countenance after.

Barney was checkmated. He tried to stir up sedition against Nancy, talked treason, all around. Finally, when he thought he had the country rife for it, he went to Ned Carrabin's wake of Glen Coagh to raise the standard of rebellion. With the exception of half a dozen of those old wiseacres, let-well-enough-alone creatures, who exist in every parish, Barney here found that he had the country with him. Accordingly, it was agreed that six men selected, with Barney Meehan as spokesman, should wait upon Nancy Kelly after Mass on Sunday, and respectfully and firmly state their grievances and demand redress. In case of the non-

success of the embassy, or in case that—as many were pessimistic enough to conjecture—the ambassadors were repelled with assault, insult, and contumely, it was not exactly clear to them what would be the subsequent procedure; but the people were given the distinct impression that something awful would follow, possibly even (it was hinted) John the Tailor, who constituted himself Barney's lieutenant on the occasion, would himself order in a large and varied assortment of postage-stamps, and deprive Nancy Kelly of every vestige of her trade. Barney was elated; he had not dreamt there was so much genuine and admirable spirit in the parish; and he gave John the Tailor and his fellow-conspirators to understand that they were the stuff heroes were made of.

Poor Barney had not allowed for the pot-valor which he should have known always sets in at social gatherings. Next morning, heroes, alack! were literally tripping over each other to see who would be first to divulge the conspiracy to Nancy. John the Tailor, who Barney thought should have flourished in the days of chivalry and borne a lance in brave but hopeless causes, *was* first. And when Barney himself, in the timid mood that will possess the greatest and most daring of men on the verge of a great crisis, called on Nancy that day for his

letter, his breath was taken away when Nancy, looking him full in the eye, said, with that awful calm that precedes a tornado, "Barney Meehan, I'm toul' ye wor at Ned Blake's wake las' night?" Barney could only gasp. Nancy waited long enough to let her dire meaning sink into his soul. Then she said, speaking with deep and deliberate emphasis, "Barney, ye're a swindlin' imposthor an' an interferin' blaguard!"—and she still followed him with her terrible eye, as he, dumfounded, slunk out of the door.

On the Sunday after, Barney, finding his nerves fairly well-strung again, descended upon the boys when they had gathered, before Mass, outside the chapel gate. He teemed upon them the bitter vials of his wrath, and denounced them as "crawlers," rolling the word with diabolic relish on his tongue—"Yez is cr-r-lawlers," he said, "cr-r-lawlers, an' yez 'ill niver be anything but cr-r-lawlers! An' you, John the Tailor"—the pinch-faced John winced—"you're the pr-r-rince iv cr-r-lawlers!"

But, storm at the people as he might, and cow them as he might—and did—he had to confess to himself in the anguish of his heart that he feared—*feared*—to meet Nancy Kelly's cruel eye and return her defiant glance.

Poor Barney's spirit was broken.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Boston: A Guide-Book.** By Edward M. Bacon. Illustrated. Ginn & Co., Boston. 4½×7 in. 198 pages.

In extremely compact form and with an arrangement which is original and convenient, Mr. Bacon has put together here a great amount of useful information about Boston and its suburbs. The book contains everything that might be found in the ordinary guide-books, and in addition many personal, historical, and antiquarian facts. A noticeable feature is the collection of colored maps, while the numerous diagrams in the book are convenient and clear.

**City Temple Sermons.** By R. J. Campbell, M.A. The Fleming H. Revell Co., New York. 5×8¼ in. 286 pages. \$1. net.

Every now and then there appears upon the scene a new preacher of real power whose sermons are so different from those of past

preachers as to cause the thoughtful observer to reconsider the popular conceptions of the secret of pulpit success. Such a preacher is Mr. Campbell, the successor of Dr. Parker, of the City Temple of London. He is as different from his predecessor as the still, small voice was from the whirlwind which preceded it. In the pulpit he is extremely quiet. He is said hardly to raise his voice above a conversational pitch. His gestures are few and simple. He possesses none of that power of passion which enabled Mr. Beecher to sweep a congregation off its feet in spite of itself. His sermons do not scintillate with sparks, as did those of his own predecessor. They are not opalescent with hidden colors as were the best sermons of Phillips Brooks. In short, they are in no sense what could be called great sermons. And yet great audiences listen to them and go away satisfied; and large circles

of readers will find interest because they will find life in them in their printed form. For Mr. Campbell possesses a vital spiritual experience, and his sermons are a revelation of the life which is hidden with God and so possess a power to impart that life to others. They are simple and sincere expressions of a real religious life. As such they are well worth reading at home by those who fail to get in other ways the religious ministry which they need; and well worth the attentive reading of ministers, who will study theology, philosophy, poetry, and rhetoric in vain if they do not also study the nature of religion and the art of giving to religion a simple and sympathetic expression. For theology, philosophy, poetry, and rhetoric are only tools, and tools are absolutely useless without the *power* to use them. The power of the preacher is religion. How much religion can do if it is simple and genuine, although perhaps we should rather say *provided* its tools are simple, this volume of sermons illustrates.

**Crises of the Christ (The).** By G. Campbell Morgan, D.D. The Fleming H. Revell Co., New York.  $5\frac{1}{4} \times 9$  in. 477 pages. \$2, net.

This is to us a disappointing volume. Its conception is excellent; it aims to treat seven critical epochs in the life of Christ—the birth, the baptism, the temptation, the transfiguration, the crucifixion, the resurrection, and the ascension. And Dr. Morgan has abilities which peculiarly fit him to treat these experiences in a practical and spiritual manner. His insight into the spiritual meaning of Scripture and his application of it to human experience amount almost, if not quite, to genius. But of that genius this volume affords little indication. His method is not interpretative, but exegetical and theological. And in exegesis and theology Dr. Morgan is not strong. He revels in the wondrous, the miraculous, the supernatural. He lays on the merely marvelous a stress which the New Testament never lays on it. The miraculous birth "must be received, or else the whole superstructure of Christianity totters and falls." It is perilous, it is unspiritual, and it is not consonant with the spirit of the Gospels themselves to make the whole superstructure of Christianity depend upon a historic fact referred to in only two of the Gospel narratives, and never by Christ himself. The ascension of Christ is the ascension of his physical body into heaven—"He in bodily form has passed into heaven"—so that in his case, apparently, flesh and blood have inherited the kingdom of God. The author invents portents and wonders, or, perhaps we should say, surmises them. "Men have to learn, to study, to go through processes of training to obtain what He possessed without these processes." "I strenuously hold that He was perfect in physical form and proportion." He was perfect as a carpenter at his father's bench. "Every piece of work that Jesus did in physical strength, under the control of spiritual intelligence, was perfect work." To make his meaning clear the author compares Jesus as a worker in wood with "Stradivarius, the great, and may it not be said, the only maker of the violin." All this is extra-

Scriptural; may be true; may be false; is certainly fanciful and certainly not important. Practical bearing on spiritual experience it has none. Dr. G. Campbell Morgan is a great preacher; but he is not a great exegete nor a great theologian.

**Interference of Patricia (The).** By Lilian Bell. L. C. Page & Co., Boston.  $5 \times 7\frac{1}{2}$  in. 156 pages. \$1.50.

This is a not very probable tale in which the daughter of a supposed Denver corruptionist thwarts all his plans, gives honest men their own, and rewards herself by marrying a titled Englishman, hated by her father chiefly because he wears a watch-bracelet.

**John Adams and Daniel Webster as Schoolmasters.** By Elizabeth Porter Gould. Illustrated. The Palma Co., Boston.  $5\frac{1}{2} \times 7\frac{1}{2}$  in. 95 pages. \$1.

In this slight but readable book, Miss Gould tells in an interesting way about the experience, as school teachers, of John Adams and Daniel Webster. There is not a little personal information about the two men which will be entirely new to most readers. It is interesting to note on almost every page the contrast between educational conditions fifty and one hundred years ago and the conditions of modern school-houses and teaching.

**Miracles and Supernatural Religion.** By James Morris Whiton, Ph.D. The Macmillan Co., New York.  $4\frac{1}{2} \times 6\frac{1}{2}$  in. 144 pages. 75c., net.

In the view of the author, while God's agency in nature may be *recognised* at one time more than another, God is always equally in Nature, controlling and directing it. A miracle therefore is not an interference with Nature; it is not an exceptional control; it is simply an incident which causes men to perceive that direction and control which is never absent. The supernatural therefore is not extraordinary or episodic. It is simply the spiritual. This conception, as our author points out, is as old as Genesis, which sees in the rainbow a witness to God's perpetual presence in the succession of the seasons. "The presence of God in his world was thus to be evinced by his regular sustentation of its natural order, rather than by irregular occurrences, such as the deluge, in seeming contravention of it." The Outlook hardly needs to add that this general view is, in our judgment, sustained alike by a sound science and a reverent theology. We might take exception to some of Dr. Whiton's interpretations of specific miracles; but the general principle that they are in harmony with the laws and forces of Nature—laws and forces which we can use, and which we may therefore well believe that God can use in ways beyond our understanding—appears to us in the light of modern thought to be indisputable. The book will be useful to persons who are more familiar with modern science than with modern theology, and are therefore perplexed how to harmonize their scientific and their religious thinking.

**Novels, Poems, and Memories of Charles Kingsley.** (Library Edition.) Westward Ho! In 2 vols. J. F. Taylor & Co., New York.  $5\frac{1}{4} \times 8$  in. 463 pages.

We have already spoken of the satisfactory qualities of this edition. Our only criticism

is the excess to which the fad of ragged (deckled) edges has been carried. "Westward Ho!" will always remain Kingsley's greatest romance and one of the greatest historical novels in the English language.

**On Special Assignment.** By Samuel Travers Clover. Illustrated. The Lothrop Publishing Co., Boston. 5x7½ in. 307 pages. \$1, net.

**Partnership in Magic (A).** By Charles Battell Loomis. Illustrated. The Lothrop Publishing Co., Boston. 5x7½ in. 270 pages. \$1, net.

A fantastic mingling of the magic and the real. The fun is contagious and will amuse the boys, for whom the story is written.

**Railway Legislation in the United States.** By Balthasar Henry Meyer, Ph.D. (The Citizen's Library.) The Macmillan Co., New York. 5x7½ in. 329 pages. \$1.25, net.

This compact and colorless summary of American railway legislation and adjudication is followed by a strong and spirited argument for the passage of the Cullom bill to give the inter-State Commerce Commission power to say what rates are reasonable. Its present power to declare existing rates unreasonable, the author rightly contends, is a mockery of real authority, as the roads may change the condemned rate ever so little, and other months or years of deliberation may ensue before another change is ordered. Mr. Meyer's volume is exceptionally valuable for reference purposes.

**Reply to Harnack on the Essence of Christianity: Lectures Delivered in the Summer of 1901 before Students of all Faculties in the University of Greifswald.** By Herman Cremer, D.D., LL.D. Translated from the Third German Edition by Bernhard Pick, Ph.D., D.D. Funk & Wagnalls Co., New York. 5x8 in. 268 pages. \$1, net.

Harnack's book on "What is Christianity?" naturally called forth expressions of disapproval from those theologians who conceive of Christianity as primarily a law to be obeyed rather than a motive for a new life. This book is one of these expressions of disapproval. Its argument is vitiated by its beginning from the false dilemma that either Jesus was "only a man, nothing else," and therefore in no respect in his own person a translation of God into human terms, or else that he was "an irregular appearance," a superhuman being transported temporarily to earth, a "God-Man." This dilemma depends upon the presupposition that there is an antagonism between the human and divine—a presupposition that is purely gratuitous. We agree, however, with the author in his opinion that the picture of Christ given in the epistle is quite as authentic and direct as that given in the synoptic gospels; but this opinion is not inconsistent with the results of the higher criticism, as the author seems to think it is.

**Rise and Progress of the Standard Oil Company (The).** By Gilbert Holland Montague. Harper & Bros., New York. 5x7½ in. 143 pages. \$1, net.

A compact and well-written defense of the Standard Oil Company. The author justifies railroads in the policy of discriminating between different places, different industries, and different individuals, and finds little that is morally abhorrent in the contracts between

the railroads and the oil combination which so stirred National indignation when their existence was disclosed. Nevertheless, he is too much of a scientist to attempt to deny any of the salient facts in the history of his client, and his account of these facts forms a valuable supplement—and in the main a confirmation—of the narratives of Hudson, Lloyd, and Miss Tarbell. The latter half of the volume, giving the history of the Standard Oil Company since 1879, is particularly instructive. In discussing present freight rates the author most frankly sets forth the advantages procured by the combination despite the inter-State commerce law, and even presents the argument which justified the inter-State Commerce Commission in ordering the railroads to ship oil in barrels at the same rate as in tank-cars. The saving to the railroad from the use of tank-cars, he admits, is not entirely clear, for while the railroad does not have to take charge of the loading and unloading, it must ship the tank-cars back empty, while cars loaded with barrels can be returned loaded with other freight. For the use of its tank-cars the Standard Oil Company receives from the railroads seventy-five cents a hundred miles. The Commission's order that the roads should not charge for the weight of the barrel, but ship oil at the same net rate whether in barrels or tank-cars, appears to have been openly disregarded by the roads.

**Studies in the Evolution of Industrial Society.**

By Richard T. Ely, Ph.D., LL.D. (The Citizen's Library.) The Macmillan Co., New York. 5x7½ in. 497 pages. \$1.25, net.

Reserved for later notice.

**The Finances and Administration of Providence, 1630-1901.** By Howard Kemble Stokes. The Johns Hopkins Press, Baltimore. 6x9¼ in. 464 pages.

Many valuable books on the history of Rhode Island have appeared within the last two years, but none nearly so instructive to the general student of history as this volume of Dr. Stokes. It is singular how few good municipal histories we have. Whenever one appears the intensive study of the history of a single community generally proves more illuminating than more labored studies of the history of the commonwealth or the Nation. The history of Providence is particularly valuable, as the city has been a center of political life since the very beginning of our national development, and the reader is able to see as under a microscope the local workings of most of the great economic movements which have affected American civic life. The main interest in the book is economic, and most of its pages are taken up with questions of taxation and finance, but the whole field of civil administration is covered. Important sidelights are thrown upon the question of popular education, which is always inadequately treated in national and commonwealth histories. It is interesting to note the movement for free higher education, which gave the public school system its great development at the middle of the last century, was especially championed by Thomas Dorr, the radical Democrat famous for his part in Dorr's rebellion.

# The Other Room

By LYMAN ABBOTT

"Books which have for their purpose to cheer the heart of man with the assurance of immortality and to give dignity to the life of man by linking it with life eternal, have a perennial timeliness. The eight chapters of this little book are studies in the resurrection of Christ, the resurrection of man, and the life everlasting. They are profoundly thoughtful; even more profoundly spiritual. And they are profoundly positive, touching the great central fact of our faith, that Jesus Christ through his resurrection brought life and immortality to light for all who are in him, and that because he lives we shall live also. There is a note of calm certainty in Dr. Abbott's treatment of this great theme—a degree and a kind of certainty that far transcends the confidence of the petty dogmatist."

# Parables of Life

By HAMILTON W. MABIE

"These are stories of souls. Under their mystical form there is a deep sense of reality. They are penetrative, faithful, sincere. They touch with a loving and reverent hand the inmost experiences of personal life. Here one finds the thoughts and feelings that one has failed to understand, because they lie so close to the heart, translated out of familiarity into intimacy. Poetic in conception, vivid and true in imagery, delicately clear and beautiful in diction, these little pieces belong to Mr. Mabie's finest and strongest work. To read them is to feel one's heart calmed, uplifted, and enlarged."—HENRY VAN DYKE.

"Because the world has been told these truths before does not detract from the charm with which Mr. Mabie has told them, or lessen the debt to him for putting old wine into bottles of new and crystalline clearness."

## A Week's Mob Violence

In the significant news of last week mob violence held the most conspicuous place. The most serious tragedy reported was that at Danville, Illinois, where a mob of six hundred men, assembled to lynch a negro criminal of the worst type, attacked other negroes on the streets, one of whom defended himself by firing at his pursuers, killing one of their number, and was for this act hanged and afterwards burned upon the public square. The mob then made a desperate assault upon the jail to secure the criminal—self-confessed—against whom it was organized. The Sheriff of the county, however, supported by his deputies and the negro turnkey, defended the jail with bravery and determination, firing into the mob and wounding several of its members. When the mob was thus taught that its own members would be the victims of further lawlessness, it scattered, shouting its threats to lynch the Sheriff and his men. To the credit of Danville, however, the sober second thought of the community indorsed the law's defenders, and not only the Bar Association but the Common Council passed resolutions commending the Sheriff (named Whitlock), and the police of the city arrested nearly a score of the members of the mob. The saddest feature of the whole affair is perhaps the fact that the negro who was hanged and burned was a refugee from Evansville, Indiana, who had fled, as he hoped, to a place of safety from mob violence. The day following the tragedy at Danville a despatch from Atlanta, Georgia, announced that the mob which the week before had lynched a negro for revolting crime, while he protested his innocence, had learned that its intended victim was alive and in the hands of officers of the law. Later in the week there were other mobs in Pennsylvania, West Virginia, Ohio, Colo-

rado, and Texas, but in no case were their intended victims injured, and in most cases the mobs were checked by the vigilance of public officials. The most encouraging news of the week came from Mecklenburg County, Virginia, where two negroes who had attempted to assault a white woman the week before were in just eight days' time tried, convicted, and sentenced to be hanged—the execution to take place the first of September. Editorial comment upon these events will be found in another column.

## The Bookbinders' Union Retreats

In last week's Outlook we stated the facts respecting the issue raised between the International Brotherhood of Bookbinders and the people of the United States, by the demand of the former organization that the Public Printer should expel a man whom the Brotherhood of Bookbinders had tried, sentenced, and expelled from its organization. At the time of our going to press we said, "We are not sorry to have this question raised, and we trust and believe that the President will meet it squarely and carry it through to a final decision." The President has done so. As reported last week, he ordered the reinstatement of Mr. Miller. Mr. Miller accordingly was forthwith reinstated. The International Brotherhood of Bookbinders first threatened to strike; then it asked that Miller be suspended pending the discussion of new charges. The threats of strike were ignored, and the President refused to consider for a moment suspending Miller. He was reinstated and put to work; he is now at work; the International Brotherhood of Bookbinders have not struck; they have seen the Government do exactly what they at first attempted to prevent it from doing; they are working under Mr.

Miller as assistant foreman; and they are not attempting to discriminate against him or in any way to contravene the principles laid down by the President as reported by us last week. The President has directed every department in all cases of employment of labor to act in accordance with the principles which he has enunciated. The incident has a double value. When an unjust demand is made upon the Government, backed by a supposed large constituency, and is met with a frank, open, courageous, but not combative declaration that the Government will not concede to the unjust demand, nor compromise with it, nor evade it, nor deal with it diplomatically, but will simply, squarely refuse concession to it, justice wins a speedy and decisive victory. We believe that the incident no less indicates what would be the effect if private employers would meet the unjust demands of labor unions in the same spirit, and would insist, in the words of the Anthracite Coal Strike Commission's report, quoted by Mr. Roosevelt in the second of the two letters reported by us last week, "that no person shall be refused employment or in any way discriminated against on account of membership or non-membership in any labor organization, and that there shall be no discrimination against or interference with any employee who is not a member of any labor organization, by members of such organization." The President's course in this matter will, we believe, win him new respect from the country at large, including all the better class of workmen both within and without the labor unions.

#### Continuing Labor Troubles

In Chicago the sympathetic features of the great Kellogg Switchboard Company strike have been abandoned by the decision of the trade-union leaders, and the conflict has settled down to a test of endurance between the company and its striking employees. The company offers to take back all the employees whose places it has not filled, and conduct an "open shop," making no discrimination between union and non-union men: but the strikers insist that they shall all be taken back in a body, and that no one shall be employed who refuses to join their unions.

In Alabama the threatened miners' strike, involving thirteen thousand men, has been averted by arbitration, Judge Gray, the Chairman of the Anthracite Strike Commission, being chosen as umpire—both sides confiding in his fairness. In most of the minor strikes the desire for peace seems to be gaining, particularly among the unions, the members of which are becoming convinced that they have in many cases tried to push too far the advantages given them by the business prosperity, and the universal employment and stronger organization of labor accompanying it. The new strike in the building trades in Pittsburgh is of the nature of a lockout—the employers' association having assumed the aggressive and sympathetically stopped all building work in order to bring one of the unions to terms. In New York City another union—the Hoisting Engineers'—has accepted the Employers' Association's plan of arbitration, but the Housesmiths' and Bridgemen's Union, which is able to stop all work on buildings in which structural iron is used, still rejects the plan, and most of the minor building trades unions stand with it. In order to ascertain the reason why this union opposed the arbitration plan and thus supported its indicted walking delegate Parks as against its president, a representative of this paper visited the headquarters of the union when its thirty-five hundred members were called together to answer the "final ultimatum" of the Employers' Association. Inquiry among the throng of assembling members soon developed the fact that Parks was the accepted leader, and that few of his followers believed the charges of corruption brought against him. Even those who did not stoutly assert their conviction that he was entirely innocent, declared that he was certainly innocent of defrauding the Union of the two thousand dollars given to settle the Ætna Iron Works strike, which formed the basis of his first indictment. This money, they said, was turned over to the Union, and a diamond pin presented to Parks in recognition of his services. Parks, they all declared, had given the Union its strength, and under his leadership in six years wages had been advanced from \$2.50 a day to \$4.50. As to the acceptance of the employers' plan of arbitration there

appeared to be more division of sentiment, but the members generally criticised the plan because it prevented the "business agents" (the walking delegates) of the unions from presenting the grievances of the union, and provided for the employment of non-union men when the unions could not furnish a sufficient force to do the work. Mr. Parks himself contended that the folly of the employers' plan from the workmen's standpoint was proven by the first decision of the new arbitration board, which had awarded the plasterers' helpers but \$2.75 a day, whereas their union had previously gained from many employers \$3.50. The decision to reject the employers' plan was made with apparent unanimity, and the prolonged tie-up seems no nearer settlement than a fortnight ago.

#### The Chicago Traction Situation

The crisis in Chicago traction affairs did not develop on August 1, as expected, but instead a truce until November 30 next was arranged, the City Council extending until that date all expiring franchise rights in the streets. Some of the Chicago street railway franchises clearly expired on July 30 last, and according to the contention of the city a very large proportion of the grants of the companies terminated or were terminable at that time. As to many streets, however, the companies claim rights for more than half a century yet under authority of the so-called ninety-nine-year act passed by the State Legislature in 1865. The act in question purported to extend for ninety-nine years, without the consent of the people of Chicago, and in fact against their protest, franchise rights which originally had been granted by the City Council for a period of only twenty-five years. The people of Chicago have always refused to recognize this act as binding upon them. They have questioned its legality, and its sufficiency for practical operating purposes, if legal. In the recent agitation over franchise renewals it has been laid down as a cardinal principle of local public policy that the companies, as part consideration for any new grants they may obtain, must agree to waive all claim of rights under the so-called ninety-nine-year act. Last winter negotiations over franchise renewals were broken off

by the companies because of the city's insistence on the waiver clause. Since then one of the companies—the City Railway—has manifested a disposition to concede the public demand for a waiver of claims under the ninety-nine-year act, but the other company—the Union Traction—which was recently put in the hands of receivers appointed by Judge Grosscup, assumed a much more hostile attitude toward the city, and has relied on the court and the ninety-nine-year act for protection. In response to a petition of the receivers for instructions, Judge Grosscup set a date for a hearing on this act, but to this hearing the city refused to be a party, as it desires a settlement by negotiation, without adjudication, and prefers, if adjudication shall be necessary, to litigate particular phases of the question as they arise. After an *ex parte* argument, Judge Grosscup, in a letter to the receivers which he said did not have the force of a judicial opinion, expressed a belief in the validity of the ninety-nine-year act, and instructed the receivers not to suffer any interference after July 30 with the property under their control. Judge Grosscup did not, however, pass on the question of the sufficiency of the ninety-nine-year act, nor the extent of its application. The city contends that the ninety-nine-year act, if valid, applies to but very few lines, and even on these authorizes propulsion by animal power only, being by its terms "An Act in Relation to Horse Railways." For that reason, if for no other, the act would be inadequate for the present purposes of the companies. On petition of the receivers, Judge Grosscup issued a temporary injunction restraining the city authorities from in any way interfering with the operation of the lines after July 30, and the question of making that injunction permanent was set for hearing on July 27. Before that date, however, an attorney representing the receivers expressed a desire to enter into negotiations with the city on the question of renewals, and on that representation the court hearing was postponed until November 30. Chicago's contest with its traction interests is full of significance for the entire country, and the outcome will be awaited with interest. It is refreshing to see a contest of this kind in which the Mayor and

Aldermen are truly representative of public interests, as is the case in Chicago to-day.

Two Billions in Street Railways  
 The massive bulletin on "Street and Electric Railways" just issued by the Census Office shows that during the twelve years between 1890 and 1902 the number of passengers carried by street railroads more than doubled, the track mileage of the roads nearly trebled, and the capitalization of the companies increased five-fold. It is the last-named fact that is startling. The street railway securities now outstanding aggregate over two billion dollars, and the companies are earning five per cent. interest on almost the entire amount. The magnitude of the sum involved is almost beyond the grasp of the imagination. A century ago the estimated value of all the houses, lands, and slaves in the country was barely one-third of the present values of street-car securities alone. Of course this contrast does not imply that there has been any such increase in the real wealth of the Nation. The receipts of street-car companies (\$247,000,000 a year) came chiefly from people who must spend ten cents daily and nearly an hour's time in going to and from their work, while a century ago men went to and from their work with no expenditure in money and little in time. But to the owners of the securities the wealth is as real as any which existed a century ago. No great business in the country has been anything like so profitable, for in none has capitalization so far exceeded investment and yet dividends kept pace with capitalization. The present census bulletin unfortunately reports a "cost of construction" nearly equal to the capitalization, but it states in the text that these figures are worthless, as companies were likely to report the amount of securities issued as the cost of construction. How far they usually are from representing the cost of construction is evident to the close observer of the tables themselves. The average "cost of construction" for the entire country is given as \$96,000 a mile. In New Jersey it is set at \$148,000 a mile. But in Massachusetts, where the presence of the great city of Boston might lead us to expect a still higher figure, the average

cost of construction is put at only \$39,000 a mile, or about a third of the general rate. The difference, of course, is due to the fact that the Massachusetts corporation laws have attempted to restrict capitalization to the amount of capital actually invested. But even in Massachusetts the Board of Railway Commissioners has more than once criticised the street railway companies for evading the laws against overcapitalization, and has declared that a part of their present capitalization has been the result of "stock-watering pure and simple." If the Massachusetts Board has spoken in this way of a capitalization of \$39,000 a mile in that State, what words would it use to characterize the capitalization of \$96,000 a mile in the country at large?

#### Contempt Proceedings in Missouri

We are indebted to the New York "Sun" for the report of extraordinary judicial proceedings in the State of Missouri. A railroad was sued for damages and the verdict was against it. The verdict was affirmed on appeal to the Supreme Court. The railroad, however, got three rehearings, and on the third a new trial was ordered. The second trial resulted in a verdict of \$15,000 for the plaintiff. On appeal this verdict was set aside, and, according to the "Sun," no new trial was ordered—an extraordinary result, which we confess we do not understand. During this long delay the complexion of the Court had, it is asserted, been entirely changed by the election to its membership of railroad attorneys, and the Court was severely attacked by the Warrensburg "Standard-Herald" in an editorial containing the following paragraph:

The victory of the railroad has been complete and the corruption of the Supreme Court has been thorough. It has reversed and stultified itself in this case until no sane man can have any other opinion but that the Judges who concurred in the opinion dismissing the Oglesby case have been bought in the interest of the railroad. What hope have the ordinary citizens of Missouri for justice and equitable laws in bodies where such open venality is practiced? And how long will they stand it? The corporations have long owned the Legislature; now they own the Supreme Court, and the citizen who applies to either for justice against the corporation gets nothing. Rube Oglesby and his attorney, Mr. O. L. Houts, have made a strong fight for justice. They have not got it. The quivering limb that

Rube left beneath the rotten freight-car on Independence Hill, and his blood that stained the right-of-way of the soulless corporation, have been buried beneath the wise legal verbiage of a venal court, and the wheels of the Juggernaut will continue to grind out men's lives, and a crooked court will continue to refuse them and their relatives damages, until the time comes when Missourians, irrespective of politics, rise up in their might and slay at the ballot-box the corporation-bought law-makers of the State.

The editor of the Warrensburg "Standard-Herald," and another editor who had reprinted this editorial, were arrested and brought before the Supreme Court on proceedings for contempt, were refused any opportunity to prepare a defense, and were fined, Mr. Shepherd five hundred dollars and costs, Mr. Cundiff, the other editor, on consideration of an apology and a retraction dictated by the Court, a nominal fine of one dollar and costs, he protesting publicly that if he had the money to pay the fine or the physical strength to endure the imprisonment he would not sign the document. The amount of Mr. Shepherd's fine was at once raised by public subscription within Warrensburg, and his release was secured. The contempt proceedings made the "Standard-Herald" a part of the public records, which gave every newspaper in the State the privilege of publishing it, and many of them have done so. Judge Gantt, who has carried these contempt proceedings to this consummation, is a candidate for the Democratic nomination for Governor against District Attorney Joseph W. Folk, of St. Louis. The basis of his claim for nomination may be guessed from his statement that "there is no boodling in Missouri."

⊙

Ought Courts  
to Possess  
Autocratic Powers?

The press ought to be very cautious about bringing charges of corruption or incompetence against the courts. Such charges never should be preferred except in the most serious cases, and never without adequate evidence to sustain them; but it is also true that the courts should be very cautious about using the extraordinary powers with which they are equipped, under such circumstances as to raise a just suspicion that those powers are used under the impulse of personal passion, to wreak a personal revenge, or to serve a

personal interest. The reason why the people have given the courts very great powers to punish for contempt is in order to secure public respect for the courts. No one either in Missouri or out of it will imagine that Judge Gantt's proceedings in this case, if they are correctly reported by the New York "Sun," will have any effect to promote respect for the tribunals of Missouri. His course will have directly the opposite effect. It is because there are American judges who are capable of such proceedings as this that men who are by no means radicals, who have no sympathy with assault upon the judiciary, who believe that its powers should be rather enlarged than diminished in order to meet the more complicated exigencies of our modern civilization, believe that their power to punish by arbitrary proceedings for contempt of court should be very largely reduced. We should like to see the law so changed that any man arrested for contempt of court, for an act not performed in the presence of the court and during judicial proceedings, should have a right to demand trial by jury before another and an impartial tribunal. It is not safe, and therefore it is not right, to leave the liberties of the citizens of the United States at the hazard involved in conferring such autocratic powers upon judges of varied mental and moral caliber as are conferred by the equity powers which our courts have inherited through English precedents.

⊙

Advocacy of  
Enlargement of the  
Erie Canal

Advocates of the proposition to enlarge the Erie Canal so as to make it suitable for the use of thousand-ton barges met at a banquet in Utica last week on Tuesday. The speeches of the evening were largely devoted to meeting the objections which had been raised in the gathering of anti-canal men in Rochester the preceding week. At the Rochester meeting, it will be remembered by our readers, the vastness of the expense which would be incurred in enlarging the canal was picturesquely stated in comparison with the educational expenses of the State. At the Utica meeting State Senator Townsend presented the expense from another point of view. The proposed sum, \$101,000,000, which it is proposed to raise,

when spread over the entire State and carried through a series of years, "would not weigh much heavier on the average farmer of the country than the annual tax upon his dog." Comparing the present wealth of the State with the wealth at the time the canal was first undertaken—when the entire population of the United States was scarcely more than the present population of the State of New York—the outlay now proposed is less than one-third of that which the people of the State first made for the canal. Emphasis in the speeches of the evening was laid upon the natural water highway that exists in the State, upon the fact that the New York farmers are not merely competitors with Western farmers, but also, and more especially, consumers of Western products, and that the present usefulness of canals is evidenced by Canadian activity in improving waterways. As Senator Townsend said, the issue is very simple: "Either the Erie Canal must be enlarged and improved to meet the modern demands of commerce or it must eventually be abandoned; it cannot stand still."

#### California Improvements

Two important movements have recently been undertaken in California of special significance and country-wide interest. One is that of the California Outdoor Art League to secure the passage of a bill by Congress to provide for the purchase of the Calaveras Grove of Big Trees, now in the possession of a lumberman. Unless the Federal Government steps in to take some action the country will lose these forest giants. The League has been greatly encouraged by President Roosevelt's outspoken declaration of interest on the occasion of his visit to the Pacific coast, and by the likelihood of aggressive co-operation on the part of bodies like the American Park and Outdoor Art Association. The other effort is that of the San Francisco Merchants' Association to abolish Chinatown and establish a park on its site. As the result of the Association's initiative, a "Mercantile Joint Committee," representative of various commercial interests, has been formed to do away with San Francisco's great slum. This city has never had the problem of overcrowded tenements, except among its Oriental popula-

tion; but this particular one is complicated and aggravated by the peculiar customs and strange vices of an Asiatic population large enough to maintain itself in a characteristically Asiatic manner. President Symmes, of the Merchants' Association, states the problem thus: "We have not attempted to decide whether we have the plague or not, but we have long known the affliction of Chinatown, and now the time seems opportune to get rid of it. Steps are now being taken to that end, and the more public-spirited of our newspapers are assisting." When we recall that Chinatown has been generally condemned by health boards the country over, this step is an important one, not alone to San Francisco and California, but to the health of the United States.

**A Woman's Hotel** New York City has now redeemed itself from the charge that a woman arriving in the city alone would be denied a night's lodging in any of its numerous hosteleries. The need of adequate provision for the housing and homing of the women who, without family ties, are in the metropolis for a day or a week or a year, has at last led to the erection of a suitable hotel. The visitor turns off Madison or Fourth Avenue at Twenty-ninth Street. Between the two avenues there stands a large yellow brick building in which the scurrying bell-boys, the ascending and descending elevators, and the passing of men and women show no difference from the subdued bustle in any well-equipped caravansary. But there is an absence of cigar counter or bar, though not of the florist's booth, the desk where umbrellas may be bought or loaned, the package counter, and the stand of magazines and books. Upstairs the face of Martha Washington, for whom the hotel is named, looks down from the walls of the library, and the colonial style is followed in the buff and blue of the large dining-hall and in all the other decorations and furnishings. In the upper dining-room meals are not given to outsiders, but here the guests of the house have their regular seats. Nor do the meals bear out the statement that where only women are to be provided for they are never given enough to eat. If, mindful of former fantastic attempts made to pro-

vide women with a hotel, something between a convent and an orphan asylum, one inquires as to regulations, he is told that the hotel does not differ from any other save that no men sleep under its roof. Men may breakfast and sup and visit there, however. The sleeping apartments might well make a woman who has suffered many things in boarding-house hall-bedrooms heave a sigh of relief as she looks at the freshness and daintiness of the room, with all its provisions for comfort. A hundred rooms are reserved for transients, five hundred for permanent guests, and the demand that existed for such a hotel may be seen from the fact that though it has been open only since March every room is occupied, and the waiting list numbers some three hundred names. It would seem as if another hotel of the same kind would not stand empty. At all events, the success of the Martha Washington shows the need of similar provision on a simpler scale for women of smaller means.

**The Beecher Memorial** Articles of incorporation have been filed for an association to carry out the plan of a memorial in Brooklyn, New York, to Henry Ward Beecher. A site for the building has already been purchased. It is one hundred feet square, directly opposite Plymouth Church, on Orange Street. There is reason for believing that this plot of land will be in several respects preferable to the site formerly suggested adjoining the church. On the land now bought a building will be erected; the plans have not yet been decided upon in detail, but they will be arranged, it is expected, so as to make the building, or buildings, suitable to serve both as a repository for books, pictures, and other articles pertaining to Mr. Beecher and the Beecher family, and also as a library and a place of recreation and instruction. The association will have in charge the solicitation of funds, their investment, and their use for the purposes of the memorial.

**The Work of Baron d'Estournelles** In the dining-hall of the British House of Commons a banquet was recently given by a hundred and fifty members of the House to half that num-

ber of guests; they comprised the International Arbitration group of the French Chamber of Deputies. The occasion was significant of the good feeling which has gradually grown between two countries which a century ago were bitter enemies. The French arbitration group was formed not long since by that distinguished deputy and diplomat, Baron d'Estournelles de Constant, to further the principles of international arbitration; it is a non-partisan organization and has grown rapidly in membership. The visit to London, made to meet British members of Parliament with similar inclinations, was decided upon at the time of King Edward's visit to Paris. Replying to the address of welcome, Baron d'Estournelles said truly that rarely in the history of England and France had conditions been more favorable for the peaceful solution of international questions. King Edward had given the signal for peace by his visit to Paris, and President Loubet had sealed the friendly overture by his sojourn in England. The speaker's special pleas were for an extension of the principle of arbitration to the colonial policies of the two countries, and for the diminution of armaments. In his turn, Mr. Balfour, British Prime Minister, declared that, as leader of a movement for international good feeling and arbitration, Baron d'Estournelles had done more for the world's peace than he had ever done in his former capacity as diplomat. Mr. Balfour urged his auditors not to allow this interchange of ideals and opinions to remain in the abstract, but to see that it extended to the practical business life of the two nations, and to their international relations in the broadest sense. He gratified his hearers by declaring it to be the deliberate intention of the two governments to place on a permanent basis some organization to prevent the causes of petty friction which tended to lead to international difficulties. Sir Henry Campbell-Bannerman, the Liberal leader, and Mr. Chamberlain, Colonial Secretary, also echoed these sentiments. Americans will recall the visit of Baron d'Estournelles last winter to this country for the purpose of asking our leading universities, Chambers of Commerce, and large manufacturing establishments to send young men to France in order to come in contact with the people there,

and to learn the methods of production in vogue in the various industries. He had already established committees throughout France with a view to instructing Frenchmen regarding the remarkable commercial and industrial progress in America, and the necessity for proper cognizance in France of our development. It is a pleasure to think that so large-minded a publicist is a member of the Hague arbitration tribunal.

**Japan and Russia** While the alarmist despatches published concerning Japanese war sentiment toward Russia hardly seem borne out by the latest Japanese papers to reach this country, on the other hand they confirm the existence of a deep-seated national sentiment. The Tokyo "Japan Times" says:

No careful reader of the Japanese press can have failed to be struck with the steadily growing intensity of feeling over the unsettled condition of affairs in the Far East. The increasing impatience on the part of the press is all the more remarkable because it is not accompanied by any violence of language. This attitude of the press irresistibly reminds one of the anxious months preceding the outbreak of the war with China in the summer of 1894. On that memorable occasion there was noticed in the press the same quiet yet firm tone that is now observed. . . . Some steps of far-reaching consequence will have to be taken in order to settle once for all the pending questions.

The Tokyo "Niroku Shinpo" adds:

To-day the Empire of Japan has a population of 45,000,000. In other words, she contains 160 people within a square mile. This prodigious population increases annually at the rate of 1.1 per cent. Sixty-two years hence the present population of 45,000,000 will reach 90,000,000. Just think of it! It is, therefore, a matter of necessity for Japan that somewhere land should be provided for her children and children's children. Korea and China, being nearer to Japan, afford the natural advantages and answer for this purpose. . . . On the other into these countries, is trying by hook or by hand, the Northern Power [Russia], stepping crook to monopolize all, economically and politically. . . . It is almost certain that England will not draw her sword in order to settle the Eastern question. Whatever disadvantages Japan may encounter, she, and she alone, will be compelled to push it to the "last argument." She knows that "war is hell," and, as a matter of course, she desires to avoid it as much as possible. One more thing she knows is this, that Russia feels uneasy at present, being annoyed by the secret societies, financial crises, and the industrial depression at home, and externally by the threatening war in the

near East. "Your words," says a Spartan king, "lack the sword." In peace, be mindful of war. The time is fast approaching for Japan to play the part of young David against Goliath.

Since Russia realizes that with every year she will be stronger on the Pacific, and therefore desires above everything to gain time, we are not surprised at the unofficial publication of a supposed agreement which is alleged to have been signed at Tokyo on the occasion of the recent visit there of General Kuropatkin, Russian Minister of War. As to Manchuria, the agreement stipulates that Russia will effect with all possible speed the "second phase" of her evacuation, but that she will be allowed to maintain a policy of force to protect the Chinese Eastern Railway as well as the legal rights she has acquired there, without, however, threatening the independence of China or prejudicing Japanese trade. Russia has no objection to the opening of three treaty ports to foreign trade, agreeing that Japanese consulates may be established at those places. As to Korea, Russia acquiesces in the right of Japan to obtain a concession for the railway from the port of Wiju to the capital, and to have a Japanese appointed as first adviser to the Korean crown. The Japanese may for the moment be pacified by such promises, but if they are to make a stand for the control of Korea it must be made now.

**The Papal Conclave** On Friday night of last week, after the historic "Veni Creator Spiritus" had been sung, the largest Papal Conclave in the history of the Roman Catholic Church assembled in the Vatican. On Saturday morning, in the Sistine Chapel, after each Cardinal had received the Holy Communion from the Camerlengo or Chamberlain (Cardinal Oreglia), and the cry "Exeunt omnes" had excluded all but the Cardinals, the first ballot was taken. The mediæval customs connected with immuring the Cardinals were carried out last week to the letter, and those dignitaries had practically no connection with the outer world. Of the sixty-four Cardinals who compose the Sacred College, sixty-two were at the Vatican; each had a suite of four rooms—a dining-room, a chamber for himself, one for his conclavist or secretary, and one

for his servant. The labor of constructing sixty-odd suites, together with the transformation of the Sistine Chapel into a voting-hall, has meant an enormous amount of work; the interior of the Vatican has, for the time being, been changed from its condition during the past quarter of a century into quite another place. The frescoes of Michael Angelo in the Sistine Chapel must seem dim against the violet draperies of the Cardinals' canopies and the altar tapestries representing the descent of the Holy Spirit. On the highest step before the altar stands a golden throne for the new Pope when he first receives the Cardinals' homage. Along the walls of the chapel are arranged the high seats or "thrones" for the Cardinals. Each seat is surmounted by a baldachino or canopy; at the conclusion of the election the successful candidate lowers his canopy so as to cover his booth conspicuously. The ballots have three spaces—one for the name of the voter, one for the name of the Cardinal voted for, and one for an appropriate quotation. Each Cardinal in turn, holding his ballot between his first finger and thumb so that every one present may see it, advances to the altar, kneels, prays briefly for guidance, and then, rising, proclaims loudly: "I call God to witness, he who shall judge me, that I elect him whom I think should be elected according to God. This I promise to do also in the *accessit* vote." (The *accessit* vote is the vote immediately following the formal ballot, in which the Cardinals are given an opportunity to change their voting and rally to some more prominent candidate.) When all the Cardinals have dropped their ballots into the chalice, the Camerlengo counts them and declares the result. The ballots are then burned in a stove specially placed in the chapel for that purpose. If there is no election, papers are burned in damp straw which gives out a dense dark smoke; but when an election occurs, the papers are burned in the ordinary way. Thus, by watching the long tube with a conical top, which, as on the occasion of every Conclave, now rises from one end of the Sistine Chapel, the waiting populace outside understands the result of the ballots already taken. On another page we give an account of the election of Cardinal Sarto.

#### American Missions in Turkey Threatened

About six months ago a delegation of twenty-four representative men, of whom Mr. Morris K. Jesup, President of the Chamber of Commerce in New York, was Chairman, called upon President Roosevelt and Secretary Hay to present the rights and claims of American religious, educational, and charitable institutions located in the Turkish Empire. Similar institutions established and directed by citizens of France, Russia, Germany, Italy, and England have been favored by the Sultan of Turkey with grants of certain immunities and privileges which these men asked should be demanded for American institutions under similar conditions. Any civilized country would have conceded at once similar privileges to institutions under governments which are entitled by treaty to the "most favored nation" rights. Turkey, however, while entering into treaties with other Powers, and while accepting "most favored nation" stipulations, at the same time refuses to concede to all treaty nations equal rights and privileges. This seems the stranger when we remember that American institutions in the Turkish Empire equal in value of their plant and the money already expended upon them that of all of the institutions of the five nations named above. Despite this and the vigorous demand of the President and Secretary of State made through Minister Leishman, not only have no concessions been obtained for our schools, colleges, hospitals, and asylums, but at the present time the Harput outrage makes it seem as if the Turks were contemplating a crusade against their very existence. A month and a half ago the senior professor in Euphrates College, an American institution located at Harput, in Asia Minor, and incorporated under the laws of Massachusetts, was arrested upon a verbal charge of sedition. This professor is a Turkish subject, as are nearly all of the professors and teachers in the American colleges throughout Turkey. The senior American at Harput, who has known him from childhood, declares that the Sultan has no more loyal subject in his empire than this professor, who, according to last advices, was confined in the common prison and was in danger of becoming insane. Rumor says that he

has been urged by Turkish officials to declare that the college is a hotbed of sedition, and that the Americans in charge are the leaders of the movement. It is easy to see that if such an attack upon the various American colleges is not immediately checked it will be a simple matter for the Sultan to order all native professors and teachers thrown into prison, and thus the schools will be closed.

## Pope Pius X.

On Tuesday morning of this week, in the great square before St. Peter's, Rome, the cry "*Ecco la sfumata!*" (There's the smoke) arose for the seventh time since the convening of the Papal Conclave; but this time the smoke—from the tube at one end of the Sistine Chapel in the Vatican—was light, not dark. Hence the people knew in an instant that a new Pope had been elected. There was such a rush for the Vatican that the troops actually had difficulty in preventing the crowd from forcing their way into the palace. It was not long, however, before the proclamation was made that Cardinal Sarto had been elected, and then the enthusiasm was noteworthy. The quick-witted Romans knew that the election of no one could presage surer harmony between Church and State. Then came a moment more impressive than the other, when the cheering thousands were stilled into silence and knelt to receive the blessing "*Urbi et orbi*" from a white-robed figure standing on the historic upper balcony of St. Peter's, where so many of his predecessors have stood for a similar ceremonial. May the benediction of Pius X. be significant of more abundant peace and more real progress than the Roman Catholic Church has yet known.

A fortnight ago *The Outlook* said: "Three candidates stand out more than ever as eminently and nationally Italian in their divorce from 'the prisoner of the Vatican' attitude—Cardinals Sarto, Capocelatro, and Agliardi, men of democratic sympathies, liberal tendencies, and marked capacity for administrative work." Of the three men mentioned Cardinal Sarto has occupied much the most important executive office. As Patriarch of Venice his position has been one of peculiar independence and of vast influence.

Giuseppe Sarto was born in Rieti in the province of Venice in 1835; he was educated in the Salesian Institute at Colognola; he was a parish priest until middle age, when he became bishop. In 1893 he was created Cardinal, having already become Patriarch of Venice—of all the important cities of Italy, Venice is the only one having patriarchal rank. During his life of sixty-eight years Cardinal Sarto has enjoyed a merited popularity, not only in his native province but throughout Italy, because of his purity of life, his highly cultivated mind, his modest and agreeable manners, his great preaching, and his influential writing. He is also a patron of the arts, and gave a start in life to Father Perosi, the celebrated priest-composer. Despite his age, Pius X. is still strong and robust, and is a picturesque personality in the best sense of the word.

As to his relations with the Vatican, Cardinal Sarto has always been distinguished from his brother Cardinals by much independence and aloofness, due both to personal initiative and to the republican character still persisting in the Venetian province. The Patriarch's relations with the political plans of the Vatican have been of the least intimate kind. Hence liberals are of one mind in agreeing that no better man could have been chosen. They hail with joy the ascendancy of one who had not been in his patriarchal office a year before openly declaring for harmony between Church and State. His utterance created a great sensation, and it was felt that the Pope must be offended, but the latter gave no public sign of it. It was due to this independence both in man and province that on the occasion of the visit of the King of Italy to Venice, Cardinal Sarto—despite the "prisoner of the Vatican" attitude of the Pope—wishing to bring about greater friendliness between Church and State, asked the Pope if it would be possible for the Patriarch of Venice to meet the King of Italy. This was a very different spirit from that shown by the Cardinal-Archbishop of Bologna on the occasion of the royal visit to that city. The Cardinal ostensibly left the place until the visit was over. It is understood that the Pope told Cardinal Sarto to do as he pleased, whereupon the Cardinal, as

ecclesiastical head of the Province of Venice, publicly welcomed King Humbert.

The papal Conclave at Rome has differed from that of 1878 in the fact that there was no dominant candidate, as there was after the death of Pius IX. We believe, however, that the man has been elected who, if not popularly so dominant as was Cardinal Pecci, is at least potentially, as far-sighted, high-minded, and tactful as he, and perhaps politically more independent. At all events, the selection by Cardinal Sarto of the name Pius indicates no return to the politics of Pius IX. It is sometimes said that papal candidates choose the name of the predecessor who impressed them most, never going back further than the last one of that name to reign. It may be remembered, too, that Pius IX. started favorably enough in the eyes of many liberals. We shall be loth to believe, however, that the reigns of Pius IX. and Pius X. are to be marked by a continuous reactionary policy, allowing only for the welcome break of a quarter of a century made by Leo XIII.

If Pius X. is to be a political force in harmonizing Church and State, we hope that he will be also a social, intellectual, and spiritual force in declining to put forth any syllabus or encyclical contrary to modern ways of thinking, and that his democratic sympathies will be the motive for papal letters on social as well as religious subjects such as marked Leo XIII.'s rule. By them that Pontiff regained for the Church much of its influence with the people at large, as well as with certain foreign Governments in particular, which had been lost during the reign of Pius IX. and his predecessors.

With natively democratic principles, a long life of single-minded spiritual service, and a sturdy independence of Vatican prejudices, Pius X. ought to bring back to Peter's chair its purely religious influence. Many well-wishers, Protestant as well as Catholic, feel that the Roman Church needs the direction of a Pontiff who will be first of all moved by spiritual rather than temporal power. But it cannot be said that Protestant narrowness is defunct; witness the following exclamation of the editor of an American denominational journal last week: "Romanism is not Christianity; it is the denial of

it, the reverse of it. . . . Pope Leo is gone, but he will have a scheming political successor, probably the puppet and tool of the cardinals and other leaders. The Papacy remains, with which no Christian can be at peace." The vast majority of Protestants have no sympathy with this extreme type of opposition to the Roman Catholic Church, none with "Orangeism" and "A. P. A." movements; on the contrary, they recognize that the Roman Catholic Church may be used, and for the most part, we believe, is being used, as one of the great Christian churches for the perfection of the world. The Outlook sympathizes with the broad, liberal movement in that Church, which during the past quarter of a century has been strikingly shown in a number of instances, just as it sympathizes with the same movement in the Episcopal, Congregational, or any other Church. We trust that the Cardinals at Rome have elected, not a reactionary but a liberal Pope, one who will stand not so much for material ends as for spiritual verities.

## Murder

The New York "Tribune" is far from a sensational journal. As little as any daily that we know does it give undue prominence to crime. And the first page of the New York "Tribune" of Monday, July 27, reports one mob in Danville, Illinois, another in Atlanta, Georgia, a third in Scranton, Pennsylvania, one murder in Vermont, New York, and a murder and a suicide in a New York City hotel. Every morning paper brings us a report of a murder or two, or a lynching party bent on murder and generally successful. Judge W. H. Thomas, of Alabama, in a recent charge to a Grand Jury, summarizes recent statistics and shows that the impression which these daily papers give to us of the frequency of homicide in the United States is not a false impression. We quote:

Killed on American railways, three years ending June 30, 1900. . . . .	21,847
Killed (British forces) during South African war, including death from disease . . . . .	22,000
Homicides (three times the number for one year, 10,465) . . . . .	31,395

That is, the homicides in the United States are nearly half as many again as

either the deaths from railroad accidents in the same country in time of peace, or the deaths in South Africa from war. Even if Judge Thomas includes suicides, as we judge that he does, the figures show an appalling disregard of human life in the United States.

It is clear from these figures that lynching is less a disease than the symptom of a disease both widespread and deeply seated. They indicate that the diagnosis of this disease furnished by a writer in the Springfield "Republican" (quoted by the New York "Evening Post" as Professor William James, of Harvard) is inadequate. The letter lacks the sobriety of tone we are accustomed to expect in Professor James. Whoever he is, the writer interprets lynching as a kind of brutal sport:

The young white American of the lower classes is being educated everywhere with appalling rapidity to understand that any negro accused of crime is public spoil to be played with as long as the fun will last. Attempts at general massacres of negroes are certain to be the next thing in order, and collective reprisals by negroes are equally certain.

We could almost wish that this explanation of the cause of lynching were correct. If it were, if lynching were only a kind of cruel sport, we may be very sure that the number in any community who would see "fun" in hanging, shooting, or burning a defenseless negro would be a very small minority, and it would only be necessary for those who do not share that view of "fun" to assert themselves and the sport would cease. But the number of homicides produced directly by mobs is very small in comparison with the whole number. Some other cause must be looked for than a mere recrudescence in the lower classes of the barbarism which led the women of Rome to turn down their thumbs in the Coliseum that they might see the gladiatorial combat end in the death of the defeated combatant. The figures which Judge Thomas gives indicate a disregard for human life, as well as a contempt for law and a free reign given to excited passion. They tell us that there are large bodies of people in America who lack the restraint put on human passion by reason and conscience operating from within, and also that put upon human passion by law and penalty oper-

ating from without. The remedy which Professor James proposes—if this letter is indeed by Professor James—and which the "Evening Post" indorses, is therefore no remedy; their suggestion rather indicates that they have been, to use Mr. James's figure, "inoculated with the same disease."

Unless special legislation *ad hoc* is speedily enacted, and unless many "leading citizens" are hung—nothing short of this will check the epidemic in the slightest degree, and denunciations from the press and pulpit only make it spread the faster. We shall have negro-burning in a very few years on Cambridge Common and the Boston Public Garden.

This hanging of a few "leading citizens" appeals strongly to the fancy of the New York "Evening Post." In Danville, Illinois, the sheriff, shot-gun in hand, faces a mob bent on lynching and single-handed drives it off. It was a brave deed; and the sheriff is worthy of all praise. But the "Evening Post" exults not merely in his courage, but in the felicity of seeing "a dozen of the rioters writhing on the ground." This rejoicing in human suffering is itself a form of that very barbarism which hangs or burns one accused of crime and carries off his bones as relics of the occasion. It is another phase of that passion for revenge, unregulated by reason, which is seen alike in the Southern lynching mob, the Italian Mafia, the labor riot, and what Judge Thomas calls the "hip pocket practice."

What is the remedy?

I. The first question to be asked is this: Is there any explainable reason for the prevalence of lynch law? Any rational excuse or palliation for it? Any provocation the removal of which would lessen the temptation to it? Any occasion which excites to it and which can be corrected? The following letter from a Southern correspondent partially answers this question:

All the South appreciated your review of Judge Speer's speech on Lee. You are doing a noble work.

Our most serious trouble is rape. It is a fearful problem. It baffles us. You know that thousands of families, where there are wives and daughters and mothers, have abandoned their farms and moved to town for police protection—afraid to remain on the farm. The widow and her children dare not remain unless under good protection. No white woman dares travel the public highway alone; yet any negro woman can travel in

absolute safety, on foot or otherwise, the highways from the Potomac to Texas. Justice Brewer has just said that there will soon be a popular uprising against lynching. It is to be regretted that he was silent upon rape of our women. Negroes misinterpret the North by their silence upon the crime of rape. They are led to believe that the North approves of that part of the tragedy or outrage. If an uprising against lynching, it is also appropriate that there be an uprising in favor of our white women. They are entitled to go unmolested. Why should they be debarred from travel on the king's highway? Why should they not be accorded the liberty and privileges of a negro woman? Why should a farmer's wife sit in fear at her own home if her husband chances to be in the field? J. C.

It may be that this letter exaggerates the fears; it may be that the fears exaggerate the dangers. But our first duty is to remove these dangers and allay these fears. That there are considerable sections in which neither the life nor the honor of woman is safe can hardly be questioned. That justice as at present administered is inadequate to protect her has been demonstrated. That if woman is to be protected by the courts of law they must find a more expeditious method of justice than they now employ is certain. Such expedition can be secured, or at least attempted, by other and better methods than mob violence. The law might provide that in any case of attempted rape the nearest judge in any court of record should at once summon a grand jury to investigate and a petit jury to try; and that no appeal should lie from the verdict of the court except on the certificate of the trial judge of probable cause for appeal. •The criminal practice of Great Britain would give warrant for the last provision; the necessities of the case for the other two. Is it said that this would violate all the traditions of American law? The answer is that it is better to violate all the traditions of American law than to leave women unprotected. Is it said that by such expeditious methods the innocent might fall a victim to popular passion and prejudice? The answer is that the innocent would be safer than they are now. Justice is sacred, but the methods which law is accustomed to pursue are not sacred. The demand of the community for the immediate arrest, trial, and punishment of the man who is guilty of rape is an entirely just demand. The method the community takes to execute

that demand is an entirely unjust method. The first remedy is to provide a just method for satisfying the just demand.

II. The second remedy is that which Mr. James and the New York "Evening Post" recommend; but administered in a very different spirit. Passion for revenge on lynchers will not cure the passion for revenge which has produced lynching. What is needed is a cool head and a resolute determination in judges, juries, sheriffs, preachers, editors, and teachers. So far as words can express what we want to express, it has been well done by Mr. Justice Brewer in a recent address:

Every man who takes part in the burning or lynching of a negro is a murderer, and should be so considered in the eyes of the law. Although it is always given in defense of such actions that what are known to lawyers as extenuating circumstances lessen to a considerable degree the gravity of the offense, it is my opinion that no circumstances whatever can change the classification of the crime to anything else but murder. Any man who kills his fellow-man otherwise than in defense of himself or his property commits nothing less than murder. The man who takes part in the burning of a negro, no matter how atrocious was the latter's conduct, is guilty of this crime.

So far as what we wish to express can be expressed by deeds, it has been expressed by the prompt and vigorous action of the Governor of Indiana in dealing with the murderous mobs in that State. We need judges who will call lynching murder, juries who will convict lynchers of murder, sheriffs who will risk their lives and, what is to them more important, their political future, by resisting lynchers as they would resist all would-be murderers; editors and preachers who will label lynchers murderers, whether or not they are "leading citizens." A few months ago some rather hysterical journals of the North declared that slavery was re-established in the Southern States and called for a crusade, at long range, by Northern papers, preachers, and reformers against it. Meanwhile two judges in the South proceeded, in the discharge of their duty, to characterize peonage as it deserved; after a brief period of hesitation, Southern papers came to their support; and already the disgrace has been atoned for, the oppression has been abated, and peonage will soon be, if it is not already, a thing of the past. Something of the same spirit shown by

press, pulpit, and court in dealing with murder by mobs would summon to their aid the judgment and conscience of the Nation, and would check, though it might not wholly abate, the awful crime the record of which blackens the pages of every day's issue of our American journals.

III. But this is not a duty which we can relegate wholly to officials, judicial or other. The power of courts and laws in America depends upon public opinion; and every man in America helps to create public opinion. American lawlessness has its springs in the home, and the school, and the church. Anarchists so labeled are few; anarchy so called is in disesteem; but the doctrine that government is undesirable and the less of it there is the better is an inheritance from the days of the Revolution. The notions that liberty is the right of every man to do what he will, and that majorities can do no wrong, are common and popular. Law is banished from the home, or administered with irregularity, and children are persuaded, coaxed, or bribed instead of commanded. The rod is banished from the school-room—whether wisely or not we do not here consider—but with it authority is also banished, and pupils are allured to studies which were once required of them, and won to good conduct by rewards of merit instead of being educated in righteousness. The Moral Governor of the Universe is no longer heard of in our pulpits, which is no loss—the phrase is not used in the Bible; but for the Fatherhood of God as Jesus Christ inculcated it is substituted the Grandfatherhood of God—that is, his kindliness and good nature without his authority, for authority does not belong to the grandfather. That there is a “law of liberty,” that justice is what Bushnell has described it, “justice secured,” that law is universal and we are all under its authority, that obedience is not only a cardinal virtue but the foundation of all virtues, are doctrines rarely emphasized in press, in pulpit, on platform, in school, or in the home. We need in America to revise both our theology and our sociology, to re-define both liberty and law, and to counteract the unrestrained passion of the mob by cultivating a reverence for law and a passionate loyalty to it.

## Civic Æsthetics

The “Engineering News” calls attention to the recent action taken by the city of Lübeck in Germany in prescribing that any structure hereafter built or rebuilt shall have all parts that are visible from the public streets constructed so as not to be a disfigurement or detract from the appearance of existing buildings. All signs, inscriptions, or other advertising devices which would be disfigurements are expressly prohibited. The “Engineering News” asks: “What would be thought if an American city should take such action?”

We believe—and so too does the “Engineering News”—that the time is approaching when such action as that taken in Lübeck will be well thought of in the United States. It is, of course, true that the power to regulate the architecture of buildings might easily be abused by the building department in any of our great cities, but so too may be—and are—the powers now lodged in this department to prevent the erection of buildings unsafe or unsanitary for their inmates. If this department had power to prevent or even delay the erection of buildings positively unsightly to the public, much good might be accomplished. In residence suburbs especially, the erection of unsightly structures often injures whole neighborhoods not only æsthetically but also in property values, without even benefiting the offending builder. Here clearly is a wrong without a present remedy.

In the matter of advertisements the case for regulation is clearer still. The law regulates railway property because, though private, it is, as the courts express it, “affected by a public use.” Advertisements are not only affected by a public use, but have no value whatever except that which the passing public gives them. When, therefore, a home or a landscape is disfigured for advertising purposes, the right of the public to regulate the advertisements by taxation, if not by prohibition, is absolutely clear. If there were a tax—for protection, not revenue—upon all such advertisements, and if people of refinement systematically refused to purchase the goods advertised in them, one of the flagrant offenses of our arrogant commercialism would be removed.

The signs are multiplying that concern

for public beauty, which is so justly a matter of pride with the authorities in Germany, is obtaining a strong hold upon the people here. It is a matter of significance that two of the National associations for municipal reform—the Association for Civic Improvement and the Park and Outdoor Art Association—are devoting themselves to the work of beautifying our cities rather than securing changes in the methods of government. Nearly every considerable city and a great many little towns and villages have a group of citizens, men and women, actively engaged in making less painful “the contrast between the cities where men live and the fields where the beasts live.” This week we read that the Civic League of St. Paul, Minnesota, is urging the establishment of playgrounds in connection with all the public schools, and a few weeks since we read that a new league in New York City was urging that new public buildings in all parts of the city should be so grouped in little parks that they should form “centers of beauty” for the people about them. Especially was it urged that our park system and our school system should be so co-ordinated that the school shall be the center of that which is most beautiful and recreative in the life of the child.

But the movement has gone beyond municipal dimensions. Last week we received the eighth annual report of the American Scenic and Historic Preservation Society, a well-illustrated volume of a hundred and sixty pages, published by the Legislature of New York, and significant of the State's interest in furthering the Society's work. Though this Society aims to preserve from injury all places of historic interest, nearly all such places for the preservation of which it is laboring have the charm of beauty as well as association. One of the beautiful places which the Society has successfully labored to protect—the Morris mansion, on Washington Heights, which served as Washington's headquarters in 1776—was last week purchased by the city of New York to form a part of its system of small parks. But the preservation of places of historic interest is only a secondary part of the Society's work. Its primary object is the preservation of the natural beauty of the Commonwealth. In this connection it reports what has been done by the Joint

Commission of New York and New Jersey for the preservation of the Palisades. This Commission has now received altogether \$587,000 for the prosecution of its work—\$410,000 from the State of New York, \$55,000 from the State of New Jersey, and \$122,000 from Mr. J. P. Morgan. Of this sum the Commission has now expended \$306,000, and has secured over two hundred acres of land stretching along more than four miles of river front, and has stopped the wrecking of the Palisades by the quarries already in operation. Ten miles more of river front remain to be purchased, and the most beautiful scenery in this part of the world will have been secured as a park for the delight of future generations. The vigorous prosecution of such a work through the co-operation of two commonwealths is incontrovertible evidence of the growing concern of the American people for the beauty of their country.

## The Patriotism of General Lee

The editorial article in *The Outlook* for July 11 entitled “The Loyalty of Robert E. Lee” has called forth a number of letters from our readers. Of these letters we have chosen three for publication in another column, one expressing approval, the other two disapproval, of the views we have expressed. These are the strongest statements we have received on either side. Leaving them without further comment, we confine our attention here to the fundamental question involved in the discussion. This question is tersely stated in the following letter:

*To the Editors of The Outlook:*

Webster's definition of a patriot is, “One who loves his country and zealously supports its authority and interests.” If this is correctly defined, how can your statement, “Robert E. Lee stands to-day among the purest of patriots,” be true?

GEORGE W. BARROWS.

What constitutes patriotism?

In “*Harper's Magazine*” for August there is an article by Mayo W. Hazeltine on “The Republic of Vermont.” In this is described the plucky stand taken by the Green Mountain Boys in defense of their homes. They had settled in what is now Vermont under the authority of

royal grants given to New Hampshire. Later the British Crown decided that the land belonged to New York. The controversy that resulted between New Hampshire and New York was of vital importance to these settlers; for if New York, representing the authority of the British Government, should gain possession of this territory, they would be dispossessed and their families impoverished. When the War for Independence broke out, they had, perhaps, as the author says, "stronger reasons than any other American colonists for rebellion against the British Crown," for if the Colonies should be defeated, the British troops would enforce the decision of the Crown and oust these men from their farms. Therefore "they had at stake not only the political liberties which were threatened by Parliament's assumption of a right to tax the Colonies, but also a title to the homes which they had created in the wilderness." Here is a concrete example of patriotism in its rudimentary form—the instinctive impulse to protect the family.

Sometimes this instinct has developed into loyalty to the tribe or clan, as among the Semites, or in the early history of Scotland; and when it has been perverted, it has resulted in prolonged family feuds, of which our own land has furnished examples. It is in this impulse to protect the family that may be found the source of race pride, or race patriotism.

But with the growth of civilization, with all its complex relationships, this instinct of home-defense has become, as it were, organized. Instead of each man's defending his own home, men have combined for the common defense of all their homes. This union of men for the common defense has been one of the elements, perhaps the chief element, in the formation of government. Such union has taken different forms. In a monarchy the king is "the father of his people," and allegiance to the home is transferred, for the purposes of defense, to the king. In a republican government it is the co-operation of the natural defenders of the home that is the essence of the Commonwealth, and allegiance is transferred from the home to the Commonwealth. It is this allegiance to the power that guards the family that is the essential element in love of country, in that passion which, according

to the Century Dictionary, "moves a person to serve his country, either in defending it from invasion, or in protecting its rights and maintaining its laws and institutions."

It is evident that under different kinds of government patriotism itself assumes different forms. In early Scotland it was fidelity to the tribe; in feudal days it was fidelity to the overlord; during the English Revolution it was, on the part of some undoubtedly sincere men, allegiance to Charles; on the part of others, equally sincere, support of Parliament. In times of transition there consequently arises a struggle between two forms of patriotism. One form may be intellectually or politically more primitive than the other; but it may at the same time be no less pure and honorable. It was a struggle between two such forms of patriotism which came to a crisis in America in 1861. Undoubtedly there were men prominent among Southern leaders, as there were undoubtedly men prominent in the North, who were swayed by other motives than those of patriotism. Very likely the struggle would not have taken the form of open war if it had not been for the men who were more concerned about the maintenance or destruction of slavery than they were about fidelity to the sovereign government. Such men are not here under discussion, but only the men who, North and South, were ready to lose all for the sake of preserving that sovereignty to which they were convinced they owed supreme allegiance.

In the North conditions largely economic had brought men to identify that sovereignty with the Federal Union; though there were Northern men, not only at the time of the Hartford Convention, but as late as the war itself, who were by no means clear in their convictions. In the South conditions, also largely economic, had brought men generally to identify that sovereignty with the State; though there were exceptions, such as George H. Thomas. In the main, then, patriotism, that is, allegiance to the Commonwealth, in the South meant allegiance to the State; in the North it meant allegiance to the Union. The fact that since the war American patriotism means fidelity to the Union does not alter the fact that before the war

the question as to which form of patriotism, State or National, should be supreme was an unsettled question. It was between these two forms of patriotism that Lee had to choose; it was whether Virginia or the Union was his country, his *patria*. Those who find it difficult to imagine how such a question could have been seriously considered may perhaps put themselves into Lee's place by imagining their own state of mind if in the future they should be called upon to choose between America and a Federation of the World. To Lee the institutions of his country which he was called upon to defend were those of his native State. To him the Federal Constitution was of prime importance politically; but he regarded it as an external compact between his State and other States, and he believed that the State, not what he regarded as a federation of States, demanded his supreme loyalty. So he decided that his country, his *patria*, was not the Union, but Virginia. If a patriot is "one who loves his country and zealously supports its authority and interests," then Robert E. Lee, in following his convictions that Virginia was his country, was a patriot.

Those on the one side (we believe that their number in the South is small) who think of the Federal troops as mere invaders, and those on the other side (we believe their number in the North is diminishing) who think of the Confederate troops as mere traitors, miss the real tragedy of the Civil War. The tragedy of that war lay in the fact that there were patriots on both sides—men like Lincoln in the North, men like Lee in the South.

The Outlook, it seems hardly necessary to add, is convinced that the outcome of the conflict between the two forms was inevitable. The Outlook believes, too, that the result of the war, which determined forever that the American's country is comprised in the Union and not limited to the State, is accepted by the South as not only inevitable but also as wise and right. It is perfectly consistent both to honor as patriots those who followed their convictions in fighting for what they counted the rights of their States and the defense of their people, as we honor those early Vermont colonists who were State patriots before they were National patriots, and at the same time to rejoice that

a higher type of patriotism than theirs has prevailed. It shall be well if we of to-day see to it that we keep our higher patriotism as pure as Lee kept his.

## Sabbath, or Lord's Day?

Churches in convention regularly protest against an increasing desecration of "the Sabbath." The encroachments of work and of pleasure-seeking upon the limits that once hedged around the ancient preserve of religion certainly indicate a secularizing tendency of evil omen that must not be left unchecked. But the resistance to this now required must recognize and follow the line of reality. There is an essential difference between the Jewish and the Christian conception of the consecrated day. It is the former that is failing, and any attempt of modern Sabatarians to revive it is foredoomed.

The difference is this: The Old Testament Sabbath was consecrated by a prohibitive *precept*: "Thou shalt not work." The New Testament Lord's day is consecrated by a positive *purpose*: "Lay hold on the life eternal." The difference of these is the difference between letter and spirit, between mechanism and life.

With the precept we are familiar. Its results were but partly good. A complicated casuistry grew up from it, whose arbitrary and often irrational decisions tended to bring it into contempt. Jewish casuists forbade the eating of an egg laid on the Sabbath. Christian casuists forbade settling accounts for pew rent on Sunday. The casuistry of prohibition was offset by the casuistry of justification, and the hedge of the prohibitive precept suffered many a breach. The Sunday street-car that began to run under anathemas from the pulpit has become the main reliance of many a pulpit for hearers. The conservatism which fancies that the broken and trampled hedge can ever be made whole and tight would cure a case of rickets by braces instead of more lime in the blood.

The wise conservative will follow the New Testament in its substitution of the positive purpose for the prohibitive precept. The precept reiterated in the Old Testament is wholly absent from the New. In its stead is put a purpose, with

incentives to strive for it. In Jesus Christ the highest ideal of life is set forth with the strongest appeals to adopt it. To promote this a day previously undistinguished is made his memorial as "the Lord's day," consecrated to commemoration of him. These are the sole data of the New Testament for observance of this day, as a day consecrated to the activity of a spiritual purpose.

But in effective power, while precept is weak, purpose is strong. It enlists the will, whole and free. No perplexing casuistry dulls its discrimination. Intelligently and automatically it rules out whatever thwarts or hinders it. Thus, to win his degree the student constrains himself to scorn delights and lives laborious days. Thus, the purpose to clear the mortgage from the home estops all incompatible expenditure. No external precept can so yoke and guide the mind in its choice of means to ends as does the purpose self-imposed. And this is the Christian theory of the sufficient safeguard of the Lord's day, as auxiliary to the Lord's purpose adopted as one's own.

But the Christian theory is neither fully presented nor truly understood without a better than the common idea of what the positive, and therefore prohibitive, purpose—the commemoration of Christ on the Lord's day—involves. The most effective commemoration is in imitation. And this is certainly not in doing all the things that Jesus did in his peculiar mission and environment, but in adopting his ruling principles, his characteristic purpose, his conceptions of personal and of social life.

Contrast here the current superficial notion of divine worship with the true idea of it. Beyond all formal observances divine worship (literally *worship*) requires us to hold things worth what God holds them worth. Here, for instance, is Christ's cardinal truth of the kingdom of God among men, and the appeal made to heart and mind by its historic progress and present advance. Defect of interest in this is defect in worship of the King. But a multitude of church-goers care much for the Sunday newspaper, and care nothing for the philanthropic and missionary publications that record the victories of the divine kingdom and appeal for larger support of the heroes at the front. This

is flat repudiation of real worship as distinct from formal.

Suppose that a prohibitive precept could be enforced, as once, on those whom church conventions charge with doing things that desecrate the consecrated day, what gain thereby? The real desecration is not in the things they do, for things innocent on one day are equally innocent on any other. It is in the repudiation of the high purpose which prizes the day as its helper—Christ's purpose to build a divine manhood by winning men to care for the things he cares for. Decorous church-goers severely disapproving of Sunday golf-players and cigar-sellers may yet be essentially with them through lack of this regulative Christian purpose.

The stock question as to what is prohibited by a proper keeping of the Lord's day may be summarily answered. Nothing that its ruling purpose does not rule out as incompatible. This, of course, is qualified by the fact of being our brother's keeper. The personal liberty that misleads another must be foregone. But personally the principle is absolute. Whatever does not interfere with that ministration to our higher nature in mind and spirit to which the great purpose of commemorating the Lord by imitation of him has consecrated the day, is to the man of that purpose, apart from considerations of a social kind, as right on the Lord's day as on any other. The fact that needs all emphasis is that the external regulative, given by Moses is superseded by the inward regulative given by Christ.

A weighty responsibility rests upon Christian pulpits to lead the Church up to the New Testament point of view. The long resisted, now advancing, movement toward the Sunday opening of public libraries shows the turn of the tide, not for the secularizing but the true humanizing of the day. What wealth of opportunity is yet unappropriated in the use of the Lord's day for the expansion of Christian knowledge and power, knowledge of the way and work of God in the past, power intelligently engaged in divine services at the altars of human need! Let church-goers make themselves learners, from its alphabet up, in the divine art of human helpfulness. That which makes all days holy, by devoting all days to the promotion of the kingdom of God on the earth, will

bar out all personal desecration of the day that is specially commemorative of the Lord.

## The Spectator

The Spectator was sitting in an open car the other day, in front of two young women whose conversation he could not avoid hearing. They were evidently going shopping, and one of them took occasion to remark, laughingly, "I've been able to get some lovely things this summer, and paid for every one of them out of my season's winnings at bridge!" To which the other replied, "I put my bridge winnings into the marketing, and once this spring I ran the house on them for two weeks." The Spectator listened and marveled. As they left the car, he had the curiosity to take a good look at the fair speakers. They were not loud or vulgar-looking women, but well dressed and apparently refined. The Spectator had heard of bridge whist and the women gamblers it produced, but he had thought of them, hazily, as existing mainly in that over-rich and exaggerated social *milieu* where fantastic things happen, not to be taken as indexes of normal feminine life. But here were women of the class that a few years ago played "progressive" games for small prizes—the average woman, in other words—and who had now progressed so far as to gamble thriftily for food and raiment, with unconcealed pride in their ill-gotten gains.

The Spectator, at lunch that day with a wealthy friend just back from a fashionable Southern resort, mentioned the occurrence, and confessed that it had given him a shock. "Well," said his friend, "I'm not strict myself about cards, and I play bridge for money because almost every one else does, and I can't get a good game unless I do. But the other night, down at the Springs, we could only get three men to play. We needed a fourth player, and one of the men, a New Yorker, suggested that his wife played, and might take the hand. Of course we assented, and he brought her over. They were both young people, and she was as refined and well-bred a woman, apparently, as you would see anywhere. He introduced her to us—none of us knew

her at all—and she played all evening with us, like a veteran, and won our money, too. At the end of the game I paid her over some bills and she took them without turning a hair—and she was a lady, and I a stranger she had never seen before. I tell you, I'm not strict about things, but if my wife was willing to play cards for money with strangers in a hotel, I wouldn't take her round with me any more. I used to laugh at her because she wouldn't learn bridge—she said she didn't care for a game that had such gambling associations—but I begin to think she showed her usual wisdom about things in taking just that stand."

Finding the subject rather interesting, the Spectator kept it in mind more or less for the next few days, and noticed a good many straws denoting the direction of the wind. For instance, a London periodical of high standing asserted that very week that the decline of book-selling was due to the fact that five hundred packs of cards were sold this season to every book purchased. The Englishwoman, instead of reading, plays bridge nowadays. In both England and America, it was also asserted, young men who are wise refuse invitations to houses where bridge is played by the hostesses and feminine guests, because of the impossibility of getting out of playing for high stakes, with consequent losses that they cannot afford. The whole situation reminds the Spectator of those old plays in the stout volumes of his "British Drama," where the women gamblers at basset and ombre are so vividly portrayed by Vanbrugh and Cibber and the rest. The Spectator had always imagined such plays as remote from modern life as the satires of Juvenal—but lo! history repeats itself, and bridge has the same excited votaries as quadrille. Pope's smooth satiric numbers, as he celebrates Belinda's victory at ombre, are not back numbers, after all, though two centuries lie between his heroine and the modern nymph. The Eternal Feminine has a trick of repeating herself whenever conditions invite; and she is not all angel, by any means.

The Spectator remembers that he has heard a great many people excuse "progressive" games for prizes. But "doubt-

ful things are mighty onartin," and the doubtful game has led to the game which is undoubtedly a gambling one. The feminine feet which went along the primrose path of prizes have come now to actual stakes and winning. The skill at cards gained in whist tournaments easily carries over to bridge whist, in spite of its differences of play. The Spectator had a cousin who played in a whist tournament in the Quaker City some years ago, and who came home indignant because every mirror in the private drawing-rooms where it was held was tied up in white linen, and actual spies were placed to see to it that no fair player looked into another's hand. "We were guests, and supposed to be ladies," remarked the Spectator's cousin with some heat, "and we will never, never play there again after being treated in that way!" When lovely woman gets into such false positions, is there anybody to blame, however, but herself? The Spectator fears that he was not sympathetic, even then, with the feminine card-player; he is still less sympathetic now.

The modern tendencies of women form a large subject, and the end is not yet. Fifty years from now will be a better time to judge them than at present. But there seems no doubt that woman, having suddenly conquered a larger liberty than ever before, is tempted to license by her victories. Of old, for example, cigarettes and several kinds of wine at a ladies' lunch were unheard of. To-day, so the Spectator is told, such accessories are a commonplace in some social circles whose women are active in charities as well as in ultra-fashionable life. The Spectator could never quite forgive Jane Welsh Carlyle her cigarettes, even as a woman of genius. But they have come down, it appears, from the sphere of genius to the atmosphere of the average person. An artistic friend living at a primitive seaside place told Mrs. Spectator the other day of her woes with a girl acquaintance who came down to visit her from the city and must have cigarettes. The hair of the clerk in the one country store rose visibly on end when the visitor strove to buy them there; and when, sent for through the mail, a package reached the fair

smoker, and she straightway sat down on the beach and lit one with practiced hand, every man, woman, and child in the place stood at gaze, and stared their fill. "It was *dreadful*!" wailed Mrs. Spectator's friend, "and Ethel only laughed and thought the natives were great fun. But I shall never, never meet with quite the same respect from them again; for I can't explain it to them. They'd never understand. I'm so much the same way myself that I never want that girl to visit me again."

The Spectator hopes that the majority of intelligent women feel the same way. He is pretty sure that they do. How far the pendulum of liberty will swing toward license is a painful present-day question. But that a reaction will come is as certain as that the Eternal Feminine exists. Meanwhile the moral law is undoubtedly in a confused state in many feminine minds. The conscientious mother who came back from playing golf with her husband at the Country Club one Sunday morning lately, and put her little girl to bed because the child hadn't gone to church as she was told, is a true type of such moral confusion—a modern Mrs. Facing-Both-Ways. Moral issues, however, tend to clear themselves. A charming old lady of the Spectator's acquaintance, who has lived a long and full life in two continents, said to him the other day: "My daughter calls me an Early Victorian Matron in my views, and my granddaughter regards me as a Cave-Dweller; but from the Cave-Dwellers to the Early Victorian Matrons, my traditions and convictions come of enduring stock, and I have no fear of their extinction. They will assert themselves again before long. My daughter may not live to be a Cave-Dweller in her views—but my granddaughter will, some day!" The Spectator heartily believes her prophecy, and is therefore not too much disquieted over the present vagaries of women, though they are, frankly, not pleasant to one who desires to admire and reverence the gentler sex. Portia playing bridge, Juliet with a cigarette—surely the glaring profanation of such imaginations might well give lovely woman pause as she hesitates before the follies which beckon her to-day.

# SOUTHERN QUESTIONS

## Was Robert E. Lee Loyal?

### I.—Northern Views

*To the Editors of The Outlook :*

No one desires to subtract in the least from the tribute of praise due to the memory of General Robert E. Lee for his many noble qualities. But if we are to preserve at all the meaning of words, or keep clear those distinctions which give words their moral value, it does not seem to me that we can rightly call General Lee a "patriot."

Webster's International Dictionary gives as the sole definition of a patriot—"one who loves his country and zealously supports its authority and interests." In the hour of his country's sorest need General Lee gave his love and his zealous support to its foes, and strove to overthrow its authority and interests.

You say, "The test of patriotism, like that of any other moral quality, is not success, but loyalty to conviction." Now, granting that success does not decide moral qualities, it does at least help to determine facts; and the war settled forever the fact that the country to which as a patriot Lee owed allegiance was not Virginia, but the Union; was not "his State," but the United States. Had he succeeded, the Confederacy would have called him a patriot, but not the North; certainly not the victorious Union.

But may there not be a higher patriotism than that of mere loyalty to the existing government? This is probably your thought. May not he who obeys his convictions retain the name of "patriot," even though the issue prove him unsuccessful? I answer, he may still keep the name "patriot," even though defeated, if the convictions for which he drew his sword against his country were right convictions, but not otherwise. Thus both Burke and Washington were truer patriots than Lord North or King George; and the mere fact that Burke resided in England and Washington in America, or the hypothetical defeat of the latter, would not have changed the essential spiritual and moral fact that both these men were loyal

to the real country, to the higher nation, to the "spirit of the English constitution." In behalf of Washington, wholly aside from his success or failure, we appeal from the *prima facie* evidence of unpatriotism (his waging war against England) to the higher right for which he fought.

But when the convictions are erroneous, this right of appeal is forfeited. Now, the editor of *The Outlook*, standing in the shadow of Beecher, will not claim that Lee fought for right moral or constitutional principles. Secession was wrong; slavery was wrong; and since no man can serve two masters, placing love of State before love of the Union was wrong. All agree to-day that Union and Freedom were the right cause.

It may be said that a man must follow his sincere convictions, even though mistaken. In reply, we maintain that it is a man's duty to find and follow the right convictions. But, however that may be, sincerity is not the equivalent of patriotism.

The man who takes up arms against his country furnishes *prima facie* evidence that he is not a patriot. If he fights in an unsuccessful cause, that presumption is increased. The only appeal is on the ground that the man is fighting for the real interests of his country, and of mankind through his country; that is, for those high moral ends for which God has established human government. General Lee cannot maintain such an appeal. However natural his motives, the cause for which he fought against his country was not for the permanent welfare of his nation or of humanity.

A second fact has been too frequently overlooked. General Lee was under peculiar obligations to the Nation. He had been educated at her expense at West Point; his commissions all contained a solemn pledge "to bear true faith and allegiance to the United States of America, to serve them honestly and faithfully against all enemies whatsoever, to obey the President of the United States, according to the articles of war."

The excuse made for General Lee is his question, "How can I draw my sword against Virginia, my native State?" But

General Lee was offered the command of the Union forces when Virginia was still in the Union; when nearly two-thirds of the delegates to the convention had been elected as pledged opponents of secession and when it was by no means clear that the people favored secession. Yet then he declined to support his country by accepting the command. Furthermore, he accepted the command of the armies of Virginia after the ordinance of secession had been indeed passed by the convention, but before it had been ratified by the popular vote, which was the condition of its becoming effective. There is point in the query of Mr. Chittenden, Registrar of the Treasury under President Lincoln, whether, if General Lee had used the mighty influence of his name and family aggressively in support of the Nation, while the State hung in the balance, and while the masses of the common people were loyal, he might not have saved Virginia and the Union from war. That is what General Scott expected him to do. Instead, he drifted with his State into disunion, and fought for a wrong cause against his country. I cannot agree with *The Outlook* that this was merely an "error of political judgment." It seems to me rather an error of the gravest "political morality."

As a private matter, we may excuse Lee on account of his sincere though mistaken convictions. But the word "patriot" is a public word, with a sacred meaning, speaking of the highest public honor. It should be reserved for men like those other Virginians, Generals Scott and Thomas, who were not misled by erroneous convictions, but who, guided by true patriotism, in the hour of their country's peril were loyal to her and to the cause of freedom and of right.

AUSTIN RICE.

Walla Walla, Washington.

*To the Editors of The Outlook:*

I read with interest your article on the "Loyalty of General Lee."

That the question of the real character of Robert E. Lee should still be under discussion justifies the conviction that it is not so easily determined as your ingenious effort at its vindication assumes.

Let me add my modest mite to that discussion.

It seems to me that you are inaccurate and illogical in ascribing to General Lee's sentiment for his native State the dignity of that exalted virtue "patriotism." At the beginning of the Civil War, in the North and at the South, "patriotism" had but one signification, elementary indeed, but unmistakable and enduring as the ages. No pent-up Africa or Virginia or Rhode Island contracted its powers or suppressed its fervor.

In the South itself, "States' rights" (which you adopt as the adequate and righteous foundation of Lee's patriotism) was a purely political issue, not less than the question of the tariff or the repeal of the Missouri Compromise. Some effusive hustings orator, here and there, may, upon occasion, have aimed to cast a glamour of sentiment around so prosaic and practical a subject; but the historic fact abides that "States' rights" was a political dogma alone.

General Lee did not take up arms in defense of his native State, any more than I or any other Union soldier entered the service to defend our native State, be it Pennsylvania or Massachusetts or Kentucky. The State of Virginia was neither in theory nor in fact attacked, any more than Pennsylvania was attacked when Lee came to Gettysburg. It was the political organization known as the Southern Confederacy against which the armed forces of the United States Government were directed; and it was in behalf of that Confederacy that General Lee abandoned his commission in the old army and accepted one of higher rank from the new association of seceding States.

This was the broad and manly and patriotic estimate of the situation that another son of Virginia, equally faithful to all her just demands upon him, and a not less gallant soldier and "Christian gentleman of high character," General George H. Thomas, found no difficulty in taking when the identical emergency presented itself to him, likewise an officer in the old regular service.

That was loyalty "writ large," contrasted with which Lee's engrossing sentiment for his native State, mildly commendable though it might have been, was but a pinchbeck thing.

ROBERT D. COXE.

Philadelphia, Pennsylvania.

## II.—A Southern View

### *To the Editors of The Outlook:*

Allow me to express my high sense of gratification with reference to your comment concerning "The Loyalty of Robert E. Lee." I trust, however, that I may be permitted to add to your appreciative estimate of the high plane of duty upon which General Lee acted, a further statement of facts that seem to me to be involved in the case. On the 23d of January, 1861, before the organization of the Southern Confederacy, General Lee was in Texas. On that day he wrote: "I can anticipate no greater calamity for the country than a dissolution of the Union. It would be an accumulation of all the evils we complain of, and I am willing to sacrifice everything but honor for its preservation. I hope, therefore, that all constitutional means will be exhausted before there is a resort to force. Secession is nothing but revolution." Constitutional means of adjustment were still possible in January, 1861. In the form of the Peace Convention and the Crittenden Resolutions such means were resorted to in February, 1861. In April, however, a resort to force was made, and on the 18th of April, 1861, President Lincoln offered to Lee the command of the army which he was then assembling for the invasion of the South. The issue presented in April, 1861, to the mind of Lee was entirely different from the issue presented to him in January, 1861. He loved the Union founded by Washington. He was loyal to the principles of that old Union. He was ready to enter his protest against secession from that Union. But with far greater strength of conviction he held that the President of that Federal Union had no authority to send an army into any one of the States. Such an act of invasion on the part of the President constituted, in Lee's mind, a more damaging blow aimed at the principles of the old Federal Union than the act of secession on the part of a State. Against secession he offered verbal protests, but against the President's policy of invasion he was ready to *fight*. On the 20th of April, 1861, Lee resigned his commission in the Federal army; and on the same day he wrote to his brother: "War seems to have commenced, and I am liable at any time to be ordered on duty which I could not con-

scientiously perform. . . . Save in the defense of my native State, I have no desire ever again to draw my sword." On the 23d of April he said to the convention in Richmond which had made him commander of the Virginia forces: "Trusting to Almighty God, an approving conscience, and the aid of my fellow-citizens, I will devote myself to the defense and service of my native State." In September, 1861, Lee told his soldiers in western Virginia that they were fighting for "the right of self-government, liberty, and peace." In July, 1862, he commended the conduct of his army at Richmond as "worthy of men engaged in a cause so just and sacred, and deserving a nation's gratitude and praise." On the 8th of September, 1862, he announced to the people of Maryland that his army had come to assist them in "regaining the rights" of which they had been deprived by a Federal Administration at Washington, which was acting "under the pretense of supporting the Constitution, but in violation of its most valuable provisions." On the 11th of July, 1863, Lee said to his men, "Let every soldier remember that on his courage and fidelity depends all that makes life worth having—the freedom of his country, the honor of his people, and the security of his home." Quotations of a similar character might be multiplied to show that Lee regarded himself as contending, throughout the war, for the rights of his people, as those rights were defined by the old Federal Constitution. In March, 1866, before a Committee of Congress at Washington, Lee expressed the view that the seceding States in 1860-61 "were merely using the reserved rights which they had a right to do." Lee wrote also, on the 5th of January, 1866, as follows: "All that the South has ever desired was that the Union as established by our forefathers should be preserved; and that the Government as originally organized should be administered in purity and truth." Again, December 15, 1866, he wrote: "The South has contended only for the supremacy of the Constitution and the just administration of the laws made in pursuance of it. . . . Although the South would have preferred any honorable compromise to the fratricidal war which has taken place, she now accepts in good faith its constitutional results." On March 12, 1869,

he made the following statement: "I was not in favor of secession and was opposed to war. In fact, I was for the Constitution and the Union established by our forefathers. No one now is more in favor of that Union and that Constitution, and, as far as I know, it is that for which the South has all along contended; and if restored, as I trust they will be, I am sure there will be no truer supporters of that Union and that Constitution than the Southern people." These words, and others that might be added, show that Lee was loyal not merely to his State, Virginia, but in his own opinion he remained always loyal to the Federal Constitution and to the Federal Union of 1789.

## Peonage

### I.—A Voice from Alabama

*To the Editors of The Outlook:*

As a resident of Montgomery, Alabama, let me thank you for your editorials on Southern questions in your issue of July 18. I am glad that there is a National moral sentiment to which the wrongs of the humblest—whether in Maine or California or Alabama—can confidently make appeal. The power of your editorial on Peonage lies in the fact that you have not excluded from this sentiment the moral participation of the South. You have not assumed that the Nation in its righteousness is on one side and that the South is sitting in darkness on the other. You have recognized the local evils, but you have also recognized the local forces of self-correction, the local conscience, and the local resolution implicit in the fact that all these indictments against peonage were found by a grand jury composed of Southern men, under the instructions of a Southern judge. If the Nation must include the South in the partnership of responsibility, the Nation recognizes and includes the South in the partnership of rectification.

Too often we find that when a Northern paper discusses wrongs at the North or at the West it criticises the *wrongs*, but when it discusses wrongs at the South it criticises the *South*. The indiscriminating and intolerant criticism of which I have just spoken tends to make the evils arising in the

Southern States issues not between Americans everywhere and the foes everywhere of a true Americanism, but crude and bitter issues between the North and the South. Such criticism reflects a Pharisaism which is the very soul of sectionalism—a Northern sectionalism as offensive as any sectionalism in our Southern States. The North, *as the North*, has nothing to do with peonage in Alabama. The North, as the North, is, in the affairs of Alabama, a meddler pure and simple. The Nation, including the South as well as the North, and the West as well as the South and the North, has to do with every issue in Alabama that touches any National right of the humblest of its citizens. We do wish the North, as the North, to let us alone. We do not wish the Nation to let us alone. We desire from every quarter, as every section should desire, a true National participation in our interests. We wish from the spokesmen of the Nation, whether in journalism or elsewhere, a criticism National in the exacting nobility of its ideals, National in its moral vigor, but National also in its intelligent and constructive sympathy.

EDGAR GARDNER MURPHY.

Montgomery, Alabama.

### II.—A Voice from Georgia

*To the Editors of The Outlook:*

As a regular reader of your valued magazine, as a Georgia planter for thirty years, and as the descendant of five generations of Southern planters, in Georgia and other States, I desire to express my cordial and entire indorsement of your article on Peonage in *The Outlook* of July 18.

You are quite correct in saying that the best sentiment of the South is utterly opposed to any such methods. Respectable planters neither desire to descend to such a system, from a moral point of view, nor to compete with it from a business standpoint. The mistaken State policy and system of hiring convicts to private parties, to conduct planting, milling, and various other business enterprises, is a temptation to the greedy and unscrupulous to be dissatisfied with the legitimate labor field.

The corrupt connivance of the degraded type of magistrates, and lax local sentiment in certain sections, make it easy and profitable to secure by fraud, and retain

by illegal and violent methods, ignorant and helpless negroes. The shiftlessness and tendency to vagrancy of a considerable class of negroes and their utter indifference to contracts as obligations serve as a welcome excuse for this iniquity and they fall easy victims.

This system of convict leases and the system of child labor in factories are both strongly attacked in our present Legislature, and there is a widely developed and most proper opposition to both.

The child labor bill was killed mainly by the potent opposition of the factory interests. It is to be feared that the convict lease system will also be sustained; but both are doomed, and it is only a question of time and educated opinion; and this in spite of the powerful interests involved in their continuance. I would add that the desire to protect the negro from oppression and brutality by the "best Southern sentiment" does not in the least involve any advocacy of his voting privilege or political rights.

A GEORGIA PLANTER.

## The Mulatto Factor

*To the Editors of The Outlook:*

In your issue of June 27 you print a communication from the Rev. Thomas Nelson Baker correcting a construction which an editorial of yours had placed upon his reference to my article on the mulatto. I have no quarrel with Mr. Baker's comments upon my utterances, and have no desire to consume your space and tax the patience of your readers by indulging in an idle controversy, but the conclusion indicated in this communication demands, it seems to me, some reply.

All that I attempted to do in the article in question—"The Mulatto Factor in the Race Problem"—was to set forth briefly certain features of the "problem" which it appears to me to be unwise to ignore in our considerations of it. At most, I could make so short a discussion merely suggestive, and no more than this was contemplated by me.

I have no fault to find with those who take issue with me, but I do object to having entirely incorrect motives ascribed to me, and false conclusions drawn from my words. The fact that this has been

done by so many of my critics—to say nothing of one or two unintentionally misleading "interviews" on the subject—warrants me in making this correction.

My position is simply that, in its mental and moral equipment, if I may so express it, the negro race is the inferior of the white; that the men who have come to the front as "race leaders," and who are pointed to as the highest intellectual type of the race, are, in fact, not really negroes—under any exact definition of the word, as descriptive of a race; that these mulattoes, from their position of leadership, wield a large influence over the more than nine millions of our population classed as negroes—and that it behooves them to see to it that that influence should be for good rather than for evil.

I do not mean to say that there are no pure negroes who have risen to eminence in this country, and I would be the last man to ignore the wise teachings and helpful influence and example of such men as Isaac Fisher and Professor Councill. I speak, however, of the masses of the race when I ascribe to it certain characteristics, just as I refer to the large body of "race leaders" when I speak of them as mulattoes. This does not mean to say that there are not many negroes who have risen superior to the character of the mass, any more than it means to say that every man is fitted for high station in the race just because he happens to be a mulatto.

Mr. Baker speaks of the "poor thinking" the white man is capable of "when dominated by prejudices and preconceived opinions." It is this, and the term "negrophobist," used by some of my critics, to which I take exception. The people of this country, North and South, white and black, have misunderstood and abused each other long enough over this "race question" to have learned that nothing is to be gained by the use of harsh terms and indulging in recrimination. Neither section, neither race, can lay claim to the exclusive possession of all the wisdom on the subject, nor justly charge the other with all the prejudice and ignorance. The situation demands a large measure of sympathy and charity f

1 the according

of honest motives to honest thought, even though it lead to conclusions at variance with one's own. He who cannot criticise without the questioning of motive—who cannot differ without indulging in reproach or abuse—cannot hope to add much to that kindly feeling which must characterize any discussion of the race

question to give it its first element of value.

ALFRED HOLT STONE.

Washington, D. C.

To the principle so admirably stated in the last paragraph, and so well illustrated by this entire letter, *The Outlook* adds its hearty and emphatic indorsement.—THE EDITORS.

## A Picture of the Papal Conclave

The romance of "John Inglesant," by the late John Henry Shorthouse, contains a vivid description of the Papal election of 1655. The very fact that it is imaginative in treatment gives to it a tone of reality which a more matter-of-fact account would lack. The election here described is that of Cardinal Chigi, who became Pope Alexander VII. By the kind permission of the publishers of "John Inglesant" (the Macmillan Company, New York) we print herewith certain excerpts from the thirtieth chapter of that justly famed romance.—THE EDITORS.

THE portion of the Vatican Palace set apart for the election of the Pope, and called the Conclave, consisted of five halls or large marble rooms, two chapels, and a gallery seventy feet long. Each of these halls was divided temporarily into small apartments, running up both sides, with a broad alley between them, formed of wood, and covered with green or violet cloth. One of these apartments was assigned to each Cardinal with his attendants. The entrance to the whole of these rooms, halls, chapels, and gallery, was by a single door fastened by four locks and as many keys. As soon as the Cardinals had entered the Conclave this door was made fast, and the four keys were given to the four different orders of the city—one to the Bishop of Rome, one to the Cardinals themselves, a third to the Roman Nobility, and the fourth to the Officer, a great noble, who kept the door. A wicket in the door, of which this Officer also kept the key, permitted the daily meals and other necessities to be handed to the Cardinals' servants, every dish being carefully examined before it was allowed to pass in. Within the Conclave light and air were obtained only by skylights or windows opening upon interior courts, precluding communication from without. The gloom of the interior was so great that candles were burnt throughout the Conclave at noonday.

From the moment the Conclave was closed a silence of expectation and anxiety fell upon all Rome. The daily life of the

city was hushed. The principal thoroughfares and fortresses were kept by strong detachments of armed troops, and the approaches to the mysterious door were jealously watched. Men spoke everywhere in whispers, and nothing but vague rumors of the proceedings within were listened to in the places of public resort, and in the coteries and gatherings of all ranks and conditions of the people.

In the interior of the Conclave, for those who were confined within its singular seclusion, the day passed with a wearisome monotony marked only by intrigue not less wearisome. Early in the morning a tolled bell called the whole of its inmates to mass in one of the small chapels darkened with stained glass, and lighted dimly by the tapers of the altar and by a few wax candles fixed in brass sockets suspended from the roof. The Cardinals sat in stalls down either side of the Chapel, and at the lower end was a bar, kept by the master of the ceremonies and his assistants, behind which the attendants and servants were allowed to stand. Mass being over, a table was placed in front of the altar, upon which were a chalice and a silver bell. Upon six stools near the table are seated two Cardinal-Bishops, two Cardinal-Priests, and two Cardinal-Deacons. Every Cardinal in his turn, upon the ringing of the bell, leaves his seat, and having knelt before the altar in silent prayer for the guidance of Heaven in his choice, goes round to the front of the table and drops a paper, upon which he has written the

name of a Cardinal, into the chalice, and returns in silence to his stall.

A solemn and awful stillness pervades the scene, broken only by the tinkling of the silver bell. The Cardinals, one by one, some of them stalwart and haughty men, with a firm step and imperious glance, others old and decrepit, scarcely able to totter from their places to the altar, or to rise from their knees without help, advance to their mysterious choice. To the eye alone it was in truth a solemn and impressive scene, and by a heart instructed by the sense of sight only, the awful presence of God the Paraclete might, in accordance with the popular belief, be felt to hover above the Sacred Host; but in the entire assembly to whom alone the sight was given there was probably not one single heart to which such an idea was present. The assembly was divided into different parties, each day by day intriguing and maneuvering, by every art of policy and every inducement of worldly interest, to add to the number of its adherents. "If perchance," says one well qualified to speak, "there entered into this Conclave any old Cardinal, worn by conflict with the Church's enemies 'in partibus infidelium,' amid constant danger of prison or of death, or perchance coming from amongst harmless peasants in country places, and, by long absence from the center of the Church's polity, ignorant of the manner in which her Princes trod the footsteps of the Apostles of old, and by the memory of such conflict and of such innocence, and because of such ignorance, was led to entertain dreams of Divine guidance, two or three days' experience caused such an one to renounce all such delusion, and to return to his distant battlefield, and so to see Rome no more."

When every Cardinal has deposited his paper, the Cardinal-Bishop takes them out of the chalice one by one, and hands them to the Cardinal-Deacon, who reads out the name of the elected, but not of the Cardinal who has placed the paper in the chalice (which is written on part of the paper so folded that even the reader does not see it); and as he reads the name, every Cardinal makes a mark upon the scroll of names he has before him. When all the names have been read, the Cardinal-Priest, from a paper which he has pre-

pared, reads the name of him who has had the most voices and the number of the votes. If the number be more than two-thirds of the whole, the Cardinal who has received the votes is thereby elected Pope; but if not, the Cardinal-Priest rings the silver bell once more, and at the signal the master of the ceremonies, Monsignor Fabei, advances up the Chapel, followed by a groom carrying a brazier of lighted coals, into which, in the face of the whole assembly, the papers are dropped one by one till all are consumed.

At the beginning of the Conclave the Cardinals were always divided into two, if not more, parties, of such relative strength as to make the attainment of such a majority by either of them impossible for many days. It was not until the persistent intrigues of a fortnight had increased the majority of any one Cardinal so much as to give a probability of his being ultimately elected, that the waverers of all sides, not willing to be known as the opponents of a new Pope, recorded their voices in his favor, and thus raised the majority to its necessary proportion. For this very delicate matter occurred at this period of the election, that, should the requisite majority of voices be obtained, the master of the ceremonies and his brazier were no longer called for, but the whole of the papers were opened to their full extent, and the names of the voters given to the world, whereby, as one conversant in these matters observes, "many mysteries and infidelities are brought to light." It is evident, therefore, that, as the majority of any one Cardinal increased or showed signs of increasing, morning and evening, as the suffrages were taken, the voting became a very exciting and delicate matter. No one could be certain but that at the next voting the majority from the cause mentioned would suddenly swell to the necessary size, and every man's name be made clear and plain on whose side he had been.

Upon entering the Conclave the friends of Cardinal Chigi adopted a quiet policy, and waited for the progress of events to work for them. . . . The great reputation he had gained at Münster, the determination he was said to have manifested to reform all abuses, the authority and influence he derived from his post of Secretary of State, his attractive and gracious man-

ner, the recommendation of the late Pope upon his death-bed—all tended to bring his name prominently forward. He was supported by the Spanish Cardinals, chiefly on account of the enmity of the French Court and of his professed opposition to Cardinal Mazarin.

The Spanish faction, which was numerous enough to have secured the election of any Cardinal had it been united, but the members of which were agreed upon nothing but their determined opposition to Sacchetti, contented itself with voting negatively at every scrutiny, making use of the form "*accedo nemini*." This course was pursued for two entire months, during which time the scrutinies were taken regularly morning and evening, always with a slightly varying but indecisive result.

It would be difficult to realize the wearisomeness which reigned in the Conclave during so protracted a period. The crowding together of so large a number of persons in a few apartments, the closeness of the air, and the unbroken monotony of the hours that passed so slowly, made the confinement almost intolerable. One Cardinal was taken ill, and was obliged to be removed. The great gallery was generally used by the Cardinals themselves, for exercise and conversation, while their attendants were compelled to content themselves with their masters' apartments, or the corridors and passages. Those which opened on the interior courts, and thereby afforded some fresh air, were especially resorted to. Communication from without, though in theory absolutely prevented, was really frequent, all the chief among the Cardinals receiving advices from foreign Courts, and conveying intelligence thither themselves.

At intervals the whole of the inmates were assembled to listen to Father Quæchi, preacher to the Conclave, a Jesuit, and secretly in favor of Cardinal Chigi, as was the Society in general. The sermon was so contrived as to influence its hearers considerably by its evident application to the manners and conduct of the Cardinal.

The famous De Retz, then an exile from France and a supporter of Chigi, by whom he always sat in the Chapel, was the principal intriguer in his favor. He was in communication with the nominal

supporters of Barberini, who sent him intelligence by Monsignor Fabei when to vote for Sacchetti, on occasions when it would be of no real service to him, and when to refrain. On one of these latter occasions Fabei intrusted his message to Inglesant, with whom he was intimate, and it afterwards appeared that Sacchetti, on that scrutiny, wanted but very few votes to have secured his election. This circumstance made a deep impression on De Retz, and he never recognized Inglesant afterwards without alluding to it.

The day after this scrutiny Cardinal Barberini appears to have thought that the time was come for his friends to make a demonstration in his behalf, and to the astonishment of the Conclave thirty-one votes appeared in his favor in the next scrutiny. This caused the friends of Cardinal Chigi to pay more attention to his conduct, and to the discourses of his Conclavists and other partisans, who neglected no opportunity of exalting his good qualities.

The exhaustion of the Conclave became extreme. Cardinal Caraffa, who, next to Sacchetti and Chigi, stood the greatest chance of election, became ill and died. Twelve other Cardinals were balloted for, one after another, without result. Cardinal San Clemente was then brought forward, and, but for the hostility of the Jesuits, might have been elected; but the Spanish Cardinals who supported him did not dare openly to offend the Society, and the election failed.

The apartment assigned to Cardinal Chigi was subdivided into three smaller ones, the largest of which was appropriated to the bedchamber of the Cardinal, the two others to his attendants. These apartments communicated with each other, and only one opened upon the center corridor running down the hall. The Cardinal retired early to his own chamber, and most of the other Cardinals did the same. A profound silence reigned in the Conclave; if any of the attendants still stirred, they were velvet-shod, and the floors and walls, lined with velvet, prevented the least sound from being heard.

Inglesant remained alone in the outermost of the three apartments, and determined to keep his faculties on the alert. For some reason, however, either the

fatigue of the long confinement or the deathlike stillness of the night, a profound drowsiness overpowered him, and he continually sank into a doze. He tried to read, but the page floated before his eyes, and it was only by continually rising and

pacing the small chamber that he kept himself from sinking into a deep sleep.

A profound peace and repose seemed to reign in a place where so many scheming and excited brains, versed in every art of policy, were really at work.

## Advice

By Paul Laurence Dunbar

W'en you full o' worry  
 'Bout yo' wo'k an' sich,  
 W'en you kind o' bothered  
 'Case you cain't get rich,  
 An' yo' neighb'oh p'ospah  
 Past his jest desu'ts,  
 An' de sneer of com'er'ds  
 Strikes yo' heaht an' hu'ts,  
 Des' don' pet yo' worries,  
 Lay 'em on de she'f,  
 Tek a little trouble,  
 Brothah, wid yo'se'f.

Ef a frien' comes mou'nin'  
 'Bout his awful case,  
 You know you don' jine him  
 Wid a gloomy face,  
 But you wrassle wid him,  
 Try to take him in ;  
 Dough hit cracks yo' feachuhs,  
 Law! you smile lak sin.  
 Ain' you good ez he is?  
 Don' you pine to def ;  
 Tek a little trouble,  
 Brothah, wid yo'se'f.

Ef de chillun pestahs  
 An' de baby's bad,  
 Ef yo' wife gits narvous  
 An' you's gittin' mad,  
 Des you grab yo' bootstraps,  
 Hol' yo' body down,  
 Stop a-t'inkin' cusswo'ds,  
 Chase away de frown.  
 Knock de haid o' worry  
 Twell dey ain' none lef'—  
 Tek a little trouble,  
 Brothah, wid yo'se'f.

# A Singer of the Night

By Clara Barrus

TO turn a new leaf in Nature's infinite book of secrecy, to penetrate behind the veils and screens which so often shut the wild life about us from our dull senses, to have eye and ear suddenly endowed with new powers—what greater pleasure to a country dweller than that? Yet how few experience it, how few go to the quick in their observation of Nature! There is a play of life all about us, which we neither see nor hear till our eyes and ears are opened. At least I am aware that this has been largely so in my own case. How dull my powers of observation have been was recently brought home to me while taking a walk with that incomparable out-of-door comrade, John Burroughs. As we were returning at dusk through a damp, stony pasture, after a gleesome saunter over hills and through the fields and woods, my attention was arrested by my companion's sudden halt, his uplifted hand, and his admonitory "Listen!" I listened. "Seap . . . seap," a harsh voice querulously called from the bottom of the pasture.

It's the woodcock's call. Oh, if we are only lucky enough to hear his evening song! But comparatively few persons have heard it; I haven't for years. Emerson, you remember, speaks of it in his "Wood Notes"—"the woodcock's evening hymn." Many observers deny that it has a song—an unusual thing in a game bird, you know.

*Seap . . . seap*, came up to us, a little nearer now, as the bird moved about to get his diet of worms.

"What is his song like?" I query. Then Burroughs tells me that, in the mating season, the bird mounts in the air with a chirring noise, and showers upon the listener a succession of notes which grow more and more rapid until the song ends in an ecstatic downpour; then the bird drops to the earth and resumes his feeding, interspersed with harsh calls such as we have just heard.

Scarcely was this explanation ended when I became conscious of a chippering, chirring sound a few rods away, now here, now there, faint, elusive, rapid, more

rapid, bubbling, rippling sounds, oh, so faint, so scarcely discernible at times, then nearer, louder, ending finally in an ecstasy of liquid notes, and, almost instantaneously, it seemed to me, followed by that querulous *seap*, which again came up from the same place on the stony hillside.

How exciting it was, how we strained eye and ear, seeing nothing in the fast-gathering darkness; indicating the bird's course by outstretched hands, but not daring to break the spell during the song by the lightest whisper.

"You heard it, I'm sure you did by the way you moved your hand. Your ears are sharper than mine."

"But didn't you?" I asked in disappointment. "Only faintly, very faintly, and I lost it part of the time that you seemed to be following it," he replied.

Twice, thrice after that, the calls suddenly ceasing, again was heard that ringing flight, and the faint but ecstatic music in the darkening skies.

At an earlier hour the following night I persuaded a friend to go with me to the same pasture, assuring her that it would be well worth her while should we hear what I heard the night before.

It was still light when we reached the pasture. Bob-whites and whippoorwills were calling; a night-hawk was flying high up in the sky, crying "Peent, peent" to us as we jumped from stone to stone, brushing away the flies that the hawk would have been glad to see so near his face. Once he flew so low that we plainly saw the white bands on his wings.

The sunset light was flooding all this May loveliness of field and farm and distant wood; song-sparrows were blithely pouring out happiness by the throatful; peepers were piping and toads trilling, and we thought it no hardship to wait in such a place till the dusk should gather, and the wary woodcock announce his presence. But hark! while yet 'tis light, only a few rods distant, I hear that welcome *seap . . . seap*, and lo! a chipper and a chirr, and past us he flies—a direct, slanting upward flight, somewhat labored—his bill showing long against the red-

dened sky. "He has something in his mouth," I start to say, when I bethink me what a long bill he has.

Around, above us he flies in wide, ambitious circles, the while we are enveloped, as it were, in that hurried chippering sound—fine, elusive, now near, now distant. How rapid is the flight! Now it sounds faster and faster, "like a whip-lash flashed through the air," said my friend; up, up he soars till he becomes lost to sight at the instant that his song ends in that last mad ecstasy that just precedes his alighting.

Sometimes we counted nineteen *seaps* between the flights, sometimes up in the thirties. Each time, until it grew too dark, we saw him fly past as he mounted to the zenith, and usually we kept him in view till toward the very last of his song, when, in spite of all that we could do, he would elude us, yet the sound seemed to be right around us.

He seemed to return so often to the same feeding-place that we tried to get a nearer view of him by running to the spot whence the *seap* arose the instant we heard him start up on his flight. But this mirage of sound lured us long without revealing to us his whereabouts—he always seemed just about as far away when we arrived at the spot as he had been when we started for it. We finally succeeded, however, although it had then become dark; he was near, we knew, a rod or two at the farthest, for his calls sounded very harsh and close, but they came less frequently, whether because he heard us or was getting sleepy we could not determine. We heard, however, a new sound—a low gurgle—coming at about the same intervals that the seaps do, sometimes just preceding them, sometimes seemingly instead of them, but the gurgles always sounded to me a rod lower down in the pasture than did the seaps. Does each gurgle mean a worm swallowed, or has he a mate there, and is it she that gurgles while he seaps? We inclined to this opinion, for when we again rushed toward the spot whence the sounds came, we both felt sure, judging from the whistling sound of their wings, that we started up two birds, which flew in opposite directions.

Remembering the muddy, rough road we must traverse in the darkness, Pru-

dence admonished me to come away, and on she started in advance. I lingered, she called, he seaped. She called again, I followed reluctantly. At that instant the bird arose; suddenly I stood transfixed, enveloped in the sound; he was close by me, closer than at any time before; it was maddening—that obscurity balking my straining eyes, his elusiveness mocking my listening ears, and Prudence in the distance warning me that there might be tramps along Snake Lane. What cared I for tramps with that bird circling about me in the darkness? Suddenly, the last notes ending, something flew close by me and alighted almost at my feet. I said so triumphantly as I joined Prudence, but sober second thought made me acknowledge (to myself) that my excitement was such that I really wasn't sure whether I saw the bird that time or only imagined that I did.

A few nights later I kept tryst with the woodcock again—this time alone. I sought him in his banqueting hall still earlier than on previous nights, hoping to get a better view of him while it was yet light.

Nearing the place, I heard and saw the night-hawk, and hoped he would keep up his call until the woodcock began, so that I might differentiate his peent from the woodcock's seap, for Prudence had declared that to her these sounds were identical. My wish was fulfilled; in fact, it wasn't long before I wished that the night-hawk would quit the field; he interfered, with his harsh, insistent voice. The night-hawk's call is sharper, but not more querulous, than that of the woodcock; it is much higher pitched, and always comes down to one, challenging him to look up, while the woodcock's seap is always a sound of concealment, however near, and always comes up to one.

While waiting for the woodcock I heard the peculiar booming sound that comes after the night-hawk has darted down from the sky to seize his victim. Such a queer, improbable sound to come from a bird! I should think it would scare the victim to death.

Presently up from the stony field comes the familiar seap—making me deaf to all other sounds. Soon that fine, ringing music is all around me. I see the bird circle around low over the field, four or

five feet above the ground, before mounting to the sky, where he circles round and round, the circles becoming smaller and smaller, till finally he disappears in the zenith. In my efforts to keep him in view I nearly lose my balance and dislocate my neck—all to no purpose; he eludes me every time; and exasperating it is, for it is just at the point when that rapid, most ecstatic part of his song is dropping into one's very ears, and when he seems to be close at hand, that he is invisible in the zenith. Suddenly the sounds cease; still looking up, I see him swiftly drop from the sky, till just above my head he again wheels and circles about, then drops noiselessly to the earth, scarcely a rod away.

Again and again he repeats these flights. Am I the only listener, or has he an admiring mate down there in the mud and in the oncoming darkness?

Now I learn that he does not invariably go back to the same spot to feed, as I had supposed he did; possibly he has changed his tactics because I keep chasing him up. Whenever he drops within a rod or two of me, that low, gurgling sound is discernible. It always sounds farther away than the spot whence the seap appears to come, but I am now persuaded that it comes from the same bird.

I have hunted the field over for a nest by daylight, but have found none, although I have found the round holes in the mud made by the long bill of the woodcock.

It is impossible adequately to describe the charm of this wary bird, impossible to communicate to others the zest there is in following him up in the field or in tracing the course of his aerial twilight voyages, impossible to make others understand the excitement that one experiences afresh each time that the bird mounts on his singing wings. As the darkness gathers, the mystery, the charm, the elu-

siveness are increased; other voices of the night have become silenced, except, far, far away, a whippoorwill's call; seated on a stone, one looks up at the immensity of the sky with one lone star in sight, and waits in breathless excitement for that mysterious flight, that ecstatic evening song—with all respect to Emerson, I cannot call it a hymn. There is nothing hymn-like in the joyous downpour. But the peace that steals over one in the evening solitude as one lies on the good brown earth and looks up into the starry sky has something hymn-like in its quality.

What a pity that disquieting thoughts will intrude! How we are wrapped around with conventions when even alone! With only the stars and the voices of the night for company, we feel the necessity of defending ourselves to ourselves for having thrown us down on Mother Earth and quietly gazed at the sky above!

The darkness deepens. Again the flight begins; straining one's eyes, the bird is seen to mount and mount; there he goes right up into the big dipper itself, though it is bottom side up. I thought the singer had gone forever, dropping those farewell notes as he went; but it wasn't long until he was down in the mud hunting for worms—gurgling and seeping less than a rod away. Since he has a choice of worlds and prefers ours, Mother Earth ought to feel flattered.

It is dark as I stumble back through Snake Lane. A few glowworms shine like opals and topazes on the moist ground. An occasional peeper pipes slowly and tentatively. The scent of the apple-blossoms makes me wish to linger in the silent orchards where, before sundown, the orioles were piping so gayly. All is now still, till, passing the last strip of woods before reaching home, I hear the muffled diminuendo call of the lonesome owl—*who-o-o-o*—a fitting finale to the voices of the night.

# Seven Years of French Rule in Madagascar

By Jean C. Bracq

Professor of Romance Languages at Vassar College

THE unconditional surrender of Ranavalona III., Queen of Madagascar, on October 1, 1895, settled the question whether that island should be ruled by one of its tribes, the Hovas, or by the French. A great civilized Power would henceforth put an end to the abominable system of Hova oppression, with its Oriental cruelty and obvious disregard of the well-being of the Malagasies. The magnitude of the evils to be overcome and the radical character of the reforms imperatively demanded greatly increased the difficulties of the conquerors. First of all they decreed the emancipation of the slaves of the island, a measure whereby one million persons gained their freedom. The people suffered from another institution, in some ways worse than slavery, the *fanompoana*, or compulsory labor, whereby the natives were placed at the absolute mercy of the aristocracy, who wrenched from them an almost unlimited service without compensation. The French limited this forced labor, regulated it by law, and at last abolished it. The State officials, governors, judges, soldiers, and police had been hitherto unpaid. They secured their livelihood by plunder and all sorts of exactions. The French introduced a regular and sufficient salary. In this way the universal bribery system which sapped the moral life of the Malagasies has been very much reduced, if not suppressed. The former so-called administration of justice has been replaced by a system of judicature which led an English opponent of France to say, "The French courts command the general respect of the people because of the impartiality of the judges and the prompt despatch of business." The State Church has been disestablished for its own good. The practice of religion has become free from the pressure of Hova officials, who compelled the heathen to walk great distances to attend church. The Malagasy is now so free that he may remain a heathen if he wants to. These gains in freedom brought by the French, and their readi-

ness to receive the vanquished upon a footing of equality, touched them. There is not the same distance between a French officer, a French soldier, and a native as there is between a British officer, a British private, and the same native. The British will secure more respect, but the French more love. The Hovas are no exception. They soon feel that they are peculiarly welcome under the tricolor of France, and many show signs of unquestionable loyalty.

The conquest was followed by an insurrection, an uprising of Malagasy Boxers equally terrible in their treatment of Malagasy converts, the missionaries of all nationalities, and all foreigners. To put this down France sent one of her most experienced generals, General Galliéni. Few men have been at once more firm and more considerate for the highest interests of humanity in a work of repression. He succeeded so well that the island, in which wars of tribes were constant, has now a peace probably never known before. His aim was that as soon as the rebels had surrendered their arms the soldiers should help them in every way possible to restore their normal life and improve it. He set them to build huts, houses, and roads. They became telegraphers, blacksmiths, tinsmiths, joiners, shoemakers, tailors, gardeners, and farmers. They assumed the functions of teachers in experimental stations, in places where missionaries had no schools, and even in English missionary educational institutions. They made themselves most useful as surveyors and civil engineers. One is impressed by the extensive and varied pacific service of the colonial army. Everywhere it has worked to improve the condition of the natives and to pave the way for European colonists. The guiding genius in all the reforms and in all constructive work has been General Galliéni.

At the time of the conquest this country, four times as large as England, had no roads. "The French," says the Rev. W. E. Cousins of the London Missionary Society, "has a way

of road-making." In 1895 they constructed a road from the west coast to the capital, Antananarivo, which cost thousands of lives. Since then they have built the eastern road to the same point, starting from the sea, crossing swamps hitherto considered most deadly, rivers, tropical forests, gorges, making cuts into the side of almost perpendicular rocks, until after one hundred and fifty miles it reaches its terminus at a height of 4,768 feet. This well-macadamized road, supported in parts by important walls, is a stupendous work for such a country. Six years ago all the passengers and freight taken from the coast to Antananarivo were carried upon men's shoulders. Now the road is patronized by horses, mules, *pousse-pousses*, and automobiles. Freight rates have fallen from \$240 per ton to \$100. It would be impossible to enumerate all the roads opened, some mere paths, others mule roads, and others still well-macadamized carriage highways. It is said that when the French means of transportation have been a little more improved fifty thousand men will be freed from the most fatiguing and demoralizing work of carriers. A railway to the capital is in process of construction. At one time twelve thousand laborers were at work on it. A section of it has already been inaugurated, and in five years from now the Eastern Madagascar Railroad will connect Antananarivo with the Indian Ocean. Another important work has been the connecting of lagoons along the coast into a canal upon which steamers are now doing considerable transportation. Several steamers are plying in some of the rivers, some are doing a regular coastal service, and three French companies, with twenty-two steamers, provide Madagascar with abundant transportation to Europe. Apart from this the British and German regular steamers also call. The telegraph radiates in every direction. In some districts it is supplemented by the optic telegraph, while the telephone is entering into a larger use. A good postal organization reaches almost every part of the island. The harbors have been improved in many ways; one of them has an iron dock one thousand feet long. Lighthouses, warehouses, dry-docks, repair shops, and means facilitating shipping have been provided. A most

extensive and varied work of scientific exploration, of scientific researches, of survey and triangulation of the island has been done. Most accurate maps have been published, which have excited much admiration.

The cities have been really transformed. Tamatave, the chief seaport in the east, has been rebuilt. It has been provided with sewers and is now furnished with abundant water. Its streets have been reconstructed, a square and boulevards opened, not to speak of the building of a circular railroad. A great covered market has been erected. Near the city is a fine botanical garden and experimental station. The city has also a commercial museum, a consultative board of trade, philanthropic institutions, clubs, means of education and recreation formerly unknown. Majunga, the western harbor, is a town almost wholly created by the French, and nearly two-thirds of its population are European. The same thing might be said of the northernmost harbor, Diego-Suarez, a town of increasing importance. Apart from the fact that it is one of the best-defended ports in that part of the world, it is provided with water-works, public lighting, and schools. A tramway sixteen miles long connects it with a recuperating place of resort upon Mount Ambre, at an altitude of 5,118 feet, where Europeans can find the reinvigorating climate of their native land. Antananarivo has been renovated more in its government and its life than otherwise, though even here a striking transformation has been wrought. The power of French æsthetics can nowhere be seen more strikingly than in the beautiful square, Andohalo, a most unsightly opening in 1896, now an admirable public garden. Now there are five miles of streets in which carriages may pass, not to speak of automobiles and bicycles. The palace of the Governor would be beautiful anywhere. Important public buildings have been erected or adapted to some great public interest. A museum of natural history, a commercial museum, a fine astronomical observatory, institutions of learning, of philanthropy, and amusement, have helped to make Antananarivo a new city. Everywhere in the country in places which have felt French influence one notices the improvements of civilization,

even in the matter of military stations and post-offices.

The future of Madagascar depends upon its agriculture. Here again the French have wrought great changes, and by French I do not mean the colonists, who have done good work, but the French administration inspired and commanded by General Galliéni. The Hova government claimed to be absolute owner of the soil and to dispense it according to its good pleasure. The French introduced and developed individual ownership, which in every country has been a great force of progress. The acquisition of land by the Malagasies, the French, and foreigners has been enormous. An admirable system of land registration gives them guaranties hitherto unknown. The spirit of routine is being replaced by practical intelligence. The department of agriculture has gathered all possible data upon the relative fertility of different parts of the country, the best methods of tropical culture, the selection and supply of most valuable seeds and plants, the best cattle to own and the best methods of cattle-raising, the inexpensive chemical analysis of soil, fodders, and fertilizers, the training of good workmen and overseers. A school farm and several experimental stations were set up. That of Tamatave is a nursery of tropical plants and a garden of acclimation for foreign plants and seeds. Missions of experts have been sent to Java, China, Japan, South America, and Cuba to study the best cultures of tropical plants. Specimens were sent from all parts of the world to these experimental stations, and when acclimatized and propagated are sold at cost or even for less. Thus one hundred plants of coffee or of cocoa-tree, well packed for transportation, sell for one dollar; a small vine or a peach-tree costs two cents. Rice must for a long time remain the great staple crop, but large plantations have been made of vanilla, coffee, tea, cotton, rubber, and other tropical plants, which must soon yield important returns. The mulberry-tree seems to have a great future. Much has been done for its culture. The Government has founded a model nursery for silkworms in which the Malagasy are trained for sericulture. Competitive agricultural fairs have been introduced, and their influence has been educational and

stimulating for the natives. At the time of the conquest there were but a few horses in the island. Under the supervision of State veterinaries large purchases of horses were made in Harrar, Algeria, and these were sold at auction to the people. Horses are becoming common near large cities. Government breeding stations were established. Forestry has also come under law. In the past the woods of the island were wantonly treated. The authorities have stopped this ruthless destruction. The lumbermen who have concessions are compelled to devote a certain number of days to the planting of trees. The purpose is both to keep up the forestial wealth of the country and also to preserve its action upon the rainfall. A very happy innovation is the founding of a bacteriological school in Tamatave to study any diseases of plants and beasts and to prepare adequate remedies.

Economically much advance has been made. A good banking service has been established. The credit of the island is such that it could easily have borrowed the seventy-five millions of francs needed for its railroad, but the metropolitan government gave its guarantee so as to secure a low rate of interest. Notwithstanding all the improvements, every year since the conquest has witnessed a large budget surplus. Trade has developed with great rapidity. It was seventeen million francs in 1896, twenty-two millions in 1897, twenty-six millions in 1898, thirty-five millions in 1900, and fifty-one millions in 1901. There are many signs that the progression will continue. To facilitate enterprise a labor exchange has been founded both for supply and for demand of labor. Large importations of Asiatic laborers were made by the authorities. Mining was favored with the co-operation of the colonial office, which placed all available data about the mines at the disposal of prospectors and miners. Numerous industrial departures were made. Commercial companies have increased as well as professions and trades. The natives have learned new crafts and improved the old ones.

Philanthropic and humanitarian advance has been even greater. New hospitals have been built to cope with that most dreadful of diseases, leprosy. If Pasteur succeeded in removing anthrax from the

*champs maudits* of France, his pupils will most surely put an end to the most frightful of human afflictions. A hospital was created for syphilitic troubles, long the predominant pathological stain of the Hovas. A lying-in hospital was opened in Antananarivo. Five large general hospitals, eleven lesser ones, and fifteen military ones do their work of mercy. A Pasteur Institute treats hydrophobia, bites from poisonous insects, anthrax, etc. Dispensaries are growing in number. A regular organization of native physicians provides medical service in the distant and often isolated parts of the island. The work of hygiene and sanitation has everywhere decreased the death-rate. If this continues, the time is not distant when Mada ascar will lose its reputation as an unhealthy country. In the building of roads, General Galliéni has shown the highest wisdom by placing the camps of the workingmen upon high grounds, in providing good water, in limiting the number of occupants of a camp, in compelling obedience to most rigid rules of sanitation, and establishing close at hand ambulances and medical service. In four and a half pages of his *Instructions générales* for the building of the railroad, two are devoted to orders bearing upon the health of all. The results as far as the railroad is concerned are that the Hovas, who formerly dreaded these districts in which they work, are now sending for their families to settle along its way. The same kindly attitude has been taken toward postal carriers, who, instead of moving in every direction, were attached to a station for service, and were there provided with a cabin and a little piece of land. This has proven physically healthier for the men, while it fosters habits of great importance. Efforts have been made to save the lives of children, whose death-rate has hitherto been enormous, a fact which accounts in part for the small population of three and a half millions in an island much larger than France. Rewards have been given to the mothers who take the best care of their offspring. "L'Illustration," of Paris, recently published a fine design showing French soldiers weighing Hova babies to ascertain their physical progress. Associated philanthropy is growing. There is a society to help half-breed children, a

benevolent society in Tamatave, and one in Antananarivo. Much more would have been done that could be recorded, but which more naturally follows church lines and is identified with religion. Every missionary enterprise in the island is a great network of philanthropic efforts.

Under the former régime education was carried on by missionaries, and here it is not possible to exaggerate the good that was done. The leadership was taken by the London Missionary Society, whose men, as a rule, are not college graduates or men of large educational ideas. After the conquest, when the separation of Church and State was accomplished, the Government was bound to take in hand the cause of general education. The old medical school was replaced by one with teachers from the best medical institutions of France. Four normal schools were created in different parts of the island to improve the grade of teachers. In 1900 more than three hundred schools had been opened where there were none or where the missionary school was inadequate. A professional school was established in the capital. The Pasteur Institute, apart from its work of treating patients, studies fermentation and makes bacteriological researches. The scientific work of travelers, naturalists, geologists, and other investigators has improved and broadened the educational spirit of teachers. The Government publications, "Le Journal Officiel," the "Vaovao Frantsay-Malagasy," the "Bulletin de l'enseignement," the "École Franco-Malgache," the year-book, the free press in Antananarivo and Tamatave, and the monthlies which every denomination publishes, have a large educational importance. We should also mention in this connection the influence of the Alliance Française with its branches, the Académie Malgache—devoted to the history, the sociology, the philology and ethnography of Madagascar—and the Library of Antananarivo, etc. Education has become more scientific, more independent, and freed from the virtual control of one denomination.

All fair-minded men acquainted with Madagascar recognize that the large body of missionaries, English, French, Norwegians, and Americans, are a stupendous force of moral, intellectual, and religious action in the island. This no

one has recognized more often or with more tact than General Galliéni. Hence he and his coadjutors are interested in having this work go on. They have created conditions most favorable to all forms of religious work. The missions have all suffered during the rebellion, and missionaries of the London Missionary Society were seriously annoyed by the crafty Jesuits who endeavored to get possession of some of the churches of that body. These churches had been built by the forced labor of all—heathen and Catholics included; they in reality belonged to the State. The Jesuits endeavored to secure them on the plea that the former nominal Protestants had become Catholics. When the untenableness of this assertion was

demonstrated, the French Government ordered the churches to be restored to their Protestant claimants. The converts gathered around these churches through compulsion lapsed as soon as the Hova government had fallen. The others have stood the test of one of the greatest social revolutions of modern times. Now they have become really independent. The missionaries of this great society may now be perfectly true to the best traditions of British Congregationalism. Working with American Lutherans, the Anglicans, the English Friends, the Huguenots, upon a footing of perfect equality, they can do more than before to give the Christ to the heathen of the island and to many of the European heathen who resort there.

## A Prayer for a Mother's Birthday

By Henry van Dyke

Lord Jesus, Thou hast known

A mother's love and tender care :

And Thou wilt hear, while for my own

Mother most dear I make this birthday prayer.

Protect her life, I pray,

Who gave the gift of life to me ;

And may she know, from day to day,

The deepening glow of Life that comes from Thee.

As once upon her breast

Fearless and well content I lay,

So let her heart, on Thee at rest,

Feel fears depart and troubles fade away.

Her every wish fulfill ;

And even if Thou must refuse

In anything, let Thy wise will

A comfort bring such as kind mothers use.

Ah, hold her by the hand,

As once her hand held mine ;

And though she may not understand

Life's winding way, lead her in peace divine.

I can not pay my debt

For all the love that she has given ;

But Thou, love's Lord, wilt not forget

Her due reward,—bless her in earth and heaven.

# The Light that Cast No Shadows

By J. F. Farrell

THE teacher spoke to Llewellyn Crosby three times; and then, receiving no answer, she took one of his hands and spat it smartly with her ruler. Twice the instrument of discipline descended, and was uplifted again; but there was something in the startled brown eyes, wide with horror, the sharply indrawn breath, and the exceeding bitter cry of the child that arrested it in mid-air. The effect of the punishment was out of all proportion to its severity. Llewellyn dropped his head on his arms and cried all the rest of the session.

Nor was this all. His benchmates, Pillsbury Fletcher and Dana Dudley, were wild with indignation; and they made the teacher realize in seventy-five separate and distinct ways that she had made a mistake. Large boys did not go to school in summer; but those two were large enough to make a young woman hesitate about open war.

The facts were that Llewellyn was deep in the last chapter of a romance that he was spinning, and it bothered him. He had begun to tell it before the plot was at all complete; and now he didn't know exactly how to finish it. Pill discovered Llewellyn's gift first. He was playing with a toad; when the little Crosby boy, whom he had never particularly noticed, suddenly developed a frenzy of baby courage. He flung himself under the bat and came near getting it full whang. Then, when the toad was safe, instead of offering to fight—Pill was quite prepared to see him pull off his jacket—the extraordinary child had promised to tell him a story if he would leave off batting every such thing. This tickled Pill immensely. He fully expected some Mother Goose nonsense; but Llewellyn had entertained him so amazingly that ever afterwards he was his special and particular friend. Dana had come into the partnership because he and Pill were inseparable; but no one else had been admitted. Llewellyn was to them what their secret hoard of dime novels is to the village urchins. They would defend him with brain and brawn to the last.

When school was done they closed in on either side of him and bore him beyond the probing of curiosity and the slingshots of careless derision, far on the way to his home. Finally they paused under the three elms at the parting of the ways; and, seeing that Llewellyn had so far recovered his spirits as to laugh, "Is the story knocked galley west, Llewty?" asked Dana, anxiously. "It's 'most done. Can't ye finish it if we come over after supper? The moon'll be as big as a cart-wheel to-night, 'n' we don't have to be in till nine o'clock."

But Llewellyn shook his head, choked up, and ran away towards the house on the hill.

"We'll come anyway, 'n' play I spy," Pill shouted after him. Then the two sat down at the roots of the largest elm and waited with the patience of Indians for a girlish figure visible in the far distance to approach.

The teacher saw them and shrank from the ordeal of either speech or silence. It seemed impossible to ignore their exasperating behavior; but she had ignored it measurably in school, and they would resent bringing it up outside. Wild red raspberries grew along that roadside, and Miss Perkins found excuse for lingering to gather them.

But there are limits even to the delight of eating wild red raspberries; and Miss Perkins finally reached the two boys under the three elms at the forks of the road. As they stood up their entire absence of self-consciousness restored her poise. She divined that they wished to speak of Llewellyn, and led the way at once by asking them if their little friend was sick.

"I hope you understand, boys, that I should not have punished him in that way if I had known he was not feeling well," she said.

"Llewty ain't sick," said Dana, "but he's liable to be—sort of—absent-minded after he's got all of his lessons. You never ketch him up in numbers nor spellin' nor nothin'; now, do you?"

"He has his lessons very well, certainly; but that is not all there is to learn at school.

It is uncivil not to reply—to pretend not to hear—when you are spoken to. In Llewellyn's case it amounted to positive insolence—"

"'N' Llew't never heard a word of it, more'n the dead. He was—"

A bare brown foot sought the speaker's instep and he stopped short.

"Llew't's all right," said Pillsbury, hastily filling up the pause. "When he don't hear you, you don't need to lam him. Hit one of us a bat, 'f you're mad 'n' haf to hit somebody. That'll bring him—"

Dana's foot sought Pill's in the same stealthily warning way; and he stopped with a jerk.

"'S Pill says, 'f you *can't* help it"—the rush to fill the pause was even more obvious—"it'll be better to hit one of us, 'n' to be swattin' a little feller like Llew't. Did you know he was a Norphan? It's better to have a rock tied to your neck 'n' be hove in the pond than to be jabbin' it into a Norphan all the time." Dana was shamelessly quoting from a lecture that had been read to him, sometime before the partnership was formed, for persecuting that same "Norphan" even to tears for being a "sissy;" but that was a detail. "When you come to the Judgment," he continued, warming with the remembered theme, "'n' God says, 'What have you done to my little ones?' I'll bet you'll feel streaked. I'll bet you won't want'er say, 'I lammed him with a ruler, when he didn't mean no harm, 'n' didn't know what 'twas for.'"

Miss Perkins had been rummaging frantically among her treasured pedagogical instructions to find something that fitted this case. But nothing was forthcoming; and she was too young—took herself too seriously—to enjoy the humor of the situation. He eyes sparkled and pink mottlings began to show through the healthy tan on her face.

"You forget that I am your teacher, Master Dudley," she said stiffly; but added, with an attempt at dignified kindness, "If your little friend is a—natural—I will try not to be severe with him."

The promise fell on empty air. No sooner had that "natural" fallen from her lips, when—"P-f-f-f!" "K-r-r-r!" "Whoo-oo-p!" Two whirling figures, all legs and arms, rolled away from her in the

wheel-ruts of the road. Dana could revolve seven times as a cart-wheel and Pill could beat him by almost two revolutions.

When they were tired of this exercise, the boys sauntered homewards, their arms over each other's shoulders; and Miss Perkins spent a long evening conning printed rules for school discipline.

The game of "I spy" was a famous frolic, long to be remembered, because it was the very last that Llewellyn played that summer. It gradually merged into tag, and then into a wild romp all over the place.

When the two boys left him, the last shade of his school troubles had vanished; and, warm and breathless from much running, Llewellyn flung himself down in the soft, cool, matted knot-grass before the steps of the unused front door. How big and bright the moon was, and how sweet the flowers smelt! Then, with the first delicious languor of his rest, lo! the doors of fancy softly opened, and the scenes of his story sprang vividly before his eyes. Not only those scenes with which he was familiar, but new ones melting and flowing into each other till the story was completed in a most satisfactory manner.

Aunt Martha was baking. When you use a brick oven, the baking has to be done at night instead of in the morning. She had removed the pies and white bread and cake, and was putting in what she called the "second batch"—things that had to bake all night in a slow heat of the cooling oven to bring them to perfection—when she saw Llewellyn going up to his room, and called to him to be sure and wash his feet. She did not know that it was a part of the game; but Llewellyn slid through the window to the long slant of the shed roof, dropped to the ground, and hid behind the lilac-bushes. The subsequent play led away on the other side of the buildings; and there was not so much shouting, for the boys were economizing their breath by that time.

Uncle John locked up the house and everything was quiet till after midnight. Then Turk came home. Turk had assisted the boys in their games to the best of his ability. Then his temperature, respiration, and pulse indicated that a long swim was necessary; and he r-

bee line for the pond two miles away. On the way home he made a few calls, and it was after twelve o'clock when he entered the yard sedately, as became a high-bred Newfoundland. The first thing he saw was Llewellyn lying on the grass before the front doorsteps, and he was scandalized. Marching straight to his young master, he woke him up and told him it was long past bedtime for respectable boys. But Llewellyn only muttered incoherently and threw out his hands. Turk made sure that the boy did not speak with understanding; then he lifted up his voice and awoke the inhabitants of three farms.

Rheumatic fever seldom kills; but those, young or old, who endure its visitations are singularly ungrateful for that. Llewellyn was put to bed and doctored in primitive fashion for the rest of the night, but ordinary household remedies made not the slightest impression, and at daylight the doctor was sent for. He arrived twenty-eight hours later, and found his patient shrieking with pain in Aunt Martha's arms.

Llewellyn was too young to know anything of a man's pride in mere stoicism; but when he had gotten a little used to suffering, love taught him some measure of self-control and fortitude. Aunt Martha blamed herself so bitterly for neglecting him, and she felt so badly when he cried, that, for her sake, he tried hard to bear his pain in silence.

After all, it was not all bad. When he could think, in the intervals of repose, Llewellyn knew that he was happier than he could have been if the fever had not come. Aunt Martha and Uncle John, in the helplessness of their sympathy, became much more outspoken and demonstrative. Aunt Martha especially. Llewellyn's face was all eyes and his frame a mere shadow; he seemed like a tortured baby to her when his every breath was a moan of pain; and she hushed and soothed him in the paroxysms with a foolish babblement of endearments as she would have soothed an infant.

Llewellyn had not been unhappy; there had been no positive unkindness to make him so; but his finer nature had always been underfed and chilled. It was like the pansies wintering in cold-frames, and like those it sprang into sud-

den growth and burst into royal bloom as soon as the sunshine and warmth came. He did not know how famished his heart had been, but he knew his own when it was offered, and he knew that it was worth the price. Aunt Martha loved him. Aunt Martha was so good. And he never would have known if he hadn't been sick. That was the anthem his soul was chanting when his face beamed with an inner joy, and his eyes were wells of dusky splendor as they rested on his motherly nurse or followed her about the room.

It made Aunt Martha feel uncomfortable to see the happiness shining in the little sufferer's face. It must mean that he was going to die. The roses she had seen at fairs, so opulent in beauty, did not call for the supernatural to explain their perfection as compared with roadside briars. The right atmosphere for a little child to grow in being supplied, might not the product prove quite as superior to the average plant, taking its chances in a hedgerow of rampant vanities and coarse, cruel ambitions, exposed to the dust and heat and turmoil of the traffic of adult humanity, as the magnificent specimen rose is to the thorny, grubby brier? Aunt Martha did not think this out. The swift blossoming of the child's soul as his body wasted away and his almost ethereal beauty wrought in her the Madonna feeling of sacred privilege in caring for one whom the Lord had chosen so young. If a matter-of-fact neighbor had said, "That child was hungry for the love that you denied him because it flatters your vanity to have people praise your housekeeping, and now he feels contented and happy because he is getting a little extra petting and personal attention," she would have been deeply offended. No. Llewellyn was simply lingering a few days before he went home to heaven.

The pain subsided after a few weeks, and only recurred intermittently; but the bad spells were very bad and came mostly in the night. Llewellyn had never "experienced religion," though he was said to have been baptized in infancy. Aunt Martha felt that something ought to be done. She wanted some positive verbal assurance that it was well with his soul; and so one day Llewellyn was propped up in bed on a big square pillow, and found himself talking to the minister. His

voice was gone, but he could whisper a few words intelligibly. The fever had not affected his mind in the least. He could think all day as consecutively as ever; and he had treasured lots of things in memory to tell the boys when he got well.

He was glad to see Mr. Warner, and looked it so plainly that speech was unnecessary. For days and days, and sometimes through long nights, he had been trying to understand a strange thing; and now he would find out all about it, for the minister knew everything, of course. He listened politely, but not very closely, while the Bible was being read, and during the simple talk that followed; but his mind held tenaciously to the thing he was interested in. He got the idea that he was expected to make up the Sunday-school lessons that he had missed while he was sick. When silence fell, he put out a feeble hand; and Aunt Martha knew he wanted to speak to the minister.

"I'll make up my lessons when I get well, every one," he whispered. "Please don't make me get them now."

Tears sprang to the pastor's eyes, and he started to speak; but the feeble fingers gently bade him wait. "I want to ask you something." Llewellyn's voice was a shade stronger, and Aunt Martha's heart beat with a sudden hope. This would be the evidence that she longed for. The boy waited for further strength, also to pack his question small. Presently it came, clear and rational, astonishing them with its definiteness, confusing them with its unanswerableness in any terms they knew.

"What kind of a light is it that makes no shadows? and where does it come from?"

Llewellyn let go the hand he had been holding, and motioned them back to their seats. He evidently expected a full and clear explanation, with demonstrations. He had the classifying instinct, and the naturalist's keen investigating spirit, yoked with a dreamy, poetical temperament. It was the naturalist half that questioned. They ought to have known it, and hunted the idea to its origin; but the minds of both his hearers were clogged with venerable prepossessions; and the boy's inquiry simply blinded them with the great white light of its possible religious significance.

"You will know all that your heart hungers and thirsts for soon—very soon—my son. Let us pray."

Llewellyn was keenly disappointed; but he closed his eyes and tried to follow the prayer. It flowed in rhythmic sentences, and the sound of it made him feel rather drowsy; but all the while the question which had been thrust back unappeased gnawed at the bars of its cage. Then it settled down, with its head on its paws, to wait. This side of Llewellyn's nature, also, knew its own, and would have none of the stones that were offered in place of the red, juicy meat that it craved. The prayer flowed on and on; and when Aunt Martha arose from her knees, Llewellyn was apparently asleep. She felt comforted, and in a manner reconciled to what must be. They softly withdrew from the room, and Mr. Warner took rather hasty leave. He wanted to write out some notes for a sermon that he expected soon to be called on to preach.

But in a few days Llewellyn was decidedly better, and proved it by calling persistently for Pill and Dana. The boys had called every day, but they had only been allowed to stand outside the door, or lean on the window-sill and look at Llewellyn, so when they were invited to come in they were almost afraid to speak or move.

But Llewellyn called to them quite in his old manner to bring their chairs close to the bed, for it tired him to talk loud. Then Aunt Martha put "Uncle Tom's Cabin" under one rocker of her chair and "The Lamplighter" under the other, and set a large foot-stool in front of it, and when she was comfortably settled with a white Shetland shawl over her head she told the boys not to let Llewellyn talk too much, and went fast asleep.

Then Llewellyn told Pill and Dana all the things he had saved for them, beginning with the story that was cut short by his illness and ending with the strange light that he saw so frequently at night when his bad spells came.

"Don't they burn a lamp?" asked Pill in astonishment.

"I can't stand it," said Llewellyn; "and Aunt Martha sets it on a board on the andirons, and all she has to do is to pull away the fireboard."

"Is the light blue?" whispered Dana,

glancing, half afraid, into the shadowy corners of the room.

"It ain't no color. I can see everything just as plain—that's all. I looked for the shadows when it first came; 'course the light would be on the other side; but there wasn't any shadow behind anything. It was just as light up there behind the picture frames and behind the door as anywhere else. What do you think it is? What do you think makes it? Did you ever see such a light?"

Pill shivered. The freckles on his whitening face sprang out like ink-spatters. Dana's big round eyes under his tousled, up-standing hair gave him an owlish look. Both boys shook their heads and remained silent till Llewellyn laughed weakly and pointed his finger at them. "It ain't scarey a bit," he said. Then they laughed, too, but rather faintly.

"What'd the doctor say?"

"'N' the minister. He's been here. Did you ask him?"

"Both of 'em. Mr. Warner 'n' Aunt Martha got a notion that it was some kind of a warning—that I'm going to die; 'n' the doctor had to be funny. He's got a notion that he must joke when people are sick. You know his way. 'Course I asked him; 'n' he said I'd see blue-haired Dutchmen some night, 'n' went off laughing. 'Tain't fair."

"I think—" said Pill; and Llewellyn turned to him so eagerly that he hesitated. Llewellyn wanted an answer to his question "as a tiger wants a sheep."

"What do you think?"

"It's the Old Harry," said Pill, with conviction; "'n' when the light comes, you'd better say your prayers as quick as you can."

Llewellyn looked indignant. "Do you suppose the Old Harry would come into the house where Aunt Martha is? What a coot you are, Pill!"

"But he could come if she was asleep," said Dana. He was evidently of Pill's opinion. "At any rate, Lewt, 'twon't do no harm to say your prayers. *If* anybody from the Bad Place *happens* to be about, 'twould drive him off."

Llewellyn had the feeling which came to him sometimes when he was entertain-

ing the boys with stories, that they were younger than himself. But he would not hurt their feelings by laughing at their superstitions. He believed in the Old Harry as unquestioningly as they did, only his doings did not enter into the question. A shadow fell on his face, and Llewellyn made an effort to sit up in bed. He felt strange, remote, alone.

"It ain't nothing, I guess," he said. "Maybe I dreamed it. I was silly to talk about such a thing. Tell me what you've been doing since school closed. Have you made any squirrel traps? Say, Pill 'n' Dana, 'f I'll tell you where there's a flyin' squirrel's nest, will you catch just one for me, and not bother the rest? Honest Injun now."

"Honest Injun," said both boys in a breath.

While Llewellyn was directing them to the particular hollow tree that held his treasure, Aunt Martha awoke and said it would tire him too much to talk any more.

"Must have dreamed that light," said Pill on the way to the woods, and Dana agreed with him; but Llewellyn turned his face wearily to the wall.

"I wonder," he mused, "if I shall ever find anybody to talk with good."

In outworn France or benighted Scotland, perhaps, but not here. Turn your face to the wall, O gifted child! the tip of the "midnight tower of shadow" from a blind world has already touched you, is already sweeping you into cosmic isolation. Forget, if you can, the gnawing of the gray panther of starving intelligence. He will die after a while. Use for a little space your wonderful imagination; the young women with rulers who are waiting for you will beat those rainbow wings flat to your shoulders. Their shimmering radiance is depravity or idiocy. There are no ruled squares on the sacred average-sheet wherein to keep account of their vibrations from day to day. Bask while you may in the new-found love, purchased at such frightful cost. The morrow cometh, crowded with accumulated duties; and when children are well it is foolish to baby them. Turn your face to the wall, Llewellyn. Sleep, and grow strong.

## Semitic Religion<sup>1</sup>

THIS record of researches and discoveries has underlying it two foundation principles, both of which we think are sound. The first is that for our knowledge of primitive religious customs we are to look rather in the present life of the modern Semites than in the earliest records of ancient literature. In other words, life is older than the oldest literature, and many religious customs and traditions have been preserved so unchanged that in the present custom we find a more ancient record than in the most ancient literature. The other principle respects the interpretation of the Bible. We may regard it simply as the history of a naturalistic human development, from which all conception of God as a living, directing, controlling Person is absent; or as a purely superhuman revelation, so given that from it all human development, and so all human error, is absent; or as a human development under the guidance of a directing God, personally present and more or less consciously recognized. If we hold the first view, the religion of the primitive Semites is a matter of interest to the historical scholar, but only remotely to the student of religion; if we hold the second view, it is of no interest at all religiously; if we hold the third view, it is of great practical importance, since by comparing the primitive Semitic religion as we find it manifested in the beliefs and customs of the Syrians and Arabs of to-day, we are able to see more clearly than before out of what the religious ideas and experiences of the Hebrew people were developed, and to comprehend more clearly what in their ideas and experiences were the results of human imperfection and what of divine guidance and direction. We hold with Dr. Curtiss this third view, and with him we find in the present customs of this ancient people great religious value for the light which they throw on the religious teaching of the Bible.

This book viewed from the scholar's point of view is a real contribution to the world's knowledge. It is not made at

second hand. It is not compiled from other authorities. It is the first-hand record of original explorations, pursued during fourteen months of tours throughout Syria and Palestine. The object of these tours was a study of the habits of the primitive people of these countries. The spirit in which these studies were pursued is well illustrated by a single pregnant passage: "An aversion to the teaching of the Scriptures with reference to the blood atonement, or a predilection in its favor, should have no place here. There can be no scientific research if we come to such an inquiry with our minds made up as to what the result would be." This scientific spirit animates the book throughout. The author believes neither in the naturalistic nor in the traditionalistic view of the Bible. He treats it as the record of a divinely developed religion. But his investigation and record of the actual life of to-day is conducted, so far as we can see, in an absolutely candid spirit, with no endeavor or desire to make that life support a theological theory of any description.

We have not the space here to follow him in his journeys or to report their results. It must suffice to say that the customs of to-day, as he ascertained them by personal observation of rites and ceremonies, and personal conferences with the common people, throw much light on some of the rites and customs and some of the religious ideas and experiences of the ancient Hebrews. Demonology is still a current belief; ancestors are worshiped; custom precedes law and gives to it sanction and makes it authoritative; God is regarded as a kind of divine Sheik, bribable by gifts and to be appeased by sacrifices; evil as well as good comes from him, just as misfortune and good fortune come from the Sheik; there are clouds of subordinate deities, who dwell in sacred rocks, sacred groves, and especially in the "high places," where they are worshiped; sin is hardly to be distinguished from misfortune; right is hardly to be distinguished from obedience to an edict issued by the Sheik, or by God, or one of the gods, as a kind of

<sup>1</sup> *Primitive Semitic Religion To-Day*. By Samuel Ives Curtiss. The Fleming H. Revell Company, New York.

superior Sheik; blood is a means of binding a covenant; it is also a means of averting the wrath of God or the gods, especially the latter. With these and other similar analogies between the Old Testament customs and the customs of the Syrians and Arabs of to-day, there are also some striking contrasts. Holiness is a term of character in the Old Testament; "the holy man of the modern Semites may be anything but a moral man." God is a righteous God in the Old Testament; might makes right among the modern Semites, and whatever his *power* commands is thereby made right. God's gifts are free gifts in the Old Testament, a grace, a *gratia*, bestowed unpurchased and on the undeserving; in the belief of the modern Semites gifts from

the gods can be obtained only by purchase.

Dr. Curtiss has opened a field for research which is well worth further exploration; if we are not mistaken, he is in this field a pioneer; and the value of his work is recognized in Germany, where a translation of his volume is soon to appear with an introduction by Ernest Baudissin, of the University of Berlin. Dr. Curtiss intimates that he would be glad to pursue his investigations further; he has proved himself the man to conduct them; and it would be to the credit of America, as well as to the advantage of sound Biblical knowledge, if some one interested in original research would equip him with the funds necessary to carry out his desires.

## Reynolds and Romney'

**A**LTHOUGH Hogarth and Reynolds must have met frequently, says Lord Ronald Gower, there seems to have been no intimacy between them. Rarely have two great painters of the same age and country been so unlike each other; their unlikeness as artists was the natural result of their unlikeness as men; perhaps their only resemblances consisted in their honesty and earnestness of purpose. "Study the great works of the great masters forever," said Reynolds. "There is only one school," answered Hogarth, "and that is kept by Nature."

In Sir Joshua's life probably the most interesting feature was his association with Johnson, Goldsmith, and Burke, a trio of illustrious names of which Lord Ronald Gower considers Johnson's the greatest. We wish that the biographer had told us more of this rare company. Regarding Sir Joshua's art, while the criticisms are not always satisfactory, we find certain striking estimates, as, after declaring Reynolds's portrait of Sarah Siddons to be that artist's masterpiece, Lord Ronald speaks of the portrait of Sterne, and cleverly com-

pares the saturnine expression in the latter to Velasquez's "Innocent X." and to Houdon's now equally celebrated statue of Voltaire.

Lord Ronald's book, however, seems to have been somewhat hastily written; at all events, there is a certain redundancy in expression and also a decided unpicturesqueness of style, avoided in great measure by the second biographer of Reynolds, who deals especially with the new attitude taken by many towards Sir Joshua as painter, writer, teacher, and man. As man, our author justly claims that "the best that can be said of his heart is that he kept it clean within him, and that, by a beautiful working of this, his work in art, if not as sweet and healthy as a good year's cornfield, is at least free from those three terrible diseases which visit corn, and not it alone—blight, mildew, and smut." As a painter, while many moderns will have him monotonous, no less an authority than Gainsborough was delighted "at his variousness," and his other great contemporary, George Romney, saw in his tendencies "an exquisite charm which I see in nature but in no other pictures."

Turning to Romney, two biographies of him also have been recently published. Mr. Cleave pays special attention to Romney's delightful grouping, as satisfy-

<sup>1</sup> *Sir Joshua Reynolds*. By Lord Ronald Gower. The Macmillan Company, New York.  
*Sir Joshua Reynolds*. By Elsa d'Esterre Keeling. Charles Scribner's Sons, New York.  
*George Romney*. By Rowley Cleave. The Macmillan Company, New York.  
*George Romney*. By Sir Herbert Maxwell. Charles Scribner's Sons, New York.

ing and expressive of the highest genius; to Romney's faces as lively, vivacious, piquant, brilliant to a degree hardly achieved by the aristocratic, placid, composed, thoughtful faces delineated by Sir Joshua Reynolds. In draughtsmanship, also, Mr. Cleave puts Romney above Sir Joshua or Gainsborough. If pictures of the great President of the Royal Academy were more varied in outline, their results were not achieved with Romney's evident ease and simplicity. When we come to color, however, a certain monotony about Romney's golden browns and deep roses, restful as are those tones in themselves, is evident in comparison, especially with the color produced by Gainsborough—indeed, the last named, according to Mr. Cleave, stands head and shoulders above both his rivals. Taking him all in all, Gainsborough is declared by our biographer to be the greatest of the trio, especially in the essential poetry, delicacy, grace, and sweetness of composition as a whole.

With Mr. Cleave's capital biography the student of British art should read also the longer biographies, first by Hilda Gamlin ("Romney and his Art," published in 1894), and Sir Herbert Maxwell's, just issued. Allan Cunningham once said: "Of all our eminent artists, Romney has been the most fortunate in his biography," and after reading the biographies published since Cunningham's day, we are inclined to think that his saying is true now as it never was before. Sir Herbert's text, better than

Hayley's, Cunningham's, or John Romney's (George's son), also includes, as those men could not, an almost complete catalogue of the painter's works, with a tracing of the remarkable fluctuations in public esteem through which they have passed. When one considers that, unlike Sir Joshua Reynolds, Romney never permitted his work to be touched by his pupils, but finished or left unfinished every picture himself, his output was prodigious. Of course there was in this an undue proportion of unfinished portraits, and haste made havoc sometimes with those called "finished." Yet even here, as Sir Herbert well says, we may recognize that Romney's sound method of applying pigments outdistanced Sir Joshua's in this department. Sir Herbert affirms that Romney was superior to Reynolds both in draughtsmanship and in color. Romney's re-establishment among great artists has been somewhat tardy in its coming, but now that it has come critics are almost running to an extreme in their appreciation of this painter's undeniable freshness, dignity, repose, grace, above all, in his representations of the character as well as the features of Englishmen, and especially of English women. His portraits preserve to a remarkable degree the fleeting, vivacious looks and gestures of his subjects—as if he had caught them while just passing by a window. There is in his portraits an undefinable, almost an Italian, grace. Romney certainly fulfilled the two essentials of a great painter, right temperament and keenness of perception.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Affaires sont les Affaires (Les): Comédie en Trois Actes.** By Octave Mirbeau. Eugène Fasquelle, 11 Rue de Grenelle, Paris. 4½×7¼ in. 288 pages. 75c.

We are not surprised that this realistic play commended by Count Tolstoi is the sensation of the day in Paris, where it is being produced at the Théâtre Français. It is certainly one of the most striking of modern French dramas. No work seems more accurately to depict the essential vulgarity of plutocracy than this. Its principal character is not a monster, but a man so enslaved by the passion of wealth-getting as to idealize money and its power.

Like most other such slaves, however, his career provokes pity rather than scorn; one feels that a good deal of his conduct is probably the result not so much of his own nature as of the materialistic age in which he lives.

**Andy Barr.** By Willis B. Hawkins. The Lothrop Publishing Co., Boston. 5×7½ in. 472 pages. \$1.50.

**Congo Slave State (The): A Protest against the New African Slavery.** By Edmund D. Morel. John Richardson & Sons, Liverpool. 5¼×9¼ in. 112 pages.

The recent action, or rather inaction, of the Belgian Parliament concerning alleged Congo

misrule is a striking fact in view of the present publication, following that of Mr. Fox-Bourne's "Civilization in Congoland." That "civilization" means a new African slavery, as the title of Mr. Morel's protest indicates. By a careful study and analysis of the facts, as impressively set forth by Messrs. Fox-Bourne and Morel, the truth about the Congo State will one day be made known to those who do not yet grasp the fact that, given a policy based upon the denial to the native of equatorial Africa of any right whatsoever in his land or its produce, slavery is necessarily re-established, and oppression rendered not only inevitable but endemic.

**Definition of the Psychical (The).** By George H. Mead. (The University of Chicago Decennial Publications. First Series. Vol. III., Part II.) The University of Chicago Press, Chicago. 8x11 in. 38 pages. 50c., net.

**Documents sur l'Escalade de Genève Tirés des Archives de Simancas, Turin, Milan, Rome, Paris et Londres, 1598-1603.** Publiés par le Société d'Histoire et d'Archéologie de Genève. Illustrated. Georg et Cie., Genève. 6x10 in. 488 pages.

The Society of History and Archæology in Geneva publishes this important collection of contemporary documents bearing on the celebrated Escalade of 1602, the assault by Savoy on Geneva, an event which marks the definite check to the policy of conquest which the Dukes of Savoy maintained against the little republic. At that time the city of Geneva had already become a kind of Protestant Rome. Calvin had founded in Geneva a church, a civil government, and a university, which were to be the beacons of Protestantism all over the world. The Duke of Savoy endeavored to win over the Roman Catholic powers to aid in his project against Genevan liberty, and his assaults took on an international character because of the very situation of the place, only a few miles from the French border and from Savoy. The successful repulse of the attack upon the town's freedom in 1602 is still celebrated there on every 12th of December.

**Essentials of a Written Constitution (The).** By Harry Pratt Judson. (The University of Chicago Decennial Publications. First Series. Vol. IV.) The University of Chicago Press, Chicago. 8x11 in. 43 pages. 50c., net.

**Executive Register of the United States, 1789-1902.** Compiled by Robert Brent Mosher. The Lord Baltimore Press, Baltimore, Md. 6x8½ in. 351 pages. For sale only by R. B. Mosher, Washington, D. C. \$2.

This valuable volume is the result of a work of infinite patience and energy. It includes an enumeration of all the Presidents of the United States and their Cabinets, a record of the dates of nomination, entrance upon duties and termination of service of the members of the Cabinets, together with the constitutional provisions and the laws governing their appointment, qualification, and tenure of office, and the first acts providing for the several executive departments. A very pertinent addition to these facts is that of the electoral and popular vote of each election, the terms of service of the Presidents, the provisions of the Constitution and the acts of Congress regulating their election, qualification, and official term. Mr. Mosher also includes the

official proceedings whenever the President has died in office. Finally, as an appendix, there are literal copies of the Declaration of Independence, the Articles of Federation, and the Constitution, with the arrangement of the signatures preserved as they appear upon the originals in the rolls of the Department of State. Mr. Mosher's book is not only of extreme value, it is really indispensable to the student of politics; for its record of the service of heads of departments is published for the first time, no complete record being found even in the departments. Such a work should prove of essential service alike to the legislator, to the "scholar in politics," and to every citizen interested in the administrative story of our Government.

**Fanny Crosby's Life-Story.** By Herself. Illustrated. The Every Where Publishing Co., 1079 Bedford Ave., Brooklyn, New York. 5x8 in. 160 pages. \$1.

**Gnadensee: The Lake of Grace. A Moravian Picture in a Connecticut Frame.** By Edward O. Dyer. Illustrated. The Pilgrim Press, Boston. 5½x8 in. 295 pages.

Some day Americans may realize what a rich inheritance fell to the Nation in the Moravians who came to these shores. Any one who does realize it, and who knows how that inheritance has been squandered, will welcome this book for its service toward preserving what remains. Gnadensee is the name given to a lake in Connecticut by Moravians who established a settlement near it. The region round about it affords a text for two groups of chapters, the first dealing with the Moravians and their contributions to the making of America, the other with the scenery of the region and its historic associations. Those who know nothing of the Moravians and their heroic and mild spirit will find in this book a brief but stirring account of their work and their character. Those who do know something of them will be interested to read of their little-known activities in New England. The English Puritans came to America, as the author points out, with the spirit of the Old Testament, to drive out the bloody "salvages" as the Israelites drove out the Canaanites, so as to establish and build up a theocracy in the wilderness: the Moravians came in the spirit of the New Testament, to bring the Good News to the Indians and to reclaim their lives from ignorance and superstition. The Old Testament prevailed. The Moravians, persecuted in the Old World by the Roman Church, found persecutions by Protestants awaiting them in the New. In the Colonial Assembly of New York measures were passed so stringent against the Moravians—classed with vagrants and disguised Papists!—as to force them back into the more tolerant colony of Pennsylvania. One chapter pleasantly describes Bethlehem, the chief seat of the Moravians, as it is in these days. The apparent fruitlessness of much of the Moravians' effort, distinctively Christian in motive and method though it was, is saddening unless one sees it from the point of view expressed by the author in these words: "Machinery abandoned to rust and disuse is loss of capital, but the heroism of personality

is an unspent force which always registers gain somewhere."

**Historic Highways of America. Vol. VI. Boone's Wilderness Road.** By Archer Butler Hulbert. Illustrated. The Arthur H. Clark Co., Cleveland. 5x7½ in. 207 pages.

The latest volume in the "Historic Highways" series has to do with Daniel Boone's road through the Cumberland Gap. This volume is of special interest, since it describes not only pioneer traveling in general, but the first Western settlement in particular.

**Homeric Life.** By Edmund Weissenborn. Translated by Gilbert Campbell Scoggin, M.A., and Charles Gray Burkitt, M.A. Illustrated. (The Vanderbilt Oriental Series.) The American Book Co., New York. 5x7½ in. 144 pages.

At last our students have a translation of Weissenborn's "Leben und Sitte bei Homer." The American edition is especially valuable, since, for more complete discussion of the various subjects treated, references are made to such works as Harrington and Tolman's "Greek and Roman Mythology," Tsountas and Manatt's "Mycenæan Age," and Reichel's "Homerische Waffen," for instance. The volume includes chapters on the Troad, by Professor H. C. Tolman, and on Hissarlik, translated from Dr. Dörpfeld's "Troja," and will prove a valuable help to every student of Homer.

**How to Know the Holy Bible.** Published by Dudley T. Limerick, 10 S. Hicks St., Philadelphia. 4x6¼ in. 72 pages. 20c.

**Inductive Lessons in Language and Grammar.** By Thomas G. Harris, M.A. (Harris's Spiral Course in English.) First and Second Book. Illustrated. D. C. Heath & Co., Boston. 5x7½ in.

**Jones Readers (The): First, Second, Third, Fourth, and Fifth Readers.** By L. H. Jones, A.M. Illustrated. Ginn & Co., Boston. 5¼x7½ in.

President L. H. Jones, of the Michigan State Normal College, formerly Superintendent of the city schools of Cleveland, enjoys a wide reputation as an educator; hence his edition of readers for elementary schools will induce teachers and parents to examine with more than usual interest the "Jones Readers" which have just been published. The books are attractive in paper, print, illustration, and binding. In their careful development of vocabulary and in their general systematic plan they are adapted for a basic series. Their crowning merit, however, lies in the emphasis put by the editor in his selections on manliness, truthfulness, kindness to animals, obedience, industry, courtesy, honesty, generosity, patriotism, heroism: the stimulus towards these ideals is so well indicated by the subject matter as not to require special explanation by the teacher.

**Laboratory Manual of Physiological Chemistry (A).** By Ralph W. Webster, M.D., Ph.D., and Waldemar Koch, Ph.D. The University of Chicago Press, Chicago. 6x9 in. 107 pages. \$1.50.

Physiological chemistry is coming into increasingly closer touch with the biological sciences—indeed, one may call this relation a bio-chemistry. Yet instruction in physiological chemistry is still largely confined to such subjects as foods, digestion, the blood, and the urine, a restriction which has not only been detrimental to the science of physiologi-

cal chemistry itself, but also equally injurious to the development of scientific therapeutics. As "a compromise between ideals and their practical applications" the present volume represents a laboratory course given to students who wish such a general instruction in physiological chemistry as shall not be too far from those practical applications. The course covers the chemistry of the cell (the application of the laws of physical chemistry to life phenomena), of the foods, of the digestion, the tissues, milk, and excretions. More experiments and methods have been given in this valuable laboratory course than can possibly be performed by any regular medical student; these have been introduced so that the book might serve as a manual for those desiring to go further into the various subjects in a supplementary course.

**Life of Leo XIII.: From an Authentic Memoir** Furnished by His Order. By Right Rev. Bernard O'Reilly, D.S., L.D., D.Lit. The John C. Winston Co., Chicago. 6x9 in. 744 pages. Sold only by Subscription.

Monsignor O'Reilly's life of the late Pope may be regarded as official, as the author was summoned to Rome by Leo XIII. and appointed by him to do this work, which occupied eight years of a residence in the Vatican. The biography is being published both in French and English. It is instructive and informative throughout, but is popular in character; it treats of the Pope, not only as a justly exalted Pontiff, but also as a distinguished statesman and scholar. The book's appearance at this juncture is timely. It will command reading from many Protestants as well as Roman Catholics; indeed, the whole world is interested to know more exactly and intimately about the life and work of the lamented Leo XIII. Being in one volume, not too heavy for the hand yet with excellent print and capital illustrations, this work is likely to make a wider popular appeal than the forthcoming long biography, official also, a work which will be sought for by students. According to a despatch from Rome, Pope Leo some time since commissioned Count Soderini to write his life for publication one year subsequent to his death, and gave to him free access to the secret archives of the Vatican. It is stated that Count Soderini has nearly completed the work, which will comprise four volumes, and that the last volume in particular will contain some important documents now for the first time published, including letters from King Victor Emmanuel and Mazzini to Pope Pius IX., giving a novel view of the history of the Papacy's loss of temporal power.

**Logical Conditions of a Scientific Treatment of Morality (The).** By John Dewey. (The University of Chicago Decennial Publications. First Series. Vol. III., Part II.) The University of Chicago Press, Chicago. 8x11 in. 27 pages. 50c., net.

**New Instruments of Precision from the Ryerson Laboratory.** By R. A. Milliken. (The University of Chicago Decennial Publications. First Series. Vol. III., Part II.) The University of Chicago Press, Chicago. 8x11 in. 8 pages. 25c.

**Plain Hints for Busy Mothers.** By Marianna Wheeler. Illustrated. E. B. Treat & Co., New York. 5x7½ in. 57 pages. 35c.

**Possibility of a Science of Education (The).** By Samuel Bower Sinclair. The University of Chicago Press, Chicago. 6x8 in. 126 pages. \$1.

**Practical Language Book (A).** By Edward A. Allen and William J. Hawkins. Books No. I and II. (The School Course in English.) D. C. Heath & Co., Boston. 5x7½ in.

**Prose Works of William Makepeace Thackeray.** *The Adventures of Philip*, to which is Prefixed *A Shabby Genteel Story*. In 2 vols. The Macmillan Co., New York. 5x7½ in. \$1 per vol.

**Radium and Other Radio-Active Substances:** Polonium, Actinium, and Thorium. By William J. Hammer. Illustrated. D. Van Nostrand Co., New York. 5½x9 in. 72 pages. \$1.

This work informs us as to certain fundamental principles in connection with the new element of radium and other radio-active substances. The author's text, accompanied by many interesting illustrations, reproduces his lecture delivered before the American Institute of Electrical Engineers in New York City last spring. According to Mr. Hammer, it is to the discovery of Professor Becquerel, of France, of the radiations emanating from uranium that the science of radio-activity owes its foundation. The remarkable radial substances which have recently been discovered give off light the moment they are formed without having to be stimulated by any form of heat, light, electrical or other vibrations. These substances, thinks Mr. Hammer, are likely to teach us more about the constitution of matter and the co-relation of vital and physical forces than any other substances which have ever been discovered.

**Rencontres.** By Marianne Damad. Plon-Nourrit et Cie., Paris. 4¼x7½ in. 317 pages. 75c. Yellow-covered paper novels bearing the imprint of Paris publishers are often suggestive of a social strata inferior in loftiness of ideals and purity of life to our own civilization. Students of French literature, however, and readers of contemporary French novels, know that this prejudice is to a considerable extent unfounded; hence they are especially pleased whenever a work in fiction appears to which they may call attention as being suitable for all readers. Such a book is the present one. It contains four stories, each a little longer than the usual "short story." The book's purpose seems to be to describe the complicated conditions involved in charity work—conditions both social and psychological. The volume has merit, not only because of its elevated tone, but also because it gives some new pictures of contemporary life to-day in the French capital.

**Strange Case of Dr. Jekyll and Mr. Hyde.** By Robert Louis Stevenson. Printed in the Easy Reporting Style of Phonography, in Accordance with the "Manual of Phonography." By Benn Pitman and Jerome B. Howard. The Phonographic Institute Co., Cincinnati. 4½x6½ in. 66 pages.

**Studies in Theology.** By J. Estlin Carpenter and P. H. Wicksteed. G. P. Putnam's Sons, New York. 5½x8½ in. 343 pages. \$2, net.

The two British Unitarians whose names are given as the authors of this volume are not collaborators. Six essays of Mr. Wicksteed's and seven of Mr. Carpenter's are here simply bound together. The two men are quite un-

like in method of thought and in literary style. Mr. Carpenter is a representative of the class of minds who have gained their breadth of view only with a corresponding loss in power of discrimination, who find it very easy to put Jesus and Plato, or Hamlet and the Sermon on the Mount, in juxtaposition, who, though they are called radical, have cultivated the wide-spreading branches of their philosophy rather than its roots. Mr. Wicksteed, on the other hand, represents that rarer class of minds whose Unitarianism amounts chiefly to a protest against the superstition and the crude tritheism that may be found in much of so-called orthodoxy; who have the historic imagination that enables them to understand, and even to some degree accept, the point of view of the mediæval Catholic, and to see the profound truth that lies in conceptions so uncongenial to Unitarian thought as the doctrines of Hell, of the Incarnation, of the Atonement, of the Trinity. The contrast between these two writers, it ought to be added, is, of course, modified by discriminating judgments on the part of the one, and by occasional lapses into the conventional phrases of "liberal thinkers" on the part of the other; but in the main the contrast is clear. Manifestly, a volume representing thus, with great ability on the part of both writers, two classes of free minds cannot be dismissed in a sentence. It invites discussion and criticism at greater length than we can give it. There are two essays which are typical of the two writers, on practically the same subject. One, "The Liberal Faith," by Mr. Carpenter, looks upon the great body of Christians from an assumed point of outside superiority; from which Greek Catholics and Roman Catholics and Protestants seem to be groping about among the devotees of other religions, all of them having contributed to the information by which the author and his guides reached the summit, but all of them prevented by the heavy creeds they carry, or the ceremonial robes they wear, from scrambling to the top themselves. The other, "The Significance of Unitarianism as a Theology," by Mr. Wicksteed, states with clearness and with sympathy one rational interpretation of the Trinitarian creed, points out the philosophy which underlies it, and then suggests that Unitarians ought to embody in their belief in the Unity of God the philosophic and practical truth that finds expression in the belief in the Trinity. In many respects the first essay of the book, on "The Religion of Time and the Religion of Eternity," by Mr. Wicksteed, is the most thoughtful and suggestive in the volume. It points out a gain that might be made, and indeed in a measure is being made, by a return to certain phases of mediæval religion. Though it includes some statements which seem to us easily proved fallacious, and though it displays the weakness of the author's intuitionist ethical theory, very comfortable no doubt, that subtly identifies his opinion of what is right with the ultimate good for all men, it is worth reading both for its luminous interpretations and for its stimulating style.

BOOKS OF THE WEEK.....	955
------------------------	-----

CORRESPONDENCE.....	957
---------------------	-----

**The Outlook** is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

**Price.**—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

**Postage is Prepaid** by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add \$1.56 for postage.

**Change of Address.**—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

**Discontinuances.**—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

**How to Remit.**—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

**Letters** should be addressed:

**THE OUTLOOK COMPANY**

387 Fourth Avenue, New York

Gall sores and blisters cause the horse much pain. They come from heat and friction under the collar or saddle. The parts should be carefully cleansed with a pure soap that will not smart. Ivory Soap, with warm water, is excellently adapted to this purpose. This soap is peculiarly efficient where it comes in contact with sores, as it is mild and pure. While cleansing thoroughly, it also soothes and heals.

## Resisting Industrial Arbitration

Apart from the settlement of the seven months' strike at Waterbury, Connecticut, the labor news of last week centered in contests over arbitration. Even the Waterbury strike was at the beginning largely a contest over the same question. At Waterbury, it will be recalled, the trolley company discharged several union leaders for petty offenses, and the union demanded their reinstatement and the submission of all questions in dispute to arbitration. The company felt strong enough to reject this demand, and soon succeeded in filling the strikers' places, but the struggle was embittered by labor riots, and greatly prolonged by a sympathetic boycott placed upon the trolley company by all the unions in Waterbury. The final settlement last week, which occasioned great rejoicing at Waterbury, was a substantial victory for the company. It merely agreed to re-employ as occasion presented strikers not charged with rioting, to confer with committees representing the employees, but not with committees representing the unions, and to make a few minor concessions. Nothing the men struck for was granted. Nevertheless, the prolonged conflict cost the company not only far more than it could have lost through arbitration, but far more than the entire wages of the men during the whole struggle. Had it not been for the rejection of arbitration, the sympathetic boycott could hardly have been instituted, and certainly could not have been so successful as to cause the Waterbury "American" to remark that the company could supply trolleys to the people but could not make them ride. In the other conspicuous contests over arbitration—those in the building trades—it appears to be the unions that are rejecting arbitration. In the statements recently

issued by the employers' associations in Boston and in Omaha it is charged that the men flatly refuse to arbitrate certain questions at issue. The conflict in Boston—between the Master Masons' Association and the Bricklayers' Union—is particularly disappointing, because for twelve years in Boston all strikes and lockouts in this trade have been avoided by yearly trade agreements which submitted all matters of material concern to a joint committee on which employers and employed were equally represented. This year the Bricklayers' Union refused to renew the trade agreement, thinking that it could force better wages by a strike. It may possibly do so for a season, but by substituting the method of combat for the method of conciliation it has aroused a new spirit of combat in the employers' association which threatens retaliatory exhibitions of power when harder times set in. In Omaha the unions express a readiness to arbitrate most questions, but not the question whether they will work alongside of non-union men. The utmost concession their representatives will make on this point is that the employers may hire men not now in the union, but the latter must join the unions and act with their fellow-workmen. Otherwise, it is claimed, employees will be divided, while employers, whether partners in a firm or stockholders in a corporation, always stand together and require dissenting partners or stockholders to act with the majority. In New York City the prolonged contest over the acceptance of the new arbitration plan shows no sign of settlement.

## Wisconsin Bankers Against Asset Currency

A surprising opposition to an increase of banking privileges has developed among Western bankers. The asset currency scheme, it will be recalled, pro-

poses to allow banks to issue notes—unsecured by the Government—to be used as currency. The present National bank notes are not, indeed, directly secured by the Government, but the banks issuing them must deposit in the National treasury Government bonds to their full value, to be used to redeem the notes if the bank fails. Thus the Government really stands behind each note, and the Government gets some advantage from the issue because the banks are willing to buy Government bonds bearing only two per cent. interest in order to secure the privilege of issuing notes. But the asset currency scheme proposes to give them the privilege of issuing notes without buying Government bonds—the notes to be secured only by the assets of the bank. This plan would restore to the banks the currency privileges they enjoyed in many States under the old State banking laws prior to the enactment of the National banking law during the Civil War and the privileges they enjoyed in England prior to the passage of the Bank Act in 1844. It was expected that the general public would oppose this form of currency, on the ground that the issue of currency is a Government function, and that the Government ought to guarantee the quality of every dollar issued—and reap the profit if its guarantee made paper as acceptable as gold. But it was thought that the banks would unitedly indorse a plan promoting their own immediate interests and power. From the first, however, the banking associations have been reluctant about indorsing the plan, and last week the Wisconsin Bankers' Association took a decided stand against it.

#### The Grounds of Opposition

This action was the more remarkable because the Association had been addressed by Congressman Fowler, of New Jersey, the author of the Asset Currency Bill indorsed by the Republican members of the House Committee on Banking and Currency, and by ex-Comptroller Eckels, an ardent advocate of the control of the currency by the banks. But the Wisconsin bankers, after a careful discussion, voted almost unanimously against the plan, on the ground that it threatened a reckless inflation of the currency likely to be followed by a dis-

astrous crash. It was pointed out that our currency supply had already been enormously increased during the past few years (about twenty-five per cent. faster than the population since 1897), and that more than half of our present currency consists of silver and paper. To permit the banks to issue more currency secured only by their assets would, as one banker put it, "drive our gold abroad under the Gresham law, or produce still further inflation of prices, resulting in riotous speculative ventures and consequent deeper depression when the ebb tide sets in." This, it may be recalled, is precisely what took place in England prior to the passage of the Bank Act. To use the language of Gresham's law, the cheaper money issued by the banks drove out the dearer money, gold, and the banks were unable to redeem their notes when the panic came. In regard to the country's need of an elastic currency, the banker we have just quoted—President Frame, of the Waukesha National Bank—uttered these sensible words:

A National bank has no more right to issue currency when its credit is strained than have State banks, or a merchant or manufacturer, under like conditions. It never should be done except in emergencies. In any case collateral should be put up as security, and a tax imposed high enough to drive it out of use as soon as its work is done. The interest rate is the check-valve to prevent undue expansion and inspire conservatism, not only in banking, but in all commercial pursuits.

This is a principle which Congress should bear in mind in legislating to provide an elastic currency. The country does not want a currency which will expand in times of high prices, low interest rates, and reckless speculation. It does want a currency which will expand only in times of emergency, when business is embarrassed by falling prices and high interest rates. To secure this the emergency currency should be subject to a Government tax, which will compel its retirement when the emergency has passed.

#### Municipal Electric Lighting in Cleveland

The city of Cleveland has undertaken to go further than Chicago and Detroit in the operation of a municipal electric lighting plant. It proposes to supply light and power to private consumers, and not merely to

light the streets and public buildings. The project formed one of the planks in the platform upon which Mayor Johnson and the Democratic Council were elected in the spring, and one of the first acts of the new administration was the introduction of an ordinance providing for the issue of \$200,000 in bonds for the erection of the required plant. The ordinance met with a temporary defeat in the Council because of the opposition of three Democrats, who refused to abide by the party platform upon this issue. A strong majority of the Council, however, favored the experiment—very nearly the necessary two-thirds. The opposition was strengthened by a report made by a special committee of the Cleveland Chamber of Commerce, which condemned the measure on the ground that municipal electric lighting was neither a proper city function nor a success; that the cost would exceed the estimates; and that the project was in the nature of unfair competition with a private company—the report further adding that ample power exists in the Council, through its ability to control rates and charges, to accomplish any results which might accrue through a municipal plant. The most striking feature of the committee's report was a comparison between the cost of street lighting in Cleveland and Detroit; it claimed that in the Michigan city the cost was the higher if proper allowance were made for interest, taxes, and depreciation. This comparison was in flat contradiction of the report given by President Ingram, of the Detroit Electric Lighting Commission, to the recent New York Convention on Municipal Ownership, and has naturally drawn forth a reply from Superintendent Bemis, of the Cleveland Water Department, showing that President Ingram's figures included the items of interest, taxes, and depreciation, and stating that the allowance for depreciation had been more than sufficient to keep the Detroit plant "up to date." Superintendent Bemis further reported that Detroit lighted her school buildings for nearly forty per cent. less than Cleveland was charged, and declared that the Cleveland rates were so high—except to large firms which received secret rates—that the business community generally welcomed the proposed city competition. Last week Mayor Johnson attended the meeting of the Cleveland

Council and proposed that, as the opposition to the electric lighting ordinance was avowedly based upon the opposition of the public, the matter should be submitted to the voters at a special election. After some opposition, this method of settling the problem was accepted, and the special election is to be held September 8. At this election a two-thirds majority of the voters must favor the experiment or it cannot be tried.

#### The Democratic Campaign in Ohio

Ohio is almost the only State politically interesting

that holds an election this fall, but the campaign there bids fair to be more interesting than any since 1900. Mayor Johnson, of Cleveland, became last year the leader of the Democratic party, and to retain his leadership it appears necessary for him to take the Democratic nomination for Governor. Otherwise a conservative nominee seems inevitable, and with it the transfer of party management into the hands of the "reorganizers." Mayor Johnson therefore has expressed his willingness to be the candidate, and his candidacy, as has been shown in Cleveland, means a campaign pushed with almost unlimited money and altogether unlimited energy. There is practically no chance of his election, as the Republican majority last year was ninety thousand; but a Republican correspondent writes to us that Mayor Johnson might secure a Democratic majority in the Legislature and defeat the re-election of Senator Hanna. Even last year Cleveland went Democratic, while this year Toledo may do the same through a fusion with the Jones independents, and in nearly all the cities except Cincinnati there is a strong revolt against the abridgment of home rule under the new Republican municipal code. In addition to these factors, which may make several doubtful counties Democratic, there is the sentiment, not confined at all to Democratic ranks, that Mayor Johnson has done a public service in insisting that the franchise values of railroads shall be taxed at the same rate as farms and homes. Over against these advantages for the Democrats, however, the Republicans count upon the continued prosperity, the great popularity of the President, and the civil war going on within the Democratic

organization. Mayor Johnson, it will be recalled, was not a silver man, but warmly supported Mr. Bryan because he sympathized with the latter's attitude toward the power of concentrated wealth. Last year, under his leadership, the Ohio Democratic Convention indorsed the Kansas City platform, and this year it promises to do the same. Last week, at a great Democratic rally at Urbana, Mr. Bryan, who has entered the conflict for Mr. Johnson, vehemently attacked the conservative re-organizers, and declared that their leader, Mr. Cleveland, in getting the votes of the Democratic masses upon a platform demanding "the coinage of both metals without discrimination," and later using his power and patronage to stop all coinage of silver, had played the part of a "bunco-steerer" in the interests of Wall Street. Yet this ill-tempered attack, which in the East injures Mr. Bryan only, was received at Urbana with a perfect storm of cheers. But even in Ohio there are a great number of Cleveland Democrats, and the factional fight, in the cities at least, promises to reduce the Democratic vote.

#### General Miles's Retirement

The retirement of Lieutenant-General Nelson A. Miles as Commanding General of the United States Army occurred on Saturday last. The very indiscreet utterances which General Miles has made more than once in recent years have unfortunately obliterated in the minds of the American people to a very considerable extent the valuable services which he has rendered to his country. At twenty-two years of age he enlisted as a captain of the volunteer forces for the Civil War. He had not previously had military training, but from the beginning of his war experience he showed not only bravery but also aptitude for military life. As a result he rose with great rapidity from one rank to another. After an experience which included all the battles of the Peninsular campaign before Richmond, the battle of Antietam, and every subsequent battle of the Army of the Potomac except one, because of his courage and brilliance in action he had at the end of the war attained to the rank of Brigadier-General of Volunteers. He thereupon entered the regular army as colonel. His subsequent career

as an Indian fighter was as brilliant as his career in the Civil War. The Kiowas, the Cheyennes, the Comanches, the Sioux, and the Apaches in succession were subdued by forces under his command. In 1894 General Miles succeeded to the command of the army. Upon his retirement on Saturday General Miles issued an address of farewell to the army. This address, dignified throughout and elevated in tone, contains one passage of special pertinence to the unprecedented duties laid upon the army as pioneers of law and order in the recently acquired possessions of the United States:

Since its organization the army has been charged with a great variety of responsibilities, all subordinate to defending the country and maintaining the rights of its citizens. . . . Always to maintain truth, honor, and justice requires the highest moral courage, and is equally as important as fortitude in battle. Drill, discipline, and instruction are but preparatory for the perfection and efficiency of an army. The events of recent years have placed upon the army a new obligation and an opportunity for a broader exemplification of its country's principles. The United States army is now brought into daily communication with millions of people to whom its individual members of every grade are the exponents of American civilization. A serious duty and a great honor are now presented to every officer and soldier—namely, to exemplify to those with whom he comes in contact our country's principles of equal and exact justice, immunity from violence, equality before the law, and the peaceful use and possession of his own.

General S. B. M. Young, who succeeds General Miles as Commanding General of the Army, and will hold the office for just one week, is a man who, though entering the army, like General Miles, from civil life, has had, like him, wide military experience, in which he has shown great efficiency. On Saturday of this week the anomalous office of Commanding General of the United States Army without power to command will lapse. General Young will therefore be the last holder of a title which has been held by Washington, Grant, and Sherman. On Saturday of this week General Young will become the first Chief of Staff under the new Army Law.

**Our New Navy** The recent voyage of the battle-ship Kearsarge from Portsmouth, England, to Bar Harbor, Maine, was a remarkably successful test of

speed and economical coal consumption. The average speed was 13.1 knots per hour. The official report shows that the voyage was made under adverse conditions, a strong head wind prevailing except for two days, and the ship being compelled at times to go slower on account of fogs and icebergs. Captain Hemphill says that if the voyage had been eastward with wind, sea, and current, the average speed would have been 14 knots per hour. The voyage has given much satisfaction to the naval authorities. If the Oregon's great journey during the Spanish War was one of the most striking performances of our new navy, the more modest voyage of the Kearsarge is hardly less significant. In the naval maneuvers last week the Kearsarge was the ship of the commanding admiral of the squadron which defended the country against the squadron of attack. The campaign began with the departure of the attacking fleet from Frenchman's Bay, Maine, to make its preparations for the operations against the New England coast; the squadron was under the command of Rear Admiral Sands, whose fleet consisted of three battle-ships and three torpedo-boat destroyers. Two days later the defending fleet, under Rear-Admiral Barker, put out to sea and began the search. The duty of Admiral Sands was, if possible, to make a landing and establish a foothold. If he could have remained in any port five hours without being discovered, he would have won the victory. Admiral Sands had steamed about five hundred miles out, and then, returning, made straight for Winter Harbor, just inside Frenchman's Bay. The Olympia, one of the shore force scouts, however, succeeded in sighting the hostile squadron and in sending a wireless message to Admiral Barker, then twenty-five miles or more away, before it could be interrupted by wireless "discords" from the Texas, the flagship of the "enemy's" forces. The use of wireless telegraphy is thus once more impressively demonstrated. All the communications between the ships were accomplished without the aid of land stations. The international position which America has now justly attained as a world-power is evidenced by the popular interest in these naval maneuvers, and in the war games between the army and the navy which are shortly to occur.

#### The Transformation of the Steerage

The humanizing of human conditions which has been advancing on land is advancing also at sea. The squalor and discomfort of the steerage passenger, not long since depicted by a contributor to *The Outlook*, have given place, on some ships at least, to arrangements for privacy, decency, health, and happiness that mark a distinct advance in regard for the welfare of the poor emigrant. The advent of the piano to the steerage, or third cabin, as some now call it, is a sign that a new era has begun for the class of passengers who used to be packed like cattle into stuffy pens between decks, and might be seen squatting on the ship's hatches eating coarse rations from a tin dish. For instance, in the third cabin of the new Cunard steamer *Carpathia* a recent observer came upon a group of musicians accompanying the piano with the violin and with song. Near this was a comfortable sitting-room for women, and a similar room for men occupying themselves with games and pipes. The dining-room, extending the whole width of the ship, was fitted, like those of higher class, with revolving chairs, and exhibited its daily printed bill of fare, four meals a day of varied and substantial food. Here also, as in upper-class saloons, the ship's daily run was bulletined. Equal improvement appeared in the sleeping-rooms, patterned after those of higher grade, some with two berths, others with four, for married people and families, each room with its separate conveniences of water and light. Ventiducts supplied fresh air as liberally as to any part of the ship; bath-rooms were ready for use; as to deck room, there was enough of it for exercise, and deck benches for seats. In short, the third-cabin passenger is at least as well cared for on such a vessel as was the second-cabin passenger at no remote date; while the second cabin, in its turn, is distinctly better than was the first cabin not twenty years ago. The supplanting of unwholesome city slums with model tenements finds a fit complement in the transformation of the repulsive steerage into the sanitary and comfortable third cabin. Much remains to be done, however, taking the steamship lines as a whole, in this needed reform.

### New Movements in Southern Education

At the Summer School of the South, held every year at Knoxville, Tennessee, the daily attendance this season averaged more than seventeen hundred. All the Southern States were represented, though nearly two-thirds of the teachers naturally came from Tennessee. The libraries, shops, laboratories, and classrooms of the University of Tennessee were at the service of the School, and the faculty of the University were all at work helping to make the School a success. Unfortunately, relatively few of the teachers came from the distinctively agricultural sections, the reason being, of course, that where teachers average but little more than one hundred dollars a year they cannot afford to pay out fifty at a six weeks' school. The teachers present, however, showed an interest in nature studies which was perhaps the most significant feature of the School. A bureau of nature study was established to encourage the study of native plants and animals and also to prevent the destruction of native birds for use in millinery. The interest shown in manual training was hardly less significant. Not only did the classes include drawing, sewing, clay-modeling, wood-carving, and the like, but bookbinding, basket-making, and weaving. The teacher in basket-making showed that good baskets could be made from rushes, sedge-grass, cat-tails, palmetto buds, and even wild honeysuckle. Rug-weaving was taught by the use of inexpensive little looms. The two things kept constantly in mind in this work were that the material for the use of each pupil should be so selected and cared for as not to cost more than five cents a term, and that in every instance the pupil must be taught to apply his knowledge of manual training to raising the standard of comfort in his own life. Tennessee has been redistricted for school purposes, the counties instead of smaller districts being made the centers of administration. By this means many neighborhood schools have been closed and central schools have been substituted with longer sessions and better equipment. It was considered indicative of the attitude of the New South toward women that five Tennessee counties now have women superintendents. In North Carolina also the campaign for educa-

tion which Governor Aycock and Superintendent Joiner are carrying on is being aided by the women of the State, who have been organized into an association for the betterment of schools, and are helping with the school building. Last year over three hundred new school-houses were built. Here, as in Tennessee, the tendency is to consolidate little schools, more than seven per cent. of the whole number of white school districts having been done away with in the past year in order that letter schooling might be provided with the least possible increase in the expense.

### The Career of Charles M. Schwab

Last week the persistently repeated and denied rumors that President Schwab, of the United States Steel Corporation, was about to be relieved from his duties proved true. According to all the official reports, and to Mr. Schwab's own statement, his shattered health was the only cause of this action. His conduct of the wrecked ship-building combination had nothing to do with it. His exploit at Monte Carlo had nothing to do with it. It was purely a case of shattered nerves. That Mr. Schwab's nerves were overstrained was the one part of the official and ex-official statements which carried conviction. Nothing but overstrained nerves could explain Mr. Schwab's statement that Mr. Morgan had long been "holding on to his coat-tails" to keep him in the presidency. Mr. Schwab is a man of decided ability. Without any advantages of family or money or education, he rose with dazzling rapidity from the post of stage-driver to that of the foremost iron-maker in the world. When little more than thirty he became the President of the Carnegie Company, and until he turned his attention, in Mr. Carnegie's phrase, from the manufacture of iron to the manufacture of securities, his administration gave entire satisfaction—except to the employees whom he drastically forbade to join unions under penalty of instant discharge. At this time in his career Mr. Schwab was an opponent of unions among employers as well as among employees, declaring that they paralyzed invention, improvements, and every other manifestation of industrial vigor. At this time he even objected

to Masonic orders, because they tended to lessen individual responsibility. When, two years ago, he was raised to the presidency of the greatest industrial combination in the world, he laid aside this part of his creed and became an exponent of the idea that the magic of combination could turn water and wind into gold. It did on the stock market, and the young man of thirty-nine, administering a property more valuable than the entire wealth of whole States, suddenly ranked with emperors in his authority, and became their associate when he made his triumphal tour through Europe. That he should have been intoxicated by his sudden elevation was not to be wondered at, nor self-righteously condemned. But whatever may be said of the nervous tension caused by his high career, his kite was really lowered because a lack of moral ballast was evident to the business men holding the string.

William E. Dodge William E. Dodge, who died suddenly at Bar Harbor on Monday of this week, was of the third generation of a family of New York merchants whom the possession of great wealth neither enervated in business energy, narrowed in public spirit, nor hardened in spiritual life. He was born in 1832, and since 1864 had been a member of the firm of Phelps, Dodge & Company. His philanthropic and religious activities have been along many lines and never ceasing. He succeeded his father as President of the Evangelical Alliance and of the National Temperance Society; he had since his young manhood been one of the foremost supporters of the Young Men's Christian Association; he had been the Vice-President of the American Sunday-School Union and Chairman of the National Arbitration Committee, and besides had been an active officer in a large number of societies for the promotion of art and the natural sciences. His son Mr. Cleveland H. Dodge and his daughter Miss Grace Dodge have inherited in full measure the moral spirit of the family, and promise to carry forward with undiminished vigor the work of their father. When it is so widely believed on this side of the Atlantic as well as the other that American commercial life is hopelessly sordid and materializing, a

career like that of Mr. Dodge maintains the honor of his Nation as well as of his family.

Phil May To the readers of the London "Punch" the name of Phil May, who died last week, has been very familiar. Since the death of Du Maurier there has been no better-known English illustrator. In the ordinary sense of the word he was not a caricaturist, though his pictures had that element of emphasis on class or character traits that is the weapon of the maker of caricatures. Like other English makers of humorous pictures, Phil May had more restraint than most of the illustrators whose work is familiar to the readers of American comic weeklies. His subjects were generally taken from life in the slums of London. He could depict the droll aspect of poverty without altogether depriving it of its picturesque misery. Nothing that he did probably ever left a sting behind it. He was born in England, struggled against starvation, went to Australia, where he got his first experience as a regular contributor to the press, returned to England and became permanently attached to the staff of "Punch." It was through his contributions to that paper that his originality of ideas and nicety of execution gave him international fame. His kindly disposition won him many friends. He was not quite forty years old.

Mr. Chamberlain's Politics The British House of Commons has passed, by a substantial majority, the Sugar Bill. This bill imposes a duty on sugar imported from abroad whenever the foreign government gives to the producer a bounty on the sugar. Such a duty is "protective," but it only protects the English producer from the effect of special legislation by other governments. It is therefore not inconsistent with free trade. For the principle of free trade is that the interests of the public will be better conserved by leaving trade to the operation of natural law than by intermeddling with natural law by special legislation; and the object of the Sugar Bill is simply to neutralize the effect of special legislation. Mr. Joseph Chamberlain, the Colonial Secretary, and a principal advocate of the bill, insists that

the price of sugar will not be increased, and that the West Indian trade will derive from the measure greater stability. The latter statement is undoubtedly true; the former statement is improbable. How the West Indian trade can be made more profitable unless higher prices are paid for West Indian sugars it is not easy to see. Mr. Chamberlain makes the Sugar Bill the occasion for a general discussion of protection. His arguments are a reproduction of those to which in this country we have long been accustomed. To wage-earners he says that, even if food be taxed, protection will raise prices, wages will rise with the general rise in prices, and so the food tax will not be felt. He does not tell them that wages are always slow to rise with a rising market and quick to fall with a falling market, nor does he say anything about the effect which artificial prices have to stimulate both speculation and extravagance. To manufacturers he says that he does not propose to impose a tax on raw materials. He takes no note of the fact that a rise in wages means an increased cost of product, and that the increased cost of product must be paid for to an exporting nation by the foreign market where the goods are sold. How, in the keener competition with America and Germany which England is now having to meet, she can retain her hold upon the foreign market while she raises the prices of her products, Mr. Chamberlain also does not explain. As might be expected, the majority of English statesmen propose to adhere to the fiscal policy which has made their country great. Of course the Liberal party as a whole continues to stand for free trade, but also the Tory-Unionist free-traders are now showing their strength. They have formed a "Unionist Free Food League," with that sturdy veteran, Sir Michael Hicks-Beach, ex-Chancellor of the Exchequer, as President. At a by-election just held, however, the successful candidate was neither the Tory nor the Liberal aspirant, but the Labor candidate, a free-trader. While Mr. Chamberlain is espousing the cause of protection with his undeniably great skill and energy, the opposition to it is proving to be not only deeper but also more widespread than he apparently thought.

#### The Work of Baron d'Estournelles

Last week Baron d'Estournelles de Constant, who headed the French parliamentary group of eighty members on its recent visit to London, published an important letter setting forth the results of the recent exchange of views in London and Paris between members of the British and French Parliaments and the leading Ministers of the two Governments. From this letter it would appear that there is more reason than ever to believe in the hopeful outlook for the success of M. d'Estournelles's proposal of an arbitration treaty between England and France. The plan has the distinct approval of the Balfour Cabinet, as has the suggestion for a reduction of naval forces. Baron d'Estournelles truly says that for twenty years the fear of parliamentary opposition has alone prevented an arbitral settlement of difficulties, but now that that fear is dispelled nothing prevents the adoption of a conciliatory policy. This policy has three objects: (1) An arbitration treaty similar to that negotiated between Great Britain and the United States, and in accordance with Clause XIX. of the Hague International Arbitration Convention; (2) a reduction in the overwhelming naval expenses; (3) a friendly settlement of all outstanding differences. The Outlook trusts that this arrangement may be put into early practical effect, and that through its influence a similar basis of agreement may one day exist among all the countries of Europe and America.

#### Macedonian Unrest

Last week in the town of Kruševo in western Macedonia the insurgents dynamited the konak, or Governor's palace, and killed fifty Turks; at other places in the sanjak (county) of Uskub entire villages were burned. The garrison at Prilip was captured, with a consequent addition of rifles for insurgent use. In several villages of the vilayet, or state, of Okhrida, on the Albanian frontier, the Macedonians rose against their Turkish neighbors and massacred them. Railway bridges were blown up and traffic on the Monastir-Salonika line stopped. A two days' rebel rout occurred at Sorobutch, in which the total loss is placed at a hundred and sixty lives. Finally, on Saturday of last week,

the Russian consul at Monastir—supposed to be in sympathy with the people—was murdered by a zapti, or Turkish policemen; it will be remembered that five months ago the Russian consul at Mitrovitza was also murdered by a Turk. These events show that the insurrectionists have cleverly planned a conflict which will require simultaneous checking at many points remote from each other. Hence, throughout the vilayets which compose the region known as Macedonia, the arrest of every

we take this statement with a certain degree of allowance, it must be remembered that the Bulgarian Government has no light task, for, ethnically, linguistically, socially, and religiously, the Macedonians and the Bulgarians are practically one people. They generally intermarry, so that the persecutions assume a family as well as a national complexion; hence the great strength of the Bulgaro-Macedonian Revolutionists' Committee having its headquarters at Sofia, the Bulgarian capital.

TURKEY IN EUROPE AND THE BALKAN STATES

suspected man has been ordered (and few indeed are not suspected), while the reserves have been called out from Adrianople on the east to Janina on the west and to the region of Novi Bazar on the north. Following last week's fighting, the Bulgarian Government announced that it wishes to maintain friendly relations with Turkey and also to prevent revolutionary bands from crossing the frontier, but that it fears a popular movement throughout Bulgaria as well as Macedonia if outrages on peaceful Macedonians, men and women, by the Turkish soldiery continue. While

This brigand band provides (1) that stores of arms and dynamite shall be kept hidden everywhere throughout Macedonia and prepared for quick use; (2) that the natives shall always be ready to fight for freedom; and—as crime begets crime—(3) that opponents shall be assassinated or “put out of the way.” Branch organizations exist in every community in Bulgaria and Macedonia, and the membership is believed to include nine-tenths of the people. We believe that the Committee has enjoyed the tacit support of the Bulgarian Government; at all events, the

Committee's influence is so powerful that it has been practically impossible to convict of crime any man who has been active in this movement.

⑤

#### Reaction in China

Even the most optimistically inclined concerning governmental reforms in China have become depressed by the Imperial Government's apparent readoption of its old policy of repression. This has been specially shown (1) by the closing of the University of Peking to European and American instructors—even though it has become officered by the Japanese; (2) by the demand for the arrest in the foreign quarter of Shanghai (internationally governed) of the editors of the "Supao," a Chinese reform journal; (3) by the torture of a reformer journalist, Shen-Chien. Thus freedom both of teaching and of the press has been threatened. China demands that the international authorities shall hand the "Supao" editors over to the provincial officers, which is equivalent to a death sentence; indeed, the demand distinctly says, "The prisoners are wanted for execution," a trial not being even mentioned. The announcement in the House of Commons last week that the British Government would not agree to the surrender of the Shanghai refugees is commended by most observers. It remains to be seen how the other Powers will act. According to a despatch just at hand, Mr. Williams, Chinese Secretary of the United States Legation, has made an investigation into the execution of Shen-Chien, which shows that the executioners, after beating the prisoner for three or four hours, despaired of being able to fulfill the Empress Dowager's orders to beat him to death, and, yielding to the unhappy man's pleadings to end his misery, strangled him with their own hands. From these events it would seem as if China were witnessing a return to the conditions which followed the stroke-of-state of 1898 by which the Empress Dowager unlawfully gained control of the Chinese Government. She again assumes a certain fear for the throne. She has placed special guards at the gates of Peking and has called together all the princes of the dynasty to consider measures to insure safety. It is believed, however, in Anglo-German quarters that the main

object of the gathering is to grant further concessions to the Russian Government, with which the Empress Dowager is supposed long to have had some agreement for the protection of the Manchu dynasty. Thus the Empress Dowager would seem not to have changed her anti-foreign attitude by reason either of the Boxer atrocities of 1900 or of the punitive expeditions of the allied Powers which followed. Indeed, it is felt by some that her inimical feeling has only increased, and that she is quietly and steadily communicating this feeling to those about her in the central Government. We trust that, while our own Government has led the world in a magnanimous treatment of the Chinese, we may not cherish illusions as to any appreciation from that people, as represented by their Empress Dowager.

⑥

#### Pius X.'s Coronation

The coronation of Pope Pius X. on Sunday of this week was the first occasion of the celebration of a pontifical mass in St. Peter's, Rome, since 1870. The new Pontiff ordered sixty thousand cards of invitation distributed without privilege, declaring that "all Christians are equal before God." In the throng the Venetians were especially noticeable; thousands of them saw "our Pope" crowned, and on his appearance in St. Peter's it seemed as if they would seek to carry him in their arms, so great was their enthusiasm. Notwithstanding the large placards which the Pope had ordered posted all about the church, forbidding with becoming modesty any acclamations in his honor, cries of "Long Live Pius X." and "Pius, our Pope, our Father," were raised and continued until the Pontiff was obliged to make a somewhat indignant sign for more reverential behavior. In contrast with the occasions when Leo XIII. had to wear the heavy white pontifical robes and the red and gold miter, the new Pope wore them without effort. Before entering the *sedia gestatoria*, or papal chair, he had asked for his spectacles, and when the master of ceremonies hinted that his Holiness would look better without them, said, "I have no desire to appear what I am not," and wore them throughout the ceremony. Over his head a canopy was held by eight men,

and surrounding him were the Noble Guard in their red uniforms and gleaming helmets, carrying drawn swords. In front marched sixty Cardinals, who had donned silver copes and white miters, and the chaplain bearing the cushion on which reposed the triple crown. The choir of the Sistine Chapel, in white, followed the Pope singing the "Ecce Sacerdos Magnus," accompanied by the notes of silver trumpets. A quaint ceremony now occurred. The master of ceremonies knelt three times before the Pontiff, each time lighting a handful of hemp which surmounted a silver torch, chanting as the flame flashed and died out, "Pater sancte, sic transit gloria mundi" (Holy Father, thus passes the world's glory). The Pope then walked to the high altar, blessed it, and the maniple, a symbol of the cords with which Christ was bound, was fastened to his arm. Mass was then celebrated by Pius X. with much attendant pomp, his sonorous voice being audible in the most distant corner of the immense church. Upon his return to the throne the Cardinals offered obedience, kissing his hand and feet and being embraced by him in turn. The whole of the Sacred College and choir then united in singing Palestrina's "Corona aurea super caput ejus." Cardinal Segna raising the Pontiff's miter, Cardinal Macchi placed on the noble head of Pius X. the triple crown, saying:

Receive the tiara ornamented with three crowns. Remember thou art the Father of Princes and Kings, the Rector of the World, the Vicar on Earth of our Saviour, Jesus Christ, who is the honor and glory of all centuries.

At this the church was filled with the blowing of trumpets, ringing of bells, triumphant strains from the choir, and acclamations of the multitude. The ceremony ended, of course, with an apostolic benediction from the new Pope.

**A Democratic Pope** As indicating the Pope's indestructibly democratic ideas, he admitted to a private audience last week the Mayor of Riese (the birthplace of the Pontiff) and some other municipal authorities who were little better than peasants and presented an incongruous group in the gorgeous setting of the Vatican. They stood huddled

twirling their hats in their hands, but the Pope soon put them at ease, saying, "Come here and sit next to me," speaking of course in the Venetian dialect. He inquired after various people in the village and said, "Throughout my career I remember with joy and emotion my youthful days among you, which were also my happiest." When the villagers tried to express their gratification at the great honor done to their small village because of Cardinal Sarto's election, the new Pope is reported to have replied:

I cannot yet realize it. On coming to Rome I was so sure of peacefully returning to my Patriarchate at Venice that I bought a return ticket. I am entirely unprepared for the position forced upon me, and though I am working very hard, it will take time before I shall feel that I can thoroughly accomplish my mission.

Other simple country folk were also allowed to visit his Holiness last week, being formally introduced by an ecclesiastic whom they happened to know. Thus those who have been in the papal apartments since the new régime began have found an unprecedented crowd there in which the democratic element was conspicuous. It is even alleged that "any reasonable cause will now procure an audience with the supreme pontiff." Furthermore, Pius X. departed from the usual papal custom of dining with no one but princes; he actually invited Abbé Perosi, the priest-composer, to his private table. It is believed that all Vatican methods will be modernized by Pius X.; at all events, there has already been an admirable simplicity and despatch in instituting changes. To us in this country the most important event of the week was the Pope's reception of the American pilgrims. As this was not only the first delegation to be received by him, but was received the day after the papal election—an unprecedented event—the honor which the Pope thus pays to the Church in this country will certainly be appreciated. Pius X. also received Cardinal Gibbons in private audience, and in a long conversation renewed his expressions of interest in America, and said that in order to become thoroughly acquainted with questions connected with the United States he would like to have the Cardinal remain in Rome for some time. After his audience Cardinal Gibbons presented to the Rector of the American University at Washington. It

will be gratifying to liberals. Protestant and Roman Catholic alike, to know that the Pope promises to do all possible to further the interests of the University.

**An Expiatory Monument** On Sunday, August 13, three hundred and fifty years ago, Michael Servetus was arrested in Geneva, whither he had fled from judgment in Vienna. He was tried and convicted of heresy and burned at the stake October 27. He had been condemned to be burned at the stake by the civil tribunal at Vienna in the previous June, but as he had escaped, the judgment could not be executed. By the initiative of Professor E. Doumergue, of the Theological Faculty of Montauban, France, and perhaps the greatest living exponent of Calvinism, the Société du Musée historique de la Réformation at Geneva has resolved to erect an expiatory monument on the spot of his execution. The monument is to be erected by the friends of the great reformer of Geneva, as an expression of sorrow for the one great mistake of his life. It is not to indorse the doctrines of Servetus, but as a confession to give peace of conscience to the sons of the men who committed the most notorious crime in the annals of Protestant intolerance. It is, of course, well known that, though Calvin approved of the execution of Servetus, he earnestly disapproved of the manner of it. The inscription for the monument has not yet been fixed upon. It will probably be one of these two texts: "The respectful and grateful sons of Calvin, our great reformer, though condemning an error which was that of his age, and firmly devoted to the liberty of the conscience according to the true principles of the Reformation and of the Gospel, have erected this expiatory monument 27 October, 1903." "To Michael Servetus, burned for his convictions at Champel, 27 October, 1553, victim of the religious intolerance of his time. The Protestants and friends of Calvin have erected this expiatory monument to repudiate all coercion in matters of faith, and to proclaim their invincible attachment to the Gospel and to liberty, 27 October, 1903." Professor Doumergue merits the gratitude of the age. No other such monument has ever been erected.

**The Babs Massacre** The London "Times" publishes an account (which, as yet, is unconfirmed elsewhere) of a massacre of Babs in Yezd, Persia. The Babs are Muslim religious reformers whose aspirations have always been viewed with suspicion by the ruling class. According to the "Times" report, during two days every Bab who fell into the hands of the rabble was butchered, and the mutilated bodies were drawn through the town followed by crazed crowds. It would thus seem, from the striking similarity of the massacres, as if the butchery of Babs in southern Persia were as popular as that of Jews in southern Russia. In both cases the unfortunate people were members of an unpopular religious faith; in both cases they had been unjustly accused of plotting against the government. Furthermore, if we may believe the "Times's" account, in both cases the government made no active attempt to save the oppressed; nay, in both cases government subordinates actually aided and abetted the rioters and murderers.

**The Young Men's Christian Association** The latest Year-Book of the Young Men's Christian Association, covering the working year to May 1, 1903, shows a gratifying increase in numbers of associations, in membership, and in total property owned. It may surprise some to know that the Associations possess nearly twenty-nine million dollars' worth of property; on this amount there is a debt of less than four million five hundred thousand dollars. Perhaps the most interesting features of this report are in such statements as these: There are nearly 4,600 boys in the 214 summer camps. The colored men's department has 34 city and town associations and 47 student associations. Army and navy work is conducted at 269 points. The number of men and boys in the Bible classes in the city and railroad associations has increased from twenty-five hundred to thirty-one hundred. The number of men uniting with the Church from the Associations has increased eleven per cent. The daily attendance at the Associations is over a hundred and eight thousand. Positions were secured for nearly seventeen thousand men and boys. Such facts are eloquent in describing the

work of an institution which, emancipating itself from its one-time over-pietistic attitude, finds every year new fields of labor and success, not alone in one department, but in many departments of physical, social, educational, and religious life.

**The Northfield Conference** The Northfield Conference for Christian Workers, which opened on July 31 at East Northfield, Massachusetts, has so far in its sessions been marked by variety in the topics treated and in the types of mind represented by the speakers. The opening sermon by Dr. R. A. Torrey expressed with clearness the undogmatic but very earnest and vital spirit which has been evinced in the Conference from the beginning. In one of the early sessions the Rev. Willis R. Hotchkiss, a missionary from Africa, made an address which, illustrated by some dramatic narrative of his own experiences among savages, emphasized the need of making Christian faith not a mere expectation of a happy future life but a power for the transformation of "this earth life." Dr. Campbell Morgan has given a series of addresses on the prophets. His power to visualize, so to speak, spiritual truth may be exemplified by this quotation :

It is because God is changeless in all the eternal sublimities of his character that he changes in his dealings toward men. I remember a man saying to me once, "Why, he is just as changeable as a weather-vane on a steeple." What an unfortunate figure of speech! The most unchangeable thing in Northfield is the weather-vane on the steeple. But, you say, it is always changing. No, it never changes; it is pointing north and south and east and west, yes; and because of its unchangeable principle it shows you where the wind is coming from, and it is always unchangeable in its adhesion to principle. The Almighty God is unchangeable. To-day his word is the word of tenderness, and to-morrow of anger. To-day he spares Nineveh, and to-morrow he smites it. Has he changed? No; Nineveh has changed. He has been the same throughout all his dealings with men, and it is they that change, not he that changes.

The Rev. Charles Stelzle, who is known to our readers as a minister who, because he has been a workingman, knows at first hand the needs of workingmen, addressed the Conference on Tuesday. He spoke of the commission of the Church to minister to physical as well as doctrinal, or,

as they are commonly called, spiritual, needs of people. It is refreshing to find a minister preaching to church adherents the particular form of gospel which the church adherents need :

I know that some people are saying the workman is at fault in this matter. Suppose he is! I am not willing to admit that he is altogether at fault—but suppose he is; don't you know that the Church was organized, established by Jesus Christ, for such people? The greater the fault of the workingman, the greater the fault of the Church in not reaching him with helpful ministrations. . . . As I have read this Bible I do not find a single command in it for the unconverted man to go to church. He is told to come to Christ; he is told to accept Christ; but there is not a single command for the non-Christian to go to church. But I find command after command in that book for the Christian to go out upon the highways and hedges and compel them to come in; and that is your commission and mine.

Professor Orr, in speaking of the drift from skepticism to faith, represented still another type of mind from those already mentioned; the Rev. R. J. Campbell still another. It is evident that Mr. W. R. Moody is making of the Northfield Conference a meeting-ground where men and women of various schools of thought may concern themselves with principles that underlie all kinds of theology, and may find a common way to the source of all vital faith.

## The Best Defense

President Roosevelt's letter to Governor Durbin, made public on Monday of this week, on the cause and cure of lynching, calls attention to the only sound method of dealing with such evils, whether they concern a race, a party, a commercial organization, a State, or any other division of men.

Although it is impossible to indict a whole people, it has been the practice of some of late to charge against the black race on the one hand, and the white race on the other, crimes committed by individuals. Naturally, men of the negro race have leaped to defend their people from the accusation brought against them; and in turn white men have leaped to the defense of their race. This impulse to defend one's own people is a lofty impulse; it is the pride which is as

necessary to the welfare of a race as self-respect is necessary to the welfare of an individual. It should not be repressed. But it should be rightly directed.

Negroes, or those speaking on behalf of negroes, in defending the black race usually attempt to minimize the evils laid at its door, declaring that the shiftlessness, the brutality, and the number of instances of assault have been exaggerated; or they extenuate the evil, declaring that slavery, with its train of injustice, social ostracism, hardship, ignorance, has occasioned the evils; or else they have brought recrimination, and rejoice in retaliation against the white race, as a correspondent of the Milwaukee "Sentinel," writing rather incoherently, seems to do:

In recent years negroes are growing away from that fear of the white man whipped into them and their ancestors during slavery; it is time they had, and are now in some cases showing a degree of manhood quite commendable, wrong as it may appear from a civilized standpoint.

When the white man defends his race, he usually follows the same procedure. He minimizes lynching and calls it sporadic. He minimizes peonage and calls it local and temporary. We quote from the Memphis "Commercial Appeal":

As a matter of fact, there is no "system" of peonage in Alabama. The fact that a few hundred negro convicts are leased out to farmers does not constitute a system. So far, the peonage is confined to two counties in the State, and it is an exception to the prevailing system.

What the white man, thus arguing, does not minimize he tries to justify. He declares that negro brutes need to be terrorized; that negro vagabonds need to be set to work. And he ends by a *tu quoque*—that any one in his place would do as he does.

Is this the best defense? We think not. This is defending the vice, not defending the race. He who excuses himself accuses himself. He, on the other hand, who begins by accusing himself will find in the end not mere excuse, but real defense.

I. The negroes' best defense against the evils charged against their race is the cure of them. There is no doubt that negroes are continually guilty of brutal assaults upon white women, and that

among negroes there is widespread indolence and shiftlessness. If negro leaders wish to defend their race against the charge just brought against it, they can best do so by being quickest to accuse those guilty and most alert in bringing about the enactment and enforcement of laws for the prompt punishment of rape. Let negro preachers preach, not against lynching, but against the crime, or crimes, which provoke lynching. Let negro teachers and parents be most earnest in drenching the minds of colored children with the hatred of the evils of which people of their race are especially accused. Let the negro race take a leaf of experience from the Hebrews, whose ancient laws are most stringent in respect to the evils to which they as a race were especially prone. Those who would make the strongest defense of the negroes can do so by inculcating in them enthusiasm for self-restraint and useful activity.

II. The best defense of the white race also begins with self-accusation. Upon the white people, especially of those localities where lynching has become prevalent, rests the responsibility of defending their race and their locality by the exertion of every energy to repress mob violence. Let white children be taught to hate anarchy with an especial hatred. Let men like Governor Durbin and Sheriff Whitlock be accorded peculiar honor. Let white teachers, preachers, parents, leaders of all kinds, make it their special function to arouse enthusiasm for law.

This principle, that the only true self-defense is self-purification, is the principle underlying President Roosevelt's ringing letter to Governor Durbin. We quote first what he says especially to the colored citizens of the United States:

In such cases, moreover, it is well to remember that the criminal not merely sins against humanity in inexpiable and unpardonable fashion, but sins particularly against his own race, and does them a wrong far greater than any white man can possibly do them.

Therefore, in such cases, the colored people throughout the land should in every possible way show their belief that they, more than all others in the community, are horrified at the commission of such a crime, and are peculiarly concerned in taking every possible measure to prevent its recurrence and to bring the criminal to immediate justice.

The slightest lack of vigor either in denun-

ciation of the crime or in bringing the criminal to justice is itself unpardonable.

Exactly the same principle he applies to the white citizens of the Union :

It is, of course, inevitable that where vengeance is taken by a mob it should frequently light on innocent people; and the wrong done in such a case to the individual is one for which there is no remedy. But even where the real criminal is reached, the wrong done by the mob to the community itself is well-nigh as great. Especially is this true where the lynching is accompanied with torture. There are certain hideous sights which, when once seen, can never be wholly erased from the mental retina. The mere fact of having seen them implies degradation. This is a thousandfold stronger when, instead of merely seeing the deed, the man has participated in it. Whoever in any part of our country has ever taken part in lawlessly putting to death a criminal by the dreadful torture of fire must forever after have the awful spectacle of his own handiwork seared into his brain and soul. He can never again be the same man.

Surely no patriot can fail to see the fearful brutalization and debasement which the indulgence of such a spirit and such practices inevitably portends. Surely all public men, all writers for the daily press, all clergymen, all teachers, all who in any way have a right to address the public, should with every energy unite to denounce such crimes and to support those engaged in putting them down. As a people we claim the right to speak with peculiar emphasis for freedom and for fair treatment of all men without regard to differences of race, fortune, creed, or color. We forfeit the right so to speak when we commit or condone such crimes as these of which I speak.

This is a principle that applies to the cure of any wrong, whether of a race, or of a State, or of a church, whether of a labor union or of a corporation. The best defenders of the good name of Alabama are the men who, like Judge Jones, brought the offenders to their punishment. The best defenders of the good name of Missouri are those who, with Mr. Folk, are indicting and convicting the corruptionists. Does a minister resent the accusation that his church is out of sympathy with the people? Let him arouse his complacent congregation. Does a property-owner fear assaults on property? Let him be the strongest supporter of the anthracite coal strike decision. Does a workman resent the charges of violence and disregard of individual rights brought against labor unions? Let him be thankful for the decision of the President that reinstated Miller against the unjust and

lawless demands of a union. He who would defend his race, his State, his organization, his class, against accusation, let him be the first to accuse and to purify.

## The Unspeakable Turk

The Sultan of Turkey has committed four grievous wrongs: (1) he has allowed the wages of his soldiers and civil officials to remain overdue; (2) he has winked at the miscarriage of justice in his courts; (3) he has made himself more of an autocrat than ever by unjustly centralizing the power of the State, and (4) he has permitted, if not encouraged, the massacre of those who differ from him, especially in religion.

Hence we are not surprised at last week's Macedonian insurrection, due to additional oppression from Turkish troops and civil officials. These rely upon the notorious corruption of the Ottoman courts, in which apparently every crime is condoned for cash. With their own wages always in arrears, the soldiers and civil officers have been reimbursing themselves by extorting sums from Macedonians through intimidation. This has chiefly concerned the exorbitant taxes, which in some cases represent the whole value of the agricultural land. Failing to get money, the Turks have filled the prisons, not only with the suspected dwellers in the town, but also with the more peaceful rural population. When they have met with resistance, they have pillaged entire villages, and have even massacred innocent persons—this despite the "reform programme" imposed by Russia and Austria. Increase of crime, of course, means additional bribes to be wrung from the terrified people, who in turn have sought the only two ways by which they can escape from military and civil clutches. The Macedonians have exhausted the first means—money; they have left only the second—force.

Viewed in the light of the highest civilization, the Macedonians are degenerates, but what wonder, after centuries of intellectual, moral, commercial, and political oppression! They still have enough instinct for liberty, however, to struggle towards it, even if they must fight the Turk with his own weapons. Is it not time for Europe to give to the miserable people

something of that freedom guaranteed by the Treaty of San Stefano which victorious Russia imposed upon Turkey after the war of 1877? It is true that by this the boundaries of the ancient Bulgarian Empire would almost have been restored, that the people would have been given theoretical independence under the Czar's protection, and that, in consequence, Russian aggrandizement would have been as evident as would have been the reduction of European Turkey to a narrow strip of territory. The Czar's protection would not have been ideal, it is true; instead of it, however, the other Powers preferred that Macedonia should be restored to the unspeakable Turk, and that a group of little weakling States should stand as a buffer between him and their jealousies. The following year, at the Congress of Berlin, they tore up the San Stefano Treaty, providing instead that the Macedonians should be under "the direct political and military authority of the Sultan," with a Christian Governor-General; that religious freedom should be guaranteed; that the people should have the privilege of electing their own magistrates and enacting their own laws, subject to the general approval of the Imperial authorities at Constantinople. These pledges have not been carried out, despite the "watchful attitude" of the Christian Powers. To show the attitude of the Turkish Government towards a word which once came near signifying liberty, the English Bible has been proscribed because it contains the word "Macedonia."

As regards Albania, the recent offer to the rebellious chiefs there of a transfer to Constantinople with immediate preferment and rich gifts awaiting them seems to have temporarily resulted as expected. At all events, it is a glaring example of the centralization of power in Constantinople which has also been one of the causes of Macedonian unrest. For years the Sultan has pursued a policy of outrageous centralization, and has now subverted what little local self-government was once enjoyed by his people. The Empire's civil affairs are supposed to be administered through the civil officers of each vilayet; in former times they had quasi-absolute power. That power has now been gradually taken away from them by Imperial edicts. The result is that every

position in the Empire may be had from the Sultan for a consideration. This centralization has, of course, undone any good which the provincial courts, were they worthy, might hope to have accomplished. If a subordinate official is shown to be a rascal, he can defy not only his superiors, but the courts themselves. He goes to Constantinople and returns with an imperial rescript which, for value received, confirms him in his position.

Turning to Turkey in Asia, we find that there also much trouble existed last week. After brutalizing its European provinces by sending into them many of the wild Kurds who had taken part in massacring a hundred thousand Armenians eight years ago, it has been believed that the authorities were secretly arming the Kurds still remaining in the mountains on the Russian and Persian border. The Porte now pretends that these brigand bands come from across the frontier, as in the case of the Bulgaro-Macedonians. At the same time the Porte had been endeavoring to convict the Armenians of revolutionary intentions. The menacing attitude of the Kurds is, naturally, a cause for disquietude at the foreign mission stations, notably at Harput, where Professor Tenekejian, of the American Euphrates College, is still scandalously kept in prison on a verbal charge of sedition, and not allowed to see American visitors. Our State Department has ordered the American Minister at Constantinople to do everything possible for the early release of the prisoner, than whom, according to those who have known him from childhood, there is no more loyal Turkish subject—most of the teachers in the American schools throughout Turkey are the Sultan's subjects. The American Minister has urged the Ministry for Foreign Affairs at Constantinople to free Mr. Tenekejian from the unjust and cruel charges made against him, and to punish the calumniators. It is feared, however, that the Sultan may use the present circumstances to endanger the safety of American institutions in Turkey. The dignity of the United States as a sovereign nation certainly demands the decisive methods which we hope have characterized the course of our Minister at Constantinople. Having once asked from Turkey that which manifestly is ours by treaty and

precedent—equal treatment with other Powers in the matter of foreign schools—we cannot allow the Sultan to humiliate us by refusal or unnecessary delay. It is desirable that our Minister and our Government take immediate and vigorous action. At least we ought strenuously to demand that all teachers employed in American institutions, whether Turkish subjects or not, shall have early and fair trial when arrested. If they are proven guilty, no one would demand that they should be exempt; but if they are innocent, we should insist that they shall not be disturbed in their work. In oppressing Macedonians and Armenians the unspeakable Turk may find that he has to do with a Power unmoved by the jealousies which have prevented the Powers of Europe from dealing with him as he deserves.

## Friends of Reform

Mr. Ridder, the editor of the New York "Staats-Zeitung," one of the best newspapers in America, is the leader of the German-American Reform Union. His newspaper has taken pains to show how much the misgoverned cities of America need the civic ideals that characterize those American citizens who are of Teutonic origin. He contemplates the political conditions of New York City, therefore, from the elevated point of view of those high-minded Germans who, having suffered in times past for advocating popular rights in a despotism, are now eager for the maintenance of liberty in a Republic.

Senator Thomas C. Platt is a man of wide experience in civic life. He has never asserted that he was in politics "for his own pocket." He holds an exalted position in the State and Nation. He lives in a county well removed from the metropolis. From his home he can view the affairs of the city with the passionless equanimity of a Greek god on Mount Olympus directing his quiet gaze upon the perturbed doings of mortals.

These two men, one an independent Democrat, the other a regular Republican, are reported to have met last week and discussed the welfare of the city. Here, surely, was an opportunity for the elimination of mere party considerations—for these two men differed in party affiliation;

an opportunity for the disregard of mere provincial narrowness—for one beheld New York from the point of view of universal freedom, the other from his throne in Tioga County. Under the circumstances, it certainly seemed as if almost nothing that was petty, temporary, parochial, could remain in any conclusion upon which two such men could agree. Is it surprising that citizens of New York, who have so soon to decide whether they shall be governed or be robbed, paused for a moment to hear the verdict these two men rendered? What they heard was something like this:

"My organization got nothing but the Bridge Commissioner. Reform has disappointed me."

"Me too," came the reply. "Mine got only a justice and a commissioner."

Then came a duet of which the following words seemed to be distinguishable:

"Let us wait and see."

It never occurred to us before how important it was to the babies of the East Side, whose very lives depend upon sanitary conditions maintained by good municipal government, that Mr. Ridder's organization should be rewarded with offices. It never occurred to us before how vital it was to the property-owners of the city, whose money may be at the mercy of a corrupt municipal government, that Mr. Platt of Tioga County should be satisfied with the amount of patronage he has to distribute. We dare say that these things never occurred to the minds of most of the citizens of New York City. This only goes to prove how different the affairs of mortal men seem when viewed from Olympian heights.

It is only fair to say that an echo has been heard which has the sound of Mr. Ridder's voice declaring that he was misquoted and that he does not approve of some things Mr. Low's administration has done; and adding that in preference to a Tammany "yellow dog" ticket his organization would support the fusion candidate even if that candidate should be Mr. Low. This overwhelming praise of honest government may reassure those who are dreading the return of Tammany to power. Who would not like to be considered better than a "yellow dog"? In the meantime the echo continues as a solo the refrain which began as a duet, and it

seems to merge into a nursery rhyme, that tersest form of philosophy:

"Let us see, let us see,"  
Says the Mole to the Bat;  
"With all my soul,"  
Says the Bat to the Mole,  
"Let us see, let us see."

We are sorry that we cannot tell our readers how accurately Mr. Ridder has been understood. He has declined to inform *The Outlook*, despite our request. We can therefore only report what the citizens of New York have heard. We are sure, however, that if he had said what he is reported to have said, he speaks for a very small number of citizens. We do not think that any one can control, by any appeal to greed for office, or by any picking out of incidental flaws in an honest administration, the votes of those whom Mr. Ridder nominally represents. The German-Americans of New York are too earnest a body of citizens either to be bribed by offices or to be deceived by even honest misrepresentations of fact.

## Try Again

You have tried the Christian life and you have failed, and you are inclined to give it up. You have gone to church, and the minister has been dull, and the church service and perhaps its membership unsatisfactory. You have suffered some practical injustice at the hands of a person of pretentious piety, and are cynically inclined to the conclusion that all piety is a false pretense. You have read your Bible faithfully and said your prayers. Nay! you have prayed, which is quite a different thing from saying prayers. But your prayers have not been answered; you have made nothing out of it all; you have not had the peace and joy which you had promised yourself. Moreover, if you are frank with yourself, you confess to yourself, though to no one else, that you have failed in righteousness. Not only have you not been happy, you have not been true to your own ideals of character. You have yielded to temptation; you are ashamed of yourself as well as disgusted with your neighbor and disgruntled with the world. Your summary of the past six months is, "I have tried and failed." Your spirit is expressed in the conclusion, "It is no use."

What does this conclusion at which you are tending mean? It means that you are giving up manhood. It means that it is no use to try to be a man. What, then, will you be? Will you revert to the beast? You are emerging, we are all emerging, from the animal condition. You have done the things you hate as you look back upon them. So had Paul. You are bound to a dead past whose memories haunt you. So was he. You are bound to a body of death, in this bundle of appetites and passions, of vanities and ambitions, of strong impulses and weak will, which make up the animal self from which the aspirations of your higher nature summon you. This also was Paul's condition. To give the struggle up is to drop back into the animal; it is to abandon the purpose to be a man. Are you ready for that conclusion? There are bad men in the church, therefore you will leave the church. By the same logic, because there are bad men in business, therefore you must give up business; because there are bad men in society, you must give up society; because there is badness in yourself, you must abandon yourself. This is what your cynical and half-formed resolution means. Did you ever consider what self-abandonment means? Are you really ready to adopt it as the final outcome of your life? There remains suicide. But have you any reason to think that another life will give you any greater advantages from this battle than are given by this life? Or are you quite sure that suicide is self-destruction, and death an eternal sleep, and that they will give you a sure refuge?

Summon your courage. Try again. Let failure nerve you to a new purpose. Take an hour to look the situation fairly in the face; to determine what you are willing to become; what you wish to become; what you are resolved to become. Then set out to achieve that purpose. Nothing is impossible to a manly resolve. Failure only nerves the true man to new endeavor. He learns from his defeats what are his weaknesses and how to guard against them. Take what helps you; avoid what hinders you. If the church helps you, use it; if it hinders you, avoid it. If one church hinders and another helps, take the one that helps and avoid the one that hinders. But whatever you do, do not do nothing. Take counsel of

courage, not of despair. The first exercise of manhood is the resolve to be a man, whatever it may cost and however long it may take.

## The Spectator

It was the recent privilege of the Spectator to listen to an informal but eloquent talk from that "genial theologian," the Rev. Dr. George Adam Smith, of Glasgow—for so he was named in a felicitous introduction, "a Scotchman who not only could recognize a joke, but perpetrate one himself on occasion." Why, queried the Spectator in passing, is—perhaps better was—geniality so often dissociated from theology? Is theology of necessity a "dismal science" like political economy? Dr. Smith quite appropriately chose "Imperialism" for his topic, for he was a guest—"the" guest—at the dinner of a New England chapter of the Society of Colonial Wars. This is a society whose members belong to it by right of descent from fellow-subjects with Dr. Smith's own ancestors of a British king—subjects who lived on a different continent because of the first stirrings of that impelling imperialism which has since peopled remotest world-corners with men of the race. Thus Dr. Smith and his hosts were brought together on an occasion designed to laud the adventurous spirit of a common ancestry—a tie emphasized, in his individual case, by the fact, as he himself noted, that he was born in Calcutta, a "Mutiny baby," thus being, in a sense, the peculiar offspring of imperialism.

Of the delightful asides and charming casual humor of Dr. Smith's talk the Spectator will, of course, attempt no mention, these were so wholly born of the passing spirit of the hour. Two often-forgotten aspects of imperialism, as presented by Dr. Smith, seemed to him, however, most suggestive. The first concerns the fact that emigration involves immigration; that Scotland, no less than New England, is face to face with the problem of influx, a less desirable and unhomogeneous population flowing in to fill any vacuum created by those who have "moved out." The Spectator, taking the matter for granted in careless fashion,

had always supposed that the United States enjoyed a virtual monopoly of the immigration as distinguished from the emigration problem—that, indeed, one of our National distinctions was the general success, due allowance being made for an expected percentage of failure, to be credited to our institutions in assimilating aliens. He had supposed, American-like, that immigration was almost an unqualified blessing to all "foreign countries," meaning practically the rest of the world, since it relieved the pressure of population and gave those who were left a better chance, that is, more opportunity and higher wages. He was then surprised to learn from Dr. Smith that whereas in his boyhood a Jew was as uncommon a sight in Scotland as an "American Indian," the Jews are now so numerous that their competition appreciably affects the rate of wages in certain industries. Dr. Smith's attention had been called personally to the fact through service on a government commission appointed to investigate industrial conditions.

In talking the matter over later with a Scotch-American friend, the Spectator was again surprised to learn how general is the recognition of the seriousness of the problem, the Trade-Unions' Federation in Scotland, for example, having already started a movement aimed at the restriction of immigration. The Spectator's friend loaned him, for his further information, a number of clippings from Glasgow papers, filled largely with evidence taken by the Alien Immigration Commission sitting in London. From these clippings it appeared, among other things, that the "Jewish invasion" had reached even to Ireland, the traditional land of wholesale emigration, the land where, as the Spectator was brought up to believe, nobody stayed who could by any possibility get away; that the Jews in Scotland had very nearly monopolized the manufacture of ready-made clothing, having brought the price of the average cheap suit of tweed, serge, or vicuna down to thirty-five shillings (about \$8.50) and having absolutely killed the trade in second-hand clothing; that mine-owners in the west of Scotland had encouraged the immigration of cheap Polish laborers and had aroused strike agitation by reduc-

ing wages. This last, so exactly reproducing the policy pursued years ago in the anthracite regions of Pennsylvania, struck the Spectator as curious confirmatory evidence of the saying that "human nature is pretty much the same the world over"—a saying which, stripped of euphemism, means that human selfishness can be depended upon to manifest itself in identically conscienceless ways, given the same chance.

⊗

The other aspect of imperialism in Dr. Smith's talk touched on its penalty of the distant grave, the family scattered in death—the cost of the adventurous migratory spirit, in his use of the word—and seemed to the Spectator peculiarly impressive. This penalty was suggested to Dr. Smith apropos of the universal sacrifices of the Boer War—the members of many families throughout Great Britain, of every social condition, who now lie buried side by side far away in South Africa. But, as he said, this was only a present example of what the adventurous spirit had cost the race from the days of Drake and Raleigh. Again and again, during a life of frequent travel, he had found in remote spots, on visiting the local cemetery (as had now become his custom), a little group of English graves, sometimes of soldiers, sometimes of civilians, telling the story of those who had fallen by the way in distant lands. For his own part, Dr. Smith added that, fanciful though it seem, he had come to believe that the sundered family ties and final separation in death, with all the longing and the brooding of which this end was the finis, the distressing experiences of generation after generation, had contributed their part toward that note of melancholy which distinguishes British character and literature.

⊗

Turning from his side of the water to our own, Dr. Smith touched on the American share in this common inheritance, one to be brought closer home to us in coming years as our colonial departure carried the Nation further beyond its continental limits, but one not unknown to us in the past. To what this pathetic inheritance had meant to some New England homes he was himself a witness. Visiting the English cemetery in Crete, he had found in a remote corner a group of

American graves, of children, women, and men. There lay the members of a little band of American missionaries who had set forth in the first enthusiasm of the new movement to do their work in Turkey. Barred of entrance on their arrival, but hopeful of a new time of opportunity, they had tarried in sight of the appointed land of duty, set in their purpose not to turn back, though the weaker and then the stronger succumbed to the trying climate, until the last survivor answered, "Adsum"—all laid at rest, with their faces toward the East, toward the rising sun and the shores they were not permitted to reach. "In hoc signo vinces."

⊗

Little as otherwise they had in common, the spirit in which these American missionaries met their death of disappointment, content to be buried where duty sent them—the spirit of the sign which conquers—recalled to the Spectator the death of Prince Christian Victor, son of the Princess Helena, and grandson of Queen Victoria. "The first member of the royal family to enter and go through a public school in the ordinary regular way," says a memorial volume by Mr. Warren, President of Magdalen College, Oxford, his too short career more than justified this "experiment in reality." By his own insistence, every honor accorded him was won fairly on his merits, from the captaincy of his (Wellington) school eleven, of which he was the proudest, to the confidence of his fellow-officers for his good sense, knowledge of technique, bravery and coolness in action, shown while campaigning in Egypt and India. His charm was his unassuming democracy, for during his service in South Africa he corresponded with equal regularity with the Queen and with a non-commissioned officer. Having reached at thirty-one the rank of brevet-major, he succumbed in 1900 to an attack of enteric fever while in Pretoria, where he was buried. This was in accordance with a noble wish which he repeated to his own mother each time he said good-by to her on leaving for the front: "If anything happens to me, please don't have me brought home. It is so unfair to the men if the officers are brought home, as they have to be left out. What's good enough for the men is good enough for me."

# Personal Impressions of Pius X.

By Daniel Clifford Branson

**J**OSEPH, Cardinal Sarto, henceforth to be known to the world and to history as Pius X., seems to me singularly unfamiliar to the general public. Even in Italy one heard little of him. On the rare occasions when he came to Rome and perhaps appeared along with other Cardinals at some papal function in St. Peter's, I used to hear all around me, "Who is that?" His face even was unknown to most of the crowd. This was not due solely or even chiefly to the fact of his being a provincial. The massive figure and strangely baggy eyes of Cardinal Svampa were as familiar to Rome as to Bologna. Cardinal Ferrari could not easily have gone about unrecognized. But Cardinal Sarto knew intuitively and superlatively how to keep quiet.

In his own Venice it was much the same. Certainly the Venetians themselves knew and loved him. There was no help for it. But of the thousands of travelers who faithfully saw Venice every year, and who at the end of their stay could tell you almost anything, from the site of Titian's grave to the prices of things at Florian's, very few could have told you the name of the Cardinal Patriarch. For in Venice, too, he kept quiet. But the Venetians knew him!

That is the first impression he gives, the impression of an equanimity not easily disturbed. He looked his best when one saw him, not in some high ceremonial, muffled and half-hidden in gorgeous vestments that would stand up of their own stiffness; but rather in his everyday cassock, walking through the corridors of the seminario or in the twisting alleys of its garden, or, perhaps, just stepping out of his gondola. Then there stood before you a man who seemed of medium height, though I suspect him of being taller, very straight, tranquil, but sure and decided in every movement, even in every little gesture.

He always seemed to me young for a Cardinal, although I knew he was not. But his fresh, almost boyish complexion, and his appearance of not only having but enjoying perfect health are oddly

incongruous with the silvery hair that struggles rebelliously from beneath the red *zuchetto*. He will never be able to do anything with that hair, unless, in time, the weight of the tiara may partially subdue it. It is "all anywhere" over his forehead, a riot of white fluff, giving a quaint and attractive dash of carelessness to a figure otherwise immaculately neat and orderly.

Pius X. has fine eyes. They are wide open, and their look meets your own squarely and with a charming frankness. You spend very little time indeed in arriving at the conclusion that you like this man, and that the devotion of his Venetians is comprehensible enough.

The first time I ever saw him, so far as I can remember, he was walking along slowly, surrounded by some half-dozen little seminarists. They were thoroughly respectful, of course, these little Venetian cherubim, but it was clear that they did not stand in any sort of awe of him. They seemed, rather, to have that boundless confidence in him which small boys give to a big friend. The Patriarch never for a moment relaxed his gentle gravity, but spoke to them as courteously as if they had been so many Bishops—no condescension, but just the manner of a man who genuinely likes children and knows that they like him. Many of the Italian clergy, especially in the country towns and villages, have this to perfection. You may notice over and again that the *parroco*, or parish priest, can scarcely budge from his door without a lot of absurdly handsome little brats clinging to his cassock and begging him for a *santo*—that is to say, one of those little cards with gorgeously colored pictures of the various saints which abound all over Italy. And perhaps the good old man will rummage his pockets and hand out cards all round, or he may kindly shake his head and tell them "*Pazienza*, some other time." In either case they kiss his hand and scamper away as pleased as boys well could be.

Well, the new Pope began as just such a parish priest. In that capacity he

labored for years, and from it he rose by slow gradations and, as Emerson said of Napoleon, "by very intelligible merits," to the Patriarchate of Venice, and now to the throne of Catholic Christendom. But through it all he has remained essentially the parish priest. His parish has widened from a village to the world, but he himself summed it all up in what he is reported to have said to a friend the day after his election: "The color of my robes has changed, but I am the same Sarto."

Village or Vatican, his surroundings change, but he does not. He will have, of course, new duties, and will have to get accustomed to things never before expected of him. He must exchange his gondola for the plaguy oscillations of *sedia gestatoria* as he is borne in unsteady triumph through St. Peter's. He who has loved quiet, who has so long shunned publicity, must school himself to be cheered and beclapped and huzzaed by thousands every time he lets himself be seen. Less than two weeks ago he was off climbing mountains; now he is a prisoner for life. Certainly these are contrasts. But it is safe to say that he will accept what comes, just as, if he had remained all his life a village priest, he would have accepted that—and thanked God.

That, as I read the man, is the basis of his character—simple, unquestioning piety. He was elected Pope for a reason which has not always primarily influenced the actions of Conclaves—for the plain, old-fashioned reason that he was a good man. The very simplicity of his nature is in salient contrast to the infinitely subtle and many-sided personality of his predecessor. We hear much discussion as to whether the policy of Leo XIII. will be continued or not. One thing is certain. There is a very striking change in the personality of the Pope. It will show in small things as well as in great. We shall have no more of those charming Latin verses, ranging in subject-matter from Horace to the hygiene of gastronomy—poems to the Madonna, and poems on the new electric lights in the Vatican. And we shall have no more politics in the grand manner. Papa Sarto—as the Romans will presently be calling him—is not a political Pope. One need only look at his face to see that. Leo XIII. had a

politician's face. Even in the closing years of his venerable age, when I used to see him borne into St. Peter's, white, frail, unearthly, seeming rather a spectral visitant from another world, his face was still the face of the master-diplomatist who brought Bismarck to Canossa, and whom the Iron Chancellor called "the greatest statesman in Europe." Cardinal Rampolla has a politician's face *par excellence*. He goes through the motions of piety with edifying correctness, and by this I do not at all mean to call his sincerity in question. But his expression and manner are predominantly worldly. I remember once observing him as he knelt before the sacrament in St. Peter's. A lady standing beside me whispered, "Isn't that a saint's face?" She saw what certainly was invisible to me. Now Pope Pius has not a saint's face, but the face of a kind, sensible man and energetic worker.

He is a man of scholarly tastes and a lover of the arts. His fondness for music and his patronage of Don Lorenzo Perosi have been much spoken of since his accession. The simple truth is that, with the best intentions, he came near wrecking Perosi's career. After one or two initial successes, the boy composer—for he was little more—came to Rome fortified with the recommendation of the Cardinal Patriarch. Here he was at once taken up and inordinately advertised by the Church. His fame was trumpeted to the four quarters of the earth, as if a new Palestrina had suddenly appeared. The natural result was an output of terribly amateurish music, evidently composed in haste and carelessly, which brought down a storm of adverse criticism all over Europe. However, Perosi is young enough to outlive the results of his premature celebrity. He has undeniable genius, and I am convinced that he will presently do work of serious value. And there is every reason to hope that the musical tastes of the new Pontiff will contribute to lift church music in Rome from the slough of despond into which it has fallen of late years. Any one familiar with the great functions of the Church in Rome, especially Holy Week and Easter, must agree that the music is scandalously inadequate to the place and the occasion.

Pope Pius is also a lover of painting,

in which capacity he once rather frightened me. This was in Venice. I was helping a friend celebrate a birthday by a visit to Giorgione's "Apollo and Daphne," in the Seminario Patriarchale. Save for the *custode*, we had the room of pictures to ourselves. The light on the Giorgione was bad, and I suggested to the attendant that we take the picture down from the wall and put it on a chair by the window. He agreed. Persons who have lived in Italy will understand the nature of the arguments we used. It was a wildly irregular thing to do, and we felt rather like stage conspirators all the time we were handling the picture. However, we saw the Giorgione to better advantage, probably, than any one else of this generation has. So we came out of the room jubilant—and walked plump into Cardinal Sarto! The Patriarch looked benevolent enough, and no doubt felt so, but to my imagination, at the moment, he seemed to have the major excommunication up his sleeve; and I lost no time in carrying my guilty conscience elsewhere.

Just one more recollection. It goes back to a day in the Jubilee year 1900, when a large pilgrimage of Venetians and North Italians were received by Leo XIII. in St. Peter's. They were presented by Cardinal Sarto, who read an address to the Pope. His sonorous voice carried far, with just the slightest touch of Venetian accent. As he stood there, erect and stately, he looked a strikingly handsome man. His few gestures, as he spoke, were deliberate, measured. Nothing could have been more different than the manner of Leo XIII. in replying. He was not still for an instant. His hands and arms were in a state of perpetual motion, reinforcing all that he said with that peculiar expressiveness of Italian gesture which makes even ordinary conversation almost dramatic. At times, in his emphasis and earnestness, he would half rise out of his throne. I watched the marked contrast with the greatest interest, but certainly without suspecting that I was looking at two Popes instead of one—Leo the statesman and Pius the priest.

## Negro Education

By H. B. Frissell

Principal of the Hampton Normal and Agricultural Institute, Hampton, Virginia

**W**HY should negro education differ from any other? Colored men have demonstrated their ability to think the highest thoughts, to do the noblest deeds. There is no dead-line in education beyond which the negro cannot go. Only comparatively few white children have the mental ability to carry them through high school and college; that there are still fewer negro children who go beyond the grammar school is not surprising when we consider their heredity and environment. Yet it is true that representatives of the negro race, both this year and in former years, have taken the highest honors at Yale, Harvard, and other universities. The negro naturally looks with suspicion on anything that seems like an endeavor to provide for him a second or third rate education. He wants the best, and he ought to have an opportunity to get the best that he is capable of receiving.

But while it is true that there is no

dead-line in the education of the negro, the long years spent by his ancestors in African jungles or under a tropical sun, far removed from the lines of commerce, have given a heritage to the great masses of his race of dense ignorance and superstition, weak will-power, and but small sense of responsibility. They stand in great need of the sort of education which consists largely in learning by doing, and which trains the whole man into economic efficiency and Christian character.

President Eliot, in his address before the National Educational Association, quoted Emerson as saying that the acquisition of some sort of manual skill and the practice of some form of manual labor are essential elements of culture. "This idea," said President Eliot, "has more and more become accepted in the systematic education of youth." Manual training and manual labor, then, are recognized by the highest authority in this country as important factors in the education of

the highest type of man that the country can produce. It would certainly seem that they should be considered essential parts of the training of a people only a few generations removed from barbarism. All agree that character is the main object of education. How is that best produced? By the study of books, or by the intelligent performance of daily work? Probably by a judicious combination of the two.

The relative importance of providing young people with broad mental culture and of preparing them to earn their own living must be considered in any system of education. There is beginning to be, throughout the country, a realization of the fact that the real ends of education have often been neglected in an excessive attention to the school machine. President Eliot says, "It cannot be denied that there is serious and general disappointment in the results of popular education up to this date." "The cry of the land," declares Phillips Brooks, "is for a moral influence to go out from the schools and colleges." And Herbert Spencer goes to the root of the matter when he says, "The fact is that scarcely any connection exists between morality and the discipline of ordinary teaching. Mere culture of the intellect (and education as usually conducted amounts to little more) is hardly at all operative upon conduct." Now, if conduct and character are or ought to be the real objects of education, and our system of academic training is confessedly not altogether successful in producing character even among a people who have the advantage of generations of discipline behind them, who have good homes and all that makes for the best in life, is it exactly the right kind of education for the negro? Is the ordinary course of study given in our public schools, which has not produced the hoped-for results among any of our people, just the sort of training best adapted to the masses of a race which inherits sloth and lack of will-power from ancestral life in a tropical country, and whose experience in slavery deprived them of homes of their own and but slightly fostered responsible action? In regard to the Hawaiians, a race, at the time of which he wrote, in a stage of development similar to that of the negroes, General Armstrong noted the fact that although

ninety-five per cent. of them, from five to twenty-one, were at school, yet they were decaying. "Spelling-books," he says, "do not, as a matter of course, make manly fiber, and practical self-restraint is not the immediate result of learning."

✓The aims of negro education must be the same as those for any other race; but differences in conditions necessitate differences in methods. While every opportunity for advanced training should be given to those capable of receiving it, there seems no doubt that in the education of most of the leaders as well as of the masses of the colored race stress should be laid upon the sort of education which, at the same time that it imparts economic independence, develops mind and character. ✓We believe with General Armstrong that an institution especially devoted to colored youth must provide a training more than usually comprehensive; must include both sexes and a variety of occupations; must produce moral as well as mental strength; and while making its students first-rate mechanics, must also make them first-rate men and women. ✓The foundation of character must be the first consideration. The negro lacks continuity. He turns easily from one thing to another. Therefore he should be encouraged to anchor himself by buying land and establishing a home. The creation of an intelligent work-habit is one of the most important features of his education. The habit of working systematically and steadily should be formed in the public schools. ✓It is there that a love for agriculture and other industrial pursuits may most easily be instilled.

And this manual training is not needed in negro schools alone. At a recent Hampton Conference, a Northern man, the principal of a Connecticut normal school, said that native Americans were being supplanted in the factories of his State by better-trained foreign workmen. He claimed that the remedy for this condition lay in the introduction of manual training into the public schools. A Southern man, the Superintendent of Schools for Virginia, attributed the comparative poverty of his State to the lack of agricultural and mechanical instruction in its schools; and several of the prominent colored men present spoke strongly in favor of an education that would teach

their people how to live and how to work intelligently. The Indian day-schools are doing much in this direction. Each one is taught by a man and his wife, and combines farm, home, and school. The boys are taught farming as well as arithmetic, and the girls are trained in the duties of home life. Similar schools for negroes are to be found here and there in the South. In the various outgrowths of Hampton and Tuskegee the industrial features are emphasized. The Calhoun School in Alabama carries on true settlement work, training its young people in the duties of home and community life, and by means of its Land Company encouraging their parents to acquire property and become useful, self-respecting citizens. In Virginia, through the Southern Industrial Classes, cooking, sewing, gardening, and bench work have been established in the colored schools of Norfolk, Portsmouth, Hampton, and Newport News, and in many rural communities. A more general introduction of such courses into the public schools of the country could not fail to result in a closer correlation of school with real life. Habits of work would be inculcated, and a new appreciation of common things would lead to less artificiality and greater usefulness. Above all, the pupils' moral and mental

fiber would be strengthened, and the schools would be less open to the accusation that they fail to produce men and women.

But the work begun in the public schools should not end there. Manual training of some kind should enter into every department of education. It should be a part of the curriculum of our colleges and theological seminaries. That should not be called a higher education which enables a man to escape from the labor of the hand. We used to think that the study of books was the only source of culture. Fortunately, we are now beginning to realize that culture does not depend on this alone. "We are becoming convinced that some intimate, sympathetic acquaintance with the natural objects of the earth and sky adds greatly to the happiness of life, and that this acquaintance should be begun in childhood and developed all through adolescence and maturity." The shop and the farm as well as books are needed to make a truly educated man. This is true of every part of our country, but it is especially true of the South, where eighty per cent. of the whole population live in the country, and it applies still more particularly to the negro, whose salvation is to be won out of the soil.

## To Sleep

By Mary Page Bird

Oh, healing Sleep, why art so shy of me?  
 I, who have wooed thee from my childhood's day;  
 The night without thee marked a lonely way,  
 The stars looked down upon a silent sea.  
 I missed the sweetness of security,  
 While in their little beds the others lay  
 And dreamed their little dreams of love and play,  
 And I without thee tossing feverishly.

Oh! wilt thou never look on me with generous eyes  
 Till, forced to these poor arms, the moment when  
 Death gives thee to me solves all mysteries—  
 A sleeping and forgetting shunned of men?  
 As now I grudge thee no sweet sacrifice,  
 Oh, gentle Sleep, be tender to me then!

# The German Elections and the Social Democrats

By G. Monroe Royce

THE elections which have just taken place throughout the German Empire have created, or rather revealed, a political situation which, if not critical, is at least exceedingly interesting. Out of a total of about seven million and a half votes, nearly one-half were cast by the Social Democrats. But this means more than the mere figures indicate; for, taken together with the other parties that are known to be unfriendly to the Government, it proves beyond doubt that a large majority of the German people are resolutely opposed to the present régime of officialism, militarism, and tariff. This it certainly does mean, if nothing more. There is, in fact, scarcely any Government party left in the Reichstag—the Conservatives being the only party the Government can call its own, and this is a small and a constantly diminishing body. Other parties, such as the Centrum, or Clericals, and the Agrarians, frequently support the Ministry when it suits their convenience; but always for reasons of their own and interests of their own, and never for pure love of the Government. The Emperor and his Ministers fully appreciate their strange and somewhat precarious position, and rely almost wholly upon the hope that they may be able in the future, as they have been in the past, to play off the Clericals, the Agrarians, and most of the other parties—which number about a dozen—against the solid front and menacing attitude of the Social Democrats. But we shall see what we shall see—as the French say. This, then, is the situation, and there is nothing like it in any country in Europe or America, and I doubt if there ever was. Such a condition of things would be quite impossible in England, France, or Italy, or any other country where there is any semblance of a popular form of government. And yet in some respects, or at least in one respect, the German is the most popular of all forms of national government, for it comes nearer

to universal suffrage even than England, and the members of the Imperial Diet or Parliament are the direct representatives of the expressed will of the people. But, in spite of this fact, they, the chosen members of the nation's congress, are unable to make or unmake governments. They can have nothing whatever to say as to who shall or who shall not belong to the governing body—that is, the Imperial Cabinet.

In England, France, or Italy the defeat of a Government measure of first importance means a change at once in the personnel of the Government to harmonize with the will of the nation's chosen representatives. Not so in Germany. Here the Government may be beaten on every one of its cherished measures and still remain in office. So that while the Imperial Diet represents the people, the Government represents, and represents only, the Emperor. The Emperor alone appoints and dismisses the Ministers, and they are responsible to him and to him only. There exists, therefore, in Germany the strange anomaly of a wholly popular national legislative body on the one hand, and a wholly autocratic imperial government on the other; and now that these two forces confront each other in hostile array, it looks as though something interesting might happen. At any rate, it seems very like a critical moment in the political and economic German world, and I feel sure that a brief account of the circumstances that have led up to this apparent crisis will be found interesting to English and American readers.

I write from Germany, where I have resided for nearly five years, and where I have been a somewhat close student of the trend of things, political and social, so far as my imperfect knowledge of the language would permit. I have not, however, depended entirely upon my own observations, as I have had kind friends among the knowing ones on all sides who have kept me informed, and with whom I

have discussed from time to time the progress of events—the chief feature of which has been, of course, the rise and amazing growth of the Social Democratic party.

The history of this party thus far is compassed within the life of a single man—Herr Ferdinand Augustus Bebel. Herr Bebel was born near Cologne in 1840, and educated as a turner. He became a Socialist under the leadership of Liebknecht, and ~~was~~ the main influence in bringing together the followers of Marx and Lassalle, out of which he formed the Social Democratic party, and has been from the first its unchallenged leader. Herr Bebel's leadership has been abundantly justified by events, and he made no vain and empty boast when he declared the day after the election, in his paper the "Vorwärts," that "Berlin is the capital and Germany the empire of the Social Democratic party." Berlin returns six members to the Reichstag, five of whom were chosen by the Social Democrats on the first ballot; and the sixth requires a second ballot, with the probabilities strongly in favor of the Socialist candidate. Thus it appears that the whole delegation to the Reichstag from the capital city of the Empire will be members of the Social Democratic party. In the kingdom of Saxony—where Herr Bebel gained his first seat in the Reichstag—the Social Democrats have captured eighteen out of twenty-three seats on the first ballot, and all the other seats require a second vote. Out of these five contested seats the Socialists will surely secure three, so that we have, as one writer puts it, a whole kingdom, bag and baggage, going over into the Social Democratic camp. Whatever may be the result of the second ballot in Saxony, we know already that the Social Democrats have just doubled their vote within five years in this kingdom. This enormous increase is accounted for in a great measure by the reactionary methods of the Saxon Government, which has abolished universal suffrage within its own domain so far as it was able to do so. We have here in Saxony the curious political spectacle of a local parliament from which all Social Democrats are excluded; and yet this kingdom sends to the Imperial Parliament a solid body of Social Democratic representatives. In

Essen, where the Emperor made his famous speech over the grave of Herr Krupp, denouncing the Social Democrats as slanderers and murderers, this party has increased its vote since 1898 from four thousand four hundred to twenty-two thousand. "This is the way the people answer the Emperor's libels," said one of the German papers last week. Munich is the capital of the second State in the German Empire in point of inhabitants and territory. The city has a population of about five hundred thousand, of whom only fifty thousand are Protestants. And yet the Social Democrats have gained in this strong Roman Catholic city more than twenty thousand votes since the last election, and now outnumber the Clericals (the Roman Catholic party) by more than two to one. This is ample proof, if further proof were needed, that the Church and religion play but a very small part in this great German social upheaval. These elections settle all doubt concerning the cities and industrial centers. Berlin, Munich, Leipzig, Dresden, and the three free cities of Hamburg, Bremen, and Lübeck, are all solidly in line for the cause of Social Democracy. Cologne, the stronghold of the Clerical party, is the only important city that still holds out, but with diminished force. "The country, that is to say the purely agricultural districts, are the only enemies of the Socialists that have anything left that is worth fighting for," said a German to me yesterday. "They make up the Agrarian party, which is the most stupidly selfish party in Germany." But even this party is showing signs of disintegration—if there is any truth in the saying that straws tell which way the wind blows. On this point I venture to give for what it is worth a case that has come under my own personal observation.

The little village of Grünwald in Bavaria, where I have had a summer residence for four years, is a purely agricultural community, and there is but one Protestant, so far as I know, in the whole district represented by this village. Farming, of one kind or another, but always in a very small way, is the only industry. The priest and the schoolmaster act together, and are the authorities on all religious and educational matters. There has never been, during my res-

public meeting held to advocate the principles of Social Democracy; and I had supposed that this was practically a unanimous Clerical constituency with Agrarian proclivities. But here is how these Roman Catholic peasant farmers have just voted: The total vote cast was 65. Out of this the Clericals polled 34, or barely a majority; the Agrarians 12, the Social Democrats 13, and the Liberals 6. The Social Democrats increased their vote in this little village since last election from 3 to 13. There was not one Conservative, *i. e.*, Government, vote cast. It appears from this that it may not be long before the village also capitulates to the Social Democrats. It indeed seems true that wherever the Social Democrats get a hearing, they get the votes. There are many striking details of these elections, all pointing to something resembling a universal conversion of the industrial classes to Social Democracy. The peasants are scattered over a wide area, and are always the last to be reached by any propaganda. But all German voters under the age of fifty can read and write, and the daily paper is now the most effective means of carrying on an agitation of any sort.

Of course the quidnuncs offer all sorts of explanations that do not explain; one of which is that the people will support any party that offers the most uncompromising opposition to the Government. This is a political philosophy as frankly pessimistic as anything could well be, and there may be a grain of truth in it. But no merely negative principle can go a great way in accounting for so positive a revolution—a revolution which is not merely or principally political, but industrial, economic, and social in the very widest sense. You cannot educate a whole nation of people, as the Germans are educated, and then expect them to be silent while their industrial and social interests are either wholly neglected or foully betrayed. The Social Democratic party in Germany is not so much a political as an industrial and social party. It does not take political preferment except as a means for industrial and social improvement; and this is perfectly well understood, and it is this that is winning for it the favor of the people. The signs of this popular favor are everywhere felt, if not always seen. It was thought for a

time that none but laborers and artisans could be attracted by this Socialist programme. But we know better now. This election has shown that the small merchant and trader, the small banker and builder, the doctor, the teacher, the professor, all have come to see and to know that the Social Democratic programme has many things to offer that they desire.

And now just what programme does the Social Democratic party in Germany offer? But it is better perhaps first to say what it does not offer. It does not offer State Socialism, as so many outsiders suppose. Except in a very limited sense, State Socialism is, or rather was, an Imperial measure, introduced by Bismarck to neutralize the effect of Social Democracy. His famous saying that every man has the right to work, and that the State should allow no man to go hungry, was State Socialism; and Bismarck was not afraid of the word Socialism, but used it on many occasions and in the frankest possible manner. There was, indeed, a period in Bismarck's career when he seemed to have been an honest convert to Socialism, in a very true sense. This was the time of his admiration and warm friendship for the brilliant Socialist Lassalle. His plans for State insurance and old-age pensions were Socialistic plans; but they were plans that centered in and gave strength to the Imperial Government. Germany has many such Socialistic features, which the Social Democrat accepts, such as State railways, telegraphs, telephones, etc. But there is nothing democratic in any of these State monopolies, as at present conducted; for they are all centralized in the most intense way, and are administered by an officialism which is often as insolent and arbitrary as a pure military government.

Bismarck, seeing that Socialism was inevitable in some form or other, hoped to emasculate it, or in some way destroy its dangerous tendencies, by placing it under Imperial supervision; and when he found that he could not succeed in doing this, he tried to stamp it out by repressive measures of the most thoroughgoing sort. The pretext for this energetic course he found in two attempts which were made upon the life of William I. The Social Democratic party was in no way implicated,

directly or indirectly, with these attempts at assassination, but Bismarck contended that it was, and really succeeded in persuading the public that it was; and the Social Democrats all over Germany were hunted like criminals from house to house. Their public meetings were interrupted and disbanded by the police in the most arbitrary manner and on the slightest pretext. These high-handed methods by the Iron Chancellor seemed for a time to succeed, and Social Democracy ran down to a very low ebb. Bebel, Liebknecht, Vollmar, and other leaders were frequently imprisoned, and for long periods. But, whether in prison or out of prison, these Socialists were always returned to the Reichstag. On the accession of the present Emperor and the dismissal of Bismarck from the post of Imperial Chancellor, the Social Democratic party again became an outward political power, and has grown rapidly in public favor ever since. That it is not Anarchistic is shown by the fact that early in its history it first broke with Bakunin and afterwards with Kropotkin. It also excluded John Most from its body, and forced him to leave Germany. It has never advocated or been responsible for any act of murderous violence, for it knows only too well that industrial amelioration can be brought about only by peaceful means. Social Democracy is not communism, as it advocates the right of private ownership under proper limits. And now, once again, what is Social Democracy? Its principle, broadly speaking, is collectivism; its programme, briefly stated, is municipal ownership of the means of production, and a just distribution of the wealth produced. Social Democracy advocates, of course, the State ownership of the postal system, railways, telegraphs, and all the means of transportation that the municipality cannot control. But these things are virtually accomplished facts in Germany, and need no further advocacy. The principle and programme of this party are neither "Anarchism," "Communism," nor "Utopianism." They are sane, practical, and just, and may be realized in any body politic without violence. Of course they would require some readjustments in the present economic methods that might disturb for the nonce the universal practice of private ownership in almost every-

thing. But no injustice to any person need follow; and this readjustment could be carried out in the most peaceable manner.

It will be seen that, both as regards principle and programme, the Social Democratic party does not commit itself to any system of State government, nor to any attitude toward the Church, whether Roman Catholic or Protestant. Those things it leaves to take care of themselves, but it intimates that if they know what is good for them they will not get in the way of this social and industrial evolution. This defines the situation exactly. Previous movements of this sort have first of all announced some theory or method of State government, and taken up some attitude toward the Church and religion. The Social Democratic movement does neither. It conducts an industrial and social propaganda along the lines of natural evolution, and leaves political systems and religious cults to decide their own fate. Its leaders have declared that religion is a private matter, with which this propaganda has nothing to do. Yet it goes without saying that this social and industrial revolution, though peaceful, cannot fail to affect in a most fundamental way the political and religious systems with which it is more or less in conflict. Moreover, it would be unnatural to suppose that this Social Democracy has no political nor religious ideals. As Herr Bebel has put it, "we aim in the domain of politics at Democracy or Republicanism, and in the domain of economics at Socialism that is collectivism." But they recognize that these are distinct and separate "domains," and they do not intend to confuse the issues and thereby defeat both objects.

Of course such economic changes as the Social Democratic party contemplates would not be long in securing a political form of government most favorable to their requirements, and this is the danger that threatens the present form of Imperial Government in Germany. But while the principles of Social Democracy are very definite, they are at the same time very flexible in form, and may accommodate themselves for the moment to all kinds of political systems, so long as their vitality is not impaired. Social Democracy does not feel itself called upon to run a tilt at every political it sees. Oppor-

tunism is just as serviceable and just as sensible here as in the domain of party politics. The leaders of this movement have learned wisdom through experience, and are not disposed any longer to sacrifice success for the sake of some questionable political or economic dogma. They have, in fact, ceased to be dogmatists. They are not only able leaders but practicable leaders. Herr Bebel is unquestionably the ablest leader in the Reichstag. Says the greatest living historian, Professor Mommsen: "The Social Democracy is the only great party which has any claim to political respect. Everybody in Germany knows that with brains like those of Herr Bebel it would be possible to furnish a dozen noblemen from the east of the Elbe in a fashion that would make them shine among their peers."<sup>1</sup> Herr von Vollmar is second only to Herr Bebel in ability. He belongs to the nobility by birth and training. He served through the Austrian war as a cavalry officer. He fought in the Bavarian army during the Franco-Prussian war, where he was wounded and made a cripple for life. He attained the rank of colonel, but threw up his commission for the cause of Socialism, in which he has worked ever since. His constituency is Munich, where he has just received an increase of twenty per cent. in the volume of his votes over the last election.

And, finally, what is the attitude of the Social Democrats toward the present Government's régime?

1. It would abolish the oppressive tariffs and establish free trade. (2) It would destroy militarism by transforming the standing army into a localized militia. (3) It would uproot officialism by vesting the appointing power in local bodies, and not in a centralized bureau.

<sup>1</sup> I take this extract from a quotation made in an article by Mr. Eltzbacher.

Now what will the Emperor and his Ministry do in the face of this army of three million Social Democrats? Will they, or rather he, accept the situation and bow before the inevitable? If so, he will have to dismiss his plans for a great navy and his dream of "world politics," and be content to reign over a peaceful, industrial, Socialistic Democracy. But if he should attempt repressive measures, what then? He will find that Germany has grown enormously in independence and in the knowledge of self-government since Bismarck's time. The last elections have shown that the Social Democrats constitute almost, if not quite, one-half of the German people, and it will be impossible to suppress such a determined body of intelligent citizens.

The Social Democrats have cast three million votes, but that they will secure seats in the Imperial Diet corresponding to their actual political strength no one expects. In the last Parliament the Social Democrats held only 57 seats, representing a popular vote of 2,107,100, and the Clericals were given 102 members on a popular vote of but 1,455,100. The average number of votes for each Social Democrat was therefore 36,966, while the average number of votes for the Clerical members was but 14,266—considerably under one-half the number of votes represented by each Social Democrat in the Reichstag. The Liberals, Conservatives, and all the other parties have each a much smaller basis for their representatives than the Social Democratic party. Should this party receive its just proportion, it would number about 175 members in the next Reichstag, and would virtually control all legislation. This enormous disproportion between the votes and the representatives of the Social Democratic party in the national Parliament is a grievance of the most serious character, into which, however, I cannot now enter.

# Taking Chances

By George Kennan

OF all the trout streams that fall into the Atlantic on the eastern side of Cape Breton Island, North River is perhaps the most picturesque and attractive. Heading in a wild mountain gorge about twenty miles north of Baddeck, it runs southeastward through a beautiful park-like valley to St. Ann's Bay, in an almost unbroken series of tumbling cascades, swift rapids, and broad shady pools, twelve or fifteen feet deep, where the foam-flecked water circles lazily over great reefs of sunken rocks, and where silvery trout, that have just come in from the sea, stop to rest and frolic as they run up-stream to their distant spawning-places.

I always went to North River for a few days' fishing in the early summer, if I could get any one to go with me; and when Mr. H——, who was the most enthusiastic and perhaps the most skillful angler of my acquaintance, proposed one morning that we drive over to the head of St. Ann's Bay and spend a day or two on North River and the Barassois, I caught eagerly at the suggestion. We left Baddeck at half-past eight, and after a ride of twenty miles reached the little farm-house of "the Squire"—our fishing headquarters—about half-past eleven. Kenneth, our Cape Breton driver, carried all of our equipment into the Squire's cozy parlor, and there we unpacked our bags, collected our tackle, and got ready for the river.

"You're not going to fish with that old rod, are you?" I inquired, as we went out to put our things into the wagon.

"What's the matter with that rod?" Mr. H—— replied, looking affectionately at the implement in question, and trying its elasticity in the air. "That's the best wooden rod I ever had."

"It may have been all right when it was new," I rejoined, "but it's played out. You've broken it two or three times already, and it's so patched up with gimp and surgeon's plaster that it's no good. It's too light for these waters, anyway; I don't believe it would hold an active tommycod."

"You don't know as much about fishing-tackle as you do about some other things,"

he replied, coolly. "That's a great rod; I've killed many a hundred pounds of trout on that rod; the splices don't hurt it any."

"Don't they! They make it look broken-backed and knock-kneed, besides spoiling the spring of it; I couldn't cast a straight line thirty feet with such a rod as that."

"No," he said, reflectively; "probably you couldn't, but I can."

"Why don't you take one of your new rods?" I persisted. "You've got half a dozen in the house; if you happen to strike a five-pound trout on that rickety old thing, you're going to lose him."

"Perhaps!" he replied, with provoking self-confidence, "and perhaps not; I'll take the chances."

"All right," I said, "take 'em, if you want to—chances are all you're likely to take, with that rod. I'll bet two to one you lose the first big fish you strike."

"Don't bet against that rod with me," he replied, laughingly. "If you do, you'll get left. Do you remember the song about 'the man behind the gun'? There's going to be a man behind that rod, as well as a big fish at the end of it."

Just at that moment the old Squire came out, bareheaded, to ask at what time we would like to have supper.

"About dark, Squire," replied my companion. "We'll fish up the river to the lower fall and back, and Kenneth can meet us with the wagon at Smith's Pool late in the afternoon."

Kenneth gathered up the reins, shouted "Get up out o' that!" to the tired horses, drove down a steep descent to the main road, and then over the shoulder of a big hill into the valley of North River.

Smith's Pool, where we intended to begin fishing, was a beautiful sheet of deep water, one hundred and fifty feet long and seventy-five feet wide, with a cascade at its upper end and a long, turbulent rapid below. It was fringed on the southern side by a dense growth of willows and alders, and on the north it was bounded by a high, rocky buttress crowned with trees, and a long beach of big water-worn pebbles which Mr. H—— called "the stone-pile." As the buttress on one side

and the alders on the other interfered to some extent with back-casting, the best places to stand were the pebble beach and a submerged ledge of rock, just below the cascade, at the very head of the pool. The ledge and the beach were on the same side of the stream, and were only sixty or seventy feet apart; but as they were separated by a deep bay, whose margin was thickly fringed with alders, it was by no means an easy task to get from one to the other. If a man should strike a big fish from the ledge, and the fish should run down-stream into the lower rapid, it would be impossible to follow him without swimming the bay, or crawling around the head of it through the bushes. The ledge, moreover, was a dangerous place to stand. It was nothing but a submerged shelf of slippery rock, and a man who waded out on it and stood there knee-deep in a rushing current, with the cascade behind him and fifteen feet of water directly in front, took several kinds of chances.

As Mr. H—— insisted that I should have the choice of positions, I forded the lower rapid and began casting from the pebble beach opposite the center of the pool. After a few experimental casts from the other side, he also crossed the stream, went up above me, crawled through the bushes at the head of the little bay, and waded cautiously out on the submerged ledge.

It was evident, even before we had taken our places, that the river was full of fresh-run trout, and that many of them were large. Circular ripples were constantly appearing over a deep-lying reef of sunken rocks opposite the stone-pile, and now and then I could see a flash-like gleam of silver as a big fish darted up from the depths of the pool, flurried the surface with a frolicsome sweep of his tail, and then vanished under cover of the disturbance that he had made. Almost every cast was followed by a quick responsive rise, and in half an hour I had taken six or eight fish, ranging in weight from a pound and a quarter to two pounds and a half. I looked up-stream occasionally at Mr. H——, and saw that he was casting with a short line over the head of the pool and drawing his fly slowly across the current, ten or fifteen feet below the cascade. Up to that time he had caught nothing; and I was just about to suggest that he should join me

on the pebble beach, when my fly, which I had allowed to sink a few inches under water, was suddenly taken by a very large trout and carried in a fierce rush to the opposite side of the pool. Almost at the same instant Mr. H—— shouted, with more excitement than he generally permitted himself to show, "Oh, Kennan! I've got a whale!" I glanced toward the head of the pool and saw that he was wading slowly and cautiously off the sunken ledge toward the sloping face of the rocky buttress, with his crippled rod bent into a dangerously narrow arch over the deep water just below the cascade. I had time, however, only for a hasty glance. My own fish was making such an energetic fight that I couldn't watch the movements of my companion, even if he did have a "whale." After half a dozen frenzied rushes, my trout settled down among the rocks at the very bottom of the pool and sulked—resisting, without apparent effort, the utmost strain that I dared put upon him. While he lay there, making up his mind what he would do next, I had a chance to look again at Mr. H——. To my great surprise, his rod was still bent over the stretch of water directly under the cascade, and his line had not moved a foot.

"What have you got there?" I cried. "A snag?"

"Not much! I don't hook snags. I've got a big trout—that's what!"

"But why doesn't he do something?" I inquired, skeptically. "You've had him on ten minutes, and he hasn't moved a foot."

"Don't you worry! He'll do something all right when he gets good and ready. I'm trying to figure out what I'll do when he makes a break; I can't get around through those bushes without giving him slack, and I'm afraid to play him from here. I wish I were down on your beach."

Five minutes more passed without any particular change in the situation. Mr. H—— lessened the spring of his rod, then increased it almost to the breaking point, and then suddenly lessened it again; but the obstinate fish at the end of the line kept close to the cascade, where the down-rush of water counteracted, to some extent, the upward strain.

"I believe that trout weighs all of six pounds," he said, as he concluded his

experiments. "I can't move him an inch. My rod feels as if I were fast to a tombstone."

"You're probably fast to a rock or an old snag," I said, with an assumed air of conviction. "No trout just in from the ocean would lie perfectly still for a quarter of an hour with a hook in his mouth and a steady pull like that on him; he'd rush, from the word go. Did you see him when he rose?"

"No, he took the fly two or three feet under water; I let it sink in an eddy."

"Get hold of the line," I suggested, "then you can tell what you're fast to."

"I know a better way than that," he replied. "If you think it's a snag, just watch out!" and, picking up a big stone from the slope of the rocky buttress, he tossed it into the pool, just below the cascade.

Then things suddenly began to happen. With a shrill whir of the reel, Mr. H——'s line started swiftly down-stream under the arch of my rod, cutting the water like a thin knife-blade, and leaving a fine V-shaped ripple in its wake. Fifty feet ran out—seventy-five feet—a hundred feet—a hundred and forty feet—without the slightest variation in the sharp metallic buzz of the whirling reel.

"Stop him!" I shouted. "You've got to stop him! He's almost in the lower rapid!"

Mr. H—— checked his reel suddenly; the long sagging line lifted and tightened; the rod bent with the increasing strain until I expected every instant to see it snap; and out of the shallow water at the extreme lower end of the pool leaped a bar of polished silver, two feet or more in length.

"Aha!" I shouted, in fierce excitement. "It's a salmon! Now, Mr. Man Behind the Rod, you've got your work cut out for you! Don't you wish now that you'd taken my advice? You'll never get that fish with your old broken-backed cripple of a rod!"

"Don't bank too much on what you don't know," he retorted. "I'll get him all right if you'll keep your trout out of the way."

The salmon leaped two or three times, just above the lower rapid, and then started up-stream, throwing the whole pool into commotion. Two more salmon, whose presence we had not even suspected,

sprang into the air over the reef of submerged rocks; my trout made a frightened rush toward the cascade; and Mr. H——'s line suddenly slackened, fell into the water, and disappeared. I thought for an instant that his rod had broken, and that in the tangle we should lose both fish; but he was merely changing his base of operations. In order to get to the beach where I stood, he was struggling around the little bay, holding his rod high above his head and shifting it from hand to hand to clear the bushes. In a moment he joined me, passed his rod under mine so as to uncross our lines, ran to the lower end of the beach, reeled in the slack until he could feel the tug of the fish, and then shouted: "Keep your trout near the head of the pool if you can, and I'll play the salmon below. We're all right if they don't run around each other and get mixed."

By putting a heavy strain on the trout and reeling in every inch of line I could get, I managed to hold him near the mouth of the little bay, giving the salmon a free range outside and below. For the next half-hour all our energies and all our skill were devoted to the work of tiring those two big fish and keeping them apart. We were succeeding fairly well, when, in the very midst of the struggle, Mr. H——, whose attention nothing escaped, shouted: "Kennan! There's a mink stealing fish out of your basket; if you don't stop him you won't have a trout left."

I had put my creel in a cool, shady place just back of the beach, where I thought it would be perfectly safe, and the daring little beast was busily engaged in carrying my trout up into the woods. For the next quarter of an hour we had to fish with one hand, throw stones with the other, and carry on a sort of triangular fight with mink, trout, and salmon.

At the end of a forty-five minute struggle I finally gaffed my trout, which weighed nearly four pounds, moved my fish-basket to a safer place, and sat down on the beach to eat my luncheon. When I had finished, Mr. H—— said, persuasively, "Now, Kennan, won't you take this salmon for a little while and give me a chance to eat? I'm hungry and tired."

"If I take him," I replied, "it must be with the distinct understanding that you're

not to hold me responsible for anything that happens. I haven't a bit of confidence in your crazy old rod—at least in my hands—and if I lose your fish, as I probably shall, you're not to throw it up to me, nor say to anybody that you hooked a big salmon and then Kennan bungled and let it get away. I'll do the best I can, but you've got to take all the chances and say nothing whatever."

"All right!" he replied, "I'll risk it. If you lose him, I won't say a word. Keep all the strain you can on him, and if he starts to run down-stream, I'll come to the rescue."

I took the rod, and Mr. H—— sat down on the beach to eat his lunch and smoke.

"It's a curious thing," he said, "that I should so often strike salmon when I'm fishing for trout. Only a week or two ago, on Middle River, I hooked one with a small fly and on a very light rod. I was alone that day; I hadn't any gaff; and how I was going to land him I didn't know. I held a heavy strain on him for two or three hours, threw stones at him every time he sulked, kept him constantly on the move, and finally tired him out—or at least tired him so that I thought I could get him ashore. When he began to turn occasionally on his side, I led him slowly and carefully into shallow water, and then, just before his belly touched the sand, I threw myself down on him at full length and scooped him out on to the beach with my hands. It wasn't a very sportsmanlike proceeding, but I got my fish. I had just killed him, and was filling my pipe for a smoke, when a red-bearded Highlander rose slowly to his feet in the bushes, not fifty feet away, looked at me with a humorous smile, and said, 'Hahn-somely done, Mистер H—— I an' it's a fine sawmon, whatefer!'"

"'Confound you!' I said, 'have you been there all this time? Why didn't you come down and help me?' But he thought it was more fun to look on. He was just lying low in the bushes to see what I'd do with a ten-pound salmon on an eight-ounce rod—and no gaff!"

I played Mr. H——'s salmon cautiously and circumspectly for half an hour, and then surrendered the rod. He kept the strain on him for another hour and then

begged for a relief. When I turned over the rod the second time, at half-past three, the fish was apparently as strong as ever, and the situation not at all encouraging. At half-past four Kenneth drove down to the pool with the wagon. The salmon was then so far subdued that he could be drawn toward the beach; but if I waded into the water with a gaff, he rushed away toward the head of the pool and recovered twenty yards of line in five seconds.

"Am I going to get him before dark, Kenneth?" inquired Mr. H——.

"I don't think!" replied Kenneth, laconically. But I began to have hopes. The fish was evidently getting very tired, and it didn't seem to me that he could hold out for another half-hour.

At five o'clock Mr. H—— drew him slowly and carefully toward the beach, and I waded out into the water with the gaff. In the eagerness and excitement of the moment I struck a little too soon, and missed him. He rushed away like a shot out of a gun, and recovered seventy-five feet of line before he could be checked. Mr. H—— made no remarks; but I knew what he thought, and, filled with wrath and humiliation, I said to him: "If you'll get that fish in once more, I'll gaff him if I have to wade out up to my neck!"

At a quarter past five the salmon was again within reach. I went cautiously down into the water over the tops of my boots, put the gaff out over him very slowly and carefully, lowered it until the point disappeared behind his back, and then struck with all the quickness and strength I had.

A moment later Mr. H—— and I were shaking hands over a fish that weighed only twelve pounds, but that had kept up a fight with two men for a whole afternoon. We had played him, by turns, four hours and three-quarters.

"Well," said Mr. H——, as we got into the wagon, "what do you think now of the 'broken-backed cripple of a rod'?"

"I don't think any more of it than I did before," I replied; "but I've got a higher opinion of the man behind it. I suppose you had confidence in your own skill; but when you waded out on that sunken ledge with that broken-backed cripple of a rod, you took big chances."

# Latin America and the United States

By C. Mayer

THE abrogation of the Monroe Doctrine has been advocated in certain remote quarters recently on the ground that it is a bar to the civilizing of those Latin-American countries of which Venezuela and Colombia are examples. With the recurring revolutions the argument is heard that these countries can be thoroughly civilized only by foreign intervention. If the observations of one citizen of the United States who has spent a number of years in Latin America and has devoted much attention to a study of its peoples is worth anything, he would assert that these peoples to-day are working out their own salvation.

The English are considered the greatest colonial rulers the world has ever seen. England has governed India for more than a century; but when we consider the frequent famines, epidemics, and insurrections which have occurred in India, the vast expenditures of millions of dollars in public charity, and the cost of maintaining the large army by which England preserves her rule, and then compare the stagnant civilization of India with the advancing civilization of Latin America since the close of the eighteenth century, surely no unbiased critic will say that Latin America has been less happily governed than India.

Did the French succeed in Martinique or Guiana? Have the English, Dutch, or Spanish succeeded in civilizing the natives of their South American colonies?

There are districts bordering on Mexico which, although half a century has elapsed since they received the benefit of the Constitution, are still in the same condition as when they were acquired by the Gadsden Purchase in 1853. We have not yet succeeded in civilizing the Indians. Rather, it has been a process of extermination. The negro question is still very much alive and unsettled.

Perhaps the only instance where a people has been partly civilized by outside influence is that of the Patagonian Indians, who, by the heroic efforts of the Jesuits, were partly civilized, but became sterile. Fiat civilization is a failure. Civilization

cannot be decreed—it must be acquired by the slow process of development. Foreign governments do not civilize, they colonize. Montesquieu said of Spain: "To preserve America she did what even despotic power itself does not attempt: she destroyed the inhabitants." Witness in our own times the "reconcentrado" policy of General Weyler. The question therefore is not whether the Monroe Doctrine retards civilization, but whether the Monroe Doctrine is a "bar to extermination."

In sketches of South America some very important and peculiar features have been overlooked; features which, no doubt, explain some of the causes of the lack of progress of Latin America, and adequately account for the paucity of immigration which has so great an influence on the civilization of a backward people. Such are the two kinds of climate that are co-extensive with the two ethnological and political divisions. The countries having a pleasant and healthy climate—the Argentine Republic and Chili on the extreme south and Mexico on the extreme north—have a stable government, a large percentage of white, Indian, or half-caste Indian and white inhabitants, and a small percentage of negroes, Indians, or mixed breeds; while the other Latin-American countries have an extremely warm and unhealthy climate, almost intolerable to white men, an unstable government, and a population which is composed of a large percentage of negroes and a small percentage of whites, Indians, or half-caste Indians and whites.

It is customary to speak of the citizen of Latin America as badly governed and unhappy, and the foreigner as subject to frequent abuses and persecutions. While admitting that the people of these countries are badly governed—using the words in the same sense as when speaking of the government of England or France in the eighteenth century—still their government is compatible with the character and civilization of their people; the foreigners are more abusers than abused; and when one goes into the interior—

away from the cities—he finds a people who live at all times in perfect contentment.

In order to describe the character of the people it is convenient to divide them into four groups :

(1) The Spaniards of pure blood, who form about eight per cent. of the total population, to which I would add the foreigners other than Spaniards, amounting to perhaps two per cent. of the total population.

(2) The peons, forming eighty per cent. of the total population. These are either descendants of native Indians and Spaniards, native Indians and negroes, or Spaniards and negroes, and are of every shade from white to black.

(3) The pure Indians, who are very few in number and of no political importance.

(4) The ruling class, comprising about ten per cent. of the total population, of either Spanish and Indian blood or Spanish with a heavy sprinkling of negro blood, with which I would include the renegade Spaniards.

The first group comprises the bankers, merchants, and their clerks. They have practically all the capital and culture of the country. In commercial dealing they are noted for their high standard of honor—one can deal with almost any Spaniard in Latin America. Be there stable or revolutionary government, they pay their obligations. They have become accustomed to revolutions and extortions, and adjust the prices of their merchandise to the political conditions. Since the days of Spanish rule they have refused political offices ; but they lose no opportunity to embarrass the government—even to intrigue against a president, though he be a man of honor. They desire officials from whom they may obtain illegal privileges and immunities. They look back at the time when they were the ruling class, permitting none but a Spaniard to have a voice in the government, and they retain their implacable hatred of the natives.

The foreigners—other than the Spaniards or the Germans—emigrate to these countries to make money and then return to their native land. It is immaterial to them how they make it, so it is quickly made. They prefer revolution if they are on the inside, but any occupation will

do. Among this class are the Americans, most of whom are the dregs of the United States. Arriving with little or no capital, they bid for the friendship of the officials, get the privilege of starting a gambling-house, rob the Spaniard—they love the green cloth—or join in a revolutionary movement.

Americans complain that they are frequently halted with a “*Quien vive*” and a Mauser leveled at them, or searched and jailed on apparently any trivial pretext ; but the Latin Americans have learned that a dozen Americans in a town is a sign of some illegitimate traffic or some attempt to subvert the government.

The second group, forming eighty per cent. of the total population, are mostly the inhabitants of the Campo. Kind-hearted, docile, and sober, but ignorant, childish, and simple, they are quick to learn the rudimentary studies—such as are taught in the lower grades of an American primary school—but most of them are incapable of acquiring higher knowledge. Their religion is a composite of Catholicism and either African fetichism or prehistoric Indian worship. Marriage ceremonies performed by the Church being expensive, and civil marriages—where permitted by the law of the country—being contrary to their religion, more than half of the peons live in concubinage. However, this custom has not as demoralizing an effect as might be expected ; they rarely separate, and they consider this tie almost as sacred as that of the Church. The children are recognized by the father, whose name they take when they are baptized. They have complete confidence in the curative powers of leaves, which they prepare in a *cocimiento*, and use for any affection, from tuberculosis to a broken arm. *Brujería*—witchcraft—is still practiced among them, and they repair to a *bruja* to find a lost ring, to secure a love potion, to reveal their future, to cast out devils, or to receive immunity from the law.

Subsisting on plantains, sweet potatoes, garlic, coffee, and sometimes a little sundried beef, the women wearing cheap cotton wraps, the men overalls, and the children nothing, they can live practically without labor. Many allow their nails to grow in the manner of the Mandarins, so as to show that they do no manual labor.

Most of their food grows without cultivation, and even during an extended revolution where the plantains and sweet potatoes are destroyed, there still are the palm-tops with which to sustain life. They have no ambition, no desires, that cannot be satisfied. They spend their nights in playing savage games of which "*Mata la Culebra*" is a type. This game is played thus: A string is tied to a rag which has been rolled to represent a snake—*culebra*—and a knotted rag is attached to a stick. There are three players; one jerks the string, making the "snake" jump around, another is the hero who kills the snake, and the third stimulates the hero by continually beating him with the knotted rag. During the progress of the game the players dance, sing, and howl, much as the American savages in their war dances; and the spectators, standing in a ring around the players, join in the chorus. The peons who have learned to write spend the day composing "poetry"—the kind where the last words rhyme, the meter notwithstanding—to which the Spanish language so easily lends itself.

The fourth group contains the officials, revolutionists, lawyers, doctors, editors, etc. Devoid of morals, ambitious to wear a uniform, rejoicing in revolution, remembering the days when Spain rode roughshod over every human right in their country, they consider the Spanish their natural prey. Each one looks forward to the time when he shall become a Jefe. They despise the American and are suspicious of the Monroe Doctrine; but this may be readily accounted for when we see America in the light in which it is seen in Latin America. Let us look at our citizens and government from their standpoint. Our consuls in the smaller Latin-American towns are frequently natives who went to the United States to obtain citizenship, in order that they might return to join any revolutionary party and hang out the American flag should the scheme go wrong. The Americans may justly complain of these representatives of the United States, but it is difficult to find upright American citizens who will live in a town where the necessities of life—according to the American standard—cannot be bought and where the perquisites amount to perhaps fifty cents per annum. Our consuls, therefore, have

usually been men of ability. With the exception of President Monroe, Mr. Bowen has done more to win the good opinion of the South Americans than any other American.

One class of our citizens who emigrate to these countries have already been referred to; the other, or better class, do not mix socially with the inhabitants and invariably return to the United States as soon as they have made their fortune.

Another cause of the feeling against Americans is the misleading press article. If one takes up a Latin-American newspaper and turns to the column of cables, he frequently finds a fictitious cable dated New York, containing some animadversion upon the people or government of the country. Sometimes the cable is a genuine extract from a speech delivered in America by a public man, but so extracted as to be unrecognizable by its author. There are also articles from American newspapers of the "yellow" type which find their way to Latin America and are translated and published. They purport to represent the American sentiment in some controversy, and are always uncomplimentary to Latin America. I remember a two page article printed at the close of the century in a New York daily, showing a map of the western hemisphere in the year two thousand across which were the words "United States." This paper caused demonstrations in a South American town against the United States.

Being in Cuba some time ago, I was surprised to learn of the feeling against Americans; it seemed to me to show great ingratitude. However, by mixing with the people, I discovered that this feeling was caused rather by the instinct of race-preservation than by ingratitude. The Cuban newspapers were publishing almost every day a report of a speech delivered in Congress or an article copied from an American paper containing either derogatory remarks or advising the United States to annex them—or both. Perhaps it might have been the nation's speech of a Congressman or a clipping from an unimportant daily of some town or of the map, but in countries where the United States is supposed to consist of New York, with Washington at the yard and with the Fair, Buffalo around it.

man in Congress is a statesman and any printed sheet a representative paper. By the dissemination of the true American sentiment towards these countries and the explanation of the Monroe Doctrine, we can change their opinion and bring them to understand that the United States is their natural friend and ally.

Before finishing this sketch of Latin America, I want to say a few words about the insignificance of our trade. Although South America is almost virgin soil for American goods, we can never hope to increase our exports by our present business methods. With the exception of some food products, in most Latin-American countries our goods are sold by catalogue, or through export companies; and, consequently, little is bought except specialties—such as tools, clocks, bicycles, shoes, patent medicines, etc.—which cannot be bought in other countries, or are so superior and cheap that they market themselves. Very few American manufacturers send representatives to these countries, and such representatives as they do send generally speak Spanish indifferently. They ask terms such as are customary in the United States; they do not seem to consider that the Spanish merchant is insulted if you try to sell for cash or on thirty days, and that he thinks this is a reflection on his credit; other foreign merchants are satisfied to sell their goods; they know the Spaniard always pays. Goods are not sold at a price which will not allow a margin for extra time. Cotton and linen goods, now mostly bought in Spain, could be sold by American houses if they would study the patterns and styles of South America. While we may prefer plain designs and pale tints, they are fond of gaudy plaids and bright colors. I think there is not a yard of cotton print manufactured in America which would suit their taste. Thousands of cases of English and Swiss condensed milk are sold in South America; whereas American brands, far superior in quality and purchasable at the same price, are unsalable. The English and Swiss condensed milk is labeled in Spanish, the American brands in English.

Much claret is imported from Spain; and although the California wine is far superior, it is practically unknown.

Virtue, intelligence, and industry being the essentials of a republic, and, as we have seen, conspicuous by their absence in these countries, I believe that they can be ruled only by a despot. The question is, shall he be a petty despot—a native not despising the peons—who, when he has carried through a successful revolution, has ruled for a few months or a year, has fleeced the Spaniard, and has banked a million in Europe, is satisfied to retire to that home for South American revolutionists—Paris; or a penniless foreign noble who despises the peons, fleeces every one, banks in his own country, and returns when he has enough money to restore his ancestral castle and family grandeur?

If we turn to the history of Mexico, we shall see an instance of a country once ruled by petty despots, shaken from year to year by revolutions, and finally reclaimed from anarchy by a native genius, President Porfirio Diaz. Is it not possible that other Latin-American countries may some day develop a genius out of one of their petty tyrants who would reclaim his country? Some other solutions suggest themselves. Geologists claim that the northern coast of South America is fast sinking—why not await developments? Or, if we will neither wait, nor allow a foreign government to set up their despot, why not make the officials virtuous, the peons industrious, and then extend to them the benefits of our Constitution? We might build cotton-factories in order to sell them the raw material and the machinery. The peon, metamorphosed into a factory hand, would soon be civilized; he would learn to eat our pork instead of plantains—would he be happier? Addicted as they are to revolution, these countries are inhabited by a people eighty per cent. of whom, although semi-civilized, are perhaps the happiest people on earth. Let us not abrogate the Monroe Doctrine. Let us permit these people to work out their own salvation.

# The Art of James Lane Allen<sup>1</sup>

By Albert Elmer Hancock

THE quality of charm is seldom found in a work of art that is strikingly original. The genius of Rubens, for instance, so versatile and so dramatically inventive, lacks the appeal of charm, while Corot, who unostentatiously transfuses a commonplace landscape with silver dream as the light transfuses a pearl, has the haunting, elusive, abiding charm of twilight and dawn. Mr. James Lane Allen has hitherto been a subtle artist of the commonplace like Corot. His muse has stayed at home. He has lacked the swift action, the dramatic originality of invention, that give movement and stir to a narrative. His plots—single, uncomplicated threads knotted by slight incidents—have been developed on a stage whose setting is the vast cosmic spectacle of nature, and for his total impression he has relied more on the quiet orchestral harmonies of landscape than upon the interplay of human emotions. One's mind reverts inevitably to that supreme moment when the solitary Mrs. Falconer, after reading of John Gray's marriage, gathers about her face the veil and whispers, "I shall go softly all my years"—a tragic moment upon which the curtain falls while the instruments of nature, playing a strain like the *Stabat Mater*, die away into quenched, heartbroken silence. Mr. Allen's work has been conspicuous for its homeliness of universal tragedies and the subdued charm of its music.

"The Mettle of the Pasture," his latest novel, shows the same traits with additional powers. There is in this book the devotion to landscape, the interpretation of nature in terms of modern science, the studious research for "parallel passages" in the life of nature and man, the idyllic love of sensuous beauty transformed into the definement of spiritual things; all these are wrought out again for us with the artistic scruple of a poet for the perfect line. But to this idyllic grace he has added some eruptions of human passion which are unusual for him, and which, like

explosives, unexpectedly burst with terrific force, tearing the heart.

The theme of the book is the double standard of purity for men and women. Rowan, the lover, forced by honor and the sacredness of his love, on the betrothal night confesses the one single slip of his youth; for his character will not permit him to base his expectant happiness on a lie. The girl, who loved him with all the possible intensity of faith and pure passion, recoils as from a hideous nightmare of hell. She rushes away from him, and in the agony of revolted nature contemns him as a man would contemn a woman of similar record. The one act was an indelible, inexorable stain. In a later interview—and here is where some of Mr. Allen's critics have failed to understand—she lashes him with an apparent self-regarding bitterness that is undoubtedly heartless, brutal. Then she commands him not to touch her, and, a moment later, as she takes her last farewell, trembling in the fear of woman's frailty to irresolution, she lays her hand on his forehead, passes her fingers over his lips, and touches her lips to his own. "'Good-by,' she murmured, against his face. 'Good-by! Good-by! Good-by!'"

Some reviewers cannot understand the paradox of the brutality and the love, but the consistency is in the fact that they are both expressions of her intense affection. Family feuds are always the worst. Men and women who love tepidly can jog along without much ruffling on the surface or in the depths, but those who love with all the ardor of absorbing passion are as sensitive to irritation and reaction as bared nerves. Isabel's apparent brutality was the instinctive recoil—love's negative passion, as the horrible is often the beautiful negation of beauty, like Leonardo's "Head of Medusa." The paradox of the brutality and affection is as consistent as the swing of a pendulum, and those who cannot see it are simply incapable of understanding the psychology of the profoundest emotions.

The other scene, even more powerful in its dramatic suggestiveness, is where

<sup>1</sup> *The Mettle of the Pasture*. By James Lane Allen. The Macmillan Company, New York.

knowing, but because it gives—especially to American readers—certain glimpses of the life of some notable characters in this country at the end of the eighteenth century. Extracts from letters to Jefferson and Clinton are, therefore, not the least interesting part of this book. In turning these pages one is reminded of the bitter experiences of those other emigrants from Holland to this country two centuries before—the Pilgrims.

**Land of Faith (The).** By James Mudge, D.D. Jennings & Pye, Cincinnati.  $4\frac{1}{2} \times 6$  in. 183 pages. 25c.

**Light Waves and Their Uses.** By A. A. Michelson. (The Decennial Publications. Second Series, Vol. III.) The University of Chicago Press, Chicago.  $5\frac{1}{4} \times 9$  in. 172 pages. \$2, net.

This volume includes discussions, not always too technical for the ordinary reader, of wave motion and interference. The author's interesting conclusion is that the medium which propagates light-waves is not an ordinary form of matter. It probably exists not only where ordinary matter does not, but it also permeates all forms of matter.

**Miracle of African Missions (A).** By John Bell. Illustrated. The Fleming H. Revell Co., New York.  $5 \times 7\frac{1}{4}$  in. 139 pages. 60c., net.

This is the story of a Congo native from his childhood, through his persecution as a Christian convert, to his death from the mysterious "sleep-sickness." Though the diction is not always faultless, the narrative is simple, pictorial, and at times dramatic. If in some portions it is rather obscure, there is good reason in the fact that it comes for the most part from Matula himself. A vivid little tale like this does more to show wherein lies the real effectiveness of missionary labors than many a treatise.

**Representative Art of Our Time, with Original Etchings and Lithographs and Reproductions of Oil and Water-Color Paintings, Pastels, etc.** Edited by Charles Holme. Part VIII. Published by the International Studio, 67 Fifth Avenue, New York.  $11 \times 17$  in. 32 pages. Complete in 8 Parts. Each \$1.

In the eighth and last part of this series the editor states that he has aimed to present enough of the present schools of painting and allied arts to give students an insight into the many-sidedness of modern art and the variety of expression of which it is capable. In the choice of subjects he has succeeded admirably, and the articles have been of real interest and value. The most notable illustration in this installment is "An Arab's Head," by Hubert von Herkomer, which is a beautiful example of the Herkomergraving process. Other artists represented are John S. Sargent, E. J. Gregory, Edward Stott, H. Muhrman, and Charles Cattet.

**Rhyming Dictionary of the English Language (The).** By J. Walker. Revised and Enlarged by J. Longmuir, A.M., LL.D. E. P. Dutton & Co., New York.  $5\frac{1}{4} \times 8$  in. 720 pages. \$1.50, net.

It seems as if a rhyming dictionary might be an easy thing to make, but when one takes up the stout volume just issued, an appreciation instantly comes of the immense labor involved. The work will be valuable to rhymesters, of course. It will also interest many who are not, but who are glad to acquaint themselves

more thoroughly concerning synonyms and other features of our language. From the publisher's point of view the book is specially commendable in its paper, print, and binding.

**Tools and Machines.** By Charles Barnard. Illustrated. Silver, Burdett & Co., New York.  $5 \times 7\frac{1}{2}$  in. 164 pages.

Every young boy loves a box of tools, and every older boy loves some kind of a machine. Mr. Barnard's book will tell boys young and old about tools—a good deal about tools and a little about machines. The book is well printed, well illustrated, and is not too large. It is just the thing for most boys and for some men.

**Turgot and the Six Edicts.** By Robert Perry Shepherd, Ph.D. (Studies in History, Economics, and Public Law, Columbia University, Vol. XVIII., No. 2.) Columbia University Press (The Macmillan Co.), New York.  $6 \times 9\frac{1}{4}$  in. 213 pages. \$1.50.

Dr. Shepherd's monograph is one of the most interesting of recent contributions to French history. Turgot was Louis XVI.'s Controller-General of Finance. He was a scholarly philosopher; he was truly, as Dr. Shepherd calls him, the very "embodiment of philanthropic ability." His work has never been properly appreciated, but the present volume will do much toward that end. It will not only make the character of Turgot stand out with greater distinctness on the crowded stage, full of interesting French men and women in Louis XVI.'s period, it will also emphasize the great significance of Turgot's Six Edicts in connection with the events which led up to the French Revolution. Only by such governmental energy, in Turgot's opinion, could the coming Revolution be averted. Radical economic reforms were necessary; their wide-sweeping nature is indicated by the Edicts, which covered the subjects of labor, grain trade, ports and markets, guilds, exchange, and taxes. In addition to this, the Edicts were calculated partly to restore the monarchy to the *de facto* head of the State re-exalted in the hearts of the people, and, as Dr. Shepherd says, "made free from the parasites which were fattening from its already over-weakened vitality." Our author well brings out Turgot's ideal of an impartial government by the king of all his subjects; the nobility were to be recalled to their proper subordination, their perquisites curtailed to the minimum of valid requirements, and the Church was to be regarded not only as a religious but as an economic person, and required to share the burdens of the State. Back of these objectives, as Dr. Shepherd shows, lay the furthering of moral culture both for the individual citizen and for the State. Alas that some elements of human nature—ignorance, prejudice, pride, greed, self-interest above social interest—that these should have stood in Turgot's way! But, after all, these elements are ever to be counted up as stumbling-blocks in the way of any reform.

**Works of Charles Lamb (The).** Edited by William MacDonal. In 12 vols. Illustrated. Vol. I. *The Essays of Elia*. Vol. II. *The Last Essays of Elia*. E. P. Dutton & Co., New York.  $4\frac{1}{2} \times 7\frac{1}{4}$  in. \$1.50 per vol.

Wise!

*To the Editors of The Outlook:*

Please remove my name from your subscription list. When next you publish an article on English affairs, do not give such a bitter partisan view as in "Passive Resistance." S.

[You are very wise. No one should subscribe to The Outlook who is unwilling to read opinions strongly put with which he disagrees.—THE EDITORS.]

Thank You

*To the Editors of The Outlook:*

I am glad to be able to assist the Spectator [see The Outlook for July 18] and to put him upon the track of what he has lost—and more. "Serendipity" (not "seradipity") is the reported recreation of Mr. Wilfrid Meynell. The word is an attractive one, the more so, perhaps, because of the difficulty in finding out what it means. Having searched dictionaries in vain, I was much pleased to get the following information from Mr. George William Harris, librarian of the Cornell University library: "Serendipity is a word coined by Horace Walpole, meaning the gift or luck of discovering things the finder is not in search of. Walpole says he once read a silly fairy tale called 'The Three Princes of Serendip,' who, as they traveled, were always making discoveries by accident or sagacity of things they were not in search of, and from this he made up the word serendipity. Serendip is said to be an Indian name of Ceylon."

H. K. ARMSTRONG.

Penn Yan, New York.

Fair Play for Nebraska

*To the Editors of The Outlook:*

I have been a reader of The Outlook for several years, and would now like to ask a few questions. Nebraska is the most exclusively agricultural State in the West. It has not even any timber or minerals of any kind. Will you explain how we get any benefit from the high protective tariff? All our surplus of grain, meat, and other products is shipped east,

mostly to Europe. If we sell in New York, Philadelphia, or Boston, we have to sell at less than European price. If we buy any manufactured goods made there, we have to pay European prices with tariff and transportation added. Government levies the tariff on foreign goods, and our manufacturers levy nearly the same upon their own goods. Is that just? Ought we not to receive as much above European prices for the product of our labor as we have to pay Eastern manufacturers?

It is claimed that our manufacturers cannot compete with foreign pauper manufacturers. Our farmers have to compete with foreign pauper farmers. Then how can our manufacturers export and sell their goods abroad without tariff protection? Why can they not do the same thing here at home?

H. W. HARDY.

Lincoln, Nebraska.

The Art of Agriculture

*To the Editors of The Outlook:*

In The Outlook of July 18, in an article by Mr. W. R. Lighton called "Where Is the West?" occurs this astonishing sentence: "It seems not unlikely that agriculture will soon be a lost art in the East." The writer defines the West as extending from Indiana to California, inclusive. This leaves Ohio, half of agricultural Michigan, eastern Kentucky, eastern Tennessee, and the States grouped by the census as North Atlantic and South Atlantic, for the East.

The development of the West has modified agriculture in the East without lessening its importance. The Eastern agriculturist is more and more concerned to supply fresh milk, fruits, and vegetables. Independent of the great increase in Ohio, every Atlantic State, except South Carolina and Georgia, had more milch cows in 1900 than in 1850, and New York had more than any other State in the Union. The Atlantic States have a decreasing surplus in the growth of population, but they still make a creditable showing in staple products per square mile. They reported in 1900, as compared with 1850,

more grain, over twice as many potatoes, more sweet potatoes, nearly three times as much cotton, over three times the tobacco, and fifty per cent. more hay and forage. Early census reports do not show the product of fruits and vegetables, but something of their recent importance is recorded.

JAMES H. BLODGETT.

Washington, D. C.

**Approved and Recommended to Railway Authorities**

*To the Editors of The Outlook:*

While in the waiting-room of a railway station the other day, I had occasion to notice the stock of reading matter carried by the news-stand in one corner of the room. The most conspicuous papers were "police" journals, and the most noticeable books were "The James Brothers" and cheap detective stories—just the type that, according to Mr. Roosevelt in "Ranch Life and Hunting Trail," the typical border outlaw delights in. Within less than one hundred miles of that news-stand within recent years there have been a half-dozen train robberies. There is some connection between literature and life; and it is reasonable to suppose that there is some connection between the sort of literature sold on railway property and train robbery.

Since railway managers are wisely exercising their authority to keep their employees from being contaminated by intoxicants, and even cigarettes, they ought to be too wise to permit the sale within their own jurisdiction of books and papers that not only intoxicate the judgment and numb the moral sensibilities, but certainly lead to train-wrecking, robbery, and murder. Surely, not only in the interest of good citizenship, but in the interest of the railway corporations themselves, the news companies doing business on the road need some attention from headquarters.

A. B. A.

**May an Engineer be an Artist?**

*To the Editors of The Outlook:*

In your issue of July 18, in reviewing Mr. Charles Mulford Robinson's book on "Modern Civic Art," you make the statement that "engineering differs from pure

art in that it may not be the child of inspiration; it is an exact science, and, as such, wealth can buy it."

Is it not this view of the engineering profession which is responsible for the fact that so much of the engineer's constructive work is a disfigurement to the landscape? Why should not a bridge, no matter how small, upon a city street receive as much artistic consideration as a mercantile building upon the same street? Usually the former is a much more prominent object than the latter.

The designing engineer has need of artistic inspiration to the same degree as has his architectural brother, and such inspiration is not an exact science, although it may be purchased by wealth.

It appears to the writer that the development of the æsthetic principle in engineering works, so much needed, depends upon the recognition by the public of the fact that the design of æsthetic structures is not and cannot be an exact science.

WILBUR J. WATSON, Bridge Engineer.

Cleveland, Ohio.

[Our correspondent is right in recognizing the value of an artistic sense in making engineering designs. Mr. Robinson does not fail to urge this strongly in his book. In so far as an engineer may have this sense, he has something more than mere science can give to him. But he may be a capable—an able, though not the best—engineer without it. Mr. Robinson, in the quotation cited, gives expression to that condition recognized when it was required that the designs for the new bridges across the East River should be passed upon by the Art Commission, or when the Royal Institute of British Architects protested against the acceptance of a design (faultless in engineering) for a bridge across the Thames, or when an architect and a sculptor were associated with an engineer in the competition for the proposed memorial bridge in Washington—an association that has been notably justified by the recent instance of the Alexander III. Bridge in Paris. It is because so many very good engineers do lack artistic perception that engineering can be said to "differ from pure art in that it 'may' not be the child of inspiration."—THE EDITORS.]

# WILLIAMS' SHAVING SOAP

## A SHAVING OUTFIT

*is never complete without*

## WILLIAMS SHAVING SOAP

You certainly want the greatest possible EASE, COMFORT and SAFETY, in shaving, don't you? Then you must have Williams' Shaving Soap.

Its great, creamy lather softens the beard—in wonderfully soothing, refreshing and healing to the face, and makes shaving "AN EVERY MORNING LUXURY."

"Don't Fool With Your Face!"

Always buy the "old reliable."

### Williams Shaving Soap

Sold in the form of shaving sticks, tablets, and cream, throughout the world.

## The Negro Issue in Mississippi Primaries

The final reports from the Democratic primaries in Mississippi show that Major Vardaman, the race-hatred candidate for Governor, received only a small plurality of the whole vote, and that Judge Critz and Senator Noel, the two candidates who stood for the honorable treatment of the politically helpless race, had the support of a decided majority of the people. The exact vote was: Vardaman, 39,000; Critz, 34,000; and Noel, 22,000. The early reports of Major Vardaman's election were due to his majorities in the cities. The rural districts went strongly against him. The issue was a simple one between justice and injustice. It is not often that a political issue is so simplified. There are two candidates for Governor now before the Democratic voters of the State, to be voted on at the primaries on August 27. Major Vardaman stands for the policy of dividing the school accommodations between the white and the black races in proportion to the taxes paid by each race. Inasmuch as the whites pay very much the larger share of the taxes, this means that the negroes of the State will be practically shut out from receiving public education. Such a division of taxes not only is a violation of the fundamental principle of the American public-school system, according to which the children of the poor are entitled to the same treatment as the children of the rich, but also will result, if adopted, in creating a great ignorant caste. A Mississippi Democratic State Senator, the Hon. B. H. Wells, has stated the case very clearly: "That man or professed statesman who comes before you with a message which is calculated or intended to fan into flames the slumbering fires of race prejudice and race hatred is, whether he knows it or not, an enemy to this people, and an enemy to the prosperity

and the welfare of the State of Mississippi." Major Vardaman in his campaign has indulged in unquotable vulgarities. His opponent, Judge Critz, the "conservative" candidate, is the one who stands really for enlightened progress. It is almost impossible to believe that such a man as Vardaman and such a policy as he represents can receive a majority of the votes. Indeed, Senator Noel has announced his purpose, in accordance with his principles, to vote for Judge Critz; and if the majority of his supporters do the same, as it is natural to expect, Judge Critz will be elected. On August 6 Senator Money was chosen at the primaries for the Federal Senate over Governor Longino. In this case the reactionary party won. Success at the Democratic primaries in Mississippi is equivalent to election.

## Comments on the President's Letter

The vigorous letter addressed by President Roosevelt to Governor Durbin, of Indiana, expressing his appreciation of the Governor's courageous action in defiance of the mob spirit, and stating his views on the nature and cause of lynching, has called forth very wide comment. To many people it may occasion surprise to learn that approval and criticism have apparently been only slightly affected by sectional lines. In the main the press North and South has been emphatic in approval. Whatever criticism there has been worth any attention is directed to some subordinate statement or phrase, or is concerned with the practicability of dealing with the question. Some of the strongest expressions of accord have appeared in Southern papers. Thus, the Atlanta "Constitution" says that the letter "is filled with common truths of ethics and good government that no right-minded citizen will contest," and the Birmingham

"Age-Herald" declares that "there is not a line in it that will not commend itself to every friend of law and order," and that it has given lynching a "salutary and wholesome shaking." Of course some of the papers which acknowledge that lynching, or, as one of them calls it, "popular justice," is an evil, shake their heads over the evil and moan that it will not cease as long as the two races live side by side; but this is not criticism of the letter, it is a weakly pessimistic philosophy. On the whole, it seems unquestionable that public opinion is aroused against mob violence as it has not been before. That this is not due to increase in the number of lynchings is asserted by the New York "Commercial Advertiser," which cites statistics (which we learn were collected by the Chicago "Tribune") to show that lynching has pretty steadily diminished from 241 cases in 1892 to 96 last year, and a little over 50 for the seven months of this year. We agree with the "Commercial Advertiser" in believing that the present horror expressed at the lawlessness and cruelty of mobs is due to a growth in "the moral sense of the land."

⊙

**The Chautauqua Conference  
on the Mob Spirit**

That public opinion is aroused on the subject of lynching is shown not only by newspaper comment, but specifically by the conference on the mob spirit in America which was held last week at the Chautauqua Assembly. On this occasion both sides were heard. The principal speech made in defense of lynching was delivered by Mr. John Temple Graves, of Georgia. His argument was based on the proposition that the evil consisted not in the lynching but in the lawlessness of the lynching. "The mob," he declared, "stands to-day as the most potential bulwark between the women of the South and such a carnival of crime as would infuriate the world and precipitate the annihilation of the negro race." His cure, then, was to legalize the mob! He argued, too, for the separation of the races. That his view was not, as it has been called, "the" Southern view is manifest enough not only from Southern comments on the President's letter but from criticisms in the Southern press of Mr. Graves's address itself. Two

clergymen, one from Pennsylvania and one from Rochester, New York, reiterated in other forms Mr. Graves's argument. On the other side the most notable speeches were made by the Rev. Dean Richmond Babbitt, of Brooklyn, and Judge Lore, Chief Justice of the Delaware Supreme Court. Dr. Babbitt emphasized the need for courage on the part of the officers of the law, and especially those who guarded prisoners. Judge Lore emphasized the need of temperateness and calmness in the courts of law in trying criminals. Judge Woodward, of the New York Supreme Court Bench, on Saturday showed, in a speech of great ability, the fact that concessions to the mob mean abandonment of popular government by law. Arguments for lynching are really arguments for revolution, if not for anarchy. The discussion at Chautauqua has done good service in making that clear.

⊙

Mere protests against lynching are, however, ineffectual. Justice Brewer, of the United States Supreme Court, in an article in the current issue of "Leslie's Weekly," has gone further and has advocated positive action to deprive lynching of its excuse. He points out the radical difference between two kinds of lynching: that, on the one hand, which existed on the frontier when society was in a crude condition and government not fully established, and that, on the other, which temporarily flames out in a civilized community. The former was a revolution for the re-establishment of order; the latter is an ebullition of anarchy, and creates an epidemic of crime. It is this sort of lynching, aroused by impatience at the lagging of legal methods, that needs to be dealt with now. Justice Brewer commends two changes in the law. One is the abolition of appeal in criminal cases. He cites legal experience as a justification:

For nearly a hundred years there was no appeal from the judgment of conviction of criminal cases in our Federal courts, and no review, except in a few cases in which, two judges sitting, a difference of opinion on a question of law was certified to the Supreme Court. In England the rule has been that there was no appeal in criminal cases, although a question of doubt might be reserved by the

presiding judge for the consideration of his brethren. The Hon. E. J. Phelps, who was Minister to England during Mr. Cleveland's first administration, once told me that while he was there only two cases were so reserved. Does any one doubt that justice was fully administered by the English courts?

As against the ancient maxim, "It is better that ninety-nine guilty men escape than that one innocent man be punished," he would put, in view of the publicity of modern trials with all their safeguards for prisoners, President Grant's dictum, "Let no guilty man escape." The other change he recommends is to direct "the presiding judge of the proper court, when such an atrocious crime has been committed as those giving rise to lynchings, to immediately convene that court and put the accused at once on trial." There is great significance in such suggestions coming from a Justice of the United States Supreme Court. Both these changes The Outlook has already advocated.

#### The Panama Treaty Rejected

On Monday of this week news reached this country that the Colombian Senate had rejected the Panama Canal treaty. The Senate having rejected the treaty, it cannot in its present form again come before that body except by the Senate's own vote. Señor Marroquin, President of the Colombian Republic, however, can send the treaty, slightly amended, to the Senate and reopen the Canal debate. It is believed by many that he may adopt some such procedure. Amendment of the treaty, however, may defeat final ratification, inasmuch as the treaty would have to be returned to the United States Senate, which is disinclined towards any amendment. While the despatch does not state the cause or causes of the treaty's rejection, it is believed that the question of integrity of territory had much to do with it. As the consummation of a treaty with Colombia is a condition precedent to canal construction, it might be supposed that the first failure to ratify a treaty would mean failure to build a canal by the Panama route. In case Colombia continues obdurate, however, it is possible that the State of Panama, naturally favoring the canal, might secede from the United States of Colombia and form a new republic. Our

recognition of the republic would probably give it political standing with the rest of the world, and a treaty with it would be quickly ratified. Some of our newspapers are already suggesting more radical steps which President Roosevelt might take; it is hardly necessary to add that for these he has no warrant of law, even if he were inclined to take them. What Congress has empowered him to do is this: Failing to obtain the rights to the construction of a Panama canal, by the terms of the Spooner Act he is directed to make the necessary treaties with Nicaragua and Costa Rica on terms which he may consider reasonable, and then "he shall, through the Isthmian Canal Commission, cause to be constructed a ship canal and waterway from a point on the Caribbean Sea near Greytown by way of Lake Nicaragua to a point near Brito on the Pacific Ocean." The President is fully authorized to make these negotiations without referring the failure of the Panama scheme to Congress.

#### The Alaskan Difficulty

The approaching meeting in London between Messrs. Root, Lodge, and Turner on the one side, with three British Commissioners representing Canada on the other, again calls attention to the interesting question which is before them for adjudication, not arbitration. After the organization of British Columbia in 1871, the Canadian Government requested that the boundary line between Alaska and Canada should be adjusted, but it was not until 1898 that the British Government acted in the matter. Thus, for more than seventy years (through the Russian occupancy of Russian America and the American occupancy of Alaska), the British Empire made no formal protest against Alaskan boundaries as marked on maps, official and otherwise. In view of such history, the Canadian claim, countenanced in 1898 by the British Government, seems curious—that the Alaskan eastern boundary should run from Prince of Wales Island at 54° 40' along the mountains nearest the shore and across all the indentations of the sea up to Mount St. Elias. The grant of such a claim would contravene the phrase from the official language (French), "parallèle aux

sinuosités de la côte," found in the Russo-British Treaty of 1825. The correspondence leading up to this Treaty shows indubitably that its purpose was (1) to give to Russia a continuous strip of territory on the American mainland around all sea-indentations, and (2) to make this territory ten marine leagues wide unless there should exist inside that limit a chain of mountains which could constitute a watershed. The country is still largely unexplored, but we now know that a natural watershed exists on the summits of the White and Chilkoot Passes. These are less than ten marine leagues from the coast. Under a *modus vivendi* with the Canadian Government, our own boundary has thus been brought nearly to the coast line at these points, and if such a watershed exist elsewhere, the boundary line should be changed accordingly. This granted, the general claim that the boundary should follow, not the actual indentations, as provided for in the Treaty, but the general trend of the coast, rests on insufficient basis, as is seen even from Canadian and British sources. For instance, in the British Admiralty Chart No. 787, corrected to 1901, the American frontier is marked as giving a continuous strip of territory, cutting off Canada from all contact with any of the indentations which jut into the continent between Portland Channel and Mount St. Elias. Furthermore, by actual occupancy and usage the United States has acquired by prescription a confirmation to its title.

#### The Joint High Commission

The main cause of the suspension of the Anglo-American Joint High Commission in 1898, however, was on account of inability to agree as to the meaning of the language of the Russo-British Treaty. In considering the "coast" (côte) referred to in that Treaty, and also in the Russo-American Treaty of 1867, the American Commissioners understood the coast of the continent to be intended. To this the British Commissioners replied that, while it was probably intended that the line should be drawn upon the continent, the language used was open to misconception. In addition, they objected to the American claim that all towns or settlements on tide-water, settled under the

authority of the United States, should remain within American territory; they declared that this marked a departure from the rules which governed the Venezuela boundary question. The American Commissioners declared that the Alaskan and Venezuelan disputes were not analogous; indeed, they challenged their British colleagues to cite any instance where such a subject as the Alaskan dispute had been submitted to arbitration. The American representatives did offer, however, to submit the dispute to adjudication—that is, to the decision of six judges, three from each country. This the British Commissioners rejected, and the High Commission adjourned, referring the boundary question to the two Governments for further negotiation. The British Government finally agreed to adjudication, and we trust that the present labors of the American and British Commissioners in London will dispose, once and for all, of this irritating question.

#### The Macedonian Insurrection

Last week the Turkish Imperial troops reoccupied the town of Krushevo, which had been seized by the insurgents the week before. It is stated that the Christian inhabitants in the neighborhood were massacred by the Turks. At Monastir, where the Russian Consul was murdered week before last, terror reigns; Russia has now despatched a squadron to Turkish waters, to emphasize her intention of exacting complete compliance with her demands as to immediate satisfaction for the murder. The insurrection has spread not only over what is popularly known as Macedonia, but also eastward toward Adrianople. The insurgents operate in bands numbering about a hundred men each; wherever possible they avoid open encounters with the Turkish troops, but are burning crops and villages, seeking by these savage means to terrorize the inhabitants into joining them in revolt. The destruction of telegraph lines and railway bridges by the revolutionists has now become extensive. Across the border, in Bulgaria, the most dangerous factor in the situation is the country's economic depression. The influx of thousands of Macedonians anxious for employment has disorganized the labor market and be-

come a source of great discontent. Furthermore, the Bulgarian merchants are no longer able to obtain credit abroad, and are forced to pay cash. Thus, in addition to ethnological and political sympathy, there is now the factor of industrial and commercial panic to give additional point to the declaration of many Bulgarians that the present condition of affairs in their country is no longer endurable. Even war, they say, whatever might be the result, would be preferable, as it would at least be followed by some period of rest.

#### The Macedonian Committee

The Macedonian Committee at Sofia, the Bulgarian capital, formally appealed last week to the representatives of the various Powers there, declaring that systematic persecution by the Turks has compelled the Christians in Macedonia and in the vilayet (State) of Adrianople to institute a general rising. The Committee complains that it has exhausted all pacific means for securing the intervention of Europe to enforce the provisions of the Berlin Treaty. The sporadic efforts of the Powers to secure reforms have failed—"they have resulted merely in a recrudescence of Turkish fanaticism and governmental oppression." The insurgents declare that revolution is now their only hope, and that they propose to continue the fight until the object of their uprising has been attained. The statement of this object has an ironical sound, when one considers that the European Powers pledged this very reform to the Macedonians by the Treaty of Berlin in 1878. "It is evident," says the Committee, "that reform measures, to be efficacious, must include the appointment of a Christian Governor-General of Macedonia." The insurgents now add that this official should be one who has never held office under the Sultan's Government and who must be independent of it in the exercise of his functions. In its turn, on Sunday of this week, the Bulgarian Government presented a memorandum to the Powers, setting forth at great length the conditions in Macedonia during the past three months (or since the Turkish Government undertook to inaugurate the reforms imposed on it by Russia and Austria). The statement shows in detail that the Sultan has

failed to observe his promises; instead he has enacted sterner measures of repression and has sought "every possible pretext to persecute, terrorize, and ruin the inhabitants" of Macedonia. This memorandum is the most terrible indictment of the Turkish Government yet made. We trust that it may have its due effect upon the Powers. Under treaty they are responsible for good order in Macedonia.

#### The Lesson of the Paris Disaster

The loss on Monday of last week of nearly a hundred lives by burning and suffocation in the Paris transit tunnel, and the heartrending accounts of the helplessness of all attempts to aid those who were suffering so terribly, at once raise the question whether all possible safeguards against such a horrible disaster are being taken in the projected New York tunnel. When a similar but less extensive calamity took place nearly two years ago in Liverpool, Mr. George Westinghouse, the expert electrician and constructor, pointed out that there was special danger of conflagration in electric tunnels, that cars should be made indestructible by fire, and that in every plan for electric transit the question of possible danger from the motor power should have prime importance. In Paris this had not been done. The same electric circuit furnished the power and lighted the tunnel—a frightful error, for most of the victims were lost when groping through a dark tunnel or when blocked in a panic-stricken mass in an unlighted curve, while most of the trainmen, who knew the tunnel by heart, escaped. It is said that the motorman disobeyed orders in not disconnecting his motor at once when it became short-circuited, but so deadly a danger ought not to be left within the control of a motorman; undoubtedly a mechanical contrivance could make it impossible to proceed with an electric engine in such a condition. It is reassuring to be told as to the New York underground roads that the cars are to be of fireproof construction, that the lighting is to be done by entirely separate plant and circuit, that in ventilation and size of stations our roads are to be superior to those of Paris, and that protection against broken circuits is to be provided. It is fairly well establish-

that both the Liverpool and the Paris disasters were partly due to faulty and now already antiquated appliances, and the assurances of the managers of the American projected tunnels are of weight. It should be added, however, that the New York State Railway Board should make rigid inspection of all the apparatus and plant and insist upon a large margin of safety. The Berlin authorities have just made an inspection of Berlin's new electric road, which is partly underground, and their certification of its safety means something. If the New York tunnels are to be popular and useful, they should have the indorsement as to safety not only of their builders and managers but of scientific experts who represent the people.

#### The Russian Labor Revolt

Were it not for the overshadowing interest of the uprising against race oppression in Macedonia, the eyes of Europe would now be turned toward the uprising against class oppression in southern Russia. Reliable news is difficult to obtain, but, according to the Russian correspondents of the London "Times," "Mail," and "Standard," the labor movement has for the first time taken a serious hold on industrial Russia, and the industrial discontent is so vitally united with political discontent—giving strength to it and receiving strength from it—that the Russian authorities feel that political revolution will be hastened if the strikers are successful. This, according to the English correspondents, is the explanation of the shooting down of large numbers of strikers by the Russian soldiers during the past few weeks. The Cossacks, it is charged, fire into crowds of workmen upon little provocation, and themselves take the places of the strikers on the railways and in the factories when willing hands cannot be found. The censored Russian despatches deny the charges of terrorism, and claim that the troops have only fired into mobs which were themselves terrorizing the communities about them. Without doubt the Russian defense contains a large measure of truth. In Russia, as in Macedonia, those in revolt have been subjected to brutalizing conditions for generations, and it would be strange if they were not guilty of outrages requiring stern treatment from the sol-

diery. Nevertheless, in Russia as in Macedonia the struggle for better conditions awakens the sympathy of liberty-loving people all over the world.

#### Mr. Carnegie's Gift to his Native Town

Mr. Andrew Carnegie's gift of two million five hundred thousand dollars and a park to his native town of Dunfermline in Scotland is a decided departure from the benefactions with which his name has generally been associated. Instead of establishing a library, he has undertaken the experiment of founding an institution to serve the entire social life of the people of the place. To quote his own words, the object is "to attempt to introduce into the monotonous lives of the toiling masses of Dunfermline more of sweetness and light, to give them, especially the young, some charm, some elevating conditions of life which their residence elsewhere would have denied, so that a child in his native town will feel, however far he may have roamed, that, simply by virtue of being such, his life has been made better and happier." Whether it be in a village, a provincial town, or a great city, the last thing to be ministered to is the wholesome desire for social enjoyment. It is this lack of healthful social centers which gives power to degraded pleasure resorts and is the cause of much that is barren and dreary in country and city alike. We believe that Mr. Carnegie has in this gift made one of his greatest benefactions. He has shown great wisdom, too, in not only permitting but specifically instructing the trustees of the fund to try experiments, to be willing to make mistakes in attempting to discover just what will be most effective in accomplishing the object, and to be free in the administration of the trust so long as they keep in mind the wants of the people and the possibilities for their improvement and uplifting. There are thousands of communities in this country that need such a wholesome social center as this more than they need anything else.

#### A West Indian Hurricane

Not merely the sympathy of people in this country but their generosity should be appealed to by the destruction caused in Jamaica by the hurricane which swept over that beautiful island early last week.

A despatch from Kingston states that the destitution in the stricken districts is appalling, that thousands of persons are homeless, and that at a meeting held with the Governor's approval an appeal was made to the people of the United States for foodstuffs, lumber, and money. The southeastern portion of the island suffered most severely, and although the loss of life was comparatively small, the loss of property is many millions of dollars in value, and the immediate suffering inflicted on the people is incalculable. The same hurricane or cyclone also did serious damage in the island of Martinique and some on the southern coast of Cuba, and then appears to have dissipated itself in the Gulf of Mexico. It was a typical four days' tropical cyclone, such as often occurs in the Caribbean Sea at this time of year, and it is only because the island of Jamaica was so unfortunate as to lie exactly in the course of the storm when it was at its utmost violence that this cyclone is to be distinguished from many others which in August or September sweep this portion of the ocean.

**Prussia's  
Anti-Disfigurement Law**

The Prussian law recognizing without qualification the right of the State to prohibit disfiguring advertisements on private property, a right touched upon incidentally by The Outlook in a recent editorial on "Civic Æsthetics," is discussed at length in the latest issue of "A Beautiful World." This publication, as will be recalled, is the official journal of Scapa, the English society which for ten years has waged vigorous war against such advertising appropriation of the common inheritance in undefaced scenery. The object of the Prussian law, as stated in the preamble, is to "prevent the disfigurement of places remarkable for their natural beauty." It authorizes the "police authorities," meaning local elective bodies having some functions resembling those of the county or road commissioners of some of our States, "to prohibit outside of towns such advertising boards or notices or pictorial devices as disfigure the landscape," thus extending a similar prohibition in urban districts provided for in previous legislation. The law owes its origin to agitation in the Rhine country after the attempt by a

district council to prohibit disfiguring advertisements was thwarted by an adverse decision, the Supreme Court sustaining on appeal the claim that there was no legislative authority for such prohibition. The Government, in response to a generally expressed desire, then introduced in the Landtag a bill to remedy this defect. The committee charged with its preliminary examination carefully considered all the equities involved. It was urged, to quote the report, that "where a small landowner, who has won a scanty yield from his stony fields, is enabled to get an additional rent in excess of the annual yield of the land by permitting the erection of a huge advertising board," he is entitled to compensation for its removal. Reply was made that "employment of the surface of the land for a purpose so far removed from its common and ordinary use" does not constitute a proper case for compensation. It was proposed "to do no more than to extend accepted legal principles"—for example, "large restrictions placed on the use of landed property, in the form especially of building regulations," dating back to 1850—"so as to bring within the scope of public regulation both the protection of the æsthetic taste and the preservation of landscape beauties." This view was accepted by all but one of the fourteen members of the committee, and the bill substantially as reported passed both Houses with apparently little, if any, opposition. As "A. Beautiful World" says of the law, it is "elastic," giving a remedy where there is a grievance, but not interfering with advertising generally; it is not "arbitrary," since it makes no distinction between different classes of advertisements, "disfiguring effect being the sole criterion;" it is based on the right view of public policy, recognizing legally the equitable interest of all who love the beautiful in nature. The example set by Prussia has been followed by the Hessian Legislature, which has included similar provisions in a statute for the protection of public monuments.

**The Work of Scapa** This issue of "A Beautiful World," the first in three years, reviews at length what has been done by Scapa in the ten years of its existence. Of matters of

general interest in this record, not previously noted in *The Outlook*, these may be mentioned: The application to Parliament for special powers to regulate exposed advertising (similar to the powers granted to Edinburgh and Dover) by some twenty corporations and district councils; the promise of the Government to make official inquiry into the practice of other countries regarding the taxation of exposed advertising and its regulation; the passage of an act enabling local bodies to levy rates on spaces and premises used for advertising display, a power effectively invoked in some localities to diminish the volume of such advertising; a conference between representatives of Scapa and a committee of bill-posting interests to reach, if possible, some friendly agreement as to regulation—an incident, though the conference failed of immediate result, which illustrates the new place accorded Scapa as representing, not a fad, but a practical reform; the founding of "John Evelyn Clubs" as educative centers "for the defense and promotion of picturesque amenities, and for developing and fostering the taste for nature and for grace in the aspect of every-day scenes." "A Beautiful World" also devotes large space to the report of a commission appointed by the Grand Council of the Canton of Vaud, Switzerland, and referred to the Council of State, demanding the protection of "our dearest national inheritance, the beauty of our country," from advertising disfigurement. In this connection it is interesting to note a quite general protest against the construction of mountain railroads in the Alps, and especially against the railroad now slowly creeping up the Jungfrau. The London "Graphic" comments: "The Wengern Alp, once sacred to the beautiful blue gentian, is speckled with the shells of hard-boiled eggs, rows of ladies read penny society papers at the edge of the Eiger glacier, and at the Sheideck a gramophone has taken the place of the 'Ranz des Vaches.'"

The London Religious Census  
The religious census of London compiled by the London "Daily News" has just been completed, and its statistics are worthy of attention. The census was taken by six hundred men, and involved

the work of six months. No enumeration was taken on such special Sundays as Christmas, Easter, or Whitsunday, when the churches would be likely to be crowded. According to the report, the ratio of church-goers is about one in 4.45, but as about a third of them are popularly known as "twicers," or those who attend a place of worship twice a Sunday, the total number of attendants must be reduced by so much. Hence the ratio becomes one in 5.25, or sixteen per cent. of the population. As to proportions between the churches, the Established Church of England heads the list, followed very closely by the Nonconformists, and a long way off by the Roman Catholics. Of the Nonconformist bodies, the largest are the Baptist and Congregational, each of which contributes more than a quarter of the total, while the Methodists and Presbyterians together contribute more than another fourth. The Methodist Church and the Established Church are the only two communions represented in every borough. In connection with this census the "Daily News" prints some interesting conclusions from the superintendent of the enumerators, who believes the principal lesson of his work to be that the power of preaching is undiminished. "Wherever there is the right man in the pulpit, there are few, if any, empty pews. It is not necessary that the right man be a genius, or anything approaching a genius. He may be in many particulars an 'extraordinarily ordinary' man so long as he possesses strong convictions, keen sympathies, and a magnetic personality." Secondly, if the so-called working classes and the classes below the working classes are to be brought inside a place of worship, future buildings must be the antithesis of what they are at present; especially must pews, with their attendant rents and proprietary rights, be abolished. But even where men and methods are alike admirable, many people, either from hostility or apathy, remain untouched. In order to reach these there must be more open-air preaching. Finally, the superintendent sensibly says, the Gospel preached must cover the whole of a man's life.

If the revival of the eighteenth century was due to the rediscovery of the worth of an individual soul and its personal responsibility, the revival of the twentieth century will be due to the discovery of the worth of the whole

man and the responsibility of the community. Our forefathers were content with the heaven after death; we demand a heaven here. They regarded themselves as pilgrims with no continuing city, "mere desert-land sojourners;" we are determined that this metropolis shall become the City of God.

While other causes may contribute to the apathy or hostility of nearly five-sixths of London's population as regards church-going, the deductions just mentioned are among the most important to be considered. It is hardly necessary to state that they apply to New York City and to other large communities as well as to the greatest city in the world.

#### Free Transportation for Tramps

While our frontier courts no longer return the verdict "Not guilty if you leave the State," many of our charitable societies continue to return the verdict "Worthy of aid if you leave the town." Tramping in America has been practically subsidized by the readiness of local boards to get rid of tramps by paying their railroad fares to the point where work is said to be awaiting them, or at least to the next station along the route. Like all mean ways of helping ourselves at the expense of our neighbors, this one has reacted upon those using it. Cities that have been made the dumping-grounds for the tramps visiting their neighbors have retaliated upon their neighbors, and in the end every city has had more tramps than if tramping had never been subsidized, and the whole cost of transporting tramps from one city to another has been added to the burdens of the cities concerned. Last year the National Conference of Charities and Correction took hold of the abuse, and appointed a committee, with Charles F. Weller, of Washington, as chairman, to formulate a plan by which the evil could be remedied. This committee sensibly utilized a plan which the National Conference of Jewish Charities has already used successfully for two years, and, after wide correspondence with competent advisers, has amended it as conditions seemed to require, and now submitted it to the charitable bureaus of the country, public and private, for adoption. It becomes binding upon the signers when adopted by the officers of one hundred such bureaus. It provides

that the signers shall not forward applicants for charity to other cities without first consulting the charity bureaus in those cities, and learning that the applicant's condition promises to be materially improved by transporting him, or that he has a legal residence in the place to which he desires to be sent. The signers further agree not to furnish any transportation to applicants unless they furnish through transportation either to the place where the applicant rightfully asks to be sent or to the place where his charitable transportation originated. In no case is the applicant to be "passed along" to another community which has no adequate responsibility for him. The committee has prepared an admirable telegraphic code by which all ordinary questions can be asked and answered in a few words. The plan is so well matured and the need for its adoption so evident that it ought to be adopted by acclamation by the charity bureaus of the country.

#### Forestry and Railways

The Bureau of Forestry in the Department of Agriculture has been accomplishing an amount of practical good which has not received the public attention to which it is entitled. One of the most important things accomplished by the Bureau is giving advice to individuals, associations, and communities concerning the various departments of forestry. An interesting application recently came to the Bureau from certain railways concerning the problem of securing new ties, a problem yearly becoming more difficult of solution as the long-leaved pine lumber grows scarcer. Yet over a hundred million ties must be used annually merely to replace those no longer serviceable, without counting those necessary for new construction. The reply of the Bureau of Forestry was that cheaper woods than long-leaved pine should be used—for instance, beech, birch, and maple. To the complaint that these timbers rot quickly the Bureau showed that the Chemin de Fer de l'Est in France has succeeded in making beech ties last over thirty years by simply impregnating them with tar oil. But the advice from the Bureau did not stop at this point; it suggested that railways should themselves

engage in practical forestry by acquiring large tracts of land suitable for timber; they would thus be assured of a steady supply of ties. Following this advice, the New York Central, Erie, Pennsylvania, and Baltimore and Ohio roads are studying the woodlands along their routes with a view to determining where timber-farming may be carried on most advantageously. Of course the system advocated by the Bureau is that which exists in Germany and Switzerland, namely, the cutting only of those trees which will afford a maximum of the kind of timber required, the small trees developing in their turn, and the cut-over land being gradually reforested by the planting of new trees. In those countries, for every tree cut a new one must be planted. From the standpoint of National wealth, no economic problem before the American people is at once so important or so interesting just now as is that of forestry. The work of the Bureau at Washington can hardly be commended too highly. It has brought the question before the people in such a way as to appeal both to the head and to the pocketbook—in other words, to theory and practice.

**A School of Journalism** Columbia University is to have a School of Journalism, related to the general educational work of the University precisely as is its school of law or of medicine. This is absolutely a new thing in the field of education; there have been courses of lectures on journalism in colleges, and private institutions have taught or attempted to teach the art, but the systematic training for newspaper work in a fully equipped institution established solely for that purpose is a novel undertaking, and may be regarded as one of the most interesting educational experiments of our time. The founder of the school is Mr. Joseph Pulitzer, of the New York "World;" and his generous gift of \$2,000,000 will certainly put the school on a sound financial basis and make it practicable to form and carry out thorough and extensive plans. The sum of \$500,000 is to go for the building, to be erected at once; the rest will endow adequately the professorships; the course is to be two years; it is hoped that

the school will be ready for work in about a year's time. In addition to the oversight and direction from Columbia University which the School of Journalism will have in common with other organic branches of Columbia, its management will be under the counsel of an advisory board to be appointed by the donor. Mr. Pulitzer has already obtained the consent to serve on this board of President Butler, of Columbia, the Hon. John Hay, Mr. Whitelaw Reid, the Hon. Andrew D. White, Mr. Victor F. Lawson, Mr. St. Clair McKelway, and General Charles H. Taylor, of Boston, while President Eliot, of Harvard, although unable to serve on the board, has expressed his willingness to give the institution suggestions and advice and has approved the general plan. The personnel of the advisory board, so far as announced, must give the public confidence that the school will be carried on in a dignified and intelligent manner; it is constituted, as will be noticed, almost equally of experienced newspaper editors and of men recognized as of a foremost rank in public life and statesmanship. President Butler's announcement of the munificent endowment points out that a new academic field is entered upon and that the donor's aim, long in contemplation, is to provide an opportunity to secure in a great university both theoretical and practical training for journalism, or, in Mr. Pulitzer's phrase, to found courses of study that will for this profession be equivalent to what other professional schools supply for other professions. President Eliot has submitted an excellent tentative outline for the course of study; its main divisions include newspaper administration, newspaper manufacture, the law of journalism, the ethics of journalism, the history of journalism, and the literary form of newspapers; while history, political science, and English will be taught with special reference to the practical work of the press. It is often said that a good newspaper man cannot be made by teaching, but it is equally true that a lawyer or a doctor cannot be made solely by teaching; in every profession a period of apprenticeship in actual work must follow the study of theory. It is not to be doubted that of two men entering upon newspaper work, one who has had the

advantage of such a course as Dr. Eliot has outlined would have a great superiority over one of equal ability who depended solely on his native cleverness and adaptability. That the Columbia School of Journalism will in time have a perceptible influence on the press of the country as regards dignity, breadth of view, and thoroughness of method can hardly be doubted.

## The Making of Americans

In the discussion aroused by the attempt of the United States to control and educate dependent peoples in distant islands the fact has generally been overlooked that there is an undertaking of the same nature in controlling and educating the mass of immigrants that pour into the States themselves. To say, as we are saying or ought to say, to Italians or Hungarians or Russian Jews who are here in America, You shall not be admitted to the privileges of citizenship until you give evidence of your fitness to meet its obligations, and in the meantime you shall not govern yourselves, we shall govern you, is to set ourselves a problem no less complicated and difficult of solution, but no less inevitable, than that which we have set for ourselves in the Philippines or Porto Rico. Indeed, the situation in those islands is in many respects less serious than that which exists within the United States itself. There the dependent people are isolated, here they are mingling with the citizens of the Nation. There the disturbance that is bound to occur in the process of control and education extends only indirectly to the Nation at large; here every disturbance affects very directly and appreciably the whole American population. The gradations are easy from ignorance and violence in a horde of un-Americanized aliens to political corruption throughout the whole political body; and political corruption means the decay of republican institutions. The Outlook has faith enough in the American form of government to believe that it is capable of solving the problem involved not only in the extension of territory, but also in the increase of immigration. The problem, however, will not solve itself.

There are two factors in this problem.

They may be stated in two questions: (1) What shall the Nation do to regulate the incoming stream of immigrants? (2) What shall the Nation do to make those who are already here contribute to its own best life?

I. The present stream of immigrants is very different in composition, as The Outlook has already pointed out in the issue for August 1, from that which was entering American ports twenty years ago. Then the immigrants were not very different in race and historical environment from those who originally peopled the United States. Celts and Celto-Saxons from Great Britain and Ireland, Swedes and Norwegians from Scandinavia, and Teutons from Germany are all racially allied. These were all elements that entered into the making of the English race. These elements were, two decades ago, simply uniting again in remaking the American people. Now, however, it is a people almost wholly alien in race and language that is being fused with the population of America. Now it is not northern but southern Europe, and southern Italy at that, not Celts and Teutons, but Slavs and Semites, that are sending in their hordes. These people bring with them no high standard of living; they bring with them no conception of popular government, not even one so rudimentary as that which the barbarian invaders of England possessed. The other day a colony of these immigrants was discovered contentedly living in the midst of the filth that dripped from the garbage-dumps of New York. Every day there are occurrences that show the easy acquiescence of these immigrants in the *padrone* system, a petty tyranny that is too ignoble to be classed among forms of government. Even as they are, if they were impelled to come to America by their aspirations after something better than they have in the Old World, though their aspirations were crudely materialistic, they ought to find at least discriminating welcome. But it is plain that they come almost involuntarily. Indeed, it is fair to say they do not come, they are imported. The steamship companies find that men and women make as profitable freight as any other goods. To drum up trade they are employing agents to send men and

women to these shores. According to the reports of Mr. Marcus Braun, the confidential agent in Europe of the Bureau of Immigration, these companies pay peasants and peddlers, school-teachers and postmasters, village notaries and even priests, in Hungary, Croatia, Poland, and elsewhere, to recruit immigrants from among the most ignorant, destitute, and degraded of the people. Employers of labor in this country, according to accounts given of Mr. Braun's reports, are joining in defiance of the law with the steamship companies in this importation of men like chattels. Immigration thus stimulated and conducted is not the sort of immigration this country can be expected to tolerate. The Outlook has never advocated and does not now intend to advocate the shutting of "the door of hope" against the oppressed of other lands, but it does most urgently advocate the shutting of the door of privilege against the greed and unscrupulousness of those who would traffic in human beings without regard to the welfare of this country, much less to the ordinary promptings of humanity.

There needs to be a very vigorous and widespread public sentiment aroused against this wholesale commerce in men, women, and children. If the economic and political welfare of this country is to be preserved, the people themselves must preserve it. They owe it to themselves to call for a curtailment, and if possible a total prevention, of this cattle business. For this there must be more effectual laws.

In the last session of Congress the bill requiring an educational test was held up by filibustering in regard to the Statehood Bill. This test ought to be enacted. It is hopeless to make Americans out of the class of immigrants who are now entering the United States, unless they are proved to be intellectually capable of understanding American institutions. The only way by which this may be done is by an examination that will satisfy the immigrant officers that the applicants for admission have received some education.

Before the new law was passed last March, consuls in foreign ports had power to scrutinize the list of immigrants leaving those ports. Thus precaution was taken against allowing undesirable immigrants

even to start on their trip across the Atlantic. By the new law the consuls were deprived of this power. Why? A stone does not roll of itself up hill. The steamship companies found it not only irksome to pay the dollar for each list submitted to a consul, but disagreeable to be obliged to accept his rejections of those immigrants who, because they were superannuated or paupers or contract laborers or exposed to disease, deserved to be excluded. The companies, moreover, did not enjoy having their steerage quarters supervised. So the law was changed, and now the steamship companies dump their human freight before inspectors in American ports who have no such means of knowing about the people as an official in the port of departure would have. Whether the former provision was the best that can be devised we do not undertake to say; but in some way the power to examine and reject immigrants before they embark for America should be restored. The best way to prevent the steamship companies from grubbing after the most degraded human creatures of Europe is to make that part of their business unprofitable.

II. Whatever may be the safeguards, however, which we may adopt in the future, we have already hundreds of thousands of aliens in this country who are strangers to our laws, our customs, our language, to the whole spirit of our life. Like all strangers, they huddle together in communities of their own. They not only speak, but they think and live, in Italian, Slavonic, Yiddish. They dig American ditches, they mine American coal, they cut American garments, but they no more become Americans thereby than a cow becomes an American because she eats American grass. What shall we do with them?

The chief thing to do is to believe in them. They are not all living under the garbage-dumps. Go into an Italian tenement and see there more courtesy than exists in many a New England village. Go among the Slavic population of a mining town and find there virtue that would shame many an indigenous American community near by. Go among the poor Jews of New York and find there more family loyalty than in most homes on Fifth Avenue. This Italian, this

Slovak, this Jew, is different from the Yankee. Suppose he does not become a Yankee all at once, is that any ground for contempt or fear of him? Is not a character that is a bit firmer than wax worthy of respect? Is it not somewhat vainglorious in us to imagine that all good will come to him only as he becomes like us? Is it wholly preposterous to fancy that in return for what we give him he has something to give us? Is American civilization to be measured wholly by wages and votes? Cannot America get other profit than that which can be described as economic or political? It seems to us that we may expect something from races that have created the art of Italy and the wild music of Hungary and Poland. Down in the foreign quarters on the East Side of New York there is more evidence of sheer delight in the beautiful than can be discovered in all the annals of conscientious New England. The evidence may be only in a fiddle, a bit of colored cloth, a little puppet show, but that, to use Carlyle's expression, "as compared with flat Nothing, is something very considerable." It is of first importance to make sure that only those be admitted to this country who have aspirations for economic and political freedom; but it will be well to remember that these same incoming aliens have other aspirations—or perhaps, more exactly, instincts—which we of well-to-do America, too commonly ignoring them, might cultivate to our own advantage as well as to theirs.

## A Victory for Conciliation

While capital in some of the textile industries and laborers in some of the building trades are rejecting arbitration because they think they can secure by conflict better terms than impartial arbitrators would accord them, it is refreshing to see that the principle of arbitration is making steady advance and that in every part of the country public sentiment is pressing more and more strongly upon both parties to industrial disputes to submit their differences to a fair tribunal. The latest victory for this principle is in the Southwestern coal mining region, where the agreement reached covers all the mines of Missouri, Arkansas, Texas, Indian Ter-

ritory, and Kansas. This great mining district has not received from the press one hundredth part of the attention given to the anthracite fields, but it is rapidly coming to rival them in importance. About fifty thousand miners are already employed in it.

As in other sections, the miners' union in the Southwest passed through the crude experimental stage when its combative spirit was out of proportion to its strength, and when this spirit in the union had its counterpart in the same spirit among the operators. As a correspondent in the heart of the region writes us: "The record of the past shows that operators met in secret and secluded places to plan war against the miners' organization, subscribing thousands of dollars to ship in colored miners and non-union white miners, and thus show that they had a right to run their business as they pleased and employ whom they pleased. The miners, on the other hand, fought for their organization as the bear fights for her cub. They denounced the mine-owners, abused capitalists, obstructed every movement to operate the mines, and put the whole surrounding country in jeopardy. This year, after long negotiations, a treaty of peace was concluded satisfactory to both parties."

The negotiations took place during a three weeks' inter-State convention of operators and miners held last month in Pillsbury, Kansas, one of the most important of the new mining cities. For fully a week before this convention met, separate meetings of operators and miners had been in session to formulate in private the policy of either side. For the first time in their history the operators were fully represented and united, and for the first time a complete recognition was made of the miners' union. The miners were firm in their demands for higher wages and improved conditions. These demands were chiefly based on the increased expense of their living and the more profitable market operators have for their coal. The moving and guiding spirit in their meetings was the President of their National organization, John Mitchell. The operators felt that they could do business with a man who had received the respect of Eastern operators and of the President of the United States. The miners felt, too, that their cause could be safely

intrusted to his hands. Their retreat from radical and unreasonable demands is due to his generalship and sound advice. Addressing a mass-meeting of miners, previous to the joint convention, he said :

There are many misconceptions about the relations of capital and labor. Some men who own the mines think they own the men too. And some miners who work in the mines think that they own them. Both are wrong. The mines belong to the owners. You belong to yourselves. I don't believe we will ever be able to correct wrongs by denouncing some one else. I don't believe in denouncing capital for the wrongs of labor. I don't believe that capital is altogether to blame for all of labor's wrongs. None of us are poor because we want to be. There is not one of us but would be willing to accumulate wealth and become a capitalist if we could do so honorably. So, instead of denouncing those who have money, what we ought to do is to organize our forces to cause a fairer distribution of wealth among those who produce. . . . It is claimed by the ignorant and the prejudiced that trades-unionism should be abolished because it depends upon the exercise of physical force to make its issue successful. If I believed that trades-unionism depended on acts of lawlessness and violence to be successful, I would abandon it forthwith. I am a better American than I am a trades-unionist, and I would not stay with a movement that depended on lawlessness. . . . While the trades-unions ask the highest possible wages, they must return faithful service. In the trades-union and in the industrial movement men have obligations as well as privileges. We have a duty to perform. If we receive good pay, we must give good work.

At the miners' convention, speaking to the delegates representing fifty thousand miners, Mr. Mitchell gave similar advice. He appealed to them to meet the operators not in the spirit of bluff and bravado, but as man to man, and talk over the situation "calmly, temperately, and without prejudice or passion." When a resolution was introduced to submit to the local unions for their adoption the joint contract and scale of wages that should be agreed upon, it was promptly tabled, on the ground that it was not right "to play ping-pong" with a contract accepted and signed by the operators. In the joint convention the miners were represented by their best-informed and fairest-minded men, who presented ably their interests, and were also ready to concede to the operators just profits on capital invested. The operators showed on a blackboard the cost of operating shafts, and the average cost per ton to

them. The miners showed to a cent their average wages and actual earnings after deducting their expenses. After a most thorough discussion, the whole matter was turned over to special committees which wrestled with the problem a whole week, and finally settled upon a contract and scale of wages, which the joint convention adopted.

It is hardly necessary to add that in the final agreement each side made concessions for which its members had been prepared at the separate sessions to which the proceedings of joint conferences were constantly reported. At the end, however, each side was assured that it had obtained fairly just terms, and that insistence on better terms threatened a strike or lockout, sure to cost far more during the conflict than could be won by victory. The public, too, has gained as much as either side, for, no matter what the result of a labor conflict, the public is sure to be the loser from suspended production, interrupted trade, and advanced prices. There are times when the stronger of the two parties to an industrial dispute may gain an advantage through trial by combat. But the advantages thus secured are short-lived, for the imposition of unjust terms provokes new conflicts until justice is secured. To the public, however, there is never any advantage, however temporary, from industrial war, and every one who is—as Mr. Mitchell might phrase it—a citizen first, and a trades-unionist or a stockholder second, is bound to support the methods of peace. The great victory for conciliation in the Southwest brightens the hope for similar victories in every part of the land.

## An Old Lesson

Years ago Mrs. Jackson, writing under the familiar initials "H. H.," published in *The Outlook* an article on a lost map, which attracted a great deal of attention. A distinguished officer during the Civil War had been charged with grave misconduct on the field of battle. He defended himself by a very straightforward statement, which was unsupported by proof, and for many years he suffered greatly in reputation and still more, no doubt, in his own sense of injustice ; for, after a long period

of time, a plan of the battle was discovered which confirmed in every respect his own statement of his plans and actions on the momentous day. From this striking incident Mrs. Jackson drew the lesson of holding the mind in suspense, of postponing the judgment, of patience and charity in passing judgment upon others, so constantly needed to be learned by men and women of all classes.

There is no more tragic aspect of life than the waste of energy, the loss of power, the breaking of influence, and the breaking of hearts, which are the results of hasty and inaccurate judgments of all kinds. Men are constantly ridiculed or denounced for reports of speeches or newspaper statements of opinions which the critics and judges do not so much as take the trouble to verify. Misrepresentations of this kind often fly undisputed from the Atlantic to the Pacific, leaving a permanent erroneous impression in the minds of thousands of people. The discussion of the day, both oral and written, in conversation, in newspapers, in magazines, in every conceivable form of publication, is full of misrepresentation, incorrect quotations, and misstatements, not always by any means the result of malicious intention, but the product of a careless, slovenly, and morally inexcusable attitude of mind.

All right-minded men and women owe it to themselves, to their neighbors, and to the well-being of society to protect their fellows against this kind of misrepresentation. No charge against a man ought ever to be repeated unless it is advanced upon serious grounds by respectable people. Not long ago several leading journals united in publishing a story in regard to one of the foremost Americans of the day which, if true, would have stamped him as a scoundrel. That story has been retracted, and the inferences from it disavowed; but meanwhile it has found lodgment in the minds of thousands of people who have failed to see the disavowal, or forget that it has been made, and a permanent injustice has been done to an upright public servant. It is one thing to criticise fearlessly and sharply a public man's failure to do his duty; it is another thing to make charges affecting his personal character. Such charges ought never to be made, or to be repeated, except on good authority.

No man ought to be held responsible for an opinion unless it is definitely known that he entertains and has expressed it. A newspaper report of a speech ought never to be made the basis of serious criticism unless the person who has been reported is first consulted. Grave injustice has often been done by taking careless and inaccurate reports as if they were authoritative statements of opinion.

No story of any kind against a man or woman which is being hawked about through small communities, or in larger circles in larger communities, ought ever to be passed on except with a full sense of responsibility. That is to say, every man who repeats a story affecting another person's character ought to understand that by that repetition he has made himself responsible for the charge. Instead of pulling people down morally and breaking their influence, it is every man's duty to build them up and to conserve their influence. There is no more heinous offense against a community than the wasting of its moral capital; and this is precisely what happens when the reputation of a good man or a good woman is assailed. To attack such a reputation, to smirch it, or belittle it, is not only a grave offense against the person, but is a waste of the moral capital of the community in which that person lives.

No rational man or woman expresses an opinion about any scientific matter unless that matter has been made the subject of intelligent study and some familiarity with the facts has been secured; but in the gravest questions affecting character, men and women do not hesitate to express opinions on the slightest possible basis of knowledge; and so it happens that the gravest wrongs are committed and the heaviest sorrows inflicted by mental slovenliness and moral obtuseness. The sensitive and high-minded suffer as much from the stupidity of the obtuse as from the malice of the keen-witted. Most of the misrepresentation, eight-tenths of all the personal criticism, and the great mass of miscellaneous misinformation which floats about in every community, are set in motion and kept in motion by people whose opinions are entitled to no weight because they never take the trouble to base them on facts.

Responsibility for the tongue is constantly evaded, but no man can escape it; and there are heedless men and women in every community who are walking straight on to a day of reckoning, the terrors of which will not come out of any external punishment, but from the consciousness of irreparable wrongs committed carelessly and stupidly, without even the palliation of temptation.

## What is it to Accept Christ?

If accepting Christ means simply obeying his instructions and following his teaching, how does this differ from salvation by works? What place does it leave for regeneration? What for atonement? What for the value of his sufferings and death?

To accept Christ is to accept his life, his love, his service, to accept his pardon and his forgiveness, to accept his cross and his power. It is to accept this simply, naturally, to accept it as a free gift, paying nothing for it. And then, because we honor him and love him, to follow him, and try to do his work in his way. Salvation by work means that he saves us because we work for him. Salvation by faith means that we work for him because he has saved us. In the one case we pay him for his gift, and it is not a gift but a purchase. In the other case we accept his gift, and then show our gratitude by the service we render. If we try to buy peace and joy by working for them, we make a mistake. If we try to buy them by regarding our experience as a condition of getting them, we make a mistake. We are to take God's gifts as we take the sunlight and the air, and we are to live in his grace just as we live in the sunlight and the air.

Regeneration is new birth, new life. We cannot recreate ourselves. The birth from above must come from above, not from us. All our thinking, our studying, our resolving, can do nothing toward recreating ourselves. We are to leave all questions of new birth to God, and not trouble ourselves about them. We are just to take his gift of life, and then live naturally and simply because he has given that gift to us.

Atonement is at-one-ment. It is reconciliation with God; it is being at one with him. It has cost God something to make

this atonement possible. That cost is represented to us by the suffering and death of Christ. He has done all that he can do to be at one with us, by coming into our life, sharing our sorrows, bearing our burdens, entering into our sins. It remains simply for us to be at one with him, to make his will our will, by taking the gift which he freely bestows upon us, by making his will our will, and by living the life which through the life of Jesus Christ he has interpreted to us. This is salvation, taking the gift of life from God, and then living it naturally, simply. Salvation, then, does not come by work; it is not given to us as wages because we have paid for it by service. It does not come by seeking or following after it, or trying to get it. It comes by the faith which desires it and accepts it, the faith which works by love, that is, the faith which is shown in the obedience of love, by doing the work which Christ bids us to do, and living the life which he enables us to live, accepting the commission which he proffers to us in the words, "As the Father hath sent me into the world, even so send I you into the world."

## The Spectator

In a recent issue of *The Outlook* comment was made on the attitude of the Turkish Department of Public Education toward the editions of the Bible in the Turkish language which the American Bible Society distributes so widely throughout the Ottoman Empire. This attitude and the comment thereon recall to the Spectator the general question of press censorship in Turkey, and particularly a chat which he had some time ago with the editor of the "*Lisan el Hal*," one of the leading papers of Syria published in Beirut. Ludicrous to the American mind as may seem the objections of the Turkish Educational Department to the word Macedonia as it appears in the New Testament, or its suggestion that the sentence in 1 Timothy, "Christ Jesus came to save sinners," be changed to "Christ Jesus came to save Christian sinners," the Turkish censorship as applied to the press and to secular books offers examples still more amusing and incomprehensible. The last instance given above is indeed not incom-

prehensible at all, as soon as one understands the intense hold that his religion has upon the average Mohammedan, and his utter contempt for and hatred of other beliefs.

To come back to the main point, however. As in Russia, the proof of every line intended for publication in a newspaper in the Ottoman Empire must be submitted to the censor. If he approves an article, well and good. If it displeases him, out it goes, or else he changes it to suit his views and those of the Government. The "Lisan el Hal," or, to English the name, the Tongue of the Times, is a Christian publication (in the sense at least that it is not Mohammedan), and perhaps has had more than its share of attention from the censors, but, on the whole, the latter are fairly impartial and treat the publications of all sects and nationalities pretty much alike. The editor must bear in mind that nothing must be said which could be remotely construed by the most exuberant imagination into a reflection on the Sultan or the Government; that he must constantly speak in praise of Abdul Hamid, and that he would much better avoid politics. If he touches on the latter subject, he does so with considerable trepidation, and usually his views do not reach the public. The "Lisan el Hal's" editor gave to the Spectator a number of examples of the work of the censor. One day a man came to the office and offered an advertisement to the effect that a valuable horse belonging to him had been stolen from an inn somewhere in the Lebanon. The advertisement was duly set up, sent to the censor, corrected by that official, and printed in the paper. The next day the advertiser appeared at the office and demanded to know where his advertisement was. "In the paper, of course," he was told. "There's an advertisement in the paper saying that a horse has been lost. That's not mine. My horse was stolen," he protested. "Ah, but don't you see," was the reply, "if we say that your horse was stolen, that would indicate that traveling in the Lebanon is unsafe. The censor says that would never do, because every one knows there is no safer region in the world." And the advertiser content with that. What

of the "Lost and Found" columns in the New York papers if that system prevailed here? On another occasion there was a murder in Beirut, and the "Lisan el Hal," being an enterprising sheet, "covered" it fully. The entire article was "killed" by the censor. He could not allow the impression to go abroad that anybody ever killed anybody else in the city. Partly through disgust, and partly because the paper had to go to press at once, the editor simply left a blank space where the account of the murder should have been. Worse and worse! The censor argued that when people saw that blank space they would know that something objectionable to the Government had been left out, and would immediately begin to inquire what that something objectionable was. They might find out, too, and then the work of the censor's office would have gone for nothing. So, to uphold the dignity of the office, he suspended the "Lisan el Hal" for some weeks, and, if the Spectator's memory is not at fault, imprisoned the editor to boot. There came to the city at one time, for a visit, a certain Mr. Caliph, from somewhere in the interior. He was a man of some consequence in his native town, wherever it was, and "Lisan el Hal" deemed him worthy of mention and proposed to print the fact that "Mr. Caliph was visiting Beirut, etc., etc." The censor was aghast. Allah forbid! There is but one Caliph, and he is our victorious Sultan, Abdul Hamid Khan—long may he live! So poor Mr. Caliph had to make his visit unnoticed by the press, much as he may have deserved the distinction and little as he may have cared to exchange places with his Imperial Majesty.

It has been said that in newspaper articles frequent mention must be made of the Sultan and the glories of his reign. An excellent instance of this is shown in an account of the inauguration last May of the Rev. Howard S. Bliss, D.D., as President of the Syrian Protestant College, which was printed in "El Mahabbi," an Orthodox Greek newspaper in Beirut. After an introductory paragraph the article continued: "The joy was general the spirit and significance of the celebration was general. The celebration

was a bright representation of the advance of knowledge protected by the Ottoman flag. It presented to our view a magnificent scene in the progress of an age illuminated by the sun of knowledge radiating from the firmament of the Hamidian [Abdul Hamid's] throne. We greeted, therefore, in the person of the new President, the Ottoman Empire under whose protection the college has grown and the sciences and arts which the college strives to disseminate in our country. It was with this salutation that we stood among the crowds of well-wishers. For, as loyal and true Ottomans, whose first and foremost duty is to honor their Sultan and his flag, we deemed it our duty to salute the man who has come from a distant country to direct an institution in which the Ottoman flag is honored and where good wishes are always being formed for the welfare of his Imperial Majesty the Sultan, . . . We are particularly indebted to the college for the respect in which the Ottoman Empire is held within its walls and for honoring his Imperial Majesty, our lawful liege and sovereign, the victorious Sultan, Abdul Hamid Khan. The faculty is so careful in this respect that the college is more Ottoman than American. The name of our beloved Sultan begins and ends every speech delivered from its platform. The crescent of our victorious flag waves over its walls and lends to them its luster and brilliancy. Its graduates are known to be the most loyal subjects of the country. That is what makes the college great in our eyes, in our heart, and in our thought." No comment is necessary. The Spectator has reason to know that most of the adulatory sentences were written or suggested by the censor himself, and that much of the original matter was stricken out.

The censorship over secular books is conducted on the same picayune ideas. The Department of Public Education once suppressed an entire edition of a rhetoric or grammar because it gave as an example of an interjection the phrase "To arms! To arms!" That, the censors gravely said, would be enough to rouse all Armenia to revolt. Better still was the serious objection raised against the Moody and Sankey hymn-book. The censors based their ob-

jections on the ground that the famous hymn, "Hold the Fort, for I am Coming," could not fail to spread sedition among the discontented and lead them to believe that some mysterious power would aid them in overthrowing the Ottoman Empire! There is also the probably apocryphal story of the suppression of a chemistry because it spoke of the formation of water by the *union* of oxygen and hydrogen. The story might very well be true. All books that enter Turkey through the Turkish mails are, of course, carefully examined. Not long ago the Spectator sent "Richard Yea-and-Nay" to a friend in Turkey, but it never reached its destination. The censor probably has it in his library. The safe way is to direct books via London. In this way they go in the English mail, which the Turk does not often dare to violate.

The supervision over telegrams is just as strict as that over books. A German engineer in the Lebanon placed an order with a Paris firm for some sort of a stationary engine to be shipped to him as soon as possible. The firm telegraphed to inquire how many revolutions a minute he wanted. He answered, "Five hundred revolutions a minute." The next day he was arrested. Brought into court, the judge asked him if he lived in the Lebanon. He replied that he did. "Do you correspond with such and such a firm in Paris?" "Yes." "Ah," cried the judge, "I know you. You are the man who telegraphed to Paris that there are five hundred revolutions a minute in the Lebanon!"

And the above instances are not extreme ones. Others similar to them occur all the time. This microscopic censorship is not only an annoyance, but, if the Turk could understand it, is perfectly senseless and useless to himself. While the censors are wasting their time hunting for insignificant little things which would otherwise pass unnoticed, they are leaving the door open for the entrance of advanced ideas of education and civilization which, from their point of view, are calculated to do a world of harm. So one may view with considerable equanimity the present system, irritating as it is at times and ridiculous as it is always.

# Colombia and the Canal

By Archibald R. Colquhoun

Author of "China in Transformation," "The Mastery of the Pacific," etc.

EVER since the Latin-American countries threw off the Spanish yoke, that part of South America which adjoins the isthmus has been the scene of conflict. Bolivar, the hero of ancient Colombia, who was President from 1819 to 1831, had a simple task in upholding his people against Spain compared with the efforts of later Presidents to maintain themselves against their own countrymen. Colombia split in two in 1830, and then came a fresh period of confusion and party strife leading up to the civil war of 1860 and the triumph of the Federalists, after which the country emerged as the United States of Colombia, with a constitution modeled on that of its great neighbor in the northern continent. Since that time the history of Colombia has been that of revolution and party warfare. But, indeed, there seems some special fate pursuing this unfortunate country.

The strongly fortified city of Cartagena, said to be the oldest walled city in the Americas, testifies to the strategic value attached by Spain to this territory, and was the scene of many stern conflicts. Cartagena, with its forts, its walls, its narrow streets, its cathedral and churches, remains almost as the Spaniards left it, and the free-born citizens of the republic which threw off the yoke of Spain use the dungeons left by their quondam masters to imprison their political opponents.

What the internal development of the country has been can best be judged from the state of communications. From the coast at Savanilla a short (and uncertain) line runs to Barranquilla, a rather picturesque little town, where the prevailing features are the dust, the blaring of trumpets and banging of drums by a ragged military band, and the prevalence of Germans at the hotels. From Barranquilla to Bogota, the capital of the republic, is about ten days' journey; the first six performed in comparative comfort if one is able to secure a peaceful passage on one of the fine paddle steamers that

ply on the river. These are liable, however, under the military régime which has prevailed for the last four years, to be requisitioned for troops, who are not at all desirable traveling companions. The latter half of the journey is made on horse or mule back, and its comfort depends greatly on the knowledge possessed by the traveler of the country, the completeness of his arrangements, and on his power of invective if he detects his pack-driver or others in his employ in attempts to shirk their duties.

Bogota, when reached by this route, is therefore some eleven days from the coast, and although there are about four hundred miles of railway altogether in Colombia, different parts of that country are even more remote. The lines are laid in short lengths in eight out of the nine departments, and forty-seven miles must be deducted for the line which crosses the Panama isthmus. The country is, nevertheless, a fine one, especially in the temperate regions of the plateaus in the eastern Cordilleras, which enjoy a cool and healthful climate and are rich in minerals. Large quantities of gold were taken from the country in Spanish times, and mining, even under present conditions, is successfully carried on by several foreign companies.

It is impossible to appreciate the condition of affairs in Colombia to-day without a brief résumé of her political history since 1884, and more especially since the death of her last strong President, Rafael Nuñez, early in 1894. This man overthrew the constitution of the Federal Republic, and was practical dictator of the country for about ten years; and although his opponents regard him as a traitor, and he undoubtedly used political parties merely as a means of gratifying his ambitions, it must be said that under his arbitrary rule Colombia enjoyed peace and comparative comfort. The constitution of the republic before the *coup d'état* of Nuñez was modeled on that of the United States, each department enjoying

autonomy under a President chosen by themselves. Nominally no more freely representative government could be devised, but practically the party in power managed the elections in such a manner that they became mere farces. Latin-Americans have peculiar theories of their own as regards elections, which are very differently worked from those of Europe or the United States. As a rule, they take place without the people's knowledge, the result generally showing the return of the President's selection at the head of the poll. The process is as follows: A few weeks before the date of the so-called elections an address is circulated in which it is courteously but plainly pointed out that, while in no way wishing to bring an undue influence to bear upon the electors, in the opinion of the President and Ministers Mr. X. and Mr. Y. would be highly suitable people for such and such seats; and returned they usually are. But if the people happen not to approve of the official nominees, ah!—then occurs the revolution, that so oft-recurring feature, the *pièce de résistance* of Central American life.

Sometimes, however, as a means of avoiding a threatened rising, they go so far as to make considerable show of opening the polling-booths, and one little instance will give a pretty fair idea of what mockery it all is. On the eve of the day announced for the polling, the *alcalde* of one of the larger towns despatches a batch of messengers to three hundred or so residents in the district, requiring their presence on the morrow under penalty of a heavy fine. On arriving next day, they are ushered one by one into the *Cabildo* (municipal building), where the *alcalde* wishes them good-morning and summons his clerk, who hands each man a strip of paper neatly folded up, pointing at the same time to a box and adding: "Put it in there, please." Naturally, Mr. Elector does as he is requested, after which another clerk registers his name and address, the *alcalde* comes forward and shakes him by the hand, and the next moment he is in the street—asking the first passer-by what it all means. Next morning the official gazette solemnly announces that by an overwhelming majority Mr. So-and-so has been elected to the vice-presidency, and so the matter ends. This is what is known

as the strict observance of the people's right of voting. The fact is that the liberties, the guarantees, the rights of the Spanish-American citizen exist in the Constitutions—but only there. Nothing remains to be desired—except that fulfillment.

Under a vigorous and unscrupulous man like Nuñez the government became entirely centralized, and the President assumed the most absolute power. By the new Constitution promulgated in 1886 the President became irresponsible, had the power to declare the country in a state of siege, to frame special laws, and to muzzle the press in a manner hardly possible in even autocratic Russia. Partly because of the heavy expenses involved by his method of government, which made a large army imperative to the maintenance of his power, and partly because he was a very poor financier, Nuñez involved the country in serious difficulties by the reckless issue of paper money, and thus was inaugurated the most extraordinary financial system ever seen in a country, outside comic opera. The issue of paper money has been the resort of every one who has been in power, or nearly in power, since then; and to such an extent has this been carried that unauthorized and irresponsible people have got together a few printer's types, and, setting up notes, have printed and circulated them with great success before any one could interfere. No wonder that the exchange has gone up and down to extraordinary figures, from something like 250 to 20,000 and more. (At the time of writing it is a little over 10,000.)

The death of Nuñez in 1894 let loose the elements of discord. The Vice-President, Caro, who had been for some years the executive head but entirely subordinate to his chief, became Acting President. Nuñez and Caro had kept to the traditional policy of their party in maintaining the Church as part of the State, but making the former subservient politically to the latter. In 1895 the Liberal party, whose principal platform is anticlericalism or the separation of Church and State, made an effort to get into power by stirring up a revolution, but this was put down by General Reyes, who was generally expected to be Caro's successor. Reyes is a man of property and education,

in many ways superior to his opponents, and a good deal was hoped from him; but hitherto he has not developed the daring and initiative which make a successful leader. In 1897 fresh elections took place on traditional Latin-American lines, but Caro, Reyes, and the other Conservatives could not make terms among themselves as to who should be "elected," and they therefore compromised by nominating two men, assumed to be "men of straw." These were an aged gentleman named Dr. Sanclemente, living a long way from Bogota and believed to be too feeble to be carried there, who was appointed President, and Marroquin, a man of some capacity but no particular influence, who became Vice-President. Reyes caused himself to be named "Designado"—a functionary who acts as under-study to both President and Vice-President, and assumes the supreme functions in case of death. Caro was, therefore, left out in the cold, and this seemed a defeat to his wing of the party, which is known as the "Historical Conservative." A surprise awaited Reyes and many others, however.

Marroquin had assumed the Presidential rôle, for the appointment of Sanclemente was regarded more or less as a joke; but while it still remained to be seen whether Caro or Reyes would be the power behind the throne, a third party got possession of the old President, "bundled him up," as a lively American described it, and brought him to Bogota, where, after a struggle with the astounded Congress, which locked its doors and sat inside refusing him entrance, he actually took the oath and became President *de facto* as well as *de jure*. During his temporary absence from the capital in 1898 Marroquin again took the reins of office, and, to the surprise of many, abandoned the Nationalist Conservative party, with its traditions of centralization, and went over to the Historicals. He gave satisfaction to many of the people by repealing some of the most obnoxious anti-Federal laws, but his reign was cut short by the return of Sanclemente, backed by his party, and in the clashing of interests was struck the spark which lighted a four years' revolution in Colombia.

It will be seen from the brief sketch given that many conflicting elements go to make up the political situation in

Colombia, and the broad lines which divided the Liberals and Conservatives, the Clericals and anti-Clericals, have been complicated by many side issues. Nevertheless, the Church has played no inconsiderable part in the recent struggle, and as Colombia is the last stronghold of the Catholic Church as a State institution in the Latin-American republics, it is inevitable that the *odium theologicum* should make itself felt in every dispute.

Soon after the outbreak of the war Marroquin headed a revolution in which the aged President was deposed and imprisoned, the ostensible object of the revolt being to stop the war. Marroquin became President, but the war continued with augmented force, the principal supporter of Marroquin being Fernandez, the head of the military and police forces at Bogota, who still retains a place in the Government under the same chief. Reyes took little part in these affairs, going to Paris to live, and afterwards, by a touch of irony, to Mexico as a delegate to the Pan-American "peace conference." He has only recently returned to Bogota.

The havoc wrought by the war is enormous. For over three and a half years trade has been non-existent, millions upon millions of paper money have been issued, crops destroyed, native and foreign property damaged, serious foreign claims incurred, and some forty thousand lives sacrificed. Peace has been obtained at last merely because the people are quite exhausted. At the time of writing the country remains under martial law, and thus all functions are vested in the executive, Marroquin and his associates being fearful of the consequences if they let go their despotic power.

At this juncture the Panama Canal question comes once more before the Colombian people, and all the four aspirants for power—Caro, Reyes, Marroquin, and Fernandez—are anxious to be in office when the treaty is passed and to get their share of the purchase money.

If a story (which comes on such excellent authority that it can hardly be doubted) be true, the Colombians, not long ago, were "done out of" what they thought was a very nice little deal on the Panama Canal. During the recent war, when the Government was particularly hard pressed for funds, certain members of the Gov-

ernment remembered that the Panama concession had nearly terminated, and arranged, on their own responsibility, to renew it to the Company for a very moderate sum. As the Colombian Constitution renders a renewal of the concession valid only after the sanction of Congress, this was an act of doubtful legality, but the members of Government concerned were prepared to take a good deal of risk for a small sum of ready money. Unfortunately for them, the whole amount was paid to certain bankers representing Colombia in Paris, who, when asked to pay over the funds, replied that they would be pleased to credit the amount to the Government account, but as the Government was still in their debt, they, much to their regret, could not see their way to further advances! Whether this is entirely accurate or not, it is certain that the Government got little or none of the money.

It would seem to a casual observer that there could be no two opinions in Colombia as to the desirability of the canal treaty; but it is the opinion of well-informed people that if the Congress had met two months ago the chances of ratification would have been only four out of ten. The people who object to the treaty may be roughly grouped into seven classes:

1. Those who honestly believe that the treaty violates the Colombian Constitution, and that adherence to the principle of the Constitution is of more national importance than any material gain.

2. Those who give reason No. 1 for opposing the treaty, but whose real motive is to make political capital by accusing Government of selling a strip of territory, in violation of the "sacred word of the Constitution," for their own personal advantage. This position is taken by many Liberals looking for an opportunity to embarrass the Government, and by many factions of the Government party itself who wish to delay ratification for reasons given in No. 3.

3. Those of the Government party who wish to delay ratification until they themselves are in office, or can obtain preferment which will help them to a share of the money to be paid by the United States.

4. Those who believe that the United States will pay more than has been offered,

especially if ratification is withheld for a time, while others who do not really believe this use it as an argument to induce delay.

5. Those who believe that the \$10,000,000 paid in a lump sum will be at once dissipated, either by dishonesty or by payment of debts, and that the country will reap little benefit. These people would prefer an annual payment, even if it were a smaller amount than the lump sum offered.

6. Those citizens of the Department of Panama who believe that, the canal being situated in their department, the money should be handed over to them; and who will oppose the ratification until an arrangement is made as to the division of spoils. Some are even anxious to secede and set up a Republic of Panama, when they could make their own treaty and, of course, obtain all the benefits accruing.

7. Those who oppose the treaty for a thousand and one "tom-fool" reasons, which could, however, generally be traced to personal animosities.

The opposition, therefore, appears to be formidable; but a great many of these objections would disappear were there any question of losing the canal altogether, and in any case the opposition grows steadily weaker and will probably break down before the intense desire of those in office to put the treaty through before they go out of power.

It may perhaps surprise the reader that there is no joyful anticipation of the difference which \$10,000,000 of good money will make in the economic condition of Colombia. On the contrary, only those whose official position or political influence may give them opportunities for "spoils" are eager about the money. The general feeling is that whatever escapes the governmental maw—if such an unlikely thing should occur—will be wasted in paying debts to foreigners and others; and a Colombian can imagine no more uninteresting way of spending money. It will be remembered that in the neighboring State of Venezuela President Castro, when, by means of the customs, he had collected considerable sums of money, spent it, not in liquidating his many debts, but in equipping eight thousand men for a futile expedition to Bogota. At the present time he is employing money freely

to influence Colombian politics, and hopes to prevent the ratification of the treaty.

If Colombia had any statesman of vigor and capacity to take the situation in hand, affairs would be immensely simplified, but at present there is none in sight. Reyes has shown a lack of backbone, Caro and Marroquin are also too weak to become dictators, and Fernandez, who has power and ability as well as ambition, is the worst type of Latin-American politician, and, fortunately for the country, has but a scant following.

Even when the treaty is ratified, there will be no change in the unstable conditions of the country. Indeed, the parties

which have called a truce while this momentous issue hangs in the balance will inevitably fall foul of each other over the division of spoil, and the governmental abuses will lead to further revolutions.

Such is the political condition of the country through which the United States is undertaking to make a trans-isthmian canal. Britons who remember the sequel—a long series of sequels—to the Suez Canal scheme wonder whether the United States realizes the burden the nation is taking upon its shoulders. And yet it is a burden that cannot be shirked, nor can the United States, having put hand to the plow, turn back again.

## How Prohibition Works in Kansas

By C. H. Matson

**T**O understand the present status of the Kansas prohibitory law it is necessary to understand the early attitude of the political parties towards the law. It has been twenty-two years since prohibition became a feature of the organic law of the State. It went into effect on May 1, 1881. There are voters in Kansas who have never seen a saloon in the county in which they were born and now live, and in whose minds liquor-selling is classed in the same category as stealing or any similar crime. When the prohibitory amendment was passed, it was a popular measure. The leaders of the Republican party realized this fact, and an indorsement of the law was placed in the party's State platforms year after year. The Democrats were forced to keep silent or take the opposite view. They chose the latter course and denounced the law. Many Democrats really believed in it, but loyalty to party compelled them to oppose the law. Many Republicans, on the other hand, were at heart opposed to prohibition. They would place a prohibitory plank in the party platform and then seek some unseen place to drink to the success of their candidates.

One of the first great blunders in the history of prohibition in Kansas was this action of the Republican party in making it a partisan issue. The majority of Democrats were naturally inclined to resent such legislation as an abridgment

of their personal rights, but prohibition was popular and the Republican party made political capital by becoming its special champion. For years one could always count on one of the first planks of the Republican State platform declaring for prohibition, while one of the chief planks of the Democratic platform never failed to denounce it as "sumptuary legislation."

In the eyes of many people this removed it from a question of right and wrong to a mere issue of partisanship. To them the prohibitory statute was no longer clothed with the majesty of the law, nor did they deem it entitled to respect as such. At length the wave of Populism swept over the State and the Republican party was removed from power. The opponents of prohibition were numerous enough to be a valuable aid in a close political campaign, and the Republican leaders began to grow lukewarm on the subject. Weak officials who did not wish to incur the enmity of the liquor element found it easier to shut their eyes to violations of the law than to prosecute the law-breakers.

The liquor interests outside of the State were organized to take advantage of every possible point against the enforcement of the law. In the course of time the anti-prohibition element became a source of considerable power in the larger towns. As a consequence it frequently found a

way to secure the nomination of men for prosecuting attorneys and sheriffs who would at least not be hostile to the interests of the saloon, if not positively friendly to them.

In three or four of the larger cities prohibition has never been thoroughly enforced. During recent years this number has increased, and to-day there are probably not less than thirty towns in which illegal saloons, or "joints," as they are termed, are operated openly. In these towns a system of monthly fines which amounts to a license system is in vogue, so that Kansas now practically has local option. These towns are now governed entirely by local sentiment. Outside of two or three of the larger cities in which the saloons are recognized as a permanent institution, every municipal campaign in many Kansas towns corresponds to the local option fights in the towns of other States. The mayoralty campaigns are usually only a contest between the "wet" and "dry" elements. This is true even in Topeka, the capital of the State, with its forty thousand inhabitants. At the time of this writing the "dry" element in Topeka has just won a decisive victory, and the chances are that the saloons, which have operated openly for a year or more, will be compelled to close.

The difference between the system now in operation in Kansas and the local option plan of other States is that legal local option does not breed the contempt for law which unenforced prohibition does. On the other hand, prohibition, even unenforced, is a constant menace to the saloon, and if the saloon becomes too bold, or if some crime is committed as a direct result of the existence of the saloon, public sentiment may rise and cause the officials to wipe it out in a day; so that the existence of prohibition is a check on the encroachment of the saloon element, even where it is not enforced.

The contempt which unenforced prohibition breeds for the dignity of the law is its worst feature. There are towns in Kansas—a very few—in which it is almost impossible to convict a lawbreaker of selling liquor. No matter how strong the proof of his guilt, at least one man of the twelve on the jury will stand out for his acquittal. The saloon breeds lawlessness, and the contempt for the prohibitory

law inevitably spreads to other laws. Kansas has a law against gambling which makes the offense a felony punishable by a term in the penitentiary, yet this is as persistently violated as is the law against liquor-selling. Other statutes are viewed in the same manner by those who have come to regard the violation of the prohibitory law as an evidence of smartness.

Another evil which prohibition has wrought in Kansas has been in impeding direct efforts to reform the drunkard. With prohibition in the State Constitution, the temperance people settled back on the theory that the only way to abolish the evils of drink was to keep liquor from being sold. All efforts are now directed towards electing officers to enforce the law against the liquor-seller, while the drunkard is left to himself. The good old-fashioned Gospel temperance meeting, in which men are urged to abstain from drink for the sake of their souls and their families, and in which they are impromptu to sign the pledge, is practically unknown in Kansas. Theoretically there are no drunkards in Kansas, and this is indeed true in many counties where the law is strictly enforced. The old toppers have died off and the strict enforcement of the law and moral sentiment have prevented the manufacture of new ones. But in many Kansas communities there is practical work for the old-time temperance lecturer. While even in communities where saloons are in open operation drunkards do not exist to the same degree that they do in States where liquor-selling is unrestrained, and while instances are rare where men waste their property through drink in Kansas, and outside of three or four of the larger cities men who become intoxicated and abuse their families are very few—while these things are true, if the advocates of temperance had devoted more effort to the reclamation of drunkards, and thus destroyed the demand for liquor, it would now be less difficult to enforce the law against the liquor-seller.

The time is now passing when prohibition is looked upon as a partisan issue. In some of the larger towns many Republicans are as much committed to the system of regulating the "joints" by monthly fines as are the Democrats. The

last Republican State platform was silent on the question of prohibition, while at the last Democratic State Convention a number of the younger element pleaded for a denunciation of the saloon. During the last Legislature Topeka had open saloons. The Legislature was overwhelmingly Republican, but in connection with the Copeland Hotel, the Republican headquarters, and only two blocks from the State Capitol, was a bar-room. The saloon was in a building adjoining the hotel, but to accommodate the thirsty politicians who crowded the hotel lobby during the session of the Legislature a door was cut through the wall between the lobby and the bar-room, and the State's legislators were by no means few among the patrons of the bar. Yet, notwithstanding this, so strong is the sentiment for prohibition in Kansas as a whole, that a bill to strengthen the prohibitory law passed almost without opposition.

While the law may be openly violated in perhaps twenty-five of the one hundred and five counties of the State, they are the exception to the rule. In the other eighty counties the law is enforced—in some with practically no violations; in others with few violations, carried on in the utmost secrecy. Strange to say, the western counties, the frontier, are generally the more law-abiding. There are counties in which the county jail has not been occupied in eight years, and in which there is no poorhouse or poor-farm, for the reason that there are no paupers. These are generally counties with a strictly rural population, although there are towns of ten thousand people or more in which the prohibitory law is comparatively well enforced.

The towns and counties in which the law is strictly enforced are, as a rule, better off financially than those which allow open saloons and collect a monthly revenue from them for the support of the city government. The towns in which the monthly fine system has been longest in force are deep in debt; they are compelled to maintain a large and expensive police force, and the criminal dockets of their county courts are nearly always crowded. The opposite is true in the towns which will not tolerate saloons. This is aptly illustrated in the history of

Hutchinson, a town of ten thousand inhabitants, and, with the exception of Wichita, the largest town in the south-central part of the State. After allowing "joints," or illegal saloons, to run for a number of years under the monthly fine system—practically a license for the support of the city—a "dry" government was instituted two years ago and the saloons driven out. The result is given in a recent statement made by the Mayor, Mr. F. L. Martin. He says:

For the first time in the history of the city of Hutchinson the floating debt of the town has been reduced, during the past two years. The street fund has changed from a deficit of \$8,000 to a surplus of \$4,000, and the general fund from a \$15,000 deficit to a \$5,000 deficit. Not one dollar of "joint" money went into the treasury in this time.

In the eight years prior, when the saloons were running, the floating debt was increased by \$75,000. Of this \$55,000 was refunded and \$20,000 was left over for us to pay. During part of that time as high as \$1,000 a month was collected from the "joints."

In two years the criminal docket of the district court originating from Hutchinson has practically disappeared. The total costs to county and city of criminal cases originating in Hutchinson for two years will be less than \$500, against probably \$5,000 to \$10,000 for each two years prior under the "fine" system of allowing saloons to run.

Tax levies have been reduced, yet we voted one mill for a Carnegie library, increased electric lights from thirty-four to forty-six, and added twenty-one additional water hydrants and two miles of water mains to our water plant.

We reduced the police force, and our city has been free from the criminal element. A large portion of the money formerly spent in saloons or lost in gambling has gone into legitimate trade, and our merchants all report increased business. During two years not a woman or child has complained that her husband's, father's, or son's wages were spent in a saloon or gambling-den.

There are many counties in Kansas in which the prohibitory law is enforced with the same vigor as the law against horse-stealing, and there is little doubt that the sentiment of the people of Kansas as a whole is largely for prohibition and against the saloon. On the strength of only a rumor that an attempt would be made in the last Legislature either to resubmit the prohibitory amendment to a vote of the people or to weaken the existing laws for the suppression of the saloon, the Legislature was flooded with protests from thousands of people against any such action. The rural communities in many

counties are almost solid against the saloon.

In the towns where public sentiment is against the strict enforcement of the law there is practically a high-license system. A city ordinance is passed declaring all "joints" and saloons to be public nuisances, and making the proprietors of them subject to a fine of from \$50 to \$100. In some places it is the custom to make a formal arrest of the proprietor or barkeeper of each "joint" once a month. He pleads guilty and is fined a regulation amount. After paying the fine he knows he will not be disturbed for a month, and he proceeds with his illegal business without fear of molestation until the regular time for his monthly arrest. Another method is for the city marshal or other police officer to go through the formality of an arrest, but, without taking the offender to the police station, to release him on a cash bond for a stated sum, \$50 or \$100. The offender never appears in court and the bond is declared forfeited. This latter method opens the way for municipal corruption by making it possible for city officials to collect bonds of which a record is never made in police court, and which go directly into the officials' pockets. There is little doubt that corruption of this character exists to a greater or less extent in some Kansas towns. It is one of the evils which the prohibitory law and its non-enforcement make possible.

In some towns the illegal saloons are allowed to run wide open in second stories, but are not tolerated on first floors. This is the condition in Salina, a town of seven thousand people, where from twelve to sixteen of these second-story saloons have been in operation for several years, and pay \$50 a month each into the city treasury as fines. No signs are tolerated, but the drinking public has

little difficulty in locating the stairways leading up to the saloons.

In the county in which Salina is situated the prosecuting attorney is a brother of a justice of the State supreme court, yet he has not prosecuted a joint-keeper in three years. He tried a few prosecutions when he first went into office, but each jury refused to return a verdict of guilty, although the evidence was as strong as it was possible to make it. This is one of the deplorable results of the system now in vogue in Kansas. In communities where the law is openly violated and the sentiment is for the saloon, men who regard themselves as fairly good citizens will perjure themselves as jurors and return a false verdict in order to protect an illegal traffic.

But, notwithstanding this, prohibition has raised the general standard of public morals to a higher plane in Kansas as a whole. The nomination for a public office of a man who is known to use intoxicants to any considerable degree will bring forth a storm of protest. In the great majority of counties the "jointist" is considered to be as much of a criminal as a pickpocket.

The law can doubtless be enforced more successfully in Kansas than it could be in most other States, because there are no large cities in Kansas, yet in some Kansas counties it would require a Roosevelt, a Folk, or a Jerome to enforce prohibition, and men of that character are few. The majority of prosecutors in counties where public sentiment is against the law are either too indolent to enforce it or are afraid that such action would interfere with their political futures.

The experience of Kansas teaches that even with constitutional prohibition the battle for the suppression of the saloon is only partly won, and that it is really only another form of local option, after all.

## The Washington Monument

At Washington, D. C.

By Richard Watson Gilder

Straight soars to heaven the white magnificence,—  
Free as man's thought, high as one lonely name.  
True image of his soul,—serene, immense,—  
Mightiest of monuments and mightiest fame.

# The Street Gang as a Factor in Politics

By Brewster Adams

University Settlement, New York City

**A** POLITICAL organization is maintained only by constant accessions, to be gained either by persuasion or training. Of these two methods the former offers the more immediate, the latter the more permanent, results. A temporary, unorganized body, as a fusion ticket, must of necessity depend for victory almost solely on its ability to persuade. Such an organization as Tammany, however, gains permanency and stability from the education and training of its supporters.

The voters of a city are recruited from two classes, those who are born in it and those who move into it—the boy and the immigrant. The allegiance of the immigrant is uncertain. The “graft” which wins him may lose him. He learns to expect to be done for, not to do for. He is more truly a recipient than a supporter. His loyalty varies with the patronage assured him. If he has employment steady enough, protection secure enough, favors often enough, he may be relied upon. Should a fluctuation in his “blessings” occur, he will shift his allegiance. The knowing ones are familiar with this weakness. Ring and Reform will, in the last analysis, appeal to the same motive. The Ring makes no apology for its corruption. It simply emphasizes the fact that when the people put them in office they distribute the “benefits.” Mr. Devery is bold enough to say: “The graft belongs to the people, and youse is the people. When youse give me the office, youse get the graft.” Reformers as well, in making election speeches to the foreigners, know that they cannot gain support by condemning corruption as an abstract wrong. They must appeal to the greater benefits that are to come from a better administration.

The vote goes to the party that throws the larger bone. We term one office “spoils” and the other “benefits,” and believe the first to be malicious and the second legitimate. As long, however, as those who are to decide prefer free beer

to free baths, reform by persuasion is somewhat afar off.

A friend, prominent in the reform movement, tells of a men’s club in which he became greatly interested. He spent several evenings before election explaining to them the significance and value of a vote. Later he was thunderstruck to find that the club had voted Tammany to a man. It was explained to him as follows: “You see, we never knew what a vote was worth until you told us, and so we all struck for five dollars for our votes instead of two dollars, being what they had always given us, and we got it.”

Besides the persuasion which can be exerted and the patronage to be brought to bear, there is an opportunity which offers more certain and reliable results—namely, the training of the boys for the “Organization.” This training is rarely that of the individual boy. It is an exception when the parent seeks to educate his child in his own political faith—a far more feasible fulcrum is found in that natural and instinctive tendency of every boy to enter and organize a gang.

This instinct spares no boy. Every street has its gang, every corner its club, every neighborhood its organization. He will belong to the “Chrysties,” the “City Halls,” the “Cherry Hills,” the “Elizabeths,” the “Leonards,” or a hundred other gangs of a similar nature. One of these will surely find him a devoted and loyal member.

Until he is about eight years old he has few ties save those of his home. At that age the authority of the family suffers decline; at twelve he may still be the son of his parents, but he is more truly the child of the street. With perhaps twenty-five others from the immediate neighborhood, of the same age and with similar tendencies, he has formed a gang. This comes about through necessity as well as by instinct. “Little Spec,” who lives in a tenement down on James Street, has suffered violence at the hands of the “Mott Streets,” the most dangerous gang

of boys under fourteen in lower New York. He tells his grievances to his friends on James Street. "Dere's a guiney over at de Points [Five Points] what cut me wid a knife." "Us kids will get togedder and go over dere and we won't do much but make circles around dat gang," responds a Hiteye, his friend, who lives in the next flat. Thus the gang has its beginning, Hiteye becoming its self-constituted leader. They go forth to war to conquer or be conquered, it matters little which, for adversity binds them together even more closely than fortune.

The motive of the gang has no little influence in molding the future political ideas of the boy. To seek the gain of the gang, whatever be the loss to the community, offers a most excellent working premise for his later political career. To steal, to pillage, to destroy, even to stab or shoot, is justified if done in a worthy (?) cause, in the name of the gang.

The meetings are democratic; every boy can speak his grievance or rehearse his wrongs. Each case receives its deserved attention. Their government, however, is autocratic, for when "Boss Kelly" rebuked "Hooligan" of the "Young Seymours" on Henry Street for disturbing a meeting, there was no putting the question to vote. His words were memorable on that occasion and were typical of the lower East Side: "Say, Hooligan, if you don't quit dat rough-house, I'll punch dat face of yours so dat you will want to hock [pawn] it and lose de ticket."

Here in the crude is a rare opportunity for political training. Instinct and nature will aid the politician. The gang, with its strong tendency toward organization, its motive of personal gain and its government by leaders, would develop almost of itself into the present political system. If shrewd influence be brought to bear upon it and a direction given to its partisanship, an allegiance will be gained not easily to be shaken.

Little impression can be made upon the gang until it begins to develop the social spirit; for the gang, as the individual, must first pass through certain stages of development. The inclination is at first toward athletics. If you will take a trip down Mulberry Street to a point near the

Band Stand, you will find twenty-five youngsters about twelve years of age playing "shinny." They compose the Mulberry Bend Athletic Club. They are organized almost solely for athletics. Their organization gives them authority and power to control the use of the pavement, to say who shall play and who shall not, to pester the unwise buckster who shall place his cart in the way of their game, and to resent interference by those who would molest them. One must notice that this strife for control, this granting of special privileges, and this desire for security differ little from the real platform of any political organization. The social instinct is only in the germ as yet. Upon each Wednesday afternoon you will find them holding a business meeting in the Band Stand. It will be only a little while, however, before they follow the history of every other gang. They will lay aside their sticks and ball and "hang around" the corner or frequent some friendly candy-shop. Down on Front Street, near Roosevelt, you will find thirty boys between fourteen and sixteen who style themselves the Front Social Club. Last winter they used a vacant flat for a rendezvous. They care for little more than to keep together, to loaf, to shoot craps, to smoke cigarettes, and to isolate themselves from all others. They are now entering the social period in the development of the gang.

Hitherto the politician has befriended them only as individuals. A picnic has brought about a certain friendliness, or a vote bringing a job has awakened some little gratitude. Now, however, the time has come for the first impression upon the gang. One of the members, "Looking-glass-fighter" they dub him, is the son of the local Boss. He appears one day with an extra box of cigarettes and passes them around. "Say, fellers, dis joint is to de bad fer a hang-out. De old man says we can use his flat on Catharine." "All to de good," respond "de fellers," and the politician and the gang have shaken hands in a friendship not easily to be dissolved. Many benefits follow, but they are always judiciously given. The gas may cost the boys nothing. The piano may be contributed. A "feed on de old man" may strengthen the tie. Still, there is much wisdom and

prudence in each bestowment. The Boss is educating the lads, not patronizing them, and very often the gang must contribute its portion of the expenses.

At election time they may become a valuable adjunct. There is not a gang in lower New York over fifteen years of age but bears allegiance to some politician. They distribute circulars, "throw-aways," and election literature in general. They spot uncertain and unreliable votes; they shadow rival candidates for information; they augment the applause and cheering for the street speakers of their own faith, and add materially to the disturbance and "flying things" which greet their opponents. Thus the bond between the politician and the gang is strengthened—a support for the Boss and an education for the boy—until one day the tie is drawn very close. "Swift Kelly" is pinched (the leader of the gang is arrested). The "old man" now becomes a very present help. A word to his friend the sergeant and thence to the judge, and the boy is put on probation. If that is impossible, the fine is paid. The Boss has won the lad, and not him alone, but the gang with him, for they have received back their leader.

They are no longer boys, but young men now, and the politician is prepared for a further move. He plans the first outing for the club. It is a Sunday excursion, a "treat" by his worthy self. Every boy in the gang is there with his "bundle," and she is happy to be there. It is a great trip. Under the excitement, moved by the memory of many a good turn, dreaming of future graft, the die is cast. It is no longer the Street Gang with its sticks or the Club with its rooms, it is now the Association, with every interest on politics, for at the climax of that day's fun "Swift Kelly" has called the gang about him and expressed his views (he is likely to have had a previous rehearsal with the Boss). "Fellers, dis bunch has got one friend, and dat's Mr. Callahan. He's stuck by dis gang and played us clean. He's give us rooms fer a hand-out; he's put many a job in our way; he shoved de dust when de judge clipped me wings. Dis club has one friend, and it sticks by him. After dis day, which is de biggest blowout dis gang has yet seen, we's no longer the

Henry Streets, we's de Callahan Junior Association."

Thus does the street gang disappear and that organization of mysterious birth, the political association, appear. The latter is the development of the former, and the politician who has been a friend to the first gives the name to the second. If you will walk down Third Avenue and notice the "stickers" on the "L" supports or the cards in the windows, you will read of outings, balls, or meetings of these associations. You will read of the Tim. D. Sullivan, Thos. J. Brennan, Lowenstein, Max J. Porges, and innumerable other associations, all of which were organized either directly or were recruited indirectly from some street gang under sufficient persuasion.

The "Catharines" were a street gang of twenty lads only twelve years of age, but they recently changed their name to that of the "Wm. Guthrie Association." In a similar manner the "Oaks" have become the "Murphy Association;" the "Madisons" are now the "Sullivan, Jrs." An East Broadway gang of fifty lads have assumed a new title, "The Young Adlers Association." The "Hamiltons" have, for sufficient reasons, chosen to be called the "J. P. Burke Association." Nor does this in any way exhaust the cases about Chatham Square of gangs of twenty to fifty boys under eighteen years of age that have developed from a street gang to a political association.

As they further progress they are more closely embraced by the larger organization. The street gang has become part of the local club, and they in turn of the city "Organization." The "Pearl Streets," for example, graduate into the "Five Points Social Club," which is itself only a school for Tammany Hall. Each seeks, however, to preserve its social functions. Balls, stags, and outings are given by the different clubs. Protection and assistance are lent them. Attempt to disturb the "Chatham Club" or the "Broken Shutter Association" if you question this. In return for this favor the party expects not only so many individual votes, but organized help. Fights and disorders at the polls can very often be traced to this sort of support.

It is not many years since Tom Foley made "his contribution to the expenses" of the "Five Points Social Club" (a club

that began years ago as a social organization but now wears the Tammany star). Any one who lived about Chatham Square will tell you what occurred on the election following. No "Diver" (man) passed the "two and threes" of the "Five Pointers" without being provoked to fight or to run. Could he by any means pass this outer ring without being shuffled off, he would meet a line of that same gang "waiting to vote" (?), and that line waited ahead of him until the hour for voting was passed.

Such a factor does the boys' gang become in politics. Only a few years ago these little fellows were trying to control the street for their play. Now they are seeking to keep the city under their authority. The lad has become the politician. He has had his training, his education. Year after year the influence of the "old man" has passed upon him. The leader in his little clique will become the chief in the greater body.

The gang has become a part of the "Organization." Its motive has suffered little change. The good of those within, regardless of the loss to those without, is still the great object. The spirit of

the one is that of the other—"the display of faithfulness and allegiance to the members, and the legitimacy of all intrigue and deception on those without." Their government is the same. Chief, lieutenant, and boss, all find counterpart in the gang. Their policy is similar; the assembly of the political organization, with the right of all to speak but the might of the few to rule, finds prototype in the meetings of the gang.

It is not the object of this article to show that these are merely coincidences. As such they would offer but little significance. It would make evident that the gang, with its motives and instincts, would develop of itself into a political ring; that when direction is given to its development it becomes the most reliable support a party can gain; that it develops the boy along "Organization" lines, thus inculcating loyalty to the ring without any conception of obligation to the people. Such being the part a boys' gang may play in politics, the problem of municipal reform is deeply involved in the problem of the boy. Better conditions will come, not alone by the persuasion of men, but by the training of youth.

## Tribulations of a Seacoast Parish

By George S. Wasson

Author of "Cap'n Simeon's Store," etc.

Our readers will be interested to know that this story, though cast in the form of fiction, is a genuine human document. Mr. Wasson has lived for fourteen years in a small New England coast town and is thoroughly acquainted with the people of that coast in other towns. His volume of stories called "Cap'n Simeon's Store," lately published, is receiving from many sources warm praise for its singularly direct reproduction of the talk, way of thinking, superstitions, and old-time lore of the Maine mariner and fisherman.—THE EDITORS.

OVER the sagging wooden steps of the ancient meeting-house at Killick Cove, and covering deep the straggling path leading up from the road, the snow had lain undisturbed all winter. As the cold Northern spring grudgingly advanced, it slowly settled away until from under huge drifts in the little graveyard behind the church appeared quaint urns and weeping willows chiseled on reeling stones of slate over many a God-fearing old-time skipper of the Cove.

But the eaves ran at noonday till the snow was gone, and plantains and dande-

lions grew thickly in the still untrodden path from the road, until even Captain Isaac Windseye, latterly chief pillar of the Cove society, was forced to admit that the society was in an unusually bad way.

In younger days Captain Windseye had earned his title in transporting slab-wood by sloop to Portland, but, having thus laid by a tidy sum, straightway quit so perilous an occupation for good, and established a store on his native heath at Killick Cove. Here there undoubtedly existed enticing opportunities for a man with his particularly greedy appetite for

"trades," not only in the way of lending money among an improvident fishing population, but frequently upon the occasion of wrecks in the vicinity. For these latter it was remarked that the Captain had a scent like a vulture.

He soon became a power in the village, and with prosperity came the development of a hitherto wholly unsuspected quality of his nature, for he not merely experienced religion in most violent form, but posed as its foremost champion in the Cove, and gradually assumed the difficult position of managing director in the affairs of the Cove's society. It is true that interest in the church seldom showed itself through expenditure of money on his own part, but was chiefly manifested in luring the pastors annually required, and in hounding his neighbors for their support; still, Captain Windseye habitually claimed much credit for his prominence in church matters, and constantly called attention to his labors in their behalf.

In spite of all, however, attendance and support steadily fell away, and the village of Killick Cove frequently remained for long periods without Sabbath services of any sort.

Allured by the promise of three hundred dollars salary, and donation parties at short intervals, the last incumbent bravely stood at his post for nearly six months. He failed to collect the promised money, and was, like his predecessors, obliged to eke out a bare living by haying and working at odd jobs about the village, till at length, being unable to support his family in the tumble-down parsonage, he vacated the premises one foggy night, leaving in lieu of farewell discourse, firmly impaled upon each remaining picket of the dilapidated front fence, one and one-half dozen yellow saleratus biscuit, these constituting the gross receipts of a recent donation party.

For many ensuing weeks the Killick Cove meeting-house remained closed except during the short stay of callow divinity students from a distant seminary, who came and spoke their little pieces, and went with the blueberry season; and also excepting the memorable Sunday on which Captain Isaac Windseye himself mounted the pulpit and held forth to an assemblage largely composed of persons in his debt at the store or otherwise.

So matters stood until, as the result of much laborious correspondence on the Captain's part, a shabbily dressed, well-nigh decrepit old man arrived one day by stage as a candidate for the vacant position, but, before having an opportunity of addressing the people, was bedridden by rheumatism, and so remained when, just as the fog was creeping in from sea towards the close of a brooding October day, certain prominent citizens, assembled in Abner Grommet's sail-loft, noticed a small white sloop drifting slowly into the harbor.

Her sole occupant seemed to be an elderly man in a long black coat, and as he anchored his craft in mid-channel, a battered canvas-covered spy-glass was brought to bear upon him by Captain Job Gaskett.

"That 'ere's that tormented ole mish'n-ary feller ag'in, ef I ain't mistakened!" exclaimed he, handing the glass to Captain Windseye. "Prob'ly he cal'lates to turn to and preach here Sunday. A man must owe hisself consid'ble of a bad gredge to take and scull 'round the rocks all soul alone same's he doos, come now!"

"Oh, wal, you! it's a trade same's everything else!" said Captain Windseye, after a long look. "That's him, I don't misdoubt. Let him go to work and preach all he wants. He'll come in jes' now handy's a pocket in a shirt."

"Who in tunkett is it backs the ole creetur, anyways?" asked Job. "Plague take his ole pelt, when the likes o' him gits a livin' preachin', seems 's ef there'd ought to be an opening for 'most any on us, and resk it! Ever sence that little confab him and me had together the last time ever he showed up here, I've kind o' sot him down for a reg'lar-built ole garsbag, and them that turns to and foots his bills must love to heave away money a sight wuss'n what I do!"

"Set-fire, you!" exclaimed Captain Windseye. "What sense is they takin' on so-fashion? Ef there's folks wants to take and send him round this way, and square all his bills, I don't see no great call to kick, now you can bate! 'Tain't the leastest mite of expense to us folks, and we make out to git us a Sunday's preachin' free gratis for nothin', in room o' not having none at all!"

"Preachin' for nothin' be jiggered!" retorted Captain Gaskett. "I'd lievver

pay out a little sunthin' for my preachin', ef ever there was ary preacher struck this Cove now'days was wuth listening to; but dinged ef I call it no objic' to go and set under some pore ole has-been that ain't got no buckram left to him, nor yit one o' these young squirts same's they turn to and ship down here summer-times to preach out their grub and lodgin'! That last pore little shoat ever we had here wa'n't scursely ole 'nough to wear galluses, anyways, and I never figgered them kind are over 'n' above fittin' to tell us no great sight we ain't knowin' to a'ready in regards to the hereafter, nor nothin' else! I been knockin' 'round here 'most too long now to turn to and swaller down them little boys' say-so right kerplunk, leave alone asking for no more sich! But you come to take this here towzle-headed ole creetur out here in the bo't, and I can tell ye jest what about him in less 'n two shakes!"

"I ain't the leastways anxious to hear no more sich blasphemis rubbige!" snapped Captain Windseye.

"Sho, now!" said Captain Job, coolly.

"I cal'late, though, to out with it, all the same, Cap'n. You don't make out to be all the one to this Cove has any say about the meetin'-house, Cap'n, ef you do run her now'days pooty much to suit yourself. Two year ago come spring, when this ole feller come in here last time, we hadn't had no preachin' for quite a long spell, mebbe you rec'lect. This ole mish'nary feller he come in of a noontime Friday, I know, and dropped killick right abreast o' my house, there. All soul alone he was, same's he is this time, and 'twas right in the thick of a fog mull, too. Wal, now, he come in same's to-day, noontime, we'll say; leggo killick under foot, took and snugged up things on deck all tanto, went b'low and turned in, I cal'lated, for he never once shoved his head outen the cud that we see till nigh supper-time, same's to-morrer night; goin' on two days, that was.

"Then he come paddlin' ashore in his small skiff, clim' up over them laidges front o' the house there, and wanted to know of me jes' who 'twas had the care o' the meetin'-house; 'lowed how he cal'lated to turn to and preach into her next mornin'. Wal, o' course, I give him to un'stand you was called the biggest herb

we had here now, Cap'n, but then I up and says to him, 'Elder,' s' I, 'come right in,' s' I, 'and have some supper 'long o' our folks. We're only jest this very minute settin' down,' s' I. 'Be tickled to death to have ye stop,' s' I.

"'No! No, sir-ee! Wa'n't noways hungry, and couldn't stop ef he was hungry. Must be steppin' right along any ole how!"

"'Wal, look a' here, you!' s' I. 'Don't, Elder,' s' I, 'don't for king's sake go to stoppin' no longer all soul alone out there aboard that little smoke-bo't so-fashion! That ain't no kind o' way to live!' s' I. 'Turn to and fetch your dunnage right ashore to-night quick's ever you can, and put up 'long o' us. We got any God's quantity o' room and to spare!' s' I.

"But no! You couldn't budge him a hair noways, and fin'ly the woman she come out and done *her* dingdest a-coaxin' of him too. 'Whatever should possess ye, Elder,' s' she, 'to turn to and do for yourself all soul alone aboard your bo't that way, when there's folks would love dearly to have ye take and stop 'long on 'em ashore?"

"But seems 's though her talk didn't amount to nothin' either, for allst in the world ever he'd do, he'd just up and fetch them horrid groans like o' hisn, till bimeby he turned to and drewed his ole mug down out o' all manner o' shape, and says, s' he: 'When I'm out there aboard o' the bo't,' s' he, 'I feel sure I'm all alone 'long o' my God,' s' he—them's jest his very words—but then he 'lowed how ef he should turn to and stop any time at all here on the main, he was like to git hisself smirched and s'iled someways or 'nother rubbin' up agin' our folks, and so he figgered prob'ly it stood him in hand not to go taking no sich chances!"

"'Wal, wal, wal, you!' thinks I to myself right away off, 'ef you ain't a dandy to go mish'naryin' 'round! Godfrey mighty!' thinks I, 'I've run afoul o' folks afore now that was what you might call nasty-nice, but he jiggered ef ever I see anything yit would commence to tetch *you*, Mister What's-your-name! Guess,' thinks I, 'on the whole you better a dinged sight stick her right out aboard your bo't where you be! We're a consid'ble weeked lot here to this Cove, that I'll give in to ye, but blowed ef I cal'late you're the feller to help us out no great a-preachin',

and resk it! I never went anigh the meetin'-house that time, and I don't cal'late to go anigh her this time neither, nor ary one o' my folks!"

"You're allus and forever ter'ble down on all them preachers, Cap'n Job," protested Captain Windseye. "I've took notice it's seldom ever we do git a one to this Cove without you're allus the fust to commence pickin' on him like. Mebbe the time'll come when you'll wisht you'd tended out on meetin' stricter 'n what you do."

"Like enough! Like enough!" laughed Job, good-naturedly. "But there, Cap'n, when you come to talk about my being down on them style o' folks, why, you're clean away off! I'm only jest givin' of ye a few p'inters in regards to this ole smoke-bo't feller out here. *Me* down on preachers! Why, 'tain't only this spring I was took for one o' them kind myself, there to Portland!"

"Yas, it's some likely you was!" sneered Captain Windseye.

"Honest Injun I was! That's a fact!" declared Job. "'Twas the time I visited to Mirandy's. Up steps this here white-haired preacher-lookin' ole sir, and ketches me by the hand, ter'ble glad to see me, now I tell ye. Asked how the folks was to home, and all sich-like, same's ef him and me was reg'lar ole chummies.

"'Wal, Elder,' s' I, quick 's ever I could slide in a word edgeways. 'Elder,' s' I, 'you got the advantage o' me in proper good shape this time, be jiggered ef you hain't, now!"

"'What! s' he right away, 'ain't I addressin' the Rev. Mr. Slocum?"

"'Not by a blame' long chalk you hain't! s' I, and I wisht to gracious you could seen the look he give me that time!"

"Didn't stop to make no more talk 'long o' *you*, prob'ly," remarked Abner Grommet from his bench.

"Talk? No, you bate he never!" replied Captain Job. "Shoved his hellum hard up, and kep' her off for all he was wuth, now I tell ye! S'pose likely I hadn't ought to spoke to him jest the way I done, but there, you! Prob'ly 'twill be all the same a hunnerd year from now!"

"Guess it's some lucky for you 'twa'n't ole Elder Roundturn you run afoul on that way," said Abner. "I often set here

and think what works there'd be here to this Cove if ever he showed up here ag'in at this day o' the world! I cal'late he'd make shift someways to fill the meetin'-house chock-a-block full same's he useter, don't you?"

"Fill her full?" repeated Captain Job. "I cal'late he'd have her jammed chock to the hatch-combin's every lick, ef he had to turn to and collar every soul on us to do it! I never'll forgit the time I see him take holt on ole Skipper Adam Kentall up the ro'd a piece one Sunday mornin'. Seems 's though Skipper Adam sot out to take a walk down to his shore that mornin' so 's to turn a few dezen fish he was makin' there on his flakes, but Elder Roundturn he spoke him and ordered him to heave to right away. Big through as ary hockshead-tub, ye know ole Elder was, and strong 's a steer. 'The two had some little argufyin' it over at fust, but all to once I heern Elder holler out fit to stund ye. 'You won't trouble no fish not this mornin', my friend,' s' he, and bedide ef he didn't up and grab ole Skipper by the scrof o' the neck, and snake him off to meetin' in tow, goin' a good ten-knot stick at the least cal'lation. Why don't you turn to and gaft onto one o' them kind o' preachers to fill her up now'days, Cap'n?"

But Captain Windseye evidently by no means approved of such jocularly concerning a former light of the Cove church.

"All the same," said he, somewhat severely, "you come to take ole Elder Roundturn there, and them that could down him at preachin' was some scatterin'. I'm knowin' to it myself that when he was preachin' into the ole Neck meetin'-house you could hear him tol'ble plain chock down to the shore, and that's a good mile and a half, leave it to any man ef 'tain't!"

"Oh, he was a master ole feller to poke it to 'em in them days, 'cordin' to all tell," said Job Gaskett. "I'll bate too you never ketched him usin' no papers and writin's to preach out on neither, same's lots doos now'days!"

"I know they do!" cried Captain Windseye, indignantly. "I know they do, any grists on 'em doos so, but, set-fire, you! no sich kind o' krawn and rub-bidge ever'll git no footing to this Cove as long's I've got ary word to say 'bout it!

The way I allus look at the thing, ef a man's got a call he don't need no plaguey writin's to help him out. Ef he's got rale ole preachin' into him, it'll rabble out'n his mouth good and easy, and ef he hain't got it into him he best take and git into sunthin' else quick 's ever he can git 'round to it. Ain't that the right doctrine, Abner?"

"Wal, yas," admitted Abner Grommet, "I cal'late you got the rights on't there, Cap'n. "A consid'ble every-day sort o' chap can gin'ally make a pooty fair fist readin' a mess o' writin's off'n a parcel o' papers, but, by fire! the way 'tis with me, 'lowin' I go to meetin' at all, I want to see some feller into the pulpit can stand right up in his boots and reel it direct off'n his tongue, like!"

"That's the talk!" cried the Captain. "That air's what you may call proper good preachin', you! But I want a man should give us it so's it 'll be heerd good and easy, too. This here mumbeling of it over, same's the most on 'em doos now'days, is a style o' preachin' don't hit me wuth a cent, and I don't care who knows it, neither!"

At this point some one took occasion to speak in commendation of a certain Indian evangelist, so called, who had electrified his hearers during an all too brief sojourn at the Cove some months previous.

"Set-fire, you!" at once exclaimed Captain Windseye, in a burst of enthusiasm at the recollection of such eloquence. "What a voice that man had onto him! Put me in mind o' the fog-horn on the Neck fust time he come to preach, and that's a fact. There wa'n't nobody in them ordinances deaf so's they couldn't hear *him* hollerin', now I'll guarantee! And d'ye mind them plaguey great long jaw-breakin' words he kep' a-ropin' in stiddy—why, there wa'n't ary soul ever to them meetin's knowed what under the livin' canopy he was comin' at, not half the time! Set-fire, but ef only he would stopped here a spell, I cal'late the meetin'-house would been shingled 'fore spring, and money to spare! Them kind won't never stop 'round long to sich places as this, though," added the Captain, regretfully.

"Why hadn't you went to work and coaxed him to stop over a spell, ef 't took a leg?" asked Job Gaskett. "Ef

he suited so right chock to the handle, seems 's though you might turned to and rigged it someways so 's he'd hung on a while."

"Wal, didn't I try my dingdest a-coaxin of him, as you call it?" retorted Captain Windseye. "Coaxin' don't amount to shucks with them kind, though; it's the dollars that talks every blame' time! That air Injun chap 'lowed how he'd stop here jes' long 's I'd take and guarantee him his little ten dollars a week and board, and he wouldn't talk no less.

"I up and told him right off, 'Set-fire, you!' s' I, 'what you cal'late us folks 'round here is, anyways? Jest only a blamed click o' millionaires or what?' s' I.

"Wal, he never 'peared to give a rap one way or 'tother; independent 's a hog on ice, he was. 'Lowed how he could make that much wages 'most anywheres; so, bein's we couldn't seem to hitch hosses in no kind o' shape, he up and give it to her back down east ag'in where he come from. Now it's all ter'ble fine to go 'round here a-yippin' and yappin' how we'd ought to run a reg'lar-built, smart, A No. 1 preacher to this Cove, but I allus take pertik'ler notice quick 's ever it comes to drawin' your wallets and puttin' out the cash, you fellers' tails is clean down betwixt your legs in a jif!

"Of co'se, we can't never count on no great shakes of a preacher stoppin' here long, for them kind most gin'ally strikes a soft snap to some city place—they're all after a dollar, same 's you and I be, eggs-ac'ly—they that preaches for the love on 't at this day o' the world is some few and fur betwixt, now I tell ye what! But I cal'late we could run a meetin'-house to this Cove, and keep a fair up-and-comin' style o' preacher into her, too, ef only our folks didn't begredge puttin' out a cent for preachin' now'days so like the very mischeef.

"I cal'late we're missin' of it right along scand'lous by not keeping no reg'lar preacher. For one thing, I cal'late we don't commence to git the rusticators we would to this Cove summer-times ef only we kep' holt on a preacher anyways stiddy. Ever sence them summer-folks struck in comin' this way at all, I've kind o' kept the run o' their talk about this here bus'niss of not keepin' no preacher, and, set-

fire! I can tell you for a fact we'd be full better off in the long run to keep a one!

"But there, as I say often to them rusticators up to my place there, I can't allus and forever bear the brunt o' the bills, that's a dead sure thing. I'm a pore man, I be, and going astarn every blamed hitch reg'lar, but I'll put in my time for nothin', and mebbe give what little money I'm able, 'cordin' to."

This familiar talk of poverty on the part of the forehanded Captain was always taken by his hearers for just what it was worth. Every man of them knew that his condition was most flourishing, and most of them had before this unwillingly contributed towards making it so.

"Wal, then, I cal'late that settles it for us folks," observed Job Gaskett, as Captain Windseye paused. "Ef your boarders says preacher, nothin' won't do with-out we turn to and git us a one for good, right away off. How about this ole Mr. Step-and-fetch-it you've got in dry-dock up there to the pars'nage now, Cap'n? Ain't he never liable to limber up so 's to be out 'round ag'in, think?"

"Set-fire, you! I dunno jest what to think 'bout him," answered Captain Windseye. "Some days I have consid'ble hopes he'll pan out fair to middlin' yit, but the thing on't is he's so blamed short o' clo'es, ye see. Ain't got ary half-decent coat to his name, nor nothin' else, fur's ever I can make out."

"You don't mean to say!" exclaimed Captain Job. "I want to know ef he's so bad off! I see, the day he come, there wa'n't nothin' very beautysome about the ole feller. Come right down to the fine thing, s' I to myself, he doos make out to be one o' the very lookin'est ole has-beens ever was stranded here yit, but then, thinks I, p'haps he may turn out to be same's the singed cat, as the feller said, a sight smarter'n what he looks to be."

"You've allus got to take and heave slurs, now ain't ye, Job?" said the Captain. "Of co'se anybody can see he's pooty much all run out, and ain't no great to look at, but his lungs 'pears to be good yit, and I cal'late ef only we take and sort o' tog him out a grain amongst us, and mebbe top-out that there old chimbley to the pars'nage, he'll be more'n apt to stop here the winter over, and 'twon't be no

great bill of expense to us neither. Looks to me, he doos, jes' though he wouldn't need no sich dretful sight of urg'in' to stop and preach 'most anywheres for his keep."

But it proved that shrewd Captain Windseye was too hasty in thus flattering himself that the Killick Cove meeting-house was soon to have a pastor preaching into her on such favorable terms. The health of the new candidate turned out so poor, and his worldly possessions so exceedingly scanty, that retention was at length deemed inexpedient, and after a short trial he too departed.

Said Job Gaskett, in summing up the matter afterwards: "Cap'n Windseye he made out to pick up a pore ole wrack of a preacher adrift outside here somewheres, and towed him in here to the Cove, cal'latin' for sure how he'd grafted onto consid'ble of a big prize. Come to call a survey, though, they found the gear pooty much all played out; keel twisted out o' all reason; wood-ends started forward and aft, and the upper works ter'ble punky like. They fin'ly come to the conclusion she wa'n't wuth repairin' up, so they jest turned to and condemned the ole creetur, and sot her adrift ag'in, to be red on her."

Then followed another long period of what had come to be known as "low-water-slack" in parish affairs, but at length it began to be rumored that a candidate was coming who at one time in his career had actually preached in that cultured region rather indefinitely described as "up back o' Baws'n somewheres."

In due course of time the Rev. Mr. Mudger appeared at the Cove, distinguished by the tall silk hat he invariably wore even while personally making much-needed repairs upon the desolate old parsonage. Under the pilotage of Captain Windseye he later strode about the village making acquaintance with his flock, everywhere creating a most favorable impression, and confirming the Captain's expressed belief that not only was Killick Cove at length possessed of a reg'lar-built snorter of a preacher, but, moreover, one of that desirable variety who wouldn't go outside the Bible for nothin' nohow.

In Abner Grommet's sail-loft his first sermons were discussed for a time to the utter exclusion of other subjects. With

pardonable pride, Captain Windseye drew attention to the powerful manner in which the elder had socked it to 'em on the preceding Sabbath, and reiterated his belief that a reg'lar snorter was now at the helm; Abner Grommet declared enthusiastically that they were indeed at last gittin' of it poked to 'em in proper good style; and Captain Job Gaskett confessed with delight that the new minister was simply whangin' and cuffin' of 'em right and left, and not leavin' of 'em in no kind o' shape at all.

Such favorable comment on Mr. Mudger's plan of campaign, as indicated in his opening discourses, was, however, not merely confined to that select coterie frequenting the sail-loft, but was constantly to be heard throughout the village of Killick Cove. Judiciously refraining from discussion as to the identity of the unrighteous persons whose evil practices were at length being rebuked in such scathing terms, each man, with a serene feeling of personal immunity perhaps not peculiar to Killick Cove alone, apparently included his neighbors in the black-list of names, and chuckled mightily at such merited castigation. Thus may possibly be explained, in part at least, the unwonted wave of enthusiasm with which the new pastorate undoubtedly began.

But it seemed as though fate had decreed that trouble should be the lot of the Cove parish in these latter days. For a time all went smoothly enough, though the pace set by the impetuous Mr. Mudger in his first few sermons proved too hot for permanent retention, and his popular manner of sockin' of it to 'em lost some of its pristine vigor as the weeks rolled by. Still, his labors were on the whole acceptable, and numbers of young men appeared to find the evening service especially attractive.

There was always the alluring hope that the Elder might at any minute again delight their souls by whangin' somebody after his early ravishing manner, and meantime the rear pews of the meeting-house furnished decent facilities for amusing conversation and the consumption of peanuts, corn-balls, and tobacco.

On a fateful Sabbath evening, however, after dealing as usual in a plain-spoken manner with certain frailties of his flock, Mr. Mudger rashly ventured a remon-

strance against these time-honored features of worship in the Killick Cove meeting-house. Munching peanuts continually during services, and the incessant spitting of tobacco-juice in the corner of the family pew, were habits, he plainly declared, with which he was heretofore unfamiliar, and against which he acknowledged the strongest prejudice. Then, expressing a fervent wish that in the future they might be dispensed with, he pronounced the benediction.

But it must not for a moment be supposed that the high-strung, sensitive natures of these young men could brook so wanton and deliberate an insult, and several of them immediately announced their intention of lickin' the Elder within an inch of his life, thus avenging his unpardonable slur upon society and the citizens generally.

Accordingly, four of them, divested of coats, and with shirt-sleeves rolled up, lay in ambush for him in a thick growth of alders by the side of the road as he returned home that evening.

Now, fortunately, the Elder, though by no means a heavy man, was a muscular Christian of pronounced type, and had, moreover, previous to entering the ministry, served for some years with much credit on the police force of a large city. Though it seems incredible that he should at the time have foreseen a call to labor in the vineyard at Killick Cove, yet had this been the case he could in nowise have fitted himself to more purpose for the strenuous life of his present incumbency. In short, it transpired that as an officer Elder Mudger had won renown on his beat for his masterly manner of running in hoodlums, and the four young men who anticipated a veritable picnic in the proposed meeting with their pastor were somewhat discomfited at the outset by the totally unconcerned manner in which he received their first volley of threats and profanity.

Far from recanting, or even showing the least apprehension of the impending thrashing, the Rev. Mr. Mudger, as it were, cast aside for the moment his priestly robes, and, addressing his young parishioners in the terse phrases of an unmistakable layman, assured them that unless they forthwith hied from his presence with the utmost despatch, he would

then and there proceed to wipe up the ground with their persons.

Failing to withdraw at once as the Elder suggested, two of the young men nearest him suddenly found themselves revolving among the dust-laden burdocks by the roadside; seeing which, the other defenders of the Cove's fair name speedily fled into the alder-bushes, and Mr. Mudger coolly proceeded on his way homeward.

But the matter was far too serious to be allowed to rest here, and as a result, numbers of persons whose help could ill be spared withdrew their aid of the society in anything but mute indignation. Before the leaves had fallen from the stunted cherry-tree at the parsonage gate a rude little sign bearing the word "Dress-making" appeared nailed to its trunk,

and later Mr. Mudger himself in his tall silk hat earned a few needed dollars at banking up certain houses for the winter with rockweed and kelp from the shore.

By Christmas, however, the parish at Killick Cove was once more pastorless, and the gray little meeting-house again stood deserted among the ledges on the hill. The howling northeast storms started bricks from its crooked chimney, and scattered shingles from the roof broadcast among the mossy headstones of its zealous supporters long years ago.

Very often the two narrow front windows were seen gleaming with the cold light of the winter sunset across the bay, but the snow again lay heaped in unbroken drifts high against the weather-beaten door.

## Why the French Have No Social Settlements

By André Siegfried

FOR a long time the Social Settlements of England and America have attracted the attention and, I may say, the admiration of that part of the French public which cares for social matters. The old *cliché* of the French, ignoring what is going on outside Paris, has long ago ceased to be true, and at present we are well informed about that splendid movement of the Settlements of which the English and the Americans are so justly proud. Why, then, has that mode of social work had, up to the present time, no real success in France?

I do not mean to say that the French have not dealt with the momentous problem of the relations between the different classes. In a democracy (and France is a democracy in the true sense of the word), the people being called to exert a decisive influence on the government, it is, of course, most important to educate them. The founders of the third republic understood the gravity of the thing, and under the leadership of Jules Ferry they framed the well-known laws on primary education. Since then the workmen have taken each year a greater part in the government of the country, and, seeing

this evolution, quite a number of the people of the richer and more educated ranks have understood the necessity of entering into closer contact with the laboring classes.

During the last years of the last century the ground seemed then to be well prepared for the creation of Social Settlements. Many young men had visited the English and American Settlements, some had even lived in them, and were eager to create institutions of the same kind in their own country. Their propaganda was at a certain time flourishing in various French circles, but it has never been broadly popular. Some institutions very like the Settlements have been tried, but in order to succeed they had to be modified, and to take the classical form of the French *Universités populaires*. The reasons of that transformation and the predominance of the *Université* on the Settlement constitute an interesting problem to study, as it throws a curious light on the feelings and methods of the Parisians in their social and political conceptions.

The difficulty of making Settlements in Paris (I do not say France, in order not to indulge in exaggerated generalizations)

does not lie in the lack of eagerness of the average Parisian to study and to learn. On the contrary, I think that no population in the world has such a great desire to learn. You will never hear science more spoken about than in the discussions of the *Universités populaires*. It seems that the French workmen, having as a rule given up religious belief, have taken for their own the idea once flourishing in the time of Renan, that Science will be one day the master of the world, and that the scientist will be all-powerful. This love of knowledge is a broad and solid basis for the organization of universities or schools for the people. But Settlements are something else and something more.

The first and great obstacle met is that the working people of Paris (I mean here the people who live mostly in the *fau-bourgs*) are extraordinarily independent, and that their usual feeling toward the upper classes is one of distrust. They were in olden days under the influence and sometimes the domination of the richer classes and of the Roman Catholic Church. They have won liberty by hard fights, and they are now very particular about anything or any one likely to influence them again. That is undoubtedly why any kind of patronage is now rather unpopular in Paris. People always fear some intrusion of a political, or religious, or even a moral kind.

This state of feeling obliges those who deal with popular universities or Social Settlements to be extremely careful. They must avoid even the appearance of any political, religious, or even moral propaganda. If you want to have a political meeting, do it openly. I should say the same thing of religious work. But you will lose entirely the confidence of the average Parisian workingman if you come to the *Universités populaires* with the least ulterior motive, or even the appearance of such a motive. Those who have followed the evolution of French thought for the last century will understand very well the great difficulty of the situation. They will understand, for instance, that it would be inconvenient in Paris to have Settlements with clergymen as residents. They will understand also that religious or simply ethical principles would not be welcome when set forth by a lecturer with the aim of doing good to the hearers. The French

are generally good people, often altruists and generally idealists, but they hate being sermonized. Every one who wants to found an institution with some chance of success must not forget this point of view.

Another characteristic of the workman in Paris is that he does not admit any hierarchy of classes. The English, for instance, have never lost their traditional respect for the noble and the rich. That fact gives a great power to the upper classes, and they would be wrong not to use it. In Paris such a kind of influence may be real with the lower middle class, but with the workingmen it is utterly non-existent. When members of society have to come into contact with the working people, they must try, on the contrary, to make them forget that they are of another social level. The Parisians are usually such good talkers and so quick-witted that it is rather easy to talk with them as you would do with friends. This attitude of equality is certainly the best. I have met sometimes English or even Americans who were to deliver lectures in Paris for the people; they thought they ought to appear in their most elegant clothes; that the people would be honored by the fact. I think they were completely mistaken and had failed to understand the true character of the Parisian democracy. The way of approaching people is to go with the simplest clothes you have, and to mix with them exactly as with comrades, forgetting even that you have or might have some intellectual or social superiority over them.

After this brief description it is easy to understand that it would be difficult to organize in Paris Social Settlements exactly after the English or American type. The principal features of the Anglo-Saxon Settlements appear to be, with the educational part, the residence of educated people in the poorer quarters, and the personal patronage and influence of the residents among the families of the quarter where they dwell.

In Paris the educational part is easy to organize and usually successful. But the residence scheme and the patronage are awkward to carry out. I do not say that you cannot find in Paris charitable people living among the poor and doing marvelous work. But I think that the plan of a

body of residents, in the English or the American style, has not yet been successfully tried in the French capital. The *milieu* is not really favorable. If the residents want to win a good reputation in the quarter they have chosen, they have to live exactly as the people around them. If they indulge in, I do not say luxurious, but simply comfortable rooms, it will be known, and some will feel jealous or judge it unsuitable. If, having noticed that state of feeling, you oblige the residents to live in poor rooms, in the outlying parts of Paris, you will find most likely some trouble in recruiting people to live the life of apostles or missionaries. The question of patronage is by no means an easier one, for the reasons I have already ex-

plained. I suppose those are the causes why Social Settlements have not flourished in France.

I should not dare to conclude that Settlements will never succeed in French towns. But for the present I must remark that among the *Universités populaires* no one works on the line of a Settlement. In a capital where paupers are not exceedingly numerous, where there is no particular prestige of wealth or society, but in fact a real prestige of brains, the popular university is certainly better adapted to the wants of the situation. That is probably why France has no Social Settlements, while it has a wonderful growth of social work under the successful form of the *Universités populaires*.

## The Turk and His Lost Provinces<sup>1</sup>

THE present unrest in the Balkan provinces makes the appearance of this volume timely. In picturesque phrase Mr. Curtis describes for us, first of all Turkey, and then the Turk's lost provinces. We have in this book much of that direct, almost conversational, talk which also distinguished the author's "Between the Andes and the Ocean."

Mr. Curtis believes, as did the great Moltke, that Europe's next battle-ground will be the Balkan Peninsula. The horrors which have been constantly occurring in the Balkans need occasion no surprise; these will continue to occur so long as Turks are permitted to govern Christian communities. If a Christian woman repels a Turk's advances in Macedonia, for instance, persecution begins not only as regards herself, but her family also; father, mother, brothers, and sisters are arrested for fictitious offenses and thrown into prison. They may be accused of treason and shot; they may be fined the entire value of their property, and made to suffer other penalties which the Turks show great ingenuity in devising. Of course there are many cases of yielding; but, says Mr. Curtis, usually the entire family abandons everything and flees across the boundary into Bul-

garia, with only such property as can be carried in their hands, to begin life over again under the protection of the Bulgarian authorities and among sympathetic surroundings. Turkish officials invariably confiscate any property that may be left. Southern Bulgaria is full of such refugees.

On the other hand, there has been enormous provocation from the Bulgarian-Macedonian brigand "committee." Few will agree with the author that the present management of the Macedonian Committee is "patriotic, unselfish, and honest," though Mr. Curtis does admit that the previous administration was corrupt and vicious. With regard to the kidnapping of Miss Stone, Mr. Curtis makes a statement which may surprise some:

No demand has been made upon Turkey for indemnity or other reparation, because it is clear that the crime was committed by Bulgarians and not by Turks, although upon Turkish soil and in Turkish disguises; and it is equally clear that the conspirators desired and intended to involve Turkey in complications with the United States.

Of course the Macedonian Committee needed money to carry on their armed propaganda, desired to terrify the American missionaries into co-operation with them in their efforts to secure the emancipation of Macedonia, wanted to attract the attention of Europe and hoped to provoke complications between Turkey and the United States, thus involving a new Power

<sup>1</sup> *The Turk and His Lost Provinces: Greece, Bulgaria, Servia, Bosnia.* By William Eleroy Curtis. Illustrated. The Fleming H. Revell Co., New York.

in the question. This granted, we do agree with Mr. Curtis when he says :

No one will suggest that the sufferings of the Christian citizens of Turkish provinces should be prolonged, even though bandits and blackmailers may be interested in their redemption. The world owes a duty to the people of Macedonia.

The control of Bulgaria has now been obtained by the very power which the Treaty of Berlin was supposed to oppose. Intrigue has done what international law could not do.

The lack of educated natives in Bulgaria made it necessary to fill nearly all of the important military and civil offices with foreigners, and the Russians obtained the most influential places. Clever men were sent from St. Petersburg to cultivate public sentiment, and by mercenary and other means to influence elections.

The brave Prince Alexander, however, instituted a spirited policy independent of Russian influences, adding an encouragement of education to an extent not appreciated by the clergy of the Greek Church. The Russian Government retaliated by a conspiracy which might have happened in the Middle Ages, in the days of the robber barons and the Medici, but with which there is nothing to compare in modern times. The crowning shame is that not one of the Russian officials who were engaged in the plot was ever punished, or even censured. When, finally, Alexander saw that Russia would compel him to retire, he exacted a pledge from the Czar that the Bulgarians should henceforth manage their own affairs without interference, "a pledge violated within the next thirty days." The leader of the assassins of Premier Stambulov, our author avers, was a political adventurer who had frequently been employed by the Russian Minister on confidential missions. Mr. Curtis is so scathing in his indictment of Russia as to declare that its diplomatic agent in Sofia has gradually acquired an influence over Prince Ferdinand (Prince Alexander's unworthy successor) and a control over the Government that are now almost absolute. "Ferdinand might as well be the Governor of a Russian province."

Mr. Curtis believes that in Bulgaria, Servia, and even Rumania disorganization and decay are advancing more rapidly than are the elements of progress—a statement which will be challenged in many a quar-

ter. He declares that Russian influence is now supreme in Rumania as well as in Bulgaria, and that the Servians are willing to submit to Russian domination under certain contingencies. It is difficult to believe that Russian influence is supreme in the first-named land.

Since Mr. Curtis's book was published the Servian King, Queen, Prime Minister, and a number of other dignitaries have been slaughtered; hence the following excerpt may be read with interest:

Sunday morning the King gave an audience to the Skupshtina, as the parliament is called, and it was, therefore, one of the great days of the year. The bishops and the clergy, in their magnificent embroidered vestments, were even more imposing than the generals in uniforms of blue, scarlet, and green, with gold braid. The members of the diplomatic corps in court dress were led by the Turkish Minister and his suite. The Austrian and Russian representatives were handsomely decorated and made a fine appearance. They were watched with interest because it is supposed that both are intriguing for the control of the country. The members of the Skupshtina were clad in black evening dress, with embroidered shirt-fronts, white ties, and white gloves. A band of music stood in the area beside the palace and played lively airs while the ceremonies were going on, and a battalion of the King's bodyguard, in brilliant uniforms like those of the Austrian Hussars, was drawn up in two lines, between which everybody had to pass. I looked at these troops with peculiar interest, *because upon their loyalty the life of the King depends.*

Politics is the curse of Greece.

I have always noticed that the smaller the country the hotter the political contests. In Servia, Bulgaria, and certain American republics, where the population is less than in Greece, political agitation is even more bitter, and a larger number of people give their exclusive time to it.

Even so acute a man as Mr. Curtis, after trying to discover the political issues in Greece, gave up the task in despair. The local complications are too intricate, says he, to be untangled by a stranger, and "when you bore through into the pith of the thing you find that the ambition to hold office is the ruling motive."

Bosnia makes the only bright picture in the book. Thirty years ago that land was in a worse condition than Macedonia is to-day, because it had a larger proportion both of Mohammedans and of Turkish outlaws. One could travel in Bosnia only with the greatest difficulty and with not less danger than in the wilds of Kur-

distan. The condition of the people was more abject than that of the fellahin on the Nile. Yet one who visits Bosnia to-day can scarcely believe such conditions to have existed only a short time ago. No passages in Mr. Curtis's book are more valuable than those which show what law, order, education, and broad-gauge rule have done with the hitherto apparently hopeless state of Bosnian civilization:

Railroads reach every corner of the province, and the freight-houses are fed by long caravans of carts hauled over excellent highways. The towns are filled with new and handsome houses, factories have been built to utilize the water-power, a university, colleges, academies,

training-schools, and other institutions have been established to qualify the people to make the most intelligent use of their opportunities. Members of the different religious faiths mix with each other on amicable terms and show mutual respect and mutual toleration; the courts are wisely and honestly administered, justice is awarded to every citizen regardless of his religion or social position, taxes are low and honestly collected and disbursed. There has been little corruption in office, and whenever it has been discovered it has been severely punished. The people have learned for the first time in their history that honest complaints will be patiently listened to and that wrongs will be redressed. The introduction of free education has enabled them to appreciate the value of such a government.

## 'The Bible and the Monuments'

THE publishers of "Explorations in Bible Lands during the Nineteenth Century" have given to it a form which is impressive both for its portliness and for its typography. We can well imagine the pride with which a minister would view this volume on the shelves of his working library, and the comfortable consciousness of possessing what would serve at once as a testimonial to his scholarly inclinations and a storehouse of information on the history of the peoples of the Bible. We can imagine, too, the assiduity with which, after the first flush of possession had passed, he would let it remain on the shelf.

To the expert, or *quasi* expert, this volume is of undoubted interest. In the first place, it gives at first hand an account of the explorations and excavations undertaken by the editor and principal contributor to the book, Professor Hilprecht, the Assyriologist of the University of Pennsylvania; in the second place, it combines in one volume accounts of expeditions and discoveries, not only in Assyria and Babylonia, but also in Palestine, Egypt, and Arabia during the last century. The fact that the account of the work done by Americans is given here officially is, so far as its technical value is concerned, an extenuation of its being accorded space out of all proportion to the rest of the volume. It is not, however, an extenuation of the personal

animus that appears in Professor Hilprecht's accounts of the origin and history of the Babylonian expedition of the University of Pennsylvania. If in writing his accounts he was not influenced by the desire to justify himself as well as to record the facts, he should have guarded more carefully against subjecting himself to the suspicion that he was. As it is, parts of the narration are not very dignified. The ordinary reader who buys this book in order to learn about Oriental excavations is not likely to be very much concerned as to whether the author is right or not in statements which amount to saying, "I told you so!"

The early explorations in Assyria and Babylonia were marked by a courage and an idealism that are highly praised, though not a whit too highly. What the men of these expeditions endured is typified in events of the '30s and '40s. In the middle of the former decade a party of men under command of Colonel Chesney left England for the Euphrates. Among their other possessions, two iron steamboats had to be carried overland from the Bay of Antioch to the Euphrates. Fever and inundations were the first enemies to be overcome. Then, after a year of laborious progress, the descent of the river was made. The population of the region turned out "to see an iron boat swim," for there was a tradition "that when iron should swim on the waters of the Frāt, the fall of Mohammedanism would commence." Soundings, explorations, and tours of explanation and conciliation to

<sup>1</sup> *Explorations in Bible Lands during the Nineteenth Century*. By H. V. Hilprecht, Ph.D., D.D., LL.D. Illustrated. A. J. Holman & Co., Philadelphia.

neighboring Arabs were carried on during the descent. Suddenly a simoom, with its "dense masses of black clouds, streaked with orange, red, and yellow," struck the vessels with terrific force. One of the vessels sank and twenty men were drowned. The other vessel continued to the juncture with the Tigris, and ascended that river some distance. When returning up the Euphrates, the engines broke down. Funds were exhausted, Russian opposition was made emphatic, and the enterprise ended. But the results of the surveys made at that time can be seen in the later expeditions, and are valuable even to-day.

In 1845 Sir Austen Henry Layard started to excavate Nineveh. Knowing the evil disposition of the inhabitants of the region, he set out ostensibly as a hunter. With untrained Arabs he began his toil. On the first day he discovered two Assyrian palaces. He pushed on with his work. The rains of winter poured through the hovel where he passed the nights. Then the Governor of Mosul, learning of the operations, forbade further work. Under the cover of making drawings and copying inscriptions, Layard continued his search. A new and enlightened governor replaced the old one. Further excavations were then made possible. It was under the protection of this new governor that the enormous human head of a winged lion (one of those that are now seen in the British Museum) was found. The amusing method by which the Arab workmen brought Layard to see it—an incident, by the way, which is one of those that show the interest these Arabs took in the work—is told for the most part in Layard's own words. In order to arouse interest in England, he had been digging to find some well-preserved monuments, and had unearthed, in the process, the earliest palace of Nimrod.

On the morning following these discoveries he rode to the encampment of a neighboring shaikh, and was returning to his trenches, when he observed two Arabs of the latter's tribe "urging their mares to the top of their speed. On approaching him they stopped. 'Hasten, O Bey,' exclaimed one of them; 'hasten to the diggers, for they have found

Nimrod himself. Wallah, it is wonderful, but it is true! We have seen him with our eyes. There is no God but God!' and, both joining in this pious exclamation, they galloped off without further words in the direction of their tents. . . . One of the workmen, on catching the first glimpse of the monster, had thrown down his basket and run off towards Mosul as fast as his legs could carry him. . . . Entering breathless into the bazaars, he announced to every one he met that Nimrod had appeared." . . . The governor, "not remembering very clearly whether Nimrod was a true believing prophet or an infidel," sent a somewhat unintelligible message "to the effect that the remains should be treated with respect, and be by no means further disturbed, and that he wished the excavations to be stopped at once."

The work was resumed after the excitement had subsided. Then Layard's health, revolting against the work carried on in that climate, broke down. After two months of recuperation he was back again in the trenches. Then came new difficulties; funds were lacking; but Layard continued, making even greater discoveries, and in the course of his work identified the site not only of Nimrod, but of Nineveh itself, the capital of the vast Assyrian empire.

The larger part of the book, dotted as it is with names that bristle with diacritical marks which mean little to the ordinary reader, lacks the human interest existing in stories that are told of Chesney and Layard and some others. Nevertheless, the book as a whole is not without some interest for the ordinary minister or other student of the Bible; for it is a record of labors that have given new significance to the Bible. It is due to such labors, involving patient enthusiasm, the expenditure of money, and even the loss of many lives, that the life of nations which were ancient when Greece was young is being restored to the knowledge of men; and to such labors, together with the equally patient and courageous work of literary critics, is due the understanding of the Bible, not as a mere mechanically dictated law, but as a record of a people whose life, in connection and in contrast with the nations round about, felt the guidance of God and struggled up toward him.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Ahead of the Army.** By W. O. Stoddard. Illustrated. The Lothrop Publishing Co., Boston. 5x7½ in. 302 pages. \$1, net.

The author of those excellent stories for boys, "The Noank's Log," a tale of the Revolution, and "Jack Morgan," a tale of the War of 1812, has now published a story of the war between the United States and Mexico, which ought to prove as interesting to young readers as have been its predecessors. The hero of the book is an American boy who arrives in Mexico as the war is beginning, and becomes a guide of our army. As such he meets Captain Lee, Captain McClellan, and Lieutenant Grant—men destined to become famous in another and greater war.

**American Newspaper Annual (The).** N. W. Ayer & Sons, 300 Chestnut St., Philadelphia, Pa. 6½x10 in. 1,466 pages.

This portly volume includes a remarkable gain in number of newspapers and periodicals; an analysis of increase, however, shows the gain to be mostly sectional. There are notable additions both in number of towns and number of newspapers in Pennsylvania, West Virginia, Wisconsin, Minnesota, Oklahoma, Indian Territory, and California; these additions make about two-thirds of the total, but the other third is scattered among the remaining States, some of which even show a small loss. In the United States and Canada the dailies have increased in number to nearly twenty-five hundred, the gain in the United States being just double that of the previous year. This, says the editor of the Annual, is largely due to the extension of the rural free delivery system, which in many cases has caused the establishment of new dailies, or the change from weekly or other issue to a daily issue. To this he adds an interesting and, to many, a surprising statement: "The discontinuance of the weekly edition of leading newspapers is being increasingly noted." The number of weeklies is about two hundred greater than the report for the previous year; this is undoubtedly due to the growth in newly settled districts. A very striking augment, also, is that of the monthlies. They have increased by no less than eighty—four times as much as the gain of the previous year. The net gain in the total number of newspapers and periodicals enumerated in this Annual is the largest recorded since 1897. It is true that the names of several hundred publications will not be found in this Annual, as they have no value either for the general public or for the general advertiser. Among them are the papers issued by local churches, the small colleges, the high schools and academies, and the private schools. Not only by reason of the twenty-three thousand and more newspapers and periodicals enumerated, but also by reason of noteworthy

accuracy in the enumeration and description, this Annual is invaluable to every one interested in newspaper and periodical circulation.

**Another View of Industrialism.** By William Mitchell Bowack. E. P. Dutton & Co., New York. 5½x8 in. 403 pages. \$2, net.

This is a weak attempt to create a new political economy by treating industrial problems from a metaphysical standpoint. The author believes that in our enlightened day economic truth only needs to be presented in order to be accepted. "Adam Smith, Ricardo, Malthus, John Stuart Mill," he says, "were ever marshaling their arguments against the dangerous fallacies and hostile interests of their age," but now "these giants have all been slain." This extreme bit of optimism recalls by contrast Macaulay's reflection that the doctrine of gravitation would not be accepted to this day if it had interfered with vested interests.

**At the Gates of Song: Sonnets.** By Lloyd Mifflin. (Third Edition, Revised.) Henry Frowde (American Branch), Fifth Avenue, New York. 6¼x8¾ in. 150 pages. \$1.25, net.

The third edition of Mr. Lloyd Mifflin's collection of sonnets, entitled "At the Gates of Song," will be welcomed by the many who think him a modern Wordsworth. His poems are simple, strong, and beautiful; the feeling they express is both deep and great, and the style is distinguished by appreciation and scholarship. There is the craving in the heart of every man for the lovely, tender, and noble; it is not too much to say that such sonnets as "The Ocean Isle," "The Voiceless," "He made the Stars also," do very much toward satisfying these longings. Mr. Mifflin's book seems an abiding contribution to American poetry.

**Aus dem deutschen Dichterwald: Favorite German Poems.** Edited by J. H. Dillard. The American Book Co., New York. 5x7 in. 206 pages.

In this anthology Professor Dillard, of Tulane University, has done welcome service to all lovers of German poetry. In a volume not too large for the pocket, well bound and well printed, we find a collection of short German poems, ranging from Luther to Geibel. The grouping of the verses into four departments or chapters is original and attractive, the arrangement being with regard to thought and connection rather than (for American readers) any progressive ease in translation. Yet even very young readers will not have to seek far before coming upon their favorites—"Der Gute Kamerad," by Uhland; Körner's "Gute Nacht," Heine's "Zwei Grenadiere," and Goethe's "Ich ging im Walde" or "Sah ein Knab' ein Röslein Steh'n." From these titles it may be seen that the anthology is especially rich in verse which was first published in that wonderful period for German literature just

before and just after the beginning of the nineteenth century. Finally, we acknowledge with gratitude another excellence. The English notes are not put at the end of the book, as is too often the case, but at the bottom of the page, where they ought to be.

**City of God (The).** By St. Augustine. Translated by John Healey. (The Temple Classics.) In 3 vols. The Macmillan Co., New York. 4x6 in. 50c. per vol.

**Color of His Soul (The).** By Zoe Anderson Morris. R. F. Fenno & Co., New York. 4x7½ in. 220 pages.

A piece of crude realism that shows the ugliness of life in New York City.

**Distribution of Blood Vessels in the Labyrinth of the Ear of *Sus Scrofa Domestica* (The).** By George E. Shambaugh. (Reprint from the University of Chicago Decennial Publications. First Series, Vol. X.) The University of Chicago Press, Chicago. 8x11 in. 35 pages. \$1.25.

**Duke and His Double (A).** By Edward S. Van Zile. Henry Holt & Co., New York. 4½x6¾ in. 187 pages. \$1.

**Hints for Lay Preachers.** By F. B. Meyer. The Fleming H. Revell Co., New York. 5x7½ in. 128 pages. 50c., net.

Though addressed to lay preachers, this volume may be read with equal profit by ministers. It states with great concreteness and directness the fundamental principles involved in all effectual preaching. In spite of one or two instances of indulgence in the whimsical (as, for instance, an objection to a sermon with six divisions, because six is the "number of the Beast"), these chapters illustrate with great genuineness and spontaneity the principles enunciated, for they bear the characteristics of brief sermons themselves. When Mr. Meyer deals with specific methods of sermon-making, he wisely points out that their value depends upon temperament and other variable conditions; but when he deals with underlying principles, he speaks with the confidence of one who possesses truths that can be universally applied. We wish that every minister might make these principles a part of his sub-conscious self.

**Hiram College and Western Reserve Eclectic Institute: Fifty Years of History, 1850-1900.** By F. M. Green, A.M., LL.D. Illustrated. The O. S. Hubbell Printing Co., Cleveland, Ohio. 5½x8 in. 425 pages. \$1.50.

**Interior of the Kingdom (The).** By David Vaughan Gwilym. Thomas Whittaker, New York. 5½x7½ in. 132 pages.

A series of meditations on the spiritual and devotional, as distinct from though not necessarily in contrast to the theological, or the practical, side of Christian life. They all center about the Beatitudes.

**Ireland and Her Story.** By Justin McCarthy. Funk & Wagnalls Co., New York. 4¼x7½ in. 190 pages. \$1.

Mr. McCarthy's latest volume is a clear narration of the social and political evolution of the Irish nation from the earliest times to the present day. Mr. McCarthy vividly brings out the chief figures in the history of his people—Grattan, Flood, Tone, the Emmets, O'Connell, Parnell—though his accounts of such movements as that for Roman Catholic Emancipation, the "Young Irelanders," the Home

Rule propaganda, and finally the contest for the ownership of the soil, are necessarily condensed. Still, they are related with all the compelling power of Mr. McCarthy's brilliant phrase. The little book in its appropriate green cover, excellent page and print, should find wide circulation, if for no other reason than that no one is better qualified to describe Irish events than its author. Though he has been chairman of the larger section of the Nationalist Party, and for many years the leader in the House of Commons of the views of the Irish majority, he has never lost the confidence and the esteem of Englishmen, and thus among Irish representatives at Westminster has occupied a unique and enviable place.

**Junior Studies in the Life of Christ: A Year's Course of Thirty-five Lessons, for the Use of Junior Students and Classes.** By Ralph Eugene Diffendorfer and Charles Herbert Morgan. Jennings & Pye, Cincinnati. 4x6½ in. 221 pages. 50c.

**König der Bernina (Der): Roman aus dem schweizerischen Hochgebirge.** By J. C. Heer. J. C. Cotta'sche Buchhandlung Nachfolger, Stuttgart und Berlin. 5x7½ in. 361 pages. \$1.

The Engadine is justly becoming more and more the playground and the health-ground of Europe and of the world. This is due to its apparently unique physical character; yet of the thousands of foreigners who spend summers and now winters there, few realize that its people have also an extraordinarily striking stamp of character. "Jürg Jenatsch," by Conrad Meyer, was perhaps the first really great novel to depict the Engadine folk. Herr Heer's superb "König der Bernina" is also valuable; first, because of its merit as a historical romance; secondly, as an impressive delineation of the life of the people; and, finally, as a description of the varying appearance in every month of the year of the marvelous valleys, mountains, lakes, and glaciers about Pontresina and St. Moritz.

**Law and Loyalty: With Other Charges and Sermons Preached at the Consecrations of Bishops.** By Henry C. Potter, Bishop of New York. Edward S. Gorham, New York. 5½x8½ in. 307 pages. \$1.50, net.

This series of discourses by the Bishop of New York on the duties and functions of the clergy in his communion are of course chiefly interesting to Episcopalians. Bishop Potter does not succeed in making clear how the "freest and frankest criticisms" of the offices of his Church—criticisms which he welcomes—are consistent with the duty he lays down in these words: "A man who is under the obligation of a priest's ordination vow has parted with his individual discretion." In his sermon on the occasion of the consecration of the Bishop of Nebraska he makes a distinction which comes with especial force from a prelate of his standing: the men whom Christ chose, he says, "were bidden to do the mightiest works the world had ever seen . . ." and as they preached, wrought and healed, "it was not their powers—canonical, ecclesiastical, episcopal—that made them strong, but their power." And he warns his brethren against mistaking "that which is the voice of authority for that which is the far mightier constraint of example, of wisdom, of love." We believe

that "individual discretion" is freed, not imprisoned, much less destroyed, by such constraint as that. That this is true these addresses themselves are no insignificant indication. In them the emphasis is strongly upon what is vital, rather than what is formal, in the system and order of the Episcopal Church.

**Lord's Prayer for Children (The).** By Martha K. Lawson. The Fleming H. Revell Co., New York. 5x8 in. 37 pages. 50c., net.

Each petition in the Lord's Prayer is illustrated by a story, rather insipid, a song set to music, and a picture. The concluding chapter of hints is brief, sound, and moderately suggestive.

**Marion Harland's Complete Cook Book: A Practical and Exhaustive Manual of Cookery and Housekeeping.** By Marion Harland. Illustrated. The Bobbs-Merrill Co., Indianapolis. 5½x8½ in. 780 pages.

A large, well-arranged, and fully illustrated volume on a subject of universal and continuous interest. Mrs. Terhune's pseudonym is a guarantee of high excellence.

**Mitosis in Pellia.** By Charles J. Chamberlain. (Reprint from the University of Chicago Decennial Publications. First Series, Vol. X.) The University of Chicago Press, Chicago. 8x11 in. 25 pages. 25c.

**New German Grammar (A).** By Marion D. Learned, Ph.D. (Twentieth Century Text-Books.) D. Appleton & Co., New York. 5x8 in. 407 pages.

**Notes and Reminiscences of a Staff Officer.** By Lieut.-Col. Basil Jackson. Edited by R. C. Seaton, M.A. E. P. Dutton & Co., New York. 5¼x8 in. 218 pages. \$2.50, net.

The Waterloo campaign will always be one of the most absorbing and interesting moments of history. Many very notable contributions have been made to its narration. Among them the present volume will have deserved place, first, because it is a first-hand account, and, secondly, because of the simplicity and directness of its style. Colonel Jackson was a staff officer in the Waterloo campaign, and was afterward at St. Helena during Napoleon's captivity. In 1889, at the age of ninety-four, Colonel Jackson died, leaving only three surviving heroes of Waterloo—namely, the Earl of Albemarle, General Whichcote, and Colonel Hewitt. The narration, as given to us in this volume, may be criticised as not being in line with some other accounts, but it certainly makes a strong impression as the evidently faithful report of an eye-witness.

**Philippine Islands, 1493-1803 (The): Translated from the Originals and Annotated by Emma Helen Blair and James Alexander Robertson, with Historical Introduction and Additional Notes by Edward Gaylord Bourne.** Illustrated. Vol. V.—1582-1583. The Arthur H. Clark Co., Cleveland, Ohio. 6¼x9½ in. 320 pages.

**Phylogeny of Angiosperms (The).** By John M. Coulter. (Reprint from the University of Chicago Decennial Publications. First Series, Vol. X.) The University of Chicago Press, Chicago. 8x11 in. 6 pages. 25c.

**Saint of the Dragon's Dale (The).** By William Stearns Davis. The Macmillan Co., New York. 4x6¼ in. 129 pages. 50c.

In this little book we have a tale of Eisenach, the Thuringian Forest, and the Wartburg as they must have looked in very early days.

The story is fantastic, but attractively fantastic. The book's size, its good paper, clear print, and appropriate cover, will prejudice the reader in favor of the volume as a pocket companion during an hour's journey.

**Studies in Fat Necrosis.** By H. Gideon Wells. (Reprint from the University of Chicago Decennial Publications. First Series, Vol. X.) The University of Chicago Press, Chicago. 8x11 in. 27 pages. 25c.

**Studies in History, Economics, and Public Law.** Vol. XVI. The Centralization of Administration in Ohio. By Samuel P. Orth, Ph.D. The Columbia University Press (The Macmillan Co.), New York. 6x10 in. 177 pages. \$1.50.

**Studies in History, Economics, and Public Law.** Vol. XVII. Principles of Justice in Taxation. By Stephen F. Weston, Ph.D. The Columbia University Press (The Macmillan Co.), New York. 6¼x9½ in. 299 pages. \$2.

**Temptation of Jesus (The): A Study of Our Lord's Trial in the Wilderness.** By A. Morris Stewart, M.A. The Fleming H. Revell Co., New York. 5¼x8½ in. 230 pages. \$1.25.

Lessons drawn from the temptations in the wilderness after the baptism by John. Although the author says that "critical questions and purely theological discussion have been avoided," he enters them enough to suggest, for instance, that Jesus was transported bodily to the pinnacle of the Temple. He seems to have ignored the probability, to say the least, that Jesus, who is the only one who could have related the story of the temptation to the disciples, spoke in this case, as was his wont, in a parable.

**Under Our Flag.** By Alice M. Guernsey. The Fleming H. Revell Co., New York. 5x8 in. 192 pages. 50c., net.

A collection of facts and anecdotes illustrating conditions affecting home missionary work.

**Woman's Library (The).** Vols. I. and II. Illustrated. E. P. Dutton & Co., New York. 5x7¼ in. \$1.50 per volume.

From the articles which constitute these volumes one may ascertain how to become a London milliner, learn the steps which take one into sanitary inspecting and the secrets of the dressmaker's art, and consider the stage and medicine. The most illuminating portion is Janet Hogarth's chapter on the "Higher Education of Women," which treats that rather over-treated theme with freshness, insight, and good judgment. Would-be actresses who read Mrs. Kendal's article on "Theatrical Life" will have to reverse the ministerial motto, "Not as I do, but as I say," for this successful player holds out scant prospect of place or success. We are inclined to think somewhat misleading her statement that "there are three thousand actresses in London alone always out of work half the year at least." The profession is one of shifting engagements and constant changes, and from week to week the three thousand would not be the same people. All the writers deal with conditions in England, and give an English point of view. Perhaps the more practical volume is that taking up needlework. The article on embroidery is especially good, and the cuts and illustrations are so clear that even one unskilled with the needle could do fancy stitch or two.

# Correspondence

## Bishop Brent on Religious Conditions in the Philippines

[Concerning the religious conditions in the Philippines statements have appeared from time to time in the papers that the American Commissioners and other officials at Manila (1) did not greatly welcome Protestant missionary work; (2) were absenting themselves from Protestant church worship, perhaps for policy's sake towards the Roman Catholics; and (3) had interfered with the freedom of a school-teacher in outside religious work. In response to our request Bishop Brent thus informs us concerning these matters.—THE EDITORS.]

### *To the Editors of The Outlook:*

I have arrived at the following conclusions regarding the subject of the attitude of Government officials to mission work in these islands:

1. The Governor and his associates on the Commission make every effort to be impartial and just in all their dealings with religious bodies of whatever sort. Two illustrations will suffice: There was a dispute in Benguet as to the title of some land which we were using for church-building purposes. The opposition of the local governor notwithstanding, the Commission dealt with the matter in no cold, judicial way, but with a measure of considerateness that does not always characterize the action of such bodies. It was under no compulsion to allow us to continue our use of the property, and we would have had no grounds for complaint had the decision of the local authority remained unmolested; for we could have had recourse to the courts, which, perhaps, would have been the natural way of settling the dispute. The Commission's action indicates a desire to foster any work that has the welfare of the people in view. I have every reason to believe that the Commissioners are glad to see American missionaries come to the Philippines, and that they stand ready to give that measure of aid which is possible under the American Constitution, which admits of no State religion and allows of no special consideration for any given religious body.

The other instance referred to above is more pointed. The Methodists applied to the Commission for a lease of part of the San Lazaro estate, in the administration of which delicate questions are involved. The Commissioners did not grant all that was asked of them, but I believe they went to the limit of their authority. Here again they were in no wise bound to give heed to the application, and had the Commissioners been afraid of exciting Roman Catholic criticism they would have excused themselves from complying with the request; for the San Lazaro estate has such antecedents as to make the existence of a Protestant mission upon it sufficient to rouse the former owners from their graves, to say nothing of its effect on the living. I have no doubt at all that the Commission has at times been overcautious in handling questions in which Roman Catholic matters were involved. It would be surprising if it had not. But, on the whole, it has threaded its way along a difficult and intricate path with fairness and commendable wisdom. The very fact that there are many from the Roman Catholic Church on the one hand, and from Protestant churches on the other, ready to shower criticism on the Commissioners on the common charge of partisanship, is something of an indication that impartiality is their law; they are in a position which Scripture makes an enviable one—by inference, at any rate; that is to say, no man speaks well of them in this respect! There is a story to the effect that one day Archbishop Alcocer charged the Governor with being unfair. The Governor turned to his secretary and asked for the letter in which he (the Governor) was attacked for his action in the matter. The secretary is said to have replied: "Which letter, sir, the Roman Catholic or the Protestant?"

2. As to the attitude of Government officials. As I view the question, we are warranted in discussing their religious or ecclesiastical behavior only from one standpoint. The fact—and a deplorable fact it is—is that the majority of Government officials, great and small, are not regular church-goers. The question, how-

ever, is not whether or not they go to church, but whether they absent themselves from public worship for policy's sake—that they may favor the Roman Catholic cause. I can secure no evidence that this is the case. The temptation is to impute evil motives; but I do not think we have any more right to guess at motives as to why men stay away from church than we would have to guess at those which lead them to church. When I came to Manila, I heard it stated in different quarters that Commissioners held aloof from religion so as not to offend the Roman Catholics. At first I was inclined to believe it. As careful an investigation as a man can make in such a matter leads me to the conclusion that the complaint had no foundation either then or now. So contemptible a thing would it be for a man to suppress his convictions and his duty to God for the sake of the applause of the majority, or to gain some petty advantage in temporal government, that any one guilty of it, *ipso facto*, would be disqualified for holding the reins of authority.

Probably the majority of the men under discussion came from the United States as non-church-goers, and they are seen at public worship here somewhat more often than when at home—at any rate, not less. Others, of course, have fallen into the listlessness of Oriental life. But the point is this, they are not absentees because of timidity or on account of (what viewed from the precarious standpoint of expediency alone would be a foolish and short-sighted) policy. Beyond this I do not care to discuss the matter. In my own church not a Sunday passes without the presence of Government officials, from the Governor down; a number are not regular, but they recognize that they owe some duty to religion by coming even occasionally. Many of our warmest supporters are of the families of men high in office, and this has always been so from the inception of our work, long before I arrived on the scene. Naturally, I wish that more of our public men, men of mind, character, and influence, were prominent also in church matters; but I would deprecate their becoming so because it was politic, respectful, useful for temporal ends, almost as much as I would resent their abstention on similar

grounds. We do not want officials at church because they are officials, but because they are men; and the more excellent way is to hush our complaints and go after and win them as men.

The real drawback to mission work here is the same that exists elsewhere—the indifference and wickedness of nominal Christians. If we are to criticise those who happen to hold office for being non-religious or irreligious, it should not be *qua* officials, but as belonging to that class, which is large in Manila, who are so absorbed in the affairs of this world that they give no thought to the deep things of God. Only that measure of censure is due to officials which attaches to any other non-religious persons. They should be religious because they are men, not because they hold government positions.

3. I am conversant with the case you quote, in which the freedom of a school-teacher was tampered with. Shortly after he arrived here he was asked to speak at a Sunday evening meeting of the Young Men's Christian Association. He did so, and no comment was provoked. Months later the Evangelical Union invited him to give an address on "our work." He assented. Mr. Moses, the then Commissioner of Education, led him to understand, through the Superintendent of Education, that he would displease the authorities if he did not cancel his engagement. Such action was unjustifiable, and the teacher would have been warranted in ignoring this interference with his religious liberty; but it was the action of an individual Commissioner and not of the Commission, who, as I understand the case, knew nothing about it. There was no formal prohibition issued; though, as I view the matter, there was no sufficient warrant for *any* interference. It would have been quite within the bounds of propriety for the Commissioner to have conferred with the teacher, whose position happened to be conspicuous, as to the wisdom of making a public address on religious matters new to the native mind, at a moment when the Filipino was viewing the schools with suspicious eye, and was encouraged to believe that the educational work bore something of the character of a Protestant propaganda—a colossal lie, of course. But he seems to have overstepped the mark in the course he

a clever girl may be ready to take a position (on trial) as general housemaid. After a year and a half of service let her come back for advanced work in cookery, fine washing and ironing, physiology and hygiene, and, when all the requirements have been complied with, give her a diploma. Of course, if her behavior in service has not been satisfactory, probation must be longer. The school would keep in touch with its alumnæ and foster an *esprit de corps* like other institutions. The wage for the graduate would naturally be higher than for the probationer or the ordinary maid, but it would be justified by her greater skill and economy, and probably not far exceed the present sum.

A pretty, serviceable uniform might become as honorable a badge of skilled service as a nurse's white cap and apron, and bring as great comfort into our households.

This experiment has been tried in London with great success. How far the details correspond with the plan outlined above I do not know. Even one good school in this country would do much to advance the standard. Just as the first woman who went to college opened the door to thousands of others, so the first women trained to housework will draw others after them. Certain it is that a warm welcome is waiting, in every home in the land, for the well-trained, economical, responsible servant-girl; nor will she ever have cause to complain, like her sisters in other occupations, of lack of time, money, respect, home surroundings, or, bitterer still, the fierce competition that crowds them into dishonor or starvation.

EMILIE CAM DE PHILO.

#### A Health Farm

*To the Editors of The Outlook:*

The establishment of the Denver Association Health Farm marks the latest development in Young Men's Christian Association work. The aim is to provide in this rare climate of bright sunshine and pure air a cheerful environment, sanitary home, nutritious food, and pleasant occupation for men who need building up physically, and to give an opportunity in this connection for young men of meager financial ability to get the benefit of Colorado's favorable climate. The present

equipment includes a brick house for office, superintendent's residence, parlor, dining-room, kitchens, apple cellar, stable, and a group of cottages, each one of which is occupied by a farm resident. These cottages are well floored, and have a three-foot wainscoting with canvas sides and roof.

Residents are received on a basis of twenty-five dollars a month and credit given for work done by the resident. Employment is not guaranteed, but, when the physical condition of an applicant permits, will be provided as far as possible. Some employment can be secured on adjacent nursery and vegetable farms.

Mr. Richard C. Morse, General Secretary of the International Committee of the Young Men's Christian Association, describes the Association Health Farm as a "manifestation of that Christian hospitality to young men for which our Associations stand," and further very cordially characterizes the enterprise as a generous Christian and international undertaking which should receive enthusiastic support from the whole brotherhood of Associations.

W. M. DANNER.

Denver, Colorado.

#### Honor to Oberlin

*To the Editors of The Outlook:*

In the number of *The Outlook* of August 1, in an article on "Education of Women," the author states that up to 1840 no college was open to women. In that she is mistaken. Oberlin College was open for women from its foundation, 1834. One woman graduated there in 1838 and six in 1839. Oberlin was the first college in the world to admit women. Kindly make the correction.

ADDISON W. FISHER.

Warsaw, New York.

#### A Correction

*To the Editors of The Outlook:*

"College News" is not published, as was stated (June 26), by the Wellesley Inn Corporation, but for the past year has been edited and issued by the students of the college, through the Board of the "Wellesley Magazine," which bought it last September from that corporation.

# RHEUMATISM

(Chronic or Acute)

## Relieved Free Wonderful Discovery of Michigan Man Cures Without Medicine

Taking medicine is only the beginning of trouble. Don't do it. Nature provided millions of pores for the expulsion of impurities which cause rheumatism. You must make these pores do their work. Magic Foot Drafts open up and revitalize the largest pores in the body and stimulate the circulation and entire nervous system to prompt action. A pair of Drafts will be sent free on approval to anybody. If you are satisfied with the help they bring, send One Dollar. If not, keep your money. The risk is ours.

Magic Foot Drafts cured Mrs. Leah Brumbaugh, Postmistress of Coburg, Neb., in 1901, and there has been no return of pain.

They cured both Mr. and Mrs. Edward Lincoln, of Rochester, New York, over a year ago. No pain since.

They permanently cured A. J. Keenan, a New Orleans grocer. They cured Calvin Hersome, of Boston, after being laid up seven months.

R. D. Cummings, of Fort Worth, writes: "I have never felt any rheumatic pains after I used Magic Foot Drafts last June (1902)."

Many thousands of others are rejoicing over comfort brought by Magic Foot Drafts. Sit down and write to-day for a pair of Drafts free on approval to MAGIC FOOT DRAFT CO., Rf 22 Oliver Bldg., Jackson, Mich. They will cure you.

# That Peculiar Lightness and Flavor

Noticed in the finest biscuit, rolls, cake, etc., is due to the absolute purity, fitness, and accurate combination of the ingredients of the Royal Baking Powder. The best things in cookery are always made with the Royal Baking Powder. Hence its use is universal—in the most celebrated restaurants, in the homes of the people, wherever delicious, wholesome food is appreciated. Its sale equals that of all other baking powders combined.

**Made from pure grape cream of tartar.**

Care must be taken to avoid baking powders made from alum. Such powders are sold cheap, because they cost but a few cents per pound. Alum is a corrosive acid, which taken in food means injury to health.

**The Outlook** is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

**Price.**—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

**Postage is Prepaid** by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add \$1.56 for postage.

**Change of Address.**—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

**Discontinuances.**—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

**How to Remit.**—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

**Letters** should be addressed:

THE OUTLOOK COMPANY

287 Fourth Avenue, New York

For shaving Ivory Soap is preferred by many. Its lather is profuse. Hot water instantly softens the surface but does not melt the cake to waste in the cup. Ivory Soap is aseptic and odorless and rinses away entirely, leaving the face smooth and absolutely clean. It costs about one-fifth as much as most of the so-called shaving soaps.

Ivory Soap— $99\frac{4}{100}$  Per Cent. Pure.

## The President and the Labor Unions

Three weeks ago, in reporting the action of the President in reinstating a workman who had been dismissed from the Government Printing-Office because he was not a member of the union, The Outlook said that the President had directed that the principle upon which he had acted in that case should be followed in every department. The letter which he sent to the heads of departments inclosed two letters to Secretary Cortelyou; they have now been made public. The principle which he enunciates is given in these words:

There is no objection to the employees of the Government Printing-Office constituting themselves into a union if they so desire, but no rules or resolutions of that union can be permitted to override the laws of the United States, which it is my sworn duty to enforce.

He then quoted from the finding of the Anthracite Coal Strike Commission:

It is adjudged and awarded that no person shall be refused employment or in any way discriminated against on account of membership or non-membership in any labor organization, and that there shall be no discrimination against or interference with any employee who is not a member of any labor organization by members of such organization.

The President then made this comment:

I heartily approve of this award and judgment by the Commission appointed by me, which itself included a member of a labor union. This Commission was dealing with labor organizations working for private employers. It is, of course, mere elementary decency to require that all the Government departments shall be handled in accordance with the principles thus clearly and fearlessly enunciated.

With the publication of these letters there arose the rumor that a general investigation of labor conditions in all the departments had been ordered by the President. This has been denied. What is more important, the policy of the Administration in dealing with Government employees

has been distinctly stated. The result makes every concern conducted by the Government an "open shop." In other words, the laws and regulations of the Government have been declared supreme over all rules of labor unions. Clear-headed workmen will see that this decision is as much to their advantage as it is to the Nation at large. If labor unions were permitted to compel the Government to accept their selection of employees and their determination as to conditions of work, American laboring men would be under the rule of irresponsible associations rather than under the protection of a free republic. The unions themselves, whether they recognize it or not, will profit by this decision, for they will feel the stimulus to maintain their organization by making it stand, not for privilege, but for competency.

## Discriminations Against Unionists Legal

While Government officials, under President Roosevelt's directions, are seeking to put an end to arbitrary discriminations against non-union workmen in the Government employ, the United States Circuit Court at St. Louis has rendered a decision that a private corporation may legally discriminate against unionists by discharging workmen for connecting themselves with a union, and by maintaining for itself and giving to others a blacklist of the employees discharged for this cause. The case before the Court was that of Arthur Boyer and others, who stated that they were members of the Commercial Telegraphers' Union, and had been discharged and blacklisted by the Western Union Telegraph Company solely because of their membership in this union. They asked the Court to enjoin the Company from discharging employees because of membership in their union, and, from conspir-

ing to prevent their further employment by means of a blacklist. Judge Rogers, in refusing to issue the injunction, held that the corporation had a right to discharge an employee for any cause, or without cause, unless it thereby violated a contract, and that if it did violate a contract the remedy of the discharged employee was a suit at law and not a writ of injunction. The Court further held that the blacklisting of discharged unionists and the giving of the lists to other employers did not constitute a conspiracy, as there could be no conspiracy to do a legal thing. The very fact, he said, that the union professed to be organized for moral purposes prevented any member from objecting when his discharge was based upon his unionism. The unionist had no more cause for legal complaint than would a member of the order of Freemasons or of the Presbyterian Church if he were discharged and blacklisted for membership in those organizations. All this, it may be said, is quite conclusive from the standpoint of law, but unsatisfactory from the standpoint of justice. In the absence of a statute forbidding it, a corporation may discharge employees for membership in a union just as it may discharge them for membership in a particular church or political party, but the discharging of employees for such reasons has always been resented in America as a tyrannical violation of individual freedom, and has in some States led to the passage of laws forbidding such discharges. Workmen have the same natural right to join unions not directed against the public welfare that capitalists have to join corporations not so directed, and the attempt to deny equal rights brings public sympathy to the side of the intended victims. The action of the Western Union Telegraph Company in discharging and blacklisting employees for membership in the union is certain to make new friends for the cause of unionism.

⊙

#### A Walking Delegate Convicted

On Friday of last week Samuel Parks, the walking delegate of the New York Housesmiths' Union, was convicted of the crime of extorting two hundred dollars from Josephus Plenty,

a contractor for skylights on the new Hamburg Line pier. The contractor, it may be recalled, charged that he had paid this sum to settle a strike which tied up work on the pier and rendered him liable to a penalty of two hundred dollars a day for delay in carrying out his individual contract. The jury was selected with great care, and was an intelligent, well-to-do body of men. Unfortunately for the prosecution, one of the witnesses called by it to sustain Plenty's charges became a witness for the defense, others had their testimony stricken out as incompetent, and still others were not put on the stand. The weakness of the prosecution led the friends of Parks to expect an acquittal, but the weakness of the defense finally convinced the jury of the truth of Plenty's charges. Parks not only pleaded not guilty, but declared that he had never met Plenty until the prosecution was begun, and his attorneys asserted that Plenty falsely claimed to have paid Parks the two hundred dollars in order to extort a hundred and fifty from the Hamburg Company as its share of the alleged cost of placating the union. An agent for the Hamburg Company, it appeared, did at one time pay Plenty the sum specified, though it was afterwards paid back. But, unfortunately for the defense, it conspicuously failed to put on the witness-stand the friend of Parks who was alleged by the prosecution to have turned over to him the money paid by Plenty, and also failed to put on the stand the servants alleged to have passed through the room where Plenty and Parks were conferring. The witnesses summoned by the defense were used chiefly to prove that Parks had not been accompanied by another officer of his union when conferring with Plenty, as the other officers named by Plenty had been in a conference with other men at the time named. The jury spent four hours considering the case before they were able to reach a verdict. The lawyers for the defense at once gave notice that the case would be appealed. Three other indictments are pending against Parks, and the prosecution asks for his immediate trial upon them. No one questions that many union officials have used their power to extort money from employers, and it is a great gain to the entire public to have these extortioners exposed and punished. The unions

are the worst sufferers from this crime, because it is their interests that are betrayed by bribe-taking delegates, just as it is the public interests that are betrayed by bribe-taking councilmen and legislators. It is extremely unfortunate that in the case just tried the associates of the man found guilty are not yet convinced of his guilt. The prosecution of the other indictments ought fully to establish the character of the man indicted.

**Negro Business League  
in a Southern Capitol**

On Wednesday,  
Thursday, and Fri-  
day of last week

there was held in Nashville, Tennessee, the fourth annual session of the National Negro Business League. This organization is formed of colored men and women who are engaged in various lines of business—nearly every line, indeed, in which white men are engaged. It is doing good service to the white race as well as to the black. On the one hand, it is a summons bearing visible evidence of its own reasonableness to the poor and the ambitious of the negro race to make themselves useful members of society. As Dr. Booker Washington, who is President of the League, said in his annual address, "It is much wiser for us to emphasize opportunities than grievances. The world soon gets tired of the man or the race with a grievance. We must learn to be bigger than those who would insult us. . . . The race that can produce such an assembly [as this] of men and women after only forty years of freedom is one to be proud of. . . . The man who proves himself useful, no matter what his color, is the one who is going to succeed." On the other hand, this League is a revelation to the white race of what the negroes are capable of. Factory operatives, blacksmiths, hotel-keepers, pharmacists, bankers, gathering together and conferring on their various enterprises, form an unanswerable argument that the American negro is not unworthy of public confidence and respect. Unquestionably there are many Southern white people who need such ocular demonstration to be convinced of the negro's capability; but that Southern white people are glad to be convinced of this fact is evident from the way in which this League was entertained by the people of

Nashville. The Hall of Representatives in the State Capitol was put at the League's disposal for its meetings. Trolley excursions were provided. Mayor-elect Williams made the address of welcome on behalf of Nashville, and the President of the Chamber of Commerce welcomed the negroes on behalf of the commercial life of the city. Women of the best white families attended the meetings, taking seats behind the rail. In spite of the many disheartening aspects of the relation between the white and black races, such a convention as this is full of reassurance as to the present and of promise for the future.

**Political News  
and Gossip**

In Nebraska—one of the few politically interesting States that hold an election this year—the Republican Convention last week passed resolutions enthusiastically indorsing President Roosevelt for a second term, proclaiming present prosperity to be the result of Republican policies, eulogizing the protective tariff, condemning "combinations of capital having for their purpose the stifling of competition," and demanding such legislation as will enable American-built ships to carry America's foreign commerce. The word subsidy was not used in this last plank, but the subsidy policy was plainly indorsed. Mr. John L. Webster, an Omaha lawyer, was proposed by the Convention as President Roosevelt's associate on the ticket of 1904. In Ohio the contest between Mayor Johnson and John L. Zimmerman, the conservative candidate for the Democratic nomination for Governor, is proving closer than was expected, though the reports still indicate that Mayor Johnson is likely to control the Convention. In Missouri the popular demand that Mr. Folk, the successful prosecutor of the St. Louis and Jefferson City rings, shall be made the Democratic candidate for Governor is increasingly strong—particularly in the rural districts, where Mr. Folk's independent course has not stirred against him influential enemies. Mr. Folk has even been proposed in the "Commoner" as a possible Democratic candidate for the Presidency in 1904. For this last-named position, however, the present range of gossip knows no bounds, and the situation has recalled the epigram made upon the election of President Polk:

"Henceforth no private citizen is safe." Several influential Southern Senators have united in indorsing Senator Gorman, of Maryland, but Mr. Bryan has promptly declared that this nomination would no more secure harmony than would that of Mr. Cleveland. It would, he says, eliminate from the campaign the tariff issue, the trust issue, the imperialism issue, and the currency issue, and leave nothing but the question, Who shall hold the offices? Mr. Gorman, he declares, would poll a million less votes than a Democratic ticket with no candidate at all.

**Mr. Hay and the  
Open Door**

Last week the Chinese Minister at Washington conveyed to the State Department an official notification of China's purpose to open two ports in Manchuria on October 8. This is the date on which Russia has announced her intention of evacuating that country, "if circumstances permit." While most observers hold this phrase to be hardly other than meaningless, it is significant that the opening of the ports is put by China for the date of the supposed evacuation. It might be thought that China's consent to open the ports would constitute in Russian eyes a "circumstance" that would prevent evacuation, but Russia's consent has already been obtained by our State Department. It might also be thought that, on its part, China would make Russian evacuation a secret precedent for the opening of the ports. We hope that this fear is groundless, especially as the Chinese Minister, in an interview last week, defies any one "to name an instance when China violated her treaty obligations except in the guarantee of safety to foreigners." Whether Russia evacuates or not, if additional treaty ports are opened at our initiative, the benefit accruing both to China and to the world will be far greater than the mere amount of extra commerce involved—the benefit will be moral rather than commercial. So far, the American open-door policy as regards the Asiatic Pacific coast seems to promise ultimate success. We are glad to note that Mr. Hay's work in this matter is receiving commendation from the best papers, not only here but abroad. For instance, last week the London "Specta-

tor" declared China's official notification to be the crowning proof of Secretary Hay's ability. He is "the most successful of living diplomats," declares the "Spectator." Considering his place among the world's statesmen, it notes certain qualities that have raised him to his present position:

His ruling qualities are serenity, firmness, a high sense of honor as well as of public duty, and a wide knowledge of men and affairs, without a trace of the bully or blusterer in his composition. He is never awed, not merely by other men, a kind of courage which is not uncommon, but he is never awed by rumor, circumstance, or the creation of bogies of any kind.

The "Spectator" attributes Mr. Hay's calmness, self-possession, and quiet ability to his training as President Lincoln's secretary, and regrets that President Roosevelt, Mr. Hay, and others do not collect young men around them and train them in a similar manner for a few years as secretaries, since such training would be invaluable if in later years they were called to serve the State. We believe that the young men who have been serving our statesmen as secretaries have had precisely this training. Some of them—notably Secretary Cortelyou—now show its advantages in a more important station.

**The Macedonian  
Insurrection**

Readers of press despatches should not put too great confidence in the despatches from Constantinople or from Sofia, the Bulgarian capital, concerning the events of the Macedonian insurrection. During the week, now from one source and then from the other, characteristically contradictory statements have come as to the massacres in the northern district of Uskub, as to the reign of terror in the Monastir district to the south, and as to the burning of villages in the district of Adrianople to the east. On one point, however, all despatches are agreed. The port of Iniada is a port of the last-named district. The Russian fleet sent to overawe the Turkish Government anchored there last week. It remained until the Sultan had acceded to all the peremptory and severe demands made by Russia relative to the punishment of the murderers of the Russian Consul at Monastir and of the officials, both civil and military, who were in power at the time. The Russian

Government demanded, in addition, the appointment of European officers to the Turkish gendarmerie or police force. Having gained some reform in Turkey's internal affairs, the Russian ships returned to Sebastopol. The presence of the fleet, however, at Iniada for several days, gave encouragement to the insurgents, as the spread of the insurrection towards the east indubitably shows. It must be admitted that, with all his record of crime, the present position of the Sultan is a pitiable one. No matter how sincere he may be in his desire for peace and order within his empire, he has to deal, in the first place, with agents whom he cannot trust. He has not money enough to pay his soldiers regularly; and, though they have been accustomed outrageously to recoup themselves from the provinces, those in the region popularly known as Macedonia find the country devastated and are proportionately discontented. Moreover, the Sultan's own body-guard is composed of a large force of Albanians, and these, if the bravest, are among the most lawless of his subjects; a single untoward event on the border between Macedonia and Albania might be paid for by terrible vengeance at Constantinople. Again, while the Sultan has been able to keep the Bulgarian Government at bay because of the distance of insurrection from the border, it will be increasingly difficult for him, even aided by the Powers, longer to restrain the Bulgarians, for the fighting has within the past week approached dangerously near the frontier. Finally, there is always the Russian glacial movement, whether towards the Pacific, the Persian Gulf, or the Mediterranean, to be feared. Sometimes the movement is impressively unglacial, as was the case last week.

#### The Native Christians of Turkey

According to last week's despatches, the Greek Christians in western Macedonia appear to have complicated matters unnecessarily for the Bulgarian Christians. Some rivalry between them has existed ever since Bulgaria began to be politically independent. Even as far back as 1870, eight years before the Treaty of Berlin erected Bulgaria into a principality, the Bulgarian

Church, which had been part of the Greek Orthodox Church, became independent of the latter, causing considerable feeling. The Bulgarian Church is governed by a senate of bishops which, with the Sultan's approval, chooses an Exarch to reside at Constantinople and dispense patronage throughout the Empire. Perhaps the strongest bond between the Bulgarians and the Macedonians has been that of a common religion. Any possible present jealousy of the Greek Christians arises largely because they fear a Greater Bulgaria as a result of the insurrection against Turkey, and they discern no Greater Greece. If Macedonia is divided into two main divisions of native Christians, Armenia is divided into three. The Armenian Church was founded by Saint Gregory (died 322), hence the name Gregorian as applied to the Church which at the General Council of Chalcedon (451) refused to accept that Council's decisions. To the rest of the world the following centuries were dark ages, but there was a renaissance in Armenia both in literature and art. Historically Armenia was really the first Christian nation. It possesses a translation of the Bible dating from the fifth century, a work of marked literary worth. As for architecture, the Armenian churches still standing throughout the region of Van and as far as Anj in Russia show, in their slender pillars, noble arches, polygonal towers and domes, an impressive evidence of Byzantine art. In the fifteenth century the Armenian Church was split into two parts, the larger accepting papal supremacy. When, in 1870, the dogma of infallibility was promulgated, this majority faction again split and its minority affiliated with the Old Catholics. The Orthodox Armenian ecclesiastical head, the Katholikos, has as subordinates the Patriarchs of Constantinople and Jerusalem; he resides near Erivan, in Russian Armenia. The Roman Catholic Armenian Patriarch resides in Constantinople. The American Protestant missionaries in Macedonia and Armenia, we are glad to add, have always endeavored not to antagonize these various bodies of native Christians in Turkey, but to lead them to a larger liberty. That they may attain this liberty is a not impossible outcome of the present agitation in the East.

**The Humberts Convicted**

An extraordinary ending to an extraordinary chapter of criminal conspiracy was reached in Paris last week. Mme. Humbert, at intervals during the trial which has been the reigning sensation of the summer, has declared her intention of solving to everybody's satisfaction the mystery of the Crawfords and their mythical millions, with the story of which our readers are familiar. Her counsel, Maître Labori, in his address darkly foreshadowed the impending revelation by saying, "Suppose the Crawfords bore a name so hateful to mention that it would scandalize your patriotism." This was explained when Mme. Humbert, in a dramatic and rhetorical address to the court, put forward the startling assertion that the elder Crawford, the original owner of the untold millions (which were to be but were not found in the safe sealed up by the courts while they gravely considered the sham lawsuits brought by the non-existent Crawford heirs), was no other than Regnier, the supposed intermediary between Marshal Bazaine and the Germans in the matter of the surrender of Metz, and the intimation was that the source of the money was a German bribe. Regnier was, it is said, condemned to death by a French court martial, but disappeared, and has been supposed to have died many years ago. As a stroke of monumental mendacity this "revelation" was sensational enough. It was joined to solemn assertions that the "Crawfords" exist, that the millions exist, and to the incoherent declaration, "Now you have the whole Crawford case and the whole Humbert case." Mme. Humbert's revelation certainly proved a sensation, and was thoroughly enjoyed by the Parisian multitude who have followed this astounding case with all the expectant excitement of an audience at a play. If there had been previously, however, any possibilities of an acquittal, the impudent audacity of the accused destroyed them. She made no attempt whatever to explain the connection between Regnier and the younger Crawfords, who by the two wills were rival suitors for her sister's hand. Neither did she tell where the great fortune is to-day. Her assertions were vague, incoherent, and inconclusive at every point. The time had long gone by when this remarkable woman

could convince merely by the vastness of her schemes and her sheer bravado. The jury promptly found Mme. Humbert guilty, as also her husband and her brothers, Émile and Romain Daurignac. The Humberts were sentenced to five years' imprisonment, the others to two and three years.

⊙  
**Automobile Restriction  
in Great Britain**

The most noteworthy thing about the law for the regulation of

motor vehicles passed by the British Parliament just before its close is that it does not content itself with specific limitations as to speed, nor, indeed, treat the question as if speed were the only matter for regulation, as have some of the State laws in this country. On the contrary, the British law in itself, and Lord Balfour in his exposition of its intent, brought to the front the sensible idea that drivers of automobiles on public roads must have regard for the nature and condition of the highway, the amount of traffic which is actually upon it at the time, the conduct of the horses actually near to the automobile, and all surrounding circumstances. The law defines recklessness, not only as proceeding at a speed above a given limit, but as acting in a manner dangerous to others, having regard to all the circumstances of the case. As to speed itself, the limit is placed at twenty miles, while the local authorities are given power to set the distance from the center of towns or cities within which motor-cars are to be confined to a speed of ten miles. Licenses are to be granted, recoverable by the courts for misconduct; no one under seventeen years of age may have a license; automobiles must be registered and carry numbers; fines ranging from twenty to fifty pounds may be imposed for violation of the law, and the magistrates have also the option of imposing imprisonment in case a conviction is not a first offense. This law appears to be based on reason and regard both for the rights of the traveling public and for the privileges to which lovers of this new form of sport and recreation may properly regard themselves as entitled. It is now pretty generally recognized that the automobile has come to stay, as the phrase goes, and that the law must regulate and not suppress it. Suppression has been tried in

some limited localities. An amusing incident was lately told in a despatch from Switzerland, where one of the cantons has a law forbidding motor-cars to enter its limits. An American, not knowing of this law, reached the center of the canton before he was stopped, and was then surrounded by a large detachment of the police, who refused either to allow him to go on or to return. The case was finally compromised by his being allowed to walk beside his vehicle while it was escorted out of the canton. In a few towns in some of the New England States, we are informed, a similar attempt is being made to keep out motor-cars altogether. It is doubtful whether any such attempt will, in the long run, prove possible and desirable. The true remedy against recklessness and the true preventive of danger is a law so framed as to be possible of enforcement.

**A Volcanic Obelisk** An extremely singular phenomenon, one new to geologists who have studied volcanic eruptions, has taken place on Mont Pelée. Professor Angelo Heilprin, who, as readers of Mr. Kennan's articles in *The Outlook* will remember, was the first to ascend Pelée to its crater after the terrific explosions of last year, vividly describes in the "Youth's Companion" this peculiar formation as it appeared to him on a recent ascent, under the title "A 'Corked' Volcano." It seems that the lava pushed up constantly by volcanic force from the new crater has hardened before it emerged, so that instead of flowing it is continuously pushed into the air in the form of a rock or crag. This natural rock obelisk is now eight hundred feet in height (two and a half times the height of the Bartholdi Statue of Liberty's torch from the water), and at its base is over three hundred feet thick. It is, says Professor Heilprin, as if a cork were being pushed out from inside a bottle. The obelisk or crag is still rising; indeed, it rose twenty-one feet during the four days of Professor Heilprin's stay. Its base is fiery red from molten lava, and a light cloud of steam at the very top shows that there must be a channel or rift through the entire eight hundred feet of rock. Says the observer, "The grandest monuments erected by

man are insignificant when compared with this monument of nature, placed where it looks over cities of the dead." From time to time parts of the rock break off and avalanches of the fragments fall into the valley, but still the monumental mass continues to mount silently and majestically. What the end of the phenomenon will be is an open question; it may fall over in a tremendous crash; it may cease to rise, and remain a strange and impressive memorial of a great tragedy.

**The International  
Yacht Races**

The rather easy victory of the *Reliance* by nine minutes, actual time, over *Shamrock III.* on Saturday in a race sailed for the most part in a fresh breeze, taken with the American boat's apparent superiority in the previous attempt to race with merely a breath of air stirring, has led the yachting experts both in America and England to the conclusion that there is very slight doubt that the America's Cup—first won fifty-two years ago to a day before the *Reliance's* first victory—will remain on this side the water. When the official measurements of the yachts were made and published together, it was clear that the *Reliance* was not only the larger boat, but had more possibilities of motive power in proportion to her size, and could well afford to give even as large a time allowance as nearly two minutes. The race of Saturday was a fine one in many ways: the wind was from ten to fifteen knots from the southwest; the yachts were near enough each other to make the race exciting; the great fleet of steamboats and private yachts with thousands of onlookers behaved as they should in leaving the course clear; there was no dispute or unpleasant incident or mishap. That the following races may be as satisfactory was the wish of all interested. Sir Thomas Lipton is a prime favorite with the American public; he has shown good humor and good sense as well as persistence and sportsmanship. It has been said with truth that one of the most disagreeable consequences of our losing the Cup would be that we should no longer have our annual friendly visits from Sir Thomas.—An announcement of importance to lovers of yachts and yacht-racing is that there

is a probability of a challenge for the America's Cup for next year from Canada, where a group of yacht-owners are raising a fund for the construction of a challenger. A novel suggestion is that the crew may be made up entirely of volunteer "gentleman sailors."

**A Question of Title** The Supreme Court, New York City (Justice McCall), lately issued an order enjoining any interference with the mural paintings executed by Mr. William de Leftwich Dodge at Toronto, Canada, until the case should have been passed upon. These paintings depict stirring scenes in Canadian history, and were placed in the new King Edward Hotel, Toronto. They were furnished by Mr. Dodge, acting under contract with a well-known decorating concern. The hotel authorities had already made a contract with the decorators, which, so it is reported, said that "the work should be satisfactory." Although Mr. Dodge's preliminary sketches had been approved, the architect of the hotel found the finished panels unsatisfactory, because the electric light was not strong enough properly to display them. Hence he ordered changes to be made so that the pictures would be lighter in tone, it being supposed by him that "title had passed" and that the artist had already parted with his control. Mr. Dodge refused to make the changes demanded, and, when told that they would then be made by another, offered to return the sum received in payment for his pictures, declining to have his work mutilated. Fearing that changes might be made anyway, he applied for an injunction restraining the architect and decorators of the hotel from altering the panels. So far as we know, this is the first case of the kind to come before an American court. The whole question seems to us one of the passing of title. If a contract has been made for mere decoration, which, of course, comes under the authority of the architect, the terms of the contract must be fulfilled, and the case is one under the general laws of bargain and sale. If, on the other hand, an artist of signal reputation is employed to paint a picture, signed by his own name, any changes made by others in the picture, disapproved by the original artist, would seem to be

so many forgeries. There is an analogy between changes proposed to be made in his signed painting and those which might be made by the publishers of a signed poem.

## Lord Salisbury

On Saturday night of last week, in an old-fashioned room at Hatfield House, there passed away an old-fashioned man. The room overlooks a garden where, three and a half centuries ago, Elizabeth first heard that she was Queen of England. Her great Minister, Burleigh, was the ancestor of the statesman who died last week. The careers of these two Ministers were marked by certain common characteristics due first to the men themselves and next to their times—aristocracy, independence, imperialism. For, in our opinion, the two notable periods for English expansion are the Elizabethan and the Victorian.

The personal career of the Marquis of Salisbury was as interesting as was his political career. More than any one of our day, he showed that the great aristocratic houses of England are still producing statesmen. Yet he was perhaps the last of the old-time Tory nobles to rule England.

Independent he always was, personally and politically. In early life, as Lord Robert Cecil, a younger son, and not expecting to succeed to the marquissate, he supported himself by writing for the "Standard," the "Saturday Review," and the London "Quarterly." As biography, an account of this period is more inspiring reading than the description of his later years and honors. The most important event of his life flatly defied Cecil traditions. Even here he could be independent of his family. But Lady Salisbury, supposed to be beneath her husband socially, was quite his equal. Their married life was one of exemplary purity, privacy, and beauty; and when the Marchioness died recently, Lord Salisbury's friends knew whereof they spoke in prophesying that he would not remain long in active politics, but would seek distraction in the pursuit which absorbed him even more—chemical research. Lord Salisbury was also personally independent of those about him. Walking to and

from his house in Arlington Street, you might see the stout, full-faced, stoop-shouldered man pay no more attention to the passers-by than to his decidedly shabby-looking clothes. Not only did he keep himself aloof from the public, but even from those of his own Cabinet; with both he used, on occasion, an exasperatingly "cross-country" manner.

Politically, Lord Salisbury's career was distinguished by an independence which, in our opinion, was generally admirable. His addresses never carried with them the magnetism which attached to Gladstone's, for instance. Not for felicity in language, for eloquence in delivery, or for resultant thrill among auditors, were the Salisbury speeches notable. The speaker probably realized this himself. He doggedly went to the other extreme. Whether from pride of station or from contempt for mere rhetoric, his bent towards satire and sarcasm was accentuated. Most of the Cecils have been statesmen and Cabinet officers: it has seemed to us sometimes, in reading Lord Salisbury's earlier speeches, as if an intransigent Tudor or Stuart representative of the family had suddenly come to life in a new age—and did not like it. Yet, unconciliatory as Lord Salisbury's temper might be, he always commanded respect even from those whom he irritated most. In him they recognized both intellect and character. His independent course was not demagogical. He never "played to the galleries;" he carried on the ancestral tradition worthily. It has been a strange fashion in some quarters to call Lord Salisbury an opportunist, and to quote Bismarck's bitter characterization of him, "A lath painted to look like iron." But Lord Salisbury could display firmness to match any man's. At least he had the advantage of Bismarck, who, after showing tremendous obstinacy, did after all go to Canossa, being gently led thither by the greatest diplomat of his time, the late Pope. Lord Salisbury was no opportunist. We are convinced that he always aimed to be true to his convictions. If he must fail, he failed; he did not compromise. As long ago as 1868 he resigned his place in the Government rather than betray what he held to be a constitutional principle. In our opinion, his was then a bigoted Tory exclusiveness miscalled principle, but at least we may

honor his conscientiousness. This quality may be noted all through his career. Only quite recently he gave a signal example of it, taking the very moment when British blood was "up" to deliver a seemingly cold-blooded and ironical speech. Even some of his own party adherents called him a cynic, but in this, we are sure, they went beyond the mark. He simply felt it his duty to speak; he spoke his mind fearlessly; the knowledge that his words were pessimistic and would not be popular moved him not a whit.

Though in appearance of the John Bull type, and in adding to and maintaining the British Empire the typical imperialist, Lord Salisbury's words were—especially in the latter half of his life—markedly unjingish, unbellicose. In them you could see the real man, an aristocrat in the best sense, simple, sincere, actuated by an overwhelming sense of public duty, the upholder of the nation's dignity, but also and in especial of the world's peace. No one's influence for peace meant more. Even when he referred impressively to "decadent nations," there was no fear that he was going to take advantage of them, nor when he indulged in his annual jeremiads on the occasion of the Lord Mayor's dinner—addresses which came almost with the authority of the sovereign's speech opening Parliament. Every one felt that at the base with him there was a vast melancholy and sadness, quite the opposite pole from the war-making spirit—as if he knew that the times were out of joint and he the last of his kind! He must have despised the Crimean War, and we fancy that the Boer War was hardly of his seeking. In that, as in all the rest of the making of the British Empire, the exclusive aristocrat had a truer conception of real progress than has Mr. Chamberlain, the "pushful" democrat to whom the Premier gave a place in the coalition Cabinet of 1895.

In Lord Salisbury's foreign policy we recognize both failures and successes, but the latter far outweigh the former. He was in public life during the half-century between the Crimean and Boer wars, but he influenced the foreign affairs of Europe at first hand during the twenty-five years in which he was three times Prime Minister and four times Foreign Minister. He was the last of that great quartette of

Foreign Ministers—Bismarck, Gortschakoff, Andrassy, Salisbury.

Queen Victoria was repeatedly served by Mr. Gladstone on the Liberal side as First Minister of the Crown, but she was served, we believe, more acceptably by Lord Salisbury on the Conservative side. Indeed, even from the Liberal standpoint, we are not sure but that, in their own estimation, the English people, as a whole, were more acceptably served by the Marquis of Salisbury than by any recent statesman. Haughtily independent and aristocratic as he was, they recognized in him an equal sincerity and integrity with Mr. Gladstone's, a greater simplicity and far-seeing wisdom, and certainly a more popular because a more progressive imperialism.

In the old days the nobles ruled; in ours the people rule. Yet nobles may still exercise enduring influence, particularly if, as in Lord Salisbury's case, they are noble nobles.

## The Congo Slave State

A cable despatch from Brussels last week ran as follows:

The British Minister has notified the Belgian Government that Great Britain formally objects to the granting of monopolies, the employment of forced labor, and other features in the administration of the Congo Free State.

It is certainly to be hoped that the despatch accurately reflects the tone as well as the substance of the protest presented by the British Minister. The recent action of the Belgian Congress—with only a few Socialist deputies dissenting—approving of the administration of the King in the Congo Free State shows that the reform of abuses there is not likely to proceed from the foreign nation directly in control. It must come from the outside pressure exerted by the other Powers which eighteen years ago at Berlin intrusted the King of the Belgians with the rule of the Congo State.

Of the character of the Belgian administration, as reported by Protestant missionaries, foreign travelers, and even ex-officials of the Congo bureaucracy, *The Outlook* has made frequent mention. Recently the whole case has been presented in a hundred-page pamphlet by

Edmund D. Morel, whose volume entitled "Affairs in West Africa" has proved one of the strongest influences in bringing Congo oppression to the attention of the liberty-loving world. This pamphlet is certain to quicken public feeling everywhere, and aid in making the protest just filed by the British Government an insistent demand on the part of all nations concerned in the promotion of human justice.

The policy of the Belgian administration, as shown by Mr. Morel, has been to turn almost the entire territory of the Congo State over to a group of industrial monopolies which, supported by the army, carry on their "trade" by means of a merciless system of forced labor—the wages of the natives and the prices of their products being fixed by the commercial corporations in control. Nominally, it was only the "vacant land" of the territory which was parceled out to these trusts, but as all land not actually built upon or cultivated was declared vacant, virtually all the natural resources of a country with nearly twenty millions of people were turned over to the foreign syndicates. In these syndicates the Belgian Government generally subscribed for a half interest—the partnership between the Government and the trusts serving the double purpose of bringing commercial interests in Belgium to the support of the Government's foreign policy, and at the same time enabling the Government to profit financially from its trusteeship while reporting to the rest of Europe that its receipts from taxes in the Congo hardly met the cost of administration. It is through the operation of these commercial syndicates that the real taxation of the natives is exacted.

The methods of a single trust will serve to indicate the methods of them all. We select the Mongalla trust, the description of which is largely taken from a statement by an American citizen, Mr. Edgar Canisius, who was formerly one of the trust officials. The Mongalla trust is an Antwerp society, with a capital of only 3,400 shares (\$340,000), yet controlling a territory as large as New Jersey. One-half of the shares belong to the Congo State. The profits during the last five years have aggregated \$1,600,000—or nearly five hundred per cent. upon the capital sub-

scribed. During these five years the scandals from the trust's administration have led to stirring debates in the Belgian Chamber of Representatives, followed by the punishment of a few minor officials, while the responsible men whose wishes were the real law to their subordinates went scot-free. The principal business of the Mongalla trust, as indeed of all the others, was the collection of rubber and ivory, which are practically the only exportable products of the country, now that slave labor can no longer be exported. As both rubber and ivory are produced on land neither occupied nor tilled, they both belong to the monopolies to which the "vacant" land is ceded. The collection of rubber by the Mongalla trust at a trading-post established among a submissive tribe—the Gombés—is described by Mr. Canisius as follows:

Once in a fortnight these Gombés were obliged to bring rubber to the post. Each of the villages was under the surveillance of a "capita" or headman, sent by the post manager, whose duty it was to see that the natives gathered the rubber in time, and in proper quantity.

At the time appointed, the post manager notified the "capitas" to bring in the rubber gathered by the villagers under their control, and in due course they arrived at the station, each man carrying a small basket made of rattan, furnished by the white agent, in order that no native could make a mistake as to the quantity he must furnish.

When all the villagers had arrived at the station, they took up their positions in rows, and the post manager then settled down to business, assisted by the Company's "soldiers," a number of whom were stationed at every post. Each villager was in turn ranged up before him, every man with his basket before him. Each native wore, attached to a cord around his neck, a small disc made of the zinc lining of packing-cases. These discs each had a number stamped upon it, and in a book which the manager had before him were inscribed the names of the natives against the number upon their "tags." One by one, the half-frightened bushmen were called up and made to present their baskets to the white man, a proceeding frequently assisted by a cuff from one of the soldiers. If the quantity of rubber was satisfactory, the native—who had worked many days to produce it—was paid what the agent thought the proper amount in "mitakos," pieces of brass wire, six to eight inches long. If, on the other hand, a native had only a small quantity of rubber in his basket, he was taken aside by one of the soldiers, and, after all had been called up, was severely castigated with the fearful whip made of hippopotamus-hide.

When all the villagers had deposited their

quotas of rubber, the manager had a thousand pounds, or more, which I estimated cost him at the rate of about one penny per pound. As this rubber was worth over three shillings per pound in the Antwerp market, it is safe to assume that the Company made a very considerable profit on it, even after paying heavy transport charges and a high export tax.

These statements regarding the nature of the "trade" forced upon the natives by the representatives of higher civilization seem almost incredible until we find them practically confirmed by the official reports of the Belgian Government regarding the value of the exports and imports of the Congo State. These run as follows:

Exports.. \$10,000,000 Imports.. \$3,600,000

In other words, the natives send abroad ten million dollars' worth of products, for which they receive in return at most three millions and a half. In reality they receive much less, for more than half of the imports consist of arms and ammunition, provisions and liquor, plainly designed for the soldiers and officials of the Belgian Government and syndicates. The supplies intended for the natives appear to be worth hardly one-fifth as much as the rubber and ivory they return!

This, then, is the course of trade where the natives have submitted to the new régime. Where they have not submitted, the outrages perpetrated upon them are often almost indescribable. A missionary, for instance, tells of regiments of cannibal soldiery being despatched into unsubmitive districts, with orders to bring back a hand for every cartridge fired—the troops often bringing back the hands of living women and children in order to comply with the requirements of their civilized commanders. Other missionaries, whose statements seem to be carefully guarded, tell of villages from which the women flee into the woods at the approach of the soldiers, and tell of Government victories which are carnivals of arson, murder, and rape. Outrages of this character must be exceptional, but Mr. Morel's narrative proves that, while the Belgian officials doubtless try to prevent savagery, the terrorism they seek to establish by the methods of civilization is hardly less cruel. The whole narrative recalls the horrors of the slave trade, and the fact that King Leopold has been proclaiming before the world that his "only

programme" was "the work of moral and material regeneration" only makes the régime the more revolting. The conscience of the world will condemn it, and under this condemnation it will be destroyed.

## Who Will Guard the Guards?

Men have been sent to Indian Territory to protect the Indians. Some of them are under the Indian Department, others belong to the Dawes Commission. When the old pernicious reservation system, by which the Indians were isolated from civilization and kept in barbarism, was abandoned, and the policy of allotting lands in severalty to the Indians, by which these dependent people were given a chance to make progress, was adopted, a long step was taken toward decent dealings between white and red men. It then became the duty of Indian agents, and in particular of members of the Dawes Commission, to see to it that the change should be made fairly and honestly. The Indians themselves, untrained in business methods and unacquainted with the value of their possessions, were incapable of looking out for their own rights. This fact gave opportunity for speculators and promoters to obtain possession of land by inducing Indians to part with it, either by lease or sale, at ridiculously low figures. It is true that the law affecting the change made apparently ample provision against oppression; but since the Indians were not able to enforce the law themselves, officials of the Federal Government were designated to enforce it. It is now charged that some of these officers, guardians of a helpless people, have taken advantage of their authority to become speculators and promoters themselves.

This condition has been made known by a representative of the Indian Rights Association, Mr. S. N. Brosius, who has been on the ground studying the administration of the law for a year. He reports other evils as well as this betrayal of trust. The method of allotting land is so technical and complicated that it requires of every Indian a considerable journey to Tahlequah and a long wait there to file his application, involving expense and absence

from home which the Indian cannot afford. Mr. Brosius has calculated that, under the method now in vogue, the work of the Commission in allotting the lands will not be completed for more than thirty years! But such an evil as this, outrageous as it is, does not compare with that of commending the Indians to the protection of men who have entered upon the business of obtaining possession of the Indians' lands. According to Mr. Brosius's report, the Chairman of the Dawes Commission, Tams Bixby by name, is stockholder and vice-president of one real estate company, and stockholder and president of another; Thomas B. Needles, another member of the Commission, is a director and vice-president of a third company; P. L. Soper, United States District Attorney for the northern district of Indian Territory, whose business it is to prosecute persons having excessive holdings of land, and to defend Indians in all suits involving titles to lands, is a stockholder in a fourth company; J. G. Wright, Indian inspector in charge of Indian Territory, is a director of one of these companies. So the list might be extended. It is such companies as these, Mr. Brosius declares, that are leasing lands from the Indians at twenty-five to seventy-five cents an acre, and then subletting them at from one to two and a half dollars an acre. Similar companies organized to control oil and gas lands are doing the same sort of business. For example, Mr. Brosius says:

In a case recently reported to the Indian Office by the writer, protest was made against the approval of a lease covering the homestead rights of a mother and two minor children. The Indian mother, being ignorant of values, was induced to give up the lands that had been in possession of the family for many years upon being paid \$900 each for the three tracts, while the person obtaining the same received \$20,000 from the oil company for his share of the profits.

Such a report as this demands investigation. Clear and specific allegations such as are made by Mr. Brosius cannot, and we believe will not, be ignored. We are glad to say that Commissioner Jones, of the Indian Department, takes this view. The alleged evil is of such scope, however, that investigation ought to be directed by the Department of the Interior, or, better, by the President who need not limit the investigation to any one Depart-

ment. We hope the announcement is true, which was made last week, that such an investigation is contemplated.

Commissioner Jones, of the Indian Department, is quoted as saying that he thought it was extremely bad taste for officials to allow themselves to be connected with these companies. It certainly is—the same bad taste that is displayed when a man cheats his washerwoman. The man who profits by the driving of hard bargains with people who are not only helpless but dependent upon him and under his care ought to have his taste improved.

The United States has treated the Indian with vast generosity in granting him privileges and making of him a pauper. The Nation should not now turn back from its undertaking to make a man of him by no longer being niggardly in according him his rights. Fortunately, in this case there is no question as to what the first rights of the Indians are: that these charges be investigated, and, if proved true, that the Indians be protected against their protectors.

## Making Opportunities

It cannot be too often said to men and women of all ages, nor with too ample illustration, that opportunities are never to be waited for and that they come unawares. Great things are gained by intelligent and patient waiting; but the man who stands beside the highway of life waiting, not for something which he is prepared to receive, but for something which accident may throw in his way, will never be overtaken by Fortune. When Fortune comes his way she will pass without any recognition from him. It sometimes seems as if life were a great game, and as if the invisible player against whom all men and women are matched delighted in perplexing and confusing his opponents. As a matter of fact, life is so saturated with the moral quality that every step brings us face to face with a new test. The great things are for the most part so humbly garbed that, unless we penetrate their disguise, we do not recognize them until they have passed and are a long way off, when we discern their majesty. In Emerson's

poem "The Days" are represented as appearing with empty hands and in the humblest dress; but if a man fails to recognize them, he sees, after they have passed, that they are queens in disguise and that their hands are full of the choicest gifts.

The difference between men and women lies largely in the ability or the lack of ability to penetrate the disguise of the opportunity and detect its true nature. As a rule, the great opportunities on which success turns come in unexpected moments and ways; and the great majority of men who have attained marked success, as they look back, see clearly that they passed the turning-points in their career when they were quite unaware that they were on critical ground. No one ever knows when his opportunity will come; no one ever knows when the decisive moment of his life will arrive. The great crises are often like a bolt out of the blue of a summer day; there is not a moment for preparation. In such crises all that a man has been doing in the way of preparation suddenly bears its fruit. He often acts instinctively; he does that which he is in the habit of doing; and, because he is in the habit of doing his best and all his instincts prompt him to put forth the best that is in him, he seizes the golden moment and does not discover until long afterwards that it was golden. He meets his great crises with clear intelligence and a resolute will, and passes it successfully before he is aware that it is upon him.

Opportunities are created by the development of the power which deals with them, and they come to men and women, as a rule, in exact proportion to the ability to recognize and handle them. There are of course vast differences of condition and ability between men, but opportunities come to all. The difference lies in the ability to seize the right moment and make effective use of what is thrown in one's path. Successful careers often read like romances, so full do they seem of the chances of life, so purely accidental appear to be, at the first glance, the openings of the gates of success. It is true that Malibran happened to pass under the window of the house when the young violinist, Ole Bull, was practicing, and that apparent accident gave the brilliant young

violinist the great opportunity for which he longed ; but Malibran would not have paused, nor would Ole Bull have been sent for, if the notes of the violin had not, by their compelling beauty and power, arrested her attention and made the fortune of the player. It was not Malibran who gave Ole Bull his chance ; it was his own magical skill. Malibran furnished the opportunity, but the opportunity would have come in some other way if the famous singer had not passed under the window of the violinist. Men and women who could help us are always passing under our windows, but if there is nothing in us which lays a spell upon them, they do not know that they have passed our way and we are never aware of it. The streets are thronged with those who could open the doors, and the houses they pass are full of men and women who long to have the doors opened ; but it is only the man or woman of skill, power, training, and discipline who can arrest the attention and command the chance. The way to secure opportunity is to walk resolutely on the pathway along which opportunity comes. He who waits wastes his life. He who takes his fate in his hand and goes forward, sooner or later finds the time of his deliverance and the place of his achievement.

## Am I My Brother's Keeper?

You have a friend for whom you feel a burden of responsibility. You are regular at church ; he has ceased attendance. You are a devout believer ; he has lost or is losing his faith in the Bible, in God, in immortality. You are a total abstainer ; he is already a moderate drinker, perhaps verging toward the immoderate drinker. There are special reasons why you feel a sense of responsibility for him. He is an old friend ; an old pupil ; the son of an old friend ; your own son. What shall you do for him ? What can you do ?

There are two things you can do.

First, remember that he is his own master. His will is free. The God you believe in made his will free. No man can be steered by another. If he is insane, society puts him under the control of another for his own protection ; if criminal, it puts him under control for the sake of others ;

while he is yet a child he is under control of his parents. But when he has come to manhood, he is put under his own control. He has the same right to stay away from church that you have to go ; to drink wine that you have to abstain from wine ; to disbelieve that you have to believe. You are a Protestant ; would you not resent the claim of your neighbor to drag you into attendance on a Roman Catholic church ? You eat meat ; would you not resent your vegetarian neighbor if she lectured you on the sin of meat-eating ?

Do not misunderstand us. We do not doubt that it would be better for your friend to abstain from wine-drinking and to cultivate the habit of church-going. But what he shall eat and drink and how he shall spend his Sundays are questions he is to decide for himself ; you are not to decide them for him. Do not hector him ; do not lecture him ; do not, in your own mind, assume responsibility for him. Do not imagine that you are your brother's keeper. If you think the Bible makes you so, read again the story of Cain and Abel, and see if it justifies the conclusion which has sometimes been deduced from it.

Is there nothing you can do, then ? Yes ! Something. Stevenson has said— we quote from memory and not with exactitude : There is one person whom it is my duty to make good, that is myself. My duty towards others is better expressed by saying, Make them happy. You go to church. Get happiness out of it ; come back from church, not to look rebuke at others because they did not go, but with a sunny face, happy yourself and better fitted to make them happy. Live your own life so joyously that your friend will envy you, but do not live it for the purpose of making him envy you. The fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance. All men like these fruits. If your orchard is full of these, your friend will wish that he had an orchard like it. Do not preach ; simply practice. And always remember that God has seen fit to make him the master of his own life, and any wish on your part to become the master of his life and bend it into conformity with your liking and your conscience would be a wish to violate the divine order.

# Lord Salisbury<sup>1</sup>

By Justin McCarthy

THE retirement of Lord Salisbury from the position of Prime Minister and the leadership of the Conservative Government withdrew into comparative obscurity the most interesting and even picturesque figure in the English Parliamentary life of the present day. Even the most uncompromising opponents of the Prime Minister and of his political party felt a sincere respect for the character, the intellect, and the bearing of the man himself. Every one gave Lord Salisbury full credit for absolute sincerity of purpose, for superiority to any personal ambitions or mere self-seeking, for an almost contemptuous disregard of State honors and political fame.

Yet it was not that Lord Salisbury was habitually careful and measured in his speech, that he was never hurried into rash utterances, that he was guided by any particular anxiety to avoid offending the susceptibilities of others, or, indeed, that, as a rule, he preferred to use soothing words in political controversy. He had, on the contrary, a marvelous gift of sarcasm and of satirical phrase-making, and he was only too ready to indulge occasionally this peculiar capacity at the expense of political friend as well as of political foe. In his early days of public life, when he sat in the House of Commons as a nominal follower of Mr. Disraeli, he was once described in debate by his nominal leader as "a master of flouts and jeers." On another occasion Disraeli spoke of him, although not in Parliamentary debate, as a young man whose head was on fire. In later days, and even when he had held high administrative office, Lord Salisbury often indulged in sudden outbursts of contemptuous humor which for a time seemed likely to provoke indignant remonstrance even from his own followers. . . . The truth is that Lord Salisbury's odd humor is a peculiarity without which he could not be the complete Lord Salisbury, and an unlucky

expression was easily forgiven because of the many brilliant flashes of genuine and not unfair sarcasm with which he was accustomed to illumine a dull debate. When he succeeded to his father's title, and had, therefore, to leave the House of Commons and take his place in the House of Lords, every one felt that the representative chamber had lost one of its most attractive figures, and that the hereditary chamber was not exactly the place in which such a man could find his happiest hunting-ground. Yet even in the somber and unimpressive House of Lords, Lord Salisbury was able, whenever the humor took him, to brighten the debates by his apt illustrations and his witty humor. . . .

We may take it for granted that Lord Salisbury had been for a long time growing tired of the exalted political position which had of late become uncongenial with his habits and his frame of mind. By the death of his wife he had lost the most loved companion of his home, his intellectual tastes, and his political career. A pair more thoroughly devoted to each other than Lord and Lady Salisbury could hardly have been found even in the pages of romance. The whole story of that marriage and that married life would have supplied a touching and a telling chapter for romance. Early in his public career Lord Salisbury fell in love with a charming, gifted, and devoted woman, whom a happy chance had brought in his way. She was the daughter of an eminent English judge, the late Baron Alderson, and although such a wife might have been thought a suitable match even for a great aristocrat, it appears that the Lord Salisbury of that time, the father of the late Prime Minister, who was then only Lord Robert Cecil, did not approve of the marriage, and the young pair had to take their own way and become husband and wife without regard for the family prejudices. Lord Robert Cecil was then only a younger brother with a younger brother's allowance to live on, and the newly wedded pair had not much of a prospect before

<sup>1</sup> The article which is here in part reprinted first appeared in *The Outlook* for September 6, 1902, and is included in Mr. McCarthy's book, "British Political Portraits," published by the Outlook Company.

them, in the conventional sense of the words. Lord Robert Cecil accepted the situation with characteristic courage and resolve. There seemed at that time no likelihood of his ever succeeding to the title and the estates, for his elder brother was living, and was, of course, heir to the ancestral title and property. Lord Robert Cecil had been gifted with distinct literary capacity, and he set himself down to work as a writer and a journalist. He became a regular contributor to the "Saturday Review," then at the height of its influence and fame, and he wrote articles for some of the ponderous quarterly reviews of the time, brightening their pages by his animated and forcible style. He took a small house in a modest quarter of London, where artists and poets and authors of all kinds usually made a home, far removed from West End fashion and courtly splendor, and there he lived a happy and productive life for many years. He had obtained a seat in the House of Commons as a member of the Conservative party, but he never pledged himself to support every policy and every measure undertaken by the Conservative leaders, whether they happened to be in or out of office. Lord Robert always acted as an independent member, although he adhered conscientiously to the cardinal principles of that Conservative doctrine which was his political faith throughout his life. He soon won for himself a marked distinction in the House of Commons. He was always a brilliant speaker, but was thoughtful and statesmanlike as well as brilliant. He never became an orator in the higher sense of the word. He never attempted any flights of exalted eloquence. His speeches were like the utterances of a man who is thinking aloud and whose principal object is to hold and convince his listeners by the sheer force of argument set forth in clear and telling language. Many of his happy phrases found acceptance as part of the ordinary language of political and social life and became in their way immortal. Up to the present day men are continually quoting happy phrases drawn from Lord Robert Cecil's early speeches without remembering the source from which they came.

Such a capacity as that of Lord Robert Cecil could not long be overlooked by the public, and it soon became

quite clear that he must be invited to administrative office. I ought to say that, after Lord Robert had completed his collegiate studies at Oxford, he devoted himself for a considerable time to an extensive course of travel, and he visited Australasia, then but little known to young Englishmen of his rank, and he actually did much practical work as a digger in the Australian gold-mines then newly discovered. He had always a deep interest in foreign affairs, and it was greatly to the advantage of his subsequent career that he could often support his arguments on questions of foreign policy by experience drawn from a personal study of the countries and States forming successive subjects of debate. Suddenly his worldly prospects underwent a complete change. The death of his elder brother made him heir to the family title and the great estates. He became Viscount Cranborne in succession to his dead brother.

In 1866 Lord Cranborne entered office, for the first time, as Secretary of State for India during the administration of Lord Derby. The year following brought about a sort of crisis in Lord Cranborne's political career, and probably showed the general public of England, for the first time, what manner of man he really was. Up to that period he had been regarded by most persons, even among those who habitually gave attention to Parliamentary affairs, as a brilliant, independent, and somewhat audacious free-lance whose political conduct was usually directed by the impulse of the moment, and who made no pretension to any fixed and ruling principles. That was the year 1867, when the Conservative Government under Lord Derby and Mr. Disraeli took it into their heads to try the novel experiment, for a Conservative party, of introducing a Reform Bill to improve and expand the conditions of the Parliamentary suffrage. Disraeli was the author of this new scheme, and it had been suggested to him by Mr. Gladstone's failure in the previous year with his measure of reform. Gladstone's reform measure did not go far enough to satisfy the genuine Radicals, while it went much too far for a considerable number of doubtful and half-hearted Liberals, and it was strongly opposed by the whole Tory party. As usually happens in the case of every reform introduced by a Liberal ad-

ministration, a secession took place among the habitual followers of the Government. The secession in this case was made famous by the name which Bright conferred upon it as the "Cave of Adullam" party; and, by the co-operation of the seceding section with the Tory Opposition, the measure was defeated, and Mr. Gladstone went out of office. Disraeli saw, with his usual sagacity, that the vast mass of the population were in favor of some measure of reform, and when Lord Derby and he came into office he made up his mind that, as the thing had to be done, he and his colleagues might as well have the advantage of doing it. The outlines of the measure prepared for the purpose only shaped a very vague and moderate scheme of reform, but Disraeli was quite determined to accept any manner of compromises in order to carry some sort of scheme and to keep himself and his party in power. But then arose a new difficulty on which, with all his sagacity, he had not calculated. Lord Cranborne for the first time showed that he was a man of clear and resolute political principle, and that he was not willing to sacrifice any of his conscientious convictions for the sake of maintaining his place in a Government. He was sincerely opposed to every project for making the suffrage popular and for admitting the mass of the workingmen of the country to any share in its government. Lord Cranborne was then only at the opening of his administrative career, and he must have had personal ambition enough to make him wish for a continuance of office in a powerful administration. But he put all personal considerations resolutely aside, and resigned his place in the Government rather than have anything to do with a project which he believed to be a surrender of constitutional principle to the demands of the growing democracy. Lord Carnarvon and one or two other members of the administration followed his lead and resigned their places in the Government. I need not enter into much detail as to the progress of the Disraeli reform measure. It is enough to say that Disraeli obtained the support of many Radicals by the Liberal amendments which he accepted, and the result was that a Tory Government carried to success a scheme of reform which practically amounted to the introduction of house-

hold suffrage. Lord Cranborne and those who acted with him held firmly to their principles, and steadily opposed the measure introduced by those who at the opening of the session were their official leaders and colleagues. I am convinced that even the most advanced reformers were ready to give a due meed of praise to the man who had thus made it evident that he preferred what he believed to be a political principle, even though he knew it to be the principle of a losing cause, to any consideration of personal advancement.

Some of us felt sure that we had then learned for the first time what manner of man Lord Cranborne really was. We had taken him for a bold and brilliant adventurer, and we found and were ready to acknowledge that he was a man of deep, sincere, and self-sacrificing convictions. I have never from that time changed my opinions with regard to Lord Cranborne's personal character. His career interested me from the first moment that I had an opportunity of observing it, and I may say that from an early period of my manhood I had much opportunity of studying the ways and the figures of Parliamentary life. But until Lord Cranborne had taken this resolute position on the reform question I had never given him credit for any depth of political convictions. The impression I formed of him up to that time was that he was merely a younger son of a great aristocratic family, who had a natural aptitude alike for literature and for politics, and that he was following in Parliament the guidance of his own personal humors and argumentative impulses, and that he was ready to sacrifice in debate not only his friends but his party for the sake of saying a clever thing and startling his audience into reluctant admiration. From those days of 1867 I knew him to be what the world all now knows him to be, a man of deep and sincere convictions, ever following the light of what he believed to be political wisdom and justice. I can say this none the less readily because I suppose it has hardly ever been my fortune to agree with any of Lord Salisbury's utterances on questions of political importance.

In 1868 the career of Lord Cranborne in the House of Commons came to an end by the death of his father. He succeeded to the title of Marquis of Salisbury, and became, as a matter of course, a member of

the House of Lords. He was thus withdrawn while still a comparatively young man from that stirring field of splendid debate where his highest qualities as a speaker could alone have found their fitting opportunity. I need not trace out his subsequent public career with any sequence of detail. We all know how from that time to this he has held high office, has come to hold the highest offices in the State whenever his political party happened to be in power. He has been Foreign Secretary; he has been Prime Minister in three Conservative administrations. For a time he actually combined the functions of Prime Minister and those of Foreign Secretary. He was envoy to the great conference at Constantinople in 1876 and 1877, and he took part in the Congress of Berlin, that conference which Lord Beaconsfield declared brought to England peace with honor. Everything that a man could have to gratify his ambition Lord Salisbury has had since the day when he succeeded to his father's title and estates. His own intellectual force and his political capacity must undoubtedly have made a way for him to Parliamentary influence and success even if he had always remained Lord Robert Cecil, and his elder brother had lived to succeed to the title. But from the moment when Lord Robert Cecil became the heir, it was certain that his party could not venture to overlook him. He might have made eccentric speeches, he might have indulged in sarcastic and scornful allusions to his political leaders, he might have allowed obtrusive scruples of conscience to interfere with the interests of his party, but none the less it became absolutely necessary that the Conservative politicians should accept, when opportunity came, the leadership of the Marquis of Salisbury.

Lord Salisbury certainly did not achieve his position by any of the arts, even the less culpable arts, which for a time secured to Macbeth the highest reach of his ambition. Lord Salisbury's leadership came to him and was not sought by him. I cannot help thinking, however, that, after he had once attained that supreme position in his party, the remainder of his public career has been something in the nature of an anticlimax. Was it that the chill and deadening influ-

ence of the House of Lords proved too depressing for the energetic and vivacious spirit which had won celebrity for Lord Robert Cecil in the House of Commons? Was it that Lord Salisbury, when he had attained the height of his ambition, became a victim to that mood of reaction which compels such a man to ask himself whether, after all, the work of ascent was not much better than the attained elevation? Lord Salisbury's years of high office coming now thus suddenly to an end give to me at least the melancholy impression of an unfulfilled career. The influence of the Prime Minister, so far as mere outsiders can judge of it, has always been exerted in foreign affairs for the promotion of peace. Even the late war in South Africa is not understood to have been in any sense a war of his seeking. The general belief is that the policy of war was pressed upon him by influences which at the time he was not able to control—influences which would only have become all the stronger if he had refused to accept the responsibility of Prime Minister and had left it to others to carry on the work of government. However this may be, it can hardly be questioned that of late years Lord Salisbury had become that which nobody in former days could ever suppose him likely to become, the mere figurehead of an administration. Lord Salisbury's whole nature appears to have been too sincere, too free from mere theatrical arts, to allow him to play the part of leader where he had no heart in the work of leadership. A statesman like Disraeli might have disapproved of a certain policy and done his best to reason his colleagues out of it, but nevertheless, when he found himself likely to be overborne, would have immersed himself deliberately in all the new-born zeal of the convert and would have behaved thenceforward as if his whole soul were in the work which had been put upon him to do. Lord Salisbury is most assuredly not a man of this order, and he never would or could put on an enthusiasm which he did not feel in his heart. We can all remember how, at the very zenith of British passion against China during the recent political convulsions and the intervention of the foreign allies, Lord Salisbury astonished and depressed some of

his warmest admirers by a speech which he made at Exeter Hall, a speech which, metaphorically at least, threw the coldest of cold water on the popular British ardor for forcing Western civilization on the Chinese people.

Lord Salisbury's frame of mind was one which could never allow him to become even for a moment a thorough jingo, and through all the later years of his power he held the office of Prime Minister at a time when jingoism was the order of the day among the outside supporters of the Conservative Government. He never had a fair chance for the full development of his intellectual faculties while he remained at the head of a Conservative administration. Under happier conditions he might have been a great Prime Minister and a leading force in political movement, but his intellect, his tastes, and his habits of life did not allow him to pay much deference to the prejudices and passions of those on whom he was compelled to rely for support. There was too much in him of the thinker, the scholar, and the recluse to make him a thoroughly effective leader of the party who had to acknowledge his command. He loved reading, he loved literature and art, and he took no delight in the formal social functions which are in our days an important part of successful political administration. He could not be "hail-fellow-well-met" with every pushing follower who made it a pride to be on terms of companionship with the leader of the party. I have often heard that he had a singularly bad memory for faces, and that many a devoted Tory follower found his enthusiasm chilled every now and then by the oblivious fact that the Prime Minister did not seem to remember anything about the identity of his obtrusive admirer. Much the same thing has been said over and over again about Mr. Gladstone; but then Gladstone had the inborn genius of leadership, threw his soul into every great political movement, and did not depend in the slightest degree on his faculty for appreciating and conciliating every individual follower. Lord Salisbury's tastes were for the society of his close personal friends, and I believe no man could be a more genial host in the company of those with whom he loved to associate; but he had no interest in the ordinary ways of society and

made no effort to conciliate those with whom he found himself in no manner of companionship. He did not even take any strong interest in the study of the most remarkable figures in the political world around him, if he did not feel drawn into sympathy with their ways and their opinions. On one occasion, when a report had got about in the newspapers that Lord Salisbury was often seen in friendly companionship with the late Mr. Parnell in the smoking-room of the House of Commons, Lord Salisbury publicly stated that he had never, to his knowledge, seen Parnell, and had never been once in the House of Commons smoking-room.

No man has been better known, so far as personal appearance was concerned, to the general English public than Lord Salisbury. He has been as well known as Mr. Gladstone himself, and one cannot say more than that. He was a frequent walker in St. James's Park and other places of common resort in the neighborhood of the House of Parliament. Every one knew the tall, broad, stooping figure with the thick head of hair, the bent brows, and the careless, shabby costume. No statesman of his time was more indifferent than Lord Salisbury to the dictates of fashion as regarded dress and deportment. He was undoubtedly one of the worst-dressed men of his order in London. In this peculiarity he formed a remarkable contrast to Lord Beaconsfield, who down to the very end of his life took care to be always dressed according to the most recent dictates of fashion. All this was strictly in keeping with Lord Salisbury's character and temperament. The world had to take him as he was—he could never bring himself to act any part for the sake of its effect upon the public. My own impression is that when he was removed by the decree of fate into the House of Lords and taken away from the active, thrilling life of the House of Commons he felt himself excluded from his congenial field of political action and had but little interest in the game of politics any more. He does not seem destined to a place in the foremost rank of English Prime Ministers, even of English Conservative Prime Ministers. But his is beyond all question a picturesque, a deeply interesting, and even a commanding figure in English history.

# The Financial Administration of Colleges

By Henry A. Stimson

**M**R. CARNEGIE'S creation of a board of trustees to manage his ten-million-dollar gift to promote Scientific Research, Mr. Leland Stanford's founding of the university that bears his son's name, and Mr. Rockefeller's great gifts to resurrect and establish the Chicago University, serve only to remind us that for now nearly three hundred years a great array of relatively small givers have been placing sums which aggregate many millions of dollars in the hands of trustees for the benefit of the public in educational lines. If to these be added the great sums intrusted by the people through the Legislatures to the Regents of the State universities, cases in which the endowment has been in land grants of a value difficult to estimate, but already, as in Texas and Minnesota, of vast proportions, it will be seen that the amount is sufficiently large and the interest of the public in its legal relations and management sufficiently vital to make it second to none. The aggregate is, for various reasons, difficult to discover, the last census of the United States being in this respect incomplete, but it amounts to many millions of dollars.

Some would be disposed to add to the purely educational trusts the great philanthropic benefactions, of which the Sailors' Snug Harbor in New York and the Board of Governors of the New York Hospital are examples, and the various ecclesiastical corporations, like Trinity and the Reformed Collegiate Churches, the Roman Catholic Bishop, who is a "corporation sole," holding in his own name the property of his diocese, and the different Catholic orders, which have held large properties and peculiar relations to the people in the Philippine Islands, and already have very large holdings in the United States; but for all these there is more or less special legislation, and the consideration of the forms of trust which they represent and the method of their administration, important as these matters are becoming, does not now concern us. The question which I propose to discuss is the admin-

istration of the finances of our endowed educational institutions considered as a public trust.

The college or university is, of course, primarily a corporation. It almost invariably has a special charter from the State. These charters the States were slow to grant, and at first restricted them within very narrow limits. The Dartmouth College case not only fixed the inviolability of these charters, but gave an impulse to a line of development in their administration which has become largely characteristic, and is only now attracting attention and beginning to change. The bitter struggle which Yale College went through under President Clap, in contest with the State of Connecticut, to secure its independence and life, naturally crowded the early governing boards into an attitude of defense, and ultimately of secrecy. Trustees felt the importance of a trust for the benefit or understanding of which the community was in many cases not yet prepared, and which had in it advantages and powers to be carefully shielded. In most cases it consisted in large part of real estate, and its amount and value could not be concealed. But to protect the institution from destructive taxation or from hostile legislation, the necessity was apparent for all the privacy of administration that was possible. After the two or three great contests, the State was content not to interfere, and the colleges have been more than willing to be let alone. They are corporations, but without stockholders. The trustees are, in the main, self-perpetuating. There is no official accountability. And the feeling has naturally grown within the boards of management that these institutions are largely private affairs, of which the corporate body is the virtual owner.

That these corporations are trusts in the true sense, the same to all intents and purposes as those created by wills (which was the original form of trust), appears from several considerations. Though they are generally close corporations and self-perpetuating, the members of the corporation have no financial interest and

derive no profit from their trusts. They are supposably punishable for tort, but have no personal financial liability. They do business in other States than that in which they are chartered, on the same basis as private individuals. They buy and sell land and loan money only under such regulation as applies to citizens. The courts have settled it that these and all similar corporations exist solely for the sake of the beneficiaries, and if the term *owner* is to be used at all, it applies exclusively to the latter—that is, in the case of educational institutions, to the faculty and students, for whose benefit the trust was originally created.

In fact, therefore, we have here a trust in the largest proportions, long established, in the highest degree beneficent, and in the manifest interest of the whole people. The method of its administration is obviously of more importance to the public, and perhaps will have more to do in quieting the public mind and preparing the way for the healthy and beneficent development of the trust idea, than the mere fact or form of its legal standing in comparison with trusts as ordinarily known.

In common with other trusts, the time has come when the administrators must take the public more frankly into their confidence. Public confidence is the basis of all forms of organized social activity. The colleges are no exception. To the fullest extent they have enjoyed this confidence in their ability to produce men. The time has come when they can set the example and do much to establish the confidence of the public in the ability of these men to manage large financial trusts both honestly and honorably. Happily, that confidence in the administration of our educational institutions has not been disturbed. It is true that there have been defalcations and losses, but they have been few and not important. Because of the undisturbed confidence of the public in college officers, it is their privilege to take, in advance of pressure, an attitude toward the public which, as both legally correct and administratively prudent, would constitute an important contribution to the healthful financial progress of society. They have the entire confidence of the community as educational institutions, long tried and thoroughly approved.

The time has come when they deserve a similar confidence, and owe it to themselves to secure it, distinctively as public financial trusts. The question as to how this is to be accomplished may not at once be satisfactorily answered. The habit of secrecy and the conviction that it is an important factor in protection against attack are long established. Some conscientiously feel that if the actual facts (in some cases of their poverty, in others of their wealth) were known, it would interfere with their ability to secure increased benefactions. The mere sense of control of large sums of money, detached from a sharp and constant consciousness of personal accountability, constitutes a subtle temptation to magnify the importance of one's position and to make one reluctant to share it with others. The more splendid the success of the administration and the more distinguished the institution, the stronger is this feeling. But, whether for reasons which have some show of justification or have not, the time has surely come when the frankest and fullest publicity is not only desirable but is demanded in the interests both of the institutions and of the community.

To this end there ought to be a periodic and official, if not a more or less public, accounting. The presidents of some of our largest universities have begun to issue annual reports with increasing detail, and some college treasurers do the same; but, as a rule, such has not been the case. In some institutions lax accounting has long prevailed, and often slack financial responsibility. I know one institution of the highest class whose newly appointed treasurer has had the greatest difficulty in interpreting and adjusting the accounts of his predecessor; another where the new treasurer accepted his position only after an outside expert had been called in to fix the various balances with which he might open an entirely new set of books; another, of the highest standing and most successful management, whose trustees have not for years had from their treasurer an account that was more than a memorandum of what he thought wise to communicate; another that has only recently revised its entire system of accounts; and I am told that for three months or more experts have been at work upon the books of one of the largest institutions of the

country. A complete printed annual report of a college treasurer is still a rarity. Finance committees often do little more than record the action of the treasurer, and boards of trustees go through the form of accepting reports of which they have but the slightest knowledge, and for which they feel the minimum of responsibility.

The bearing of all this upon the situation as it stands to-day is shown in an incident that has recently occurred. The treasurer of an important Eastern college, himself a prominent business man, told me that in response to an application which he ventured to make to a well-known millionaire for a large benefaction, he received an invitation to an interview. After he had carefully answered certain questions that were addressed to him, his friend said, "I will let you know my decision before long." A few days afterwards a stranger walked into the office of the college, introducing himself as the representative of the millionaire, and asked to see the treasurer's books. He spent a number of hours in a careful examination of them and also of the minutes of the trustees. A week or two passed, when my friend was summoned to a second interview. The millionaire said, "I have had a careful examination made of your institution. I find that your treasurer does not run the college, and that your trustees attend to their business, that your accounts are properly kept, and that your funds are well invested. I have therefore decided to give you" so much—a very large sum of money. There may have been some show of excuse, in the early days of a struggling institution, for the president to carry its accounts on scraps of paper in his coat pocket, as has been the case in the past. There may have been justification for devoted officers of institutions that have had to struggle for success in the face of the competition of rival institutions and the antagonism of the State, to make their financial affairs as closely

matters of private concern as was possible. But in the light of the new attitude which is now everywhere being taken by both the legislatures and the courts toward all institutions that are recognized as existing for the welfare of the people—an attitude which is disclosed in the legislation of all the States from New York to California, now everywhere notably generous and kindly toward such institutions—it certainly is no longer necessary. And the time has come when, in view of the widespread discussion of matters of public finance by all classes, and of the relations in which trusts in every form have come to stand toward the interests of the people, it is the privilege of those who are the managers of this oldest form of trust that exists in our land to so administer them, in openness to the public eye, in manifest carefulness of detail, and in unquestioned devotion to the public service, that they shall not only command the public confidence for themselves, but shall quiet the public unrest and strengthen the confidence of the people in the general stability of our financial condition. Many of our religious and philanthropic corporations have already established the rule of an official audit of their books by a public accountant. Some are insisting that their funds shall be deposited in the trust companies, and even employing them in connection with their own financial committees as agents for investment. No board of management, however generous its service or however distinguished the position of its individual members, will be exonerated in case of trouble, either by the courts or by the public, unless it can show at once that it has taken advantage of modern methods of doing business and has exercised that kind of care which to-day is alone regarded as adequate. The time has come when the common people no less than the millionaires insist on knowing that their benefactions are carefully administered as well as safely kept.

# Emergency Relief in Great Disasters

By Edward T. Devine

General Secretary of the Charity Organization Society of New York City

**F**ORTUNATELY, the need for charitable relief in American communities is comparatively rare. It is not, as it has elsewhere become, a usual feature in the life of the ordinary laborer. Abnormal immigration, industrial crises, a wasteful and unwise relief policy, and such disasters as a great city fire, the overflowing of rivers, or the destructive sweep of the tornado, have caused at times acute and even widespread distress, which has led to the adoption of emergency relief measures.

The questions arising from immigration—like those arising from the presence of a race problem in the Southern States—although they are essentially relief questions in a broad sense, are not of an emergency character, and are too complex to be dealt with briefly as a part of the present article. The problem of hard times and the distress caused by industrial displacement must also be set aside for the present; although it is enumerated as one which is not to be disposed of by a consideration of such National policies as the currency, the tariff or other form of taxation, imperialism, or the management of trade-unions. On the contrary, in every period of depression and unemployment there is likely to arise a need for exceptional relief; and in a progressive society in which mechanical processes are rapidly discarded to make way for better processes such needs are likely to increase rather than diminish.

The demand for relief which is created by unwise philanthropy or lavish expenditure for public relief may likewise be passed over; although there is no doubt that a considerable part of the existing dependency is due directly to such causes.

Immigration, hard times, industrial displacement, the congestion of population, and the race problem, are all to be considered as exceptional causes of distress, with which we shall one day know how to deal effectively. They are unlike sickness, accident, and death of the breadwinner, unlike mere industrial inefficiency and moral defects, in that all of the latter

can be remedied only by changes in human nature, or by the slow, if steady, advance of science; and yet all of these are but phases of the general problem of relief. Those who are to shape National and local policies must come to look upon them as parts of a general problem, to solve which clear and definite views are essential. From these we may distinguish, as less complex and baffling than many of the others, the task of dealing with exceptional emergencies—such as are caused by fire, flood, and famine. In the presence of such disasters as those at Heppner, Oregon, Armourdale, Kansas, and Martinique, there can be no doubt of the need for quick and effective assistance, and there can be no doubt of the wisdom of considering the lessons to be gained from the study of such disasters, after they are passed.

The first lesson which is written large in the experience of those who have been called upon to deal with such disasters is the folly and wastefulness of relying upon inexperienced, untrained, or incompetent agents for the distribution of relief and for the constructive work without which relief distribution may easily be productive of more harm than good. There are always at such times novel problems to be solved, but the experience of other communities under similar or analogous conditions will aid in their solution if it can be brought to bear. It may be, as at Chicago after the great fire, that the problem is primarily one of relief pending the resumption of trade and industry. It may be, as at Johnstown and at Heppner, that the problem of sanitation and public safety is equally important; or, as at Martinique, that the destruction of life is so complete that little relief is required except for the transportation of the few survivors for whom no means of livelihood remain. It may be that, as in Paterson after the fire and flood of March, 1902, and the tornado of 1903, the community as a whole remains self-supporting, even though one portion is severely taxed to supply the necessities of other portions

that have especially suffered, and that as a consequence no outside relief is needed; or, on the other hand, as at Galveston after the inundation in September, 1900, and at Kansas City, Kansas, this year, that all classes have been so uniformly stricken that outside relief is imperative; or it may be, as at East St. Louis and adjoining villages, that relief is provided in sufficient quantity from towns and cities in the immediate vicinity, although not in sufficient amount from the stricken town or city itself.

It is indispensable that there shall be a quick perception of the essential features of the existing situation in those who would lead a community and outside sympathizers to a wise conclusion in the face of impending or accomplished destruction of life and property.

When it has been decided that there is need of relief, whether in the form of money, of transportation, of labor, or of whatever form, then there should be summoned an executive, if such a one can be found, who is endowed with financial capacity, a knowledge of human nature, experience in dealing with men, and acquaintance with the peculiar and difficult problems constantly arising in the attempt to relieve suffering and distress without injury to the self-respect of those who are to be aided, and without injury to their neighbors. If the problem is a large and complicated one, numerous sub-committees will be requisite and a staff of assistants. There should be searching inquiry into the claims for relief where the facts are not fully known. The bureau of inquiry inaugurated at Johnstown by Mr. Tom L. Johnson, of Cleveland, speedily became one of the most important features of the whole relief system, and upon it eventually devolved the real decision as to the persons to be aided and as to the amounts they should receive.

There should be an executive committee, whether called by that name as in Chicago, or by some other designation, thoroughly acquainted with local conditions and in constant touch with the relief operations. Whether this committee should have the full responsibility, or should itself be responsible to a larger board or commission, will depend upon various conditions, and especially upon the extent of the area from which dona-

tions are received. If contributions are made from distant communities, it may be advisable that there should be representatives upon the controlling body from such communities, or at least there should be as members of it citizens of sufficient reputation and standing to inspire a feeling of confidence even in the most distant places. After the Johnstown flood, a commission was appointed by State authority on which there was comparatively little local representation, and the principal responsibility in Johnstown itself, during the period of greatest need, rested upon what was known as a finance committee. Although there are advantages in an authoritative and widely representative commission, such as that which was then created, it is doubtful whether the resulting delays and the lack of familiarity with the actual situation are not fatal objections. It is certain that commissions, if made at a distance, should be influenced by the opinions of those who are on the spot. In any event, the real responsibility will naturally rest principally upon the local executive committee and its executive. The committee should lay down the principles on which aid is to be extended, and full responsibility for carrying them into effect should devolve upon the executive.

Material should be preserved for the publication of a detailed report, including a detailed financial record both of receipts and disbursements. This is not only due to contributors and to the public as a guide in future emergencies, but it is of advantage to those who are responsible for the relief measures in order that, if criticism or controversies arise, a full statement can be made. The Fire Report of the Chicago Relief and Aid Society and the Report published in Calcutta of the Central Executive Committee of the Indian Famine Charitable Relief Fund of 1900 may be cited as models of most complete and elaborate reports; and, although of briefer compass, the Report of the Secretary of the Johnstown Flood Relief Commission, the Report of the Jacksonville (1901) Relief Association, and the Report of the Minnesota State Commission for the Relief of Fire Sufferers (September, 1894; report printed 1895), are equally explicit and valuable as sources of information.

The failure to publish similar reports, or, indeed, anything that can be properly called a report or a financial statement, is one of the just criticisms made against the American National Red Cross. This society has taken part in the relief of the sufferers from the forest fires in Michigan in 1881, from the overflow of the Mississippi River in 1882 and of the Ohio in 1883, from the Mississippi cyclone in the same year, from the overflow of the Ohio and Mississippi in 1884, from the drought in Texas in 1886, from the Charleston earthquake in the same year, from the Mount Vernon (Illinois) cyclone in 1888, from the yellow fever epidemic in Florida in the same year, from the Johnstown disaster in 1889, from the inundation, hurricane, and tidal wave of the South Carolina coast in 1893 and 1894, and from the Galveston flood.

In connection with these various enterprises, and others in which the Red Cross has been interested, large sums of money have been contributed to the Red Cross Society, but for their disbursement no suitable public accounting appears to have been made in any instance. In the pamphlets and addresses issued by the Society such paragraphs as the following take the place of definite statements concerning what was actually done and what relation such action bore to the relief work of other and often more important agencies:

"The Secretary brought together the women of Johnstown, bowed to the earth with sorrow and bereavement, and the most responsible were formed into committees charged with definite duties towards the homeless and distraught of the community. Through them the wants of over three thousand families—more than twenty thousand persons—were made known in writing to the Red Cross, and by it supplied; the white wagons with the red symbol fetching and carrying for the stricken people."

It is principally considerations of this kind that have led to the recent remonstrance from some of the most prominent members of the Red Cross Society, and to an attempt, thus far unsuccessful, to bring about a reorganization of its management, especially on the financial side.

In times of great calamity, such as we have been considering, there are many

who are ordinarily self-supporting who find themselves suddenly bereft of property, of accumulated savings, of the means of livelihood, and even of the barest necessities of life. The disaster may befall a community of high industrial standards, with few, if any, paupers or public dependents—a community in which there is little lawlessness and crime. Under such conditions, the principle of indemnity, as distinct from that of charity, may well have a very general application. The principle of indemnity is that of the fire insurance companies, and, in a modified form, also that of the life and accident insurance companies. It implies the reinstatement of the beneficiary as nearly as possible in the position from which he was hurled by the calamity which has befallen him. It implies that to the householder shall be given the use of a house, to the mechanic his tools, to the family its household furniture, to the laborer the opportunity of remunerative employment. For the community as a whole it means the speedy restoration of such commercial and industrial activities as have been temporarily suspended, the rebuilding of bridges, the reopening of streets, the reestablishment of banks, business houses, churches, and schools. It requires that protection shall be given to the defenseless, food and shelter to the homeless, suitable guardianship to the orphan, and, as nearly as possible, normal social and industrial conditions to all. The charitable principle takes account only of the necessities of those who apply for aid; the principle of indemnity gives greater weight to their material losses and the circumstances under which they were previously placed. It is a vital question whether the principle of indemnity might not properly have a wider application to ordinary relief than has usually been given to it, but we may be certain that the pauperizing effects supposed to result from liberal relief have not been found to follow the most generous attempts to avert completely the paralyzing and direful consequences of such disasters as we are now considering. Both in Chicago and in Johnstown hundreds of families were placed by gifts of money, or of house, furniture, clothing, and tools, in a position practically as good as that which they had occupied before the fire or the flood

respectively. There is ample testimony that in practically all instances good results were obtained from this policy. In Chicago harmful consequences in the subsequent charitable history of the city have been traced to a retention of a portion of the money by those who were its custodians; and in Johnstown there was unquestionable hardship from the delay in its distribution and from the early indiscriminate grants made without knowledge of the circumstances of claimants; but in neither city were there well-founded complaints of the results of discriminating and judicious disbursements in large amounts made with the avowed purpose of putting the recipients in a position to carry on their former or equally appropriate vocations.

On several occasions the usefulness in great emergencies of detachments of the standing army which have happened to be near at hand has been demonstrated. The perfect discipline and the organization constantly maintained in the army may save days at a time when even hours are of the greatest importance. The National Guard of the various States might render, and in some instances—notably at East St. Louis, Missouri, this year—has rendered, similar service. The suggestion made by Dr. F. H. Wines in the "Charities Review" for June, 1898, that soldiers are of great utility as an aid in emergency relief work, was based upon an experience in the relief of sufferers from an overflow of the Ohio River at Shawneetown, Illinois. The detail which came to his assistance on that occasion consisted of a sergeant and nine men, and their special duty was that of patrol and other similar service. Dr. Wines found that even then twenty men would have been better. Dr. Wines recommends that where any portion of the population of a given community requires the shelter of tents, a temporary canvas city provided by the State or Nation should be organized and remain under the control of the military authorities. By maintaining strict military discipline the inhabitants of the emergency camp at Shawneetown, slightly exceeding at one time two hundred in number, of whom two-thirds were negroes, were at all times under thorough control. By the aid of the military force it became possible to provide for these refugees "a

care so sympathetic and paternal that it produced . . . no pauperizing impression."

For the temporary camp in Kansas City, Kansas, tents were supplied from the Federal post at Fort Leavenworth, and for the similar but smaller camp on the Missouri side, for residents of Kansas City who had been driven from their homes by the flood, tents were supplied by the State militia; and in both cities detachments of the National Guard were called upon for patrol duty. One of the principal reasons for such a military patrol is the temporary disorganization of the community. The local constabulary is likely to be demoralized and excited, and the presence of State militia gives confidence and security to people who need temporary moral support.

While soldiers may profitably be employed in the manner that has been indicated, it will not ordinarily be found advantageous to place upon them responsibility for relief or for remedial measures. Military discipline has its limitations as well as its advantages, and it would unfit the average soldier or petty officer to exercise that discriminating judgment and personal influence which are so essential in dealing with people who have suddenly lost their possessions and require aid and counsel in readjusting their affairs and regaining a foothold in the industrial system. At the earliest practicable moment the ordinary municipal authority should be established and the necessity for military patrol overcome.

At Johnstown one of the most interesting chapters in the history of the few months succeeding the flood is that which deals with the restoration of municipal borough authorities to the full exercise of their functions. In some of the boroughs affected by the flood there was left no building in which a meeting of the borough council could be held. Self-constituted committees had temporarily managed police, health, and fire departments, and later such duties had been in part assumed by State authorities. Gradually, however, the Adjutant-General, representing the State government, sought out those who had been duly chosen to perform such duties, arranged suitable meeting-places for councils and public boards, and transferred to them the duties which it had

again become possible for them to perform. No legal or other controversies arose in connection with these ultra-constitutional arrangements, and no act of the Legislature was thought necessary to legalize what had been done in the interval during which ordinary municipal activities were suspended, or the acts performed by the reorganized and restored municipal authorities.

One suggestion which is frequently made is that relief in emergencies should never be in money, but always in its equivalent. This suggestion is not to be adopted without consideration of the character of the proposed beneficiaries. It is probable that, so far as disbursements from public funds are concerned, the policy suggested is wise, and that provision of employment where emergency relief measures are necessary is still better than relief in kind. Instead of opening free shelters, depots for free food and for the distribution of clothing, as early as possible a reliable list should be made, based upon a knowledge of the portion of the community affected by the disaster. In Baltimore, after the recent tornado, the police, under the direction of the Marshal, prepared a census of all the families residing within the storm area. When a reliable list of this kind has been prepared, applications may be compared with it and intelligent decisions reached as to the relief required.

The conclusion reached by the Johnstown Flood Commission to make a distribution of money was eminently justified by the conditions that there prevailed. It was then proposed, and indeed at one time it had virtually been decided by the Commission, instead of dividing the money in their hands after providing for various special needs, to establish large warehouses and fill them with clothing and other necessities of life, to be distributed as occasion might require throughout the ensuing winter. The change of plan was made because of earnest and emphatic protests from prominent citizens of Johnstown who were personally acquainted with the people for whom this scheme of relief was proposed, and who appreciated the absurdity of applying to skilled mechanics and prosperous trade people the principles which are based upon distrust either of the honesty or

intelligence of ordinary applicants for relief.

One cannot ~~commend~~ the methods of those almoners in Johnstown who, instead of placing their funds in the hands of the relief committees, ~~passed~~ through the streets handing ten-dollar bills to every one whom they met. The criticism, however, lies not against their use of money, but against their lack of discrimination and common sense. Many of those to whom grants of one thousand dollars and upwards were made instantly became engaged in active industry and trade, and within a few months, except for the loss of relatives, neighbors, and friends, might have looked upon their experience as a nightmare to be forgotten in the waking hours of renewed active life. It is probable that so large a sum has never before been poured into a community of equal size with so little damage to the personal character of the citizens and so complete an absence of any pauperizing or demoralizing influences. In the opinion of good judges resident in the city both before and after the flood, this is due in part to the fact that money was given, and that those who received it were left free to decide for themselves how it should be expended.

Two other considerations may be suggested. Special emergencies display in a high degree the need of local co-operation. In meeting such distress as is caused in populous communities by a tornado or a serious fire, there is a place for the activity of the Chamber of Commerce or Merchants' Association, or some other representative of the business interests of the community. The task relative to the large sums of money usually requisite can best be ~~undertaken~~ by some such body. Any ~~appeal~~ having their indorsement will be likely to meet with generous and quick response. There is a place also for the Charity Organization Society, or Bureau of Charities, or Provident Association, or some other general agency whose officers and agents are trained in investigation and in the administration of funds. It may also be expedient, if no such general agency is in existence, to call upon the churches or upon such denominational bodies as the Society of St. Vincent de Paul and the Hebrew Charities. There may also be a need for children's aid

societies or the representatives of orphan asylums to care for children who are left without guardianship; and there is almost always an urgent demand for physicians, for a temporary ambulance and hospital service, and for trained nurses. Often the aid rendered by volunteer private citizens is more valuable than that of any organized agency, and often the absence of organized relief makes it imperative that private citizens shall undertake to do what is essential, whether from choice or not.

One of the best illustrations of successful local co-operation in a special emergency is described in a brief account given by Walter S. Ufford in "Charities" of August 8, although in the storm which was its occasion no lives were lost, and the amount of relief required was less than four thousand dollars. In Baltimore, as in some other communities, a citizens' permanent relief committee has been created to deal with great National disasters, but so efficient was the co-operation of the various local societies that public sentiment did not demand a calling of the meeting of that committee.

This leads to my final suggestion, which is that in the presence of even a serious disaster leaders of public opinion should attempt to preserve in the public mind a due sense of proportion. Even in the presence of urgent need at a distance, the

continuing and probably equally imperative needs at hand should not be forgotten.

It is not surprising, in view of the frightful loss of life at Martinique and its proximity to our own shores, that the New York committee should have received some eighty thousand dollars more than they could disburse, in spite of an announcement by the committee that it would not take additional contributions. This was in part due to the fact that the eruption occurred in foreign territory, and that public appropriations were made both by the United States and France.

I would not be understood as discountenancing large and immediate responses to such appeals. By no means all that is given to meet special emergencies is deducted from ordinary charitable resources. There should, however, be cultivated a sane and reasonable examination of the probable need; and the citizen who gives, even with great liberality, should not on that account consider himself free from the obligation to consider also the needs of his immediate neighbor. The city, even in prosperous times, through its quick industrial changes and by the very conditions of life which it imposes, places upon some weak shoulders burdens which are not rightfully theirs and which it is the duty—and it is an agreeable duty—of their neighbors to share.

## Managing a National Park

By Henry Harrison Lewis

SEVERAL years ago a well-known magazine illustrator conceived the idea of producing a series of sketches showing Uncle Sam in his various characters. The scheme was to draw the typical lean, shrewd face with its chin-whisker, and garb the body according to the character in question. The artist began to compile a list, starting with the army and navy, but when the list had grown beyond the hundred mark he decided that the Washington Government's duties were too multitudinous to make the plan practicable.

If the artist had completed his series, one of the characters would have shown Uncle Sam in a nondescript costume

made up of a cavalry uniform, a ranger's buckskins, and a Cabinet official's conventional clothing. This picturesque costume would have represented the Government in its capacity as manager of the Yellowstone National Park, the most stupendous of its kind on earth and in character quite unique.

Perhaps it is only natural that the many articles published about the Yellowstone Park have told only the scenic side of it, but the result is that few persons know anything about the rules established by the Government for the maintenance and care of this most remarkable wonderland.

It was in 1872 that Congress enacted

the law reserving from settlement the great tract of land

"Tucked away among the mountains on the crest of the continent,"

where the border-lines of Wyoming, Montana, and Idaho meet, but for the following six years it allowed it practically to protect itself. The first appropriation to care for and improve the Park was made in 1878, and amounted to \$10,000. When it became evident that some form of local government was required, it was decided to place the territory under the charge of the Interior Department, and to commit the actual guarding to an army officer and a detachment of United States troops. Our soldiers surely could not be assigned work more useful and patriotic in times of peace than that of preserving for posterity this magnificent natural museum.

The first appropriation was ridiculously small and inadequate, but last year the sums set apart to improve and perfect the Park and to provide the proper administrative force, exclusive of the cost and maintenance of the soldiery quartered there, reached the generous total of \$750,000. The greater part of this money was expended in extending the system of roadways and in opening a new entrance by way of the Wyoming border.

Although the seat of control is in the office of the Secretary of the Interior, the headquarters, the capital, so to speak, of the district is at the Mammoth Hot Springs, where Fort Yellowstone is situated, and where practically all the travel in the Park passes. It is here that Major Pitcher—the commandant and the superintendent of the Park—has his station, and it is at this point that the troops of cavalry make their headquarters.

Although the superintendent is supposed to govern according to his discretion and the circumstances of the case, there are strict regulations promulgated in Washington relating to the protection of the natural phenomena of the Park from injury and mutilation, to the carrying of firearms, protection from forest fires, and care of the animals, fish, and birds of the Park.

To secure the better enforcement of these regulations, the troops are stationed in detachments of from three to ten men each at the most frequented points. These stations, ten in number, are located

at Mammoth Hot Springs, Norris Basin, Lower Geyser Basin, Upper Geyser Basin, The Thumb, Lake Station, the Grand Cañon, Soda Butte, Riverside, and Snake River. A glance at a detailed map of the Yellowstone Park will show that these little outposts are so arranged as to cover the entire area, or at least that part accessible to the ordinary tourist. From each of these stations a system of daily mounted patrols is kept up over some two hundred miles of road. The fact that from the headquarters at Mammoth Hot Springs to the most remote station, Snake River, is a distance of ninety miles, shows the scale on which the Park is laid out.

One efficient aid in keeping out undesirable visitors is the fact that during nine months of the year the interior of the Park is accessible to the public by practically only one route—that through Gardiner, on the north boundary. The other entrances, of which there are three more, are blocked by snow, and although it would be possible to penetrate them with a heavily provisioned expedition, skillfully guided, it would not be long before the presence of such an expedition would be known to the soldiers.

An incident that occurred during President Roosevelt's recent visit proves the exceedingly careful manner in which the Park is guarded. When Mr. Roosevelt made it known that his object in entering the Yellowstone Park was to secure several days of complete privacy, and that he did not want any one aside from Major Pitcher and the picked escort to accompany him, a certain correspondent representing a New York daily, who had been ordered to be on hand in case of any accident to the President or other emergency of National importance, resolved to ignore the President's request and to follow him at all hazards.

With this object in view, he attempted to bribe some of the native population, but without success. Not disheartened by his failure to secure a friendly companion and guide, the correspondent hired a horse and persuaded a stray dog to accompany him. This was on the afternoon of the President's arrival at Fort Yellowstone. The Fort is ten miles from Gardiner, where the rest of the correspondents and the President's party had stopped.

The recreant correspondent set forth

in high glee at the possibility of working a "beat" on his fellow-craftsmen. As he rode along through the leafy lanes and past the towering cliffs which in part line the road to the Springs, he felt very well satisfied with himself, and chuckled at the ease with which he had evaded the guards stationed near Gardiner. Suddenly, as he was entering a particularly dark part of a forest, he heard a voice from the brush on the right.

"Theodore Jones," it said slowly and in unmistakable authoritative tones. "Theodore Jones!"

The correspondent reined up his horse in amazement. Who was it calling his name? Had he been followed from Gardiner? If so, why did the voice come from the bushes and evidently some distance from the road?

"Hello!" he shouted, in reply.

There was no answer. He called again and again, but without result. Then he put spurs to his horse and rode on. Half a mile further down the road, just as he was passing through another bit of woodland, a deep voice called out seemingly at his very elbow:

"Theodore Jones! Theodore Jones-s-s! Better go back."

For one moment the newspaper man hesitated, then he rode resolutely forward. He felt that he was being tricked, but he intended to see the game out. He was a bit nervous because he realized that his course of action was not entirely honorable, and it was with something very like relief that he espied at a turn in the road a United States trooper sitting with horse blocking the path and a rifle slung carelessly across the pommel of his saddle.

"Halt!" called out the soldier. "Mr. Jones, you are wanted at Headquarters."

"How do you know my name is Jones?" demanded the correspondent.

The trooper smiled as if the question was a joke. Placing one hand upon the correspondent's bridle, he led him without further words to Fort Yellowstone. A technical charge of unlawfully bringing a dog into the reservation was entered against Mr. Jones, but he was released on his promise not to enter the Park again until the President's return. The incident had its value in showing the extreme care taken by the Park's guardians in keeping out unwelcome visitors. The

correspondent's errand was known at Headquarters before he had crossed the line.

It would seem to be a difficult problem to take care of more than sixty-two square miles of park with two troops of cavalry, but the system followed is so well planned that good results are obtained. In summer the troops patrol mainly the roads along which tourist travel is greatest. During the hunting season careful watch is kept of the game ranges in order to prevent poaching. The Yellowstone and Teton forest reserves to the south of the Park are under the same administration, though still subject largely to the laws of Wyoming.

To facilitate winter scouting a number of snowshoe cabins have been erected at intervals of about one day's travel throughout the Park. These cabins are supplied at the beginning of winter with food, bedding, fuel, matches, and cooking utensils. They are indispensable for the maintenance of the Park regulations and the protection of the guards, for without these the winter patrols would be limited to one-day or at most two-day trips from the permanent stations. All travel in winter is done on skees, the great depth of the snow effectually preventing the ordinary means of transportation.

The precautions against forest fires are particularly strict and thorough. As fully eighty-five per cent. of the Park is forested, the work of fire-prevention is one of the most harassing and arduous that falls to its guardians. Notices to guard against fires are posted throughout the Park and at all places suitable for camping. All camps are examined by the patrols after they have been vacated, to see that the fires are extinguished. Failure to thus extinguish a fire on moving camp means arrest and trial before the United States Commissioner.

The wild denizens of the Park are, of course, strictly protected from attack. Hunting, killing, or capturing any wild animal except dangerous animals in defending one's self from an attack is prohibited. At times campers have found it necessary to shoot bears who come too near for comfort, but the occasion is seldom. Firearms are permitted in the Park only on written permission from the superintendent. Fishing for profit, or in any

manner except with hook and line, is likewise prohibited. The superintendent may at any time declare a close season in any or all the Park waters. As a consequence of the vigilant and unsparing enforcement of these rules, poaching on the National preserve has been reduced to a minimum, and the animals within the reservation are gaining yearly in numbers and fearlessness.

During his very interesting visit to the Park, President Roosevelt had an excellent opportunity to secure personal knowledge of conditions affecting the game. It is known that he is heartily in favor of the policy making the Yellowstone reservation not only a place of recreation and sightseeing for tourists, but also a great breeding-ground for American fauna. The President saw during his eight days' stay immense herds of elk, so many in fact that it was difficult to believe that all of them could find feeding-place in even the Park's large area. There was abundant evidence that a number of elk and other animals had died of starvation during the winter, and it was this fact which caused the President to recommend the discontinuance of hunting the lions, cougars, and bobcats with the Government's packs of cougar hounds. Mr. Roosevelt's long experience with nature in the open enabled him to see that nature was better able to practice economy than man.

In addition to the elk there are fully a thousand of the American antelope living under National protection. They are among the most troublesome of the wild inhabitants, because of their propensity to stray across the boundary line, where they are almost sure to be shot by some of the hunters who hang around the outskirts of the Park waiting for just such an opportunity.

The common deer abound everywhere, frequently appearing on the parade-ground at Mammoth Hot Springs, so fearless have they become through long immunity. There are still many splendid specimens of the moose to be seen, and since the enactment of strict protecting laws by the Wyoming Legislature they have begun to increase in numbers. The beaver, once plentiful in every American stream, but now confined to a few favored haunts, here finds a safe refuge and builds his dams undisturbed. The buffalo herd, one

of the few remaining, contains forty or fifty members; these are the only animals that show a decrease in numbers from year to year.

Besides enforcing the game laws and fire regulations, the Park officials have to look after the safety of the thousands of tourists, and to see that the roads and bridges are passable after the storms of winter. The road-making and other engineering work is under the direction of the United States Engineer Corps. Recently improvements to the estimated amount of \$300,000 were completed. Many miles of new roads have been constructed, and the old ones made safer and better adapted to traveling.

Transportation in the Park is in the hands of the Yellowstone Park Transportation Company. The company operates two stage lines with the regulation outfit of coaches, teams, and drivers. These lines run through the Park, one connecting with the Northern Pacific Railroad at Gardiner, Montana, and the other with the Oregon Short Line at Monida, Idaho, making a tour of all the principal points in five days. There are also a number of licensed guides who will personally conduct a camping party. This method of "doing" the Park relieves one of the necessity of patronizing the Park hotels, as those who travel by stage are obliged to do.

The regulations provided by the Government for the Yellowstone Park are few in number, but they are rigorously enforced. For the benefit of intending visitors to the Park, as well as others who may be interested in the subject, several of the more important rules are herewith given.

For instance, those visitors who may feel inclined to carry away souvenirs of their stay should understand that they are strictly enjoined from removing or injuring the sediments or incrustations around the geysers, hot springs, or steam vents. It is also forbidden to deface the same by written inscriptions or otherwise.

If the reader has it in his mind to take residence in Yellowstone Park, it will be well for him to get permission in writing from the Department of the Interior, or he will find himself hastily vacating at the point of a very earnest cavalry saber.

For the benefit of campers it is well to add that they are forbidden to cut or injure any growing timber. If they need

fuel, they must use dead or fallen timber. Fires shall be lighted only when necessary, and must be completely extinguished when no longer required. As a proof of his temperate habits, Uncle Sam, in the person of the Secretary of the Interior, absolutely prohibits drinking-saloons or bar-rooms within the limits of the Park.

Persons who render themselves obnoxious by disorderly conduct or bad behavior, or who violate any of the rules, will be summarily removed from the Park, and will not be allowed to return without

permission in writing from the Secretary of the Interior. The legal penalty for the violation of the regulations, in addition to the above, is severe, and any one proved guilty may be punished by a fine of \$1,000 or imprisonment not exceeding two years, or both. It will be seen from this that the Government is very much in earnest in its efforts to so manage this most wonderful of national parks, the Yellowstone, that it will prove a garden spot for tourists and a safe haven for the wild animals of the country.

## The Hungarian Immigrant

By Edward A. Steiner

**N**EARLY all Slavs are designated in America as Hungarians, which is so distasteful to them that it comes near being accepted as an insult. The Magyar, the ruling race of Hungary, has not the slightest relation to the Slavs, unless it be that of ruling a portion of them with a rather iron hand, and hating all of them proportionately. The Magyar's closest relation is to the Finns on the north and to the Turks in the east of Europe, and he is classed anthropologically as a Ugro-Finn. In his development he has leaned closely to the west, having a Germanic culture while still retaining a somewhat untamed Asiatic nature which manifests itself in nothing worse than a love of fast horses, fiery wine, and the wild music with which the gypsy bewitches him and draws the loose change out of the pockets of his tight-fitting trousers.

In that strange conglomerate of races and nationalities called the Austro-Hungarian Monarchy, the Magyar has gained a dominant influence, and although numerically among the smallest, he has gained for himself the greatest privileges, and practically dictates the policy of the Empire. Upon those rich plains by the Danube and the Theis he has been a plowman who enjoyed the fruits of his toil as long as the marauding Turk would let him, furnishing wheat and corn for the rest of Europe and gaining not a little wealth since his arch-enemy has been driven back into peace. What he has of his country in the last forty years

of internal and external peace, how he has created for himself a capital which surpasses Vienna, and built factories and railroads unrivaled anywhere, forms a glorious page in the history of Europe.

From this comparatively wealthy country, from its freedom, from its broad prairies and its picturesque village life, there have come to America one hundred thousand men and women who are hard to wean from this Magyar land, but who, like all others, finally lose themselves in the National life, bringing into it fewer vices and more virtues than we ever connect with the Hungarian as he is superficially known among us. In New York, where the Ghetto ends, "Little Hungary" begins; rosy-cheeked maidens with bare arms akimbo stand in many a doorway while their swains court them on the street as they were in the habit of doing at home. Nearly every second house advertises "Sor-Bor" or "Palenka" for sale—the wine, beer, and whisky to which the Magyar is devoted; everywhere one hears the sound of the cymbal, that unpromising instrument which looks more like a kitchen utensil than anything else, but out of which the gypsy hammers sweet music. Little Hungary has but a small domain in New York; it ends abruptly with a restaurant in which gulyas, the favorite stew of the Magyar, lures the appetite; close by is Little Bohemia, and finally the big Germany which overshadows every other nationality.

The Hungary of New York, however, is only a stopping-place, and not sufficiently

distinctive to give a good field for observation. In Cleveland some twenty thousand Magyars live together round about those giant steel-mills which send their black smoke like a pall over that much alive but very dirty city. Although street after street is occupied solely by them; I have not seen a house that shows neglect, and the battle with Cleveland dirt is waged fiercely here, judging by the clean doorsteps, window-panes, and white curtains which I saw at nearly every house. A large Catholic church, with its parochial school dedicated to St. Elizabeth, the Hungarian queen, shows that the Magyar does not neglect his religion. There are also a Greek Catholic church and a flourishing Protestant congregation. A weekly newspaper keeps the Hungarians in touch with one another and with the homeland, although it does not represent the Magyar spirit either by its contents or through the personality of its editor, who has no influence among his countrymen. I looked in vain for a Hungarian political "boss," for no party can claim these people exclusively. Social Democracy has made great gains among them, which is due in no small measure to the fact that they come from a comparatively wealthy country, from conditions which are not unbearable, and from something of ease and comfort, and so, finding the work in the iron-mills hard and grinding, they soon grow dissatisfied, which means—Social Democracy. A sort of pessimistic philosophy is developed, and the happy Hungarians grow melancholy, dejected, and homesick. They cling with rare tenacity to the fatherland, in which they have a just pride, and whenever the opportunity offers itself they show how much they love it. The erection of a monument to Louis Kossuth by men and women of the laboring classes, the enthusiasm with which it was dedicated, the festivities which recalled by speech, song, and dress the greatness of the man whose memory they honored, speak much for their idealistic and loyal love of country.

Of all foreigners the Hungarians are among the most tolerant toward the Jews, who live in large numbers in Hungary, while Hungarian Jews in Cleveland love to be known as Magyars and are treated as such by their fellow-countrymen. The Magyar's good nature is also shown by

his treatment of the gypsies, who have followed him in large numbers to America and are really a sort of parasite, being supported by the easy-going and pleasure-loving Magyars, who dance the czardas to the fiery notes of fiddles and cymbals whose owners finally possess the largest portion of their patron's wages. Of the Hungarian gypsies it is said that when a boy is born among them the father holds before the child a penny and a violin; if he grasps the violin, he grows to be a musician; if the penny, a thief; but in most cases the child must have taken the two, for in Hungary as well as in America he is both with equal adeptness. One gypsy in Cleveland keeps a saloon which is a combination of the Hungarian "czarda" (inn) and its American namesake, the saloon, and it combines the evils of both institutions. The regular bar is supplemented by rickety chairs and tables and a clear space for the dancing floor without which the Hungarian czarda does not exist. On Saturday night, the soot of the week washed away, the Hungarian is found here in all his native glory. His mustache, twisted to the fineness of a needle-point, is his most prominent national characteristic, unless it be his small, shining eyes which barely escape looking out into the world from Mongolian openings. A small head and prominent cheekbones are also characteristic, while the color of the hair is dark brown and black, the blond being almost unknown. He differentiates himself from his neighbor the Slav by his agility of both temper and limbs, and to see him dance a czardas, to hear him sing it and the gypsy play it, is as good as seeing that other acrobatic performance, a circus. When the gypsy innkeeper knows that his guests have pay-day money in their pockets, he has ready a band of gypsies, who look shabby enough, and very unpromising from an artistic standpoint; the leader, who plays the first violin, tunes it with remarkable care and tenderness, the second violin scrapes a few hoarse notes after him, the bass-viol comes in grudgingly, and the cymbal-player exercises his fingers by beating cotton-wrapped sticks over the strings of his strange instrument. One patriotic youth, who has had just enough liquid fire poured into him, now lifts his voice and sings a song of the puszta (the

Hungarian prairie), of the horses and cattle which graze upon it, and of the buxom maiden who draws water from the village well. Slowly, pathetically, almost painfully melancholy, the notes ring out as if the singer were bewailing some great loss; the musicians follow upon their instruments as sorrowful mourners a hearse; but all at once the measure becomes brisk and the notes jubilant; the singer and the musicians are caught as by a fever, faster and faster the bows fly over the strings, the cymbal is beaten furiously, and the bass-viol seems in a roaring rage.

Sunday morning finds the dancers sobered and reverent on the way to church, most of them going to the Roman Catholic church, in which a zealous priest blesses, but is not blessed by, them. Seldom have I found among foreigners such frank criticism of the priest and yet such loyalty to the Church. The Hungarian Catholic is not narrow; he is much more liberal than the Slav or the German Austrian, and a bigoted priest may hold him to the Church but will not win him to himself. It is always hard to judge of a priest or preacher from the reports of disgruntled members of his flock, but the Catholics seldom speak ill of their shepherd unless there is much hard truth to tell. The following, which I heard from trustworthy sources, is characteristic. At a meeting of one of the lodges the motion was made to have a mass said on a certain memorial day; the priest arose to second the motion, and said, "We have two kinds of mass, the five dollar and the ten-dollar one, and I would not advise you to have the cheap one." True or untrue, the fact remains that this priest has built a fine church and a magnificent parochial school. He is a good financier, and I doubt not that he is such for the glory of his Church and not for his own enrichment; I can testify to the fact that he has done much good, that he has quieted much turbulence, that he is not a friend of strong drink, and that he is a narrow but exceedingly careful shepherd of his flock.

The Greek Catholic priest in Cleveland was driven from the church by his independent parishioners, who found him not only a good financier but a bad man, "a holy goods," as they called

him, who was ready to dispense his blessing to man and beast for money, large or small, or for a drink more often large than small. The Protestant church is shepherded by a young man from the Oberlin Theological Seminary, who is in touch with the American life and its interpretation of the Christian Church and ministry.

The Protestant Hungarian is, as a rule, better educated, morally on a higher level, and in America more quickly assimilated than his Catholic brother. In Hungary this has well-defined causes. First, splendidly equipped Protestant ministers, not a few of them graduates of English and Scotch universities and imbued by the Puritan spirit of those countries. Second, a Protestant theology of the Calvinistic type, which, harsh and hard as it is, makes everywhere strong men and women, and which in Hungary distinguishes the Calvinistic communities from the Catholic by a severer philosophy of life and a much more moral conduct. The third cause may in the eyes of some persons be the most real one. Wherever a religious community is in the minority and is or has been severely persecuted, it becomes thrifty and highly moral. Whatever the reason, the fact exists and is a pleasant one to chronicle. Not so pleasant is the fact that, in common with all foreigners, the Magyar presents a serious religious problem. Neither church, priest, nor preacher holds authority over him very long after he reaches these shores. He rebels against, loses interest in, and finally ceases to support his church; neglect not seldom ends in hate, and a rude atheism is a common disease among these people. Besides this, it is not easy to find enough and suitable priests and preachers for these foreigners, as slight differences in language call for different pastors, and in Cleveland alone the Church could use advantageously men of twenty nationalities of whose existence the average man has scarcely any idea. The imported pastor is almost always in discord with his congregation, which is almost always in accord with the freer American spirit and cannot be treated as he treated his people in Hungary or Poland. Many, perhaps most, of the pastors who are educated abroad have no sympathy with the democratic spirit of our

country, and they frequently complain of its effect upon their authority. I met one such priest on his way back to Europe; he was leaving his work because, as he said, "I could find nobody in my parish to black my boots, for everybody considered himself as good as I am. In the old country my people would stop on the street and kiss my hand, but here the children say, 'Hello, Father,' and go on their way." The ministers trained in America are few, and these are yet young and inexperienced.

The English Protestant churches are not seriously concerned about this growing problem, the solution of which does not consist only in building missions and paying money into the treasury, but also in presenting to these foreigners a living, acting, and blessing Christ, who, when uplifted, draws all men unto him. It is good to be able to say of people who come to a strange country that they maintain their integrity, and this may be said of the Hungarian. He is, as a rule, honest, easily imposed upon, somewhat quarrelsome, addicted to drink, not so industrious as the Slav but much more intelligent, comprehending more easily and assimilating more quickly. He is not a problem but a lesson. Crossing the ocean in December on the Red Star Line steamer *Vaterland*, I found among the mixture of steerage passengers over two hundred Magyars, or, as we more exactly call them, Hungarians. I was eager to know what they were carrying home to their native country after years of living with us, and I found that many of them seemed completely untouched by the American life. Their language, spoken by but a few people in Europe, is almost unknown in America, and the man without a language is almost always "the man without a country." If anything, these poor creatures seemed worse than when they came, for many of them had failed and were broken in spirit. Some whose tongues had become loosened were aware of the larger life, and were full of the praises of America. They were going back to look again upon the village in which they were born, in which they made whistles from the hanging willows by the creek, where they chased the pigs into the mud-puddles, where they lived their small and simple life, and to which they were now returning as traveled

men. They had crossed the ocean, seen miles of earth, had struggled with wind and weather, felt freedom's breezes blow, and had grown mightily. Brain, heart, and soul had developed, or perhaps only changed, but even change is experience, if not always life and growth. It was good to talk to these men who had "arrived," who saw things as we see them and felt them as we feel them, and who carried American flags in their pockets to show to their friends and gloried in their American citizenship. "I love the old country," said one of them, "but I love America more. Stay in Hungary? Oh, no! I do not even want to die there, but if I do, I want them to wrap me in this shroud," and he pulled out of his pocket the Stars and Stripes.

But not all of them are so idealistic; some love America for the money they made, some for the social position it gave them, many of them for the chance their children will have to grow into their full heritage as men and women; but, whatever the cause, it is good to feel that so many of these foreigners learn to love their adopted country. It was interesting also to find that these ten or twelve nationalities which were represented in the steerage of the *Vaterland* were nearly all closely related, but could not understand one another in their native language. There were Slovaks, Serbs, Rumanians, Poles, and Bohemians, all of them more or less of Slavic origin, and yet when they wished to speak to one another they had to use the English tongue. In that conglomerate of races and nationalities, in which language was an iron wall, it was good to hear "American talk," as they call it, and find it a binding link. They sang as only these children of nature can sing. A Serbian bard sang of his heroes who fought the Turk, the Magyar sang of love and wine, of horses and red cattle, the Jew chanted the Psalms of David and called God down to earth because he was poor and needy, the Frenchman sang the martial "Marseillaise," and the German the stirring notes of "Die Wacht am Rhein," and as they sang and the voices mingled the sound brought discord and confusion to the ear and to the heart also, for these songs had in them the thunder of war and the spirit of enmity. In the midst of this uproar a Hungarian boy, who came

from the mines of Pennsylvania, began to sing, "My Country, 'tis of thee, sweet land of liberty." Not many voices joined in the strange tune, but there arose a deep

and listening silence, a prophecy of peace and of the final consummation of the dream of seers and prophets—the brotherhood of man.

## One of the Family

By Alice Ward Bailey

IT was a pleasant room, with wide window-seats and many cushions, pictures everywhere, and souvenirs of travel, but not handsome, not formal, as one's best room should be. So thought Aunt Susan Symington as she stood looking about her. She had hoped Elizabeth would have things different as Sanford Grey made more money and Katharine and Stuart grew older, but here she was, married ten years and if anything less "particular" than in her girlhood. The reflection brought a sigh.

"You have no cause to sigh; I'm the one," said a voice behind her, and there stood Elizabeth herself.

"You!" exclaimed Aunt Susan, with a start. "What has happened?"

"Nancy," was the laconic reply, as Elizabeth seated herself and folded her hands in her lap. "She won't let me say a word."

"She never would," retorted Miss Symington, dryly. "But then you didn't use to try. I don't see why you should begin now."

"Katharine will be nine years old to-morrow," said Elizabeth, "and I have decided that one young lady is enough in the house. Besides, you've stirred my conscience."

Aunt Susan looked up inquiringly over her spectacles.

"You've impressed it upon me that I'm not doing my duty by Nancy. I've always taken her as a joke," said Elizabeth, calmly. "It was very wrong."

"It was wrong," said Aunt Susan, warmly. "Now, the first night after I came, do you know what that girl did?"

"You strike," said Elizabeth, "the key to the situation. You see, she never was 'that girl' to me. She was—Nancy."

"Do you know what she did?" repeated Miss Symington. "She brought in the

dining-room lamp turned 'way down, and told you not to turn it up till the chimney was dry—she'd just washed it. And you and the children sat there and giggled in the dark!"

"We do—'giggle'—a good deal," said Elizabeth, apologetically.

"Moreover," said Aunt Susan, severely, "you've allowed her to enter into the conversation of the family while she was waiting on the table. She doesn't do it as much as she did."

"The conversation isn't as interesting," said Elizabeth, mischievously.

"And I caught her in *your place* drinking tea *out of your cup* the other night," finished Aunt Susan.

"She must like me pretty well," mused Elizabeth.

Aunt Susan drew out a length of thread and bit it off with the precision of an Atropos.

"You see," said Elizabeth, "two years ago, when Sanford was traveling and both the children were down with the measles, Nancy and I ran the hospital together, bathed and fed the children together, sometimes we ate together. She found herself in the bosom of the family, and, hard as it was, she liked it. She doesn't like being poked out."

Elizabeth whisked off to another room, as she had a way of doing when she did not care to be answered. "Some 'Aunt Susan' will be all right in this, but all 'Aunt Susan' will be as bad as all 'Elizabeth,'" she said to herself.

Not long afterwards Mrs. Bolton called—Mrs. Isaiah Bolton, President of the Woman's Club and author of "The Complete Housewife." "I'll ask her about it," decided Elizabeth.

"Dear Mrs. Bolton," she began earnestly, after the preliminary questions and answers which belong to a call as "responses" do to the Episcopal service.

"Dear Mrs. Bolton, what *do* you do when your cook gets obstreperous?"

"I keep out of her way," returned Mrs. Bolton, easily.

"But if there are orders—"

"I don't give them. I let her do as she pleases until she is tired of the responsibility."

"But—don't you think—isn't that an—*evasion*?"

"Of course. That is why I do it. My dear, there are enough things which we cannot evade. We must dodge where we can." And Mrs. Bolton dodged. "I wanted to ask you," she said, graciously, "what you think of putting in Miss Comstock as corresponding secretary for the Club?"

"Admirable," exclaimed Elizabeth, and spoke no more of Nancy.

While Mrs. Bolton was saying her farewells, Mrs. Clark called. She had on a new picture hat which became her, and she took her seat in range of the mirror where she could study the effects.

"I'm delighted that you approve," she said, in reply to Elizabeth's compliments. "I suppose Bridget will have one as near like it as possible before the month is out, but I'll have a chance to wear it a few times. How do I get on with Bridget? Finely. I do as you do with Nancy. I make an intimate friend of her."

Mrs. Clark showed her dimples.

Elizabeth thoughtfully rubbed her chin. "Nancy and I are not as intimate as we were," she said, soberly.

"You're not?" cried Mrs. Clark. "Do you think they take advantage?"

"I think *we* do," was the unexpected reply.

Mrs. Clark opened her eyes. "That's just what my husband says," she cried. "He declares that I ask Bridget to do things I wouldn't think of asking if we were not on such good terms, and that some day she'll 'kick,' as he expresses it. Has Nancy? Why, I thought Nancy would stand anything. How did it happen? What began it?"

"I began it," Mrs. Grey confessed. "She didn't complain about doing things, but she would take her own time and way, and I objected."

"How is she, now?" inquired the visitor, manifesting the acute interest of one

who sees destiny looming large on her own horizon.

"She's pretty bad," was the reply.

"How do you think it'll end?" asked Mrs. Clark in awed tones.

"I'm afraid," said Elizabeth sorrowfully, "she'll have to go. I'm afraid she'll want to, when she finds she can't have her own way. And she has 'shown out,' you see."

"Can't you make her think you haven't noticed?"

"Only by letting her have her own way more than ever and acting as if I were the one to blame."

"Can't you train her? Is she impudent? If she has commenced *that*, of course you can't stand it—I *must* go. I promised to meet Mr. Clark at his office at twelve. Don't be discouraged. Perhaps you'd like a Pole. The Bridgmans have one."

"I know they have," said Elizabeth, without enthusiasm.

"You know you always *do* have to put up with something," said Mrs. Clark, lightly. "My friends ask, 'Is Bridget a good cook?' 'Not very,' I say. 'Is she a good laundress?' they ask. 'I put out most of it,' I tell them. 'Well,' they say, 'she probably gives exceptionally good service.' But she doesn't. It's only that she's so *comfortable*."

"Nancy *was*," sighed Mrs. Grey.

"I'm sorry for you," said the visitor, rising. "But, then, you'll get along. You have your aunt, and Katharine is old enough to help. How old is Katharine?"

"Katharine will be nine to-morrow."

"And Stuart?"

"Stuart is five. Oh, yes. I shall get along."

"Cheer up!" called the visitor, over her shoulder, as she descended the steps.

"It isn't the same thing at all to her," thought Elizabeth, disconsolately. "She's had a dozen girls since Nancy came to me." Was this the better way, she wondered, to let them come and go and not to care?

She glanced up at Nancy's ample figure as it bent over her at dinner, touched anew by its bovine majesty. "How she did shake her horns at me when I tried to drive her out of her clover pasture!" she thought. "There's no other way,

though, if she stays; and I want no one else. I want her—as I want her.”

“Nancy!” she said, by way of continuing the course of discipline upon which she had entered. “You may have breakfast at seven hereafter. Set the alarm for six.”

Nancy snorted. Set the alarm, indeed! For more than a year her morning summons had been a rap on the wall with the heel of Mrs. Grey’s slipper—unless Mr. Grey was at home; then Mrs. Grey slid into her dressing-gown and stole around to Nancy’s door.

One quick glance passed between the two, and Nancy countered.

“We’re out of flour,” she said, grimly, “an’ we’ll need sugar by to-morrow. There’s only tea enough for once more. An’ I thought I’d ask you before I changed the tablecloth if I’d put on that darned one s’ long’s there’s comp’ny.”

Elizabeth winced, but increased her “manner.”

“I’ll order flour and sugar the first thing in the morning,” she said, grandly. “And tea—that tea’s gone pretty fast, Nancy. You’ll find plenty of tablecloths in the bottom drawer in the china-closet.”

“There ain’t but one the right length,” returned the triumphant Nancy, “an’ that’s the one I was tellin’ you of.”

“I’ll see about some, immediately,” said her mistress, clutching at her vanishing dignity. “Nancy, you have on a very dirty apron.” Nancy flounced out of the room. The trumpet had sounded; the interchange of hostilities had begun.

On neither side was there hesitation or regret. Nancy was “Old Country born,” and Elizabeth herself came of fighting stock. All that day Nancy sang in an aggressively loud voice over her work and banged the kitchen door as she went to and fro. On her part, Elizabeth ceased to “make things easy” and to inquire after Nancy’s lame feet.

War in its initial stages is more or less exhilarating, especially when it occurs between friends. The escape from an overclose intimacy brings a sense of freedom. The desire to retaliate for wrongs, real or fancied, gives a glow, adds an artificial strength. After liking what some one else likes and doing what some one else pleases, it is a relief to like and

do the contrary. Elizabeth even indulged in a little mild braggadocio to her aunt.

“I’ll soon have her in hand,” she said, gayly. “She had rather gotten beyond me, but she’ll come down.”

Likewise Nancy made light of what had occurred. “It’s that old maid’s doin’s,” she said to herself. “Mis’ Grey’s all right when she’s let alone. Only she’s a right to keep out o’ the kitchen.”

But Elizabeth did not keep out of the kitchen and Nancy did not “come down”—in truth, she did not dream that this was expected of her. She merely knew that one who had been near and warm had become distant and cold as well as annoying, and, not to be outdone, she too grew distant and cold and annoying.

The entire feminine portion of the household stiffened, for Katharine naturally patterned after her mother, and Miss Symington was only too glad of an opportunity to act as she felt. Stuart alone, being a man—in embryo—ignored conditions and enjoyed himself.

He strolled out into the kitchen, his chubby face wreathed in smiles.

“Nanthy,” he began, confidently, “I want to thee your thircuth.”

Although Stuart was five, he retained his lisp. Only a heart of adamant could resist it, but Nancy’s was a heart of adamant just then.

“I haven’t any circus,” she said, crossly.

“Yeth you have,” he insisted. “Up in your room. I want to thee the man who turns around tho,” and he did his futile best to produce a semblance of the contortionist. “You thaid they’d picked the bones out of him.”

“I don’t know what you’re talking about,” said Nancy, disagreeably.

She did know, and she wanted to run up to her room and get the picture; she wanted to take the adorable little fellow in her arms and squeeze delicious laughter out of him—but she wouldn’t, no, indeed; if Mrs. Grey could be “mean,” Nancy could.

“I won’t have you bothering me while I’m at work,” she said to the boy. “Run along and play.”

Stuart sidled towards the door, his round eyes fixed upon her face. Nancy felt them, although she looked another

way, and she charged up another uncomfortable sensation to Mrs. Grey's account.

Stuart did not come again, but there were other opportunities to "get even." She had not lived side by side with her mistress for nearly four years without learning somewhat of that lady's idiosyncrasies. While Mrs. Grey sifted Nancy, Nancy sifted Mrs. Grey. There was one beautiful result—the house was kept as it had never been kept before. Cleanliness and order prevailed. The meals were well cooked and admirably served. Elizabeth congratulated herself upon having gained so much, nor questioned if the effort paid.

At the end of the week Sanford Grey came home. He knew as soon as he opened the front door that something had happened. "It's as clean as a funeral," he said, sniffing suspiciously; and later, "Bess and the children are at the mercy of their best clothes, and Miss Symington smiles like 'the cat that has eaten the canary'—and Nancy—*Nancy has nothing to say!*"

This gave him a clue. "Bess has been attending another course of lectures on Domestic Science," he decided. "I wish she'd let well enough alone." He taxed her with it that night after the children had gone to bed and Miss Symington was deep in the magazines.

"If you don't take that look of the Perfect Housekeeper off your face," he added, "I'll go away again. It is almost as bad as the look of the Professional Bargain-hunter. Come back to your nice old easy-going ways, or I won't stay."

"Am I different?" she inquired, sensitively. "I didn't know I was different."

Aunt Susan looked up over her spectacles. Her glance said plainly, "Why don't you tell him?" She didn't know—how could a spinster know that one must never tell one's husband servant-girl troubles?

"I know I'm stupid," she said, brightly.

"No, you're not," he answered. "I wish you were. I'd have more hope of you."

Evidently Bess did not intend to tell him. And there was something very much out of the way with Nancy; the girl looked as if she'd had a fit of sickness. Women always did expect too

much of their help. He essayed a stratagem.

"I've been telling John Southey about Nancy's getting up and building fires in the middle of the night when the children were sick. He said he never heard anything like it; he'd never had a girl in all the years he'd kept house that would do such a thing."

Not a word replied Elizabeth.

"I told him how she takes care of the furnace and does all sorts of things 'most any one would leave for a man. He thinks we have a very valuable girl."

"Sometimes," said Elizabeth, slowly, "I think she is worth her weight in gold. Again I would let her go for what she breaks and eats."

"I told him it was all your doing," said Sanford, ignoring the interruption; "that you make her feel that she is one of us, that our interests are hers. He wished his wife could talk with you."

"I should be very glad to hear what she has to say," said Elizabeth, politely, but Sanford detected a different ring in her voice, and fell asleep, content in the consciousness of having sown good seed.

While he slept, however, the enemy sowed tares, in another corner of the garden.

"Ye ain't goin' now, sure," cried Mary Daly, when Nancy commenced at ten o'clock to put on her things. "Ye've been onaisy all the avenin'. What's atin' ye, onyway?"

"They're havin' breakfast earlier at the house," returned Nancy, "an' I must be abed."

"They? Who's they? Don't ye get breakfast any more?"

"Course I get breakfast," replied Nancy.

"Well, thin, they'll have it when ye get it, won't they?"

Nancy sat down.

"I notice ye ain't sayin' so much about 'our' house an' 'our' children," continued Mary, teasingly. "Have ye had a divorce?"

But Nancy was in no mood for pleasantries; she made no reply.

"Take another cup o' tay," pursued Mary, insinuatingly. "This ain't none of yer thirty-five-cent stuff."

"Who's tay is?" demanded Nancy.

"Yer folkses. I seen it on the paper."

"Ye see no such a thing," returned Nancy, angrily. "It's seventy-five."

"Have ye the paper?" asked Mary, putting in more sugar and stirring vigorously. "Take a good look at it when you go home."

"I'm going now," said Nancy, rising. "Come over, when you've nothin' better."

"I will," said Mary, cheerfully. She had longed for months to "take Nancy Cassidy down a peg." Nancy had put on such airs, on account of being "intimate" with her lady. If Nancy hadn't been a "gonus" she would have known how little *that* amounted to. "Seventy-five cents!" she muttered, tossing the contents of her cup, thick with sugar, into the sink, and turning on the water to wash it down. "I've given her somethin' to chew on."

She had. All the way home Nancy rolled the bitter cud. Could it be that Mrs. Grey was buying poor tea for the kitchen? Early in her service at Mrs. Grey's the subject of "treating" had come up for discussion, and Mrs. Grey had demurred at Nancy's liberality.

"Sure, they all know ye're as open-handed as the day," had been Nancy's wily reply. "They'll think I'm the stingy wan."

Mrs. Grey had laughed and shrugged her shoulders and had let the matter go. But of late she had made tea on her own little table in the library, for those who drank it, and Nancy had had hers by herself.

The paper was still on the last package, stuffed into the canister. Nancy could hardly wait to pull it out and carry it to the light. Suspicion and distrust, forever latent in the very relation of the employed to the employer, stirred like snakes in her breast. "What is it?" she whispered. "It's seventy-five. No, 'tain't; they've changed it, they've put a seven over the three!"

She tasted a dry leaf and spit it out resentfully. "They were awful smart," she sneered, "an' I—what a granehorn! I'll show 'em. I'll get square with 'em."

The next day she reserved the first "drawing" of coffee for herself and the first skim of cream. Elizabeth saw her through the open door. She had come down early prepared for an armistice. She said nothing; but she did not stint

the coffee or the cream; and just before she left the dining-room she poured the contents of the water-pitcher into the coffee-pot, and replenished the cream-jug from the milk-pitcher. "I didn't think I'd ever come to that," she said, as she did it.

She went out into the kitchen an hour later, banners flying, gun to shoulder; but she found the enemy prepared. Her eyes fell before the bold gaze they encountered. Something came up from below and looked out at her, something she had not seen before. The nature of the contest had changed. It was no longer the wrenching apart of two who had been friends and who still feel the drawing of old ties, it was the antagonism of those who realize that they have been betrayed into a false position. The girl had not been impudent before, that was plain. She had merely flung out against restraint. Now the veiled insolence of her manner was intolerable. Class against class they met now, not in the air where the superior combatant meant to keep the battle, but on the ground where the inferior always ends it. "Has she overheard? Does she know that Mrs. Clark sent a girl here yesterday?" went through Elizabeth's brain, while she faltered out her orders. Nancy made no reply. Her silence was eloquent of mud-flinging.

"And to think how I've taken her to my heart," panted Elizabeth, in the safety of her own room. "How I've interested myself in everything that concerns her, her dress, her love affairs, her health! She must go. *She must go.* I will not have her here. She must go, as soon as I can find some one to take her place."

Left in command of the field, Nancy exulted and mourned by turns. "She couldn't look me in the eye," she said to herself. "I'm enough for her—she was such a nice lady, what's come over her, I dunno! She'll hunt long before she'll find a girl to do what I've done. But I'll give her a dacent notice, while I'm lookin' around. I'm goin'—but I'll take me time."

Each reckoned without the other and without the provocations sure to arise. It is not in the nature of a duel to permit deliberation. The fury of a regiment is more or less disseminated; the fury of one is the discharge at the electrode's

point. It was inevitable that Elizabeth should walk out into the kitchen, after resolving not to go near the place again that day, and, actuated by she never knew what impulse, lift the lid of the stove, where Nancy with equal fatuousness was burning the pieces of bread left from the table. And then—the thing was done!

"So that is why we never have crumbs," cried Elizabeth, with fine irony.

"I gives me notice!" cried Nancy. "I'm sick an' tired of you follerin' me up as you've done lately."

"Very well," returned her mistress. "You can go any time, Nancy."

"Then I'll go now," shouted the girl. "I'd give a respectable notice if I'd been treated respectable, but I ain't. I'll go now."

She wrung the suds from her hands and wiped them on the dish-towel.

"I'll go now," she repeated, tremulously. "An' it'll be long before you'll find a girl to serve you as faithful as I've done."

With dignified demeanor she walked slowly out of the kitchen and climbed the stairs leading to her room. Elizabeth stood where she was, for some seconds, listening to the retreating footsteps. At last she too withdrew and went to her own part of the house.

Nancy had waited outside the door of her room. She had thought that her mistress would follow her. When she heard that light footfall cross the kitchen floor and pass along the hall, she pulled open the door fiercely, and entered her room.

It met her with the sweet graciousness of the woman who had planned it for her comfort. There were muslin curtains at the window, white covers on the tables, a rug before the bed. "I hope you will be happy here," Mrs. Grey had said the night she came. She had been happy, happier than she would ever be again.

How could things be so different?

There were Christmas and birthday gifts about her which told of the "good feeling" which had been; a picture of Stuart in his first trousers, one of Katharine dressed in fancy costume for a children's party; there were toilet articles in silver—"It does seem ridiculous," Mrs. Grey had said to Mrs. Clark, "to give her such things, but what can you do? She wants them, and they were selling for fifty cents apiece at Tracy's." Nancy wiped

her eyes as she looked at the nail-file and the shoe-horn and the cold-cream jar.

"Why didn't she come an' talk to me like she useter?" she sobbed, "an' not stand off an' act so! P'raps she's got another girl in mind." Sudden jealousy seized her for her possible successor. "Pretty much everythin's mine," she muttered. Those were her own pictures on the walls, her own knots of ribbon and bunches of artificial flowers. Her heart ached at the thought of dismantling the place familiarity had made so dear.

The girl in the kitchen is a bird of passage, but not from choice. Often she will remain in a hard place, amid unpleasant surroundings, rather than risk new ways and the criticism of strangers. And this place was not hard or unpleasant, it was home.

"She made so much o' me," moaned the girl. "She's a right to come to me now and talk it over. I'd 'a' done anything in the world for her. I would now. Huh, what does she care? She is like the rest of 'em. Prob'ly she's got a girl all engaged. Prob'ly she'd 'a' fired me if I hadn't give notice. That's the way they all do. She is just like the rest of 'em." She clenched her fist and lifted it against all those who hire. "I hate 'em," she cried. "I hate 'em!"

In the opposite corner of the house Elizabeth sat motionless, her chin upon her hand, her elbow on her knee, until she heard the children come in from school. Miss Symington followed, returning from the Monday Morning Bible Lecture. It was time for luncheon. She hurried into the kitchen. Nancy had gone. The kitchen stove was cold.

"That's the way they do, the best of them," said Miss Symington, cheerfully. "I knew you'd find her out sooner or later."

"It was she who found me out," said Elizabeth, gravely. "I could never deceive her again."

Miss Symington studied her niece's face.

"I suppose that is a joke," she said, seriously.

"No, it passed beyond a joke some time ago," said Elizabeth. "Stuart, run up to mamma's room and bring down the other chafing-dish. We'll see what we can do about luncheon."

Mr. Grey came in while the

getting things ready, and took his turn, preparing a dish he had seen John Southey's wife make.

"So Nancy's gone!" he ejaculated, and gave a long, low whistle. "Well, I must say I'm surprised. And she gave notice herself? I didn't think any one could club her away.—Stuart, my boy, give me some hot plates."

Nothing more was said on the subject. Luncheon went off in gay, picnic fashion. Katharine, in a long gingham apron which came down below her short skirts, washed the dishes while her mother and Aunt Susan took an account of the larder. Mr. Grey and Stuart "carried away."

"We'll all go out to dinner," announced Mr. Grey. "And, Bess, I have tickets for the opera to-night, if you and Aunt Susan would like to go."

"I detest opera," said Aunt Susan, promptly. "I'll stay with the children."

"It's a star cast," said her nephew-in-law.

"I don't care if it's sun, moon, and stars," replied Aunt Susan, recklessly. "I'd rather go to bed. Elizabeth looks more fit for bed than to go out, but I suppose she'll forget her troubles listening to the music."

Elizabeth smiled faintly. Would she ever forget the occurrences of the past few hours? As to finding in music a Siren's voice to divert and soothe—every penetrating note reached the sore spot in her heart. So still she sat and with such white cheeks that Sanford touched her to

make her look at him. He saw then that her eyes were full of tears.

"I am surprised at you," he said, when they were again at home and he was stooping to unfasten her cloak. "An old opera-goer like you crying over the Damnation of Faust!"

"It wasn't that," she answered, breathlessly. "It was the Damnation of Nancy—just as inevitable, just as gradual, just as terrible!"

"Poor little woman!" he exclaimed, seating himself in the big smoking chair and drawing her to his knee. "You're all worn out with this business. Don't be so tragic."

"It *is* tragic!" she cried. "They may talk of the Tragedy of Sex—it isn't any bigger than the Tragedy of Service. You come so near, you are so tied up together, so interdependent. You can't get away! And there is all that strain of employment, of working for wage; and if you try to make it up to a girl, that is a mistake—you can't be too kind."

"And she watches so, she knows all your weaknesses! You have to be perfect. She does as you do, only worse. We think we impress them by our manners, we think they do not see behind it. We think we can keep them on a leash and they will do as we please—why should they? Why should they be humble? Why should we be proud? And how will it be settled at the Last Day, tell me that?"

"I can't tell you, dear," said Sanford, soberly.

## Leavening the Nation<sup>1</sup>

PRESIDENT ROOSEVELT, who has not only a scholar's knowledge of the West but a practical knowledge of the American people of all sections as few if any other men have, has paid tribute in at least two public addresses to the part which missionaries have had in the subjugation of the North American continent to civilization and to the construction of the Nation. "It is such missionary work," he has declared, "that prevents the pioneers from sinking perilously near the level of the savagery against which they contend. Without it

the conquest of this continent would have had little but an animal side. . . . Because of it, deep beneath and through the National character, there runs that power of firm adherence to a lofty ideal upon which the safety of the Nation will ultimately depend." That this is a sound view no one who has studied historically the forces which have produced the United States can deny. The home missionary, who to many people is hardly other than a man with a wife and several children somewhere out West, to whom a barrel full of odds and ends is sent, and from whom is received a letter full of gratitude and accounts of prayer-meetings, is in reality

<sup>1</sup> *Leavening the Nation*. By Joseph B. Clark, D.D. The Baker & Taylor Company, New York.

one of the most dominant agents in the making of history that the world has ever known. Compared with the settlement and civilization of Europe the spread of civilization over the territory which now comprises the United States has been startling in its swiftness. No armies ever achieved so thorough or so speedy a triumph as the American pioneers did. And among the pioneers none were more courageous, none were more steadfast, and none more in earnest, or, on the whole, more successful in attaining their purposes, than the men who went, not for the sake of extracting wealth from the soil, but for the sake of establishing righteousness in the new communities. In the midst of greed, or what may at best be called the spirit of acquisitiveness, they injected the spirit that seeks not to get but to give, the saving spirit of service, the leaven of the Nation.

It is from the point of view which enables one to see these missionaries not merely as propagandists but as makers of a nation that Dr. Clark has written his account of their activities. "Leavening the Nation" belongs to missionary literature; but it belongs just as truly among books on American history.

As a specific instance of this characteristic of the book we select Dr. Clark's treatment of the Northwest Territory. He describes its position and briefly recalls the mode of its settlement. Situated so as to be in comparatively easy communication with States so widely different in character of population as New York and Kentucky; subject to the Ordinance of 1787, which not only shut out slavery from the Territory, but also created a National sentiment that was quite as cohesive in its power as the Constitution itself; a natural highway to the further West and therefore a region inviting the incoming foreigners, especially the Teutons and Scandinavians; a natural territorial unit by virtue of the Great Lakes, which make the distribution of its population easy—the Northwest Territory was inevitably, as Dr. Clark says, "the recruiting-ground for the gathering of those forces which were destined to win and subdue the greater and the then unknown West," as well as the field in which took place the conflict of principles (personified in Lincoln and Douglas) which resulted in mak-

ing of the United States in fact a Nation. With the territory thus described, the missionary activity that took place within its borders necessarily assumes quite other than merely ecclesiastical or denominational significance; it is seen rather to be momentous in its influence on National destiny. In similar fashion, New England, the early West, the Louisiana Purchase, the Southern Belt, the Mexican Cession, and Alaska and the West Indies are considered. The order is, first the region, its settlement and its historic relation to the Nation, then the part which missionary activity has had in creating its character.

Certain conclusions are very plainly to be drawn from this volume. One is the unifying effect which the missionary spirit has often had upon the churches. This finds frequent illustration. The "Plan of Union," by which Presbyterians and Congregationalists pooled their missionary contributions, so to speak, for the benefit of churches of both orders; the United Domestic Missionary Society of New York, an early federation of mainly the Presbyterian and Reformed Churches; the American Home Missionary Society, whose membership included four denominations, Presbyterian, Associate Reformed, Reformed, and Congregational; and the comparatively recent and very efficient Interdenominational Comity Commission of Maine, by which the Baptists, Congregationalists, Free Baptists, and Methodists have co-operated in promoting economy of effort and diminution of rivalry in establishing new churches or reviving churches that are decadent—these are all cases in point. Perhaps, however, the most picturesque incident illustrative of the federating influence of missionary work in a new country is told of the settlement of Michigan, where the educational system was built upon the plans and efforts of four home missionaries—a Methodist, a Roman Catholic, a Presbyterian, and a Congregationalist. The Methodist and the Roman Catholic drew up an act to establish a university to which they gave the name (evidently manufactured from the names of their respective communions) "Catholepistemiad!" In frankness, however, it ought to be recorded that the sectarian rivalry, which Dr. Clark emphatically calls "denominational enterprise," that flourished especially in Minnesota seems to have

produced results as favorable as the more amicable policy of Michigan, so far as church statistics indicate.

Another conclusion to be drawn from this volume is that home missionaries are engaged in as picturesque and complicated an adventure as was ever undertaken. Their business is to be the advocates of Christian civilization in a growing Christian nation; and yet it falls to their lot to encounter as rank lawlessness and as silly superstitions as confront the missionary in foreign lands. No romancer, for instance, could conceive any situation more extraordinary than that which exists in our own country, where Christian forces are facing such an artificial heathenism as the religion and hierarchy of the Mormons.

The third conclusion, and the last we shall mention, is one which Dr. Clark explicitly and clearly draws—that with the settlement of the country home missionary

activity is not to cease; for the enemy has shifted his ground; he is no longer threatening the safety of the Nation in the materialism of the frontier; he is rather gathering his forces among the vast hordes of immigrants that are crowding into the big cities. It is there that the armies which do battle in the name of the Son of God will find in the future the most important field of conflict.

The book has its defects. Names which have only professional interest might well have been more generally relegated to foot-notes. Congregationalists occupy more than their share of attention. Statistics quoted in evidence of social changes are sometimes really of more ecclesiastical than social significance. In view, however, of the author's historical sources, these very defects, because of their comparative slightness, indicate a wholesome and commendable restraint.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**American Government: A Text-Book for Secondary Schools.** By Roscoe Lewis Ashley. Illustrated. The Macmillan Co., New York. 5x7½ in. 356 pages. \$1. net.

A well-planned text-book for the secondary schools. The affairs of local, State, and National governments are presented in the right perspective, the former occupying the foreground in this volume as they do in the actual life of most citizens. Pending measures of reform, such as public control of monopolies, direct primaries, and direct legislation, are dealt with without dogmatism—the pros and cons being presented so that the student may comprehend both sides.

**Babel and Bible: Two Lectures on the Significance of Assyriological Research for Religion: Embodying also the Most Important Criticisms and the Author's Replies.** By Dr. Friedrich Delitzsch. Translated from the German by Thomas J. McCormack and W. H. Carruth. Illustrated. The Open Court Publishing Co., Chicago. 6x7½ in. 167 pages. 75c.

These lectures have already appeared in another form and have been reviewed by us. Comments on the lectures, together with the Kaiser's letter, are here included, and Professor Delitzsch's reply to his critics. It is evident that this eminent Assyriologist is not a leader in religious thought. He is a type of those who have not yet adjusted their theology to their increased knowledge of facts.

**Defending the Bank.** By Edward S. Van Zile. Illustrated. The Lothrop Publishing Co., Boston. 5x7½ in. 313 pages. \$1. net.

A spirited young folks' story, telling how two

boys and a girl defeated a band of burglars. It is not quite probable in all points, but it is certainly readable and has fun as well as excitement.

**Exact Science of Health Based upon Life's Great Law.** By Robert Walter, M.D. The Edgar S. Werner Publishing Co., New York. 6½x10 in. 302 pages. \$2.

**Failure of Jesus and His Triumph (The): Silhouettes Touching the Story of the Unfolding of the Son of God in the Son of Man.** By Frater Occidentalis. The Argus Press, Red Wing, Minn. 5½x7 in. 124 pages. \$1.

The meditations and exclamations of a modern mystic. His forceful style is disfigured by trivial expressions in the midst of passages that are elevated and even poetical in diction. The typography of the book as well as its style smacks of Elbert Hubbard, though it is in places careless. What is here said, however, is worth saying. Much of it is very suggestive. For instance, the first temptation of Christ is interpreted as a temptation to make his ministry a purely material one, to deal with starvation of the body rather than with that of the soul, to "give to mankind the blessings of a leisure class." The author finds evangelical faith rational though tested by science and philosophy. He is, unfortunately, so recently freed first from narrowness and then from infidelity that he cannot forbear a polemical tone.

**Independence of the South American Republics (The).** By Frederic L. Paxson. Ferris & Leach, Philadelphia. 5x8 in. 264 pages. \$2.

Three years ago, in his work on the "Diplo-

matic Relations of the United States and Spanish America," Mr. Latané gave a much-needed outline of the wars of liberation waged by the new republics in the early part of the preceding century. Mr. Paxson's study is a necessary complement to Mr. Latané's work, and is indeed an exhaustive account, since, for the first time, the diplomatic correspondence of the American and British Foreign Offices and the archives of the Adams family have now been thoroughly explored. The work might almost have been entitled "The Foreign Policy of John Quincy Adams," since it necessarily concerns itself in great part with his course during the eight years in which he was Secretary of State. Mr. Paxson has done one signal service in bringing out the fact that, even more completely than has been surmised, John Quincy Adams was the real head of the Monroe Administration, and was the real power behind the throne as regards the Monroe Doctrine. Furthermore, the author shows that the Monroe Doctrine itself was in process of formation for many years before it was enunciated in 1823. Finally, the present study throws new light upon the rivalry between John Quincy Adams and Henry Clay. Thus we have a work which will attract the immediate attention of every student of American history, and the attention will be well repaid.

**Man in the Camlet Cloak (The): Being an Old Writing Transcribed and Edited.** By Carlen Bateson. Illustrated. The Saalfeld Publishing Co., Akron, Ohio. 5x8 in. 320 pages. \$1.50.

**"Miss Träumerei": A Weimar Idyl.** By Albert Morris Bagby. Illustrated. (Fourth Edition.) Published by the Author, 18 W. 34th Street, New York. 5x8 in. 292 pages. \$1.50.

A pleasant love story set in the Weimar of Liszt's last days. The musical atmosphere is successfully conveyed to the reader. It is that of a hothouse. The moist adulation which was the very breath of the "dear master" becomes somewhat suffocating at times; but that is not the fault of the book. There is plenty of opportunity of breathing drier air in the course of the story. The characters are interesting, fairly distinct, wholesome and human. The reader's interest is carried leisurely along. The book is better than most musical novels.

**Municipal Affairs. Vol. VI. No. 4. Municipal Operation and Public Franchises.** Reform Club, Committee on City Affairs, Pine Street, New York. 6½x9½ in. 374 pages. \$1.

The current issue of "Municipal Affairs" is a volume of nearly four hundred pages containing the papers read before the convention on municipal ownership of public franchises held under the auspices of the Reform Club in New York last February. There is no other volume which presents so well both sides and all phases of the problem dealt with. This is high praise, but it is given without qualification.

**Mutineers (The).** By Eustace L. Williams. Illustrated. The Lothrop Publishing Co., Boston. 5x7½ in. 291 pages. \$1, net.

A school story dealing with a faction fight between two societies, the evil results in athletics, and the final triumph of the mutineers or independents in a great ball game. We

regret to say that the boys of both factions talk and act like rowdies.

**My Child and I: In Sickness and Health from Pre-Natal Life until Sixteen.** By Mrs. F. L. S. Aldrich, M.D. P. W. Ziegler & Co., Philadelphia, Pa. 6x9 in. 429 pages.

**New International Encyclopedia (The).** Edited by Daniel Coit Gilman, LL.D., Harry Thurston Peck, Ph.D., LL.D., and Frank Moore Colby, M.A. Vol. XI. Illustrated. Doud, Mead & Co., New York. 7x10 in. 1,050 pages.

**New Testament Apocryphal Writings.** Edited by James Orr, D.D. The J. B. Lippincott Co., Philadelphia. 4x9½ in. 137 pages. 60c., net.

**One Woman (The).** By Thomas Dixon, Jr. Illustrated. Doubleday, Page & Co., New York. 5x8 in. 350 pages. \$1.50.

A dime novel—except for price, typography, and—save the mark!—religion. A triumph of crudeness and vulgarity.

**R. F. & H. L. Doherty on Lawn Tennis.** Illustrated. The Baker & Taylor Co., New York. 5x8 in. 233 pages. \$1.50.

Beginners and experts alike may find in this volume much suggestion as to the detail of play in tennis. It is written by men who are champions through skill rather than severity of play. The value of the lessons is doubled by the many and excellent illustrations throughout the book.

**"Ropes of Sand:" Verses.** By Joseph Jenkins Lee. Published by Robert Grier Cooke, New York. 6x9 in. 15 pages.

**Solar Electric Distribution and Sun Habitation.** By Alexander Young. Illustrated. C. E. Cochrane & Co., Laporte, Ind. 5x6½ in. 132 pages. \$1.

**Stories from the Hebrew.** By Josephine Woodbury Heermans. Illustrated. Silver, Burdett & Co., New York. 4½x7½ in. 178 pages.

**Two Twice-Told Tales.** By John Jacob Meyer. (Reprint from the University of Chicago Decennial Publications. First Series, Vol. VI.) The University of Chicago Press, Chicago. 8x11 in. 11 pages. 25c.

**Vigilantes (The).** By Mrs. C. C. Ellerson. Illustrated. Walker-Ellerson Publishing Co., New York. 5x7½ in. 254 pages.

**Virgil's Æneid: Books I.-VI.** Introduction, Notes, and Vocabulary by Jesse Benedict Carter. Illustrated. (Twentieth Century Text-Books.) D. Appleton & Co., New York. 5x8 in. 386 pages.

We have often wondered why most of the school editions of Cæsar, Cicero, and Virgil have been left unillustrated. Not only does the text of each author lend itself well to illustration, but the boys' and girls' interest should be taken into account. We are glad to see that Professor Carter has made his edition much more interesting to young pupils (and also to their elders) by the quaint pictures which have been included in this volume. It has, however, another and greater merit. Its introduction and notes have evidently been prepared first of all for the use of the boys and girls themselves and only very secondarily for the use of teachers. We observe also that the notes have not been loaded down with convenient phrases of translation. Professor Carter justly believes that the pupil should work out the rendering without such assistance.

**Whitewash.** By Ethel Watts Munford. Illustrated. Dana Estes & Co., Boston. 5x7½ in. 319 pages.

## PURINA MILLER

### In the Wheat Field

Says the Miller: "The Western wheat fields are right here at my door and I have my selection of the choicest wheat in the world. It's the gluten in wheat that makes it wholesome—and it's the glutenous flavor in my foods and my flour that makes folk love them. Some people eat white bread because it looks white, but the never-ceasing hum of my Mill tells me that many a home appreciates my Purina Whole Wheat Flour and the care I take with it.

"If you don't believe this try any one or all of these Checkerboard packages and sacks:

**Ralston Breakfast Food,**

*Made of all of the best wheat.*

**Ralston Health Crisps,**

*Made of all of the best wheat.*

**Purina Health Flour,**

*Made of all of the best wheat.*

Yes, maybe I'm a crank on wheat; but it's cranks that make the world go 'round."

**Ralston Purina Co., St. Louis**

"Where Purity is Paramount"

# THE AMERICAN SPORTSMAN'S LIBRARY

Photography for the Sportsman Naturalist  
The Sporting Dog  
The American Race Horse, The Running Horse  
Trotting and Pacing  
Riding and Driving  
Baseball and Football

Yachting, Small Boat Sailing, and Canoeing  
Rowing, Track Athletics, and Swimming  
Lacrosse, Lawn Tennis, Wrestling, Racquets, Squash, Court Tennis  
Skating, Hockey, Ice Yachting, Coasting, and Skate Sailing

**THE AUTHORS** of the volumes named include only men whose reputations are national as authorities on the sports of which they write. Mr. THEODORE ROOSEVELT opens the series with papers on deer, elk, and antelope, aided by D. G. ELLIOT and A. J. STONE, supplemented with an account of Pacific Coast varieties by T. S. VAN DYKE, who in other volumes writes of the upland game and the water-fowl of the same region; EDWYN SANDYS treats also on upland game, L. C. SANFORD and L. B. BISHOP of water-fowl, while the volumes on different kinds of fishing are contributed by such well-known writers on the sport as DEAN SAGE, C. H. TOWNSEND, WM. C. HARRIS, JAMES A. HENSHALL, who contributes the volume on Bass, Pike, Perch, etc., and CHARLES F. HOLDER, who describes the big game fishes.

**THE ARTISTS** are of equally high rank, each as a specialist in the illustration of the subject treated, including Carl Rungius for drawings of animals; Louis Agassiz Fuertes, A. B. Frost, C. L. Bull, and others, in the volumes on birds; A. B. Frost, C. F. W. Mielatz, Martin Justice, and others in the books on fishing; the new volume on the big game fish will contain eight plates in color by C. F. W. Mielatz.

**THE SET** will be at once the most adequate, authoritative, and comprehensive series on American sport ever issued; it will be an incomparably valuable part of the library of every man who knows the delights of rifle, rod, or gun.

*Each bound in cloth, gilt, crown 8vo, gilt tops, \$2.00 net (postage 15c.)*

For a full descriptive circular of the Library and a specimen plate in colors, with particulars as to special terms to subscribers to the set, address

## THE MACMILLAN COMPANY, Publishers

66 Fifth Ave., New York

# A Specimen Lecture, with Illustrations

## Will be Mailed Free on receipt of the Coupon below

**THE BEST HISTORY** is the one that gives what is worth knowing in such a graphic way as to make it hard to forget—one that strips from a memorable event all the useless detail of minor happenings in order that the main issue stands out clearly. Historians have seldom had this "editorial" ability. Dr. Lord possessed it to a degree. In his "Beacon Lights of History" there is presented a series of clear-cut pictures that cover the whole range of civilized record—the really important things that have happened in the world—their causes and their effects.

A few years ago the daily papers were filled with the news of the Cuban war—thousands of columns were written and as eagerly read as soon as printed. If this mass of detail were published to-day, who would care to read through such a labyrinth of unimportant data? When an event ceases to be news and passes into history, there are but three points of interest connected with it. First, the causes which led up to it;

second, its main features, its crisis; third, its effects. All else is unimportant to the general reader—a detriment, in fact, since the inclusion of other than vital points serves only to obscure the main issue.

"Beacon Lights of History" is *all* history, with no important historical event omitted. And yet it is entirely different from other world-histories, in that it is *told in biography*—the lives of the great heroes and leaders of every age. This personal real-life element makes the difference in interest between reading the dry annals of a nation's rise or fall, and of following with fascination the adventures and achievements of the men and women who have themselves *made* its history.

"Beacon Lights of History" is without question the most popularly read of all the works of the kind that have been given to the world. In its earlier and incomplete forms thousands upon thousands of volumes have been sold in every English-speaking country.

The new edition, which now for the first time presents the work completed as planned by its author when he began his life's labor more than sixty years ago, is destined to remain for some generations the standard work of the kind for the reading public and for the student, as well as for the special classes to whom it especially appeals—clergymen, teachers and educators generally.

The best way to really appreciate a history so different from all others as Dr. Lord's "Beacon Lights of History" is to read the work itself, or a part of it.

We will send a specimen lecture from "Beacon Lights of History," with illustrations—*free*, on receipt of the coupon on this page. It will come to you *by mail*, and will not in any way obligate you to purchase the work. It is by no means an inexpensive piece of literature to give away, but we are so confident of the attraction of Dr. Lord's writings that we believe few who have an opportunity of judging for themselves will wish to do without a work of such unusual character.

There is a considerable price-saving on these first sets from the new edition that will also help in interesting you. That will be explained *by mail* also. Simply write name and address plainly on the coupon in the corner and mail it to us promptly.

(Assisted by nearly 300 Eminent Editors and Contributors)

We invite comparison with other English Encyclopædias and it will at once be recognized as the only work that is

## NEW ALL THROUGH

and based on strictly modern principles. It is the only new Encyclopædia published during the last ten years, and contains concise, yet complete information on every branch of human knowledge to date.

## IT SHOULD BE IN EVERY HOME

because it is indispensable to every Business Man, Professional Man, Teacher, Scientist, Student, School Child. Every man, woman, and child, who wishes to keep correctly informed on questions which arise in conversation or are met with in one's reading, will find **The New International Encyclopædia** the most helpful and reliable reference work published.

**New in its Methods** We of to-day demand quick and direct answers to our questions. This is attained in **The New International** by the alphabetical arrangement of subjects (instead of topical grouping) and by abundant cross-references.

**New in its Facts** All the newly discovered facts and principles in the realm of Science, Invention, Discovery, etc., are incorporated in **The New International**, bringing it thoroughly up-to-date. The population and other statistics of cities and countries are the latest official census figures of the various Governments. The theory and practical application of Electricity, Wireless Telegraphy, Transmission of Power, etc., are fully treated.

**Over 7,000 New Illustrations** Pictures speak a universal tongue and render concrete the ideas underlying verbal descriptions. **The New International** includes thousands of cuts in the text and hundreds of full-page plates in black and white and in colors, excelling those in any other English work.

**Within Reach of All** Our little-at-a-time payment plan makes the ownership of this latest and greatest work a simple matter. Those who purchase now will receive a **Special Discount**. Do not put off but write at once for

and  
what  
it will  
do!!!

One Dollar pays for a membership in The Wanamaker "Century" Club. A Membership saves you exactly Half the purchase price on a set of "The Century." It sends you the books, complete, in their specially-designed Bookcase, without further immediate payment. It privileges you to pay the Half-Price a little at a time—practically on your own terms. It thus ensures your ownership of the work that is acknowledged to be of MORE PRACTICAL USE than any other ever published—and at the lowest price at which it has EVER been offered. **That's what one dollar will do—if spent wisely and promptly!**

## **The Century Dictionary & Cyclopedia & Atlas**

is an encyclopedia built like a dictionary—with each of its items in its own alphabetical place instead of hidden in long chapters under some general heading, which was the old-fashioned way. It is the only reference work that is really used *daily* by half a million people in this country alone (and many of them were glad to pay the twice-bigger price which was charged before The Wanamaker Century Club was organized).

The latest revised edition is controlled by us absolutely. It is unabridged and is the only authorized edition now published by The Century Co.

**If you will mail us the coupon in the corner, with your name**  and address written plainly, we will send you a book that will explain to you why The Century is different from any other work of reference; why nearly every one who has found out what it really contains now owns a set,—and why we think *you*, in particular, would be interested. Sending the coupon does not bind you to purchase.

It simply gives us the opportunity, which we want very much, of putting you in full possession of the details of what we feel to be the greatest book opportunity ever offered.

## The PIANOLA

Each succeeding year is considered more as an essential in the proper equipment of a Summer Home.

Of value wherever there is a piano, it is in the Summer Home that the Pianola is almost indispensable.

Here, when outdoor pastimes are abandoned because of rain or darkness, each company or household is dependent on its own resources for amusement.

Under these conditions, the Pianola, which can be played by any one, and is capable of giving the same degree of pleasure as a finished hand-performer, is a most notable accessory (or addition) to the piano.

It never grows tiresome, because music never does, and in the enormous catalog of 9,309 pieces prepared for the Pianola an ample and varied program can always be found, whether to entertain a company or while away an hour for a solitary music-lover.

Appropriate on all occasions, capable of playing everything from classic masterpiece to song-accompaniment or two-step, the Pianola robs the rainy day of all its ennui and easily assumes first place among the indoor features of the Summer Home.

The Pianola can be seen and played at our exposition-rooms or at the warerooms of any of our agents, and a personal opinion formed by both the novice and the skilled musician upon the benefit to be derived from its assistance.

A handsomely illustrated and descriptive brochure (Catalog X) will be sent to those desiring information by mail, and all questions answered through our correspondence department.

The price of the Pianola is \$250. May be purchased by monthly payments if desired.

**The Pianola's phenomenal success has inspired many imitators—there is but one Pianola**

## Reduced Prices on Suits and Skirts

**B**ECAUSE one of the best known manufacturers of dress goods wants to keep his mill running during the dull season, he offered us his most desirable materials at greatly reduced prices—much less than their real value—and we gave him a large order for the newest Summer fabrics.

These goods are now being delivered to us and we are prepared to make them up into suits and skirts and pass them on to you at *one-third less than our regular prices*. Nearly all of our styles share in this sale.

Here are a few of the bargains which we shall offer for the next few weeks:

**Tailor Suits and Etamine Costumes in the newest Summer models made of up-to-date materials, former price \$10, reduced to \$6.67. \$12 Suits reduced to \$8. \$15 Suits reduced to \$10. \$25 Suits reduced to \$16.67. \$30 Suits reduced to \$20.**

**Latest designs in Traveling, Walking, and Dressy Skirts, with just the right style to them, made of cool, Summer-weight materials, former price \$5, reduced to \$3.34. \$6 Skirts reduced to \$4. \$7.50 Skirts reduced to \$5. \$10 Skirts reduced to \$6.67. \$12 Skirts reduced to \$8.**

**Reduced prices on Jackets, Walking Suits, Traveling Dresses, etc.**

All letters of inquiry are answered by women fashion experts, who are in a position to make many helpful suggestions in the way of styles or combinations to suit the taste or figure of those who do not wish to rely solely on their own judgment.

All orders are filled with the greatest of promptness, very often in *three days*.

Remember that you take no risk in dealing with us. Any garment that fails to fit or give entire satisfaction may be returned promptly and your money will be refunded.

Catalogue and assortment of the newest styles, together with a number of Summer materials, will be sent **FREE** by return mail. A postal will bring them. If you prefer mention the color or samples you desire, so that we will endeavor to send you a full assortment of just the things you wish. With a trial order, the choicest goods will be sent first.

How a Doctor  
raised his baby on

# ESKAY'S FOOD

Told in picture & letter

Dr. W. R. Franklin, Rockford, Ill., says in his letter to us:

"For four years ESKAY'S FOOD has been a favorite prescription of mine, and nine months ago when this boy was born I resolved to give ESKAY'S FOOD a thorough and exhaustive test. The picture at 8½ months tells the story. It represents nothing abnormal, but a perfect physical development. He weighed

At birth, 7½ lbs.

3 months, 12 lbs.

6 months, 19 lbs.

8 months, 22 lbs.

His only food since his second week has been ESKAY'S, with two short trials of other foods for experimental purposes. He was so perfectly well I wished to see if some other food might not give as good results, but each time it put him out of order, and we were glad to get back to ESKAY'S within 36 hours.

"We have had two other children, bottle babies, carefully fed on other foods, preparations, modified milk, etc. They did fairly well, but always had a good deal of stomach trouble and never thrived as this one has. My experience with ESKAY'S FOOD has been uniformly excellent."

Our helpful book for mothers and all who have the care of children, "HOW TO CARE FOR THE BABY"—free on request—with generous trial samples of ESKAY'S FOOD.

SMITH, KLINE & FRENCH CO., 428 Arch Street, Philadelphia, Pa.

## Ivers & Pond Pianos

Classique. Latest Model.

Our new catalogue, just off the press, should be in the hands of every intending piano-buyer. It is a "Mirror Fashion Plate" of latest styles in piano casings. Our new creations in case designs of grands and uprights are most attractive and fascinating. Exact pictures from artistic half-tone plates of our new models, "Classique, Colonial, Athenian, Colonial Renaissance, and Louis XV.," will be found in our new catalogue. This for the asking. In artistic requirements, such as quality of tone, perfection of action, only the use of the finest materials and labor in construction, the

Ivers & Pond Pianos cannot be equaled. They are superlatively fine.

**HOW TO BUY.** Where we have no dealer, we can arrange to sell you direct from our Boston establishment. A full list of prices on a most favorable basis and full explanation of our plan of furnishing pianos on easy payments (some of our plans requiring monthly payments but slightly larger than ordinary rent) and a personal letter mailed free. We select personally any piano you may order, and will make shipment to any United States point subject to approval, at our expense for railway freights if not entirely satisfactory. Write to-day.

**IVERS & POND PIANO CO., 167 Boylston Street, Boston**

Mattress makers everywhere are paying the tribute of imitation to the

# Ostermoor

mattress, but its qualities elude them—they can't make Ostermoor Patent Elastic Felt, because it is our patent and if we catch them selling their worthless "cotton pickings" or "cotton batting" as FELT, we commence legal proceedings against them at once. It's not FELT if it's not an OSTERMOOR. Our name is on every genuine mattress.

**Price \$15. Express Prepaid**  
**30 Nights' Free Trial**

You can have an OSTERMOOR MATTRESS, sleep on it 30 nights, and if it is not better than any other mattress you have ever used—if it is not all you even HOPED for, return it at our expense and your money will be immediately refunded without question. What more can we do to convince you?

STANDARD SIZES AND PRICES OF THE OSTERMOOR	
2 feet 6 inches wide, 25 lbs.	\$8.35
3 feet wide, 30 lbs.	10.00
3 feet 6 inches wide, 35 lbs.	11.70

4 feet 6 inches wide, 45 lbs.	15.00
All 4 feet 3 inches long.	
Made in two parts, good extra.	
Special sizes at special prices.	
We Prepay all Express Charges	

Please do not consider any longer the purchase of an out-of-date hair mattress. Nobody "who is anybody" buys hair nowadays. A hair mattress is a tick *stuffed* with animal hair often swarming with disease germs. It gets lumpy and needs constant renovation at great expense. Each Ostermoor mattress is built—not stuffed. Hand-laid sheets of snowy whiteness, each the full size, are carefully compressed into the tick. The Ostermoor Patent Elastic Felt is purity itself, germ-free and vermin-proof. Ostermoor mattresses cannot get lumpy; never need renewing; an occasional sun-bath is all they require. The tick can be taken off and washed whenever soiled.

**Send for Our Handsome 96-Page Book Free (See Coupon)**

whether you want a mattress or not. There is no other mattress as good as the "Ostermoor," and we want you to know why—we challenge comparison. Our book, "The Test of Time," gives testimonials from such men as Rev. Dr. MacArthur and George H. Daniels, whom you *must* believe—even if you think we exaggerate. It illustrates the various uses to which the Patent Elastic Felt is put—Pillows, Window Seat Cushions, Boat Cushions and Church Cushions, etc.

Cut along this line. Or, just write your name and address on a postal—we will understand.

## A PLAIN BUSINESS TALK

### ABOUT THE BEST TYPEWRITER IN THE WORLD

In order to make a typewriter that can be sold in competi-  
tion with other high-class machines, without cutting the price,  
it stands to reason we must make one that has points of merit  
that make it *better* than any other.

That is what we have done in the Fox Typewriter. It is a  
basket type machine, with ball-bearing carriage, two oz. key  
tension (instead of 4 or 6), half inch key dip, aluminum finger  
levers with individual tension, adjustable type bars (insuring  
perfect alignment even after years of service), line lock, auto-  
matic line spacer, and automatic ribbon movement. It is the easiest to  
operate, most durable, has highest  
speed, and combines all the desirable  
features of the standard machines,  
with decided improvements.

We can demonstrate its superior-  
ity over any other typewriter to  
any business man who will make a

careful examination and test.

We are making a special proposition to Clergymen, Lawyers,  
Medical Men, and Bankers, which it will pay you to investigate.

A Fox Typewriter will be sent to any responsible firm or  
person in the market for a typewriter, on *ten days' trial free*,  
and no obligation to purchase will be incurred.

One Michigan manufacturer recently replaced 30 well-known  
typewriters with Fox machines—because we proved to him  
that the Fox was the best he could buy. Send for new 1903  
Catalogue.

TRIAL allowed before acceptance. Just drop postal for cata-  
logue. Ohio Carriage Mfg. Co., Station 129, Cincinnati, Ohio.

## The Silent Circle

is banished. We have prepared a little book  
which furnishes a menu of bright, entertain-  
ing, and catchy games to occupy every minute  
of afternoon or evening gatherings on lawn  
or in parlor. 10 cents, postpaid.

**HOME SPECIALTY CO., Dept. F  
31 Milk St., Boston, Mass.**

## Always Sold in a Yellow Box

To protect you against inferior substitutes, the **Prophylactic Tooth Brush** is always sold in a yellow box. Watch for it. Your dealer must hand it to you that way, or you have been deceived. It is not the name that cleans, but the shape of the brush and the arrangement and quality of the bristles. It is made to (and does) clean *between the teeth*—the starting point of all dental troubles.

There is a hole in handle, and hook to hold it. Soft, medium, or stiff bristles.

Sold in three sizes. Adult, 35c. Youth's, 25c. Children's, 25c.  
By mail prepaid or at all good dealers'. Send for our free booklet "Tooth Truths."

time she has had !

My name on every one.

If you'll send your address, I'll send you the Index  
to Lamps and their Chimneys, to tell you what num-  
ber to get for your lamp.

MACBETH, Pittsburgh.

# RHEUMATISM

Relieved  
Through the Feet

Don't Take Medicine, External Remedy  
Brings Quick Relief. FREE on  
Approval. TRY IT.

We want everyone who has rheumatism to send  
us his or her name. We will send by return mail  
a pair of Magic Foot Drafts, the wonderful external  
cure which has brought more comfort into the  
United States than any internal remedy ever made.  
If they give relief, send us One Dollar; if not,  
don't send us a cent.

Magic Foot Drafts are worn on the soles of the  
feet and cure by absorbing the poisonous acids in  
the blood through the large pores. They cure  
rheumatism in every part of the body. It must be  
evident to you that we couldn't afford to send the  
drafts on approval if they didn't cure. Write  
to-day to the Magic Foot Draft Co., R F 2, Oliver  
Bldg., Jackson, Mich., for a trial pair of drafts on  
approval. We send also a valuable booklet on  
Rheumatism.

## MONEY TO COOKS

**\$7,500.00 Donated, to Be Divided Among  
Family Cooks**

The sum of \$7,500.00 will be distributed between  
now and midsummer among family cooks, in 735  
prizes ranging from \$200.00 to \$5.00.

This is done to stimulate better cooking in the  
family kitchen. The contest is open to paid cooks  
(drop the name "hired girl," call them cooks if they  
deserve it) or to the mistress of the household if  
she does the cooking. The rules for contest are  
plain and simple. Each of the 735 winners of  
money prizes will also receive an engraved certi-  
ficate of merit or diploma as a cook. The diplomas  
bear the big gilt seal and signature of the most  
famous food company in the world, The Postum  
Cereal Co., Ltd., of Battle Creek, Mich., the well  
known makers of Postum Coffee and Grape-Nuts.  
Write them and address Cookery Dept. No. 116  
for full particulars.

This remarkable contest among cooks to win the  
money prizes and diplomas will give thousands of  
families better and more delicious meals as well as  
cleaner kitchens and a general improvement in the  
culinary department, for the cooks must show  
marked skill and betterment in service to win.  
Great sums of money devoted to such enterprises  
always result in putting humanity further along on  
the road to civilization, health, comfort and happi-  
ness.

## Peter Moller's Cod Liver Oil is different

from other cod liver oils, as it is never sold  
in bulk. It is bottled when manufactured,  
thus passing direct to the consumer without  
the possibility of adulteration.

### Moller's Cod Liver Oil

Is put up only in flat, oval bottles, and bears  
our name as sole agents.

Schieffelin & Co., New York

## ASTHMA

**TAKEN FROM THE SYSTEM.**  
Nothing remains which can produce an at-  
tack. You can eat, sleep, and stand expo-  
sure without slightest return of symptoms.  
Appetite improved; blood enriched; nerves strengthened; whole  
system built up; health permanently restored; life made enjoyable.  
Book 21A Free. DR. HAYES, Buffalo, N. Y.

Mr. C. L. KERN, La Harpe, Ill., writes:  
Whenever a little one begins to complain, has fever and becomes  
nervous and fretful, a few doses of the Strength-Giver, Jayne's Tonic  
Vermifuge, is sure to bring it right. I always keep it in the house  
and have raised quite a large family without serious sickness.  
Catarrhal Fevers almost invariably yield to  
JAYNE'S EXPECTORANT.

## TO INVESTORS

### A VERY UNUSUAL OPPORTUNITY

Mr. John Brisben Walker is taking the Presidency of a Company which offers unusual features for safe and highly profitable investment; namely, First Mortgage, 6-per-cent., Real Estate bonds, accompanied by a 60-per-cent. bonus in the Company's Preferred Stock. This Company takes over more than 900 acres of land within 3½ miles of center of Denver. Berkeley Heights is the most beautiful plateau around this rapidly growing metropolis of the Rocky Mountain region—the most prosperous city on the continent to-day. The property is to be immediately developed upon an extensive scale as a residential quarter upon modern plans, with reservations. Mr. Walker will hold a controlling interest in the stock, and personally recommends the investment as absolutely safe and likely to be extremely profitable. For further particulars address James Randolph Walker, Secretary, The Berkeley Heights Investment Co., Irvington-on-the-Hudson, New York.

## Six Per Cent. Guaranteed

The Coal River Coal and Land Co., Charleston, W. Va., offers a limited amount of its certificates for sale at \$50.00 per share. This Company owns coal lands which are leased to operators who pay rentals based on production, the minimum amounting to more than nine per cent. on the capital stock (\$100,000). A Trust Company guarantees at least six per cent. dividends to shareholders. For booklet and map, please write

COAL RIVER COAL & LAND CO.

Citizens National Bank Bldg., . . . Charleston, W. Va.

## EDWIN C. MASON & CO.

FINANCIAL AGENTS  
**HOMESTEAD TRUST COMPANY**  
OF AMERICA  
220 BROADWAY NEW YORK

Offer the balance of \$1,000,000 capital stock at par, \$50 a share, subject to prior sale. Future allotments will command a premium of 10% to 40%.

The offer of such stock as a popular investment is unique. Ask why we desire stockholders in every State?

Buy one share or more and receive the full profits instead of 2% to 4% usually paid depositors. Earnings of New York City Trust Companies averaged 42% in 1902.

**Non-Speculative:** Invests only in Homes of moderate value, each occupied by purchaser who pays part cash and balance, with interest, in monthly instalments about equal rental value.

**WRITE TO-DAY** (postal will do) for booklet "O," which tells why this investment is **safe and profitable**, and how to distinguish between investment and speculation. Will also send valuable and interesting general investment information and a descriptive comparison of the various modern financial systems: Private, State, and National Banks, Trust Companies, Building and Loan Associations, Life Insurance Societies, etc., etc.

**High class representatives** offering acceptable references may obtain remunerative, permanent connection.

**"THIS BEATS NEW JERSEY"** Charters procured under South Dakota laws for a few dollars. Write for Corporation laws, blanks, by-laws, and forms to **PHILIP LAWRENCE**, late Ass't Sec'y of State, Huron, S. Dak., or Room K, 20th floor, 220 B'way, N. Y.

# Hotels and Boarding Houses in Colorado

**\$8** TO \$10 a week will pay for excellent board at many a house in Colorado, right in the heart of what is beyond any question the most charming summer country in the world. We publish a handbook of Colorado which tells all about some 200 desirable places, giving the names of proprietors, prices for board, location on the map, which is part of the book, information about nearby attractions, rates for guides and livery, in fact about everything there is to know. I shall be glad to send you a copy without charge. Kindly write for it today.

**Burlington  
Route**

Colorado is by no means an expensive place to visit, and there is no country in the world that equals it as a resort for health and pleasure — spend your vacation there.

We shall sell tickets to Colorado next summer at unusually low rates.

We run trains "one night on the road" from Chicago or St. Louis to Denver.

Don't fail to send for our handbook of Colorado hotels. Full of information. No charge.

# Jamaica Nature's Great Sanitarium

A restful five-day ocean voyage takes you from the blazing, sultry heat and chilling frosts and winds of the North to Jamaica, an ideal land of rest, health, and comfort. In the "Golden Caribbean Sea," with the Gulf Stream flowing about it, the trade winds constantly blowing over it, and a lofty range of mountains extending its entire length: the atmosphere laden with spices and sparkling with pure mountain ozone, constantly in motion, the thermometer varying only from 70° to 88° the year around. Hay fever, colds, grip, and pneumonia cannot exist there, while nervous ills, cares, and worries fly away. On every hand, from mountain tops to the white, sandy beaches, is spread a beautiful carpet of emerald green, decorated with a riotous growth of flowers, fruits, and ferns. There are well-kept riding and driving roads in every direction. The sea bathing is unexcelled on this continent; the mountain views are the most magnificent on earth; flies, mosquitoes, snakes, fogs, fevers, are practically unknown. There are elegant hotels, good clean boarding-houses, golf links, croquet grounds, broad piazzas, and interesting novel foreign sights and scenes everywhere. All these features combine to make Jamaica nature's greatest health sanitarium for either summer or winter resting. The elegant twin-screw "Admiral" steamers leave Boston every Wednesday and Friday. Round trip tickets, including meals and stateroom berths, good from May 1st to Oct. 1st. Write for free booklet.

UNITED

ING WHARE, BOSTON

## **Banff Springs Hotel.**

Last Summer the accommodation of the BANFF SPRINGS HOTEL was taxed to its uttermost. This year visitors will find

### **Its Capacity Doubled.**

Not only has the hotel been added to, but the Canadian National Park, in which Banff is situated, is many times larger than was formerly the case. The Dominion Government was careful to include in it the springs, "hoodoos," glaciers and peaks, the valleys and watersheds of the Bow, Spray and Ghost rivers—among the most wonderful natural attractions of the Canadian Rockies.

Here you may bathe, ride, fish, hunt, climb, sketch and botanize to your heart's content, while enjoying all the comforts and luxuries of an up-to-date hotel. The rarefied air stimulates like wine, the days are long and bright, the scenery superb—and there are absolutely no counterbalancing disadvantages.

**The Imperial Limited** will run, commencing early in June, three times a week between Montreal and Vancouver, reaching Banff in 72 hours.

*For further particulars apply to any agent of the*

**CANADIAN PACIFIC RAILWAY,**

**Or to ROBERT KERR, Passenger Traffic Manager, MONTREAL, CANADA.**

*"The old oaken bucket, the iron-bound bucket,*

*The moss-covered bucket, which hung in the well."*

The hand of time has cast a charm about many articles once in daily use by our ancestors, but now, for practical purposes, so far superseded by modern appliances, as to be only interesting in that they were a part of the life of a century ago; and so while we touch with reverent hands these relics of the past, let us rejoice that for our comfort we have the new. The "old oaken bucket" and the **Hot-Air Pump** are antitheses, the old and the new—the primitive and the most modern forms of conveying water. Think over these two methods, for every other water supply approaches more or less closely these two. If yours is half way

between, why not improve it.

Look around your place and see how much time you or your servants spend daily in conveying water

by hand, for the laundry, the live stock, the garden, and every household use, and remember, the

**Hot-Air Pump** is the cheapest form of constant water supply now

known. A permanent investment, which will outlast a generation of users, can now be

bought for \$108.

Descriptive Catalogue "D" sent free on application.

The Hot-Air Pump.

# The Stone Method

**For Men and Women  
Requires No Apparatus  
Does Not Overtax the Heart**

If you knew—beyond the shadow of a doubt—that **The Stone Method** would restore you to sound, robust health—you would investigate it wouldn't you?

If you knew—positively—that **The Stone Method** would give you a fine, strong, well-developed physique, which bears every evidence of perfect manhood or womanhood—you would write us for detailed information, wouldn't you?

If you knew—to a certainty—that by following our instructions 10 minutes daily you could secure a pair of sound, easy-working lungs, with plenty of room in which to expand—a splendid circulation that would make itself known in a ruddy complexion—good digestion—sound, restful sleep—an active liver—an increased appetite—bright eyes—a clear brain—a light step—an erect carriage—you would do it, wouldn't you?

This is what we have to offer:

A system of exercise which requires no apparatus whatever, and only 10 minutes time each day, in your own room, just before retiring.

It is not our purpose to develop abnormal muscles but rather to impart greater strength, round out the physique, correct chronic complaints and insure a greater measure of life in general.

Such results can hardly be measured in dollars and cents.

We are the only instructors of prominence who pay special attention to women and children. Mrs. Ellen Walker has charge of this department. She has had a very extensive experience, and she opens and answers letters of a private nature.

Letters addressed "Mrs. Ellen Walker, Personal, care of The Stone School," will be kept sacredly confidential.

**The Stone School of Scientific Physical Culture**  
1648 Masonic Temple, Chicago, Ills.

A FLAT, NARROW CHEST OF LIMITED LUNG CAPACITY

WELL ARCHED CHEST, OF GOOD LUNG CAPACITY.

Note the depth of Mr. Bosworth's chest. We will send you his complete letter if you will write us.

Beatrice, Neb., Oct. 15, '02.

I have followed your instructions faithfully and have realized a good gain in weight. The development without apparatus is a surprise. I exercise only 10 minutes a day and the results so far have been greater than I expected. My chest expansion has increased wonderfully, and to put it mildly I am more than satisfied. I believe that there are thousands who are suffering with chronic complaints who could be cured without medicine by simply following your instructions. I know that The Stone Method has done wonders for me and I can heartily recommend The Stone School to those who wish to regain their health and to those who are blessed with good health, but want to improve the physique.

G. A. BOSWORTH.

THE STONE SCHOOL  
Chicago, Ill.  
Please send me (free of all cost) booklets, Condition Blanks and full information in regard to The Stone Method. It is understood that I do not in anyway obligate myself.

# Stag Supper

With Suggestions for Serving

By MRS. HELEN ARMSTRONG

Prepare Sauce for Oysters with one cup of catsup, one-fourth cup of vinegar, juice of a large lemon, and seasoning of salt, pepper, and tabasco.

Select crisp stalks of celery, and fill each piece with soft cream cheese rubbed to a paste with butter.

Bread cases may be made of thick rounds of bread hollowed out, brushed with soft butter and browned in the oven.

The fruit salad, composed of oranges, sliced pineapple and pears, Maraschino cherries, pecans, and a rich syrup, should be served very cold in sherbet glasses. A fitting Crown for this feast of the Kings is found in

SMITH'S New Book**

**THE UNDER DOG**

Most of these stories, as the title implies, are tales of men whom the world has used roughly ; and in the fashioning of them the author's extraordinary sense of the dramatic and picturesque is united with an idealized justice and with a seriousness of purpose which lifts the book to a high plane.

With 12 Illustrations. \$1.50

**THE MODERN OBSTACLE**

By

**ALICE**

**DUER**

**MILLER**

"The modern obstacle is the lack of money. The situation presented is that of two persons who love each other, but who are too intelligent not to recognize the fact that by taste and cultivation neither of them is equal to a struggle with existence without a guaranteed income large enough to minister to needs made imperative by lifelong custom. Around this situation the author has woven a story as engrossing as it is original in theme and treatment."—*Brooklyn Times.*

# The Outlook Books

## A LIST OF SUBSTANTIAL VALUE

"The publishing business is one that usually grows slowly if its growth shows signs of reaching maturity. Since the Outlook Company began making books they have proceeded upon the plan that it is better to publish an occasional worthy book than to achieve a long list of more or less speculative character. They now have a list of substantial value, and the indications are that the Outlook Company will become an important factor among the makers and sellers of books of standard literature."—*The Interior*.

We would appreciate an opportunity of giving you further information about THE OUTLOOK BOOKS already published and about those which we shall publish later. If you will fill out and mail to us the blank below, we will take pleasure in sending you a copy of our illustrated catalogue, and in placing your name on our mailing list for the receipt of such printed matter as we shall issue from time to time.

### A CAPITAL BOOK FOR BOYS

## Trapper "Jim"

By EDWYN SANDYS, *Author of "Upland Game-Birds"*

*Fully illustrated. Cloth, \$1.50 net. (Postage 15c.)*

Every man who sees it will be trailing new game—a boy with whom to enjoy it. Every boy will be utterly absorbed from the first page to the last—except those who cannot wait another minute before doing some of the things of which the author tells.

## Athletics and Out-Door Sports for Women

Each subject being separately treated by a special writer, with an introduction by  
LUCILLE EATON HILL, *Director of Physical Training in Wellesley College.*

*Cloth, 12mo, with over 200 illustrations. \$1.50 net. (Postage 20c.)*

Seventeen articles on different forms of recreative exercise—a book for the women of leisure who make golf, equestrianism, and such sports their pastime; for students interested in basket-ball, rowing, tennis, etc.; and equally for the business woman who in town or country would keep up her physical health by training at home, gymnasium work, fencing, tramping, etc.

## A Woman's Hardy Garden

By HELENA RUTHERFURD ELY

*Third Edition, Illustrated, Cloth, \$1.75 net. (Postage 15c.)*

"Unusually good because it tells frankly and chattily about the author's successes and failures in developing her own garden."—*Town and Country.*

"Really practical . . . and a book to be welcomed with enthusiasm."—*New York Tribune.*

## The Garden of a Commuter's Wife

RECORDED BY THE GARDENER (*Barbara*)

*By the Author of "People of the Whirlpool." Fifth edition. Illustrated, Cloth, \$1.50.*

"It breathes an air of cheery companionship, of flowers, birds, all nature, and the warm affection of human friendship, wholesome, unselfish, and kindly."—*Chicago Post.*

*By the same author*

"CHARMING, WHOLESOME, UNIQUE"

## People of the Whirlpool (*Second Edition*)

FROM THE EXPERIENCE BOOK OF A COMMUTER'S WIFE (*Barbara*)

*Illustrated with eight full-page plates. Cloth, \$1.50.*

"The whole book is delicious, with its wise and kindly humor, its just perspective of the true values of things, its clever pen pictures of people and customs, and its healthy optimism for the great world in general."—*Philadelphia Evening Telegraph.*

*On net books ordered from the publisher carriage is an extra charge.*

# THE STORY OF A BIRD LOVER

By WILLIAM EARL DODGE SCOTT

**"W. E. D. Scott is the most versatile and interesting writer on birds since Audubon."**—*Syracuse Herald.*

**"An entertaining, instructive, inspiring book."**—*Brooklyn Standard Union.*

**From the New York Tribune**

"Mr. Scott's book marks a departure from the host of guide-books to the bird world which have come down upon us in something like a flood; it is rather the autobiography of an enthusiastic scientist who has mastered his enthusiasm and marshals its suggestions. It gives us the more intimate confessions of an alert and progressive naturalist, and it has the faculty of communicating some of its spirit of delight to the reader."

**From the Congregationalist**

"His book is varied in its interest, giving us records of discovery and pictures of different parts of America as they appeared to the eye and thought of a first-class naturalist. Mr. Scott is a man worth knowing for himself, and the reader lays the book down with an abiding interest in his work and both the fulfilled and unfulfilled aims and ambitions which are so simply and interestingly set before him."

**From the St. Paul Globe**

"The book is a rather minute account of Mr. Scott's life, work, and studies among the feathered tribes. It is replete with information about birds every one knows—not about fanciful and imaginary birds. Mr. Scott is a naturalist and not a romancer. His book is never tiresome, never dull, for it is full of birds, and birds are among the delightful things of life."

# DARREL

OF THE BLESSED ISLES

By IRVING BACHELLER, AUTHOR OF "EBEN HOLDEN"

## THE UNION SIGNAL

"Irving Bachelier's new story, 'Darrel of the Blessed Isles,' is surely a tale for the lips of the 'Old Man of the Hills.' Well may the pen hesitate in its attempted characterization. Call it charming, delightful, fascinating, enchanting, or like superlative of expression, and you have yet failed to convey the rarity of its atmosphere, the subtle essence that permeates to the very soul of things. As a tale of humanity it is composite, altogether lovely, and of the beautiful simplicity of the great soul and of nature. From the poetry of the dew-glistening valleys one is led to the very summit of the hills of philosophy, there to behold what Love hath wrought. . . . Roderick Darrel is a character that will live so long as the human soul is striving for its ideal, and it is with affectionate reverence that one steps aside to let him pass on to mingle with the company of the world's greatest in literature."

## ST. PAUL DESPATCH

"It is a book to take to one's heart as a companion, a 'personal' book, to be treasured as one treasures a cheerful, helpful friend who brings smiles and sunshine.

"Besides the sweetness and wisdom of Darrel there are many quaint and beautiful touches of life throughout the book."

Postpaid, \$1.50

LOTHROP PUBLISHING COMPANY, BOSTON

# THE ALASKA FRONTIER

By THOMAS WILLING BALCH, A.B. (Harvard)

Member of the Philadelphia Bar

To collect the material upon which this book is based the author traveled as far as Alaska and St. Petersburg.

"In Mr. Balch's book, the main threads of evidence are woven into a conclusive whole, which should be in the hands of all interested, and the publication of which is of general importance at the present time."—*The New York Evening Post*, April 15, 1903.

"This book . . . constitutes, all things considered, the most effective, accumulative and crushing blow thus far dealt the Canadian claim."—*Phila. Press*, February 22, 1903.

"The work of Mr. Balch . . . is by far the fullest and best presentation of the American case which has ever been made, and will be of great value to the counsel who will appear for the United States before the boundary commission."—*Seattle Post-Intelligencer*, April 2, 1903.

"If there is anyone who has any doubt as to the validity of the American claim to all the sinuosities of the coast north of 54-40, it is safe to say that the doubt could never survive a careful reading of 'The Alaska Frontier.'"—*Daily Alaskan*, Skagway, April 16, 1903.

"This timely volume states concisely but luminously the title of the United States to a continuous strip of territory on the Northwest American continental shore between Mount St. Elias and 54° 40' north latitude."—*The Outlook*, May 16, 1903.

212 pages, large 8vo, bound in cloth, price \$2.00 net

E. E. & B. C. FRENCH, Principals.

# SCHOOLS AND COLLEGES

## MONTCLAIR Military Academy

A boy can be placed here for preparation for college or business with the assurance that he is safe, his mental training carefully guarded, his physical growth perfected through the military system which is secondary to the school's chief aim—the individual's highest attainment in the chosen course of scholastic work. It is the school home of a boy's early years that shapes his character as it shall be in later life. The whole success of Montclair has been built on this truth. Healthful location, 500 feet above tide water, Gymnasium and all out-door sports under direction of Physical Instructor, U. S. Army officer detailed, Lieut. Col. W. H. Boyle, U. S. A., retired. A better understanding of the school and its methods can be had from catalogue which will be sent on request. Address J. G. MACVICAR, A. M., 3 Walden Place, Montclair, N. J.

# Coal is Supplanted by Peat

## Great Profits Will Be Made on This New Enterprise

We offer a guaranteed investment that promises to pay at the rate of 20 per cent. a year.

We own 2,000 acres of the best peat lands in America and have many millions of tons of peat actually in sight. It lies on the surface of the ground, where it can be seen and measured, and only has to be dug up, dried and compressed into briquettes to be ready for the market.

The whole operation is very inexpensive, the profit is large, and we have already secured sale for all the peat we can produce.

We estimate we can produce at the rate of 600 tons per day, which, on the most conservative basis, will yield a net profit of \$2.50 a ton.

This is about \$1,500 a day or \$450,000 a year.

This estimate is based upon two peat beds only, but we can operate ten.

Fuel is a necessity.

The coal mines are controlled by a few men, who demand a high price for it—because the people must have the coal.

Peat is a modern substitute for coal. It is really coal in its first stages; vegetable matter that is becoming oxidized and carbonized.

The compressing process that nature requires years to accomplish is done quickly and cheaply by our machinery.

It burns as long as coal, produces as much heat, and is much cleaner and cheaper in every way.

There will be a tremendous demand for peat, because it will be cheaper and better than coal. No smoke, no soot, no dust.

We will supply a great portion of this demand.

We want the names of persons who have \$100 that they would like to invest in a guaranteed enterprise of this nature.

All we want is a chance to write, or talk to them personally.

We do not ask them to invest a dollar, until we have fully demonstrated our proposition.

We can prove to them how and why this is a guaranteed investment, and how all money invested should return 100 per cent. in dividends within 5 years.

The Trust Company which holds the money in trust is an additional protection for investors.

If you will write us you will place yourself in the way to make your money earn big dividends.

We know we can prove all we claim, if you will give us a chance to have a personal talk, or correspondence, with you. Write us at once.

There is only a small block of stock offered for sale, and when this is sold, it will all be withdrawn from the market. It costs you nothing to investigate.

We give as references the Old National Bank and the Grand Rapids Savings Bank, Grand Rapids, Mich.

**MICHIGAN PEAT & MARL CO., Ltd. GRAND RAPIDS MICH.**

# From Grieg to Brahms

Studies of Some Modern Composers and their Art

By DANIEL GREGORY MASON

Second Edition. \$1.50 net (postage 11 cents)

From the London Spectator

"What chiefly strikes the reader in these studies is the prevailing sanity of the writer. His estimates . . . are undisguised by gush or preciosity. We are, perhaps, too near any of these [composers] to expect finality in any of his judgments, but we have nowhere encountered in contemporary criticism a more terse or lucid summary of their dominant characteristics, or a more easily intelligible attempt to relate them to the general evolution of the art."

From the New York Times Saturday Review

"It is a pleasure to meet with a discussion of musical subjects so clear, so sane, so thoughtful, and so independent. . . . We have no hesitation in saying that his book charming in literary style, rich and suggestive in expression as it is acute in judgment and ample in knowledge, ought to be ranked among the best of recent contributions to the higher forms of musical criticism."

A copy will be sent on approval on receipt of a postal card order

**THE OUTLOOK CO., 287 Fourth Ave., New York**

## REDUCED RATES

on shipments of Household Goods to and from California, Oregon, Washington, and Colorado. We save you worry, time, expense, and guarantee prompt, careful service. Write for particular Maps of Los Angeles or San Francisco free if the asking. Address

**Bekins Household Shipping Co., 99 Dearborn St., Chicago, Ill.**

Mr. H. W. MORGAN, Austin, Minn., February 27, 1901, writes: "I have used the Strength-Giver, Jayne's Tonic Vermifuge, for 10 years, and believe it to be decidedly a superior remedy. THE WORST COLDS can be cured with JAYNE'S EXPECTORANT."

## TO INVESTORS

Money invested in Sheep and Cattle in Montana safe and pays 30 per cent. A small investment grows into a large flock in a few years. Over 300 Men, Women and Children now have Cattle and Sheep on our Ranches. Write for Annual Report, a most interesting document.

**WANTED**, at Sage College, Cornell University, Ithaca, N. Y., a lady of experience to take charge of dining room and culinary department. Best of references required. Address GEO. F. FOOTE, Sage College, Ithaca, N. Y.

# Come to Nordrach

## A PLACE OF REST

Some people are so completely used up that summer resorts tire them, mountain climbing is impossible, a sea voyage frightens them — they are, in fact, so completely nerve worn that nothing short of a return to nature, with lots of air, rest and sunshine will help them to recover their lost vitality and renew the youthful spirits, the joy of exercise and the hilarity of outdoor sports. Are you one of them? Then come to Nordrach.

Here is a place where man can be nursed from physical wreck-dom to rollicking childhood. Invalid women, sallow, wretched and emaciated, become round-limbed and dimpled once more. This is not accomplished by means of medicines, but by lots of rest, that simplest of all foods, milk, and proper exercise. From three to four pounds a week are gained under Nordrach treatment.

Worn out nerves can grow strong in no better place than the Southern Catskills, in the midst of pure air, perfect spring water and sanitation, 1,050 feet above the sea level, no malaria, no hay fever and no mosquitoes. Lawn and Table Tennis, Billiard and Pool Tables, Card Rooms and a Bowling Alley are provided for recreation.

Vapor, Hot Air, Nauheim, Electric, Medicated, Oil and Alcohol Baths, Electricity and Massage are administered under the care of skillful physicians.

For further information send for pamphlet, or call Tuesdays on Dr. A. Judson Benedict, Medical Director, for consultation without charge, at the Hotel Albert (Eleventh Street and University Place).

## The Pearline Test

How to make it. Obtain a sample of material; soak one half of it in Strong Pearline Suds. Rinse well. If there is any loss of color The Material is not Washable

## Linen Underwear for Summer

GIVES LUXURIOUS COMFORT IF MADE FROM

# Belfast Mesh

Belfast Mesh has remarkable absorbent properties; takes up excretions and moisture quickly and evaporates them rapidly.

Belfast Mesh may be boiled any number of times. Hence a clean, sanitary garment.

Belfast Mesh, when it has become wet, dries quickly, and body is surrounded by dry fabric and dry air.

Belfast Mesh is grateful to the skin and comfortable always.

### Send for Free Samples of the Fabric

which is made in several weights and in two styles. (1) Natural linen (buff) recommended as more durable and absorbent. (2) White—the linen bleached.

OUR FREE BOOK is handsome and convincing. It goes into the subject thoroughly and is designed for thinking people who desire comfort with health. The only forcible objection to mesh underwear has been that they "wear out too quickly." We guarantee that Belfast Mesh will wear to the satisfaction of the purchaser or refund money.

Sold by all dealers or sent direct by mail if your dealer won't supply it.

THE BELFAST MESH UNDERWEAR CO., Inc., 316 Mechanic Street, Poughkeepsie, N. Y.

## OUR NATIONAL COFFEE

### Postum

Physicians know that drugs will not correct the evils caused by coffee. Coffee causes "Our National Disease—Dyspepsia."

The only remedy is to stop short on the coffee and use Postum Cereal Coffee in its place. A physician of Heber, Ark., says: "I have been a coffee drinker for 50 years and have often thought that I could not live without it. After many years of suffering from our national malady, dyspepsia, I finally attributed it to the drinking of coffee, and after some thought determined to use Postum Food Coffee. I soon found myself so much better I used it at all meals and I am pleased to say it has entirely cured me of indigestion."

"I gained 19 pounds in 4 months, and my general health is greatly improved." Name given by Postum Cereal Co., Battle Creek, Mich.

*O'er land or sea, where'er you be,  
take*

A compact, convenient lunch—highly nutritious—ready in a moment—pure, rich milk and the extract of malted grain, condensed to powdered form—prepared with either hot or cold water—always healthful and invigorating—a delicious food-drink—invaluable in car or seasickness.

In tablet form also—as a food confection—in natural or chocolate flavor.

Used and sold everywhere—all druggists.

## Reduced Prices on Suits and Skirts

YOU are now in the middle of your buying time, but the cloth manufacturer's selling time is over. That's why he will make us his best goods now at far less than

regular prices—and that's why we can offer you Suits and Skirts made-to-order of bran-new materials, beautifully finished, at *one-third less than regular prices*. All of these fabrics are suitable for Summer or early Fall wear.

Our etamine costumes are the lightest and coolest garments for Summer wear. Nearly all our styles and materials share in this sale.

**Tailored Suits and Etamine Costumes in the new models, made of up-to-date materials, former price \$10, reduced to \$6.67. \$12 Suits reduced to \$8. \$15 Suits reduced to \$10. \$25 Suits reduced to \$16.67. \$30 Suits reduced to \$20.**

**Latest designs in Traveling, Walking, and Dressy Skirts, with just the right style to them. Former price \$5, reduced to \$3.34. \$6 Skirts reduced to \$4. \$7.50 Skirts reduced to \$5. \$10 Skirts reduced to \$6.67. \$12 Skirts reduced to \$8.**

**Reduced Prices on Jackets, Walking Suits, Traveling Dresses, etc.**

All letters of inquiry are answered by women fashion experts who are in a position to make many helpful suggestions in the way of styles or combinations to suit the taste or figure of those who do not wish to rely solely on their own judgment. Orders are filled with the greatest promptness, very often in three days' time.

Remember that you take no risk in dealing with us. Any garment that fails to fit or give entire satisfaction may be returned promptly and your money will be refunded. It's your good will we want most.

Catalogue and Supplement of the latest styles, together with samples of the new materials, will be sent **FREE** by return mail. A postal will bring them. If possible, mention the color of samples you desire, as this will enable us to send you a full assortment of just the things you wish. Write to-day. This sale will end in a few weeks.

**NATIONAL CLOAK AND SUIT COMPANY**

119 and 121 West 23d Street, New York

**"The desert shall rejoice, and blossom as the rose."**

No better proof of the truth of this old prophecy is needed than the visible fact that a large part of that vast region only a few years since known as the "Great American Desert," is now the most fertile portion of the United States. This great change is due to irrigation; an abundance of life-giving water has turned these sandy wastes, once the home of wild beasts, the cactus and sage-brush, into productive farms and grazing lands. Such wonders does the **Hot-Air Pump** work on dry soil; arid lands anywhere can indeed be made to "blossom as the rose." Have you not some unproductive ground which irrigation might improve? These pumps are automatic, supplying any amount per diem, up to 100,000 gallons.

Remember, the Hot-Air Pump is the cheapest form of constant water supply now known. A permanent investment, which will outlast a generation of users, can now be bought for \$100. Descriptive Catalogue "D" sent free on application.

# NESTLÉ'S FOOD

## "Under the Nestlé Tree"

there is protection for an infant. Nestlé's Food has saved the lives of and properly nourished thousands of babies who have grown into strong men and women and brought up their children upon it in turn. It needs no added milk in preparation, because it is itself made from the purest milk. It has been the most approved infants' food with three generations. With Nestlé's Food universally used and so easily obtained, why experiment with others?

*Let us send you, free of charge, a half-pound package of Nestlé's Food for trial and our "Book for Mothers." This says a little about Nestlé's Food, but a great deal about the care of babies and young children. Send us a postal card.*

**HENRI NESTLÉ, 73 Warren Street, NEW YORK**

## The Angelus Piano Player of 1903

**T**HE ANGELUS of to-day is so far superior in every respect to the first Angelus (or even that of last year) that the one ought not to be compared with the other, except to note the marked improvement.

To-day it is not only the means for any one to play upon the piano anything written in music, even though he does not know one note of music from another, but also it is the delight of the musician, for he can now play his favorite classics with The Angelus fingers, which never make a mistake in reading the notes and never get out of practice, as his own do.

The first Angelus permitted some individual expression, but The Angelus of to-day gives the performer all the means to interpret a composition to accord with the feeling and sentiment of his own soul.

We call your attention to the following features and important things which can be done with the aid of an Angelus :

- (1) The playing of the theme or melody of a composition loud while the accompanying notes, either in the treble or base, will be subdued and flowing.
- (2) The accenting of a single note or chord, as your taste may dictate.
- (3) The phrasing lever, with which you can prolong or shorten syllables in the rendition of songs.
- (4) The means of retarding or accelerating, or, in other words, the privilege of taking liberties in the rendition of a composition without changing the marked "tempo" or time.
- (5) The dainty resilient touch like that of the human fingers, owing to the elasticity of air by which the touch is produced.
- (6) The size of the cabinet, being the smallest made, of elegant design, and the best piano finish.

**We should be pleased to have you thoroughly investigate our claims regarding The Angelus of 1903—our product of to-day. Price \$250.00.**

# Poco Pictures

## are Worth While

The many Poco Cameras, from the little Pocket Poco "C" illustrated here, to the famous Cycle Pocos and Tele-Photo Pocos, are all exactly constructed for the successful making of artistic pictures. Pocos for 1903 are simpler, more compact, more graceful in line, more beautiful in finish. The successful Pocket Pocos are now being made in three styles, and to suit all tastes. To the simple and accurate Poco shutter mechanism the artist may now add the advantage of the Ross Homocentric lenses, these famous lenses of Jena glass may be fitted to Poco Cameras. The new Poco book, sent free, should be in the hands of every student of photography. It tells of the last steps in camera and lens construction. Write to

**ESKAY'S FOOD**

THESE fine twins are the children of A. J. Cline, 186 Melrose St., Chicago, who writes: "They weighed 6½ and 7½ lbs. at birth. They had weak digestive organs and for the first three months we tried about everything the doctor recommended. We thought one could not live, until we tried ESKAY'S FOOD, and it agreed with both of them at once. They weighed at 10 months 28 and 30 lbs. respectively. They are now 14 months old, and we are feeding them all kinds of solid food, as their stomachs never give any trouble. They were fed on ESKAY'S FOOD until they were a year old, and are as well developed in strength and intelligence as children two years of age. Each has 14 teeth, which came without the least fretting."

A well-known specialist in infants' troubles writes: "It is pre-eminently the substitute for mother's milk. I prescribe it constantly." Our helpful book for mothers and all who have the care of children. "HOW TO CARE FOR THE BABY"—free on request—with generous trial samples of ESKAY'S FOOD.

**Why Get The**

**Improved**  
**Hartshorn**  
**Shade Roller**

**Because**

it is the strongest, simplest, easiest-working and best-constructed shade roller made.

It has the best seasoned wood, the finest tempered springs, the "unbreakable" brackets.

It is perfectly turned and always runs true, on an exact center.

It needs no tacks. It never tears or soils the shade. Four Hartshorn shade holders fasten the shade firmly and evenly; they never slip and are put on quickly with a single tap for each holder.

It is the product of the largest factories and the longest experience of any shade roller concern in the world.

It is the only thoroughly satisfactory shade roller. It is the best.

**That's Why**

Be sure to get the genuine with the signature on the label.

*Stewart Hartshorn*  
Wood Rollers. Tin Rollers.

# Make Money in Real Estate

At the World Famous "Soo"

A few of the many Mills (Brown Stone Buildings) and St. Mary's River

No other place in America is so magnificently enterprising and promises such great future prosperity. Backed by the gigantic "Allied Companies" with a capital of \$117,000,000.00 (and subsidized by the Dominion Government) which builds, owns, and operates such institutions as the following: The largest Pulp Mills in the world; Steel Rail Mills, employing 1,000 men; Blast Furnaces, Sulphide Mill, Iron Works, Reduction Works, Machine Shops, Veneer Works, Alkali Works, Charcoal Works, Tube Works, Nickel Smelter, Saw Mills, Steamship Lines, Ferries, Railroads, Electric Street Car Lines, Water Works, Electric Light Plant, Water Power Canals, fabulously rich Iron, Nickel, Gold and other mines, and many other immense industries in project, in which limitless millions are already invested in the development of the "Soo" into a mighty industrial center, making it verily the "Pittsburg of the North."

Note the marvelous record of the Canadian Soo's recent growth. Population for 1900 was 5,000, in 1903 is 18,000. Assessed Real Estate value in 1900, \$1,700,000; in 1903, \$7,000,000 (with bulk of industries exempt from taxation). Number of Manufacturing Plants in 1900, 5; in 1903, 20. Number of employees in same in 1900 was 500, in 1903 over 5,000, with annual pay roll of \$2,500,000, and when improvements now projected are complete 25,000 men will be employed. *Most of this great increase has been in the past 18 months.*

The "Soo" is the literal power-house for the world. On both sides of the river there are water power canals built and under construction that develop 110,000 horse-power. Our cheap power brings the factories.

## Real Estate Values are Doubling at the "Soo."

from the actual growth of the industrial interests and the population—not from speculation. Last year 500 houses were built here and more than that will be built this year. Good building sites are limited and will never be so cheap again. The "Allied Companies" do not own property except as needed for their own uses, and do not deal in real estate in any way.

## Send \$10 and Secure a Lot.

We own the very choicest tracts of building property in the "Soo." Our Highland Park addition has beautiful location overlooking the river. Good houses built on and around it. Half of these lots have been bought by "Soo" residents and visitors, and many are building. To interest investors and those seeking an ideal home-site, or a growing field to locate in, we offer remaining lots cheap and on easy terms. Lots run 38x105 ft. to lane. Only \$10 down and \$6 a month buys these choice lots. Price, if you buy now, only \$200, but they are worth more, and on September 1st unsold lots will advance to \$225 each. We will return all payments in full with 6% interest to any one who purchases a lot from us and who visits the "Soo" within two years of the date of purchase and is not fully satisfied with his investment. If purchaser dies after one year's payments are made we will deed the property with clear title to his estate or heirs. Send without delay, or this tract will be sold out. *All orders entered in rotation as received.*

Highland Park has graded streets, shade trees and strict building restrictions. It promises to fully triple in value by 1905.

## Our "Soo Books" Free

describe in detail by photograph and phrase, maps, etc., the wonderful "Soo," its marvelous growth and promises for the future. Those in search of a location with promising prospects for the investor, the labor- and home-seeker, the opportunity-seeking professional man or manufacturer, are requested to write to us for particulars in detail. Address,

## A Sound Business Investment Based on Facts

The only opportunity ever offered the small investor to become interested in a typewriter building company, doing a large business and making substantial profits. This enterprise has none of the features of speculation attached to it, as the demand for the machines is thoroughly established and their merit proven. While there is no difficulty in interesting a few capitalists to subscribe for the entire amount of the new stock, we prefer to interest a large number of small investors, each of whom will use his influence to further the popularity of the Chicago Typewriter and cause

financial advantage to accrue to all stockholders through personal advertising. This proposition is not experimental, the business being already established upon a firm foundation, and the machines being unconditional leaders wherever superior typewriters are required. The machines are already introduced in every part of the world, and are giving unequalled satisfaction. You have doubtless heard of this splendid mechanism, which was the first standard machine upon the market sold at a fair price, and breaking the \$100 combination upon high grade machines. The marvelous success of the Chicago Typewriter, unapproached by others as to value, has induced us to enlarge our facilities in all branches to meet the great demand for a standard machine, sold at a just and popular price. We offer for sale at par 7,500 shares at \$10.00 each, of our \$200,000.00 capital stock. Profits have been over 10 per cent. each year. The cash value of assets of the business is more than equal to the amount of stock issued. The money realized from sale of stock now offered will be used partially to increase manufacturing and selling facilities, and partially retained as a cash surplus. Each dollar's worth of stock adds a dollar to the business; and as the assets remain active in the business each dollar's worth of new stock issued will be covered by assets having cash value equal to the amount of the stock. Write for further particulars to

AGENTS IN ALL PRINCIPAL CITIES

# Water is Free!

But it won't take the pain out of a burn; it won't heal a wound; it won't take the ache out of rheumatism, neuralgia, etc. Pond's Extract *will*. It will do it instantly. The claim that ordinary witch hazel is "just as good" or "just the same" as Pond's Extract needs but a mite of consideration to prove its falsity. Ordinary witch hazel is nearly all water. That's why you can get so much for so little—because *water is free*.

Pond's Extract is the pure extract of *Hamamelis Virginica*—that's why it costs more; that's why it CURES. If you want water, get it at the pump—it's cheaper and safer. If you want relief from pain—*any* pain, insist on getting Pond's Extract. Always sold under original label. Sold everywhere.

# Memory Means Money

A Failing Memory is the First Evidence of Mental Decay. If you are afflicted with a defective memory or mind wandering, write for Dr. Pelman's books: "Memory Training, Its Laws and Their Application to Practical Life," and "The Natural Way to Learn a Language." Both FREE for the asking. The Pelman System develops the natural memory and will enable you to remember names, dates, faces, etc. Requires only a few minutes each day and is so simple a child can master it. Taught in six languages.

**THE PELMAN SCHOOL OF MEMORY TRAINING**  
1640 Massena Temple, Chicago.

LONDON, 4 Bloomsbury St., W. C.; PARIS, Avenue de Beaulieu, 809;  
MUNICH, Neumarkt, 8; MELBOURNE, G.P.O. Box 492.

*What ABRAHAM  
is to the name  
of LINCOLN  
1847 is to the  
name of ROGERS*

Great achievements are inseparably associated with the times in which they were enacted. In 1847 the original Rogers Bros. silver plated ware was first made and sold, and from that time has been known as 1847 Rogers Bros. Other ware has been made since and called Rogers, but the name that stands for the best, the genuine and original, is the full trade-mark name

**"1847 ROGERS BROS."**

This date is the distinctive sign of the genuine trade-mark. It is important to bear this in mind when buying spoons, forks, knives, etc., and thus insure "Silver Plate that Wears." 1847 Rogers Bros. goods are sold by leading dealers everywhere. Beautiful patterns are fully illustrated in our catalogue, "F 92," Sent Free. Address

**MERIDEN BRITANNIA CO.,** (International Silver Co. Successor), Meriden, Conn.

## FOR SALE OR RENT

**New Summer Cottage** On "NAPINKA ISLAND"

At the far famed "Fiddler's Elbow" 1,000 ISLANDS, ST. LAWRENCE RIVER Canadian Side

Beautiful summer home just completed, extensive large reception and dining room, with open hearth fireplace in each, kitchen with sink and tile floors, five bedrooms, large linen room, bathroom, w. c. and lavin. House plastered with asbestos plaster throughout. Spacious verandas, balconies, waterworks, drainage, fountains filled with ice, new boat-house, three bedrooms over same, new skiff and steamboat landings and docks. Stone seawall will round island, beautiful timber and shade oak, maple, birch, pine, cedar, situated between all steamboat and yacht channels, close to London's and American Rail's best Channel, etc., improved property on all sides, daily mail, post-office on main shore few minutes distant. Finest location, most extensive and magnificent view of the Canadian side of the river. "Napinka" Island contains about 25 acres. Price \$7,000, easy terms, or to a good party for a term of years will rent \$200 furnished, \$100 unfurnished. I have also large number of beautiful, unimproved islands all along the Canadian side between Brockville and Gananoque, including a number of the best water in the river. Parties desiring to inspect "Napinka" property will find key close by at Mrs. Porter's, Echo Lodge, a three hill property on the same side of the river. The Outlook is for further particulars address the owner, W. D. Morris, Ottawa, Canada.

## Florida

## Home Seekers Attention!

Do you want to live in the finest country in the world? Do you want to invest your money where you can make from twenty to fifty per cent.?

Are you hunting a congenial climate and one which is almost a certain cure for all pulmonary troubles?

Do you want to find the country that has never felt a financial panic?

Are you interested in trucking? Do you want some fine timber land, which are constantly increasing in value? Are you interested in pasturage? How would you like a nice orange grove that will pay twenty-five per cent. interest?

If any of the above propositions appeal to you write us and let us know just what you want. A postal card will bring a little booklet telling of the many advantages of De Soto County, South Florida, the center of the great orange and cattle industries.

**THIS IS A FREEMAN'S PARADISE**

Write us now.

**HEARD & CHILDERS, Arcadia, Florida.**

## Maine

## THE WALTER SANITARIUM WALTERS PARK, PA.

### THE ORIGINAL MASSAGE INSTITUTION

**WITHOUT A PEER** as to location, air, water, scenery. Location selected and buildings erected by their sole owner and present manager to illustrate **an idea** which had grown out of twenty years of invalidism.

**FORTY-FIVE YEARS OF HOPELESS INVALIDISM**, convalescence and restored health have enabled the founder of this Sanitarium to develop

## The Exact Science of Health

**Based upon Life's Great Law, the Analogue of Newton's Law of Gravitation**

Over 300 large, royal octavo pages, price \$2.00. The most important work of this or any other age. Solves all medical problems and establishes a science of regaining and maintaining health as certain and reliable as astronomy or chemistry. It will double the average of human life within fifty years.

**THIRTY YEARS OF PRACTICE** justifies the most extreme claims. No patient has died in this Sanitarium in fifteen years except from the infirmities of old age, and not more than two or three in thirty years. No other Sanitarium and no other system of treatment in the known world can show an equal record. What did it but "The Exact Science of Health"? Don't fail to send for the book. To all who send Post Office Order drawn on Walters Park, Pa., for \$1.50 before June 15th, the book will be sent post paid. Circulars free to any address. Address

## COUNTRY PROPERTY FOR SALE AND TO RENT

### FOR SALE

#### LAND'S END, ROCKPORT, MASS.

**8 SHORE FRONT LOTS** of 2-4 acres each.  
**SEVERAL FINE HIGH LOTS** of about the same size, with beach privileges and magnificent ocean views.  
**ALSO 2 LARGE TRACTS**, one of about 40 acres, with sea front, and the other of about 55 acres. Any of these parcels can be divided.  
 This land is on the most easterly point of the northern shore of Massachusetts Bay, close to the twin lights of Cape Ann, which mark the northern entrance to Massachusetts Bay as Cape Cod Light does the southern. Both north and south of Cape Ann the sea makes into the westward, also, that most every wind comes over the water. The shore in front of these lots is bold and rocky, and there is a fine sandy beach on the property near by. The place is one of great beauty.  
 Neighborhood most desirable. References required to keep it so. For particulars and maps apply to the undersigned, or Mr. T. Sheehan, Jr., Rockport, can show you the property. Better still, after June 25, spend a few days at the Turk's Head Inn on the property and look over the whole of the beautiful North Shore at your leisure.  
 ARTHUR LYMAN, 33 State Street, Boston, Mass.

### Maine

**CHOICE LOCATION** for Summer Home. Ten lots of 10,000 feet each. Near bay; splendid ocean view. Price reasonable. N. W. Thompson, Friendship, Me.

# A Summer Tour to JAMAICA

## An Ideal Vacation Voyage to an Island

Where the Sky is the Clearest, the Atmosphere the Mildest, the Scenery the Grandest, the Mountains the Most Verdant, and the Sea Bathing the Most Delightful of Any Place in the Western Hemisphere.

**Five Days at Sea, from  
Boston or Philadelphia**

The splendid U. S. Mail and passenger steamships of the United Fruit Company make weekly trips from Philadelphia and semi-weekly trips from Boston direct to Port Antonio, Jamaica, offering to vacation tourists an opportunity of visiting this island of scenic beauty, of thrilling romance, and of eventful history. Its sights and scenes are new, novel, and most enjoyable. Its hotels are modern and splendidly kept. Railroads, trolley lines, and perfect macadam roads encourage travel and remove its every discomfort.

No one need fear to go to Jamaica in the summer. Its climate is delightful at all seasons of the year. The average range of temperature between summer and winter is but seven degrees (87° in summer and 80° in winter). Out-door life is exceptionally enjoyable, and the sea bathing is the best in the world.

Special reduced rates are quoted for summer travel (from June to October) and there are also reductions at the principal Jamaican hotels. The reduced steamer rates are as follows:

<b>Fare, One Way.</b>	.	.	.	.	.	<b>\$35.00</b>
<b>" Round Trip,</b>	.	.	.	.	.	<b>60.00</b>

# Your Vacation in Colorado

## TOURIST TICKETS FOR HALF FARE

A Colorado trip this year will cost very little. We are going to sell round trip tickets from Chicago for \$30. From St. Louis \$25. Practically half fare. Eastern railroad agents will sell through tickets based on these rates. This will enable people of moderate means to spend their holiday in the delightful Colorado country. Special tickets will be sold July 1 to 10 for even less than named above.

Burlington  
Route

## OUR HANDBOOK OF COLORADO

which we will send if requested, without charge, tells all about the hotels, boarding houses and ranches, their prices, names and addresses of the proprietors, attractions within reach, rates for livery, the fishing and hunting, charges for guides, etc. You can get excellent accommodations for \$8 to \$10 a week. Send for a copy. Do it *today* and with the book I will enclose a circular telling about the railroad ticket rates and our fast "one night on the road" trains between Chicago or St. Louis and Colorado.

There is no place in the world like Colorado for beauty of mountain scenery and perfection of climate—it is ideal. I have never known anyone to return from Colorado disappointed. Where could you find a more delightful place to spend your vacation?

Don't forget. Send *today* for a copy of our Colorado handbook. It is well worth looking over even if you don't make the trip.

Vacation trips to the Rocky Mountains this summer will be more popular than ever. Many have already arranged their summer tours via the

**Chicago, Milwaukee and St. Paul**

AND

**Union Pacific Line**

and many more are going to do likewise. Low rates from Chicago to Colorado and back will make the trip an inexpensive one.

A postal card will bring complete information.

# JOYOUS VACATION DAYS

Vacation time is here again. Where are you going this summer, and how?

There are many delightful places: Lake Chautauqua, St. Lawrence River, Adirondack and White Mountains, Atlantic Coast, Canadian resorts, Niagara Falls, South Shore of Lake Erie

Country, including its beautiful Islands; lakes of the Northwest, Yellowstone country and Colorado places.

The service of the Lake Shore & Michigan Southern Railway — unequalled for completeness and comfort — may be used with greatest advantage for reaching all of these places.

**Privileges**—A number of enjoyable privileges are accorded on tickets over the Lake Shore: stop-over at Lake Chautauqua, Niagara Falls, Lake Erie Islands, also option of boat or rail, either way, between Cleveland and Buffalo, etc.

**Summer Books**—Sent for six cents in postage by undersigned: "Lake Shore Tours," "Lake Chautauqua," "Quiet Summer Retreats," "Privileges for Lake Shore Patrons," "Book of Trains."

Any information for perfecting your vacation plans gladly furnished.

**Boston Excursions**—Over the Lake Shore, July 2, 3, 4 and 5. Good until September 1. Very low rates. All railways sell in connection with Lake Shore.

**Chautauqua Excursions**—Over Lake Shore, July 3 and 24, from all points west of Cleveland, O. Good 30 days.

A. J. SMITH, G. P. & T. A., Cleveland, O.

# MADE WITH A GOERZ LENS

## THIS WONDERFUL PHOTOGRAPH OF BROOKLYN BRIDGE

at night, which recently appeared in The Outlook with other equally striking photographs of New York City at night, was made with a Goerz lens. When the picture was taken the fog was so thick that the bridge was almost entirely obscured to the eye. Only a Goerz lens could produce such work as this, and magazine readers may feel sure, when they see a group of unusually clear and picturesque photographs, that the camera was equipped with a Goerz lens, which is known all over the world as being the product of the most expert knowledge and skilled workmanship. Ninety-nine per cent. of camera value is in the lens. The lens is like the works of a watch. You would not buy a watch for its case alone. Neither should you buy a camera for its box alone. The box of a camera has only one object—to exclude the light. So when selecting a camera look at the lens, for it alone will be responsible for your success or failure in photography.

Any dealer will fit a Goerz lens to your camera

**C. P. GOERZ, 52 E. Union Square, N. Y.**

## "THROUGH THE LINE"

COPYRIGHT, 1902, BY SMITH & WESSON

**M**EN accustomed to danger always carry a Smith & Wesson Revolver because they have absolute confidence in its accuracy and reliability. A Smith & Wesson is the surest preparation for infrequent peril because it is to be depended upon in any crisis.

All Smith & Wesson Revolvers have this monogram trade-mark stamped on the frame. No others are genuine.

"Through the Line" is a notable specimen of Dan Smith's wonderful art. We will send a perfect reproduction in colors of this picture—suitable for framing, on heavy plate paper 14x15, prepaid for 10c. silver. The July numbers of Pearson's, Munsey's, Collier's (magazine number), Cosmopolitan, Country Life and Town and Country will contain a Boer war picture by G. W. Peters entitled, "At Bay." Owing to an unprecedented demand for these pictures, and as the edition is a limited one, early requests are advisable.

# SMITH & WESSON

# WINCHESTER

## RIFLES, REPEATING SHOTGUNS AND AMMUNITION

Rank first in popular favor with the shooting public because of their uniformly high quality. When you buy a Winchester Rifle or Shotgun, you can count on its being carefully made, well finished, an accurate shooter and thoroughly reliable in action. When you buy Winchester make of ammunition, you can rely on its being properly loaded, carefully gauged and inspected, and, in a word, the kind that shoots when you want it to and where you point your gun. Aren't these facts worth considering when buying anything in the gun or ammunition line? Winchester Guns are made in all desirable calibers, bores, weights and styles, and are plain, partially or elaborately ornamented, suiting every purpose, every pocketbook and every taste. Winchester Ammunition is made for all kinds of shooting and all kinds of guns.

Send your name and address for our large, illustrated catalogue. It's sent free.

# Theodore Roosevelt the Citizen

**J**ACOB A. RIIS, the author of "The Making of an American" and "How the Other Half Lives," will contribute to The Outlook, beginning in the autumn, a series of articles on "Theodore Roosevelt the Citizen." No writer understands better than Mr. Riis what constitutes the highest and truest Americanism, and no writer has had a more intimate opportunity of studying these qualities in President Roosevelt. No books have had a stronger influence in favor of patriotism and good citizenship than Mr. Riis's already published volumes, and it is because Theodore Roosevelt is a living exponent of those qualities that Americans honor him. Mr. Riis always infuses into his literary work personal enthusiasm and buoyant energy.

# DARREL

OF THE BLESSED ISLES

By IRVING BACHELLER, *Author of "EBEN HOLDEN"*

HARRIET PRESCOTT SPOFFORD

"I have read of late few more delightful stories than 'Darrel of the Blessed Isles.' Entirely fresh in conception and plot, it leads one with gentle but absorbing interest and with skilfully managed surprises and incidents. There is a sweetness and strength about the whole book rarely found in the novels of the day, and in its own genre unsurpassed."

NEWALL DWIGHT HILLIS

"'Darrel of the Blessed Isles' is at once the latest and the best of Mr. Bacheller's stories. It is an idyl of love and the story of a great happiness that came through self-sacrifice and expiation. Mr. Bacheller has clothed life's simplicities with enduring charm and beauty, and made honor and self-sacrifice, truth and love, seem the only things that are really worth while."

Postpaid, \$1.50

THE

## LIONS OF THE LORD

A ROMANCE OF THE OLD WEST

By HARRY LEON WILSON, *Author of "THE SPENDERS."*

Postpaid, \$1.50

In his romance of the old West, "The Lions of the Lord," Mr. Wilson, whose "The Spenders" is one of the successes of the present year, shows an advance in strength and grasp both in art and life. It is a thrilling tale of the Mormon settlement of Salt Lake City, with all its grotesque comedy, grim tragedy, and import to American civilization. For the first time in a novel is the tragi-comedy of the Mormon development adequately set forth.

THE

"Keen characterizations of these men."—*Springfield Republican*.

"The sketches are so full of his own genial individuality and personal reminiscence that the volume is readable from cover to cover. The author speaks, of course, from the viewpoint of a Liberal and an Irish nationalist, bestowing the highest praises upon the men of his own principles, yet saying all the good he conscientiously can of the conservative leaders. Mr. McCarthy is a broad man, and, allowing for his point of view, every portrait in his book is just, not to say generous. His attitude is always closely in harmony with that of the American public."—*Chicago Record-Herald*.

"All the chapters are good, and they are full of personal anecdote and reminiscence. . . . Drawn for us to the life with the skill of a practical writer and the knowledge gained by close observation and association. It is a most remarkable and instructive book."—Prof. HARRY THURSTON PECK in the *New York American*.

"Justin McCarthy does more than give us a personal sketch of his subjects. Not the least valuable part of his volume is the illuminating side lights it throws upon the present political situation in Great Britain, with brief, prophetic glances into the future."—*Newark Evening News*.

*For sale at bookstores*

# REJECTED OF MEN

BY

## HOWARD PYLE

This novel brings home a realization of how the Messiah might be received were He to come now. Mr. Pyle has told a modern story of human interest, into which he introduces Biblical characters made to speak and act as people do to-day, but who represent the same principles as they did 1900 years ago. The story is perfectly natural; there is nothing forced or incongruous about it. With a reverence to which no exception can be taken, the story tells of His coming, His poverty, His betrayal. The book makes a notable addition to that literature which is best represented by "Ben Hur" and "The Story of the Other Wise Man."

*Cloth, \$1.50.*

**HARPER & BROTHERS, Publishers, New York**

# ROCK RIDGE HALL

## A School for Boys

The many considerations of a boy's life at school form the text of a pamphlet that has been written about ROCK RIDGE HALL. Though it may not influence a selection in favor of this school, it will be read with interest by all who are impressed with the equipment and methods that are essential for a thoroughly modern preparatory school.

This pamphlet, which has been prepared with care and illustrated with numerous photographic reproductions, describes both by word and picture the advantages, natural beauty, and historic interest of the school's surroundings. Sent without charge on request.  
DR. G. R. WHITE, Principal  
Wellesley Hills, Mass.

**WABAN SCHOOL** WABAN, MASS.  
A superior preparatory school for boys.  
J. H. PILLSBURY, A.M., Principal.

**Sprague Correspondence School of Law,**  
869  
Detroit, Mich.

MASSACHUSETTS

# THE ALLEN SCHOOL

West Newton, Mass.

**RECORD** counts for something: In 50 years between four and five thousand students have been instructed here, coming from every state and territory in the U. S. and 40 foreign countries.

**EQUIPMENT** counts: The new school house approaches the perfection of opportunity. It contains laboratory for sciences, workshop for manual training, library, maps and illustrative material, pianos and a two manual pipe organ, gymnasium of large area, and a white tile 25 foot swimming tank, that boys and girls find irresistible. The environment is beautiful. Opportunities for all sports are abundant.

**TEACHERS** count: The teaching force the past year included three Doctors of Philosophy. The ratio of regular teachers to pupils was one to five; besides this there were 9 special teachers. These facts alone give a tremendous advantage over the average public or private school. And the teachers know how to teach. They fit for any college or scientific school.

**SPIRIT** counts: This is a happy school. The atmosphere of culture elevates the homes, mutual respect in the school room removes friction, kindness that is not weakness anticipates discipline.

**This School is Worth Investigating.** 51st year begins Sept. 16, 1908. Boys and girls received in separate houses. Send for illustrated circular to

ALBERT EDWARD BAILEY, Head Master.

MICHIGAN

# Insured for One Million Dollars in **THE PRUDENTIAL**

*From the*

**New-York Daily Tribune.**

APRIL 26, 1903.

The Prudential Insurance Company, through its Philadelphia agents, has insured L. Rodman Wanamaker, son of John Wanamaker, for \$1,000,000. The premium on the insurance is over \$30,000 a year. This makes Mr. Wanamaker one of the most heavily insured private individuals in the world, as he carries policies for \$2,000,000. His insurance is said to be exceeded only by that of King Edward VII. John Wanamaker, his father, carries policies aggregating \$1,500,000, and John M. Mack carries \$1,250,000, of which \$1,000,000 was placed recently.

**Mr. Wanamaker's Selection of The Prudential is a Striking Demonstration of—The High Esteem in which This Company is held by Farsighted Business Men, and Their Great Confidence in The Prudential's—Permanent Strength, and Able and Conservative Management,—Both Conducting to Profitable Dividend Returns on its Policies.**

Whether the Policy be Large or Small, the Same Progressive and Conservative Management is Back of All. Send Coupon for Specimen Policy, Suitable to Your Means.

## THE PIANOLA IN THE SUMMER HOME

**O**N YACHT, in Country Club, or Summer Home, music is always apropos and always welcome. If sufficiently good it will

take precedent over every other means of entertainment.

The Pianola makes piano-music available to every company.

And although it may be played by one who knows nothing of music, the result will be the same as though a brilliant pianist sat at the piano.

The vast collection of pieces of every kind of music prepared for the Pianola insures a program suitable for all occasions and to every taste.

The Pianola is always appreciated, but in the summer time it is of especial value to hosts and those whose taste for music of the better class can in no other way be gratified.

In every civilized country of the world the Pianola is now recognized as a standard method of playing the piano.

Failure to include a Pianola with the other means of entertainment provided for a country home means that one of the most agreeable and pleasant features of modern summer life will not be realized.

**The Pianola's phenomenal success has inspired many imitators—  
there is but one Pianola**

The Pianola can be seen and played at our exposition-rooms or at the warerooms of any of our agents, and a personal opinion formed by both the novice and the skilled musician upon the benefit to be derived from its assistance.

A handsomely illustrated and descriptive brochure (Catalog X) will be sent to those desiring information by mail, and all questions answered through our correspondence department.

The price of the Pianola is \$250. May be purchased by monthly payments if desired.

## PURE WATER AND GOOD HEALTH

### GO HAND IN HAND.

In everything pertaining to health the nearer we get to Nature and to Nature's ways the better we are. Perfect filtration is absolutely necessary to make water the true, wholesome solvent it is intended to be.

## The National Filter

is patterned closely along natural lines and is based strictly upon Nature's methods. The finest quality of tripoli stone is the filtering medium used, and its construction and action are such as to positively remove every trace of bacterial and animal matter. Hence absolutely pure water is the result. The National Filter never needs taking apart for cleaning—there is no removal of the stone, and anybody can clean it thoroughly in three minutes.

Made in all sizes for the home, the office, and large institutions. Installation is direct with the supply pipe and in no way interferes with water drawn direct from faucet. Write for illustrated booklet, "Pure Water in Nature's Own Way"—it's free.

**NATIONAL FILTER CO., 278 FISHER BLDG., CHICAGO.**

127 Broadway, New York      1015 Pine St., St. Louis, Mo.  
203 1/2 St. Paul St., Baltimore, Md.

# \$ Think Money

## BIG MONEY MAKERS THINK MONEY

A strong, well-fed and well-nourished brain is absolutely essential.

Where every hour brings its several joys."

### "America's Summer Resorts"

This is one of the most complete publications of its kind, and will assist those who are wondering where they will go to spend their vacation this summer.

It contains a valuable map, in addition to much interesting information regarding resorts on or reached by the

### NEW YORK CENTRAL LINES

A copy will be sent free, postpaid, to any address on receipt of a two-cent stamp, by George H. Daniels, General Passenger Agent, New York Central & Hudson River Railroad, Grand Central Station, New York.

### A Summer Tonic

Better than drugging the system—better than artificial tonics—more effective in cleansing the system and toning up the nerves—is ten days or two weeks among the picturesque highlands of Southern Indiana, at those wonderful and rapidly becoming famous French Lick and West Baden Springs on the Monon Route, and it is much cheaper. There are several different springs, having different curative properties.

For Stomach, Liver, Kidney, and Bowel troubles and their attendant nervous affections, these waters have produced wonderful results. They allay gastric irritation, render soluble in the body substances that are harmful, and thus free the body of them. Their action on the kidneys and bowels, as well as on the skin, corrects the acidities due to various kinds of fermentation in the body.

An excellent adjunct to these waters is the good air and the opportunity for exercise in the open.

Hotel rates range from \$8 up to \$35 per

week, including free use of all the waters. Booklet telling all about the waters and giving list of hotels and boarding houses, with their rates, sent free. Frank J. Reed, G.P.A., Monon Route, Chicago.

### Christian Endeavor Special Train to Denver

The passenger department of the Chicago & North-Western Ry. has arranged for a special train account United Society of Christian Endeavor Convention, Denver, July 9-13, 1901, to leave Chicago 10:30 P.M., Tuesday, July 7th, with Pullman Standard and Tourist sleeping cars, free reclining chair cars and standard day coaches through to Denver without change. This special train will enable Endeavorers and their friends to travel westward in congenial company and upon schedules arranged for their special convenience. The route is over the only double track railway between Chicago and the Missouri River, and will traverse the rich prairie and farm regions of Iowa and the Platte Valley of Nebraska by daylight. Only \$25.00 round trip from Chicago and correspondingly low rates from other points. Tickets good to return until August 31st. Very low side-trip rates to points in Colorado. For illustrated folder and full particulars address W. B. Kniskern, 22 Fifth Avenue, Chicago, Ill.

### The Southern Pacific

offers a variety of Routes to California—by their new steamers to New Orleans, thence by rail—or by any all rail route at from \$9.00 to \$50.00. Everything else can be learned at 349 Broadway or 1 Battery Place.

# Cool Off in Colorado

If it's hot where you are and you want a change of air, if you are tired and overworked and need a little outing; go to Colorado. It is the one perfect summer spot in America. The pure, dry, invigorating air, the glory of the mountain scenery, the quiet restfulness of the place, the fine fishing and golf links, the comfortable hotels and boarding houses, all go to make Colorado the ideal country for seekers after health and pleasure.

**Send for our "Handbook of Colorado."**

A trip to Colorado costs but little. Our handbook tells all about the prices for board and the attractions at different places. Send for a copy TO-DAY. No charge. At the same time I will mail you a circular telling about the very cheap tickets we are selling to Colorado. Round trip from Chicago, \$25 and \$30; from St. Louis, \$21 and \$25, according to the date. It takes but one night on the road from either Chicago or St. Louis to Denver.

# STARVED UNTIL FED ON

## ESKAY'S FOOD

When you see this picture you will want to read the mother's letter.

Her mother, Mrs. L. M. Martin, of Marietta, Ohio, writes:

"Our baby weighed at birth 9 $\frac{1}{4}$  lbs. and seemed perfectly healthy. Having to use artificial food, we tried five different kinds, none of which she could digest. She could retain nothing on her stomach, and became so emaciated that we could trace the bones in her little head and body. At this time she was 3 $\frac{1}{2}$  months old and weighed only 8 $\frac{1}{4}$  lbs. I then received a sample of Eskay's Food, commenced using it, and in two weeks she had gained 13 $\frac{1}{2}$  lbs. and has continued to gain right along. This picture was taken when she was 9 months old. She weighs 23 lbs., her flesh is firm, she is unusually strong, and a sweeter and better natured child could not be found. No miser prizes his gold more than we prize our Eskay's Food."

Eskay's Food babies are always well, never suffer with hot weather troubles or from teething, because they are all perfectly nourished.

Our helpful book, "How to Care for the Baby," free on request with generous trial samples of Eskay's Food.

# If Water Would Cure

aches and pains; heal cuts and bruises; subdue inflammation, hemorrhages, soreness, lameness, scalds, burns, insect bites and stings, sunburn, neuralgia and rheumatism, POND'S EXTRACT would never have gained its world wide fame as "King" of pain cures. For 60 years it has been alleviating pain of all kinds.

Don't be misled by the claim that POND'S EXTRACT is the same as witch hazel. POND'S EXTRACT CURES. Ordinary witch hazel is practically all water—that's why it WON'T cure. That's why you can get so much for so little—water is cheap. Insist on POND'S EXTRACT—the true extract of *Hamamelis Virginica* and accept no other. The true cure for all pain.

Sold only in sealed bottles, enclosed in buff wrappers.

**MELLIN'S FOOD COMPANY, BOSTON, MASS.**

"Let independence be our boast, ever mindful what it cost;  
Ever grateful for the prize, let its altar reach the skies!"

"The day we celebrate" brings its noisy pleasures to every youthful American heart. It is a day of fire and is always fraught with more or less danger from conflagrations. Only he is safe whose home is protected by an abundant water supply, sufficient to extinguish any ordinary blaze which a "cracker" or stray rocket might kindle. Don't spoil the day for the children; let them celebrate to their hearts' content their country's natal day; let the cannon roar, the fireworks blaze, and so cement in the youthful mind the glorious birth of freedom. Install a **Hot-Air Pump** and you are always safe; it is a practical insurance against fire.

The feeling of security which a Hot-Air Pump brings to its owner will alone repay him many times its cost, while the other advantages of owning one are as varied as the many uses to which water is daily put, from the morning bath to sprinkling the lawn and garden. It does away entirely with the slow and expensive process of conveying water by hand.

Prices from \$108.

# Adopt Scribner Books

## If Considered You Will Adopt These !

**Gordy and Mead's Language Lessons**

(A First Book in English)

**Burt's The Literary Primer**

**James and Sanford's Government in State  
and Nation**

**James and Sanford's "Our Government"**

(Local, State and National)

**Gordy's American Leaders and Heroes**

**Gordy's History of the United States**

**Ashton's Plane and Spherical Trigonometry**

**Miller's Elementary Physics**

## A Sufficient Reason in One Sentence

**Gordy's Language Lessons** are the simplest, straightest paths to writing, speaking and knowing our English Language.

**Burt's The Literary Primer** is based upon word-getting, teaching of sounds, repetition of vocabulary, child's own activities, and contact with permanent literature.

**James's Government in State and Nation** brings pupils face to face with government AS IT REALLY OPERATES and conditions as they really exist.

**James and Sanford's Our Government** is just as good for elementary classes (either first year of High School or last year Grammar School) as the larger book is for more advanced students.

[Wisconsin, Iowa, Illinois, New York, and Pennsylvania Supplements are in preparation.]

**Gordy's American Leaders and Heroes** makes the personal character of our great men stand out clear as crystal in an epoch or crisis, and the beginning child learns that history is the record of human life.

**Gordy's History of the United States** was written by a GRAMMAR SCHOOL MASTER, and that is a great distinction nowadays.

**Ashton's Trigonometry** moves in a direct line to the solution of triangles.

**Miller's Elementary Physics** is elementary, and the experiments ARE the bases of the text.

# THE STORY OF A BIRD LOVER

By WILLIAM EARL DODGE SCOTT

**"W. E. D. Scott is the most versatile and interesting writer on birds since Audubon."**—*Syracuse Herald.*

**"An entertaining, instructive, inspiring book."**—*Brooklyn Standard Union.*

**From the New York Tribune**

"Mr. Scott's book marks a departure from the host of guide-books to the bird world which have come down upon us in something like a flood: it is rather the autobiography of an enthusiastic scientist who has mastered his enthusiasm and marshals its suggestions. It gives us the more intimate confessions of an alert and progressive naturalist, and it has the faculty of communicating some of its spirit of delight to the reader."

**From the Congregationalist**

"His book is varied in its interest, giving us records of discovery and pictures of different parts of America as they appeared to the eye and thought of a first-class naturalist. Mr. Scott is a man worth knowing for himself, and the reader lays the book down with an abiding interest in his work and both the fulfilled and unfulfilled aims and ambitions which are so simply and interestingly set before him."

**From the St. Paul Globe**

"The book is a rather minute account of Mr. Scott's life, work, and studies among the feathered tribes. It is replete with information about birds every one knows—not about fanciful and imaginary birds. Mr. Scott is a naturalist and not a romancer. His book is never tiresome, never dull, for it is full of birds, and birds are among the delightful things of life."

# Lasell Seminary

For Young Women,

Auburndale, Mass.

**I**N planning a system of education for young ladies, with the view of fitting them for the greatest usefulness in life, the idea was conceived at Lasell of supplementing the purely intellectual work by a practical training in the art of home management and its related subjects.

It was the first school of high literary grade to introduce courses in Domestic Science into the regular curriculum.

The results were so gratifying as to lead to the equipment of Experiment Hall, a special building, fitted for the purpose of studying the principles of Applied Housekeeping. Here the girls do the actual work of cooking, marketing, arranging menus, and attend to all the affairs of a well arranged household.

Courses are arranged also in sewing, dressmaking and millinery, they are conducted on a similarly practical basis and equip the student with a thorough knowledge of the subject.

Work of this nature makes no encroachment on the intellectual life, and Lasell has much to recommend it in this direction.

Its proximity to Boston makes it especially strong in Music and Art courses, and the Boston environment is especially valuable to students in these branches. Unusual advantages are offered in Organ department. A fine three manual pipe organ has just been installed, and the teaching is done personally by one of the best of Boston organists.

Specialists preside in all branches and the school is kept purposely small in number of students to insure the best individual results and a true home atmosphere.

Everything that a beautiful suburban location can offer for health, comfort and pleasure is secured at Auburndale—and Boston's wealth of educational advantages and historic interests but 10 miles distant.

Lasell is well worth investigating. Many parents have written strong commendatory letters on the unusual quality of the school work. For catalogue and information address,

C. C. BRAGDON, Principal.

**SALTSBURG, PA.**

The site of this school was chosen for its unusual advantages for the training of boys. A natural park of 40 acres gives the freedom of outdoor life so dear to a boy's heart and so beneficial in physical and mental development. The school's aim is thorough preparation for any college, technical school or for business, and the development of manly, useful men. *Small classes bring student and teacher into close personal contact insuring a measure of success only possible in individual instruction.* Every provision for outdoor and indoor athletics. Catalogue gives description of school's equipment and unique location. A. W. WILSON, Jr., Ph.D., R. WILLIS FAIR, Ph.D., Principals. P. O. Box 500

PENNSYLVANIA, Germantown, Philadelphia.

### Walnut Lane School and Wellesley Preparatory.

For Girls. Highest attain-

ments in scholarship. Attractive home and social life. Golf, tennis, basket-ball.  
Mrs. THEODORA B. RICHARDS, Principal.

## Haverford Grammar School

A College Preparatory School for Boys. Nine miles from Philadelphia. Surroundings beautiful, healthful, refined. A Boarding School emphasizing the best influences of a home. Numbers limited to secure the best individual development. Equipment complete and thoroughly modern. New Recitation Halls, Athletic Shed, Swimming Pool and Gymnasium. Its graduates among the alumni of all the leading colleges. Its prominence in all branches of athletics due to its superb natural facilities for out-door sports, and to the policy of providing for every boy the most thorough physical training under staff supervision. A school thus planned to give the best at any cost cannot offer low terms, but merits the careful investigation of thoughtful parents. Vacancies are filled from the waiting list. Illustrated circular on application.

CHARLES S. CROSMAN, Head Master, Haverford, Pa.

## Franklin and Marshall Academy

Lancaster, Pa.

Located in the "garden spot" of the State. Beautiful scenery. Near cheap and abundant markets. Prepared 175 boys for 16 different colleges in the last six years. Thorough training. Careful supervision. No smoking. Furnished rooms with steam heat and electric light. Good boarding. Free text books. Use of library, gymnasium, athletic field, etc. Terms \$25 per year.

## KITCHEN MONEY

**\$7,500.00 Donated  
To Be Divided Among  
Family Cooks**

Great numbers of ladies have requested an extension of time on this contest. It has been granted; full particulars by mail. See below.

The sum of \$7,500.00 will be distributed between now and fall among family cooks, in 735 prizes, ranging from \$200.00 to \$5.00.

This is done to stimulate better cooking in the family kitchen. The contest is open to paid cooks (drop the name "hired girl," call them cooks if they deserve it) or to the mistress of the household if she does the cooking. The rules for the contest are plain and simple. Each of the 735 winners of money prizes will also receive an engraved certificate of merit or diploma as a cook. The diplomas bear the big gilt seal and signature of the most famous food company in the world, the Postum Cereal Co., Ltd., of Battle Creek, Mich., the well-known makers of Postum Coffee and Grape-Nuts. Write them and address Cookery Department, No. 116, for full particulars.

Great sums of money devoted to such enterprises always result in putting humanity further along on the road to civilization, health, comfort, and happiness.

## The Baby Thrives on

because it is pure, rich milk from our own dairies, with the extract of malted grain, already prepared and reduced to powder form by our own special process—nutritious, easily digested, containing everything needed for the upbuilding of the child. Its use prevents the summer troubles incident to impure milk and improper feeding. Thousands of healthy children attest its value. Keeps in all climates. Convenient to carry and prepare when traveling. No cooking or addition of milk required. Ask your physician about it.

Very sustaining and strengthening for nursing mothers—a delicious invigorating food drink for every active, ready in a moment by stirring in water.

Used and sold everywhere—all druggists.

## ESKAY'S FOOD

This advertisement is not written by the maker but by one of the users of **ESKAY'S FOOD**, Mrs. Geo. Hofter, Kearny, N. J.

Two years ago the boy whose picture I herewith enclose was born. He was at birth an exceptionally small and weak child and continued to be so for months and months until we despaired of ever raising him, the attending physician even coinciding with our opinion. After trying all kinds of medical experiments the physician in question advised as a last resort Eskay's Food. We purchased same and used as directed, and the result was, as the photograph will demonstrate, the development of a prize-winning two-year-old boy, that is talked about by everybody who knows the circumstances of his birth, sickness, recovery, and development. The same facts can be repeated in reference to the raising of a three months old brother to the one spoken of above.

Every mother needs our valuable book, "*How to Care for the Baby*." It is sent free with samples of Eskay's Food.

**SMITH, KLINE & FRENCH CO.**

426 Arch St., Philadelphia Pa.

### How About Yours?

How many thousands of our American "parlors" contain that shining monument to a past girlhood—a *silent piano*. Its inscription might well be "Sacred to the memory of fingers stiffened by housework, and a leisure killed by maternity."

HARVEY: *The Story of Una.*

**THE CECILIAN**  
THE PERFECT PIANO PLAYER

### A Suggestion.

The Cecilian will bring your silent piano to life, for, with it, you, or any member of your family, can (without practice or musical training) play any music you desire. The Cecilian has a new device which permits the use of any standard 65 note music as well as the regular Cecilian music, and has other points of superiority which we will be glad to tell you about if you will send us your address. Price, \$250.00. Easy payments, if desired.

**FARRAND ORGAN CO., Dept. G**

DETROIT, MICH.

A HUNGRY man is not discriminating as a rule—almost any food invites his palate. The owner of a fine piano, if he lacks the ability to produce the music he loves, is like the hungry man in one respect—he is not inclined to be critical at first.

Since the introduction of the

## ANGELUS Piano Player

others have been brought forward which give something, but not the artistic performance which he desires later. Not one of them can be successfully compared with the ANGELUS, because the Government patents protect the two most important features of this wonderful instrument. They are the two devices which permit the person playing the piano by means of the ANGELUS to duplicate pianists. The ANGELUS alone delights the critical music lover as well as the music-hungry one.

### THE PHRASING LEVER and the PISTONS

which soften the Bass or the Treble independently of each other (thus bringing out the melody, while subduing the accompaniment) give the human touch and the finger effects impossible with any other piano player.

So important are these two distinguishing features that after you have investigated them for yourself, no other piano player would be admitted to your home at half the ANGELUS price, \$250.00.

You can play any piano with the aid of the ANGELUS.

### LOOK UP.

See how four Hartshorn shade holders fasten a shade on a roller firmly and evenly. They never slip; never tear the shade as tacks do; cost you no more and are put on with one tap of a hammer for each holder. This is only one advantage of

Fine tempered steel.  
Japaned.  
Actual size.

### The Improved HARTSHORN SHADE ROLLER.

It has many. But beware of imitations. The genuine always has this signature on the label.

*Stewart Hartshorn*

Wood Rollers.

Tin Rollers.

### For Garbage

Garbage standing around in open cans or pails is offensive, unsightly, unsanitary.

### Witt's Corrugated Can

has close-fitting lid which shuts in odors, makes scattering of contents impossible. So strong it will not dent or bend in a lifetime. Good housekeepers use it. Imitations are worthless. See that "Witt's Can" is stamped in the lid.

For sale by Hardware and House Furnishing Dealers.  
The Witt Corncice Co., Dept. O. Cincinnati, O.

Assistance in lessons, with view to acquiring proper habits of study. References exchanged. Correspondence solicited. Address No. 5,917, The Outlook.

**YOUNG MAN**, experienced tutor, desires position after September 20. Would travel. Box 94, Lenox, Mass.

# Lakes in the Clouds

The above illustration represents Lake Agnes, one of the three **Lakes in the Clouds**, reached easily from Laggan Station on the Canadian Pacific Railway. It is a beautiful sheet of water, sleeping amid the everlasting hills, but there are thousands of others equally alluring in the Canadian Rockies.

## The C. P. R. Chalet Hotels,

from which these lakes are accessible, were taxed to their uttermost last year, but this season finds each one doubled in capacity and better equipped than ever, including camping outfits, tents, ponies, packers and Swiss guides.

NATIONAL BISCUIT COMPANY

# A Prescription for all PAIN

A prescription that for 60 years has been alleviating the sufferings of mankind as nothing else can. That has withstood *all* tests; conquered *all* imitators; overcome *all* substitutes. POND'S EXTRACT is a prescription THAT CURES—stops *all* pain and starts the healing instantly. It does it with an efficacy no other remedy in the world possesses. There is nothing like it. It CURES because it contains the pure extract of the most valuable anodyne (pain relief) known in materia medica.

## **If You Want a Cure That's Safe and Sure**

you want POND'S EXTRACT—it CURES. Don't expect a substitute to cure. Water WON'T cure. That's why ordinary witch hazel is so cheap—it's *nearly all water*—that's why it WON'T cure.

For burns, scalds, wounds, inflammation, rheumatism, neuralgia; for cuts, bruises, lameness, soreness, strains, sprains, sunburn, chafing, insect bites and stings, irritation after shaving, get POND'S EXTRACT. It is the *pure* extract of *Hamamelis Virginica*, combined with other pain relieving ingredients—that's why

## **IT CURES**

Sold only in sealed bottles,  
enclosed in buff wrappers

# Who use the Hot-Air Pump?

About 30,000 families in every part of the world. The following names are selected from our books, simply because they represent a discriminating class, who search for the best article for any purpose and then buy it; these men have *tried* the Hot-Air Pump, and it has *not* been found wanting:

J. Pierpont Morgan, New York.  
Khedive of Egypt.  
Whitelaw Reid, New York.  
W. K. Vanderbilt, New York.  
George Vanderbilt, New York.
